A 2022 decree on the implementation of legal policy tasks State Enterprise, Ministry of Internal Affairs, and other state bodies with the “Development of the concept of ‘artificial intelligence,’ including the procedure, scope and range of its use, status and legal consequences, with the subsequent introduction of a separate offense providing for liability for its use for criminal purposes”³¹¹⁷ by December of 2025 and 2026.³¹¹⁸

Action N72 sets government entities with the responsibility to submit proposals for “Codification of the rules of law governing the most important public relations in the field of information and communication technologies, data processing, digital assets, industrial automation, information security, machine learning and artificial intelligence, protection of the rights of personal data subjects.” These were planned to be finished by the end of 2023.³¹¹⁹

Research & Development

The World Bank announced cooperation with Nazarbayev University in 2020 to create a National Cluster of Artificial Intelligence, including a country-based laboratory, data processing research center, and science park for the

development of artificial intelligence.³¹²⁰ The parties also plan to cooperate in developing common standards, rules, and policies in the field of data exchange and integration. The Kazakh Ministry of Education and Science, along with the World Bank, launched the Fostering Productive Innovation Project (FPIP)³¹²¹ in April 2020 to support and develop high-quality scientific research on, and the commercialization of, new technologies.

Facial Recognition and Smart Cities

Facial recognition surveillance technology is becoming increasingly widespread in Kazakhstan. While the government insists that the main goal is to maintain public safety, many activists are worried that this will ultimately create a totalitarian surveillance state.³¹²² This concern is even more pregnant that the companies behind these surveillance systems in Kazakhstan are under U.S. sanctions for unethical use of AI technology.

In October 2019, facial recognition systems were first installed on buses.³¹²³ Notably, President Tokayev paid a visit and discussed future cooperation with Hikvision,³¹²⁴ a Chinese state-owned surveillance company under U.S. sanctions³¹²⁵ that provided the hardware for Kazakhstan's newly established surveillance system. In the same year, the small city of Akkol was proclaimed the first complete Smart City in Kazakhstan. Akkol is digitally monitored by an AI-based facial recognition surveillance system. Its functions include thermal imaging, searching for a car by number plates, recognizing missing persons, and detecting the presence of weapons in schools, hospitals, and

other public places.³¹²⁶ Over 4,000 cameras have blanketed Nur-Sultan, the capital.³¹²⁷

In 2020, the authorities announced that Kazakhstan would be spending \$23 million to install facial recognition software in its largest city, Almaty.³¹²⁸ In mid-March 2020, Kazakhstan's government was fighting the novel coronavirus. The Ministries of Health and Internal Affairs ultimately turned to AI technological solutions to confront the coronavirus outbreak. The range of technologies reoriented to enforce quarantine and curfews included traffic cameras, facial recognition technologies, and smartphone apps.³¹²⁹ The Ministry required the 8,000 or so Kazakhstani citizens under quarantine to use the SmartAstana tracking app, to allow officials monitoring compliance of isolation mandates.

The government also monitored citizens through facial recognition video surveillance technology to find violators of the quarantine regime in Almaty. By the end of the country's two-month state of emergency, 2,424 people had been charged with violating quarantine in Almaty and 3,347 in Nur-Sultan.³¹³⁰ According to experts, the pandemic exacerbated the existing arbitrary and uneven policing practices as national and municipal authorities' surveillance practices increased without public oversight.³¹³¹

The country launched a facial recognition system at airports, religious institutions, and underground walkways of Nur-Sultan city in 2022.³¹³² Reports of arrests of protesters based on facial recognition from surveillance cameras and AI-powered recognition technology also continued.³¹³³ Kazakhstan and China have

strengthened their cooperation in AI, big data, cloud computing, and other high-tech sectors.³¹³⁴

Biometrics

Kazakhstan implemented the use of biometrics in the eGov Mobile app in 2022.³¹³⁵ The system requires a Digital ID video identification. The Chairman of the Board of National Information Technology highlighted this development as an “easier and time-efficient [process] that provides more reliable personal data protection.” The authentication via biometrics applies for 400 public services and e-license services, across over 2.4M citizens, using the airport, train services, banking, mobile services, postal service, and notary public.

Environmental Impact of AI

No official documents, reports, or statements from the government or relevant agencies could be found to determine an official stance or policy on the environmental impact of artificial intelligence. Despite the lack of official action, experts at the Connected conference in Kazakhstan’s capital Astana³¹³⁶ discussed the future of climate change and the role of AI in mitigating or exacerbating it.

Lethal Autonomous Weapons

Kazakhstan was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly in October 2022. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.³¹³⁷ In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”³¹³⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In February 2023, Kazakhstan participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Kazakhstan, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.³¹³⁹ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” States also “stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain.”³¹⁴⁰

Human Rights

According to Freedom House, Kazakhstan is “Not Free” with a score of (23/100) for political rights and civil liberties.³¹⁴¹ Freedom House reports “Parliamentary and presidential elections are neither free nor fair, and authorities have consistently marginalized or imprisoned genuine opposition figures. The dominant media outlets are either in state hands or owned by government-friendly businessmen. Freedoms of speech and assembly remain restricted and punished, and corruption is endemic.”³¹⁴²

Kazakhstan is eligible for admission to the Council of Europe (CoE) and has increased cooperation with the body in recent years. A previous agreement was limited to criminal justice. However, the Neighborhood Co-operation Priorities for Kazakhstan 2019–2022 introduces new areas of cooperation, including the fight against economic crime, promoting a common legal space and human rights standards, and assistance in the electoral field. The document was adopted by the Committee of Ministers in April 2019. Kazakhstan participates in the CoE Central Asia Rule of Law Programme, launched in 2020, which has the goal of “Improving the lives of citizens by reinforcing human rights, democracy

and rule of law.”³¹⁴³ Corruption in Kazakhstan remains a serious concern, entrenched in different sectors, institutions, and public and private spheres.³¹⁴⁴

The re-established Constitutional Court of Kazakhstan began to operate on January 1, 2024. Citizens may appeal directly to the court on cases regarding fundamental rights and freedoms in the country.³¹⁴⁵ The Constitutional Court received more than 5,300 appeals in 2023.³¹⁴⁶

OECD / G20 AI Principles

Kazakhstan has not endorsed the OECD AI Principles. According to the OECD AI Observatory, the Digital Kazakhstan Government Program, a national initiative, addressed the OECD AI principles of inclusive growth, sustainable development, and well-being; investment in AI R&D; and fostering an ecosystem for AI.³¹⁴⁷

The country’s major AI research center, the Institute of Smart Systems and Artificial Intelligence at Nazarbayev University, operates in accordance with the ethical principles aligned to the OECD AI Principles: Societal Well-being, Human-Centered Values, Transparency, Technical Resilience and Robustness, and Accountability.³¹⁴⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

Kazakhstan is a UNESCO member since 1992³¹⁵⁰ and endorsed the UNESCO Recommendation on the Ethics of AI.³¹⁵¹

Kazakhstan contributed actively to the drafting of the UNESCO Recommendation. A country delegation from the Institute of Smart Systems and Artificial Intelligence of Nazarbayev University (ISSAI) participated in the UNESCO Session on the Ethics of Artificial Intelligence held online on July 23-24, 2020. The event gathered feedback and stakeholder contributions for the review of, and comment on the draft recommendation. The ISSAI delegation submitted the ISSAI Ethical Principles document as a sample of organizational AI Ethics statements. The Kazakhstani delegation offered observations on explainability, accountability and responsibility of AI systems, and the need to respect human rights and human dignity.³¹⁵²

Kazakhstan has yet to take concrete steps to implement the UNESCO Recommendation on AI Ethics systematically, such as implementing the Readiness Assessment Methodology (RAM).³¹⁵³ However, the AI People course, a nationwide initiative to increase AI literacy and skills among the general population,³¹⁵⁴ aligns to the Aware & Literacy principle necessary to the human-centered approach underlying the UNESCO recommendation.³¹⁵⁵

Evaluation

Kazakhstan's AI policy landscape has evolved, with the adoption of the Concept for Artificial Intelligence Development for 2024-2029,³¹⁵⁶ establishment

³¹⁵⁰ Astana Times, *Kazakhstan Marks 30th Anniversary of Membership in UNESCO* (Jun. 22, 2022), <https://astanatimes.com/2022/06/kazakhstan-marks-30th-anniversary-of-membership-in-unesco>

Center for AI and Digital Policy

of a dedicated Committee of Artificial Intelligence and Innovation Development,³¹⁵⁷ and the launch of an AI literacy program for the general public.³¹⁵⁸ While the 2021 presidential decree on accountability was a step in the right direction, no national AI strategy or policy framework exists to enshrine human-centric AI principles promoting human rights and democratic values into law. ISSAI's ethical principles provide a model for aligning AI research and innovation to global frameworks such as the OECD AI Principles and UNESCO Recommendation. The Personal Data Protection Law has not addressed the areas of automated decision-making and algorithmic transparency, and no system exists for civic engagement in policymaking.

Meanwhile, Kazakhstan has already endorsed smart surveillance systems in various cities, which led to fears that the country would transform into a digital authoritarian regime and a real life-laboratory for foreign companies under US sanctions for unethical use of AI technology.

Kenya

In 2024, Kenya initiated a development process including public consultations for a National AI Strategy. Kenya also participated in the first meeting of the International Network of AI Safety Institutes.

National AI Strategy

Kenya has not finalized a national AI strategy. However, the Ministry of Information Communications and Digital Economy issued a draft National AI Strategy for public validation in January 2025.³¹⁵⁹ Kenya launched the National AI

Center for AI and Digital Policy

Strategy Development Process in Nairobi in April 2024 to address key issues, including data governance, legal frameworks, and privacy policies.³¹⁶⁰ The AI strategy development process is supported by partnerships with organizations like the German Agency for International Cooperation (GIZ) and UNESCO.³¹⁶¹ This partnership under the FAIR Forward—Artificial Intelligence for All—initiative aims to establish a framework for the responsible, ethical deployment of AI, aligning with Kenya's broader goals of social inclusion and sustainable development.³¹⁶²

The efforts to build an AI Strategy contribute to the realization of the Digital Master Plan (DMP) 2022–2032 released by the Ministry of Information, Communications and Technology.³¹⁶³ Building on earlier master plans and e-Government strategies and policies,³¹⁶⁴ the DMP provides a blueprint to “create business opportunities, wealth creation, employment and the contribution of ICT to the growth of the economy [...] towards the realization of our goal in transforming lives, better for the citizens.”³¹⁶⁵ To this end, the DMP identifies four pillars to advance the provision of services to citizens and businesses:

- Digital Infrastructure, including equitable access
- Digital Government Service, Product and Data Management to improve productivity, efficiency, effectiveness, and governance across sectors through e-Government
- Digital Skills to develop “a digitally skilled workforce and citizenry that is grounded on ethical practices and social cultural values”
- Digital Innovation, Enterprise and Digital Business to help transform innovative ideas into sustainable business and operating models.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Master Plan aligns with the Smart Africa Alliance goals for the long-term outcomes of digital government, including “job creation and economic growth, sustainable development, cashless economy, citizens participation, transparency, trust, and accountability.”³¹⁶⁶

Kenya’s government has demonstrated its commitment to applying AI technologies, particularly in sectors like agriculture and healthcare.³¹⁶⁷ Key applications such as SunCulture’s AI-driven agricultural tools and Ubenwa’s diagnostic healthcare platform show how AI can directly improve productivity in resource-constrained environments.³¹⁶⁸ However, without a clear regulatory framework, Kenya lacks a means to address concerns about the potential misuse of AI, discrimination, and data breaches. A taskforce report in 2019 identified three potential benefits from Blockchain and AI, including fighting corruption, strengthening the financial sector, and bolstering “election fairness through fast tallying and providing real-time polling results, and by extension, strengthen democracy.”³¹⁶⁹ The taskforce concluded that effective regulation would address both citizen protection and private sector innovation.³¹⁷⁰ However, the taskforce recommendations have yet to translate into public policy, legislation, or strategy on AI.³¹⁷¹

With the support of various organizations, such as the German Federal Ministry for Economic Cooperation and Development (BMZ), the European Union (EU) and the Digital Centre (DZ), Kenya is undertaking a “transformation towards a sustainable and human-centered digital economy and Society.”³¹⁷²

In March 2022, the government of Kenya developed a National Cyber Security Strategy³¹⁷³ for a unified approach to the implementation of cybersecurity activities in the country. The strategy establishes foundations and pillars for effective cybersecurity for the public and private sectors by combining good governance with a set of initiatives and interventions. Spearheaded by the (then) Ministry of ICT, Innovation and Youth Affairs and the Ministry of Interior and

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Co-ordination of National Government, the strategy provides a framework to defend and protect the cyberspace of the Republic of Kenya.

As a member of the African Union (AU), Kenya is committed to advancing the formulation and implementation of human-centered AI policies, in alignment with the goals of the AU digital transformation strategy³¹⁷⁴ and the Continental Data Policy Framework.³¹⁷⁵ The AU AI Working Group is endowed with the mission to foster collaboration among African states to “help countries develop AI strategies, identify other regulatory and governance issues, and learn from regional best practices.”³¹⁷⁶

AI Oversight

The Ministry of Information, Communications, and the Digital Economy (MICDE) is primarily responsible for overseeing AI development and policy.³¹⁷⁷ The ministry leads the development of Kenya's National AI Strategy with support from partners like GIZ and UNESCO to guide the ethical adoption and implementation of AI across different sectors, from education to healthcare.

The National Communications Authority (CA) is also involved in regulating aspects of AI, such as data privacy and security.³¹⁷⁸ The CA plays a critical role in ensuring that AI-related advancements align with national goals, including infrastructure development and cybersecurity, while protecting digital rights.

The Kenya Robotics and Artificial Intelligence Society Bill,³¹⁷⁹ which was proposed to the Parliament in 2023 and debated in 2024, would introduce a regulatory body, the Kenya Robotics and Artificial Intelligence Society, to set standards for AI and robotics development and ensure compliance. However, tech experts testified before the National Assembly ICT Committee that the initiative oversimplifies the complexities of AI roles and imposes impractical requirements, such as mandatory membership for AI professionals.³¹⁸⁰

Center for AI and Digital Policy

Public Participation

Kenya has made strides in establishing a systematic process to engage stakeholders in meaningful participation in policymaking through the Public Consultation portal of the Communications Authority of Kenya (CA).³¹⁸¹ Kenya also hosts conferences and workshops to encourage multistakeholder engagement to define AI strategy and policy. Most documents related to Kenya's AI policies, such as the National Digital Master Plan 2022–2032, are publicly accessible. However, some earlier documents, such as the Distributed Ledgers Technology and AI Taskforce report, that were previously available on government websites are no longer accessible, perhaps because of a reorganization and renaming of the Ministry of Information communications and Digital Economy in 2022.

In a 2023 consultation, the CA invited comments from all stakeholders for the development of the Framework for a Regulatory Sandbox.³¹⁸² The Regulatory Sandbox aims to nurture and support innovation by exploring the application of innovative regulatory solutions.³¹⁸³

A previous consultation took place in 2018, during the development of Kenya's Blockchain and AI Taskforce report. The taskforce received 150 presentations and consulted with approximately 90 stakeholders.³¹⁸⁴ The composition of the taskforce was inclusive and diverse, with four women in the pool of 14 experts drawn from academia, research institutions, tech entrepreneurs, consultants and private businesses, such as Safaricom, Cisco, IBM Research Africa, the African Development Bank. The consultation also included approximately 31 AI startups operating in various sectors of the Kenyan economy.³¹⁸⁵

As part of its broader initiative to develop a National AI Strategy, the Ministry of Information, Communication and the Digital Economy (MICDE) in partnership with the German Corporation for International Cooperation (GIZ), has

Center for AI and Digital Policy

organized a series of stakeholder consultations to gather input from government, academia, civil society, and industry.³¹⁸⁶ The launch of the National AI Strategy Development Process in Nairobi in April 2024 brought together more than 70 participants from government, academia, industry, and civil society to discuss critical issues such as data governance, legal frameworks, and privacy policies.³¹⁸⁷ This discussion stressed the importance of balancing innovation with ethical concerns, focusing on transparency, accountability, and digital rights.³¹⁸⁸

A stakeholder workshop in Naivasha, Nakuru County in May 2024³¹⁸⁹ continued these discussions and focused on shaping a vision for responsible AI that aligns with Kenya's values and international frameworks such as those from UNESCO and the African Union. Participants in the workshops stressed the importance of workforce development, supportive legislation, and the creation of an independent AI governing body. The workshop produced a roadmap outlining timelines, pilot projects, and financial planning to ensure sustainable AI growth. This approach seeks to develop a locally empowered AI ecosystem that is competitive on the global stage, in line with international standards.

According to UNESCO, as Kenya moves forward with developing its first National AI Strategy, the process will continue to involve extensive consultations to refine the strategy and ensure it meets the country's ambitions to become Africa's "Silicon Savannah."³¹⁹⁰

While past participatory efforts showed promise, however, they also faced issues of accountability and project oversight.³¹⁹¹ Public participation in AI legislation could face similar shortcomings if not accompanied by effective mechanisms for monitoring and ensuring that feedback leads to tangible changes. Also, the limited understanding of AI among the general public, compounded by digital inequalities, means that citizens may struggle to engage with AI discussions

Center for AI and Digital Policy

meaningfully unless AI literacy programs are expanded nationwide.³¹⁹² The Africa Centre of Competence for Digital and AI Skills opened in October 2024 through a partnership with the UN Development Programme and Microsoft at the Kenya School of Government in Nairobi is a step toward addressing this issue. The center aims to equip public sector employees with digital and AI skills, improving service delivery and driving public sector innovation. This literacy supports the National Digital Master Plan 2022–2032 emphasis on stakeholder consultations, public forums, and community engagement efforts as essential components of the policy-making process.³¹⁹³ The center offers training on human-centered problem solving, strategic foresight, and systems thinking to help government workers anticipate future challenges and devise solutions. This effort also supports broader Sustainable Development Goals (SDGs), such as quality education (SDG 4) and reducing inequalities (SDG 10).³¹⁹⁴

The Ministry of Information, Communications and the Digital Economy released a draft National Artificial Intelligence (AI) Strategy for public validation in January 2025.³¹⁹⁵

In the 2024 UN e-Government Survey Kenya's ranking in e-participation declined to 83rd place out of 193 countries,³¹⁹⁶ compared to 64th place in 2022.³¹⁹⁷ Kenya is still among the top 15 African countries in terms of E-Government development.

Data Protection

Kenya continues to refine its approach to data protection in the context of AI and digital technologies. Kenya enacted the Data Protection Act (DPA) in November 2019,³¹⁹⁸ establishing protections for personal data and reaffirming the

right to Privacy.³¹⁹⁹ The DPA gives effect to Article 31(c) and (d) of the Constitution that contains the right to privacy, regulate the processing of personal data, provide for data subjects' rights, and create obligations for data controllers and processors. Applicability to AI can be inferred where personal data is involved in AI-based transactions.³²⁰⁰ The DPA applies to both government and private entities handling personal data, including the large datasets used for AI training and decision-making.³²⁰¹

The DPA contains principles of data protection that relate to the fair, transparent processing of personal data (Section 25), the right to erasure and rectification (Section 34, 40), and rights related to automated decision-making (Section 35).³²⁰²

Pursuant to the DPA, the Office of the Data Protection Commissioner (ODPC) was established in 2020. In 2022, the ODPC became a member of the Global Privacy Assembly (GPA).³²⁰³ The Global Privacy Assembly seeks to provide leadership in data protection and privacy by connecting the efforts of more than 130 data protection authorities across the globe.³²⁰⁴ The ODPC has not endorsed the GPA 2018 Declaration on Ethics and Data Protection,³²⁰⁵ 2020 Resolution on Accountability in the Development and Use of AI,³²⁰⁶ 2022 Resolution on Principles and Expectations for the Appropriate Use of Personal

Information in Facial Recognition Technology,³²⁰⁷ or 2023 Resolution on Generative AI.³²⁰⁸

Throughout 2021 and 2022, the Kenyan legislative Assembly enacted regulations providing for additional safeguards to privacy and fostering a robust digital economy: Data Protection Regulations (Registration of Data Controllers and Data Processors)³²⁰⁹ and the Central Bank of Kenya (Digital Credit Providers) Regulations, 2022.³²¹⁰ These regulations aim to curb unethical debt collection practices and abuse of personal data.

Although the African Union developed the AU Convention on Cyber Security and Personal Data Protection (Malabo Convention),³²¹¹ Kenya has not signed or ratified the Convention.³²¹² Calls to the government of Kenya to sign and ratify the Malabo Convention re-emerged, amid the concerns surrounding data localization requirements and cross-border data transfer, that would require reciprocity with Malabo signatories. Signing the convention would signal Kenya's commitment to the intra-African partnership and regional cooperation.³²¹³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Algorithmic Transparency

Kenya has not explicitly established a right to algorithmic transparency in its legislation. However, existing laws provide a measure of protection. However, the DPA includes provisions that could be related to algorithmic transparency, such as granting individuals rights over their personal data, including the right to access and correct their data. This could indirectly require organizations to be transparent about how data is used in automated decision-making processes. The Act establishes principles such as fair, transparent, and lawful processing of personal data, which are relevant to algorithmic transparency.³²¹⁴ For example, Section 22 requires that a data controller or data processor shall not only “inform a data subject when engaging in processing based on automated individual decision making” but also “provide meaningful information about the logic involved.”³²¹⁵

Kenya was one of 49 countries subject of a study by Human Rights Watch about the use of government-endorsed or government-built Ed Tech tools for online learning during the COVID-19 pandemic.³²¹⁶ The findings show that Kenya Education Cloud, a platform used by the Ministry of Education to deliver online education to primary and secondary students, shared children’s data with AdTech companies. The platform designed for children contained ad trackers that sent data about users to third-party companies to target ads across the internet.³²¹⁷ The platform did not have any publicly available privacy notice that would give children the right to object to being surveilled. The platform “denied the knowledge or opportunity to challenge these practices.”³²¹⁸ Human Rights Watch exhorted UN the Human Rights Commission to address questions with the government of Kenya regarding children’s rights challenged through this practice. Given the increasing matter of algorithmic discrimination, which the DPA does

Center for AI and Digital Policy

not address directly, there is a need for a comprehensive non-discrimination statute that addresses these risks.³²¹⁹

The Kenya Ministry of Education planned to implement automated decision-making in admission decisions. In response to the public outcry, the Ministry explained the factors underlying the model, including the reliance on criteria of merit, equity, choice, category of school, and school capacity. Reports about the outcomes of the model are forthcoming.³²²⁰ A previous process of quotas in the Form One selection in Kenya led to complaints by parents who argued discrimination in 2012.³²²¹

Biometrics

Kenya's policies on biometrics are part of its broader efforts to modernize identification systems and enhance security. The country has initiated the National Integrated Identity Management System (NIIMS) intended to create and operate a national population register as a single source of information about Kenyan citizens and foreigners in the country.³²²² This system collects biometric data, including fingerprints and facial images, to facilitate access to government services and initiatives such as digital driving licenses and e-passport systems.

The Kenyan government started an upgrade of the medical records system in 2015 in a bid to stop health insurance fraud in Kenya's Hospital Insurance Fund (NHIF). The NHIF has 6.7M members, serving a population of 48M. The government started the biometric registration of civil servants and security officers to migrate the system to smart cards.³²²³ The government deployed biometric kits to 1,370 hospitals in 2018.

In 2018, the biometric plan included the registration of students into a health insurance plan nationwide and the registration of newborns.³²²⁴ The infant biometrics plan emerged from the need of the country to ensure that kids of HIV-

Center for AI and Digital Policy

affected mothers returned to the hospitals for treatment. UC San Diego conducted fundamental research on fingerprinting engineering.

Kenya biometric ID system Huduma Namba went live in 2019 amid allegations of insufficient protections for privacy rights and challenges by digital rights groups. The Kenyan High Court ruled in 2020 that the government must implement comprehensive data protection measures before fully operationalizing the system.³²²⁵ The Bill since then has remained in Parliament. The Cabinet Secretary for ICT, the sponsor of the Bill, asserted that the project “ran into trouble because of inadequate sensitization and a lack of trust in the system by a vast majority of citizens.”³²²⁶

Kenya is set to revamp the ID scheme as part of the digitization efforts of the country. The Cabinet Secretary for Information, Communication, and Digital Economy announced the plans to replace the controversial Huduma Namba by a new digital identity in February 2024.³²²⁷ The online identification will have a centralized database that will connect with the National Information Management System (NIIMS). The system will contain a comprehensive set of data held by the government to facilitate access to public services, and also to be linked to the birth-to-death Unique Personal Identifier (UPI).³²²⁸ The plans include the assignment of a number to the newborn that will remain as the identifier at school and as the National Identity number, social security number, and death certificate number.

Despite the legal framework, concerns remain about data security, potential misuse of biometric data, and the inclusivity of the NIIMS system.³²²⁹ Critics argue that marginalized groups may face barriers in accessing the system, potentially exacerbating existing inequalities.³²³⁰ Most recently, the Cabinet

Center for AI and Digital Policy

Secretary of the Ministry of Interior and National Administration also announced the issuance of biometric passports, which were launched in 2022. Citizenship and Residency documents with advanced features of third-generation security will be part of this innovation to the immigration process.

Facial Recognition

Kenya's policies on facial recognition are still evolving. There is no comprehensive regulatory framework, but rather it uses existing laws, like the Data Protection Act.

The Kenyan National Police Service (NPS) launched facial recognition on major roads and highways through an urban CCTV network in 2018.³²³¹ This system called Integrated Command and Control system (ICCS) relied on CCTV cameras to do Automatic Number Plate Recognition (ANPR) to detect vehicles involved in crimes as part of the Critical Incident Management suite (CIMS).

The NPS partnered with a Japanese firm to install an upgrade of the ICCS, to “help in fast and accurate identification of suspects.”³²³² The NPS Plans include using the Neo Face as an alternative when law enforcement cannot identify a suspect using fingerprints.

Currently there are no laws in Kenya that specifically address the challenges associated with the misuse of facial recognition technology. Nor are there laws aimed at regulating the adoption and use of facial recognition or even traditional CCTV systems more broadly.³²³³

Lethal Autonomous Weapons

Kenya supports a legally binding instrument on autonomous weapons and has voted in favor of UN resolutions toward that end.³²³⁴ Kenya is part of the African Group and Non-Aligned Movement. Kenya reiterated the position to “act quickly to establish a robust international regulatory framework that would ensure such technological advancements [as AI and LAWS] serve to protect humanity, rather than diminish its values.”³²³⁵

Environmental Impact of AI

Kenya's growing AI ecosystem, particularly within the agricultural and healthcare sectors, presents opportunities to follow UNESCO's guidance to adopt technologies that minimize environmental impact. However, a lack of regulatory frameworks to monitor AI's environmental footprint poses challenges. Strengthening these frameworks could position Kenya as a regional leader in environmentally responsible AI development, aligning with UNESCO's emphasis on sustainability.

Kenya is actively exploring the environmental implications of AI adoption, particularly in sectors where AI systems can enhance sustainability, such as agriculture and energy. The National AI Strategy development process includes considerations for minimizing the carbon footprint associated with AI technologies, acknowledging the need for sustainable practices in digital transformation. By investing in energy-efficient infrastructure and promoting AI applications that support environmental goals, such as precision agriculture, Kenya aims to align its AI advancements with sustainability objectives.

Human Rights

According to Freedom House, Kenya is "Partly Free" with a score of 52/100 for political rights and civil liberties.³²³⁶ The country's media and civil society sectors are vibrant, even as journalists and human rights defenders remain vulnerable to restrictive laws and intimidation. Concerns exist about the government's interference with the right to privacy of individuals and the frequent use of cybercrime laws to crack down on online critics of the government. The Ibrahim Index of African Governance in 2024 scores Kenya at 60.3/100 for overall governance, and 63.8/100 in Participation Rights & Inclusion, placing the country in position 10 out of 54 countries.³²³⁷

Kenya's Constitution contains the Bill of Rights under Chapter 4 with a catalog of fundamental civil and political rights and socio-economic and cultural rights. These rights include Freedom and security of the person, right to Privacy, Freedom of expression, Freedom of the media, right to access to information, and

right to dignity.³²³⁸ Kenya's Human Rights Commission has an oversight mandate on human rights protection and promotion.

Kenya is a signatory to various regional and international human rights treaties and conventions including the African Charter on Human and Peoples Rights, the International Convention on Civil and Political Rights (ICCPR), and the International Covenant on Economic, Social and Cultural Rights (ICSECR).

AI Safety Summit

Kenya participated in the first AI Safety Summit and endorsed the Bletchley Declaration in 2023.³²³⁹ Kenya thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

At the second safety summit, the AI Seoul Summit, Kenya and other participants signed a Statement of Intent to cooperate on AI Safety Science. Kenya's Special Envoy for Technology attended the first International Network of AI Safety Institutes in San Francisco in November 2024.³²⁴⁰

Conversations about synthetic content, managing risks, and global governance continued at the third summit, the AI Action Summit in Paris in February 2025, where Kenya got feedback on managing synthetic content and misinformation.³²⁴¹ Representatives defined a shift in focus “to develop technical solutions that are open and accessible to all” and reiterated a commitment to “Ensuring the development of trusted, safe and secure AI to benefit of all.”³²⁴²

Center for AI and Digital Policy

OECD / G20 AI Principles

Kenya is not a member of the OECD and has not endorsed the OECD AI principles.³²⁴³ Many of Kenya's initiatives in digital transformation and AI align with OECD AI principles. Research and development centers on the fulfilling the Sustainable Development Goals. Kenya's AI strategies, initiatives, and policies such as AI Use Case in the Public Sector; Blockchain and AI Task Force; Emerging Digital Technologies for Kenya Exploration and Analysis; Kenya's Digital Economy Blueprint; Kenya's Digital Economy Strategy; and Kenya's Digital Literacy Program (Digischool) align with OECD principles such as inclusive growth, sustainable development, and well-being and capacity-building.³²⁴⁴

Council of Europe AI Treaty

Kenya has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law, the first legally binding international treaty on AI.³²⁴⁵

UNESCO Recommendation on AI Ethics

Kenya is a UNESCO member state since 1964,³²⁴⁶ and was one of the 193 member states that adopted the Recommendation on the Ethics of Artificial Intelligence in November 2021.³²⁴⁷

According to the UNESCO AI Needs Assessment Survey in Africa, Kenya has been active in initiatives to improve participation through improvements in internet access under the Rights, Openness, Accessibility, and Multi-stakeholder participation. The report does not include information about Kenya's progress in strategies, policies, legislations, ethical guidelines, centers of excellence on AI, start-up, and incubation centers.³²⁴⁸

The Government of Kenya has collaborated with UNESCO in organizing and participating in the Eastern Africa Sub-Regional Forum on Artificial

Intelligence. Kenya hosted the 2024 forum under the theme of Harnessing Artificial Intelligence for Sustainable Development in June.³²⁴⁹

Kenya completed the UNESCO Readiness Assessment Methodology (RAM) in 2024.³²⁵⁰ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.³²⁵¹ The RAM report commends Kenya's strong legal framework and multistakeholder consultation process in developing the AI and digital economy strategies. The report notes challenges in Kenya's public investment in research and development and disparities in access to digital services across gender and rural-urban divides.³²⁵²

Evaluation

Kenya is stepping up its efforts in establishing a comprehensive framework for digital policies in line with developments in the African Union. Kenya has updated its data protection legal regime, created an independent data protection commission, and progressed on the right to algorithmic transparency. Kenya is yet to adopt a national AI policy that reflects the commitment it took by endorsing the UNESCO Recommendation on the Ethics of AI. However, partnerships with organizations like GIZ and UNESCO illustrate its commitment to ethical AI use, particularly through initiatives like FAIR Forward, which focuses on inclusive AI development. Despite this alignment, Kenya's lack of formal endorsement and absence of a dedicated regulatory body for AI limit the full integration of OECD standards, particularly in algorithmic transparency and accountability. Serious concerns also exist about practices akin to AI-powered mass surveillance.

Korea

In 2024, Korea passed comprehensive AI legislation with the Basic Act on the Development of Artificial Intelligence and Establishing a Foundation of Trust. Korea brought countries together to reaffirm support for AI safety and Inclusive AI in the second AI Safety Summit (AI Seoul Summit) and for progress toward the responsible use of AI in the military in the REAIM 2024 summit.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

National AI Strategy

The Republic of Korea, known commonly as South Korea, announced the National Strategy for Artificial Intelligence³²⁵³ in December 2019. While the focus is on building a world-class AI technical capacity through ambitious targets such as “achieving a world top 3 digital competitiveness by 2030,” the Strategy also aims to address AI ethics and algorithmic transparency-related issues under the pillar of realizing people-centered AI.

The National Strategy materializes the Presidential Initiative for AI that former President Moon Jae-in announced on October 28, 2019. “AI is moving beyond scientific and technological advancements and is approaching us as a new civilization [...] AI will not only affect industrial sectors but also solve many issues facing our society: public health in an aging society, welfare for senior citizens living alone, the safety of women living by themselves, and the prevention of crimes that are becoming more sophisticated,” stated former President Moon Jae-in.

Korea's National Strategy identifies nine major axes and 100 major tasks in three major areas. The major areas are (1) fostering a global-leading AI ecosystem, (2) becoming a country unrivaled for its use of AI, and (3) realizing people-centered AI. The Strategy is the result of a cooperation of the entire Korean ministries and offices including the Ministry of Science and ICT, the Ministry of the Interior and Safety, the Ministry of Education, and the Presidential Committee on the Fourth Industrial Revolution (PCFIR).³²⁵⁴

The Presidential Committee on the Fourth Industrial Revolution (PCFIR) formally ended in September 2022³²⁵⁵ and the Presidential Committee on Digital Platform Government was launched in September 2023.³²⁵⁶ The new Committee will be responsible for evaluating policies and projects related to AI, infrastructures, and services for creating a Digital Platform for Government according to a human-centered vision.³²⁵⁷

President Yoon Suk-yeol visited the University of Toronto for an AI roundtable in September 2022, where they discussed AI and collaboration between

³²⁵³ The Government of the Republic of Korea, *National Strategy for Artificial Intelligence* (Dec. 17, 2019), <https://www.msit.go.kr/bbs/view.do?sCode=eng&nttSeqNo=9&bbsSeqNo=46&mId=10&mPid=9>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

University of Toronto and South Korean partners.³²⁵⁸ As an extension of the roundtable, the Ministry of Science and ICT announced the Digital Strategy of Korea in line with President Yoon’s vision. The purpose is for Korea “to become a best practice country in digital innovation and take a leap forward as a leading country in the digital era, rather than staying stagnant as a fast-follower.”³²⁵⁹

In addition, MSIT announced the Plan for Mainstreaming Artificial Intelligence and Industrial Advancement in January 2023 as a follow-up plan for the Korean Digital Strategy. The plan will promote the advancement of AI industry and technology while sharing benefits with the public by investing in 10 core AI projects.³²⁶⁰

The Korean government updated the National Strategy in September 2024 with a set of new commitments intended to serve as a blueprint for Korea’s goal to become one of the top three global AI powerhouses.³²⁶¹ These commitments are part of the Policy Directions for National AI Strategies presented at the first National AI Committee chaired by President Yoon Suk Yeol. MSIT described this development as a “shift in policy paradigm,” as the government aims to “move beyond merely expanding the initial AI infrastructure” to establishing AI as part of the national infrastructure, “fostering transformation across all sectors.”³²⁶²

The Policy Directions for National AI Strategies reasserts the goal set out in the National AI Strategy of establishing Korea as a Global AI Hub through the Leap to AI G3. This plan rests on four AI flagship projects:

1. Expand advanced GPU capacity by 15 times and support the commercialization of domestic AI semiconductors, including the establishment of the National AI Computing Center
2. Stimulate private investment of KRW 65 trillion in the AI sector over four years (2024–2027)
3. Drive the AI adoption rate of 70% in industries and 95% in the public sector by 2030

Center for AI and Digital Policy

4. Establish robust AI safety and security capabilities early on to take the lead in global AI governance.³²⁶³

The Korean government also unveiled an updated enforcement framework consisting of the newly established National AI Committee that will “be responsible for establishing and implementing the National AI Strategy by translating the policy directions into concrete and actionable tasks.”³²⁶⁴

AI Ethics

Korea’s National Strategy for Artificial Intelligence includes “preventing AI dysfunction and establishing AI ethics” as one of nine major actions and aims to set up AI Ethics Principles through public consultation.³²⁶⁵

As a follow-up action to establish the comprehensive AI ethical standards that all members of society—developers, providers, and users—can refer to from development to use of AI, the Korean government has formed an AI ethics research team and analyzed the commonalities and differences in OECD AI Principles and 25 global major AI ethical principles. As a result, in December 2020, the Korean Ministry of Science and ICT announced the Korean AI Ethical Standards³²⁶⁶ at the plenary session of the Presidential Committee on Fourth Industrial Revolution. The Standards include 3 basic principles to ultimately materialize ‘Humanity’ in the development and utilization of AI, as well as 10 key requirements to back up these principles. The 3 basic principles are Human dignity, Public interests, and Technological teleology. The 10 key requirements are Human rights advocacy, Privacy protection, Respect for Diversity, Injunction against infringement, Public interests, Solidarity, Data management, Accountability, Safety, and Transparency.

In May 2021, the Ministry of Science and ICT announced the national strategy to build social trust in the era of AI. The strategy explicitly put an emphasis on the development of relevant technologies to pursue three ethical values: Explainability, Fairness, and Robustness.³²⁶⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Improvement of Policies and Laws for the Era of AI

Korea's legislature approved the Framework Act on the Development of Artificial Intelligence and Foundation of a Trust in December 2024 and enacted in early January 2025.³²⁶⁸ The Act establishes human-centered AI development and use as a basic principle such that "Artificial intelligence technology and the artificial intelligence industry should be developed in a way that enhances safety and reliability and improves the quality of life of the people."³²⁶⁹ The Act charges state and local governments to "devise policies to respond to changes in all areas, including society, economy, culture, and people's daily lives" because of AI systems and to "enable all citizens to adapt stably."

In keeping with the National Strategy's focus on making the Republic of Korea a global leader in AI, the act includes systems for developing trustworthy AI and charges the government to "respect the creative spirit of AI business operators."³²⁷⁰ The legislation will be enforced beginning in January 2026, with the Ministry of Science and ICT charged as the authority in charge of implementation and investigation.

In May 2020, the Korean government amended the Framework Act on National Informatization,³²⁷¹ now the Framework Act on Intelligence Informatization. "The purpose of this Act is to contribute to realizing an intelligent information society, securing the national competitiveness, and improving the quality of life for citizens, by prescribing matters necessary to establish and promote policies related to intelligent informatization."³²⁷² The Act provides a definition for intelligence information technology and the basis for all regulations

that address the development and use of AI, such as the basic principles of the intelligence information society, technical requirements, standardization, and personal data protection. This Framework operationalizes in part the National AI Strategy and its idea of a “future-oriented legal system”³²⁷³ based on the review and revision of relevant laws and regulations to address the issues pertaining to the use of AI in (1) data, (2) intellectual property, (3) accountability, (4) regulation of algorithms and trade secret, (5) finance, (6) platform, (7) labor, (8) healthcare, and (9) welfare.

Public Participation

The Korea Information Society Development Institute (KISDI) and the Ministry of Science and ICT (MSIT) jointly held an open seminar³²⁷⁴ to receive a wide range of public comments from the public and private sectors, academia, and civil society. The conference was implemented with the mission of changing the direction of AI’s implication on Korean society in more benevolent ways, by checking the goodness, fairness, and validity of “The RoK’s AI Utilization Guidelines” and its enforcement as of 2022. Before convening the event, the KISDI actively accepted and reflected a large number of opinions related to Korea’s three major AI policy implementation measures: 1) The Self-checklist for practicing AI Ethics Standards,³²⁷⁵ 2) The Instructions to develop AI Accountability, and 3. AI Ethics Education.³²⁷⁶

South Korea conducted public consultations on AI legislation and welcomed independent expert participation in newly established AI bodies in 2024. Specifically, from June to July 2024, the Ministry of Science and ICT (MSIT) solicited public feedback on the opportunities and threats of AI technology, regulatory strategies for ensuring safe and reliable AI, and the government’s AI policy priorities through an enhanced digital public forum (beingdigital.kr), following the Plan for Establishing a New Digital Order announced in May. This input will be used to guide the development of global AI norms in the future. The follow-up on the consultation also announced a policy

Center for AI and Digital Policy

idea contest open for anyone to propose new policies on issues such as closing the gap in access to AI, ensuring ethical awareness among AI developers, and preventing AI from violating individual rights.³²⁷⁷

Also, in April and July 2024, South Korea established two specialized bodies to enhance AI governance, both including independent experts. The Ministry of Science and ICT launched the AI Strategy High-Level Council to guide AI integration across various sectors.³²⁷⁸ Additionally, the State Council inaugurated the National Artificial Intelligence Committee to coordinate comprehensive national AI policies, focusing on regulatory improvements and infrastructure expansion.³²⁷⁹

Data Protection

In February 2020, Korea amended the three major data privacy laws to protect personal information and improve the personal data protection and privacy governance system in the era of the 4th industrial revolution.³²⁸⁰ The three laws are the Personal Information Protection Act (PIPA), the Act on the Promotion of the Use of the Information Network and Information Projection (the Network Act), and the Credit Information Use and Protection Act (the Credit Information Act). These amendments reflect the outcome of “Hackathon agreements” held in February and April 2018. In May 2018, relevant ministries, civil society organizations and professionals from the industry, including legal circles, participated in the Presidential Committee on the Fourth Industrial Revolution. The Committee discussed the introduction of the use of fictitious names to foster the use of data, reviewing the existing legislation for increased coherence, and strengthening users’ responsibility.

As a result of the amendments to the three major data privacy laws, the mandate of the Personal Information Protection Commission (PIPC) was upgraded in August 2020. The PIPC is now a ministerial-level central administrative agency that formulates data privacy policies and supervises the enforcement of data

protection laws as an independent authority.³²⁸¹ Initially created in 2011 under the office of the President, the PIPC now operates independently. The PIPC centralizes various personal information protection functions previously scattered across ministries.

The PIPC published an AI Personal Information Protection Self-checklist to provide guidelines for the protection of personal information gathered and used by artificial intelligence in 2021. The checklist presents 16 specific items to check and 54 items to verify the safe handling of personal information during the AI life cycle: design, development, and operation. The PIPC penalized the indiscriminate use of personal information by a company using AI technology for the first time in 2021 as well. The AI startup was fined following a massive personal data breach.³²⁸² The PIPC signed self-regulation agreements with ten online shopping platforms for the safe use of personal information in 2022.³²⁸³

The PIPC adopted a guide clarifying the rights of data subjects regarding automated decision-making by institutions using AI³²⁸⁴ and published standards for processing public data used in artificial intelligence (AI) development and services in 2024.³²⁸⁵

The PIPC and the European Commission announced the successful conclusion of their negotiations and the adoption of the European Commission's adequacy decision for the transfer of personal data from the European Union to the Republic of Korea under the General Data Protection Regulation in December 2021. The adequacy decision confirms the shared commitment of the Republic of Korea and the EU to a high level of data protection.³²⁸⁶ Korea reconfirmed this

collaboration and partnership with the EU in a 2023 joint press statement³²⁸⁷ and ongoing discussions in high-level meetings with international data protection officials in 2024.³²⁸⁸

The PIPC is a member of the Global Privacy Assembly (GPA) since 2012. The Korea Internet & Security Agency (2004) and the Korea Communications Commission (2018) are also GPA members. The PIPC has taken an active role within the GPA in recent years. The PIPC co-sponsored the 2022 GPA Resolution on Facial Recognition Technology³²⁸⁹ and the 2023 GPA Resolution on Generative AI.³²⁹⁰ However, the PIPC did not endorse the 2018 Declaration on Ethics and Data Protection in AI³²⁹¹ or the 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence.³²⁹² The PIPC serves as a member of the GPA's Policy Strategy Working Group 1: Global Frameworks and Standards³²⁹³ and Digital Education Working Group,³²⁹⁴ whose common purpose is to enhance data protection and AI accountability.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The PIPC announced its plans to shape global privacy norms, especially in the context of emerging AI technologies in 2024. Chairperson Haksoo Ko will participate in high-level discussions on establishing safe frameworks for cross-border data transfers and privacy governance for AI applications, collaborating closely with EU data protection authorities and others from the UK, France, and Singapore to strengthen international cooperation. The PIPC will also host the GPA in Seoul in 2025 and promote global solidarity on data protection standards and AI governance, aiming to establish a unified approach to privacy in the digital age.³²⁹⁵

Regarding AI oversight, the PIPC is not the only competent independent agency. The National Human Rights Commission of Korea³²⁹⁶ advocates for the non-discriminatory use of AI and warns against the risk of bias and deep fake technology.³²⁹⁷ In a decision of April 11, 2022, the National Human Rights Commission adopted Human Rights Guidelines on the Development and Use of AI.³²⁹⁸ The Commission took a step toward implementing the Guidelines by developing a Human Rights Impact Assessment Tool for AI in 2024.³²⁹⁹ The Commission advocated to the Minister of Science and ICT that the Tool be “utilized during the establishment and implementation of AI-related policies and project plans to prevent human rights violations and discrimination arising from the development and use of AI.”

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Algorithmic Transparency

The Korean legislature passed amendments to the PIPA in 2023.³³⁰⁰ As of March 2024, South Korea's revised Personal Information Protection Act (PIPA) regulates automated decisions, defined as decisions made solely through automated processes, including AI systems. Under this amendment, individuals can request an explanation for automated decisions affecting them and may challenge such decisions if they impact their rights or responsibilities.³³⁰¹

Changes to the Public Official Election Act (POEA), effective January 2024, aim to prevent misuses of deepfakes during elections. The law mandates that AI-generated content, including synthetic images, voices, or videos that closely resemble authentic content, must clearly disclose the use of AI. This amendment seeks to protect electoral integrity by ensuring transparency of AI usage.³³⁰² The national strategy to build social trust in the era of AI explicitly refers to "Explainability" as a main ethical value.³³⁰³ The National Human Rights Commission's Human Rights Guidelines on the Development and Use of AI also provides for algorithmic transparency. The Human Rights Impact Assessment Tool developed from these Guidelines³³⁰⁴ in 2024 guides developers or deployers to protect algorithmic transparency through measures for Personal Information Protection, Data Management, Algorithm Performance and Reliability, Non-Discrimination, Explainability and Transparency, and Degree of Human Intervention.³³⁰⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Framework Act on Intelligence Informatization provides a framework to secure accountability, interoperability, and safety of intelligence information technology.³³⁰⁶ The Korean government enacted the details and level of technical standards³³⁰⁷ that are legally required to be open to the public in May 2022. The technologies subjected to these criteria are, first and foremost, developed, managed, and utilized for military purposes; second, directly utilized for medical purposes and therefore have a tremendous influence on people's lives; and third, likely to cause significant damage to people in case of malfunction.³³⁰⁸

Korea amended sectoral legislation to reflect new demands for algorithmic transparency. The Credit Information Use and Protection Act introduced the right to challenge decisions based on automated processing in 2021.³³⁰⁹ The Credit Information Act recognizes the data subject's right to challenge an automated credit assessment. It defines "automated credit assessment" as a "credit information company's or other act of evaluating credit information and other data using an information processing device (such as a computer) without the intervention of a human in the evaluation." The Credit Information Act was the first law that empowers individual users toward AI transparency.

The Korea Fair Trade Commission indicated in September 2024 that it intends to focus on amendments to Korea's competition law, the Monopoly Regulation and Fair Trade Act (MRFTA),³³¹⁰ for regulating AI companies, abandoning initial plans to adopt a Korean version of the EU's Digital Markets Act.³³¹¹

EdTech and Children Tracking

In their report investigating use of EdTech tools endorsed by governments for online learning during the pandemic,³³¹² Human Rights Watch noted that Korea Educational Broadcasting System (EBS), the website of Korea's national educational public broadcaster, with over 2.1 million daily users during the COVID-19 school closure, tracked "a child's every movement and interaction within the virtual classroom" and sent children's data to 15 AdTech companies. Nonetheless, the EBS "does not disclose the use of ad trackers on the site."³³¹³ "Nor are the AdTech companies detected by Human Rights Watch to receive children's data disclosed in the list of third parties officially recognized as processors of EBS users' personal data."³³¹⁴

Without following up on efforts to address these issues, the Korean government announced plans to invest \$69.3 million by 2026 to develop digital classroom infrastructure and additional educational services. The EdTech Korea Fair 2024 organized in September 2024 highlighted various AI-driven learning platforms and digital services to personalize student learning, enhance digital literacy, and provide tools for teachers to monitor students' progress in real-time. The International Trade Administration estimates that "the focus is primarily on adopting AI technologies such as Intelligent Tutoring Systems, Extended Virtual Worlds (Metaverse), Extended Reality (XR), Conversational AI, and Speech Recognition into existing textbooks."³³¹⁵

Environmental Impact of AI

South Korea took a role in promoting environmentally responsible AI through commitments made at the Seoul AI Safety Summit in 2024. The Seoul Declaration and Ministerial Statement, adopted by various international leaders and experts, emphasized the need for AI that is safe, inclusive, and sustainable. Recognizing AI's potential impact on the environment, the declaration calls for policy frameworks that support the development of AI systems designed with sustainability in mind, ensuring they contribute positively to global climate goals.³³¹⁶ Later, at the United Nations Summit of the Future in September, South

Korea endorsed the Global Digital Compact, committing to responsible AI use that minimizes environmental harm and accelerates climate action.³³¹⁷

Lethal Autonomous Weapons

The Korean government takes a stance against developing lethal autonomous weapons and rather focuses on AI supporting non-weapon systems such as effective management of military supplies or human decision-making processes.³³¹⁸

In October 2022, the Republic of Korea was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.³³¹⁹ In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”³³²⁰ Korea voted in favor of the UN General Assembly resolution on lethal autonomous weapons systems in December 2023.³³²¹

Korea participated in the REAIM 2023 international summit on the responsible application of artificial intelligence in the military domain. Hosted by the Netherlands, the participants worked to define an agenda for developing international agreements on AI applications in the military.³³²² At the end of the

Center for AI and Digital Policy

Summit in February 2023, Korea and other participant countries agreed on a joint call for action³³²³ where they “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”³³²⁴ Korea also endorsed the Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.³³²⁵

South Korea organized the second the Responsible AI in the Military Domain Summit in Seoul (REAIM2024), attended by representatives of 90 countries in September 2024. The summit highlighted South Korea’s commitment to shaping global standards and frameworks for AI in military applications, underscoring its position as a mediator in the international arena. During the summit, 61 participants endorsed the Blueprint for Action, which “suggests principles and framework for the future governance, emphasizing that being responsible entails complying with international law, holding humans responsible and accountable, ensuring reliability and trustworthy of AI, maintaining an appropriate human involvement and improving AI explainability.”³³²⁶

Weeks after the Summit, the Ministry of Science and ICT demonstrated how Korea’s leadership in efforts to regulate LAWS integrated into the national AI strategy with the launch of the National AI Strategy Policy Directions.³³²⁷ Under the vision of “Emerging as one of the top three AI powerhouse to become a Global Pivotal State,” the Policy Directions document outlines plans to promote AI in national defense through the “development of AI military security policies and the expansion of defense AI infrastructure” as part of efforts to achieve a 95% AI adoption rate in the public sector. South Korea also commits to promoting the values of the Seoul Declaration globally and “expand international cooperation for the responsible use of AI in military and security sectors” under the plan to lead global AI governance.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Human Rights

Korea was rated “Free” with a score of 83/100 in the Freedom in the World 2024 report.³³²⁸ According to the report, “South Koreans benefit from regular rotations of power and robust political pluralism. Civil liberties are generally respected, though the country struggles with minority rights and social integration.”³³²⁹

The Korean government established the National Human Rights Commission of Korea (NHRCK) in 2001 as a national advocacy institution for human rights protection.³³³⁰ During his congratulatory remarks on Human Rights Day in December 2018, former President Moon Jae-in stated “when human rights are realized in everyday lives, their value is demonstrable [...] Human rights are guaranteed through peace, and peace is secured through human rights.” He also extended his gratitude to NHRCK for “fully demonstrating the history and significance of the Universal Declaration of Human Rights.”³³³¹

In addition, the Korean government has been an active member in the seven core international human rights instruments, including the International Covenant on Civil and Political Rights and International Covenant on Economic, Social, and Cultural Rights. Especially since its entry into the United Nations (UN) in 1991 and the Commission of Human Rights (CHR) in 1993, Korea has been engaged in various international cooperation activities for the improvement of human rights, especially the rights of the vulnerable and of North Koreans.³³³²

AI Safety Summit

In November 2023, the Republic of Korea participated in the first AI Safety Summit and endorsed the Bletchley Declaration.³³³³ Korea thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI

Center for AI and Digital Policy

systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

Building on this, South Korea co-hosted the Seoul Summit with the United Kingdom in Seoul on May 21-22, 2024. This resulted in the conclusion of several agreements, including the Seoul Statement of Intent toward International Cooperation on AI Safety Science and the Seoul Declaration for Safe, Innovative, and Inclusive AI.³³³⁴ France hosted the third AI Safety Summit, rebranded as the AI Action Summit in February 2025.”³³³⁵

OECD / G20 AI Principles

The Korean government has been actively participating in international cooperation in the AI sector to promote responsible development and the use of AI. Korea endorsed the OECD AI Principles in 2019 and recommitted to the updated OECD AI Principles in 2024.³³³⁶ The Korean government is also one of the founding members of the Global Partnership on AI (GPAI), the world’s first international AI initiative.³³³⁷

At the Ministerial Council Meeting of October 2021, the Korean Ministry of Science and ICT presented the “Progress over the past two years in implementing the OECD AI Principles and Future Direction.”³³³⁸ A general director of the AI policy bureau at the Ministry of Science and ICT, Ms. Kyunhee Song, presented Korea’s progress in accordance with the OECD AI Principles. As part of the effort to implement the OECD AI Principles, the Korean government also established the ‘National Strategy of Artificial Intelligence (2019)’ and the ‘Digital New Deal Strategy (2020) (Data Dam Projects).

To further its commitment, Korea has joined the Steering Group for OECD’s Working Party on Artificial Intelligence Governance.

South Korea ranked first in the OECD 2023 Digital Government Index, reflecting its alignment with OECD AI principles, particularly in digital government transparency and effectiveness.³³³⁹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Council of Europe AI Treaty

South Korea has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.³³⁴⁰

UNESCO Recommendation on AI Ethics

Korea has been playing an active role from the drafting to the implementation of the UNESCO Recommendation on the Ethics of AI.

Korea co-organized a Virtual Regional Consultation for Asia and the Pacific Region in July 2020, to work on the first draft. The conference responded to UNESCO's request for feedback reflecting different cultural values while addressing various regional concerns to achieve a document that "takes into account the wide-ranging impacts of AI, including on the environment on the needs of the global south."³³⁴¹

The Korean government presented the results of ongoing projects supported by various public donors and identified new opportunities for cooperation with UNESCO in 2021.³³⁴² The Ministry of Science and ICT informed UNESCO of the Korean government's support for the drafting of the UNESCO Recommendation on the Ethics of AI. The Ministry of Science and ICT and the Korean Information Science Development Institute (KISDI) participated in two Intergovernmental Meetings and Intersessional Consultations for intergovernmental negotiations for the Recommendation. The Ministry of Science and ICT provided in-depth comments on the draft to make the Recommendation actionable for future AI policy. In that process, the Korean government consented to the purpose and values of the Recommendation.

Together with the Korean National Commission for UNESCO, Korea Legislation Research Institute (KLRI) hosted a forum themed UNESCO's Recommendations on AI Ethics and Legal Challenges in April 2021, which discussed the status of UNESCO's Recommendation and significant legal issues with the advent of AI technologies, urging for collaboration between the two organizations to address ethical and legal challenges posed by AI.³³⁴³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In December 2022, the Ministry of Science and ICT of Korea attended the first UNESCO Global Forum on Artificial Intelligence Ethics online hosted by the Czech Republic in Prague,³³⁴⁴ recalling the significance of the Recommendation and discussing its implementation.³³⁴⁵

South Korea has not begun the process of implementing the UNESCO Readiness Assessment Methodology (RAM).³³⁴⁶

Evaluation

Korea is one of the leading countries in the field of AI policy, a status confirmed by the enactment of the Basic Act on AI Development. Korea has adopted a comprehensive National Strategy for AI, developed a strong ethical framework, and launched the AI Strategy High-Level Council and National AI Committee to guide AI policy integration across all sectors.³³⁴⁷ Korea has endorsed the OECD/G20 AI principles and played an active role in the drafting and implementation of the UNESCO Recommendation on the Ethics of AI. Korea has updated national privacy laws, established a Personal Information Protection Commission, and maintained a leading role in the defense of human rights. Although Korea's Personal Information Commission endorsed the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology, the absence of regulation on the use of facial recognition at the national level still needs to be addressed.

Kuwait

In 2024, Kuwait introduced a draft National AI Strategy 2025–2028 and updated the Data Privacy Protection Regulation.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

National AI Strategy

Kuwait's focus on the diversification of its oil-based economy is the basis of the Kuwait Vision 2035 "New Kuwait,"³³⁴⁸ the country's National Development Plan requiring investment in R&D propelled by industry, government, and academia. Kuwait released the draft National AI Strategy 2025–2028 in 2024 in line with the Vision 2035.

The National AI Strategy 2025–2028 document outlines strategic objectives for the Government to advance toward the AI goals defined under the Vision 2035. The Strategy conflates the pillars of the vision with a roadmap for AI, envisioning Kuwait's global positioning, Sustainable living, Effective public administration, Creative human capital, Developed infrastructure, Sustainable diversified economy, and High-quality healthcare as keys to harnessing AI "for the benefit of its citizens and the nation as a whole."³³⁴⁹ The National AI Strategy stresses the importance of "transparency, accessibility and user-friendliness" to the objective of transforming public services.³³⁵⁰ The Strategy defines "Advancing Responsible AI" as the first step in the roadmap, building the development of AI on "Ensuring AI is developed and deployed responsibly within Kuwait is a critical piece of the AI puzzle." The Government notes policy and regulatory tools to ensure responsible AI governance.³³⁵¹

Launched in 2017, the New Kuwait Development Plan aims to transform the country into a financial and commercial hub for the region. The plan is aligned with the SDG 2030 and more particularly the objective of "consolidating the values of society, preserving its identity, as well as achieving justice, political participation and freedoms."³³⁵² The seven pillars of the Kuwait Vision 2035 are:³³⁵³ (1) public administration (2) economy (3) infrastructure (4) living environment, (5) healthcare, (6) human capital, and (7) global position. The public administration pillar has the objective of "reform[ing] administrative and bureaucratic practices to reinforce transparency, accountability and efficiency in the government."

The Kuwaiti government issued the first National Cyber Security Strategy (2017–2020) in 2017. Notable in the strategy is the declaration of the State of

Kuwait to ensure that the strategy “preserves the fundamental rights, freedom and privacy of individuals and institutions.”³³⁵⁴ The strategy defines three objectives for the creation of a cybersecurity environment that is safe and secure, through the development of legislation that keeps pace with technology and aligns with international standards.³³⁵⁵

Kuwait’s Communications and Information Technology Regulatory Authority (CITRA) declared the importance of adopting artificial intelligence³³⁵⁶ and cloud computing techniques to achieve the New Kuwait 2035 objectives. Another government entity, the Central Agency for Information Technology (CAIT) has a key role in implementing a roadmap for government in digital transformation and announced the launch of the Massar strategy during the Smart Government Summit in May 2022.³³⁵⁷

Government entities such as CAIT are making concerted efforts to advance the digital transformation roadmap in Kuwait. In November 2022, CAIT hosted the Digital Transformation Kuwait Conference, to discuss digitization in government services and the pathway to the digital economy. The Deputy Director General of CAIT expressed the need for “cooperation between government and private sector to build, and advanced digital economy coupled with a flexible legislative system that dedicates uniformity to the sector’s cybersecurity policies, guidelines and strategies.”³³⁵⁸

As a member State of the Digital Cooperation Organization (DCO), Kuwait endorsed the Riyadh AI Call for Action (RAICA) Declaration “aimed at advancing the DCO’s commitment to identifying and addressing present, emerging and future humanitarian issues in the field of AI.”³³⁵⁹ RAICA was

Center for AI and Digital Policy

launched during the Global AI Summit of 2022³³⁶⁰ and established a commitment to developing AI technology that benefits people, communities, and nations.

Public Participation

The Kuwait Government's online platform is the channel of communication of the government with the society, providing information about laws and regulations and increasing awareness of information technology.³³⁶¹ The platform includes a list of government entities using e-services with channels for consultation. Kuwait is yet to have a mechanism to engage civil society in AI policymaking and the formulation of an AI strategy.

The Kuwait Vision Engagement Program 2035 (برنامج المشاركة لرؤية الكويت) included a mechanism providing an opportunity for the society to provide input in the formulation of the New Kuwait document.³³⁶² Individuals, government organizations, private companies, NGOs, or volunteers were able to submit their interest in various roles, such as ambassadors, pledgers, enablers, innovators, spreaders, and entrepreneurs.

The Kuwaiti Government produced the Country Engagement Framework (CEF) as part of the Third Kuwait National Development Plan (KNDP-3) within the New Kuwait 2035 Vision. This policy framework, produced in consultation with stakeholders and with the support of the World Bank,³³⁶³ reflected the analysis of issues and challenges regarding the seven pillars of Vision 2035.

On the civil society front, the Kuwait Transparency Society, a non-profit organization in Kuwait, participated in drafting the executive regulations of the "Right of Access to Information Law" passed in November 2021.³³⁶⁴ The focus group included a team of governmental experts to improve the final format of the regulations in line with international experiences.³³⁶⁵ The Society monitors the regulations implementation and trains government agencies in implementing the law in line with transparency and anti-corruption standards.

Center for AI and Digital Policy

Kuwait has embraced e-government plans, to enhance transparency and decentralization of public services, to minimize the control of government officials on operations.³³⁶⁶ This is still work in progress, as reported by the Bertelsmann Foundation country report,³³⁶⁷ which by 2022 ranked Kuwait #68 out of 137 countries, substantially lower than in previous years, with low scores in “Rule of Law” and “political participation.”

Data Protection

Kuwait's Constitution protects the right to privacy. Article 39 reads: “Freedom of postal, telegraphic, and telephone correspondence is maintained, and secrecy is ensured.” Messages may not be monitored unless required by law and only in compliance with established processes.³³⁶⁸

Kuwait lacks a dedicated personal data protection legislation and a data protection supervisory entity.³³⁶⁹ Two government entities: CITRA and CAIT, are responsible for the regulation and governance respectively, of information technology services in the country. CITRA³³⁷⁰ is the Communication & Information Regulatory Authority, responsible for regulating, supervising, and monitoring the telecommunication sector of Kuwait and protecting the interest of users.³³⁷¹ CAIT is the Central Agency for Information Technology, responsible for IT governance.³³⁷²

CITRA has made efforts to provide governance and regulation to the technology sector, through Decision No. 42 of 2021 on Data Privacy Protection Regulation (DPPR)³³⁷³ and the Cybersecurity strategy.³³⁷⁴ The DPPR describes data protection obligations on Telecommunication Services Providers and

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

associated industrial sectors in terms of data collection, storage, processing, and transfer.³³⁷⁵ Human-centered values and fairness may be inferred from the DPPR mandate to “respect the rights and freedoms of natural and legal persons,”³³⁷⁶ setting provisions against the harmful use of personal data by third parties. Penalties are also established in case of violations of these rights. Kuwait updated the Data Privacy Protection Regulation in 2024 to establish a more robust data privacy framework aligned to the Kuwait Vision 2035.³³⁷⁷ CITRA also canceled the Data Classification Policy.³³⁷⁸

The DPPR governs the collection and processing of personal data via Service Providers of Communication and Information Technology Services (CIT Service) in the public and private sectors. CIT Services include public telecommunications networks, the operation of a website, smart application, or cloud computing services, by any natural or legal person.

The DPPR requires the determination of mechanisms and standards for encryption in line with the Data Classification policy of CITRA. Service Providers must comply with certain conditions for data processing, such as a) providing users with clear, easy access to their data practices and policies, b) maintaining a clear purpose for data collection (purpose limitation) and c) maintaining appropriate technical and organizational measures to ensure that personal data is protected against unauthorized or illegal processing, accidental loss, destruction or damage, among other conditions. Exempted from the DPPR are natural persons collecting and processing personal or family data, and security agencies processing personal data to prevent, investigate, or detect crimes, or to prosecute criminals, enforce, or prevent threats against public security.

The 2014 Law on Electronic Transactions includes privacy safeguards for privacy and data protection of civil, commercial, and administrative transactions, controlling electronic records, signatures, transactions, messages, and documents relating to these activities, but no specific mention to safeguards on interactions with AI-powered systems.³³⁷⁹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Law No. 63 of 2015 related to Combating Information Technology Crimes (Cyber Crime Law) regulates acts performed using an “information network” or “information technology.”³³⁸⁰ Punishable under this law are hacking computer systems, accessing personal data without authorization, fraud, posting pornography, and engaging in human trafficking over the Internet. Articles 6 and 7 extend bans on print publications to online sharing of information, including online journalism and private use of social media and blogs.³³⁸¹

The Cyber Crime Law, enforced since 2016, faced criticism for permitting restrictions on Internet-based speech.³³⁸² Nothing in the Cybercrime law precludes police from utilizing these criteria to monitor private communications on Twitter, Facebook, and other social media platforms and mobile phone apps.³³⁸³ An analysis by the Council of Europe (CoE) of the Cybercrime Law No 63 and Law No 20 of 2014 on Electronic Transactions found several areas of misalignment with the Budapest Convention.³³⁸⁴ This development contrasts with the original objectives of the National Cybersecurity Strategy of 2017-2020 that made “fundamental rights, freedom and privacy of individuals and institutions” a priority.³³⁸⁵

In January 2022, the Kuwaiti government announced a Cyber Security Bill to amend Law No. 63 of 2015 and established the National Center of Cybersecurity.³³⁸⁶ In a statement to the United Nations General Assembly in October 2022, the Kuwaiti Diplomatic attaché stressed the importance of the Cybersecurity Strategy 2017-2020 to “protect vital national and informational infrastructure and assets.”³³⁸⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Algorithmic Transparency

Kuwait has not enacted algorithmic transparency in law but the DPPR³³⁸⁸ requires providers to ensure transparency throughout collection and data processing. Yet, the DPPR does not include articles addressing automated decision-making, explainability, or AI-related transparency.

Biometric Identification

Kuwait efforts in digital government started in the early 2000s, following the GCC's decision to create electronic ID schemes for residents across the region. Kuwait launched the ID card program and eGovernment services in 2009. By 2012, Kuwait Ministry of Interior set up a biometric system in all land, sea, and airports, to track wanted individuals attempting to enter illegally to the country, and in 2016, launched a new e-passport system to combat forgery in immigration ports.³³⁸⁹

The Kuwaiti government launched the new Digital ID card in April 2020, entrusting the project's management to the Public Authority for Civil Information (PACI).³³⁹⁰ The new Civil ID card would become the primary way of verifying the digital identity of all Kuwaiti citizens and residents and replace the physical card. The Civil ID was a crucial component in streamlining administrative operations to support Kuwait's comprehensive digital government project, aimed to change the way citizens and residents receive government services.

The new Civil ID card has a microprocessor that can store massive information, including digital certificates in a secure environment, allowing the use of electronic authentication and digital signatures.³³⁹¹ ID verification takes place through mobile and QR codes, with the aid of a bot. A feature of the 'credential wallet' hosts driver's licenses, birth certificates, and other documentation. During COVID-19 the Civil ID app was also used for registration of the status and doses of vaccination.³³⁹²

The Ministry of Education (MoE) announced the approval by the Audit Bureau in January 2023 of the implementation of a fingerprint system to track the

attendance of teachers and school workers in government schools.³³⁹³ Earlier, in 2019, the MoE had plans for implementing a fingerprint system for attendance in 900 public schools, to include students and teachers, “without any gender discrimination” to strengthen safety measures.³³⁹⁴ The compulsory biometric attendance is set to start in the academic year 2023–2024, and is considered by MoE as a necessary action to “end the case of neglect by some teachers and school administration and preventing tampering with records.”³³⁹⁵ The government has already selected the contractor for the 2,770 fingerprint devices worth US\$1.1M to be installed in schools across the country.³³⁹⁶

Facial Recognition

Facial recognition mechanisms were in the plans of Kuwait Civil Aviation in 2019,³³⁹⁷ but were placed “under revision” by Yousef Al-Fouzan, Director General at Kuwait’s Directorate-General for Civil Aviation (DGCA). The system was designed to locate passengers’ whereabouts “at all times” to offer “better airport services.”

The Ministry of Interior of Kuwait rejected categorically allegations of mass surveillance practices to monitor citizens’ accounts on social media in 2020. The Minister set up an investigation committee to pursue fake accounts that published leaked recordings of Kuwait’s State Security.³³⁹⁸

A study by Amnesty International 11 countries using data tracing apps for COVID-19, including Kuwait, found that the “Shlonik” app was among “the most alarming tools [...] carrying out live or near-live tracking of users’ locations by frequently uploading GPS coordinates to a central server [...] far beyond what is

Center for AI and Digital Policy

justified in efforts to tackle COVID-19.”³³⁹⁹ Conversely, a report by Privacy International in 2022, did not find Kuwait to use practices of surveillance in public spaces and use of facial recognition.³⁴⁰⁰

Smart Cities

The government of Kuwait has announced plans for Smart sustainable cities, in line with the New Kuwait 2035 Vision and the efforts towards the UN SDGs, to make “urban operations and services more efficient [...] improve traffic flow and safety [...] and much more.”³⁴⁰¹ Kuwait’s General Secretariat for the Supreme Council for Planning and Development (GSSCPD) and UNDP organized workshops in February 2020 to obtain input from public and private entities and civil society about good practices regarding the creation of eco-cities.³⁴⁰²

Environmental Impact of AI

Kuwait’s National AI Strategy envisions AI development in line with sustainable development goals. The Strategy identifies Energy as one sector where AI can drive advancements to “drive efficiency, foster innovation, and unlock new opportunities” in line with Kuwait’s Vision 2035.³⁴⁰³ The Strategy identifies projects in energy to ensure adequate supply while promoting decarbonization.³⁴⁰⁴ However, the strategy does not address the energy or water demands of AI systems.

Lethal Autonomous Weapons

Kuwait has been an active participant of the CCW GGE Group of Governmental Experts on Lethal Autonomous Weapons, yet the country has not banned their use.³⁴⁰⁵

Kuwait is one of 126 High-Contracting Parties in the Convention of Certain Conventional Weapons (CCW) and endorsed Protocol I (on Certain Conventional Weapons), Amendment II, Protocol III, IV, and V.³⁴⁰⁶

Kuwait, as part of the Non-Aligned Movement (NAM), expressed its position against lethal autonomous weapons systems during the UN General Assembly of 2015, due to the “moral, humanitarian, and legal challenges for the international community.”³⁴⁰⁷ The statement, presented during the Group of Governmental Experts on Emerging Technologies in the Area of Lethal Autonomous Weapons Systems Meeting in Geneva in 2022, calls for the negotiation of a “legally binding international instrument stipulating prohibitions and regulations on lethal autonomous weapons systems.”³⁴⁰⁸

Kuwait participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands in February 2023. At the end of the Summit, Kuwait, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.³⁴⁰⁹ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” States also “stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders,

including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain.”³⁴¹⁰

Human Rights

Kuwait is a signatory of the Universal Declaration of Human Rights.³⁴¹¹ Kuwait has not ratified the International Covenant on Civil and Political Rights (ICCPR) or the International Covenant on Economic Social and Cultural Rights (ICESCR).³⁴¹² When the ICCPR was first issued, Kuwait expressed reservations and observations³⁴¹³ because ICCPR’s Articles 6, 7, and 13 combined form an effective barrier to critical political discourse on the Internet, in contrast to the crucial safeguards provided by article 19 of the ICCPR.

The Freedom House rated Kuwait as a “Partially Free” country with a score of 38/100 in 2024; with a score of 14/40 in political rights and 24/60 in civil liberties.³⁴¹⁴ Amnesty International reported that Kuwait has areas to improve in relation to protecting the rights of certain groups of non-citizens.³⁴¹⁵ Human Rights Watch in 2022 reported that Kuwaiti authorities limit free speech and punish dissidents using sections in the penal code, national security, and cybercrime legislation, notably for remarks published on social media.³⁴¹⁶

Kuwait’s Diplomatic Attache Jana Al-Dhafiri’s speech at the 23rd regular session of the Independent Permanent Human Rights Commission (IPHRC) of the Organization of Islamic Cooperation (OIC) stressed Kuwait’s commitment to human rights in AI. Al-Dhafiri called for “extraordinary measures to bridge digital gaps and foster innovation, including creating a comprehensive global regulatory framework [...] to advance a free, open, and secure digital future centered on human rights.”³⁴¹⁷

Transparency International’s 2022 Corruption Perception Index ranks Kuwait in 77th place out of 180 countries with a score of 42/100, signifying some

³⁴¹⁰ Responsible AI in the Military domain Summit, *REAIM Call to Action* (Feb. 16, 2023), <https://www.government.nl/documents/publications/2023/02/16/reaim-2023-call-to-action>

level of corruption.³⁴¹⁸ Kuwait has taken considerable steps in the past five years to fight corruption and establish key foundational policy instruments to improve the government's role in fighting corruption. Accordingly, the Kuwait Anti-Corruption Authority (NAZAHA) was set up as an independent public authority to combat corruption under Law No. 2 of 2016, including the development of the NAZAHA governance framework.

The Government of Kuwait supports and promotes the right of peoples to self-determination (Guideline # 2), as well as international and regional resolutions that uphold this right, on the understanding that it is a “fundamental right that cannot be suppressed by any means or under any circumstances.”³⁴¹⁹ Kuwait's Public Authority for Anti-Corruption (Nazaha) formulated the Kuwait Integrity and Anti-Corruption strategy (KIACS) 2024,³⁴²⁰ a comprehensive document that aligns with the new Kuwait Vision 2035. The KIACS has a focus on Sustainable Development Agenda (SDGs) 2030 and The United Nations Convention against Corruption, to promote the rule of law and accountability (#5 Assessment and Accountability Obligation).

OECD / G20 AI Principles

Kuwait is not a member of the OECD and did not endorse the OECD AI Principles of 2019³⁴²¹ or the updated principles in 2024.³⁴²² Kuwait has not submitted reports to the OECD AI Policy Observatory in relation to ongoing policies, strategies, or activities associated with AI.³⁴²³

Kuwait is a member of the MENA-OECD Initiative on Governance and Competitiveness created in 2021 to implement reforms to [...] improve [...] governance structures and cooperation.³⁴²⁴ The MENA-OECD Initiative has a focus on welfare, stability, and socio-economic security for all citizens, gender equality, and transparency, but does not address AI specifically.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Aa review of Innovation policies in Kuwait by OECD³⁴²⁵ found that policies to promote science, technology, and innovation were either partially implemented or not implemented at all.

Council of Europe AI Treaty

Kuwait has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.³⁴²⁶

UNESCO Recommendation on AI Ethics

Kuwait is a UNESCO member since 1960³⁴²⁷ and is one of the 193 member states endorsing the Recommendations on the Ethics of AI.³⁴²⁸ Kuwait had a leading position in this process, chairing the UNESCO Intergovernmental committee that approved the AI code of ethics in 2021.³⁴²⁹ The committee included 300 experts, 102 countries, and 49 observers. Ambassador Adam Al Mulla, Permanent Representative of Kuwait to UNESCO highlighted the importance of the UNESCO Recommendation as a negotiated effort to reach a framework of international and national policies “to ensure that Artificial Intelligence benefits society as a whole.”

UNESCO launched the Guidance for Policy Makers in the Gulf States with a forum to discuss AI policy with representatives from Kuwait and other five Arab states in 2021.³⁴³⁰ The UNESCO event was a key engagement in the region that aimed to “initiate the conversation on the possibility of developing national policies in AI.” Following this effort, in a 2022 statement, Kuwait University called all university units to activate the UNESCO recommendation in their current and future applications.³⁴³¹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Kuwait is an example in the Arab region of engagement in the promotion of the UNESCO Recommendations. Kuwait Ambassador Mr. Al Adam Al Mulla was elected Chair of the Group of Friends of the Implementation of the Recommendation on the Ethics of Artificial Intelligence in September 2022.³⁴³² The Group of Friends of the Implementation of the Recommendation on the Ethics of AI seeks to set a program that includes: (1) Elaboration of capacity-building tools and methodologies aligned to Policy action 1 for the Ethical Impact Assessment, Monitoring and Evaluation. (2) Global Forum on Ethics of Artificial Intelligence, (3) Establishment of the Global Observatory of AI Ethics, (4) Assisting Member States in building strong national institutions for promoting AI ethics, (5) Establishment, facilitation, and management of expert networks, such as the AI Ethics Experts without Borders (AIEB), Global Network of Knowledge Centers on Ethics of AI, Women on Ethical AI Network (W4ethicalAI).³⁴³³

Kuwait has not taken targeted action to implement the UNESCO Recommendation such as initiating the Readiness Assessment Methodology (RAM).³⁴³⁴

Evaluation

Kuwait's formulation of the New Kuwait Vision 2035 harnesses the efforts to lead in digital transformation. The country is in the early stages of policy formulation that supports the adoption of responsible AI, though the draft AI Strategy in 2024 signaled progress. The fairly high position of Kuwait in AI readiness in the region indicates the potential impact that governance of AI could have to propel the country's responsible innovation. Kuwait's active leadership of the UNESCO Group of Friends and the former Chairmanship of the committee that drafted the Recommendations for AI are positive steps that need to be translated at the national level by the formulation of a national AI strategy. Kuwait has a formalized system for public information and consultation, and this could be leveraged to promote participation in trustworthy AI policy formulation. Governance and oversight are areas of opportunity for growth for Kuwait as documented by multiple international governance ranking systems. The modernization of Kuwait's data protection legal regime would also allow to ease concerns over surveillance practices happening in a legal vacuum.

Lithuania

In 2024, Lithuania identified the competent and market authorities to fulfill the country's enforcement obligations related to the EU AI Act, which entered into force in August. The country's legislative body adopted a Resolution on the use of AI technologies in the public sector built on eleven principles. Lithuania also hosted the convening to open the Council of Europe AI treaty for signatures and became party to the Convention.

National AI Strategy

The Ministry of Economy and Innovation released Lithuania's national AI strategy in 2019. The *Lithuanian Artificial Intelligence Strategy: A Vision of the Future* summarizes the key points from a Landscape Report on the status of AI in the country before defining six sections that align with the purpose "to modernize and expand the current AI ecosystem in Lithuania and ensure that the nation is ready for a future with AI."³⁴³⁵ The sections correspond to key actions divided into policy recommendations defined by principles and mechanisms. The six sections are:

1. Ethical and legal core principles for the development and use of AI
2. Lithuania's position in the AI ecosystem
3. Integration of AI systems across all economic sectors
4. Development of skills and competencies
5. Growth of AI Research and Development
6. Approaching data responsibly and efficiently.

The ethical and legal core principles section identifies two components for Trustworthy AI: "1) Ethical purpose—it should respect fundamental rights, applicable regulation and principles and values and 2) it should be technically robust and reliable" to protection against unintentional harm.³⁴³⁶ Policy recommendations to realize Trustworthy AI center on four principles implemented through a series of mechanisms. The four policy recommendations center on:

1. Developing mechanisms for public feedback to advise the public sector on ethical regulation and implementation, including establishing an AI ethics committee and recognizing AI literacy as a "new civic skill."³⁴³⁷
2. Creating and establishing trust in the rules, laws, and norms that govern AI, in part through regional and international cooperation.
3. Encouraging transparency and fairness in AI applications through support for research on minimizing bias, incentives for companies to uphold ethical standards, creation for an interdisciplinary AI center to promote discussions

³⁴³⁵ Ministry of The Economy and Innovation, *Lithuanian Artificial Intelligence Strategy: A Vision for the Future*, p. 4 (Apr. 2019), [https://eimin.lrv.lt/uploads/eimin/documents/files/DI_strategija_ENG\(1\).pdf](https://eimin.lrv.lt/uploads/eimin/documents/files/DI_strategija_ENG(1).pdf)

³⁴³⁶ Ibid, p. 8

³⁴³⁷ Ibid, pp. 8–9

around ethics, and establishment of a “safeguarding mechanism that researchers would develop systems that are transparent and intrinsically capable of explaining the reasons for their results to users.”³⁴³⁸

4. Encouraging ethics by design by creating a research and educational culture centered on this principle, in part by encouraging discussions on the ethical implications of technology from high school and beyond and developing “mediation capabilities to support vulnerable populations.”³⁴³⁹

Lithuania’s AI development activity plan 2023–2026³⁴⁴⁰ issued in 2022 sets three main objectives: improve the conditions for the development of the AI ecosystem, increase the use of AI across both public and private sectors and create the necessary conditions for AI innovation.

As part of efforts implementing the national strategy, in 2024 the Ombudsman for Academic Ethics and Procedures of the Republic of Lithuania approved the Guidelines for the Ethical Use of Artificial Intelligence in Education and Research.³⁴⁴¹ The Guidelines focus on how to ensure the ethical use of AI technologies in education and research, addressing general principles and relations with open science, publication ethics, protection of intellectual property rights and consumers. “The guidelines provide information on [...] the integration of aspects of the ethical use of artificial intelligence into other relevant institutional policies governing studies and science”³⁴⁴² while allowing institutions to define their systems and processing for evaluating and validating AI tools.

The AI strategy aligns with the National Digital Decade Strategic Roadmap approved in March 2024. The Roadmap summarizes the country’s progress in the context of the Digital Decade for Europe and sets out the actions and measures that will contribute to achieving the general objectives and digital targets.³⁴⁴³ Lithuania plans to make significant investments in various digitalization-related activities by 2030. The Roadmap for Lithuania consists of 4 chapters: Digital skills and ICT

Center for AI and Digital Policy

professionals; Secure, resilient, performant, and sustainable digital infrastructure; Digital transformation of businesses; and Digitalization of public services. Among the country's priorities, Lithuania is paying particular attention to the education system, with a major overhaul of primary and secondary school curricula to strengthen digital competences.³⁴⁴⁴

EU Digital Services Act

As an EU member state, Lithuania shall apply the EU Digital Services Act (DSA).³⁴⁴⁵ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

EU AI Act

As an EU member State, Lithuania is bound by the EU AI Act.³⁴⁴⁶ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

The EU Act took effect on August 1, 2024³⁴⁴⁷ and will be fully applicable in August 2026, with some exceptions: prohibitions took effect in February 2025. The governance rules and obligations for GPAI models will become applicable around mid-2025, while the rules for AI systems embedded in regulated products will apply after 36 months, in 2027.

The Ministry of Economy and Innovation submitted a series of amendments to the Lithuanian legislature in 2024 to speed up the development of AI in the country and fulfill the country's obligations under the EU AI Act.³⁴⁴⁸ The amendments

³⁴⁴⁴ EU Digital Skills and Jobs Platform, *Lithuania—National Digital Decade Strategic Roadmap* (Jul. 27, 2024), <https://digital-skills-jobs.europa.eu/en/actions/national-initiatives/national-strategies/lithuania-national-digital-decade-strategic>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

designate the Innovation Agency as the notifying authority under the Act, charging it to assess the compliance of private entities and research institutions seeking designation as Notified Bodies under the AI Act. The bodies are required to conduct conformity assessments and certifications for high-risk AI systems, ensuring the safety and reliability of AI technologies and products.³⁴⁴⁹

The amendments designate the Communications Regulatory Authority as the market surveillance authority and single point of contact.³⁴⁵⁰ The authority will oversee the safety and reliability of AI products and systems placed on the market.

The Ministry also launched a pilot artificial intelligence (AI) environment, known as an "AI sandbox" in 2024. The space will allow Lithuanian technology companies to safely design, test and develop IoT solutions before bringing them to market.³⁴⁵¹ The Innovation Agency's launched the GovTech sandbox within the GovTech Lab Lithuania project is a pilot project to scale up safe technology and develop new concepts and strategies within the public sector. Projects have included ITocracy, Constant Reshuffling, Digital protest, Encapsulated, Anti Ping pong, Health focus.³⁴⁵²

Public Participation

The national strategy was elaborated by the Ministry of Economy in consultation with an advisory group of "expert representatives from the private sector and academia."³⁴⁵³ The national AI strategy highlighted public participation as one of the the principles shaping the Lithuanian AI ethical AI regulation and implementation with a view to promote the transparent and fair use of AI. However, the platform for consultations, e-Citizen (*e-pilietis*) shows no AI-related consultations.³⁴⁵⁴ The platform collects archives of past consultations that include consultation information, a summary of results, and where applicable, a summary of how the results will be used. Such archives exist for the cycle on the regulation

of personal data protection in 2018³⁴⁵⁵ and the role of the digital transformation manager in 2023.³⁴⁵⁶

The AI development activity plan 2023–2026³⁴⁵⁷ provides for an action item dedicated to “activities for setting dialogue with the society on questions of ethical AI and the social implications of the use of AI systems” (action item 1.5.3.). Yet, the action committee in charge of the implementation of the AI development plan is to consult involved parties and NGOs, with the omission of the public at large (action item 1.5.1).

Data Protection

Since Lithuania is an EU Member State, the General Data Protection Regulation (GDPR)³⁴⁵⁸ is directly applicable in Lithuania and to Lithuanians. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”³⁴⁵⁹ The GDPR entered into force on May 24, 2016 and applies since May 2018. Lithuania’s Law on Legal Protection of Personal Data was amended in July 2018 to adapt to the requirements of the GDPR.³⁴⁶⁰

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Regarding the activities of law enforcement authorities, the Law on Legal Protection of Personal Data, Processed for the Purposes of Prevention, Investigation, Detection or Prosecution of Criminal Offences, or the Execution of Criminal Penalties, or National Security, or Defence³⁴⁶¹ transposed the EU Data Protection Law Enforcement Directive (LED). The LED protects data rights when personal data is used for law enforcement purposes, whether that data belongs to victims, witnesses, or suspects. The LED also prohibits of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.³⁴⁶²

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Lithuania is also a member of the Council of Europe and ratified the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.³⁴⁶³

The State Data Protection Inspectorate³⁴⁶⁴ (Inspectorate) is the main national supervisory authority in Lithuania. When data processing relates to journalistic, academic, artistic or literary expression, the Inspector of Journalist Ethics (Inspector)³⁴⁶⁵ has a similar mission to that of the Inspectorate. The Inspector while on duty cooperates with the Inspectorate to ensure compliance with the GDPR.

Amendments to the Law on Legal Protection of Personal Data, effective July 1, 2024, allow employers to process employees’ and job applicants’ criminal

³⁴⁶¹ *Law of the Republic of Lithuania on Legal Protection of Personal Data, Processed for the Purposes of Prevention, Investigation, Detection or Prosecution of Criminal Offences, or the Execution of Criminal Penalties, or National Security, or Defence* (Jul. 7, 2018), <https://vdai.lrv.lt/en/legislation>

³⁴⁶² EUR-Lex, *Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA*, Article 11 (1) and (2) (Apr. 27, 2026), <https://eur-lex.europa.eu/legal-content/EN/TEXT/?uri=celex%3A02016L0680-20160504>

records under specific conditions, even if not previously provided for in the law.³⁴⁶⁶ Employers must evaluate their legitimate interest and publish a list of positions requiring a clean criminal record, alongside safeguards to protect data subject rights. The State Data Protection Inspectorate issued guidelines to help employers comply, and the European Data Protection Board issued Guidelines on Legitimate Interest in October 2024.³⁴⁶⁷ Additionally, the amendments impose stricter requirements for data subjects lodging complaints related to video surveillance, necessitating initial contact with the responsible entity before approaching the State Data Protection Inspectorate. Complaints to the Inspectorate must include proof of this initial contact. Other changes include extending the right to file complaints to non-profit organizations and enabling more efficient complaint handling, such as merging similar cases and extending the limitation period for administrative fines to three years.”

Despite being a member of the Global Privacy Assembly (GPA) since 2002, the State Data Inspectorate has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence;³⁴⁶⁸ the 2020 GPA Resolution on AI Accountability;³⁴⁶⁹ the 2022 GPA Resolution on Facial Recognition Technology³⁴⁷⁰ or the 2023 GPA Resolution on Generative AI.³⁴⁷¹

and to the factors and logic of an algorithm.³⁴⁷² They also have the right to contest a decision and seek rectification.

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems³⁴⁷³ specifically emphasizes requirements on transparency, accountability and effective remedies.

COVID-19 Tracking App

In spring 2020, the State Data Inspectorate started monitoring activities in response to information in the media about the possible improper processing of personal data by application Karantinas. After an assessment of the initial information, the Inspectorate decided to open an investigation and suspend the processing of personal data by the application. The study revealed that data from 677 individuals had been collected since April 2020 when the application became operational. The App concerned processed personal data using new technology as well as a systematic monitoring of data subjects in self-isolation. The App also aimed to process large datasets (data subjects throughout Lithuania and abroad). The processing was intended to be continuous and vulnerable data subjects were concerned.

The Inspectorate imposed a EUR 12,000 fine in 2021 on the National Public Health Centre (NPHC) and the developer of the application UAB *IT sprendimai sėkmei* for infringements of the GDPR. “When deciding on the imposition of the administrative fine and its amount, the DPA took into account the fact that the NPHC and the Company processed personal data intentionally, to a large extent, illegally, systematically, without providing technical and organizational means to demonstrate compliance with the requirements of the GDPR while processing personal data, and also processed special category personal data. In addition, the Company did not comply with the DPA instructions to stop the processing of personal data collected with the help of the app and deleted part of the personal data.”³⁴⁷⁴

The NPHC contested the decision in the court and claimed that the IT service provider should be considered the sole controller of the app and not them. The Court of Justice of the European Union, at the request of Lithuanian national

courts clarified in a December 2023 decision that “joint controllers do not require that there be an arrangement between those entities regarding the determination of the purposes and means of the processing of personal data in question” and they can be held liable for GDPR breaches committed by their representatives, without needing to pinpoint a specific individual responsible.”³⁴⁷⁵

Lethal Autonomous Weapons

Lithuania was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”³⁴⁷⁶

Lithuania voted in favor³⁴⁷⁷ of resolution L.56³⁴⁷⁸ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

Lithuania participated in the meeting of the Group of Governmental Experts on Emerging Technologies in the Area of Lethal Autonomous Weapons System in Geneva in 2024.³⁴⁷⁹ After the meeting, Lithuania joined with Australia, Canada, Estonia, Japan, Latvia, Poland, the Republic of Korea, the United Kingdom, and the United States to submit a working paper suggesting draft

articles aimed at regulating the development and use of Lethal Autonomous Weapon Systems in compliance with International Humanitarian Law principles.³⁴⁸⁰

Lithuania participated in the REAIM international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands in February 2023. At the end of the Summit, Lithuania endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.³⁴⁸¹ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”³⁴⁸² Lithuania also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.³⁴⁸³

Lithuania also participated in the REAIM 2024 Summit in South Korea and endorsed the outcome document, Blueprint for Action.³⁴⁸⁴ The Blueprint for Action lays out action steps for implementing the principles defined in the REAIM 2023 joint call around responsible AI in the military domain and governance of AI in the military domain.

Lithuania’s Ministry of National Defense and Artificial Intelligence (AI) Working Group of the Future Committee of the Seimas hosted a conference on the Use of Artificial Intelligence (AI) Solutions Now and in the Future of Defense in September 2024.³⁴⁸⁵ Rasa Petrauskienė, chairperson of the Working Group of the Seimas Future Committee described the significance of the conference: “Our country

Center for AI and Digital Policy

is standing at a historical turning point. This conference provides a unique opportunity for Lithuania to become a leading country in the formation of global AI policy in the defense sector. We have a chance not only to follow global trends but also to create them.” Minister of National Defense Laurynas Kasčiūnas elaborated on the necessity to consider the implications of AI in defense proactively: “Every day we fight with the aggressor both in the physical and technological fields. AI has huge potential to transform the battlefield, or even decide the winner. Therefore, it is our responsibility, firstly, to understand how these technologies can help us stay one step ahead, and secondly, to ensure that they are used responsibly. This requires cooperation between technology developers, public and private sectors, the military, and public representatives. Only in this way will we be able to create innovative solutions and ensure a safer future for everyone.”

Human Rights

Lithuania adopted the United Nations Declaration on Human Rights in 1998. As a member of the European Union and of the Council of Europe, Lithuania is committed to upholding the EU Charter of Fundamental Rights and the European Convention on Human Rights. According to the Freedom House 2024 Freedom in the World report, Lithuania is a free and democratic country, where “political rights and civil liberties are generally respected.”³⁴⁸⁶

A 2020 Recommendation from the Council of Europe Committee of Ministers to Member States reaffirmed that member States “must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”³⁴⁸⁷

Nordic-Baltic Cooperation on AI

As for the international landscape, the Lithuanian minister responsible for digital development signed the 2018 declaration on “AI in the Nordic-Baltic region” establishing a collaborative framework on “developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used” and “on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

enabling interoperability, privacy, security, trust, good usability, and portability.”³⁴⁸⁸

The ministerial declaration Digital North 2.0³⁴⁸⁹ builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017–2020. A council of ministers for digitalization (MR-DIGITAL) was established in 2017 with to promote regional development by: (1) Building a common area for cross-border digital services to increase mobility and integration, (2) Establishing a fair data economy for efficient sharing and re-use of data to drive innovation that promotes green economic growth and development, and (3) Promoting “Nordic-Baltic leadership in the EU/EEA and globally in a sustainable and inclusive digital transformation of our societies.”³⁴⁹⁰

The ministers for digitalization released another joint statement announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Lithuanian inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them in November 2021.³⁴⁹¹

A common statement by the Nordic and Baltic ministers for digitalization in September 2022 reiterated their commitment to “ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills” following the COVID-19 pandemic and the war in Ukraine. To maintain the trust citizens put in digital services from the public sector, the ministers noted “we need to continue our efforts to make our digital public services human centric and accessible. [...] Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services.”³⁴⁹²

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

OECD / G20 AI Principles

Lithuania is a member of the OECD and endorsed the OECD AI Principles in May 2019³⁴⁹³ and the updated principles in 2024.³⁴⁹⁴ The main principles of the Lithuanian AI strategy overlap with OECD AI principles. Some public sector initiatives and academic sector initiatives can be seen on the OECD AI monitoring platform.³⁴⁹⁵ The Seimas of the Republic of Lithuania adopted a Resolution on the Use of Artificial Intelligence Technologies in the Public Sector. The resolution emphasizes the necessity of establishing unified legal guidelines to ensure that AI integration enhances efficiency, transparency, and accountability within public institutions. It also highlights the importance of mitigating risks associated with unregulated AI usage, such as data breaches and inaccuracies. The resolution calls upon the government to implement eleven specific principles governing AI application in public sector operations.³⁴⁹⁶ These guidelines and the initiative to align with the OECD Principles promoting responsible AI use and seizing the potential benefits of AI systems to promote sustainable, inclusive growth.

Council of Europe AI Treaty

Lithuania contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law.³⁴⁹⁷ The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024³⁴⁹⁸ and opened the Convention for signature and ratification by any country in the world at a meeting in Vilnius, Lithuania in September 2024.

Lithuania is party to the convention as a member of the European Union, which signed on September 5, 2024,³⁴⁹⁹ but has not signed or ratified the treaty as an independent nation.³⁵⁰⁰

UNESCO Recommendation on AI Ethics

Lithuania was among the 193 countries that actively supported UNESCO's efforts in drafting and adopting its Recommendations on AI Ethics.³⁵⁰¹ According to the Ministry of Foreign Affairs of the Republic of Lithuania, Lithuania has been committed to supporting and implementing the UNESCO Recommendation. In addition, the advancement and implementation of ethical principles for AI were among the priorities that Lithuania presented to UNESCO for its candidacy to the Executive Board 2021–2025.³⁵⁰²

Lithuania has not initiated the Readiness Assessment Methodology (RAM),³⁵⁰³ a tool designed to enable countries to identify and overcome challenges to addressing the development and governance of AI systems in accordance with the UNESCO Recommendation.³⁵⁰⁴

Evaluation

Lithuania has endorsed the OECD AI principles and the UNESCO Recommendation on the Ethics of AI, set a national AI strategy in 2019, and launched an AI Development Action Plan in August 2022. Lithuania has taken the initial steps to implementing the EU AI Act by identifying authorities for AI oversight. The country will need to develop additional measures to supplement the EU AI Act with a national governance framework. The E-Citizen platform offers a great opportunity to acknowledge, facilitate, and expand public participation in the development of a legal framework.

Luxembourg

In 2024, Luxembourg initiated a series of legislative amendments and innovations to ensure alignment with the EU AI Act. A bill before the Chamber of Deputies would designate the AI oversight authorities. The National Data Protection Commission also launched a regulatory sandbox for AI. Luxembourg became party to the Council of Europe AI Treaty through the EU signature, though the country did not sign independently.

National AI Strategy

The Luxembourg Strategic Vision for Artificial Intelligence (2019) was presented in 2019 by the Prime Minister, who was also Minister for Digitalisation, together with the Minister of Economy. The strategy has 3 objectives for Luxembourg to: (1) be among the most advanced digital societies in the world, especially in the EU; (2) become a data-driven and sustainable economy; and (3) support human-centric AI development.³⁵⁰⁵

The Strategic Vision is based on a human-centered approach to AI whereby human intelligence should be “in charge” of AI and individuals should be at the center of all services based on AI. Luxembourg commits to the respect of the 2019 Ethics Guidelines for Trustworthy AI formulated by the EU High-Level Expert Group on Artificial Intelligence.³⁵⁰⁶ The Luxembourgian government commits to adopt policies to tackle the difficulties that could be caused by the mainstreaming of AI technologies and underlines that this mainstreaming should be aimed to the improvement of the citizens’ daily lives, keeping in mind that AI was not just created by humans, but for humans as well. For this reason, Luxembourg commits to transparent, understandable and trustworthy AI for all the people who live, invest and work in Luxembourg.³⁵⁰⁷

The Strategy also underlines the need for a regulation of the use and management of data respectful of fundamental ethical principles and confidentiality and which allows for reaching the full potential of the use of data in the economic and social domains.³⁵⁰⁸ The Strategy includes key actions to ensure the protection of fundamental rights:

- collaborating with the data protection authority and leveraging its expertise in order to address AI-related questions
- creating a consultative committee specialized in technology and ethics to debate the ethical consequences of technologies and advise the government on

³⁵⁰⁵ The Government of Luxembourg, Digital Luxembourg, *Artificial Intelligence: A Strategic Vision for Luxembourg*, p. 5 (May 2019), https://digital-luxembourg.public.lu/sites/default/files/2020-09/AI_EN_0.pdf

³⁵⁰⁶ Ibid, p. 7

³⁵⁰⁷ Ibid, p. 9

³⁵⁰⁸ Ibid, p. 6

potential risks and societal impacts. The Committee was effectively created in 2020.

- collaborating with the private sector to develop a proper corporate governance regarding AI,
- working with the Institute of Standardization, Accreditation, Safety and Quality of Products and Services (ILNAS) to actively follow the regulatory processes of products and services in the framework of the ISO system.
- putting in place innovative technologies to reinforce data protection in view of machine learning.³⁵⁰⁹

The Strategy considers how AI can foster investments and strategic partnerships, the efficiency of public services, the need to integrate AI in the context of life-long learning, attraction of talents, education, planning, and how to integrate the efforts of Luxembourg in the context of European integration.

The Strategy foresees 3 main domains of application for AI in Luxembourg:

- The private sphere: daily activities, routine activities to gain time, receive high quality assistance, and ensure data protection.
- The professional sphere: participation to the diversified economy of Luxembourg to increase job opportunities, new revenue streams, and skills training.
- The public sphere: access to governmental services and relations with the administration (e-health, education, finance).³⁵¹⁰

Luxembourg's Strategic Vision for AI has led to the creation of an AI4Gov inter-ministerial committee, whose members represent the Ministry for Digitalisation, the Communications and Media Service (SMC), and the Information and Press Service (SIP). The inter-ministerial coordination group, under the leadership of the Prime Minister, set up a governance mechanism to continuously follow up on strategic initiatives that support Luxembourg's AI development. It is tasked with regularly assessing the strategic vision and setting up a framework for future actions.³⁵¹¹

The aim of the AI4Gov Committee is also to encourage ministries and administrations to make use of AI and data science to transform their actions and tasks.³⁵¹² The open data pledge of the national strategy was implemented in

³⁵⁰⁹ Ibid, pp. 14-15

Center for AI and Digital Policy

2016³⁵¹³ and has been expanded since. The Open Data Platform enables accessible sourcing of public-sector data, open to public and private producers and reusers of data.

The strategic vision for Luxembourg endorses the Ethics Guidelines for Trustworthy AI of the High-Level Expert Group on AI of the European Commission, as well as the Coordinated Plan on Artificial Intelligence by the European Commission. Further endorsements concerning the risks of AI to Fundamental Human Rights are not addressed in the Strategy.

The Strategic Vision is part of Digital Luxembourg, a broader policy strategy that aims to coordinate and strengthen Luxembourg's transformation into a solid digital society.³⁵¹⁴

In 2019, the Ministry of Economy adopted the report *Data-Driven Innovation Strategy for the Development of a Trusted and Sustainable Economy in Luxembourg*, which is interconnected with the National AI Strategy's provisions.³⁵¹⁵ The Innovation Strategy is based on a vision of a Luxembourg data-driven economy, where AI systems, combined with Internet of Things components, systems, and networks, HPC, and Big Data analytics are used "to drive future growth." The Strategy includes:

- Boosting and assuring digital infrastructure capacity
- Experimenting, innovating, and up-take of new advanced digital technologies into industry
- Ensure a strong regulatory, intellectual property, investment and financing environment.

The priority sectors for such data driven-innovation were defined in the 2018 Luxembourg coalition agreement and include, among others, logistics, financial services, health- and eco-tech.³⁵¹⁶

The government of Luxembourg, along with thirteen other EU Member States, published a position paper on innovative and trustworthy AI in October 2020. The paper set out two visions for the EU's development of AI: (1) promoting innovation, while managing risks through a clear framework and (2) establishing trustworthy AI as a competitive advantage. The countries call for a borderless single market for AI in the EU. They state that "The main aim must be to create a

common framework where trustworthy and human-centric AI goes hand in hand with innovation, economic growth, and competitiveness to protect our society, maintain our high-quality public service, and benefit our citizens and businesses. This can help the EU to protect and empower its citizens, stimulate innovation and progress in society, and ensure its values are protected.”³⁵¹⁷

Public Participation

The National AI Strategy evolved from a project initiated by the Government of the Grand Duchy of Luxembourg and a public consultation on AI policy in 2020. The public consultation was answered by 20,000 randomly selected participants. Top consultation results include:³⁵¹⁸

- Over 80% of the public thinks that the state needs a data ethics committee
- When asked which sector they trusted most with data and AI, the public sector won with 77% of respondents voicing a high or very high level of trust
- 70% of respondents believe that AI can help them with tasks in their daily lives
- 73% of people use digital tools for public sector tasks (online payments, MyGuichet.lu, etc.). Coming in second was mobility (Google Maps, Waze, etc.)
- More than 70% of respondents are in favor of full-scale, AI-based trials, such as Luxembourg’s digital twin project.³⁵¹⁹

Currently no related public consultations are open for submissions. However, Digital Luxembourg, now known as Innovative Initiatives, supports and powers several initiatives that are open to public participation.³⁵²⁰

EU Digital Services Act

As an EU member state, Luxembourg shall apply the EU Digital Services Act (DSA).³⁵²¹ The DSA regulates online intermediaries and platforms. Its main

objective is to prevent illegal and harmful activities online and the spread of disinformation.

EU AI Act

As an EU member State, Luxembourg is bound by the EU AI Act.³⁵²² The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

The EU AI Act entered into force on August 1, 2024, and the provisions will be fully applicable by August 2, 2026.³⁵²³

Luxembourg began revisiting the national AI strategy in June 2024 to ensure that AI technologies developed in the country are compatible with GDPR and the EU AI Act.³⁵²⁴

Chamber of Deputies speaker Elizabeth Margue submitted a bill to implement the EU AI Act and designate the supervisory and competent authorities to Parliament in December 2024.³⁵²⁵ As of February 2025, the bill is still in committee.³⁵²⁶ The bill proposes the Luxembourg Office of Accreditation and Surveillance (OLAS) as the notifying authority overseeing conformity assessment bodies evaluating general purpose AI systems, the Luxembourg Agency for Medicines and Health Products (ALMPS) to supervise bodies specific to system in healthcare and medical device sectors, and the Luxembourg State Data Protection Commissioner's Office (CGP).

The National Commissioner for Data Protection (CNPD) will serve as the Notified Body charged with performing third-party conformity assessment activities for high-risk systems for law enforcement, immigration, or asylum. The

CNDP will also be the default market surveillance authority and primary point of contact, charged with coordinating activities across the sector-specific market surveillance authorities. The bill also designates supervisory authorities for judiciary and prosecution services, the financial sector, insurance sector, medicine and health, and audiovisual.³⁵²⁷

Data Protection

Since Luxembourg is an EU Member State, the General Data Protection Regulation (GDPR)³⁵²⁸ is directly applicable in Luxembourg and to Luxembourgers.³⁵²⁹ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. The Act of August 1, 2018, on the organization of the National Data Protection Commission and the general data protection framework supplements the GDPR.

Regarding the activities of law enforcement authorities, Luxembourg transposed the EU Data Protection Law Enforcement Directive (LED)³⁵³⁰ with the Act of August 1, 2018, on the protection of individuals with regard to the processing of personal data in criminal and national security matters. The LED protects citizens' right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes.³⁵³¹

The National Data Protection Commission (CNDP) enforces rights related to both the GDPR and the LED. To ensure better compliance with GDPR, in May 2022, the CNDP adopted the GDPR-CARPA certification mechanism for

companies, public entities, and other organizations established in Luxembourg.³⁵³² The CNPD accredited a first entity, EY PFS Solutions, in the framework of GDPR-CARPA, in June 2022, giving it the right to issue GDPR certifications.³⁵³³

The CNPD launched a regulatory sandbox for AI in May 2024 to serve as a platform for collaboration between government bodies and industry stakeholders. The sandbox encourages the development of responsible AI solutions while safeguarding ethical standards and ensuring compliance with the EU's AI regulations, including data privacy.³⁵³⁴

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Luxembourg is also a member of the Council of Europe. The country signed but has not yet ratified³⁵³⁵ the Council of Europe’s modernized version of Convention 108 for the protection of individuals with regard to the processing of personal data (Convention 108+).³⁵³⁶

Algorithmic Transparency

Although it has not yet ratified Convention 108+, which provides for algorithmic transparency, Luxembourg is subject to the GDPR and the EU AI Act. Luxembourgers have a general right to obtain access to information about automated decision-making, to the factors and logic of an algorithm, and access to a process for contestation.³⁵³⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems³⁵³⁸ specifically emphasizes requirements on transparency, accountability, and effective remedies.³⁵³⁹

The Luxembourg Institute of Science and Technology (LIST) Ethical Bias Leaderboard launched in March 2024 evaluates the performance of AI models across seven biases: Ageism, LGBTIQ+phobia, Political bias, Racism, Religious bias, Sexism, and Xenophobia posed by AI models.³⁵⁴⁰ The Leaderboard provides transparency to users, facilitates their ability to choose LLMs that exhibit lower biases, and increases awareness about the “inherent limitations of AI.” Evaluators emphasized the need for explainability to foster trust and to improve reliability.

Ban on Facial Recognition

Luxembourg is highly regarded as one of the few (European) countries to ban facial recognition. While this ban has never been transformed into a policy, Luxembourg Minister of Defense François Bausch pledged in October 2019 that no facial recognition systems were implemented during his term in the Defense Department.³⁵⁴¹

The European Data Protection Board (EDPB) issued guidelines on the use of facial recognition technologies in the area of law enforcement in May 2022.³⁵⁴² The EDPB Chair said: “Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms.” The EDPB stresses that facial recognition tools should be used only in strict compliance with the Law Enforcement Directive

(LED). Moreover, such tools should be used only if necessary and proportionate, as laid down in the Charter of Fundamental Rights.³⁵⁴³

Environmental Impact of AI

AI technologies in Luxembourg are beginning to have a notable impact on the environment, with the country leveraging AI for both environmental protection and sustainability efforts. As AI adoption increases, it is important to address the environmental impact of the technology itself, particularly its energy consumption and carbon footprint.³⁵⁴⁴ Francesco Ferrero, head of the Human Centered AI, Data, and Software (HANDS) unit at the Luxembourg Institute of Science and Technology promoted his vision of “frugal AI” that “embraces smaller, more efficient models and aligns with the ‘less is more’ philosophy.”³⁵⁴⁵ Luxembourg’s AI strategy and regulatory frameworks aim to balance the benefits of AI with sustainable development goals, ensuring that AI-driven environmental initiatives align with global efforts to mitigate climate change.

Lethal Autonomous Weapons

Luxembourg has regularly voiced its position on Lethal autonomous weapon systems (LAWS), in particular, via the meetings on autonomous weapons systems of the Convention on Certain Conventional Weapons (CCW). For example, in 2019, Luxembourg mentioned that international norms on LAWS could be strengthened, and spoke in favor of keeping “human control” over the use of force.³⁵⁴⁶ In September 2021, Luxembourg submitted a joint submission to the Chair of the Group of Governmental Experts (GGE) on LAWS, indicating that “the ceding of human control, agency, responsibility and intent in decisions on the application of force to algorithms and computer-controlled processes poses fundamental ethical concerns.”³⁵⁴⁷ In 2022, Luxembourg

together with other delegations submitted a working paper on emerging technologies in the area of LAWS to the Chair of the GGE, acknowledging the responsibility of the GGE to “recognize the urgent need for adequate rules and limits on the development, deployment, and use of autonomous weapon systems to ensure sufficient human involvement and oversight.”³⁵⁴⁸

Luxembourg was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly in October 2022. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.³⁵⁴⁹ In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”³⁵⁵⁰

At the 78th UN General Assembly First Committee in 2023, Luxembourg voted in favor³⁵⁵¹ of resolution L.56³⁵⁵² on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from

Center for AI and Digital Policy

humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

In February 2023, Luxembourg participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Luxembourg, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.³⁵⁵³ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”³⁵⁵⁴

Luxembourg also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.³⁵⁵⁵

Human Rights

Luxembourg is a signatory to many international human rights treaties and conventions. In 2024, Luxembourg received a rating of “Free” and score of 97/100 in the Freedom House Freedom in the World report. Freedom House reported that “Luxembourg is a constitutional monarchy with a democratically elected government. Political rights and civil liberties are generally respected.”³⁵⁵⁶

A 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers affirmed that States’ commitment to the Convention for the Protection of Human Rights and Fundamental Freedoms requires them to “ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”³⁵⁵⁷

Council of Europe AI Treaty

Luxembourg contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI and Human Rights, Democracy, and the Rule of Law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024.³⁵⁵⁸ The European Union of which Luxembourg is part signed this first legally binding international treaty on AI when it opened for signature on September 5, 2024. While Luxembourg is a member of the EU and the Council of Europe, the country has not independently signed the treaty.³⁵⁵⁹

OECD / G20 AI Principles

Luxembourg is a member of the OECD and endorsed the OECD AI Principles. In its national AI strategy, Luxembourg does not directly refer to the OECD AI principles. However, the strategy supports the key principles and suggestions such as human-centered AI, transparency of AI systems, exploring links between ethics and AI, and establishing private and public partnerships. OECD has also noted several examples of implementation of the AI Principles by Luxembourg.³⁵⁶⁰

UNESCO Recommendation on AI Ethics

Luxembourg endorsed the UNESCO Recommendation on the Ethics of AI in November 2021.³⁵⁶¹ The country has not yet initiated the UNESCO Readiness Assessment Methodology (RAM), a tool to facilitate the UNESCO Recommendation.³⁵⁶²

Evaluation

Host to some of the biggest multinational technology companies, Luxembourg is one of the first countries to have developed a policy in the field of

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

AI that addresses issues of certification and standardization. Luxembourg benefits from a comprehensive data protection legal regime with an independent data protection commission. To be true to its commitment to a human-centered approach to AI and in line with its endorsement of the UNESCO Recommendation on the Ethics of AI, it would be worth for Luxembourg to finally ratify the modernized version of Council of Europe Convention 108. Luxembourg is one of the very few countries to have officially committed for law enforcement authorities not to use facial recognition. With the adoption of the EU AI Act, Luxembourg shall designate a national supervisory mechanism which, it is to be hoped, will be an independent one and will take the protection of human rights seriously.

Malaysia

In 2024, Malaysia introduced the National Guidelines on AI Governance & Ethics and progressed on the UNESCO Readiness Assessment Methodology (RAM).

National AI Strategy

The Government of Malaysia does not have a National AI Strategy. Instead, AI-related policies under the umbrella of the National AI Roadmap (AI-Rmap), are addressed as part of the Malaysian whole-of-government strategy, known as the Twelfth Malaysia Plan, 2021–2025 (12 Plan). The 12 Plan was introduced in September 2021 with the aim of “a prosperous, inclusive and sustainable Malaysia.”³⁵⁶³

According to the 12 Plan, “national strategies on artificial intelligence (AI) and blockchain will be developed to guide the growth of every sector in the economy.” The 12 Plan mentions that measures will be implemented to strengthen guidelines and regulations on personal data protection and data sharing with the aim of “ensuring data safeguards against cyber-attacks and unethical uses.” According to the Plan, “an ethical framework and standards on technology development, deployment, and utilisation will also be introduced to ensure responsible use of technology.”

Digitalization and AI objectives are covered under the Malaysian Digital Economy Blueprint (MyDIGITAL), which operates in coordination with the Economic Planning Unit (EPU). MyDIGITAL is a comprehensive 104-page document that lays the road map to achieve the country’s grand vision to become a regional leader in the digital economy and attain inclusive, responsible, and sustainable socio-economic development nationally.³⁵⁶⁴ Other initiatives include:

³⁵⁶³ Government of Malaysia, *Twelfth Malaysia Plan* (2021), <https://rmke12.epu.gov.my/bm>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- National Fourth Industrial Revolution (2021): The Malaysian government, via its Economic Planning Unit (EPU), also introduced its National 4IR Policy, designed to “steer strategic socio-economic transformation through the ethical use of 4IR policies.” Using a whole-of-nation approach, the plan intends to support balanced, responsible, and sustainable growth for business; provide socio-environmental well-being for all; and create a fit-for-future government. Notably, the Policy draws on references from the World Economic Forum (WEF), OECD, UN, and the World Bank.³⁵⁶⁵
- National Big Data Analytics (BDA) Framework (2016): Introduced by the Malaysia Digital Economy Corporation (MDEC), the BDA has four focus areas: architecting a data-driven culture; identifying roles for a data-driven organization; turning information into action; accessing tools and partners.³⁵⁶⁶
- In 2021, the Ministry of Science, Technology, and Innovation (MOSTI) awarded selected researchers grants to formulate a National Artificial Intelligence (AI) Roadmap for Malaysia.³⁵⁶⁷

The AI-Rmap, which replaced earlier plans to develop a national AI framework to complement Malaysia’s BDA,³⁵⁶⁸ has six overall strategies to execute: establishing AI governance, advancing AI R&D, escalating a digital infrastructure to enable AI, fostering AI talents, acculturating AI, and kick-starting a national AI innovation ecosystem.³⁵⁶⁹ While the roadmap does not explicitly address human rights, it does include “Pursuit of Human Benefits and Happiness” under its list of Principles of Responsible AI.³⁵⁷⁰

The AI-Rmap has a distinct action plan through 2025, with benchmarks set for horizon 1 (2021–2022), horizon 2 (2023–2024), and horizon 3 (2050 onwards). Within those benchmarks, four strategic initiatives are delineated. For instance, strategic initiative 1.1 “Establishing an AI Coordination and Implementation Unit

Center for AI and Digital Policy

(AI-CIU) responsible for successful implementation of the AI Roadmap” outlined the appointment of a committee by horizon 1 (2021–2022) to oversee the execution of the AI-Rmap. The AI-CIU was also tasked with implementing an AI code of ethics as part of strategic initiative 1.4: institutionalizing AI principles for AI implementation. However, despite these benchmarks, no documentation has been found indicating any progress since the AI-Rmap publication in 2022.³⁵⁷¹

Nevertheless, in August 2022, the Malaysian Ministry of Science, Technology, and Innovation (MOSTI) launched five complementary technology roadmaps: the Electricity and Electronics Roadmap: Artificial Intelligence Roadmap 2021–2025, the Technology Development 2021–2030, the National Blockchain Technology Roadmap 2021–2025, the National Advanced Materials Roadmap 2021–2030, and the National Robotics Roadmap 2021–2030.³⁵⁷²

Malaysia furthered its AI-related policies in 2024. The Malaysia Science and Technology Information Center launched the National Guidelines on AI Governance and Ethics to enhance the development and deployment of AI technology.³⁵⁷³ The Guidelines cited alignment with OECD, UNESCO, and European Commission AI principles in proposing seven principles “to guide the development of Trusted and Responsible AI”:

- Fairness
- Reliability, Safety, and Control
- Privacy and Security
- Inclusiveness
- Transparency
- Accountability
- Pursuit of Human Benefit and Happiness

The Malaysia Cabinet also approved the establishment of the National Artificial Intelligence Office (NAIO), which will be overseen by the MyDIGITAL Corporation, a government agency tasked with overseeing Malaysia’s digital transformation efforts.³⁵⁷⁴

Public Participation

Information on public consultations in Malaysia are difficult to find. However, the Personal Data Protection Commissioner of the Ministry of Communications and Multimedia Malaysia issued a public consultation paper as part of a review of the Personal Data Protection Act.³⁵⁷⁵ The consultation paper is available on the Personal Data Protection Commissioner Office website, along with a 2024 amendment to the act.³⁵⁷⁶

Data Protection

Data protection in Malaysia stems from the Personal Data Protection Act of 2010 (PDPA),³⁵⁷⁷ which came into force in 2013. The PDPA seeks to safeguard personal data and confer certain rights to users regarding personal data. Five pieces of subsidiary legislation were also enforced on November 15, 2013.

Additional legislation passed to date include the Personal Data Protection Regulations 2013 (“the 2013 Regulations”); the Personal Data Protection (Class of Data Users) Order 2013 (“the Order”); the Personal Data Protection (Registration of Data User) Regulations 2013 (“Registration Regulation”); the Personal Data Protection (Fees) Regulations 2013; the Personal Data Protection Regulations 2016 (“Compounding of Offences Regulations”); the Personal Data Protection (Class of Data Users) (Amendment) Order 2016 (“the Order Amendment”); and the Personal Data Protection (Appeal Tribunal) Regulations 2021.³⁵⁷⁸

The PDPA imposes strict requirements on any person who collects or processes personal data (data users) and grants individual rights to data subjects. The PDPA is enforced by the Commissioner of the Department of Personal Data Protection (the Commissioner). The PDPA is based on widely accepted personal data protection principles, including informed consent, notice, purpose limitation, security, storage limit, data integrity, access, and correction.³⁵⁷⁹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The PDPA does not apply to federal and state governments. It also exempts the processing of information by a credit reporting agency, and it does not constrain government access to data.

The converging opinion among stakeholders is that although Malaysia is a regional frontrunner in its data protection regime, the country's laws and regulations need to evolve to reflect a more complex digital landscape. The gap between Malaysia's governance capacity and the country's aspirations could stymie its ambitions for a complete digital transformation by undermining trust in both the online and offline spaces. This risk is underscored by several realities: significant data breaches without commensurate penalty or recourse, existing gaps in the PDPA, as well as the inclusion or exclusion of vulnerable communities in Malaysia's data-driven and digitalization agenda.³⁵⁸⁰

The 2024 amendments to the PDPA may address some of these concerns with updated definitions and harsher sanctions for noncompliance.³⁵⁸¹

Malaysia's data protection agency, the Personal Data Protection Commissioner, is not a member of Global Privacy Assembly and has not endorsed the relevant resolutions.³⁵⁸²

AI in Healthcare

In 2017, the Ministry of Health launched the Malaysian Health Data Warehouse (MyHDW) as part of a national healthcare information-gathering system. The system is designed to share a patient's healthcare records among all public health institutions, ensuring any doctor had full access to medical records. The Malaysian government also initiated several public-private collaborations, including the signing of a Memorandum of Understanding (MoU) between Microsoft Malaysia and CREST (Collaborative Research in Engineering, Science & Technology) to create a first-of-its-kind digital health hub, and the creation of Malaysia's largest digital health platform, DoctorOnCall, which connects patients with an extensive network of over 1,500 Specialists in private hospitals and more than 100 GP doctors throughout the country.³⁵⁸³

To combat the spread of COVID-19, the Malaysian government led a multi-agency effort to create the MySejahtera app, which was linked to the MyTrace app (developed by the Malaysian Ministry of Science, Technology, and

Innovation (MOSTI)) which “enables the identification of those who have been in close proximity to an infected person using Bluetooth technology.”³⁵⁸⁴ In December 2020, the Malaysian government mentioned that there were 24.5 million users of MySejahtera, with a strong push by the government for increased usage.³⁵⁸⁵

MOSTI also endorsed the use of AI-enabled apps to detect those who may have been in close contact with a COVID-19 patient, and a geofencing app to enforce and monitor quarantines.” In May 2021, the Malaysian government launched the Hotspot Identification for Dynamic Engagement (HIDE) system, as an early warning system to preemptively identify COVID-19 hotspots using predictive technology, big data analytics, and AI.³⁵⁸⁶ MOSTI is also planning to add “artificial intelligence and big data analytics into the HIDE system to produce more accurate predictions of coronavirus hotspots based on Bluetooth contact tracing. HIDE currently uses MySejahtera check-in data.³⁵⁸⁷

Finally, in August 2021, the Malaysian government introduced a new mobile app, the Vaccine Certificate Verifier app, to combat a rise in the production and selling of fake certificates in the country.³⁵⁸⁸ While the government rolled out the use of AI-enabled technology to assist the healthcare industry and COVID-19 response, there has been little communication from the government about human rights, data privacy, and algorithmic transparency.

Facial Recognition

Since launching the Safe City Initiatives in 2004, cities across Malaysia have been installing CCTVs in public areas to monitor crime, traffic surveillance, and flooding.³⁵⁸⁹ As part of the initiative, the Minister of Federal Territories announced in 2020 their intention to increase up to 5000 cameras in the capital

city of Kuala Lumpur and upgrade existing cameras with AI capabilities, facial recognition, and other functions.³⁵⁹⁰

In 2018, Auxiliary Force Sdn Bhd (AFSB), a member of Royal Malaysia Police Cooperative Bhd., became the first Malaysian security force in the country to integrate body-worn cameras with facial recognition technology.³⁵⁹¹ In 2019, the state of Penang launched the first public facial recognition to help police combat crime. The system uses AI to identify faces captured by the CCTV network operated by Penang Island City Council (MBPP), with a plan to have hundreds of new cameras installed at major roads, intersections, and hotspots for criminal activity.³⁵⁹²

The Malaysian business sector has also integrated the use of facial recognition across the nation, including facial recognition “check-ins” at events.³⁵⁹³ The Malaysian Ministry of Transport introduced a public-private facial recognition program in 2019, allowing users to take selfies of themselves for recognition.³⁵⁹⁴ While there is an increase in facial recognition technology in Malaysia, there is no overarching AI policy focused on human rights and democratic values governing the use of this technology.

In 2021, the Malaysian government began planning the introduction of the Digital Identity (Digital ID) initiative. The initiative is expected to be fully implemented in 2024. The Digital ID will be a form of digital identification and authentication for individuals conducting matters using the latest biometric technology such as fingerprints and facial and iris recognition. The Home Ministry and National Registration Department (NRD) have been entrusted to lead the implementation of this initiative as the population data, information, and records are under the custody and jurisdiction of the NRD.³⁵⁹⁵ The National Digital ID (ID

Digital Nasional, IDN) aims to create a Verifiable Platform of Trust that will be utilized by the public and private sectors to verify the identity of their respective users when conducting digital transactions. The IDN is targeted at every Malaysian citizen and permanent resident aged 5 years and above.³⁵⁹⁶ There has been criticism on the security and privacy of personal data. Details concerning the digital ID system project are contained in the Twelfth Malaysian Plan, Eurasia Review states, adding that the database will contain citizens' information such as their full names and aliases as well as face and fingerprint biometrics.³⁵⁹⁷

In 2021, AirAsia introduced its revamped FACES, a facial recognition technology that allows passengers to replace their traditional boarding pass with their face, allowing for a seamless and contactless experience throughout several airport touchpoints as passengers do not need to carry around their passports and boarding passes.³⁵⁹⁸ In 2022, AirAsia announced that it would integrate the facial recognition experience with Malaysia Airports' EZPaz technology at Kuala Lumpur International Airport (KLIA2). The enhanced FACES feature is only available on select domestic travel in the initial phase. To use FACES, passengers must enroll in AirAsia FACES via their mobile app, take a selfie video, and scan their travel documents, such as their IC or passport. Before using FACES, passengers must also perform a one-time document verification check at the dedicated FACES counters in the airport. According to AirAsia, the facial recognition feature helps reduce queuing time and increases operational efficiencies, safety, and security for the airline.³⁵⁹⁹

AI in Court

Malaysia announced in 2010 its plan to establish an e-judiciary system against the backdrop of a broader initiative to digitalize its government and public services.³⁶⁰⁰ By 2017, the national judiciary system had been fully digitized and was integrated with other government agencies, including COPS (Royal Malaysia

Police), MySikap (Road Transport Department), INSIST (Malaysian Department of Insolvency), MyIdentity (National Registration Department), SMPP (Malaysian Prison Department), iAGC (Attorney General's Chambers of Malaysia), and MyeTaPP (Department of Lands and Mines).

A court in Sabah, Malaysia used AI to help mete out a court sentence as part of a nationwide pilot program aimed at determining the efficiency of AI in sentencing recommendations. This was followed by the release of an official guidance for using AI in judiciary sentencing on the peninsula in 2021, which described a three-phase strategy to expand the use of AI sentencing programs across the entire nation.³⁶⁰¹ According to Malaysian authorities, using AI in Malaysia's courts will help make sentencing more consistent and improve the quality of judgment while clearing backlogs more quickly and cost-efficiently. However, lawyers and various stakeholder groups have criticized this AI use on the grounds that the system was used before judges, lawyers, and the public can fully understand the way it works. The use of AI in the courts has also been criticized as unconstitutional and not envisaged under the country's Criminal Procedure Code. Other critics of the AI-sentencing pilot say AI systems risk worsening the bias against minorities and marginalized groups by not giving them a fair trial.³⁶⁰²

Autonomous Vehicles

The Government of Malaysia has declared on its official website that AI will be a key technology in developing autonomous or self-driving vehicles. The government of Malaysia mentions that “not only is AI capable of collecting and analysing data through sensors and cameras but it is also capable of adapting to situations and learning through machine learning.”³⁶⁰³

In February 2022, the Ministry of Transport in Malaysia updated the Guidelines for Public Road Trials of Autonomous Vehicles. The Guidelines are intended to provide guidance to organizations planning to conduct trials of automated vehicles on designated public roads. Data and information collected from the AV trial may be used in the future by relevant authorities to develop a national policy and regulatory framework for AV adoption and application in Malaysia. The Guidelines provide for safety trial measures for organizations

approved to conduct AV trials such as ensuring that the AV's software, components, equipment, and instruments are safe and operational as intended. Also, a trialing organization must be aware of abnormal traffic and weather conditions that may cause the AV system to fail.³⁶⁰⁴

According to the Malaysian Investment Development Authority (“MIDA”), Malaysia supports efforts to become a regional leader in manufacturing, engineering, and technological innovation. To this end, the National Automotive Policy 2020 (NAP 2020) aims to develop the Malaysian auto industry “through research and development of new technologies, especially in the areas of Next-Generation Vehicles (NxGV), Industrial Revolution 4.0 (IR 4.0), and mobility as a service (MaaS).”³⁶⁰⁵ According to the MIDA, the first autonomous vehicle (AV) testing route of Malaysia, which will allow tech companies to test the capabilities of their vehicles, has been approved by the Ministry of Transport of Malaysia and the Sepang Municipal Council.³⁶⁰⁶

Environmental Impact of AI

In one of its technology roadmaps, “National Advanced Materials Roadmap 2021-2030,” the Malaysian Ministry of Science, Technology, and Innovation (MOSTI) launched the 10–10 Malaysian Science, Technology, Innovation and Economy (MySTIE) framework.³⁶⁰⁷ The framework contained several scientific, technological, and socio-economic drivers, mainly focusing on national priority areas, emerging technologies, industry analysis, and global trends. The tenth metric focused on “Environment and Biodiversity,” wherein the increasing application of emerging technologies, including AI, address climate change issues such as global warming, air pollution, and biodiversity loss.

The Industrial Revolution 4.0 Policy document from 2021 recognized the wide-ranging applications of AI and included a mission to preserve ecological security and harness technology in such a manner as to “enable sustainable consumption and production, and to solve environmental issues.”³⁶⁰⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Taking a significant stride to check the environmental impact of AI, the National Guidelines on AI Governance and Ethics released in September 2024 aligns the government's initiative with responsible AI and ESG & SDG principles. Recognizing “Sustainability” as a critical element in AI policymaking, the guidelines focus on the environmental impact of AI technologies by assessing the “energy consumption and carbon footprint associated with AI hardware infrastructure, data centers, and computing resources.”³⁶⁰⁹

Lethal Autonomous Weapons

In February 2023, Malaysia participated in an international summit on the Responsible Artificial Intelligence in the Military Domain (REAIM) hosted by the Netherlands. At the end of the Summit, Malaysia, together with other countries, agreed on a joint call for action on the responsible development, deployment, and use of artificial intelligence in the military domain.³⁶¹⁰ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”

They also “affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data.”

States also “stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain.”³⁶¹¹

Human Rights

Malaysia is a member of the United Nations and has endorsed the Universal Declaration of Human Rights. According to Freedom House, Malaysia

³⁶⁰⁹ Malaysian Science, Technology Information Centre (MASTIC), *The National Guidelines on AI Governance & Ethics* (Sept. 2024), <https://mastic.mosti.gov.my/publication/the-national-guidelines-on-ai-governance-ethics/>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

is “partly free” with a score of 53/100.³⁶¹² Freedom House notes, “The Barisan Nasional (BN) political coalition ruled Malaysia from independence in 1957 until 2018, maintaining power by manipulating electoral districts, appealing to ethnic nationalism, and suppressing criticism through restrictive speech laws and politicized prosecutions of opposition leaders.” Since the BN lost to an opposition alliance in 2018, political affairs have been characterized by a “more complex pattern of competition and cooperation among multiple coalitions, creating opportunities for reform and modest improvements to civil liberties.”

On transparency, Freedom House noted that “efforts towards enacting a freedom of information act and other reforms stalled after the PN [Perikatan Nasional] took power.”³⁶¹³ Government operations were also not transparently carried out while Parliament was suspended for part of 2021.

OECD / G20 AI Principles

Malaysia has not endorsed OECD AI Principles and G20 AI Guidelines. The OECD AI Policy Observatory does not list AI initiatives from Malaysia.

Council of Europe AI Treaty

Malaysia has not endorsed the Council of Europe AI Treaty.³⁶¹⁴

UNESCO Recommendation on AI Ethics

As a member of UNESCO, Malaysia adopted the Recommendation on the Ethics of Artificial Intelligence, the first global standard on the ethics of artificial intelligence in November 2021.³⁶¹⁵

As of 2024, Malaysia has been underway in completing the UNESCO Readiness Assessment Methodology (RAM), a key tool to support Member States in their implementation of the UNESCO Recommendation on the Ethics of AI.³⁶¹⁶

Additionally, Malaysia has made efforts to align with UNESCO’s Recommendation Policy Area 8: Education and Research. Malaysia has worked on implementing an inclusive digital literacy policy. In early 2024, the country launched “AI untuk Rakyat,” a national program led by the MyDIGITAL Corporation and Intel Corporation that offers online courses to citizens. The goal of this collaboration is to “create a comprehensive and accessible learning

experience for Malaysians of diverse age groups, backgrounds, and geographical locations.”³⁶¹⁷

Evaluation

Malaysia has rapidly introduced technology into its public and private sectors and has constructed numerous digital policies and has taken action to map out and support its digital economy and support business growth. While there is currently no comprehensive national AI framework currently, the AI-Rmap is ongoing and part of the overall 12 Plan.

Along with Malaysia’s endorsement and beginning implementation of the UNESCO Recommendations on the Ethics of AI, the government has made strides with implementation of the AI Roadmap and the development of the National Guidelines on AI Governance and Ethics. However, the lack of restrictions on government or public use of data in the data protection legal regime is a cause for concern in view of Malaysia’s deployment of AI for surveillance purposes.

It remains to be seen whether the new Prime Minister, Anwar Ibrahim, will uphold his “promise of political and social reforms” and give to Malaysia’s AI and data protection laws and policies a strong human-centered focus.”³⁶¹⁸

Malta

In 2024, Malta modified the charge for the Malta Digital Innovation Authority (MDIA) to clarify the institution’s status as an authority for market surveillance and compliance reporting under the EU AI Act.

National AI Strategy

The Parliamentary Secretary for Financial Services, Digital Economy and Innovation (PSFS) of Malta released a National AI Strategy³⁶¹⁹ and a National AI Ethics Framework in 2019.³⁶²⁰ The strategy aims to make Malta the “Ultimate AI

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Launchpad” by creating a venue where “local and foreign companies and entrepreneurs can develop, prototype, test and scale AI, and ultimately showcase the value of their innovations across an entire nation primed for adoption.”³⁶²¹ The National AI Strategy was drafted on the basis of report delivered by the Malta AI Taskforce,³⁶²² a group of experts entrusted to advise the government on AI matters, and public consultation.

The National AI Strategy includes more than 70 actions that are set to be implemented by the end of 2022, together with actions to support a longer-term vision of where the country would like to be in 2030. The Strategy includes three strategic pillars with a focus on boosting investment, start-ups, and innovation and adoption across the public and private sectors. Moreover, each pillar draws on three strategic “enablers”: 1) Education and workforce; 2) Ethical and legal, and 3) Ecosystem and infrastructure.³⁶²³ The ethical and legal enabler aims to establish the first national AI certification program for those wishing to create “ethically aligned, transparent and socially responsible AI solutions.”

The Strategy, however, does not disclose financial provisions or estimations for its overall implementation.

The goals to be achieved in between 2019 and 2022 were to:

- Raise Maltese citizen’s awareness on what AI is and how it can be used to benefit society
- Generate investment with AI-related activities and stimulate research and development (R&D) across various Maltese sectors
- Support a strong culture of collaboration locally and internationally to pilot and scale AI solutions
- Launch and implement pilot projects that showcase the benefits that AI can deliver and to build an AI-powered government
- Prepare the workforce for work in an AI-driven world
- Update and align Maltese national law in accordance with changes that may be required to keep pace with disruptive technologies

The Strategy further assumes that the Maltese business community will have “developed foundational knowledge of how AI solutions can be applied in

³⁶²¹ Parliamentary Secretariat for Financial Services, Digital Economy and Innovation, Office of the Prime Minister, *Malta: The Ultimate AI Launchpad: A Strategy and Vision for Artificial Intelligence in Malta 2030* (Oct. 2019), https://malta.ai/wp-content/uploads/2019/11/Malta_The_Ultimate_AI_Launchpad_vFinal.pdf

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

their areas of business and what the benefits of doing so are,” Malta will “be a model nation that others look to when developing policy on ethical and trustworthy AI” through its national AI certification, and “[c]omputers will be able to process, understand, and generate Maltese text and speech, and AI solutions which are accessible in both of Malta’s national languages will be part of every-day life.”³⁶²⁴

The Strategy envisions additional goals to be achieved by 2030, including:

- To have AI solutions be a highly valued and trusted part of everyday life and used by Maltese citizens of all generations to enhance the way they live, work, and play
- For AI to be a key driver that propels R&D activities, investments, and growth across the Maltese economy
- For Malta to be recognized as the “Ultimate AI Launchpad” and be amongst the top 10 nations with the highest-impact national AI program, for the nation to be a global hub for AI application and niche R&D with a vibrant start-up community anchored by global AI tech companies, and for AI solutions piloted in Malta to have achieved mass global adoption
- To have AI solutions help augment most public services for the benefit of Maltese citizens, including being a central component in the toolbox of educators and doctors, alleviating congestion through intelligent nationwide traffic management, optimizing power and water usage, and fueling the personalization of citizen and tourist services
- For companies of all sizes and sectors to deploy AI solutions to improve productivity and business performance, including plugging resource gaps, providing 24/7 customer service, and redefining business models or delivering better offerings to customers
- For Maltese workers to have the skillsets needed to thrive in the new era of work
- For robust legal, governance, and social protection mechanisms to be in place to ensure AI systems are safe, ethical, trusted, socially responsible, and human-centric
- That, following Malta’s lead, most countries will require AI systems to comply with international regulations and standards on AI systems that Malta has helped to shape and develop
- For individuals to have much better ownership and control of their personal data and be able to commoditize it for their own benefit as AI, 5G, and the Internet of Things converge and revolutionize how data is used

Beyond assuming that workers will have “the skill sets needed to thrive in the new era of work,” the Strategy envisions that employment levels will remain high, worker productivity and job satisfaction will improve with the use of AI

³⁶²⁴ Ibid, pp. 16–17

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

tools, new types of jobs will exist, displaced workers will receive aid to transition into new roles, AI will be embedded horizontally across all aspects of the educational curricula, and that AI tools will be widely used by educators and schools to the benefit of their students.³⁶²⁵

Malta Digital Innovation Authority (MDIA) established in 2018³⁶²⁶ is an independent authority with the mission to “direct and facilitate the secure and optimal uptake of digital innovation.”³⁶²⁷ Supervising the execution of Malta’s National Artificial Intelligence Strategy is part of this mission.

Ethical AI Framework and Principles

The National AI Strategy identified four key actions towards trustworthy AI:

- Establish an Ethical AI Framework Towards Trustworthy AI
- Launch the world’s first national AI certification framework
- Appoint a Technology Regulation Advisory Committee to advise on legal matters
- Set up a Regulatory Sandbox for AI and a Data Sandbox for AI

The National AI Strategy foresees a strong ethical AI framework as a supplement to the national legal and regulatory system to ensure that AI development is ethically aligned, transparent, and socially responsible.³⁶²⁸

The Ethical AI Framework that followed the strategy defines four objectives: (1) Build on human-centric approach; (2) Respect for all applicable laws and regulations, human rights and democratic values; (3) Maximize the benefits of AI systems while preventing and minimizing their risks; (4) Align with emerging international standards and norms around AI ethics³⁶²⁹. The framework sets out four ethical AI principles to achieve Malta’s vision for ethical and trustworthy AI: human autonomy; prevent harm; fairness; and explainability.

The framework also recommends the establishment of a National Technology Ethics Committee (NTEC) under the auspices of the MDIA to ensure its monitoring and implementation.³⁶³⁰ However, to date, there is no evidence that the committee has in fact been created.

³⁶³⁰ Ibid.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Malta also developed a national AI certification framework, issued by the MDIA. The certification offers valuable recognition in the marketplace that the AI systems of successful applicants have been developed in an ethical, transparent, and socially responsible manner.

As for the AI regulatory sandbox, during the past years, the MDIA opened a number of competitive calls that resulted in state-of-the-art research and innovative projects. The MDIA Technology Assurance Sandbox has been revamped and in March 2023 another project on conversational AI was onboarded.³⁶³¹

Public Participation

The Parliamentary Secretary for Financial Services, Digital Economy and Innovation within the Office of the Prime Minister oversaw public consultations on the initial National AI Strategy document “Malta Towards an AI Strategy: High-Level Document for Public Consultation” in 2019. The AI Taskforce also ran an in-person public consultation workshop to help guide citizens.³⁶³²

Subsequently, the Malta AI Task Force and Parliamentary Secretary for Financial Services, Digital Economy, and Innovation released the Malta Ethical AI Framework for Public Consultation.³⁶³³

The revision of the Strategy and Vision for AI in Malta 2030 followed a pre-consultation meeting that engaged key stakeholders including startups, public sector, private sector, education, and non-governmental organizations. A call for public participation was opened in November 2023,³⁶³⁴ but no further direction has been posted since the pre-consultation meeting in December 2023..³⁶³⁵

Locating public consultation opportunities among the various government websites is not user friendly. In its annual report however, the MDIA discusses its expanding role with regard to AI.³⁶³⁶

Center for AI and Digital Policy

Digital Services Act

As an EU member state, Malta shall apply the EU Digital Services Act (DSA).³⁶³⁷ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation by requiring online platforms and intermediaries to prevent or remove posts containing illegal goods, services, or content. The DSA also bans targeted advertising based on protected categories and to minors based on profiling.

Malta is also party to the European Commission Guidelines under the DSA for the mitigation of systemic risks online for elections.³⁶³⁸

EU AI Act

As an EU member State, Malta is bound by the EU AI Act.³⁶³⁹ The EU AI Act is a risk-based market regulation that supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy, and ethical AI. The EU AI Act entered into force in August 2024. The EU AI Act establishes four levels of risk classification for AI systems and an exhaustive and nuanced list of prohibited AI uses. Still, Malta's national market surveillance authority will be charged with enforcing the rules regarding high-risk systems, investigating complaints, and imposing sanctions for non-compliance.

The EU AI Act grants these local authorities the power to request and access documentation created or maintained under the EU AI Act when necessary for fulfilling this mandate. While the European Commission has primary competence in the oversight on General Purpose AI Models, Malta's national market authority will provide oversight on high-risk systems.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Malta has three national authorities with AI oversight and reporting duties: the Malta Digital Innovation Authority (MDIA)³⁶⁴⁰, the Office of the Information and Data Protection Commissioner (IDPC),³⁶⁴¹ and the National Accreditation Board.³⁶⁴² The MDIA is the leading market surveillance authority and notifying authority on innovation technologies including AI. The IDPC enforces the GDPR and the national Data Protection Act and serves as the other market surveillance authority. The National Accreditation Board is the other notifying authority. The MDIA is required to assist the IDPC in “safeguarding the data protection rights of data subjects.”

More specifically, the MDIA Act establishes the MDIA as the competent authority to, inter alia:

- exercise regulatory functions regarding Innovative Technology Arrangements and related services;
- support the development and implementation of the guiding principles described in the MDIA Act; and
- establish minimum quality, compliance and security standards for any Innovative Technology Arrangements and related services.³⁶⁴³

With the enactment of the MDIA Act, Malta’s purpose is to establish a “national technology assurance framework.”³⁶⁴⁴ Although the MDIA’s initial focus was on distributed ledger technology to regulate and promote blockchain and cryptocurrency technology, in 2020/2021 its mandate broadened to include AI technology.³⁶⁴⁵

The IDPC’s objectives are to increase public trust and confidence in the use of personal data, ensure consistent application of the GDPR, enforce data protection rules, increase awareness, and ensure transparency and good governance, among others.³⁶⁴⁶ It also has the authority to impose administrative fines and lists data protection decisions on the website.³⁶⁴⁷ In one high-profile case,

Center for AI and Digital Policy

the IDPC levied a 65,000 Euro fine against C-Planet (IT Solutions) Ltd, which was held responsible for a personal data breach of over 337,000 Maltese voters.³⁶⁴⁸

Malta has also several independent oversight bodies for human rights, namely: the National Commission for the Promotion of Equality, the Commission for the Rights of Persons with Disabilities and the Parliamentary Ombudsman. They are competent to oversee the impact of AI policies within their field of competences.

Data Protection

Since Malta is an EU Member State, the General Data Protection Regulation (GDPR)³⁶⁴⁹ is directly applicable in Malta and to Maltese citizens. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”³⁶⁵⁰

The Maltese Data Protection Act 2018 (Chapter 586 of the Laws of Malta) (DPA) supplements the GDPR and took effect on May 28, 2018.³⁶⁵¹

Regarding the activities of law enforcement authorities, Malta transposed the EU Data Protection Law Enforcement Directive (LED)³⁶⁵² with Subsidiary Legislation.³⁶⁵³ “The directive protects citizens’ fundamental right to data

protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”³⁶⁵⁴ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.³⁶⁵⁵ The LED also requires for Member States, including Malta, to enable data subjects to exercise their rights via national data protection authorities.³⁶⁵⁶

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Malta is also a member of the Council of Europe and ratified the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.³⁶⁵⁷

Although the IDPC is an accredited member of the Global Privacy Assembly since 2003,³⁶⁵⁸ it did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,³⁶⁵⁹ the 2020 GPA Resolution on AI Accountability,³⁶⁶⁰ or the 2022 GPA Resolution on Facial Recognition

Technology.³⁶⁶¹ However, the IDPC co-sponsored the 2023 GPA Resolution on Generative AI.³⁶⁶²

Algorithmic Transparency

Malta is subject to the GDPR and Convention 108+. Maltese citizens have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.³⁶⁶³

Malta's Ethical AI Framework also covers criteria for guaranteeing algorithmic transparency such as the necessity to establish measures to ensure the traceability of outcomes for decisions made based on the use of an algorithm. Users are also to be made aware in clear and easily understandable language that relevant decisions, content, advice, or outcomes are the result of an algorithmic decision.

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems³⁶⁶⁴ specifically emphasizes requirements on transparency, accountability and effective remedies. The Recommendation provides that "Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems."³⁶⁶⁵ The Recommendation also clarifies that "Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines."³⁶⁶⁶

Smart Surveillance

Malta's Safe City pilot project in Paceville and then Marsa created using technology developed by Chinese tech giant Huawei, was considered as an example of mass surveillance technology. Former Prime Minister Joseph Muscat even referred to the potential network as "eyes in the sky."³⁶⁶⁷ The project also attracted criticisms from UN Data Protection Rapporteur Joseph Cannataci, who doubted the legal basis on which the project was developed, and EU Commissioner for Justice Vera Jourova. "Concerns about how the data collected by Huawei would be used also contributed to widespread negative responses to the project."

The project was discontinued in January 2023 after the contract expired and the state-owned company tasked with implementing the system was dissolved.³⁶⁶⁸

Environmental Impact of AI

Malta has not published specific policies or guidelines related to the environmental impact of AI systems or technology.

Lethal Autonomous Weapons

The Maltese government supports a legally binding instrument on lethal autonomous weapons. Malta has participated in some Convention on Certain Conventional Weapons (CCW) meetings on autonomous weapons. Malta spoke for the first time at the 2021 CCW Group of Governmental Experts on Lethal Autonomous Weapon Systems (GGE on LAWS) meeting, stating that it "remains concerned with the rapid technological advancement especially in AI, where as a result, lethal autonomous weapons systems are today capable of functioning with a lesser degree of human control or none."³⁶⁶⁹

In October 2022, Malta was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and

constraints.³⁶⁷⁰ In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”³⁶⁷¹

Malta participated in the first REAIM international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Malta, together with other countries, agreed on a joint call for action on the responsible development, deployment, and use of artificial intelligence in the military domain.³⁶⁷² In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”³⁶⁷³ Malta also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.³⁶⁷⁴

At the 78th UN General Assembly First Committee in 2023, Malta co-sponsored and voted in favor of resolution L.56³⁶⁷⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

At the 79th UN General Assembly First Committee in October 2024, Malta co-sponsored and voted in favor of resolution L.77³⁶⁷⁶ with 160 other countries in favor to 3 against, with 13 abstentions.³⁶⁷⁷ The Resolution highlighted “the importance of addressing the challenges and concerns (about the possible negative consequences and impacts) posed by autonomous weapons systems” from humanitarian, legal, security, technological, and ethical perspectives and mandated the UN Secretary-General to convene open informal consultations in 2025 open to the full participation of all Member States.

Human Rights

According to the Freedom House, Malta is a “free” country with a score of 87. “Malta is a parliamentary democracy with regular, competitive elections and periodic rotations of power. New and smaller political parties encounter difficulties in challenging the dominance of the two main parties, and official corruption is a serious problem. While civil liberties are generally respected, mistreatment of migrant workers and asylum seekers remains a concern.”³⁶⁷⁸

Malta is a Member State of the Council of Europe (CoE) and of the United Nations and thus has human rights obligations at the regional and universal levels.

As a Member of the CoE, Malta must abide by the European Convention on Human Rights and is subject to the jurisdiction of the European Court of Human Rights and the monitoring of the CoE treaty bodies. Its human rights policies and practices are also monitored by the CoE Commissioner for Human Rights.

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers affirmed that “member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or [minimizing] possible adverse effects.”³⁶⁷⁹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

As a UN Member State, Malta is subject to the oversight of various UN human rights bodies, including the Human Rights Council and its Universal Periodic Review and thematic special procedures.

OECD / G20 AI Principles

Malta is not a member of the OECD³⁶⁸⁰ but is recognized by the OECD as adhering to the AI Principles.³⁶⁸¹ The Maltese National AI Strategy emphasizes that Malta's Ethical AI Framework builds on the OECD AI Principles. The Framework explicitly states that particular attention was given to ensuring alignment with OECD AI Principles.³⁶⁸²

Council of Europe AI Treaty

Malta contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. Malta is party to the treaty as part of the European Union³⁶⁸³ but has not signed the treaty independently.³⁶⁸⁴

UNESCO Recommendation on AI Ethics

Malta has been a UNESCO member state since 1965 and is among the 193 Member States that adopted the UNESCO Recommendation on the Ethics of Artificial Intelligence. Malta has not initiated the UNESCO Readiness Assessment Methodology (RAM)³⁶⁸⁵ or explicitly addressed implementation of the UNESCO AI Recommendation.

Evaluation

Malta's goal is to become the "ultimate AI launchpad." Malta has developed a national AI strategy with strong pillars for trustworthy AI and benefits from a comprehensive European and national data protection legal regime. In response to the adoption of the EU AI Act, the Maltese government amended the Malta Digital Innovation Agency Act to enhance its independence and power over

innovative technology policies. The MDIA now has power to conduct market surveillance and compliance of products through investigation and enforcement, secure budget for its implementation, and issue and implement programs and schemes such as providing a certificate or mark of assurance or approval to innovative technology. In addition, Malta co-sponsored the GPA Resolution related to AI for the first time. Overall, the development of AI-related policies and the governance structure in Malta show improvement.

Mauritius

In 2024, Mauritius worked on the UNESCO Readiness Assessment Methodology (RAM) and hosted a UNESCO-sponsored AI Summit spotlighting Ethical AI.

National AI Strategy

Mauritius became one of the first African countries to publish a national AI strategy in 2018.³⁶⁸⁶ The strategy reflects the country's aim to promote and utilize AI in improving growth, productivity, and quality of life, with recommendations for the achievement of these goals. The strategy provides a roadmap for the development of AI in the country with a focus on key areas through the identification of sectors and national projects that can leverage AI, capacity-building and skill development, AI ethics, partnerships for emerging technologies, awareness campaigns, and adoption of AI in public services. The Economic Development Board and the Ministry of Finance and Economic Development³⁶⁸⁷ are responsible for piloting the strategy.

The AI projects identified for implementation fall in the manufacturing, health, agriculture, and FinTech sectors. As recommended by the Strategy, Mauritius established an AI Council composed of experts whose primary role is to advise the Government on ways to support the country's AI ecosystem. The Strategy also urges the government to create a regulatory environment for AI, consisting of a framework on ethics and data protection, and the provision of grants and tax credits to encourage investment in AI.

According to the Africa Policy Institute (AfriPoli), Mauritius' digital strategy focuses on five waves, one of which is the review of the existing legal frameworks to support AI and robotics developments.³⁶⁸⁸ The UN e-government

survey report highlights the efforts of Mauritius to align the Digital Government Transformation Strategy with the Public Sector Business Transformation Strategy, and the appointment of a High-Level Digital Government Task Force for oversight and reporting.³⁶⁸⁹ Mauritius' policy efforts align with the commitments it took as a member of the African Union, notably the AU digital transformation strategy³⁶⁹⁰ and the Continental Data Policy Framework.³⁶⁹¹

Moreover, the government of Mauritius collaborates with the national AI industry, showing support for their initiatives. In particular, the Mauritius Ministry of Information Technology, Communication and Innovation promoted the Artificial Intelligence (AI) Summit, an initiative of the Mauritius Emerging Technologies Council (METC).³⁶⁹²

Public Participation

Mauritius includes a framework for public participation in its laws. The country's Constitution makes it mandatory for the legislature to create avenues for public participation in the law-making process. Accordingly, it provides citizens with the right to participation, freedom of association, and expression.³⁶⁹³

The Digital Government Survey of 2018 reported a significant lack of involvement of citizens in national issues and policy discussions.³⁶⁹⁴ Recommendations in the Digital Government Transformation Strategy included the “provision of digital platforms for integrating citizens and other stakeholder views in government decision-making processes,”³⁶⁹⁵ engagement by Ministries / Government departments with the public, and dissemination of information to inform decision-making, as well as the release of Open Data “as a means to

achieve transparency in public sector operations.”³⁶⁹⁶ Accordingly, the government established the Citizen Support Portal.³⁶⁹⁷ The Portal is an e-participation and e-decision-making platform meant to enable government to engage with citizens. The platform is intended to “handle citizen complaints, monitor complaints, and inform citizens on Government policies.”³⁶⁹⁸ The platform is supported by 35 Citizen Advice Bureaus placed across the country, to facilitate access to computers or the Internet to citizens who do not have these means.³⁶⁹⁹ The government of Mauritius has on occasion proactively consulted with relevant stakeholders in developing its national digital policy. While preparing strategic plan Digital Mauritius 2030, the government has been consulting stakeholders from the public and the private sectors.³⁷⁰⁰

In the UN e-Government survey 2020, Mauritius had moved to first place in Africa, 63rd in the world, and 45th globally in the open data index, and was recognized as a model digital government.³⁷⁰¹ The most recent e-Government Survey of 2022, ranked Mauritius as the 2nd top nation in Africa and 75th out of 193 countries in the world, in terms of the e-Government development index (EGDI).³⁷⁰²

In January 2023, the Data Protection Office organized a conference “Protecting Personal Data across All Economic Sectors” on Data Protection Day³⁷⁰³. Privacy rights, accountability, and protection against government surveillance were part of the agenda.

Center for AI and Digital Policy

Data Protection

Mauritius is among the first African countries that enacted a new law, the Data Protection Act 2017 (DPA),³⁷⁰⁴ in line with the European General Data Protection Regulation (GDPR)³⁷⁰⁵ and repealing the previous Data Protection Act.³⁷⁰⁶

The DPA aims to enhance data subjects' control over their personal data and individual autonomy.³⁷⁰⁷ Unlike the GDPR, the DPA does not have any extra-territorial effect. The DPA covers "the processing of personal data, wholly or partly by automated means."³⁷⁰⁸ Section 21 of the DPA³⁷⁰⁹ enshrines provisions regarding the lawful, fair, and transparent processing of data, the right to erasure and rectification, and the observance of the rights of data subjects. Section 34 provides for the right to privacy within the "principles of lawfulness, necessity, and proportionality in a democratic society." The DPA requires a Data Protection Impact Assessment ex-ante to assess if the processing has the potential to result in "high risk to the rights and freedoms of data subjects by virtue of their nature, scope, context, and purpose."³⁷¹⁰ The Assessment shall include:

1. Purposes and the legitimate interest of the processing
2. Necessity and proportionality
3. Risks to the rights and freedoms of data subjects
4. Measures to address risks; safeguards

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The DPA has been criticized for providing no limitations regarding the use of new technologies, including AI,³⁷¹¹ thus raising privacy and ethical concerns if no impact assessment is conducted.³⁷¹²

The Data Protection Office (DPO)³⁷¹³ is the supervisory authority responsible for protecting the privacy rights of individuals since 2009. The DPO offers e-services ranging from Data Protection Impact Assessments, compliance audits, certifications, transfer of personal data abroad, and notifications of a personal data breach. One of the functions of the Data Protection Commissioner, as per Article 5 of the DPA, is to examine any proposal for automated decision-making that may result in adverse effects on the privacy of individuals.³⁷¹⁴

Mauritius' Data Protection Commissioner since 2007 is Ms. Drudeisha Madhub. Ms. Madhub contributed to the reform of Mauritius's data protection legislation and in the Southern Mediterranean region, including with regard to the negotiations with the EU to achieve adequacy.³⁷¹⁵ Despite the DPO's action at national and international level, the DPO has not endorsed the Global Privacy Assembly's 2018 Declaration on Ethics and Data Protection in Artificial Intelligence,³⁷¹⁶ 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence,³⁷¹⁷ and 2022 Declaration on Facial Recognition Technology.³⁷¹⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The DPO has issued several Guidelines regarding the DPA,³⁷¹⁹ including AI solutions in the context of the COVID-19 pandemic³⁷²⁰ and a Code of Practice³⁷²¹ to ensure that the Mauritius Police Force complies with the DPA when it operates the Safe City surveillance systems. In a report by the UN Rights Committee of 2021, Mauritius was found in violation of citizens' privacy rights due to the lack of assurance of protection of the biometric data stored in the National Identity Card.³⁷²²

In 2018, Mauritius ratified³⁷²³ the African Union Convention on Cyber Security and Personal Data Protection (Malabo Convention).³⁷²⁴ The collaboration with European Union led the Ministry of Information Technology, Communication, and Innovation (MITCI) to initiate the Cyber Resilience for Development Project (Cyber4D) project in 2018.³⁷²⁵ In April of that year, the country signed the Commonwealth Cyber Declaration on the occasion of the Commonwealth Heads of Government Meeting (CHOGM).³⁷²⁶ The parties to the Declaration acknowledged the importance of agreeing on common standards, strengthening data protection and security, and affirmed that "the same rights that citizens have offline must be also protected online."

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In 2021, the MITCI submitted to Parliament and achieved the enactment of the new Cybersecurity and Cybercrime legislation,³⁷²⁷ in alignment with the Council of Europe tenets and other international conventions. Mauritius is a *priority country* in the Council of Europe Global Action on Cybercrime Extended Project (GLACY+), which seeks to strengthen States' capabilities in the formulation of cybercrime legislation.³⁷²⁸ However, the cybercrime legislation does not specifically address personal data protection or algorithm transparency as fundamental rights.

In 2021, the Government proposed to amend the Information and Communication Technologies (ICT) Act seeking to regulate the misuse and abuse of social media. The Information and Communication Technologies Authority launched a public consultation,³⁷²⁹ which generated concerns among free expression advocates locally and internationally.³⁷³⁰ While the proposed amendment largely targeted communications that are protected under Article 12 of Mauritius's Constitution, such an amendment would have allowed the government to set proxy servers with the capability to decrypt social media posts. Such a capability would interfere with the provisions of the DPA that afford data privacy and protection. Ultimately, the government retracted the proposed amendment.

Mauritius signed a Joint Declaration³⁷³¹ on privacy and the protection of personal data with the European Union, Australia, Comoros, India, Japan, New Zealand, Singapore, South Korea, and Sri Lanka, with the aim to promote core safeguards relating to automated decision-making such as transparency and the possibility to challenge the outcome of an automated decision.

After an eight-day visit to the country in December 2023, the UN Special Rapporteur on the right to privacy stated, "Overall, privacy is taken seriously in Mauritius and the Government has prioritized developing a comprehensive legal

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

framework. However, the challenge, as is the case for all States, is to ensure the implementation of the laws.”³⁷³²

Algorithmic Transparency

On September 4, 2020, Mauritius became the first African country to ratify the Convention 108+, which sets a right to algorithmic transparency.³⁷³³ Section 38 of the DPA addresses the rights of an individual not to be subject to automated decision making, including profiling, that results in legal effects for the subject. This section establishes that automated processing for evaluation “shall not be based on special categories of personal data” and must include safeguards for the “rights, freedoms, and legitimate interests” of the subject.³⁷³⁴

Facial Recognition and Smart Cities

Mauritius’ National AI Strategy states that AI is essential to help improve public safety, which is also echoed in Mauritius’ Vision Strategic Plan 2030³⁷³⁵ and the Digital Government Transformation Strategy.³⁷³⁶ Already underway, the Safe City Project is set to include the installation of a Safe City infrastructure comprised of a total of 4000 surveillance cameras (Intelligent Video Surveillance –IVS) with built-in facial recognition capabilities once it is completed.³⁷³⁷ Huawei Technologies Co, Ltd, the Chinese Information Communication Technology giant with an almost two-decades-old presence in Mauritius in partnership with Mauritius Telecom, provided the AI-powered technology,³⁷³⁸ which has the capability of generating alarms when it detects suspicious personnel.³⁷³⁹ The Carnegie Endowment for Peace study on AI surveillance reported this exclusive

surveillance contract for smart policing with Huawei to be the result of a commitment of Mauritius to access long-term financing from China.³⁷⁴⁰

In 2020, members of the Parliament raised concerns about the effectiveness of data protection safeguards because the Prime Minister exempted the Safe City Project from the DPA, under Section 44 of the DPA, evoking national security grounds. As a result, the Government released a Code of Practice³⁷⁴¹ for the operation of the Safe City Systems by the Mauritius Police Forces in accordance with the provisions of the DPA 2017. Mauritius' Prime Minister stated that no biometric data has been collected because the AI technology is not yet operational and reiterated that the Safe City project is aligned with Section 44 of the DPA 2017.³⁷⁴²

The Safe City pilot falls under the jurisdiction of the Mauritius Police Force, under the Prime Minister's Office, but the responsibilities for the data of this project were opaque from the onset.³⁷⁴³ The Hoover Institution warned about the risks for "political control, manipulation, and oppression" resulting from surveillance projects, and calls for checks and balances by the Mauritian Parliament, National Audit Office, and media to ensure that the public interest in projects of this magnitude is a priority.

In May 2023, the German Council on Foreign Relations published a study demonstrating that these concerns still exist in Mauritius, as part of Chinese-planned coastal smart cities, located close to submarine cable landing stations and vital naval channels.³⁷⁴⁴

Biometrics

Upon reaching the age of 18, all Mauritius citizens must apply for an identity card which they must carry on them.³⁷⁴⁵ Mauritius launched its first

identity card scheme under the National Identity Card Act of 1985.³⁷⁴⁶ A new smart biometric ID card scheme, which mandates the Government to store data including fingerprints and calls for stiffer penalties against identity fraud³⁷⁴⁷ to deter multiple ID card applications using fake information, initiated under the Mauritius National Identity Card Unit in 2019.

The new 2013 National Identity Card scheme led to a constitutional challenge, *Madhewoo v The State of Mauritius, and another*,³⁷⁴⁸ which reached the Supreme Court of Mauritius as citizens of Mauritius feared misuse of their personal data for Government mass surveillance. The Supreme Court held that although the smart ID card scheme interfered with the plaintiff's right to privacy under Section 9(1) of the Constitution, the application of the 2013 Act was permissible under Section 9(2) because the right to privacy is not absolute and interference with that right is permissible in the interest of public order. However, the Court held that the storage of the data was not adequately secured because of the lack of safeguards as provided under the DPA. In response, the Mauritius Government issued the National Identity Card (Amendment, Civil Identity Register) Regulations 2015,³⁷⁴⁹ which erases the biometric data once the ID card has been issued.

In 2016, the Judicial Committee of the Privy Council confirmed the 2015 judgment of the Supreme Court of Mauritius.³⁷⁵⁰ Subsequently, the plaintiff filed a UN human rights complaint. On July 21, 2021, the UN Human Rights Committee shared the views of the Committee according to which the mandatory storing of biometric data interfered with the plaintiff's right to privacy since it relates to data storage and retention contrary to Article 17 of the International Covenant on Civil and Political Rights³⁷⁵¹ to which Mauritius is a party. The Committee found that the Government failed to set appropriate measures to protect the stored data against the risk of arbitrariness and abuse and must take steps to

avoid similar violations. Mauritius was given 180 days to report back to the Committee with the actions taken to give effect to the Committee's views and to publish them broadly in the official language of Mauritius. To date, there are no official reports about any action planned by Mauritius to address the UN report.

A 2021 OHCHR report also pointed to the use of AI for profiling and automated decision-making by Intelligent agencies in Mauritius despite the regulations of Section 9 of the Constitution. The report noted deployment of AI across four areas: (1) public safety video and image analysis, including the use of CCTVE audio recording; (2) DNA Analysis powered by AI; (3) Forensic application of Facial Identification Techniques (FITS) and (4) Crime forecasting through the Intelligent Video Surveillance (IVS).³⁷⁵²

Environmental Impact of AI

No available documents from Mauritius indicated a position or policies on the environmental impact of AI systems.

Lethal Autonomous Weapons

Mauritius ratified the Convention on Certain Conventional Weapons (CCW) in 1993 and has participated in some CCW meetings on autonomous weapons systems. As a member of the Non-Aligned (NAM) and the African Union, Mauritius supports the negotiation of a legally binding instrument on autonomous weapons systems to ensure that the weapons respect human rights and remain accountable.³⁷⁵³ The African Group in 2021 stressed the “ethical, legal, moral, and technical questions” raised by the use of autonomous weapons systems and urged for concrete policy recommendations to be adopted including prohibitions and regulations.³⁷⁵⁴

Human Rights

The Freedom House 2024 *Freedom in the World* report ranks Mauritius as a ‘free’ country in terms of protection of human rights, with a score of 85/100.³⁷⁵⁵ The country has a strong ranking for the protection of political rights and civil liberties. However, International IDEA's latest Global State of Democracy 2023

report indicates that Mauritius is part of the countries in Africa that have experienced the greatest democratic recession over the last five years.³⁷⁵⁶

Mauritius has a comprehensive framework on human rights, as a member of the United Nations and a signatory of the Universal Declaration of Human Rights. Mauritius has also ratified the International Covenant on Civil and Political Rights (ICCPR), the International Covenant on Economic and Social Cultural Rights (ICESR), and the Convention on Cybercrime (Budapest Convention).³⁷⁵⁷ Mauritius enacted the Protection of Human Rights Act 1998 that creates a national framework for the protection of human rights.³⁷⁵⁸ The Act establishes the National Human Rights Commission whose mandate is to protect human rights and investigate complaints regarding human rights violations.

In 2018, the UN Human Rights Council, Universal Periodic Review of Mauritius, highlighted the country's efforts to develop human rights indicators, which were integrated systematically into national implementation and monitoring plans.³⁷⁵⁹ Mauritius issues periodic reports on the implementation of the African Charter on Human and People's Rights, the latest in March 2016 for the period 2009–2015.³⁷⁶⁰

OECD / G20 AI Principles

Mauritius is not a member of the OECD or the G20 and has not endorsed the OECD AI Principles³⁷⁶¹ or the G20 AI Guidelines.³⁷⁶² The OECD AI Observatory reports the strides of the government of Mauritius in the field of AI policy³⁷⁶³ with the release of the AI Strategy and the establishment of an AI Council. The Mauritius AI strategy addresses six OECD AI principles: (1)

inclusive growth, sustainable development, and well-being; (2) Human-centered values and fairness, (3) Robustness, security, and safety, (4) Fostering a digital ecosystem for AI, (5) Providing an enabling policy environment for AI, and (6) Building human capacity and preparing for labor market transitions.³⁷⁶⁴ However, fairness is only glancingly mentioned in the national AI strategy without a clear indication of how the government of Mauritius defines and intends to promote fairness in relation to AI development and deployment.³⁷⁶⁵

At the International Conference on Digital Economy & Digital Banking held in Mauritius in October 2022, Mauritius' Prime Minister, Pravind Kumar Jugnauth, reiterated the government's engagement to continue to foster collaboration with international institutions, especially with the OECD, with the aim to promote Mauritius as a Development Model in Africa.³⁷⁶⁶ The Prime Minister shared Mauritius's determination to become a member of the OECD. Mauritius was one of the guest countries invited to attend the G20 summit in Delhi, India, in September 2023.³⁷⁶⁷

Council of Europe AI Treaty

Mauritius has not endorsed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law, the first international treaty on AI and human rights.³⁷⁶⁸

UNESCO Recommendation on AI Ethics

Mauritius is a member state of UNESCO since 1968³⁷⁶⁹ and one of the 193 countries which endorsed the UNESCO Recommendation on the Ethics of AI (UNESCO Recommendations) on November 21, 2021.³⁷⁷⁰

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In 2022, Mauritius attended the UNESCO-Southern Africa Sub-Regional Forum on AI (SARFAI 2022) held in Windhoek, Namibia in September 2022. Discussions concerned the Ethical Impact Assessment and Readiness Assessment Methodologies in the framework of the implementation of the UNESCO Recommendation. Mauritius was not a participant in the session. The co-hosts of SARFAI 2022 (Botswana, Malawi, Mozambique, Namibia, South Africa, Zambia and Zimbabwe) approved the Windhoek Statement on Artificial Intelligence in Southern Africa,³⁷⁷¹ which calls for the establishment of a Southern African coordination mechanism for the implementation of the UNESCO Recommendation on the Ethics of AI.

Member states of the South African Development Community (SADC), including Mauritius, are set to submit the Declaration to the 2023 Joint Meeting of SADC Ministers responsible for Education and Training and Science, Technology, and Innovation, for discussion and adoption. The most recent UNESCO AI Needs Assessment Survey did not include any report or statistic about Mauritius.³⁷⁷²

Mauritius is currently completing the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.³⁷⁷³ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.³⁷⁷⁴

With patronage from UNESCO, Mauritius hosted its inaugural AI Summit in 2024, focused on “ethical AI driving socio-economic progress, global collaboration, and innovation.” Organized by the Ministry of Information Technology, Communication, and Innovation and the Mauritius Emerging Technology Council (METC), the event marks a preliminary step towards implementing the UNESCO Recommendation on Ethics in Artificial Intelligence, particularly principles 9 (Awareness and Literacy) and, given the international spotlight, 4 (Multi-stakeholder and Adaptive Governance & Collaboration). The Summit brought together stakeholders from across Africa and around the world and provided a spotlight for the UNESCO Recommendation on the Ethics of Artificial Intelligence, presented by Prof. Emma Rutkamp-Bloem of the

UNESCO World Commission on the Ethics of Scientific Knowledge and Technology.³⁷⁷⁵

Evaluation

Undoubtedly, Mauritius is one of the few African countries making significant strides toward the Fourth Industrial Revolution. Mauritius has endorsed the UNESCO Recommendation on the Ethics of AI, developed a national AI strategy, upgraded its data protection legal regime, and ratified the Council of Europe's Convention 108+. Yet, concerns remain regarding widespread AI-powered surveillance practice.

Mexico

In 2024, Mexico continued participation in the UNESCO-affiliated regional summit on ethical AI and joined the Montevideo Declaration. The country also completed the UNESCO RAM with a report presented to the Senate. Domestically, Mexico lacks a formal AI strategy. However, the multi-stakeholder group National AI Alliance introduced a framework for AI regulation and development, which signals a step toward a comprehensive AI strategy under the government elected in late 2024.

National AI Strategy

In 2018, Mexico became the first Latin American country to announce a national AI strategy. The Office of the Mexican President under the Peña Nieto administration together with the United Kingdom's Embassy in Mexico City commissioned a readiness assessment and policy report.³⁷⁷⁶

The report provides a preliminary outline of how Mexico should become a leader in AI. Mexico's manufacturing-centric economy, the report argues, faces grave risks amid growing automation and should take a clear, strategic position in developing AI. The report set out five thematic areas: governance, government, and public services; research and development; capacity, skills, and education; data infrastructure; and ethics and regulation.

Within the category of ethics and regulation, the report recommends that the Mexican government bring data assets inside the scope of Mexican competition law (COFECE) in recognition of the fact that data is a competitive

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

asset. The report also calls for the creation of an AI Ethics Council which would “set guidelines and limits which reflect Mexican Values” and “award a quality mark for AI companies who abide by the standards.”³⁷⁷⁷

On this basis, in March 2018, the Office of the President under the former Peña Nieto administration launched Mexico’s AI Strategy 2018. The Strategy sets out five key actions for the Mexican government: develop an inclusive governance framework; identify the needs of AI in industry; open the recommendations of the readiness assessment and policy report for public consultation; support Mexico’s AI leadership in international forums; and promote continuity through changing administrations, by working with all interested stakeholders towards an official AI National Policy.³⁷⁷⁸

However, a 2022 report conducted by the OECD in collaboration with the Development Bank of Latin America reported: “Mexico’s 2018 strategy, which was put into effect under a previous administration, is no longer publicized on official government websites. It is unclear whether the current administration considers the strategy to be still in effect.”³⁷⁷⁹

During the López Obrador administration but following a recommendation of the 2018 AI readiness and policy report, a multi-stakeholder national coalition, IA2030.Mx,³⁷⁸⁰ comprising institutions from the government, industry, civil society and academy, and coordinated by C Minds, issued the Mexican National AI Agenda (2018–2030).³⁷⁸¹ The “objective is to coordinate efforts, build a single voice around AI and promote continued action and support for the topic.”³⁷⁸² The Agenda revolves around six thematic axes: 1. Data, Digital Infrastructure and Cybersecurity; 2. Ethics; 3. Research and Development; 4. Governance, Government and Public Services; 5. Skills, Capacities and Education; and 6. Mexicans Abroad.

Under the first axis and with regard to privacy, the Agenda identifies as a key issue: “A constant tension exists between privacy and access to data necessary

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

for the development and improvement of AI systems. If data is the raw material, how to ensure appropriate access? A vision for data governance which allows access to data in a safe, ethical, lawful and privacy-friendly way, as it is currently defined or to be reconsidered in light of recent events such as the SARS 2 COVID-19 pandemic or possible terrorist attacks, is necessary.”³⁷⁸³

Concerning ethics, the Agenda states that “it is of the utmost importance for the development and adoption of AI technology in our country to be based on the protection of, and respect for human rights.”³⁷⁸⁴ The Agenda explains that “one of the main merits in using human rights as a pivotal element in the development of AI is that human rights clearly establish the responsibility of the government in protecting human rights and providing mechanisms for the prevention of, and remedy against possible violations.”³⁷⁸⁵

The Agenda identifies three rights which may be particularly at risk: freedom of expression, equality and non-discrimination, and privacy.³⁷⁸⁶ These rights are part of the case law of the Inter-American Court for Human Rights and also addressed by the Inter-American Commission for Human Rights. These rights are also well defined in various conventions at international level.³⁷⁸⁷

The Centro LATAM Digital and Latin American Initiative for Open Data (Iniciativa Latinoamericana por los Datos Abiertos, ILDA), with the financial support of the International Development Research Centre (IDRC) and the Inter-American Development Bank (IADB), published a report on Mexico’s public policy on AI. The purpose of this report was to identify the main challenges and obstacles for the design of public policies on AI that includes a human rights-based approach and that may serve to support and resume Mexico’s national AI strategy by the current government.

Key recommendations are (i) to create a national strategy on AI that is multi-stakeholder and multi-disciplinary that could contribute to the development of public policies and mechanism for measurement and assessment; (ii) put a strong emphasis on the protection of personal data related with the development of AI technologies; (iii) implement the OECD principles on AI; (iv) include efficient government coordination mechanisms to implement a national plan on AI that could identify the main actors and stakeholders of different areas; and (v) to work closely with the different commissions and groups of National Congress

to make them aware of the benefits and risks of AI that may support the drafting of flexible regulations on AI.³⁷⁸⁸

The Mexican government also published the General Principles for the Development and Use of Systems based on AI in the Federal Public Administration.³⁷⁸⁹ The key principles are: Monitor and evaluate the impacts of AI systems in order to ensure that they achieve the expected results; Promote transparency, by explaining to the users that interact with AI systems the decision process taken by such systems, the expected benefits as well as the potential risks derived from using such systems; Protect privacy, by incorporating mechanisms of control and consent for the use of personal data during the design of AI systems; Foster equality, by reducing risks of discriminatory biases derived from the utilized data; Due process, by allowing individuals to dispute decisions made by AI systems.

The National Artificial Intelligence Alliance (ANIA) established a framework to integrate AI as a driver of social, economic, and educational development in Mexico, promoting inclusion, scientific research, innovation, and responsible entrepreneurship. This framework is designed to guide public policy, regulation, and governance to protect human and environmental rights by managing AI-associated risks and ensuring ethical and transparent AI deployment. The initiative included:

- Conducting diagnostics and formulating regulatory and policy recommendations through multi-sectoral workgroups covering public policy, education, labor, cybersecurity, gender inclusion, and innovation.
- Promoting AI awareness and training.
- Documenting AI use cases within Mexico.
- Fostering international collaboration.

ANIA, launched in the Senate, united stakeholders from technology, academia, civil society, and government, working together under an “AI Framework for the Common Good.” This collaborative model, developed with UNESCO, aimed to advance an ethical AI ecosystem for the benefit of all Mexicans.³⁷⁹⁰

Mexican Senator Ricardo Monreal introduced the Federal Law Regulating Artificial Intelligence, a bill aimed at creating a legal framework for AI in Mexico,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

in February 2024.³⁷⁹¹ However, the bill never passed. The Senate has since undertaken a series of conversations with academic and industry experts to gain insights into how to regulate AI. The senators, led by the Commission of Analysis, Tracking, and Evaluation about the Application and Development of Artificial Intelligence, expect to develop a bill and vote on it by the end of 2025.³⁷⁹²

Public Participation

The Mexican AI National Agenda is the product of broad public participation. The IA2030Mx coalition stated that “the members of this movement have been working since the beginning of 2018 under a philosophy of co-responsibility of government, academia, industry and civil society, seeking that Mexico does not lag behind in the 4th Industrial Revolution, strategically takes advantage of the benefits of AI and mitigates the possible ethical and social risks.”³⁷⁹³ “What started as the collaboration of 10 institutions grew to the participation of more than 110 on a national scale. One of the first actions of the coalition was launching a national consultation on AI” in which 1588 people across the different Mexican states participated.³⁷⁹⁴

Data Protection

The right to data protection³⁷⁹⁵ is enshrined in Article 16 paragraph 2 of the Mexican Constitution. Mexico has also ratified the 1981 Council of Europe (Convention 108) for the protection of individuals with regard to the processing of personal data but not yet the 2018 Protocol modernizing the Convention.³⁷⁹⁶

For the private sector, the 2010 Federal Law for the Protection of Personal Data Held by Private Parties and its respective Regulations constitute the main legislative framework regarding data protection. The National Institute for Transparency, Access to Information and Personal Data Protection (INAI) is the authority responsible for enforcing the law for the private sector.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

For the public sector, the 2017 General Law for the Protection of Personal Data in the Possession of Obligated Subjects as well as the General Guidelines for the Protection of Personal Data regulates the processing of personal information in the possession of any Federal, State, or local authority across Mexico. The INAI is responsible for applying these rules at the federal level. Each of the 32 Mexican States has its own legal framework that regulates the collection and processing of personal data by the public sector. A State-level data protection authority oversees compliance with the law.

As pointed by the INAI, “a common basis for the private and the public sector are the principles and duties regarding the protection of personal data that are found in the regulations that apply to them, which assure data subjects that the processing of their information is carried out properly.”³⁷⁹⁷ Whether the processing of personal data occurs in the private or the public sector, data subjects benefit from the “ARCO rights,” which refer to the access, ratification, cancelation, and opposition rights of data subjects with respect to their personal data. Data subjects have the right to oppose the processing of their data at any time by any mechanism, including automated decision-making and profiling. In the public sector, data subjects are also granted the right to data portability.

In May 2022, the INAI issued recommendations for the processing of personal data deriving from the use of AI.³⁷⁹⁸ Referring to the OECD, the INAI mentions that “there exists at least five values or principles for responsible AI governance:

1. AI should benefit to people and the planet by fostering inclusive growth, sustainable development and well-being.
2. AI systems should be designed in compliance with the rule of law, human rights, democratic values and diversity, and they should include adequate mechanisms—such as, for example, allowing human intervention when it is necessary—to guarantee a just and equitable society.

³⁷⁹⁷ National Institute for Transparency, Access to Information and Personal Data Protection, *Recommendations for the Treatment of Personal Data Derived from the Use of Artificial Intelligence* (May 2022), <https://home.inai.org.mx/wp-content/documentos/DocumentosSectorPublico/RecomendacionesPDP-IA.pdf>; Cristos Velasco and Maria Solange Maqueo, *Privacy and Data Protection Law in Mexico*, Wolters Kluwer Law & Business (Nov. 2022), https://law-store.wolterskluwer.com/s/product/privacy-and-data-protection-law-in-mexico/01t4R00000OknfVQAR?srltid=AfmBOooxbz8DFOWPvBKXXIxWYE6hOmJe7LAe-A7Z1vGK3WzLN_0VB-tP

³⁷⁹⁸ National Institute for Transparency, Access to Information and Personal Data Protection, *Recommendations for the Treatment of Personal Data Derived from the Use of Artificial Intelligence* (May 2022), <https://home.inai.org.mx/wp-content/documentos/DocumentosSectorPublico/RecomendacionesPDP-IA.pdf>; Data Guidance, *Mexico: INAI Recommendations on AI* (Sept. 2022), <https://www.dataguidance.com/opinion/mexico-inai-recommendations-ai>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

3. Transparency and responsible public disclosure regarding AI systems should exist in order to ensure that people understand its results and can be challenged.
4. AI systems should function in a safe and sound manner during its entire lifecycle and potential risks should be continuously assessed and managed.
5. Organizations and individuals who develop, deploy or operate AI systems should be responsible for its correct functioning, based on the principles described above.”³⁷⁹⁹

The INAI then sets “five basic principles which should be respected during the development and implementation of any AI technology. These principles guarantee that technological development has a positive impact on people’s life, especially people who use these technologies.”³⁸⁰⁰ These are: inclusive growth, sustainable development, and well-being; human-centered values and fairness; transparency and explainability; robustness, security, and safety; and accountability.

The INAI is part of the Ibero-American Data Protection Network (RIPD),³⁸⁰¹ a group of experts on data protection and access to information, comprising 34 entities, including 14 federal and state authorities from Latin America and the Caribbean. In 2019, the RIPD adopted the Specific Guidelines for Complying with the Principles and Rights Governing Personal Data Protection in Artificial Intelligence Projects,³⁸⁰² based on the Standards for Personal Data Protection for the Ibero-American States approved in 2017.³⁸⁰³ The INAI relied on the RIPD AI Guidelines to formulate its own recommendations on top of the OECD AI Principles.

The INAI is a member of the Global Privacy Assembly (GPA) since 2010. Data protection institutes for the Federal District (Mexico City) and for the states of Mexico, Michoacan, Nuevo León, Quintana Roo, and Tamaulipas are also accredited members.³⁸⁰⁴

³⁷⁹⁹ National Institute for Transparency, Access to Information and Personal Data Protection, *Recommendations for the Treatment of Personal Data Derived from the Use of Artificial Intelligence*, p. 16 (May 2022), <https://home.inai.org.mx/wp-content/documentos/DocumentosSectorPublico/RecomendacionesPDP-IA.pdf>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The INAI co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,³⁸⁰⁵ 2020 GPA Resolution on AI Accountability,³⁸⁰⁶ and 2023 GPA Resolution on Generative AI.³⁸⁰⁷ However, it did not endorse the 2022 GPA Resolution on Facial Recognition Technology.³⁸⁰⁸

Algorithmic Transparency

Although transparency and explainability are not expressly mentioned in the data protection laws of Mexico, the INAI's 2022 Recommendations for the processing of personal data deriving from the use of AI mention transparency and explainability as one of the five basic AI principles that should be respected during the development and implementation of AI systems.³⁸⁰⁹ The INAI explains that: "whoever uses AI systems should be transparent regarding the use of such systems and provide significant information in order for people to be aware that they are interacting with AI systems; to know what part AI systems play in the results obtained; to be granted the opportunity to contest the outcome if they have been negatively impacted by the AI system."³⁸¹⁰

Data Scraping

The INAI and 16 of its international data protection and privacy counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy.³⁸¹¹ The initial statement in August

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”³⁸¹² The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”³⁸¹³

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Mexico approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.³⁸¹⁴ The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI in public administration and adapt their AI policy strategies and laws accordingly.

The guiding principles in the Charter include human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness,

and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection.

The Charter calls on member states to create policies and laws to require the assessment of the impact of AI systems on human rights and freedoms and the registration of algorithms to “anticipate risks, prevent undesirable effects and ensure its proper implementation.”³⁸¹⁵ The Charter also proposes a risk classification mechanism that would require guardrails for middle-risk uses and prohibitions against high-risk applications. Prohibited uses include facial recognition systems; systems aimed at behavior and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly); and social ranking systems based on certain personality traits, individual behaviors, socio-demographic features or economic status.

EdTech and Children Tracking

In November 2020, the Council of Europe Consultative Committee of the Convention for the Protection of individuals with regard to automatic processing of personal data (Convention 108), to which Mexico is party, issued Guidelines on Children’s Data Protection in an Education Setting, also applicable to remote e-learning solutions and services.³⁸¹⁶ The Committee recalls that “The UN Convention Committee on the Rights of the Child set out in 2001, that [...] Education must be provided in a way that respects the inherent dignity of the child and enables the child to express his or her views freely.”³⁸¹⁷

The Committee highlighted the need for children to have agency over how their data re used and called for better education for them around their digital footprint. The Committee set standards to minimize data collection, especially in the use of EdTech “when consent cannot be freely given because the choice is to use a product and receive remote instruction or refuse and receive none.”³⁸¹⁸ The Committee recommended “A precautionary approach and a strengthened protection towards sensitive, special categories of data, including genetic and biometric data, and ethnic origin, or relating to sexual orientation, or offences, recognising children’s additional vulnerability.”³⁸¹⁹ In addition, they noted that “Profiling of children should be prohibited by law. In exceptional circumstances, States may lift this restriction when it is in the best interests of the child or if there

is an overriding public interest, on the condition that appropriate safeguards are provided for by law”³⁸²⁰

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Mexico, for children’s education during the pandemic. Based on technical and policy analysis of 163 EdTech products, Human Rights Watch found that governments’ endorsements of the majority of these online learning platforms put at risk or directly violated children’s rights.

EdTech products used in Mexico sent children’s data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online. According to Human Rights Watch, in line with child data protection principles as well as corporations’ human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children’s data for advertising. The report noted steps companies should take to protect children’s rights, including working with governments to define clear retention and deletion rules for children’s data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights to do so.³⁸²¹

Use of AI for Criminal Purposes

The use of AI and the use of deepfakes for criminal-related purposes is on the rise and Mexico has not been exempted. In December 2023, the financial services regulator, the National Commission for the Protection and Defense of Users of Financial Services gave a warning about a deepfake video being widespread mainly through social media purporting to be Mr. Carlos Slim (Mexico’s wealthiest man). The video shows a manipulated image of Mr. Carlos Slim taken from an earlier event that his company and foundation Telmex promotes among interns.³⁸²² The deepfake video informs about a new application requesting citizens to redirect to a hyperlink, download, fill out, and send a form to earn an attractive sum of money per day. The video was a well-elaborated scam and there is evidence that many people in Mexico were affected by this fraud.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Environmental Impact of AI

Mexico's participation in the Latin American and Caribbean Regional Council and other international organizations signals a commitment to sustainable development in the use of AI technologies. However, Mexico has not developed specific policies around the environmental impact of AI or other digital technologies.

Lethal Autonomous Weapons

In October 2022, Mexico endorsed, together with 69 other countries, a joint statement on autonomous weapons systems at the UN General Assembly meeting. In this joint statement, States urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”³⁸²³

In February 2023, Mexico endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,³⁸²⁴ which calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

At the 78th UN General Assembly First Committee in 2023, Mexico voted in favor³⁸²⁵ of resolution L.56³⁸²⁶ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Human Rights

Freedom House gives Mexico a “partly free” (60/100) rating for political rights and civil liberties.³⁸²⁷ According to Freedom House, “Mexico has been an electoral democracy since 2000, and alternation in power between parties is routine at both the federal and state levels. However, the country suffers from severe rule of law deficits that limit full citizen enjoyment of political rights and civil liberties.”³⁸²⁸

In December 2020, celebrating Human Rights Day, the National Institute for Public Health, mentioned that “Mexico signed the Universal Declaration of Human Rights in 1948, however it was not until 1992 that the protection and defense of human rights obtained constitutional ranking. [...] The COVID-19 crisis has been fueled by structural discrimination and racism. [...] In order to recover from the crisis, we have to tackle the pandemic of inequality. For this, it is necessary to promote and protect economic, social, and cultural rights.”³⁸²⁹

OECD / G20 AI Principles

Mexico has taken an active role in pursuing international cooperation for the ethical development of AI. The Mexican government endorsed the OECD AI Principles in 2019 and the updated principles in 2024.³⁸³⁰ Mexico has also endorsed G20 AI Guideline and is one of the founding members of the Global Partnership on AI (GPAI), the world’s first international AI initiative.³⁸³¹

Council of Europe AI Treaty

Mexico contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. However, Mexico has not signed the treaty.³⁸³²

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

Mexico is represented in UNESCO's World Commission on the Ethics of Scientific Knowledge and Technology (COMEST). COMEST produced a preliminary study on the ethics of AI, which became the foundation of the UNESCO Recommendation on the Ethics of AI.³⁸³³ In November 2021, Mexico alongside 192 other states adopted the Recommendation on Ethics of AI.³⁸³⁴

Mexico is among the countries that “have initiated a process to establish institutional infrastructures, such as national steering committees on the ethics of AI, to oversee the piloting of the capacity-building tools under development.”³⁸³⁵

CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the UNESCO Recommendation in Latin America and the Caribbean. They pledged to create a Regional Council composed of national and local governments in the region which will support their implementation efforts. Mexico is a member of the Regional Council.³⁸³⁶

Mexico signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence as part of this movement.³⁸³⁷ The Santiago Declaration aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.³⁸³⁸ Mexico reinforced this commitment with its endorsement of the Montevideo Declaration following the Second Ministerial and High-Level Authorities Summit on the Ethics of Artificial Intelligence in Latin America and

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

the Caribbean.³⁸³⁹ The declaration calls on governments and companies across the region to ensure AI advancements align with democratic values, prioritize human rights, and improve quality of life.

Mexico completed the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.³⁸⁴⁰ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.³⁸⁴¹

UNESCO developed the Artificial Intelligence Readiness Assessment of Mexico report following the RAM in partnership with the National Alliance for Artificial Intelligence (ANIA) and supported by Centro-i.³⁸⁴² The assessment involved over 250 participants from government, civil organizations, academia, and industry to evaluate Mexico's AI ecosystem and readiness for ethical governance.

The report, which was presented to the Mexican Senate, highlights AI's potential to boost global GDP by 1.5–2% within a decade and to transform up to 60% of jobs. The report also outlines Mexico's opportunity to become a regional leader through a national AI strategy integrated into its National Development Plan. Despite ranking third in Latin America in AI readiness and recording \$508 million in tech investments, Mexico faces challenges due to population dynamics and limited investment in AI (\$150 million in 2023).

Mexico has strengths in education, ranking high in technical training, AI research, and patents. However, the report advises bolstering inclusivity for underrepresented groups, including by supporting Indigenous languages, and integrating media literacy in education. Additional recommendations include a unified digital identity system, an expanded open data policy, and enhanced security for critical infrastructure.

Using UNESCO's Readiness Assessment Methodology (RAM), the report provides an ethical orientation for AI and aligns with the National AI Agenda Proposal developed by ANIA.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Evaluation

Mexico was the first Latin American country to initiate a national AI strategy in 2018. However, the change in administration at the end of 2018 put a break on previous AI policy initiatives. The 2022 Recommendations for the processing of personal data deriving from the use of AI issued by the national data protection authority and the steps taken to implement the UNESCO Recommendation on the Ethics of AI are positive signs although AI remains largely unregulated across the country. There are ever-growing concerns regarding the use of AI for mass surveillance of citizens and for malicious and criminal related purposes.

Morocco

In 2024, Morocco created parliamentary working group charged with assessing AI policy. Morocco also advanced international governance by completing the UNESCO Readiness Assessment Methodology (RAM) and introducing, with the United States, the first UN General Assembly resolution on artificial intelligence.

National AI Strategy

Morocco lacks a National AI Strategy. However, government and non-governmental organizations have worked to create pathways to such a strategy. For example, The Morocco AI conference organized by a non-governmental agency proposed a framework for a national strategy.³⁸⁴³ The Digital Development Agency (ADD) intends to establish “an ecosystem dedicated to Artificial Intelligence,” which is seen as the pathway for the development of the National AI Strategy.³⁸⁴⁴

The Moroccan House of Representatives created a parliamentary working group, the Artificial Intelligence Thematic Group in September 2024. The group is to study the opportunities and impacts of AI systems, including an assessment of existing laws.³⁸⁴⁵

A parliamentary opposition group in the Moroccan House of Councilors (the General Union of Moroccan Workers’ group) presented a bill to regulate the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

use of artificial intelligence (AI) in the country in April 2024.³⁸⁴⁶ The bill is aimed at addressing the negative aspects and illegal uses of AI technology. It proposes the creation of a National Agency for Artificial Intelligence dedicated to AI governance. This agency would be responsible for implementing, monitoring, and updating a national AI strategy in line with global developments in the field.

In December 2018, the Mohamed VI Polytechnic University in Morocco hosted UNESCO's first Forum on AI in Africa.³⁸⁴⁷ This led to the creation of the Benguerir Declaration,³⁸⁴⁸ advocating for the advancement of an AI Strategy across the African continent.³⁸⁴⁹ The declaration emphasized "the importance of fostering AI in Africa as a catalyst for development, focusing on the human rights aspect and grounded in universal ethical principles."³⁸⁵⁰ Following the forum, Morocco allocated 50 million MAD to finance research projects in 11 specific areas related to AI.³⁸⁵¹

Public Participation

Although specific public participation opportunities for the development of Morocco's AI Strategy were not identified, the formulation of The New Development Model for Morocco, which outlines the country's vision until 2035,³⁸⁵² employed a comprehensive consultative process and co-construction approach. Artificial intelligence is highlighted in the report as a disruptive force, emphasizing the necessity for adequate training in this field. However, it remains unclear whether a similar process will be adopted for the development of the National AI Strategy.

The Morocco AI Annual conference serves as another platform for businesses, government entities, and civil society to convene in Morocco.³⁸⁵³ The Recommendations Towards a National AI Strategy for Morocco Report is derived

from an analysis of numerous National AI Strategies and the priorities delineated in Morocco's New Development Model (NDM). This report meticulously presents 44 recommendations tailored to the development of an AI strategy for Morocco,³⁸⁵⁴ shedding light on critical areas where AI has the potential to significantly advance Morocco's developmental goals.

Data Protection

Morocco's Law on the Protection of Individuals with Regard to the Processing of Personal Data was passed in 2009.³⁸⁵⁵ This law establishes a framework for safeguarding personal data and the National Commission for the Protection of Personal Data (CNDP). The CNDP possesses the authority to issue guidance and enforce its provisions. Presently, the CNDP is engaged in the process of revising the law to ensure alignment with global standards and potentially seek EU adequacy status.³⁸⁵⁶

Since 2013, the processing of biometric data has been governed by the provisions outlined in CNDP Decision no. 478-2013, which delineates the necessary conditions for the utilization of biometric devices for access control.³⁸⁵⁷ This decision establishes regulations for the handling of biometric data and mandates prior authorization from the CNDP for the installation of such devices. However, authorization for the use of biometric data in accessing "sensitive premises and facilities" is granted under specific conditions.

In September 2019, the CNDP imposed a moratorium on facial recognition³⁸⁵⁸ by both public and private organizations, extending it until the end of 2020³⁸⁵⁹ through Deliberation D-195-EUS/2020, which stipulates the

Center for AI and Digital Policy

requirement of CNDP authorization among other criteria.³⁸⁶⁰ Notably, in 2020, biometric systems were sanctioned by the CNDP for utilization in "user authentication and proof of life for social welfare beneficiaries" by social security institutions.

In 2020, Morocco released two opinions regarding the utilization of facial recognition technologies. These publications underscored the country's meticulous approach in reconciling technological progress with the protection of data rights and ethical concerns.³⁸⁶¹ Additionally, Morocco collaborated with Burkina Faso in co-sponsoring AI-related resolutions at the Global Privacy Assembly. Furthermore, Morocco joined other data protection authorities in co-signing a letter addressing concerns related to data scraping.³⁸⁶²

Furthermore, a consultation regarding genomic data was initiated in April 2022.³⁸⁶³ Morocco is an active member of the Network of African Data Protection Authorities (NADPA).³⁸⁶⁴ This network serves as a platform for facilitating exchanges and cooperation among its members, aiming to amplify Africa's voice in its engagements with partners worldwide.³⁸⁶⁵

Its recent focus has been on "strengthening the network's international presence, promoting legislation on Data Protection across Africa, and fostering cooperation among members, including capacity building."³⁸⁶⁶ In 2022, the NADPA signed a Memorandum of Understanding with the Smart Africa Alliance to collaborate on various issues. These include supporting the enforcement of data protection regulations, advocating for the establishment of a harmonized framework for data protection policies and regulations across Africa, and assisting

countries in drafting or revising legislation and establishing Data Protection Authorities (DPAs).³⁸⁶⁷

The CNDP has represented Morocco to the Global Privacy Assembly since 2011.³⁸⁶⁸ The CNDP co-sponsored the 2023 Resolution on Generative AI Systems.³⁸⁶⁹ However, the CNDP did not sponsor the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,³⁸⁷⁰ 2020 GPA Resolution on AI Accountability,³⁸⁷¹ or 2022 GPA Resolution on Facial Recognition Technology.³⁸⁷²

Algorithmic Transparency

Article 11 of the data protection law prohibits decision-making based on the automated processing of personal data.³⁸⁷³ In October 2018, the Council of Europe treaty, Convention 108, officially titled the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data, was signed by 20 states.³⁸⁷⁴ Morocco, along with two other countries, was invited to accede to the treaty. Accession involves a formal evaluation to ensure that the relevant laws of the applicant country meet the requirements outlined in Convention 108.³⁸⁷⁵

Center for AI and Digital Policy

Morocco signed Convention 108³⁸⁷⁶ and its Protocol amending the convention in May 2019,³⁸⁷⁷ becoming the 55th State and the 6th country in the African region to do so.³⁸⁷⁸

The CNDP and Council of Europe announced a “Neighbourhood Partnership” in 2021 to promote the ratification of the Protocol modernizing Convention 108, as well as supporting the CNDP's efforts to enhance data protection in the Kingdom of Morocco.³⁸⁷⁹

Digital ID

Morocco established its national electronic identity system in 2008,³⁸⁸⁰ introducing the CNIE (Carte Nationale d'Identité Electronique), a smart ID card equipped with cutting-edge security features. Enrollment procedures included biometric data capture to ensure the uniqueness of individuals, employing an Automatic Fingerprint Identification System (AFIS) for de-duplication.

In 2022, the Digital Development Agency (ADD) and the Directorate of National Security (DGSN) collaborated to launch an identification and authentication service for digital service users. This initiative enables individuals to verify their identities when accessing services from both public and private sectors.³⁸⁸¹ Holders of the National Electronic Identity card introduced in 2019 gained immediate access to the platform while holders of the old CNIE were also granted access.³⁸⁸²

In June 2023, a tripartite agreement was announced between the Ministries of Health and Social Protection, the National Security Directorate, and the National Commission for the Control of Personal Data Protection. This agreement aimed to utilize the national identity card to simplify and enhance access to health

services.³⁸⁸³ Hospitals and other medical facilities would be empowered to verify patient identities, and citizens would have the option to include certain health data in the electronic chip embedded within the national identity card.³⁸⁸⁴

AI Development and Applications

Morocco has implemented AI systems in various sectors, including higher education, the judiciary, and healthcare.

The “AL KHAWARIZMI” program was launched in May 2019 through a partnership among the Digital Development Agency; National Center for Scientific and Technical Research; Ministry of Industry, Trade, and the Green and Digital Economy; and Ministry of National Education, Vocational Training, Higher Education, and Scientific Research.³⁸⁸⁵ This initiative supports applied research projects in AI and Big Data. Its objective is to promote and incentivize applied scientific research within the digital development domain, aligning with the ADD's vision for advancing the AI ecosystem.

The Euromed University of Fez (UEMF) inaugurated the Euromed School of Digital Engineering and Artificial Intelligence (EIDIA), a specialized institution focusing on AI research, development, and education.³⁸⁸⁶ It stands as the first Engineering School entirely dedicated to Digital Engineering and Artificial Intelligence (EIDIA) within the Euro-Mediterranean-African Space, marking a significant milestone in the region's academic landscape.³⁸⁸⁷

Morocco's Justice Committee purchased an AI program to “revolutionize the court system.” Tools will initially be used to undertake tasks such as note taking and “transcribe judgments through AI-supported voice dictation” with further plans to facilitate processings.”³⁸⁸⁸

In healthcare, Morocco has integrated AI tools as part of the efforts to expand access to healthcare through digitization and software. A representative from the Ministry of Health noted stressed that “Artificial Intelligence (AI) is a

tool intended to support our healthcare professionals, not replace them” and that “the final decision always remains under the responsibility of the healthcare professional.”³⁸⁸⁹

Lethal Autonomous Weapons

Morocco is a member of the Group of Government Experts on Lethal Autonomous Weapons Systems (GGE on Laws)³⁸⁹⁰ of the Convention on Certain Conventional Weapons (CCW) of the UN Office for Disarmament Affairs (UNODA) since 2014. Ethical concerns led the group to declare a pre-emptive ban on LAWS.³⁸⁹¹

Morocco endorsed the Political Declaration on the Responsible Military Use of Artificial Intelligence and Autonomy.³⁸⁹² “To build international consensus around responsible behavior and guide states’ development, deployment, and use of military AI,” reads the declaration’s stated goal.

Human Rights

Morocco ratified the Universal Declaration of Human Rights (UDHR).³⁸⁹³ Morocco is a member of the Arab League but has not ratified the Arab Charter on Human Rights.³⁸⁹⁴ Other UN human rights treaties that Morocco has ratified are: International Covenant on Civil and Political Rights (ICCPR); the International Covenant on Economic, Social and Cultural Rights (ICESCR); the Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment (CAT); the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW); the Convention on the Rights of Persons with Disabilities (CRPD); the Convention on the Rights of the Child (CRC); the Convention for the Protection of all Persons from Enforced Disappearance (CED); the International Convention on the Elimination of All Forms of Racial Discrimination (CERD);

and the International Convention on the Protection of the Rights of All Migrant Workers and Members of Their Families (CMW).³⁸⁹⁵

Freedom House scored Morocco as partly-free country (37/100) in 2024.³⁸⁹⁶ Freedom House reported, “Morocco holds regular multiparty elections for Parliament and local bodies. Reforms in 2011 shifted some authority over government from the monarchy to the national legislature. Nevertheless, King Mohammed VI and his palace maintain full dominance through a combination of substantial formal powers and informal lines of influence in state and society.” Morocco scored 54/100 for net freedom.³⁸⁹⁷ The Ibrahim Index of African Governance in 2023 scored Morocco at 62/100 for Overall Governance, and 48.5/100 in Participation, Rights & Inclusion, placing the country in position 8 out of 54 African countries, with an increasing trend since 2012.³⁸⁹⁸

The Moroccan presidency of the Human Rights Council organized high-level discussions in Geneva to address artificial intelligence and its impact on human rights. Since prioritizing this issue in January 2024, Morocco has appointed co-facilitators who led extensive consultations resulting in a comprehensive report advocating for the integration of human rights principles in the development and evolution of AI tools.³⁸⁹⁹

OECD / G20 AI Principles

While Morocco is not a member of the OECD and has not endorsed the OECD AI Principles,³⁹⁰⁰ the OECD does track Morocco on its Policy Observatory site.³⁹⁰¹ Under each principle, the site includes the previously mentioned “ecosystem dedicated to artificial intelligence”³⁹⁰² as encompassing the establishment of “a strategy and national roadmap for developing an AI

Ecosystem.”³⁹⁰³ A second initiative is contained under Principle 1.1 – Inclusive growth, sustainable development, and well-being.³⁹⁰⁴ This references the Artificial Intelligence research taking place at Hassan II University of Casablanca under the AI Khawarizmi 2020 program.³⁹⁰⁵

Council of Europe AI Treaty

Morocco has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.³⁹⁰⁶

UNESCO Recommendations on AI Ethics

Morocco has been a member state of UNESCO since October 1975.³⁹⁰⁷ It is one of the 193 countries that endorsed the UNESCO Recommendation on the Ethics of Artificial Intelligence in November 2021.³⁹⁰⁸ Morocco participated on the 24-member expert group that prepared the text of the recommendation and was one of the 5 African countries that “contributed comments on the first draft of the recommendation.”³⁹⁰⁹

In 2021, in UNESCO's AI Needs Assessment Survey, 32 countries in Africa identified institutional capacity building for AI as a key priority.³⁹¹⁰ At the UNESCO General Conference 2023, 194 countries decided to designate AI Movement in Morocco as the first UNESCO-affiliated Center in Africa.³⁹¹¹ AI Movement will work on:

1. Capacity building for policymakers, public administrations
2. Innovation and entrepreneurship through its programs like African Women in Tech
3. Educational programs at Masters and Doctoral level, as well as programs for Executives to support African businesses.
4. Creating research cooperation within Africa and beyond

Morocco's Minister Delegate for Digital Transition and Administrative Reform pledge that a "commission will be set up to establish a road map to implement the provisions of the recommendation on the ethics of AI."³⁹¹² Beginning in 2023, Morocco was selected as part of a pilot group of countries developing legislative, regulatory, and institutional changes to best align themselves with the UNESCO Recommendation on the Ethics of AI.³⁹¹³

At the beginning in 2023, Morocco was selected as part of a pilot group of countries developing legislative, regulatory, and institutional changes to best align themselves with the UNESCO Recommendation on the Ethics of AI." Morocco has since completed the UNESCO Readiness Assessment Methodology (RAM), a tool to help countries identify gaps and opportunities to implement AI systems ethically. The RAM report highlighted Morocco's "favorable ecosystem for the development of a holistic and responsible vision of AI" and progress on technical infrastructure. Along with gaps in technological infrastructure, the lack of a national AI strategy could increase the challenge of making necessary adjustments to legal frameworks, particularly in regulating personal data and cyberspace, to "address the challenges and opportunities of AI."³⁹¹⁴

Morocco joined the United States in March 2024 to introduce the first-ever UN General Assembly resolution on the use of artificial intelligence.³⁹¹⁵

Evaluation

Morocco's AI trajectory points to a strategic shift in the direction of a National Strategy for Artificial Intelligence. With several efforts and approvals, Morocco has shown that it is a progressive country in recent years. Particularly, even in situations when the human rights environment is not ideal, the Data Protection National Commission's active oversight offers a layer of safety in areas

³⁹¹² Oumaima Latrech, *Morocco, UNESCO Pledge to Strengthen Artificial Intelligence Ethics* (Mar. 26, 2022), <https://www.moroccoworldnews.com/2022/03/347908/morocco-unesco-pledge-to-strengthen-artificial-intelligence-ethics>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

of AI research. Morocco has demonstrated its commitment to ethical AI and data protection standards by endorsing the UNESCO Recommendation on the Ethics of AI and by signing Convention 108 and the Protocol. The nation's co-sponsorship of Resolution 2023 on Generative Artificial Intelligence Systems at the World Privacy Assembly demonstrates its active involvement in forming global AI policy.

US cooperation with Morocco in the presentation of the first-ever UN General Assembly resolution on the use of artificial intelligence on March 15, 2024, further demonstrated the country's active involvement in forming the global governance of AI. This achievement highlights Morocco's dedication to global cooperation and its understanding of the significance of creating precise standards and rules for the ethical and responsible application of AI worldwide. Morocco's introduction of projects centered on AI in higher education is indicative of its progressive outlook and goal to leverage AI technologies. All these changes point to Morocco's awareness of the critical role AI will play in determining the course of the future and its deliberate attempts to establish itself as a player in the international AI arena.

Myanmar

In 2024, Myanmar included AI applications as part of the draft e-Governance Master Plan. Concerns over human rights remain.

National AI Strategy

The Government of Myanmar has not developed a national AI strategy. However, the Draft e-Governance Master Plan 2030 published in 2024 reveals intentions to use AI for public services, predictive analytics, and automation.³⁹¹⁶

Myanmar endorsed the UNESCO Recommendation on the Ethics of AI, which could provide a template for a human-centered national AI strategy, should Myanmar take step to implement it.

Public Participation

The Myanmar government does not appear to hold public participation in AI policymaking.

³⁹¹⁶ Ministry of Transport and Communication, *The Myanmar e-Governance Master Plan 2030* (Jul. 2024), https://myanmar.gov.mm/documents/20143/0/Myanmar+e-Governance+Master+Plan+2030+%28Draft%29_1.pdf

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Data Protection

Myanmar does not have a single principal data protection law and does not have a data protection agency. Three legal instruments refer to the concept of privacy or data protection:

- The Constitution of the Republic of the Union of Myanmar (2008)³⁹¹⁷
- The Law Protecting the Privacy and Security of Citizens (Union Parliament Law 5/2017) of March 8, 2017, as amended by Law 16/2020 of August 28, 2020, and by the State Administration Council Law 4/2021 of February 13, 2021 (Privacy Law)³⁹¹⁸
- The Electronic Transactions Law of April 30, 2004 (State Peace and Development Council Law No. 5/2004), as amended by the Law amending the Electronic Transactions Law (No. 6/2014) of February 25, 2014, and by the State Administration Council Law No. 7/2021 of February 15, 2021 (ETL)³⁹¹⁹

Section 357 of the Constitution states: “The Union shall protect the privacy and security of home, property, correspondence, and other communications of citizens under the law subject to the provisions of this Constitution.”³⁹²⁰

According to its Preamble, the Privacy Law was enacted to protect the privacy and security of citizens as stated in the Constitution. “Privacy” is defined as “the right to freedom of movement, freedom of residence, and freedom of speech of a citizen.” Section 3 of the Privacy Law states that every citizen “has the right to enjoy the protection of his/her privacy and security in full, as set out in the Constitution.” Section 4 requires the relevant Ministry and relevant government department, organization, or official (called Responsible Authorities in the Privacy Law) to ensure that the privacy and security of citizens are protected. Before the Privacy Law was amended by the State Administration Council Law 4/2021 of February 13, 2021 (“SACL 4/2021”), Section 8 of the Privacy Law protected citizens from unreasonable searches, seizures, and surveillance. The SACL 4/2021 suspended section 8 on February 13, 2021, thirteen days after Myanmar’s military took power in a coup.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Amendments to the ETL by the State Administration Council Law 7/2021 of February 15, 2021 (SACL 7/2021) introduced the concept of personal data and personal data protection. “Personal Data” is defined as “information that identifies or is capable of identifying an individual.” A new section 27-A was inserted into the ETL, among other things: (a) setting out the obligations of a Personal Data Management Officer; (b) requiring that an “investigation team” receiving personal data keep it confidential except disclosing it to permitted persons; and (c) excluding the application of the personal data protection obligations from certain scenarios, such as investigations by the government. The term Personal Data Management Officer covers persons authorized by the government and organizations who are responsible for collecting, retaining, and using personal data. An Officer’s obligations include:

- storing, protecting, and processing personal data according to its type and level of security
- prohibiting the examination, disclosure, transmission, alteration, destruction, and copying of personal data without consent of the individual or as permitted by any law
- refraining from processing personal data in violation of the ETL
- destroying personal data after its retention period has expired

The 2022 Cyber Security Bill lays out a set of rules for the protection of personal information, which shows alignment with the General Data Protection Regulation. For example, Article 11 in Chapter 6 stipulates that “the person responsible for managing and keeping the personal information shall

1. systematically keep, protect and manage the personal information based on its types, security levels in accordance with the law
2. not allow, disclose, inform, distribute, dispatch, modify, destroy copy and submit as evidence of the personal information of an individual without the consent or the permission in the provision of an existing law to any individual or organization
3. not utilize personal information for managing issues that are not in compliance with the objectives
4. systematically destroy the personal information that is collected to be used for a period of time after a certain period”³⁹²¹

Meanwhile, the Cyber Security Bill establishes responsibilities and restrictions for Digital Platform Service Providers, which follows the global trend of holding Big Tech and platform companies accountable. The Bill not only clarifies the definition of a Digital Platform Service Provider but also requires all

³⁹²¹ The Republic of the Union of Myanmar, State Administration Council, *Cyber Security Law (DRAFT)* (Feb. 2022), https://www.hrw.org/sites/default/files/media_2022/02/220127%20Cyber-Security-Bill-EN.pdf

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

digital platform service providers to obtain a license from the newly designated Cyber Security Steering Committee to operate in Myanmar.³⁹²²

In particular, Article 36 in Chapter 9 Providing Service designates obligations for “digital platform service provider with more than 100,000 users in Myanmar shall ensure the following:

1. Devices holding users’ data must be stored in line with data classification rules.
2. Internet Service providers must be registered in accordance with Myanmar company law.
3. Taxes must be paid in accordance with the provisions set forth in relevant laws if is due to claim any tax relating to the business conducted through internet service or similar profitable business.”

Moreover, the Bill provides that a digital platform service provider in Myanmar “shall retain the following information for up to three years from the first date of use of the service:

1. username, Internet Protocol (IP) address, telephone number, identification card number and address of the service users.
2. users record of the service user.
3. other information as directed by the Department.”³⁹²³

Algorithmic Transparency

In Myanmar, algorithmic transparency is neither protected nor provided as a legal right. The report Human Rights Impact Assessments for AI: Learning from Facebook’s Failure in Myanmar by the Carr Center for Human Rights Policy at Harvard Kennedy School investigates the identification of discrimination as an algorithmic harm and the assessment of algorithmic decision-making under the UN Guiding Principles through the case of Facebook.³⁹²⁴

Facial Recognition

In December 2020, Myanmar authorities started using a system of 335 surveillance cameras in the capital, Napyidaw.³⁹²⁵ This was done as part of the government’s “Safe City” project to curb crime. Made by the technology company

³⁹²² Win Shwe Yi Htun, *Cyber Security Bill (Myanmar)*, NO & T Asia Legal Review No.44 (Feb. 2022), <https://www.noandt.com/en/publications/publication20220225-3/>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Huawei, the cameras were spread between eight townships and reportedly equipped with facial recognition as well as license plate recognition capabilities. An advisor for the Naypyitaw Safe City project, said that “anyone with a criminal history entering Naypyitaw will be recognized.”³⁹²⁶

Similar systems have been installed in Mandalay and the commercial capital Yangon.³⁹²⁷ Myanmar’s regional minister for Electrical Power and Construction confirmed by way of comments to the media, that the system in Mandalay would use AI to detect any abnormal activity such as crime and accidents. Such activity would be recorded and followed by the cameras, which would send information to one another as well as to the police.

Human Rights Watch raised concerns that the use of this technology was approved without public consultation or transparency, making it unclear how the Myanmar authorities would mitigate any potential impact on human rights and the right to privacy.³⁹²⁸

Protesters protesting the ousting of Aung San Suu Kyi in a coup in 2021 have cited fears regarding the deployment and use of facial recognition technology by the military junta.³⁹²⁹ In a few weeks after the coup, the military leadership successfully pushed for amendments³⁹³⁰ suspending Sections 5, 7, and 8 of the Law Protecting the Privacy and Security of Citizens. The ramifications of the suspension of these sections, particularly Section 8(b) of the Privacy Law which previously provided that the State “shall not surveil, spy upon, or investigate any citizen in a manner which could disturb their privacy and security or affect their dignity” when it comes to the potential of privacy breaching AI surveillance, is immense.

The deployment of facial recognition technology by the Tatmadaw against protesters has drawn concern from the international community including a call by the Indonesian President for a high-level ASEAN meeting in 2021.³⁹³¹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

A report by the Reuters news agency in July 2022 revealed that Myanmar's military government is now expanding camera surveillance systems for cities in all 14 states and divisions in the country.³⁹³²

Biometric Identification

In 2019, Myanmar's Ministry of Transport and Communications announced its intention to make biometric data collection mandatory when mobile phone services are purchased, this being part of a strategy to create a "national database to store and manage biometric mobile subscriber registration information from all mobile network operators in Myanmar."³⁹³³

Environmental Impact of AI

Myanmar has not published policies related to the environmental impact of AI in English.

Lethal Autonomous Weapons

At the United Nations General Assembly (UNGA) in October 2017, Myanmar said that lethal autonomous weapons systems were a security issue that warranted serious consideration.³⁹³⁴ At the 74th Session of the UNGA in October 2019, Myanmar's Ministry of Foreign Affairs noted that there were "growing concerns on new types of weapons such as lethal autonomous weapon systems and their destructive power" and there was a risk of a new arms race growing with worldwide military expenditures increasing at an "alarming level."³⁹³⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Myanmar is not a state party to the Convention on Certain Conventional Weapons (CCW),³⁹³⁶ but according to Human Rights Watch, participated in CCW meetings on killer robots in 2017–2018.³⁹³⁷

Human Rights

Though the country is a signatory to the UN Declaration of Human Rights, according to Freedom House, Myanmar is “not free” with a score of 8 out of 100 in 2024,³⁹³⁸ down from its score of 9 out of 100 in 2023. Myanmar was last classified as “partly free” in 2020, when it received a score of 30 of 100.³⁹³⁹

Myanmar is ranked 166th out of 167 countries on the 2023 Democracy Index, with a score of 0.85 out of 10.³⁹⁴⁰ Under the Voice and Accountability Value, which measures perceptions of the extent to which a country’s citizens are able to participate in selecting their government as well as freedom of expression, freedom of association, and a free media, Myanmar achieved a score of -0.94 in 2020, well below the world median of 0.³⁹⁴¹ In the 2024 World Justice and Peace Index, Myanmar fell further to 138th of the 142 countries and jurisdictions ranked and scored 0.34 overall.³⁹⁴²

According to Freedom House, “Myanmar’s already-stalled democratic transition was completely derailed in February 2021, when the military, known as the Tatmadaw, seized control of the government, arresting dozens of senior government officials and preventing the newly elected parliament from convening. The National League for Democracy (NLD), which won a sweeping victory in the November 2020 elections, led a broad-based opposition to the takeover, organizing a country-wide Civil Disobedience Movement (CDM) that continued throughout the year. Protesters were met with indiscriminate violence

Center for AI and Digital Policy

from military forces, and journalists, activists, and ordinary people risked criminal charges and detention for voicing dissent. Armed conflict between the military and ethnic rebel groups continued, as did the forced displacement of hundreds of thousands of Rohingya, a mostly Muslim ethnic minority.”

The use of AI has been implicated in what has been described as ethnic genocide and ethnic cleansing in Myanmar, in the wake of several reports regarding the complicity of Meta, formerly known as Facebook.³⁹⁴³ The social media platform was reported as unable or unwilling to moderate hate speech calls for violence against Rohingya Muslims in Myanmar, and in some cases amplified them. Relying on a small Burmese-speaking team who were not based in Myanmar, the company depended heavily on Natural Language Processing systems which struggled to provide accurate translations of content in Burmese. In the aftermath of the crisis which has seen over 1 million Rohingya Muslims in refugee camps in Bangladesh, a class action has been launched against Meta seeking 150 billion pounds in compensation for the company’s complicity in the genocide.³⁹⁴⁴

The Law Amending the Electronic Transactions Law of 2004³⁹⁴⁵ has been enacted last February 2021. This permits government confiscation of personal data and the criminalization of content deemed to be untruthful or fake or created to incite public panic. The 2022 Cyber Security Bill³⁹⁴⁶ not only addresses the protection and governance of personal information, critical information infrastructure, and electronic communication but also establishes mechanisms and responsibilities to tackle risks, crimes, and attacks in the cyberspace³⁹⁴⁷. Meanwhile, the new Bill faces criticisms and calls for withdrawal³⁹⁴⁸ due to its potential impacts on fundamental rights. In particular, the Bill prohibits the use of virtual private networks (VPNs) without the Ministry's permission. Moreover, the

Bill grants authorities the power to order Digital Platform Service Providers to “block or remove content” when a “legitimate complaint” is made that the content “damages a person’s social standing and livelihood.” ³⁹⁴⁹

OECD / G20 AI Principles

Myanmar has endorsed neither the OECD AI Principles nor the G20 AI Guidelines. ³⁹⁵⁰

Council of Europe AI Treaty

Myanmar has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law. ³⁹⁵¹

UNESCO Recommendation on AI Ethics

Myanmar adopted the UNESCO Recommendation on the Ethics of AI together with UNESCO Member States. ³⁹⁵² It remains to be seen how Myanmar will implement the recommendations.

Evaluation

Myanmar does not have a national AI strategy and has not established a process for meaningful public participation to this end. Meanwhile, AI is being used for surveillance purposes in a country in which the unregulated use of new technologies has already had devastating consequences in the framework of the Rohingya genocide. Myanmar has yet to act on its endorsement of the UNESCO Recommendation on the Ethics of Artificial Intelligence.

Netherlands

In 2024, the Dutch Government released a vision on generative AI and continued discussions on how to implement the EU AI Act. The Dutch Data Protection Authority also fined Clearview AI more than €30 million for violating GDPR and prohibited the company’s facial recognition services in the Netherlands.

Center for AI and Digital Policy

National AI Strategy

In January 2024, the Dutch government presented its “vision on generative AI,” which highlighted the opportunities and challenges posed by generative AI, recognizing its potential to revolutionize sectors like labor, education, research, and government services.³⁹⁵³ While embracing the technology’s ability to enhance productivity and innovation, the vision is also focused on managing risks, market monopolies, and biases in AI models.

Key initiatives outlined in the vision include funding for AI research, public-private partnerships, and the creation of a national AI test facility. It emphasizes responsible AI development based on principles of safety, fairness, human wellbeing, and sustainability. To ensure the responsible integration of AI, it committed to pursuing a comprehensive action plan that includes stakeholder collaboration, legislative development, education, and strict oversight.³⁹⁵⁴

The Dutch government set out the Strategic Action Plan for Artificial Intelligence in September 2019.³⁹⁵⁵ The Plan sets out three broad themes: “Capitalising on societal and economic opportunities,” “Creating the right conditions,” and “Strengthening the Foundations.” The key goals are public-private partnerships, international cooperation, an “inclusive approach that puts people first,” and “a country that is at the forefront of AI applications which serve the interests of people and society.” Under this plan, the Dutch government commits to protecting public values and human rights. The plan emphasizes prohibition of discrimination, protection of privacy, freedom of speech, human dignity and autonomy, as well as the right to a fair trial.

The Dutch AI strategy follows the 2018 Dutch Digitalization Strategy, the first Cabinet-wide effort to formulate key priorities for digitalization, data and AI. As part of the Digitalization Strategy, the government “supports and endorses the guidelines established in the EU’s recent communication on the ‘Ethics guidelines for trustworthy AI.’”³⁹⁵⁶ The government also commits to creating a “responsible innovation toolbox (including impact assessments, handbooks and guidelines)” and making knowledge available in the areas of transparency, explainability and accountability. Through the Transparency Lab initiative, the “government is

working with businesses and supervisory bodies to assess how algorithms and their practical applications can be made more transparent and verifiable.”

In 2021, the government published an updated Dutch Digitalization Strategy. The ministries that coordinate the efforts are advised by the Digital Netherlands Council, which joins the deliberation process on digitalization policy and consists of domain experts. The Strategy commits the Netherlands to European and international cooperation within appropriate ethical and legal frameworks. The Strategy devotes particular attention to fairness (especially in relation to the GDPR), rule of law, accountability, transparency, and fundamental rights (with explicit reference to privacy, non-discrimination, and autonomy):

Despite the actions already taken by the Dutch government, some concerns have been raised as to how the government proceeds towards its policy objectives. The findings in the 2020 report of the Temporary Committee on the Digital Future (TCDT) of the Dutch House of Representatives concludes that the House of Representatives has only discussed digitization in a fragmented way; that not all of the risks, opportunities and public values have been addressed; and that many laws and rules in the field of digitization are determined in the European Union.³⁹⁵⁷ The TCDT proposed to establish a standing committee for Digital Affairs in the House of Representatives, which was effectively formed in 2021 and addressed themes like digital fundamental rights, digital citizenship, and data ethics.³⁹⁵⁸

The Dutch Research Council (NWO) and the Ministry of Economic Affairs & Climate Policy jointly developed a public-private research program that funds research on explainable, socially aware and responsible AI.³⁹⁵⁹ The NWO funds several other AI-related programs, such as SPRONG—Responsible Applied AI. SPRONG aims to find ways to responsibly implement AI in practice, which resulted in several AI projects on sustainability and reducing socio-economic inequality.³⁹⁶⁰ In 2023, the NWO announced funding for the ten-year AI research program ROBUST, which in part focuses on “accuracy, reliability, repeatability, resilience and security” and taking “AI out of the black box.”³⁹⁶¹ The Special

Interest Group of AI, SIGAI, representing all computing science academic institutes and researchers in the Netherlands that perform AI research also published Dutch Artificial Intelligence Manifesto highlighting the importance of socially aware, explainable and responsible AI.³⁹⁶²

The public administration within the Kingdom is layered and sometimes disconnected. However, the government organizations and the Association of the Netherlands Municipalities (VNG), the Ministry of the Interior and Kingdom Relations commit to focusing on “ethics in, by and for design and the transparency of algorithms when government experiments with AI for public tasks.” A study commissioned by Ministry of Interior proposed AI guidelines that apply to the public and private sectors. The guideline, prepared by researcher at VUB, Tilburg University, Eindhoven University of Technology and the National Human Rights Institute of the Netherlands, is a result of Dutch parliament stating that “racism must be ended as soon as possible, not least by stopping the use of discriminatory algorithms.”³⁹⁶³

In 2020, the Dutch Data Protection Authority (Dutch DPA) approved the first code of conduct in the Netherlands, the Data Pro Code³⁹⁶⁴ drafted by NL Digital, the Dutch industry association for organizations in the ICT sector. In 2021, researchers from VUB, Tilburg University, Eindhoven University of Technology, and the National Human Rights Institute of the Netherlands developed AI guidelines that apply to the public and private sectors. The Guideline is a result of Dutch parliament stating that “racism must be ended as soon as possible, not least by stopping the use of discriminatory algorithms” and was funded by the Ministry of the Interior.³⁹⁶⁵

Public Participation

With the implementation of the EU AI Act, the Dutch DCA, part of the AP, opened its first two calls for public input in the fall of 2024. The calls

Center for AI and Digital Policy

specifically referenced certain prohibitions outlined in the AI Act, “based upon [the AP’s] role as coordinating supervisor of algorithms and AI.”³⁹⁶⁶

In the calls, citizens, governments, businesses and other organizations were asked to submit responses to the first two prohibitions outlined in the Act, manipulative and deceptive AI systems (prohibition A) and exploitative AI systems (prohibition B), as well as the sixth prohibition, AI systems for emotion recognition in the areas of workplace and education institutions (prohibition F).³⁹⁶⁷

Participation in the development of the Dutch Digitalization Plan and the Strategic Action Plan for Artificial Intelligence is geared more towards public agencies, private companies, universities and research institutes than the citizens directly. Taskforce AI, which created the initial AI report, is a public-private partnership, and its Dutch AI Coalition (NL AIC) is a cooperation between different research centers.³⁹⁶⁸ The national Innovation Centre for AI (ICAI) is also a national network between knowledge institutions, industry and government.³⁹⁶⁹

The Dutch AI Coalition (NL AIC), a public-private consortium, offers (paid or time-limited trial) membership for interested stakeholders in the field of AI, which would grant access to AI projects and working groups.³⁹⁷⁰ The Human-Centric AI working group has developed two key projects. The Ethical, Legal and Societal Aspects (ELSA) Labs aims “to ensure that companies, governmental authorities, centres of expertise, civil society organisations and the general public develop responsible applications of AI jointly. This involves solutions for both social and business problems, focusing on honesty, fairness, security and (above all) trustworthiness. The approach addresses human values as well as public values.”³⁹⁷¹

The NL AIC launched ‘AI Parade,’ an eighteen-month public engagement project on AI that kicked off in early 2022, focused in part on education and citizen participation.³⁹⁷² The Dutch Ministry of Foreign Affairs also set up the REAIM

conference in 2023, with the intent to “mobilise and activate a wide group of stakeholders” in the responsible military deployment of AI.³⁹⁷³

While not equivalent to public participation in AI policy as such, the Dutch government has made efforts towards document accessibility and knowledge-building, which are often the building blocks for adequate public participation in AI policies. The Electronic Announcement Act requires national governments to publish official publications on the internet rather than on paper.³⁹⁷⁴ All AI policies are accessible by the public via the websites of the Dutch Parliament and the Digital Government.³⁹⁷⁵

EU Digital Services Act

As an EU member state, the Netherlands shall apply the EU Digital Services Act (DSA).³⁹⁷⁶ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

EU AI Act

As an EU member State, the Netherlands is bound by the EU AI Act.³⁹⁷⁷ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

As of November 2024, the Netherlands has not officially determined the division of supervisory duties under the EU AI Act, but the DPA and the Dutch Authority for Digital Infrastructure (RDI) “in collaboration with 20 other Dutch

Center for AI and Digital Policy

supervisory authorities that may play a role in AI-supervision,”³⁹⁷⁸ have submitted three rounds of advice on supervisory duties to the Dutch government. The third and final round of advice was submitted on November 7, 2024.³⁹⁷⁹

The AI Act entered into force on August 1, 2024, and will be fully applicable in August 2026, with some exceptions.

Data Protection

Since the Netherlands are an EU Member State, the General Data Protection Regulation is directly applicable. In alignment with GDPR requirements, the Dutch Data Protection Authority (DPA) was established. It is an independent supervisory body in charge of promoting and enforcing personal data protection rights. It is tasked with the supervision of national and international businesses and organizations, the central government (including the police and the criminal justice authorities), as well as associations, schools, foundations and individual citizens.

The DPA is a member of the European Data Protection Body (EDPB), “an independent European body, which contributes to the consistent application of data protection rules throughout the European Union, and promotes cooperation between the EU’s data protection authorities.”³⁹⁸⁰

The Dutch DPA is also a member of the Global Privacy Assembly (GPA) since 2002. The DPA did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,³⁹⁸¹ the 2020 GPA Resolution on AI Accountability³⁹⁸² or the 2023 GPA Resolution on Generative AI.³⁹⁸³ However, the

Center for AI and Digital Policy

DPA did co-sponsor the 2022 GPA Resolution on Facial Recognition Technology.³⁹⁸⁴

In January 2023, the Dutch government launched a supervisory body for algorithms (the *algoritmetoezichthouder*, or algorithm watchdog).³⁹⁸⁵ A new dedicated unit, the Department for the Coordination of Algorithmic Oversight has been created within the DPA. The main mission of the algorithm supervisor is to coordinate all algorithm-related cooperation between Dutch regulators. Its focus will be mainly on monitoring the use of algorithms in the public sector. The objective is to better protect citizens' fundamental rights (such as privacy and non-discrimination) and reduce the risks of serious incidents. This development responds to a series of issues identified with the use of AI in the public sector and some initiatives of several Dutch regulators.

In January 2024, the Department released its second AI & Algorithmic Risks Report. In the Report, the DPA highlights the urgent need for better risk management and incident monitoring. The DPA also stresses that “the advance of generative AI puts additional pressure on the development of effective safeguards.” The report recommends a comprehensive strategy that includes human control and oversight, secure applications and systems, and strict rules to ensure that organizations are in control.³⁹⁸⁶ This shows the Dutch DPA's commitment to apply data protection law as a way to fill some of the loopholes in the EU AI Act.

In September 2024, the DPA fined Clearview AI, an American facial recognition startup, €30.5 million for violating GDPR by building a database that included facial data from Dutch citizens. Dutch DPA chairman Aleid Wolfsen said they violated data privacy law “on several points: the company should never have built the database and is insufficiently transparent” and further warned that use of Clearview services is prohibited in the Netherlands. “Clearview breaks the law, and this makes using the services of Clearview illegal,” Wolfsen said. “Dutch organisations that use Clearview may therefore expect hefty fines from the Dutch DPA.”³⁹⁸⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In January 2021, the Dutch Court of Audit, following an investigation on the Dutch government's use of algorithms, concluded that "government interests are central to algorithms, not private citizens' interests; that the government recognizes the importance of privacy but takes little account of ethical aspects; and warns against the government's use of algorithms becoming dependent on external suppliers."³⁹⁸⁸ In another report issued in 2022, the Dutch Court of Audit concluded that 6 out of 9 algorithms used by the Dutch government did not meet the basic requirements of Dutch law and exposed the government to various risks: from inadequate control over the algorithm's performance and impact to bias, data leaks and unauthorized access.³⁹⁸⁹

In October 2021, several Dutch regulators (the Netherlands Authority for Consumers and Markets, the Dutch DPA, the Dutch Authority for the Financial Markets, and the Dutch Media Authority) intensified their cooperation via the Digital Regulation Cooperation Platform (DST) to better coordinate their oversight activities, not least oversight on the use of algorithms and AI.³⁹⁹⁰ They also pushed for more transparency in how the personal data of users is processed and used.³⁹⁹¹ This stronger coordination follows a 2021 audit of Google's teaching tools for schools³⁹⁹² which found the software's privacy protections to be lacking, as well as regulatory pushback against other Big Tech firms.³⁹⁹³

Algorithmic Transparency

In March 2024, "as the coordinating authority for the oversight of AI and algorithms," the AP and the DCA outlined its oversight work plan that focused on

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

four main areas: “transparency, auditing, governance, and preventing discrimination in algorithmic processes”.³⁹⁹⁴

The Netherlands is subject to both the EU GDPR and Council of Europe Convention 108+. Algorithmic transparency is therefore a legal right. The DPA has expressed concerns about the lack of transparency and poor data security practices in the public sector, policing, criminal justice. It has also mentioned that digital government will be one of its three core focus areas for 2020–2023.³⁹⁹⁵

Algorithm Impact Assessment

Under the commission of the Dutch Ministry of the Interior, Utrecht University developed The Fundamental Rights and Algorithm Impact Assessment (FRAIA) in 2021.³⁹⁹⁶ This innovative tool aims to proactively identify and address risks to fundamental rights associated with algorithm use. Between 2023 and 2024, FRAIA was successfully piloted with 15 algorithms across various government bodies, allowing for the collection of valuable insights and recommendations for future enhancements.³⁹⁹⁷ While there was some initial skepticism, participants in these pilot programs expressed positive feedback and valued FRAIA’s comprehensive approach, which integrates legal, ethical, and technical perspectives. As a result, FRAIA is gaining considerable political and international recognition.

The Dutch Digital Infrastructure Agency (RDI) partnered with UNESCO in October 2023 to enhance the supervisory capabilities of AI regulators across Europe.³⁹⁹⁸ This collaboration supports the efforts of Dutch and European working groups focused on AI oversight. UNESCO aims to assist RDI and these groups in strengthening their oversight abilities in accordance with the AI Act and other relevant legislation. The collaboration has several specific objectives:

- Conducting a baseline assessment through a comprehensive report on current AI oversight practices in Europe and beyond.

- Developing and discussing AI oversight case studies with members of the working groups, led by RDI. Creating and sharing best practices to address specific AI oversight challenges.
- Exploring and presenting approaches and options to key stakeholders in AI oversight.
- Providing training for oversight leaders based on established best practices.
- The project is scheduled for completion by the end of 2025.³⁹⁹⁹

Fraud Detection Algorithm

In early 2020, a Dutch court ruled that the System Risk Indication algorithm (SyRI), used to combat fraud in government programs, violated Article 8 of the European Convention on Human Rights.⁴⁰⁰⁰ In the landmark decision, the Court ruled that the principle of transparency was not observed, because there is no insight into the risk indicators and the operation of the risk model. The Court also warned that there is a risk of bias, in that inadvertent links could be established through SyRI on the basis of lower socio-economic status or an immigration background.

The UN Special Rapporteur on Extreme Poverty and Human Rights explained that the decision challenged the “systematic, legislatively sanctioned, used of digital technologies in welfare state on human rights ground.”⁴⁰⁰¹ In a filing with the court, the Special Rapporteur voiced concern that “SyRI has consistently been rolled out in poorer and more vulnerable areas of municipalities”, and that the Dutch government has denied access to information about the data and ‘risk models’ used in the algorithm.” The Special Rapporteur called the decision, “a clear victory for all those who are justifiably concerned about the serious threats digital welfare systems pose for human rights.”⁴⁰⁰²

The Data Processing by Partnerships Act was introduced by the government in April 2020. Where SyRI was related to public data sharing, this bill

expands the data surveillance and sharing to all data stored in public and private storage.⁴⁰⁰³

In January 2021, the Dutch government resigned after it became clear that thousands of families, disproportionately of ethnic minority backgrounds, were wrongly accused of child welfare fraud by a discriminatory algorithm and ordered to pay money back, which drove many victims into deep poverty.⁴⁰⁰⁴ This scandal would later lead to several policy shifts: a mandatory AI registry, a new algorithmic supervisory body, and mandatory human rights risk assessments for public sector AI systems.⁴⁰⁰⁵ Alexandra van Huffelen, Minister of Digitalization at the time, later declared that high-risk AI systems should require certification before use, that “impact assessments should be meaningful and address fundamental rights in the complete AI lifecycle,” that AI should respect and protect people and their rights, and human-centric AI requires more human oversight - especially when systems have a big influence on people.”⁴⁰⁰⁶ Van Huffelen also makes clear that the government’s experiences with the fraud detection algorithm have urged the Netherlands not just to implement new algorithmic oversight policies, but also to proactively implement components of the EU AI Act, and sometimes even go beyond its requirements: she states that the high-risk impact assessment should be expanded to more cases via “a broader Impact Assessment tool on Human Rights and algorithms” and that Big Tech platform governance is inadequate, suggesting that stricter rules should include content labelling policies.⁴⁰⁰⁷

In a similar scandal, journalists revealed that five Dutch municipalities (Nieuwegein, Houten, IJsselstein, Lopik and Veenendaal) used a discriminatory risk scoring system for fraud up to June 2022 – even after the SyRi scandal – and the Dutch labor union FNV filed a complaint with the Dutch DPA in January 2023.⁴⁰⁰⁸

AI Registries

Amsterdam launched an AI registry in beta version to detail how city government uses algorithms to deliver services in 2020. “Each algorithm cited in the registry lists datasets used to train a model, a description of how an algorithm is used, how humans utilize the prediction, and how algorithms were assessed for potential bias or risks. The registry also provides citizens a way to give feedback on algorithms their local government uses and the name, city department, and contact information for the person responsible for the responsible deployment of a particular algorithm.”⁴⁰⁰⁹

The city of Amsterdam’s system was used as a blueprint for a nation-wide mandatory registry for algorithms deployed in the public sector.⁴⁰¹⁰ The registry, available online starting December 2022, is freely accessible for citizens and shows information on the purpose, legal background, application, human rights impact assessments, and oversight of public sector algorithms.⁴⁰¹¹ Contribution to the registry is currently voluntary but the aim is to make it compulsory by the end of 2025.⁴⁰¹² The Dutch government’s Fundamental Rights and Algorithms Impact Assessment (FRAIA), launched in 2021, dovetails with the algorithm registry: the registry specifies whether a Human Rights Impact Assessment was performed.

The Dutch cities of Rotterdam and Eindhoven are among 7 European cities to participate in a public AI algorithm registry experiment, The Algorithmic Transparency Standard, led by Eurocities Digital Forum Lab. Building on the Amsterdam and Helsinki experiment, the aim is to provide cities with a common data schema for algorithm registries that is validated, open-source, publicly available, and ready for use in local algorithm registries.⁴⁰¹³

Predictive Policing

The Dutch police force, in collaboration with Utrecht University and the University of Amsterdam, established the National Police Lab AI to develop “AI techniques to improve the safety in the Netherlands in a socially, legally and ethically responsible way.”⁴⁰¹⁴ In alignment with the government’s commitment to experiment with technology to solve social issues, the Dutch police has launched pilot projects with predictive policing to anticipate and prevent crime that might be committed by a certain person or at a certain location.

The first was the Sensing Project in Roermond, where police used cameras and other sensors to reduce pickpocketing. The system monitored all people driving in and around Roermond and created a risk score, effectively transforming the “city into a living lab where every person travelling by car is subjected to mass surveillance and other human rights violations”.⁴⁰¹⁵ The project violated the principles of human rights, informed consent, right to privacy and data protection, right to due process and non-discrimination. Amnesty International called on the Dutch government to “halt the Sensing project and comparable ‘experimental’ predictive policing projects” and to “implement a mandatory and binding human rights impact assessment requirement applicable to the public sector.”⁸ The experiment was halted in 2022, with its “results unclear” and without leading to structural policy shifts.⁴⁰¹⁶

The second predictive policing project is *Criminaliteits Anticipatie Systeem* (Crime Anticipation System or CAS) implemented nationwide in 2017. The use of CAS to predict crime locations makes the Netherlands the first country in the world to deploy predictive policing on a national scale.⁴⁰¹⁷ The Dutch Court of Auditors criticized the CAS for its lack of oversight, privacy, and transparency, deeming the system “high-risk,” “worrying,” and “prejudiced,” but Dutch police has not made significant changes in response.⁴⁰¹⁸

Environmental Impact of AI

The Dutch government's vision for generative AI in 2024 underscores the technology's potential to contribute to sustainability, while also emphasizing the importance of ethical principles such as privacy, non-discrimination, and fairness.⁴⁰¹⁹

The Dutch government has shown a strong commitment to these initiatives by allocating substantial resources through the National Growth Fund. This funding is specifically aimed at supporting research and development initiatives in AI, with a focus on fostering projects that address climate resilience and promote sustainable practices. A public-private initiative, known as the AiNed Program, has been established as part of the National Growth Fund to strategically position the Netherlands among the leading nations in AI advancement.⁴⁰²⁰ With funding amounting to €189 million from the National Growth Fund, the program aims to cultivate public-private investments in four areas:

- The establishment of a robust knowledge and innovation infrastructure
- The enhancement of AI-related skills
- The practical application of AI systems
- The encouragement of collaborative ecosystems among various stakeholders.

This program focuses on stimulating economic recovery and growth while reinforcing the economic foundation of the country. Central to the AiNed Investment Program, which is in partnership with the Dutch AI Coalition, is the promotion of human-centered and responsible AI utilization.

The Dutch AI Coalition (NL-AIC) has been operational since 2019. The NL-AIC engages collaboratively with various stakeholders, including governmental bodies, enterprises, educational institutions, research organizations, and societal groups, to advance the development of socially responsible applications of AI.⁴⁰²¹ The coalition underscores energy and sustainability as pivotal domains for the application of AI. Recognized as a foundational technology, AI plays a crucial role in mitigating energy consumption and fostering innovative initiatives that yield positive contributions to climate resilience. A specialized working group focused on Energy and Sustainability has been established.⁴⁰²²

The Royal Netherlands Meteorological Institute (KNMI) launched the KNMI DataLab in January 2016.⁴⁰²³ This initiative is designed to encourage and coordinate innovations across multiple disciplines, including climate science, weather forecasting, and seismology. The KNMI DataLab disseminates knowledge in these respective fields and by providing access to the extensive datasets KNMI maintains. The overarching goal is to create a CO2-free energy system, thereby contributing to global efforts in mitigating climate change.

In a parallel effort, the Dutch Water Partnership (NWP) serves as a coalition of various Dutch organizations, encompassing governmental bodies, within the water sector dedicated to the collaborative development of sustainable water solutions.⁴⁰²⁴

Lethal Autonomous Weapons

In 2016, the Dutch government agreed with the conclusions of the Joint Committee of the Advisory Council on International Affairs (AIV) and the Advisory Committee on Issues of Public International Law (CAVV) advisory report that meaningful human control is required in the deployment of autonomous weapon systems and responsibility and accountability attribution needs to be considered in the design stage of weapon systems.⁴⁰²⁵

The government also views a moratorium on fully autonomous weapon systems to be currently unfeasible. In a 2022 letter from the Government to the House of Representatives regarding Autonomous Lethal Weapons, the Minister of Foreign Affairs stated that the Dutch government agreed that the underlying mathematical models – and the data underlying those models – must be traceable and explainable at all times and further that it must be clear throughout the decision-making process where and how meaningful human control is assigned and who is responsible for what.⁴⁰²⁶

The same year the Royal Netherlands Army became the first military in the West to deploy armed unmanned ground vehicles (UGVs) “for experimental use in an operational unit in a military-relevant environment.”⁴⁰²⁷ Also in 2022, the Netherlands endorsed the UN’s Joint Statement on Lethal Autonomous

Weapons Systems,⁴⁰²⁸ which underlines “the need to maintain human responsibility and accountability in the use of force.”⁴⁰²⁹

At the 78th UN General Assembly First Committee in 2023, the Netherlands voted in favor⁴⁰³⁰ of resolution L.56⁴⁰³¹ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

In February 2024, at the High Level Segment of the Conference on Disarmament held in Geneva, the Minister of Foreign Affairs Hanke Bruins Slot announced that, as the current chair of the Government Group of Experts on Lethal Autonomous Weapons Systems, the Netherlands will preside over the discussions on the regulation of lethal autonomous weapons systems. The Minister stated, “One big challenge we face is the rapid evolution of emerging technologies. [...] we believe that the responsible development and use of emerging technologies in weapons systems are indispensable for modern armed forces. But those technologies also entail real and imminent risks to security, human rights and fundamental freedoms. [...] We must develop clear standards for responsible behaviour in this area. And we must strengthen the existing norms. The urgency is clear. [...] The risks and legal implications of weapons systems that take decisions fully outside the scope of human control are obvious.”

He also clearly expressed the Dutch national position. “Autonomous weapons systems that can’t be used in accordance with international law, including international humanitarian law, should be explicitly prohibited. And those that can be used in accordance with international law should be regulated. We must ensure human judgement and control with the development of new

weapon systems. That should be the main objective of regulation.”⁴⁰³² On November 5th, 2024, the UN General Assembly adopted the Draft Resolution L.77 on Lethal Autonomous Weapons Systems. The Netherlands was one of 161 countries that voted in favor of this.⁴⁰³³

In furtherance of regulating the use of AI in the military, the Minister of Foreign Affairs Wopke Hoekstra announced that in February 2023 the Netherlands will host an international summit on the responsible application of artificial intelligence in the military domain. The aim of the summit is to define an agenda for developing international agreements on AI applications in the military.⁴⁰³⁴ At the end of the Summit, known as REAIM 2023, government representatives, including the Netherlands, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence (AI) in the military domain.⁴⁰³⁵ In the joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” The Netherlands has also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy.⁴⁰³⁶

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission will produce a strategic guidance report to identify short- and long-term

recommendations for governments and the wider multi-stakeholder community.⁴⁰³⁷

The Netherlands also participated in and endorsed the outcome document, *Blueprint for Action*, for the second REAIM summit, which took place in 2024 in Korea.⁴⁰³⁸

Human Rights

The Netherlands has endorsed the Universal Declaration of Human Rights, The European Union (EU) Charter of Fundamental Rights and The European Convention on Human Rights (ECHR).⁴⁰³⁹ The Dutch government has set up an AI, public values and human rights knowledge platform where ministries exchange knowledge and develop policy on public values and human rights in AI applications.⁴⁰⁴⁰

Freedom House classifies the Netherlands as “Free” on the Freedom in the World report with a score of 97/100 in 2024.⁴⁰⁴¹

AI Safety Summit

In November 2023, the Netherlands participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁴⁰⁴² The Netherlands thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for

the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

The Netherlands did not attend the AI Seoul Summit 2024, which was held in May 2024 and co-hosted by the UK and the Republic of Korea.⁴⁰⁴³ The next AI Safety Summit took place in France in February 2025.

OECD / G20 AI Principles

The Netherlands endorsed the OECD AI Principles. In December 2020, the Netherlands joined the Global Partnership for AI,⁴⁰⁴⁴ a multi-stakeholder initiative which aims to foster international cooperation on AI research and applied activities and is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”

UNESCO Recommendation on AI Ethics

In November 2021, the Netherlands, alongside 192 other states, adopted the UNESCO Recommendation on the Ethics of AI.⁴⁰⁴⁵ In October 2022, the Netherlands, together with 8 other states, recalled the efforts made by the members of the Group of friends for the implementation of the Recommendation and called on Member States to be “actively involved throughout the implementation process of the Recommendation.”⁴⁰⁴⁶

Council of Europe Convention on AI

The Netherlands contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024⁴⁰⁴⁷ and it opened for signature in September 2024.⁴⁰⁴⁸ The Netherlands is party to the

Convention through the European Commission signature but has not acted independently on this first legally binding international AI treaty.⁴⁰⁴⁹

Evaluation

As of 2024, the Netherlands has gained global recognition for its responsible AI practices, ranking first in the Global Responsible AI Index.⁴⁰⁵⁰ The Netherlands has taken positive steps towards the rights-based deployment of AI with endorsement of UNESCO Recommendation on the Ethics of AI and related implementing efforts, OECD AI Principles, GDPR, and creation of an AI watchdog within its DPA. The country has expanded algorithmic transparency with its AI public registry. The Netherlands has played a leading role in building international consensus towards the need to regulate the use of autonomous weapons. The Dutch judiciary should be credited with a landmark decision concerning the use of secret algorithms in government services. Still the rise of predictive policing and biometric databases, as well as risk-based systems that may adversely impact minority and vulnerable groups remains a concern.

New Zealand

In 2024, New Zealand's Cabinet released a paper defining the country's approach to AI governance that explicitly aligned to the OECD AI Principles. The country also initiated public consultations on a draft Biometrics Code of Practice and proposed amendments to the 2020 Privacy Act.

National AI Strategy

The process for developing a National AI strategy started in May 2021 and is still ongoing. The “working vision of the AI strategy [is that] Aotearoa New Zealand's people centered, inclusive and ethical AI benefits our economy and people and makes us a trusted partner in the global AI landscape.”

The cornerstones for the proposed national AI strategy are:

- “Human-centered and trusted AI
- Preparing the workforce
- Our place in the world
- Investment in AI economy
- Uniquely New Zealand

⁴⁰⁴⁹ Council of Europe Treaty Office, *Chart of Signatures and Ratifications of Treaty 225* (Mar. 20, 2025), <https://www.coe.int/en/web/conventions/full-list?module=signatures-by-treaty&treaty=225>

- All supported by enabling foundations.”⁴⁰⁵¹

The draft AI Strategy situates itself in a series of policy initiatives.

In 2018, the Ministry for Social Development published its Privacy, Human Rights and Ethics (PHRaE) framework. This set of tools started with a focus on predictive models and has been broadened to all initiatives where client data is used. It helps those who design services question whether it is ‘right’ to use information just because there is access to it and was designed to ensure that privacy, human rights and ethics are considered from the design and development stage of an initiative.⁴⁰⁵²

In 2020, Stats NZ released the Algorithm Charter for Aotearoa and signed by a number of New Zealand government departments. The Algorithm Charter is a commitment by government agencies to carefully manage how algorithms that use government data are developed and used. The Algorithm Charter includes commitments to transparency by clearly explaining how decisions are informed by algorithms; to the incorporation of *Te Ao Māori* perspective⁴⁰⁵³ in the development and use of algorithms consistent with the principles of the Treaty of Waitangi; to keeping a focus on people through active engagement with stakeholders and affected people, communities and groups; to understanding the limitations in data and managing bias; to retaining human oversight by providing a channel to appeal decisions informed by algorithms; and to ensuring that privacy, ethics and human rights are safeguarded by regularly peer-reviewing algorithms to assess for unintended consequences and act on this information.⁴⁰⁵⁴

In September 2022, New Zealand launched its *Te Rautaki Matihiko mō Aotearoa*, the Digital Strategy for Aotearoa (Digital Strategy)⁴⁰⁵⁵ with the aim to “[e]nabl[e] Aotearoa New Zealand’s people, communities, economy, and environment to flourish and prosper in the digital era.”⁴⁰⁵⁶ David Clark, the

⁴⁰⁵⁶ Ibid

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Minister for the Digital Economy and Communications, introduced the digital strategy by stating that: “New Zealand stands on the precipice of a huge opportunity to design, build and use digital technologies in world-leading, ethical, equitable ways that reflect the culture and uniqueness of our country. To get there, we need to ask ourselves hard questions like: How can we build on New Zealand’s inherently high levels of trust to benefit society, and the economy? What would it mean to be the first country to embrace the ethical deployment of Artificial Intelligence? Are we courageous enough to unlock the benefits of widespread digital thinking?” The Strategy is framed around 3 connected themes: *Mahi Tika* – Trust; *Mahi Tahi* – Inclusion; and *Mahi Aka* – Growth, supported by goals and measures.⁴⁰⁵⁷

The 2022–2023 Action Plan for the Digital Strategy was also published in September 2022 and provides a roadmap to 2027 and measures of success. Artificial Intelligence is included as a future issue, where there are not yet dedicated resources but where groundwork is required. The establishment of a Data Ethics and AI Center is scheduled for 2025.⁴⁰⁵⁸

The Office of the Minister of Science, Innovation, and Technology of New Zealand released a cabinet paper titled Approach to Work on Artificial Intelligence in July 2024.⁴⁰⁵⁹ The paper advocates for increasing AI use in New Zealand to drive innovation, economic growth, and more effective public services. It recommends a “light-touch, proportionate, and risk-based” approach to AI, prioritizing the use of existing regulatory mechanisms rather than developing a standalone AI Act.⁴⁰⁶⁰ Additionally, the paper identifies the OECD AI Principles⁴⁰⁶¹ as key guidelines to direct NZ’s approach to AI.⁴⁰⁶² The paper also acknowledges New Zealand’s obligations arising from the Treaty of Waitangi in the development and use of AI. Furthermore, it highlights the Data Iwi Leaders’ Group’s (DILG) readiness to adopt AI, noting that, in discussions with the Cabinet Office, the DILG agreed that “the danger for Māori in AI lies in being excluded

from its ability to bring about substantial improvements in the provision of services for Māori.”⁴⁰⁶³

Public Participation

The New Zealand Government processes have consistently included periods of public participation in policy and law development. Public participation opportunities for AI are across the government sector in a variety of industries - from policy and instrument development, like the Algorithm Charter,⁴⁰⁶⁴ to application and end use, like consultation on the use of AI in conservation efforts.⁴⁰⁶⁵

Consultation opportunities on the development of AI and digital policy include the 2019 public consultation on its draft Algorithm Charter for the use of algorithms in the public sector with government data. The consultation period ran from 17 October to 31 December 2019, and submissions were solicited from a range of key stakeholders including central government agencies, academics, non-government organizations, civil society representatives, and regulators.⁴⁰⁶⁶ Thirty-four written submissions were received in relation to the charter and related issues.⁴⁰⁶⁷

From August to September in 2022, the Ministry of Justice held public consultations on reforming the disclosure aspect of the Privacy Act to increase transparency regarding the collection, use, and disclosure of personal information is fundamental to protecting individuals’ privacy rights and their dignity and autonomy.⁴⁰⁶⁸ Based on public feedback, the Ministry of Justice is considering reforms but have not yet released final decisions.⁴⁰⁶⁹

Center for AI and Digital Policy

New Zealand's Digital Technologies Industry Draft Transformation Plan 2022-2032 was open for public consultations until 31st March 2022.⁴⁰⁷⁰ The draft plan included a workstream tasked with the responsibility of delivering the AI Strategy for New Zealand including defining New Zealand's approach to supporting the ethical adoption of AI and helping grow a thriving AI ecosystem, ensuring the safe adoption and use of AI in New Zealand.

New Zealand does not have a single written constitution, rather several documents of constitutional importance. One of these, *Te Tiriti o Waitangi*/The Treaty of Waitangi, is a founding agreement between the English Crown and the Maori iwi (tribes). Through much jurisprudence *Te Tiriti* is applied in New Zealand through a series of core principles that can be applied in a circumstance; partnership, active protection,⁴⁰⁷¹ and participation. These principles in this AI framework have specific mention in the AI Charter as a commitment to embed a *Te Ao Māori* perspective in the development and use of algorithms consistent with the Treat of Waitangi.⁴⁰⁷²

New Zealand conducted two public consultations on biometric technology. The first consultation ran from August 15 to September 30, 2022, seeking public feedback on Privacy Regulation of Biometrics, particularly regarding concerns over facial recognition in retail CCTV.⁴⁰⁷³ This received 100 submissions, leading to plans for a regulatory code.⁴⁰⁷⁴ The second consultation occurred from April 10 to May 8, 2024, gathering feedback on the exposure draft of the Biometrics Code of Practice, with 250 submissions received.⁴⁰⁷⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

After the Privacy Amendment Bill introduced to Parliament in 2024 was referred to the to the Justice Committee for further consideration,⁴⁰⁷⁶ the Chairperson called for comments.⁴⁰⁷⁷ This process, as outlined by the NZ government, provided individuals and organizations an opportunity to offer their opinions, observations, and recommendations on the bill under review by the selected committee.⁴⁰⁷⁸

Public consultations in 2024 have primarily addressed specific AI-related issues, such as privacy and biometrics, reflecting a targeted rather than comprehensive approach. However, the absence of public engagement on a cohesive national AI policy highlights a gap in broader participatory processes.”

Data Protection

The Privacy Act 2020 came into force on 1 December 2020, replacing the Privacy Act of 1993.⁴⁰⁷⁹ Separately, to the Privacy Act, the courts of New Zealand have developed a series of privacy torts recognizing the right of an individual to sue another for breach of privacy.⁴⁰⁸⁰ The New Zealand Bill of Rights Act contains many rights founded on the right to privacy, such as the freedom from unreasonable search and seizure.⁴⁰⁸¹

The Privacy Act is intended to protect individual privacy by providing a framework for protecting an individual’s right to privacy of personal information, including the right of an individual to access their personal information, and giving effect to internationally recognized privacy obligations and standards in relation to the privacy of personal information, including the OECD Guidelines and the International Covenant on Civil and Political Rights.

The Privacy Act set down 13 privacy principles that require an individual to be informed of the fact and purpose of data collection, that require that collection not to be through unfair or overly intrusive means, that require the information to be protected by the agency and not used or shared outside the

purposes for which it was collected, held only as long as needed for the purpose, and may not transfer the information offshore except under particular circumstances that continue comparable protection of the information.⁴⁰⁸² The individual has some rights to access and correct the information collected.⁴⁰⁸³ These principles were largely unchanged from the 1993 Act that was replaced, with the only addition being requirements around offshore transfers. A breach of the privacy principles may lead to fine or a claim of interference under the Act, but these are minimal when compared to the European fines under the General Data Protection Regulation, or those proposed in the Australian Privacy Reforms. Notably, there are no rights for individuals being subject to algorithmic decisioning, though elements of them can be read into existing legislation as set out below.

The Privacy Commissioner has the power under the Privacy Act to issue codes of practice that become part of the law. These codes apply the Privacy Act to specific scenarios, for example credit reporting or situations of national security. There are currently six codes of practice.

In May 2018, the New Zealand Privacy Commissioner and the Chief Government Data Steward jointly developed the “Principles for the safe and effective use of data and analytics”⁴⁰⁸⁴ aimed at government agencies. Hon. Nicole McKee, the Minister for Courts, on behalf of the Minister of Justice, introduced the Privacy Amendment Bill to Parliament in 2023. The bill proposes to amend the Privacy Act 2020 by establishing a new Information Privacy Principle (IPP 3A) that would require agencies to notify individuals when their personal information is collected indirectly, addressing concerns about data collection practices and providing greater insight into how their personal information is acquired and used.⁴⁰⁸⁵ Following its first reading, the bill was referred to the Justice Committee for further consideration⁴⁰⁸⁶. The Justice Committee presented its final report on October 25, 2024, recommending that the bill be passed with amendments. The report suggests specific exceptions to IPP 3A, such as for public-interest archiving and national security purposes.⁴⁰⁸⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The New Zealand Office of the Privacy Commissioner has also been active in the Global Privacy Assembly, co-sponsoring the 2020 resolution on facial recognition technology⁴⁰⁸⁸ and the 2018 Resolution on Accountability in the Development and Use of Artificial Intelligence.⁴⁰⁸⁹

Algorithmic Transparency

The Privacy Act does not contain a right for an individual to understand how the AI decision was made. However, in New Zealand, where an automated decision is being made by a government agency, section 23 of the Official Information Act 1982 provides an individual with a right to obtain reasons for a government decision. These reasons are to be supplied in a written statement that includes any findings on material issues of fact and a reference to the information on which the findings were based to allow anybody with the power of review to understand the process of thought before a conclusion was reached.⁴⁰⁹⁰

The Algorithm Charter⁴⁰⁹¹ commits its public sector signatories to transparency - clearly explaining how decisions are informed by algorithms. This transparency may include a plain English document, making information about data and processes available, and publishing information about how data are collected, secured and stored.⁴⁰⁹² Where algorithms are being employed by government agencies in a way that can significantly impact on the wellbeing of people, or there is a high likelihood many people will suffer an unintended adverse impact, the Charter signatories will make an assessment of their algorithm decisions using a risk matrix.⁴⁰⁹³

The Joint AI Security Guidance, Deploying AI Systems Securely, developed with NZ's participation through its National Cyber Security Centre alongside Australia, Canada, UK, and US in 2024, provides further recommended practices for algorithmic systems.⁴⁰⁹⁴ The guidance suggests government agencies

should implement protection, detection, and response methodologies when deploying externally developed AI systems, including maintaining comprehensive audit logs of algorithmic decisions and establishing clear monitoring protocols for system transparency.⁴⁰⁹⁵

There is no corresponding right to reasons for automated decisions made by private-sector agencies, but there is a right to access personal information,⁴⁰⁹⁶ which could be argued to cover how the information has been the subject of processing by an algorithm. The Court has required that information provided to individuals under this access right is in a “form which can be comprehended”, including “the key” which unlocks the information in a “meaningful way”.⁴⁰⁹⁷ In other words, the standard appears to require an explanation: evidence, support or reasoning for a decision.

The New Zealand Privacy Commissioner’s submission on the Privacy Bill 2018 included a recommendation to add a new privacy principle to address automated decision-making and algorithmic transparency.⁴⁰⁹⁸ While the Departmental Report on the Bill recognized the issues needed further consideration, no change was recommended to the then Privacy Bill.⁴⁰⁹⁹

Data Scraping

The Office of the Privacy Commissioner and international data protection and privacy counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy.⁴¹⁰⁰ The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”⁴¹⁰¹ The follow-up, which incorporates feedback from engagement with

companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”⁴¹⁰²

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

Use of AI in the Public Sector

The Algorithm assessment report, published in 2018, recommended that consideration be given to ways in which agencies ensure human rights, privacy and ethics are considered when developing algorithms, and that agencies embed a *Te Ao Māori* perspective where appropriate. The Data Ethics Advisory Group (DEAG) was created to assist in meeting those recommendations. The DEAG is convened by the Government Chief Data Steward (GCDS) to assist the New Zealand Government to maximize the opportunities and benefits from new and emerging uses of data, while responsibly managing potential risks and harms. The Group provides advice, comments, views and recommendations to the GCDS and State Sector agencies.⁴¹⁰³ It has provided advice on a number of matters including on population density assessment and a framework to work more collaboratively with *iwi* (tribes).⁴¹⁰⁴

The Algorithm Charter⁴¹⁰⁵ finalized in July 2020 is considered a “commitment by government agencies to carefully manage how algorithms will be used to strike the right balance between privacy and transparency, prevent unintended bias and reflect the principles of the Treaty of Waitangi.”⁴¹⁰⁶ The Algorithm Charter stipulates that a review of it will be conducted to ensure that it is meeting its intended purpose of improving government transparency and accountability without stifling innovation or causing undue compliance burden. An independent review of the Charter - which involved interviewing signatories, non-signatories, and subject matter experts, was completed in December 2021.⁴¹⁰⁷ This report found almost universal support for the charter, but a lot of work remains on implementation to ensure compliance with all charter commitments. The report also noted there is little opportunity for New Zealanders to get individual recourse on decisions made about them that have been informed by an algorithm. It also noted that greater enforcement of the charter might be necessary to keep social license, as there is a lack of a clear oversight body. The report also noted that capability and capacity within agencies and the expert community is limited. Stats NZ is working to consider and implement the findings of the review.

In 2024, various NZ institutions worked to development and implement guidance to integrate AI in the public sector. The National Cyber Security Centre participated in developing the Joint AI Security Guidance in April 2024, providing security guidance for public sector AI.⁴¹⁰⁸ The Cabinet paper Approach to Work on Artificial Intelligence in July 2024 expanded on the Algorithm Charter’s framework by outlining five key domains for public sector AI governance.⁴¹⁰⁹ The AI Blueprint for Aotearoa by the AI Forum of NZ also introduced guidelines for

public sector AI adoption, emphasizing both innovation and ethical considerations aligned with Te Ao Māori principles.⁴¹¹⁰

Facial Recognition

In October 2022, the New Zealand Office of the Privacy Commissioner co-sponsored a GPA resolution on the Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology.

The Office of the Privacy Commissioner launched a consultation paper on Privacy Regulation of Biometrics in Aotearoa New Zealand, in August 2022, and requested public feedback until 30 September 2022. This consultation aimed to hear from New Zealanders amid growing concern over the issue of biometrics, including stores using Facial Recognition Technology as part of their CCTV systems. The consultation document featured a set of specific questions aimed at building on information first presented in an OPC position paper on biometrics released last year.⁴¹¹¹ After analyzing the 100 submissions received, the Office of the Privacy Commissioner published its intention to explore a code to regulate biometric technologies in 2023, which involved a public consultation period.⁴¹¹²

The Office released an exposure draft of a Biometrics Code of Practice for public consultation in April 2024.⁴¹¹³ The draft proposed rules focusing on transparency, proportionality, and limitations on biometric classification, with 250 submissions received from the public and agencies.⁴¹¹⁴ The Office is currently reviewing feedback from this consultation to finalize the Biometrics Code of Practice, which will provide comprehensive rules for biometric use, ensuring innovation does not compromise privacy rights.⁴¹¹⁵

Center for AI and Digital Policy

Environmental Impact of AI

The AI Forum, in partnership with the Ministry for the Environment (Manatū Mō Te Taiao) and Stats NZ, launched the 2022 report *AI for the Environment in Aotearoa New Zealand*, exploring how AI can contribute to positive environmental outcomes in the country. The report identifies five key areas where AI can provide impactful solutions: biodiversity preservation, understanding land use impacts, pollution reduction, freshwater and marine resource protection, and climate change mitigation. It highlights AI's capacity to process large data sets, improve predictions, enhance decision-making, and deliver real-time insights. Additionally, the report recommends the development of a cohesive environmental data ecosystem, strengthening capabilities, and aligning funding to maximize AI's potential in addressing environmental challenges.⁴¹¹⁶

Additionally, on its webpage, the Office of the Prime Minister's Chief Science Advisor stated that his office is considering how AI might be useful for improving outcomes for NZ's natural environment. The office's webpage also highlights existing applications and provides examples of AI research and technology that are already supporting positive environmental outcomes.⁴¹¹⁷ However, beyond this, there are no other readily available references to specific environmental sustainability considerations or concrete government policies in this area.

Lethal Autonomous Weapons

In 2021, the Minister of Disarmament and Arms Control announced that New Zealand will push for a new international law to ban and regulate autonomous weapons systems (LAWS).⁴¹¹⁸

In October 2022, New Zealand endorsed, together with 69 other countries participating in the UN General Assembly, a joint statement on autonomous weapons systems. In this joint statement, States urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law

(IHL), including through maintaining human responsibility and accountability in the use of force.”⁴¹¹⁹

At the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea in February 2023, nearly sixty states agreed to issue a joint call to action on the responsible development, deployment, and use of AI in the military domain.⁴¹²⁰ New Zealand endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁴¹²¹

South Korea hosted the second REAIM summit in September 2024, co-organized by the Republic of Korea, Kingdom of the Netherlands, Republic of Singapore, Republic of Kenya, and United Kingdom of Great Britain and Northern Ireland.⁴¹²² During the closing session, the Blueprint for Action, which provides a roadmap for establishing norms of AI in the military space was presented as the official outcome document.⁴¹²³ However, NZ did not endorse the Blueprint for Action.⁴¹²⁴

Human Rights

Freedom House ranked New Zealand very highly (99/100) in the 2024 report and noted that New Zealand has “a long record of free and fair elections and of guaranteeing political rights and civil liberties.”⁴¹²⁵ The total consists of a score of 40/40 on political rights and a score of 59/60 on civil liberties. The country

maintains strong protections, though issues such as discrimination against Māori, Pacific Islanders, and other minority groups persist, including disparities in education, employment, and the justice system. Additionally, concerns about foreign influence in politics remain.⁴¹²⁶

The Bill of Rights Act of 1990 (NZBORA), the Human Rights Act of 1993 (HRA) and the Privacy Act of 2020 are the primary legislative instruments that recognize and safeguard human rights in New Zealand.

The Preamble of the NZBORA describes its purpose as the affirmation and promotion of human rights and fundamental freedoms and the expression of New Zealand's commitments to the International Convention on Civil and Political Rights. The rights in NZBORA qualifies the exercise of rights through section 5 "reasonable limits prescribed by laws as can be demonstrably justified in a free and democratic society." NZBORA is not supreme law and cannot be used by the Courts as a basis to strike down legislation.⁴¹²⁷ A statutory meaning consistent with the rights protected in NZBORA is preferred, however a statute that has direct conflict with NZBORA will remain in force.⁴¹²⁸ This situation has been criticized by the United Nations Human Rights Committee, which has called on New Zealand to strengthen the NZBORA.⁴¹²⁹

The HRA protects people in New Zealand from discrimination on a number of grounds including ethnic or national origins, race, sex, political opinion, amongst others.⁴¹³⁰ It applies to the public sector (with some limitations for national security) and the private sector in matters such as employment, education, provision of services and membership of organizations.

New Zealand has endorsed the Universal Declaration of Human Rights and was one of the 48 nations that voted in favor of the UDHR in 1948 under the UN General Assembly Resolution No. A/RES/217(III)[A].⁴¹³¹ In addition to the UDHR, New Zealand is a signatory to various international human rights treaties, including but not limited to the following core instruments: the International Covenant on Civil and Political Rights (ICCPR); the International Covenant on Economic, Social and Cultural Rights (ICESCR); the International Convention on

⁴¹²⁶ Ibid

⁴¹²⁷ The White Paper 'A Bill of Rights for New Zealand' (1985) proposed the enactment of a Bill of Rights that would have the power to strike down inconsistent legislation. This was not accepted by the Parliamentary Select Committee on Justice and Law Reform. See *Final Report of the Justice and Law Reform Select Committee "On a White Paper of a Bill of Rights for New Zealand"* [1998] AJHR 3.

the Elimination of All Forms of Racial Discrimination (CERD); the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW); the Convention on the Rights of the Child (CRC); the Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment (CAT); the Convention on the Rights of Persons with Disabilities (CRPD).⁴¹³²

OECD AI Principles / G20 AI Guidelines

New Zealand endorsed the OECD AI Principles in May 2019 and recommitted to the AI Principles as updated in May 2024.⁴¹³³

In June 2020, New Zealand also joined the Global Partnership on AI (GPAI) to “support the responsible and human-centric development and use of AI in a manner consistent with human rights, fundamental freedoms and our shared democratic values”⁴¹³⁴ New Zealand is one of 29 member states in GPAI, and participates in the four working groups Responsible AI, Data Governance, Future of Work, and Innovation and Commercialization.⁴¹³⁵

The Office of the Minister of Science, Innovation, and Technology of New Zealand released a paper in July 2024 outlining a strategic approach to AI. The paper suggests promoting the OECD AI Principles as a key direction for responsible AI development.⁴¹³⁶

Council of Europe AI Treaty

The Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law opened for signature by member and non-member states in September 2024.⁴¹³⁷ NZ has not endorsed this first legally binding, international AI treaty.⁴¹³⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

UNESCO Recommendation on the Ethics of AI

As a member state since 1946, New Zealand has endorsed the UNESCO Recommendation on the Ethics of AI.⁴¹³⁹ NZ has neither implemented nor is currently in the process of implementing the Readiness Assessment Methodology (RAM) to assess its alignment with the ethical principles outlined in the Recommendation.⁴¹⁴⁰

Evaluation

The release of the Cabinet Paper on the Approach to Work on Artificial Intelligence marks progress toward adopting a national AI strategy emphasizing the adoption of AI to drive innovation, productivity, and public service improvements while advocating for a “light-touch, proportionate, and risk-based” regulatory framework.⁴¹⁴¹ The paper also highlights New Zealand’s intention to use the OECD AI Principles as a key direction to guide its approach to responsible AI.⁴¹⁴²

NZ has endorsed the UNESCO Recommendation on the Ethics of AI.⁴¹⁴³ However, the country has neither implemented nor is it currently in the process of implementing the UNESCO Readiness Assessment (RAM) to evaluate its alignment with the ethical principles outlined in the Recommendation.”⁴¹⁴⁴ The release of the Algorithm Charter for Aotearoa marks progress toward ethical AI development and offers a unique opportunity to draft a national AI strategy in line with both the UNESCO Recommendation on the Ethics of AI and the Algorithm Charter. This would allow the country to carve its own approach to trustworthy AI and protect human rights broadly, including the rights and culture of indigenous people against encroachment by the new technology.

Nigeria

In 2024, Nigeria launched a draft National AI Strategy for public consultation and implemented the updated data protection law. Internationally, Nigeria advocated for a legal instrument on lethal autonomous weapons.

National AI Strategy

Nigeria is making notable strides in AI governance with the National AI Strategy, driven by the Federal Ministry of Communications, Innovation, and Digital Economy (FMCIDE), Nigeria's IT standards regulator. Nigeria launched its first Artificial Intelligence and Robotics Centre to advance skills and innovation in emerging technologies, including AI and IoT, in November 2020.⁴¹⁴⁵ In August 2022, the National Information Technology Development Agency (NITDA) called for experts to contribute to a National AI Policy, leading to the establishment of a Volunteer Expert Group (VEG) in October 2022.⁴¹⁴⁶ Initial discussions at this inauguration indicate that Nigeria's national AI policy would be framed along clusters or sectoral applications in education, healthcare, security, finance, employment, agriculture and supply chain, transportation, and telecommunications with a generalist cluster of application.

Minister of Communications, Innovation and Digital Economy of Nigeria, Dr Bosun Tijani, launched a public call for the drafting of a National AI Strategy in August 2023, stating: "A National Strategy for Nigeria to responsibly steer the AI revolution towards achieving national goals around job creation, social inclusion, and sustainable development becomes imperative. With collaborative leadership, Nigeria seeks to pioneer ethical and inclusive AI innovation that improves welfare and expands opportunities for all its citizens."⁴¹⁴⁷ With that aim, the Minister, held the first session on the National AI Strategy workshop with Nigerians across the globe on March 27, 2024. A second workshop ran April 15–18, 2024.⁴¹⁴⁸

According to the Minister, the objective of the National AI Strategy is to build on the existing work done by the National Information Technology Department (NITDA) to develop a National AI Strategy. However, the Minister

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

adopted an expanded co-creation approach to include top AI researchers of Nigerian descent globally in the process of crafting a National AI Strategy.⁴¹⁴⁹

Pillar 7 of the National Digital Economy Policy and Strategy 2020 – 2030 (NDEPS)⁴¹⁵⁰ issued by the Federal Ministry of Communications and Digital Economy (the Ministry), considers AI as an emerging technology that must be harnessed for the development of Nigeria's digital economy to attain 7 of the sustainable development goals (SDGs) as prescribed by the United Nations. These SDGs include poverty eradication; good health and well-being; quality education; decent work and economic growth; industry, innovation, and infrastructure; reducing inequality; and sustainable cities and communities.

Subsequently, Nigeria launched its draft National AI Strategy on August 1, 2024.⁴¹⁵¹ The policy draft is open for public consultation, inviting comprehensive feedback to refine and shape the final strategy. As of the current draft, Nigeria's National AI Strategy reflects a commitment to fairness, accountability, and transparency by emphasizing inclusive AI development that considers social inclusion, ethical use, and public consultation. The draft also aligns with fundamental rights by aiming to address key societal needs and mitigate bias in AI applications. However, explicit provisions detailing the rule of law and comprehensive mechanisms for enforcement or oversight are still anticipated in the final version.

Nigeria hosted the Global Inclusivity and Artificial Intelligence: Africa (GIAA) Conference in Lagos, in September 2024.⁴¹⁵² The event brought together over 370 stakeholders to discuss inclusive AI development across Africa, further advancing Nigeria's engagement in AI initiatives as the country continues to develop the AI strategy and policies. The conference emphasized the need for AI development that benefits all communities, acknowledging Africa's diverse cultural landscape, including Nigeria's more than 300 ethnic groups and over 500 languages.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Earlier, Nigeria announced that it was working with the United Arab Emirates on Solar Energy and Artificial Intelligence⁴¹⁵³ after a meeting held in Nigeria between Nigeria's Minister of Science and Technology, and the Ambassador of the United Arab Emirates to Nigeria. The government announced that the National Agency for Science and Engineering Infrastructure would be responsible to develop AI in Nigeria. The government also established Nigeria's Robotics and Artificial Intelligence Centre.

Nigeria Communications Commission (NCC), the telecoms regulator, also announced the establishment of a new department on digital economy under the Office of the Executive Vice Chairman/CEO. The focus of the office is on implementing programs and policies aimed at fully supporting and promoting the national digital economy agenda of Nigeria's Federal Government. The department is under the office of the Chief Executive Officer to indicate the criticality of the objectives. The Nigerian Ministry of Science and Technology announced the goal of ensuring that Nigeria is well suited to the AI economy as critical to driving knowledge and Innovation and creating more job opportunities for Nigeria.⁴¹⁵⁴

Public Participation

The Nigerian government has made efforts to involve the public in the development of the National Artificial Intelligence Policy (NAIP). This was evident in the NITDA August call for the contribution of stakeholders in the information technology sector to the development of the AI Policy and workshops held in March and April 2024.⁴¹⁵⁵ Articles in the popular press⁴¹⁵⁶ and social media posts⁴¹⁵⁷ announcing the release of the draft National AI Strategy in August 2024

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

invited feedback with links to the strategy document. The draft itself includes an email address to receive public feedback and input on the back cover.⁴¹⁵⁸

The draft Data Protection Act also went through public consultation in 2021 before being enacted in 2023.⁴¹⁵⁹

Data Protection

Section 37 of the Nigerian Constitution provides for the right to privacy. Nigeria enacted a data protection law to address data privacy issues in the digital age in 2023.⁴¹⁶⁰ Currently, the National Data Protection Regulation (NDPR)⁴¹⁶¹ and Data Protection Act (NDPA) are in force. The NDPA takes precedence where the Act conflicts with the NDPR and the related Implementation Act from 2020.⁴¹⁶²

The Nigeria Data Protection Act 2023 (NDPA) was signed into law and became the applicable data protection law in Nigeria in July 2023.⁴¹⁶³ The NDPA 2023 establishes the Nigeria Data Protection Commission (NDPC) as the data protection authority in the country, replacing the National Data Protection Bureau. NDPC's independence is enshrined in art. 7.

The NDPA 2023 applies to the processing of personal data of data subjects in Nigeria. Compared to the NDPR 2019, the Act establishes a new data portability right for data subjects and requires processors and controllers to obtain authorization for, and justify processing of, “sensitive data” relating to religious or other beliefs, sexual orientation, health, race, ethnicity, political views, trades union membership, criminal records. The NDPA 2023 adds a requirement for data controllers to consult the Nigeria Data Protection Commission prior to processing personal data, if the Data Privacy Impact Assessment performed signals high-risk potential of the operation. The NDPA 2023 also distinguishes between data processors and controllers of “major importance” and “not of major importance,”

with the former required to formally register before the National Data Privacy Committee.⁴¹⁶⁴

The National Data Protection Commission has authority to levy sanctions for infringement. Possible sanctions are:

- Whichever is greater between 10,000,000 nairas and 2% of the revenue of the preceding year- for data controllers or data processors of major importance;
- Whichever is greater between 2,000,000 nairas and 2% of the revenue of the preceding year- for data controllers or data processors not of major importance.

The Nigeria Data Protection Committee published a draft General Application and Implementation Directive to the NDPA 2023 in May 2024.⁴¹⁶⁵ The Directive provides guidance on the implementation of the NDPA 2023.

The Nigeria Data Protection Bureau (NDPB), which represented Nigeria before the General Privacy Assembly (GPA) until the Nigeria Data Protection Commission joined the GPA Assembly as a full member in October 2023,⁴¹⁶⁶ did not a sponsor the 2018 Declaration on Ethics and Data Protection in Artificial Intelligence,⁴¹⁶⁷ 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence,⁴¹⁶⁸ 2022 Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology,⁴¹⁶⁹ or 2023 Resolution on Generative AI.⁴¹⁷⁰ The NDPC did not

sponsor the GPA Resolution on Generative AI, approved during the GPA October 2023 session.⁴¹⁷¹

Algorithmic Transparency

Nigeria established the right to algorithmic transparency in art. 3.1 (7) (I) of the NDPR, which required data controllers to explain the existence of automated decision-making and the logic involved.⁴¹⁷² These provisions are now superseded by the right to algorithmic transparency in the NDPA 2023.⁴¹⁷³ The NDPA 2023 establishes that data subjects have the right not to be subject to decisions taken solely based on automated processing of personal data, if those decisions produce legal or similar significant effects on the subject. The data subject is entitled to obtain human intervention in the decision, express his or her point of view, and contest the decision. The data subject is also entitled to be informed of the existence of automated decision-making, its significance, and his or her rights in relation to the process prior to being subject to processing of personal data by the controllers.⁴¹⁷⁴

AI Research & Development

According to the Director-General of Nigeria's National Information Technology Development Agency (NITDA), the National Centre for Artificial Intelligence and Robotics (NCAIR) is also expected to be a research development center.⁴¹⁷⁵ The Communications Commission requested a study to assess the ethical and societal impact of AI to achieve economic diversification inclusively and sustainably.⁴¹⁷⁶ The study concluded that regulators must govern artificial power while it is also the responsibility of programmers and engineers to ensure that ethical and security concerns are addressed during the initial design of these systems. The conclusions of the study urge the NCC to step move forward and develop frameworks for AI in Nigeria.

The private sector and the tech ecosystem are leading in AI initiatives in Nigeria, mostly in the private sector, with some participation from the Nigerian

government. A government project was EagleScan, a homegrown plagiarism detection software, with an AI-driven data analytics and visualization engine.⁴¹⁷⁷

The NASS-AI project uses AI to classify parliamentary bills from the national assembly, to make them more accessible. Based on the principle of open data the system ensures that legislative-related documents are complete, accessible, and machine-processable, amongst other requirements.⁴¹⁷⁸

The Director-General of NITDA announced in July 2024 that the federal government is planning on developing research centers for six key areas of emerging technologies, including AI. The plan entails research funding and innovation sandboxes for local startups.⁴¹⁷⁹

Facial Recognition

Nigeria plans to use facial recognition technology as an essential part of its digital identification scheme. According to the Director-General of the Nigerian Identity Management Commission (NIMC), the agency has plans to capture the iris of prospective enrollees, and the agency already has the capacity for capturing the iris at its backend.⁴¹⁸⁰

In 2022, Nigeria added facial recognition for voter verification. The Independent National Electoral Commission (INEC) used an Automated Biometric Identification System (ABIS) that deduplicated fingerprints and used facial recognition to verify voters before issuing permanent voter registration cards.⁴¹⁸¹ This was adopted in response to the issues identified with nullified registrations voters who were already registered and incomplete data. In 2023, the Federal Government indicated plans to install facial recognition technology at major airports across the federation.⁴¹⁸²

Biometrics

Nigeria has been keen to adopt biometric technology, despite the risks to violate human rights. The registrations of some citizens were invalidated, which may result in discrimination and limitation of the exercise of their political rights.

Center for AI and Digital Policy

The Nigerian government through the Independent National Electoral Commission (INEC) set a plan to use biometrics (fingerprint and face) matching systems (Automatic Biometric Identification System ABIS and Biometric Voter Accountability System BVAS) in the February 2023 presidential elections. This is despite the systems having invalidated around 2.78 million Nigerians.⁴¹⁸³ Despite these concerns, post-election analysis praised BVAS for significantly reducing electoral fraud.⁴¹⁸⁴

In 2021 during the governorship poll in Anambra State the failure of the BVAS system resulted in several votes deemed inconclusive.⁴¹⁸⁵ Elections for Ekiti State's governorship were held successfully with these systems.⁴¹⁸⁶ Reports from Oyo state showed that 42% of voter registrations were rendered invalid due to duplications.⁴¹⁸⁷

The World Bank issued recommendations to the Nigerian government to invest in AI-enabled Geospatial data to support the response to the COVID-19 crisis and build back better.⁴¹⁸⁸ Nigeria has multiple data sets, captured across multiple platforms such as Bank Verification Number (BVN), Voter's card, International passport, Road Safety, and National Identification Number (NIN). Reports suggest that the country loses up to US\$2 billion annually on biometric data collection duplication.⁴¹⁸⁹

To address these inefficiencies and improve Nigeria's digital identity infrastructure, the World Bank provided \$45.5 million in 2024 to Nigeria's National Identity Management Commission (NIMC) as part of the Digital

Identification for Development (ID4D) project.⁴¹⁹⁰ This funding, part of a larger \$430 million initiative, aims to upgrade biometric systems and increase the number of Nigerians enrolled in the NIN system.⁴¹⁹¹

Environmental Impact of AI

The draft National AI Strategy released in August 2024 includes “Ensure AI Contributes to Sustainable Development and Environmental well-being” among the objectives.⁴¹⁹² The objective includes a statement that “AI’s energy and resource consumption warrants a specific focus on green and sustainable AI initiatives.” The Outcomes and strategies focus on “green AI” solutions and projects, such as those used to monitor and management waste, without offering clarity on what “green AI” would entail.

Lethal Autonomous Weapons

Nigeria, though not a state party to the Convention on Certain Conventional Weapons (CCW), has actively participated in CCW meetings and supports a legally binding instrument on autonomous weapons. Nigeria endorsed both the 2024 Freetown Communiqué and the Vienna Conference’s call for urgent regulation,⁴¹⁹³ while also contributing to a draft protocol proposing prohibitions on autonomous weapons systems without meaningful human control.⁴¹⁹⁴

The Humanity at the Crossroads conference in Vienna in April 2024, brought together over 1,000 representatives from 144 nations, including Nigeria,⁴¹⁹⁵ to discuss the urgent regulatory needs for Autonomous Weapons

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Systems (AWS).⁴¹⁹⁶ Key concerns included maintaining human control, accountability, and adherence to international law, with AWS posing serious risks to global security and human rights. The conference's consensus on prohibiting certain AWS and regulating others underlined the closing window to prevent an autonomy arms race. For states like Nigeria, active participation and contributions signify a commitment to shaping international norms, protecting human dignity, and ensuring regional stability in the face of emerging AI-driven military technologies.⁴¹⁹⁷

In 2021, Nigeria issued a joint statement with ten other states at the CCW Group of Governmental Experts on Lethal Autonomous Weapons Systems (GGE on LAWS) meeting, calling to “adopt a legally binding instrument to ensure the prohibition of autonomous weapons systems.”⁴¹⁹⁸

At the 78th UN General Assembly First Committee in 2023, Nigeria voted in favor⁴¹⁹⁹ of resolution L.56⁴²⁰⁰ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. Nigeria contributed a statement to the report.⁴²⁰¹

Human Rights

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Human and People's Rights.⁴²⁰² The rights and freedoms in the treaties signed have been envisaged in Chapter IV of the Nigerian Constitution.⁴²⁰³ In 2006 the government of Nigeria developed a National Action Plan for the Promotion and Protection of Human Rights (NAP) which was a response to the Recommendation of the Vienna Declaration and Program Action, adopted at the World Conference on Human Rights. NAP was an integrated and systematic national strategy to help realize the advancement of human rights in the country. There have been considerable improvements in the enforcement, promotion, and protection of human rights and freedoms in the country since the transition to democratic rule in 1999.

In the Freedom House Freedom in the World 2024 report, Nigeria ranks as “Partly Free” with a rating of 44/100.⁴²⁰⁴ This has been attributed to the fact that the country has been facing security challenges, military and law enforcement officers engaging in extra-judicial killings, torture, and abuses. Further, civil liberties are undermined by religious and ethnic bias, women, and LGBT+ people face discrimination, and the media is constantly facing harassment and arrests over political issues.

In 2016, Nigeria joined the United States, Canada, Australia, the United Kingdom, and some European Union states to sponsor a United Nations Resolution that affirms that rights that apply offline must also apply online.⁴²⁰⁵

Nigeria's involvement in the UN's call for input on digital technologies in the administration of justice marks a pivotal step in shaping AI policy to protect human rights within its judicial system.⁴²⁰⁶ By participating through its National Human Rights Commission, Nigeria is actively addressing the impacts of AI and digital tools, such as biometrics and predictive analytics, on privacy, accountability, and fair trials. This engagement demonstrates Nigeria's commitment to aligning with global human rights standards, particularly by

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

assessing and adapting its regulatory framework to safeguard the rights of vulnerable populations in justice-related digital initiatives.”

AI Safety Summit

In November 2023, Nigeria participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁴²⁰⁷ Nigeria thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

OECD/G20 Principles

Nigeria is not a member of the OECD and has not endorsed the OECD AI Principles.⁴²⁰⁸ Nigeria submitted only two reports to the OECD AI Policy Observatory in relation to policies, strategies, or activities associated with AI.⁴²⁰⁹ The National AI Policy call for contributions is mapped to two OECD principles: Fostering a digital ecosystem for AI and Providing an enabling policy environment for AI. There is no evidence of the implementation of the OECD AI principles in the country.

Council of Europe AI Treaty

Nigeria has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁴²¹⁰

UNESCO Recommendation on AI Ethics

Nigeria is a member of UNESCO and endorsed the UNESCO Recommendation on the Ethics of AI.⁴²¹¹ Nigeria also participates in the African

Center for AI and Digital Policy

Forum for Ethics and Governance of Artificial Intelligence (AFEGAI), which was created in 2019 following a recommendation by UNESCO and African Member States to establish an African Forum of Association of Artificial Intelligence (AI).⁴²¹² AFEGAI brings together AI constituencies in Africa to support the ethical development of Artificial Intelligence. AFEGAI coordinates AI Governance Forums in Africa.⁴²¹³

The country is partially implementing the recommendations through AI and data protection policies, such as, provisions requiring transparency of data controllers to data subjects where they use automated decision making.

Nigeria is also in the process of completing UNESCO's Readiness Assessment Methodology (RAM),⁴²¹⁴ a key step in aligning with the Recommendation on the Ethics of AI. The RAM aims to evaluate the country's readiness in terms of ethical AI development, governance frameworks, and regulatory measures.

Evaluation

Nigeria has made significant progress in developing its national AI strategy, launching a draft on August 1, 2024. While the process of public participation has not always been fully systematic or consistent,⁴²¹⁵ this step marks a clear advancement toward finalizing the strategy. A reform of the existing legal framework maintained the positive features, notably the establishment of an independent data protection agency and the right to algorithmic transparency. The newly created Nigeria Data Protection Commission also officially joined the Global Data Privacy assembly as a full member.

Nigeria is a signatory of the UDHR and the African Union Charter but is only "partially free" with a record of human rights protection that could be improved. Fulfilling the commitment taken by endorsing the UNESCO Recommendation on the Ethics of AI could provide a perfect opportunity to accomplish the reform necessary at national level to turn trustworthy AI into reality for the benefit of all. Beginning the RAM process is a step in the right direction.

Norway

In 2024, Norway took various steps to ensure AI development complies with privacy regulations, such as AI inspections by the data protection agency and an expanded AI sandbox. Norway signed the Council of Europe AI Treaty and pledged to implement the provisions in the private as well as public sector.

National AI Strategy

The Norwegian Government presented the national artificial intelligence (AI) strategy in January 2020.⁴²¹⁶

The objective of the strategy is to outline the policy actions for the coming years to maximize the opportunities that AI can bring along for Norwegian individuals, for businesses and industry, and for the public sector.⁴²¹⁷ To achieve this outcome, the national AI strategy highlights the following policy initiatives:

- Expanding the offer of education programs and workplace trainings in the field of AI in order to create a solid basis of digital skills and capabilities
- Strengthening the Norwegian research in AI
- Enhancing the innovation capacity in AI in both the private and public sector
- Outlining ethical principles for AI to allow fair, reliable and trustworthy AI-related developments
- Establishing digitalization-friendly regulations as to define the legislative framework in which AI developments take place
- Constructing a strong data infrastructure ensuring open data and data sharing across sectors and business areas. Dedicated opportunities for language data resources are established through the Norwegian language bank at the National library
- Deploying a telecommunication infrastructure that provides high-capacity connectivity and computing power, and that ensures security in AI-based systems.

In a section dedicated to ethics, the strategy highlights the adoption of the EU ethics guidelines for trustworthy AI⁴²¹⁸ and the OECD AI principles.

With regards to the public sector, the national strategy aims to support value creation and use of AI in the public sector; facilitate the sharing of public sector data among public sector agencies; review and update legal barriers to public sector AI, in particular issues regarding data protection and statutory

⁴²¹⁶ Ministry of Local Government and Modernisation, *National Strategy for Artificial Intelligence* (2020) https://www.regjeringen.no/contentassets/1febbbb2c4fd4b7d92c67ddd353b6ae8/en-gb/pdfs/ki-strategi_en.pdf

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

authority; ensure that AI systems used by the government are transparent and explainable; issue guidelines to help public administrations overcome uncertainties.⁴²¹⁹

Norway has developed centralized, accessible repositories of open public data. In Norway, the Brønnøysund Register Centre and the Norwegian Digitalization Agency have established a national directory of data held by different public agencies, their relationships, what they mean and whether data can be shared and on what terms.⁴²²⁰

In 2021, Norway was the only European Free Trade Association (EFTA) country that performed activities to assess the political impact of open data. They launched “data as a resource,” which aims to develop a common methodology for measuring and demonstrating the benefits and effects of public data, based on the work done in the EU and the OECD in this area.⁴²²¹

In November 2020, the Supreme Audit Institutions of Norway, Finland, Germany, the Netherlands and the UK jointly published a whitepaper called “Auditing machine learning algorithms for public auditors.”⁴²²² This paper discussed in detail audits of machine learning (ML) algorithms by the Supreme Audit Institution with project management, data, model development, model in production and evaluation. The project [auditingalgorithms.net](https://www.auditingalgorithms.net) is maintained by The Office of the Auditor General of Norway (*Riksrevisjonen*).

Norway developed its strategy after it signed a Declaration of cooperation on Artificial Intelligence together with 24 other European countries in May 2018.⁴²²³ Several other initiatives in 2018 paved the way for the drafting of the national strategy. For example, the Norwegian Data Protection Authority (DPA) published a report on artificial intelligence and privacy.⁴²²⁴ Another report Digital21 focused on national collaboration and encouraged engagement from

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

industry, academia and government.⁴²²⁵ The Norwegian Board of Technology also published a report, *Artificial Intelligence: Opportunities, Challenges and a Plan for Norway*.⁴²²⁶

The national AI strategy emphasizes that implementation and progress will be closely reviewed and, if necessary, changed with further AI policies. The frequency with which revised strategy reports will be provided is not specified in the plan. The Norwegian Data Protection Authority, Datatilsynet, released the *Strategy for Working with Artificial Intelligence* in March 2024. The Datatilsynet strategy aligns with the 2024–2026 goals. The strategy ensures a coordinated and unified approach to artificial intelligence—both internally in its operations and externally towards society. The new strategy will:

- Provide a practical coordination of AI-relevant inquiries and activities in the Norwegian Data Protection Authority
- Provide direction for Datatilsynet’s work with AI in business planning, case management, guidance and the use of IT tools
- Build a competent and targeted supervision in the AI area
- Improve efficiency and quality in Datatilsynet’s work.⁴²²⁷

Nordic-Baltic and Nordic Cooperation on AI

As for the regional landscape, the Norwegian Minister for digitalization signed the declaration on AI in the Nordic-Baltic region, establishing a collaborative framework on “developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used” and “on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability.”⁴²²⁸

The ministerial declaration *Digital North 2.0*⁴²²⁹ builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, *Digital North 2017-2020*. “In order to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration, a council of ministers for digitalisation (MR-DIGITAL) was established in 2017.

⁴²²⁵ Digital 21, <https://digital21.no>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The aim is to promote development in three areas: (1) Increase mobility and integration in the Nordic and Baltic region by building a common area for cross-border digital services; (2) Promote green economic growth and development in the Nordic-Baltic region through data-driven innovation and a fair data economy for efficient sharing and re-use of data; and (3) Promote Nordic-Baltic leadership in the EU/EEA and globally in a sustainable and inclusive digital transformation of our societies.”⁴²³⁰

The Nordic and Baltic ministers for digitalization released another joint statement in November 2021, announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Norwegian inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them.⁴²³¹

The Nordic and Baltic ministers for digitalization issued a common statement in September 2022 on the importance of cooperation on digital security in the Nordic-Baltic region following the COVID-19 pandemic and the war in Ukraine. In their common statement, the ministers stressed that this “rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities.” The ministers declared that they “have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills. One important factor that helps ensure a strong level of digitalisation in the region is the trust citizens put in digital services from the public sector – be it at regional, national or local level. To keep up this high level of trust, we need to continue our efforts to make our digital public services human centric and accessible. [...] Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services.”⁴²³²

As part of its action plan for Vision 2030 (2021–2024), the Nordic Council of Ministers identified innovation, digital integration, the safe use of artificial intelligence, data development and open data, education and digitalization as key

Center for AI and Digital Policy

objectives.⁴²³³ The Nordic Council of Ministers also emphasizes the involvement of civil society in efforts relating to our vision for 2030 thanks to “a Nordic civil society network and public consultations.”⁴²³⁴ During the May 30–31, 2024 Nordic Meeting, Nordic Data Protection Authorities signed a joint declaration addressing current data protection issues and emphasized that national legislation must ensure responsible AI and a legal basis to process personal data. This signals that the Nordic DPAs will continue to strengthen their cooperation moving forward.⁴²³⁵

Public Participation

The Norwegian Ministry of Local Government and Modernization published the National Strategy for Artificial Intelligence on January 14th, 2020.⁴²³⁶ Throughout 2019, the Minister of Digitalization travelled around Norway to listen to suggestions from different communities to inform the national strategy. Additionally, a variety of businesses and government agencies provided comments on the content of the through written statements. Close to 50 statements were received by the Ministry. There were no major public participation opportunities in 2024. However, in July 2024, Datatilsynet and the Norwegian Technology Council conducted a public survey about views on AI.⁴²³⁷

Norway has worked to strengthen national funding for research and innovation in artificial intelligence, and to substantially increase their research collaborations. With the Norwegian Artificial Intelligence Research Consortium (NORA.ai), Norway has taken important steps to support the European ambition of increased cross-border co-operation in AI research.⁴²³⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Data Protection

The European Economic Area (EEA) Agreement is an international agreement which enables three European Free Trade Area (EFTA) States, including Norway, to participate in the EU Single Market. All relevant EU legislation in the field of the Single Market is integrated into the EEA Agreement so that it applies throughout the whole EEA. The GDPR was incorporated in the EEA Agreement by a 2018 Joint Committee Decision. The new Norwegian Personal Data Act (PDA) implements the GDPR and became effective as of July 2018.⁴²³⁹ Norway also updated several sector-specific regulations, such as in the healthcare sector, to ensure compliance with the GDPR.

Norway is also a member of the Council of Europe. It ratified the Convention 108 for the protection of individuals with regard to the processing of personal data; however, it has not ratified its modernized version (108+) yet.⁴²⁴⁰

The Norwegian Data Inspectorate (*Datatilsynet*) is the national supervisory authority for Norway. The Datatilsynet is in charge of enforcing the GDPR in Norway. The Datatilsynet is a member of the European Data Protection Board (EDPB), however without voting rights and without the right to be elected as chair and vice-chair, for GDPR-related matters.⁴²⁴¹

In June 2018, the Data Inspectorate released a report on AI and privacy. The report showed how imperative further knowledge about the privacy implications of artificial intelligence is, “not only in order to safeguard the right to privacy of the individual, but also to meet the requirements of society at large.”⁴²⁴² In this report, the Datatilsynet provides greater technical detail in describing artificial intelligence, including the black box, while also taking a closer look at four relevant AI challenges associated with the data protection principles enshrined in the GDPR: fairness and discrimination; purpose limitation; data minimization; and transparency and the right to information. A strong emphasis lays on bringing awareness to the ethical and privacy consequences of AI systems, as well as ensuring that the deployed systems respect privacy by design and meet the legislative requirements.⁴²⁴³

The Datatilsynet is a member of the Global Privacy Assembly (GPA) since 2002. It did not endorse the 2018 GPA Declaration on Ethics and Data Protection

in Artificial Intelligence⁴²⁴⁴ or the 2023 GPA Resolution on Generative AI.⁴²⁴⁵ However, it did co-sponsor the 2020 GPA Resolution on AI Accountability⁴²⁴⁶ and the 2022 GPA Resolution on Facial Recognition Technology.⁴²⁴⁷

The Datatilsynet has been very active in both enforcement and publication of guidelines on a wide range of significant data protection concerns, including CCTV surveillance and codes of conduct. The Norwegian data protection authority has made a list of processing activities that they believe are likely to pose a significant risk to data subjects' rights and as such will always necessitate a data protection impact assessment. These include: processing of biometric data for identification purposes on a large scale; collecting and combining personal data from third parties in order to decide whether the data subject shall be offered, continue to receive, or shall be denied a product, service or offer; monitoring employees' internet activity, electronic communication or camera surveillance for the purposes of employee monitoring; systematic monitoring, including camera surveillance, on a large scale, in areas accessible by the public⁴²⁴⁸

Following a data protection impact assessment of Facebook, the Data Inspectorate announced that it will no longer communicate via the social media network. Datatilsynet Director-General Bjorn Erik Thon noted, "We believe the risks to the users' rights and freedoms associated with the processing of personal data through a Page on Facebook are too high."⁴²⁴⁹ This is not the first time the Data Inspectorate opposed Facebook. Back to 2012, the Datatilsynet raised important concerns about Facebook's facial recognition tool. Bjorn Erik Thon

stated that “It’s a very powerful tool Facebook has and it’s not yet clear how it all really works,” and “They have pictures of hundreds of millions of people. What material Facebook has in its databases is something we need to discuss with them.”⁴²⁵⁰

In December 2021, the Datatilsynet issued its highest fine so far—65 million NOK (around 6.5 million Euros)—against Grindr for failing to comply with the consent requirements under the GDPR.⁴²⁵¹ Grindr appealed the fine and the Norwegian Data Protection Authority will assess the relevant appeal and consider whether there are grounds to rescind or alter the decision. By application of the Norwegian Public Administration Act, the Norwegian Consumer Council will also issue an opinion. If the decision is not rescinded/alterd, the case may be assessed by the Privacy Appeals Board.⁴²⁵²

Algorithmic Transparency

Although it has not yet ratified the Protocol amending the Convention 108 which provides for algorithmic transparency, Norway is subject to the PDA, implementing the GDPR. Norwegians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁴²⁵³

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁴²⁵⁴ specifically emphasizes requirements on transparency, accountability and effective remedies. The recommendation states that “The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs.”⁴²⁵⁵ The Recommendation also clarifies that “Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be

Center for AI and Digital Policy

affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”⁴²⁵⁶

Data Scraping

The Datatilsynet and international data protection and privacy counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy.⁴²⁵⁷ The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”⁴²⁵⁸ The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”⁴²⁵⁹

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

Facial Recognition

The Norwegian Consumer Council urged “the Government to take”⁴²⁶⁰ a more active role to ensure Norwegian consumers’ privacy and turn words into

action” in September 2022. Drawing on a report from the Privacy Commission report,⁴²⁶¹ the Consumer Council noted that the use of remote biometric identification, including facial recognition, puts great pressure on privacy. The Consumer asks the Government to support the proposal for a general ban on the use of facial recognition in public spaces.

Regulatory Sandbox

Pursuant to the national AI strategy, the Datatilsynet has created a regulatory sandbox for responsible AI. The goal is to promote the development of innovative artificial intelligence solutions that, from a data protection perspective, are both ethical and responsible. The sandbox provides free guidance to a handful of companies, of varying types and sizes, across different sectors, selected through regular calls for application issued by the Data Inspectorate, in exchange for full openness about the assessments that are made.⁴²⁶² In the fifth round of the regulatory sandbox, generative AI emerged as a common theme for projects in the sandbox, offering potential for valuable insights across the projects.⁴²⁶³

As illustrated in the proposed Norwegian state budget for 2023, the regulatory sandbox is now to be financed as a permanent initiative, not as a temporary pilot project as it was the previous two years.⁴²⁶⁴

Environmental Impact of AI

The Norwegian Ministry of Research and Education has formal collaboration agreements with the US Department of Energy to address AI challenges in climate, energy, and health through joint research projects, student exchanges, and a commitment to ethical AI.⁴²⁶⁵

Lethal Autonomous Weapons

Norway has regularly participated in the Convention on Certain Conventional Weapons meetings.⁴²⁶⁶ The ethics committee of the Norwegian Government Pension Fund Global⁴²⁶⁷ recommended in June 2020 that the Fund add lethal autonomous weapons systems to the exclusion list of weapons that it will not invest in.⁴²⁶⁸ Norway's parliament voted in favor of a proposal to add new criteria to the fund's policy, following endorsement by the Ministry of Finance in 2021. The proposal was aimed at breaking ties the fund may have with companies that sell weapons to parties that use them to violate international humanitarian law.⁴²⁶⁹

Norway's Government Pension Fund Global (GPF) strengthened its ethical guidelines in 2023 by excluding companies linked to military sales that contravene international humanitarian law. This exclusion policy aims to prevent investments in companies that sell weapons used in ways that violate ethical and humanitarian standards.⁴²⁷⁰

In 2022, Norway and 69 other countries signed a UN statement calling for humans to stay in control of AI weapons. The countries called for clear limits and human oversight for military decisions.⁴²⁷¹ The statement details a two-tier approach where States should commit to (1) outlaw fully autonomous lethal weapons systems operating completely outside human control and a responsible

Center for AI and Digital Policy

chain of command, and (2) regulate other lethal weapons systems featuring autonomy in order to ensure compliance with the rules and principles of international humanitarian law by preserving human responsibility and accountability through appropriate human control and risk mitigation measures.

Norway reiterated this stance in 2024 by backing new global rules for AI weapons. The proposal would ban fully autonomous weapons and require human control over other military AI systems.⁴²⁷²

Norway endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain at the REAIM 2023 summit hosted by the Netherlands.⁴²⁷³ States stressed that autonomous weapons should be “employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” Norway also participated in an endorsed the outcomes statement for the REAIM 2024 summit. The Blueprint for Action operationalized the principles for the 2023 REAIM call into a series of action steps for countries to collaborate on a legal instrument on AI in the military.⁴²⁷⁴

Human Rights

Norway is a signatory to many international human rights treaties and conventions, among which the Universal Declaration of Human Rights and the Council of Europe’s European Convention on Human Rights.⁴²⁷⁵ However, it has not yet ratified the modernized version of the Council of Europe Convention 108 for the protection of individuals with regard to the processing of personal data.⁴²⁷⁶

Freedom House ranks Norway among the world’s most democratic and “Free” countries in the 2024 Freedom in the World report with a score of 98 out of 100 for its strong civil rights and transparent government.⁴²⁷⁷

Diversity in AI is valued in Norway through prioritizing the development of language technology systems that support communications in Norwegian,

Sámi, and other dialects. The aim is to protect the indigenous rights of the Sámi people, a Finno-Ugric-speaking people inhabiting the region of Sápmi that Norway is part of. This focus on the Sámi language is also included in the Norwegian National AI Strategy.

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers clarified that their commitment to the Convention for the Protection of Human Rights and Fundamental Freedoms requires that “member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”⁴²⁷⁸

OECD / G20 AI Principles

Norway is a member of the OECD and endorsed the OECD AI Principles in May 2019.⁴²⁷⁹ The country reaffirmed this commitment in 2024 by aligning its AI initiatives with updated OECD guidelines, which now emphasize risk management, data privacy, and AI accountability.⁴²⁸⁰ In terms of ethical principles, the Norwegian government emphasizes fairness, accountability, transparency, and trustworthiness in AI development with a focus on data privacy and integrity.⁴²⁸¹

Norway supports the OECD AI principles through initiatives such as norge.no, a public platform providing a centralized guide for accessing public services.⁴²⁸² The site includes open data from previous versions of the site via the National Data Catalog, which offers an overview of datasets, concepts, APIs, and models accessible to both public and private sectors.⁴²⁸³ The project was established by the Brønnøysund Register Centre and the Norwegian Digitalization Agency.

NORA.ai, Norway's national AI research network, maps all AI activities in Norway through its AI Directory. Its startup program helps research-based AI companies join a shared European network with France, Germany, and Sweden.⁴²⁸⁴

In September 2022, Norwegian Research Council announced a 10-year financial support for Integreat, a purely AI focused Center of Excellence (CoE) that will offer groundbreaking research, and develop theories, methods, models, and algorithms from a sociological perspective that integrate general and domain-specific knowledge with data, laying the foundations of the next generation of machine learning. This initiative supports OECD's principle of shaping an enabling policy environment for AI and corresponds to the policy goal identified in the Norway's AI strategy to strengthen research in AI and enhance the innovation capacity in AI in both the private and public sector.⁴²⁸⁵

Council of Europe AI Treaty

Norway contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024.⁴²⁸⁶ Norway signed the Council of Europe AI Treaty, the first international legally binding agreement on AI, on September 5, 2024. Norway pledged to apply the treaty to cover AI's lifecycle and risks for both public and private sectors.⁴²⁸⁷

UNESCO Recommendation on AI Ethics

Norway has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.⁴²⁸⁸ Norway has not initiated the UNESCO Readiness Assessment Methodology (RAM).⁴²⁸⁹

Evaluation

Norway launched its national AI strategy in 2020, aiming to foster responsible and transparent AI aligned with ethical principles. The strategy includes the principles of fairness, transparency, accountability, and a commitment to protect civil rights in digital spaces. Norway endorsed the OECD AI Principles in 2019 and integrates them into its AI policy framework, supporting transparency, accountability, and human rights protections. Norway's oversight framework includes the Data Inspectorate (*Datatilsynet*) for data protection, the Consumer Council for consumer rights in digital platforms, and the Privacy Commission, which recently highlighted risks related to biometric and facial recognition technologies. As an EFTA state in the European Economic Area (EEA), Norway will be required to implement the EU AI Act by 2026. This will necessitate allocating resources for oversight to enforce the Act's provisions on high-risk AI and transparency. The Norwegian Consumer Council has voiced concerns over the use of facial recognition in public spaces, urging the government to consider regulatory measures to protect privacy rights, following reports by the Privacy Commission on risks related to biometric technologies.

Although Norway ranks high in the protection of civil liberties, Norway has yet to ratify the updated Council of Europe Convention 108+, which would enhance data protection and algorithmic transparency rights, strengthening protections for digital privacy. Following Norway's endorsement of the UNESCO Recommendation on the Ethics of AI, the government has engaged with UNESCO's Global AI Ethics Observatory, which provides frameworks for implementing ethical AI at national levels. Norway has also signed the Council of Europe AI Treaty and specified that it will apply to private as well as public AI uses. However, further action will be required to translate these recommendations and pledges into practice.

Pakistan

In 2024, the cabinet introduced the Regulation of Artificial Intelligence Act to the Senate, calling for a National AI Commission. Biometric surveillance and restrictions on expression threaten to deepen in Punjab province with the deployment of an AI-powered facial recognition system and the introduction of a Cybercrime Control Act to work alongside the national Prevention of Electronic Crimes Act (PECA).

National AI Strategy

The Federal Minister of Information Technology & Telecommunication (MoITT) Syed Aminul Haque announced government plans in December 2021 to

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

introduce a national AI policy.⁴²⁹⁰ A draft was finally released to the public in May 2023.⁴²⁹¹ The policy defines the purpose “to create a broad-based awareness of the use of AI-based platforms while keeping privacy at the forefront, upskilling human capital on AI and allied technologies, guiding investment in AI research and development, ensuring ethical and responsible use of AI, and provide a framework for addressing the challenges and risks associated with the socio-economic outfit of the country.”⁴²⁹²

No noticeable progress has been made on the substantial groundwork already laid towards AI and Digital Policy in Pakistan due to a series of crises related to political instability from April 2022 to March 2024. The MoITT webpage provides no details on the current state of the draft policy but provides an email for those who still may wish to contribute with comments.⁴²⁹³ However, media sources indicate that consultations should resume soon.⁴²⁹⁴

The concept of “Digital Pakistan” was first introduced at the state level after a record year of revenues from software exports in 2016-2017⁴²⁹⁵. Official language focused on getting more citizens digitally connected, literate and brought under the government’s data collection umbrella. It also mentioned the need for both digital skills training and the support of entrepreneurship in this area.⁴²⁹⁶

A year later, the MoITT issued the 2018 Digital Pakistan Policy. This policy includes the need to develop necessary policy frameworks, laws, and rules to enable the creation of a sustainable IT environment, including the enactment of a data protection and privacy law.⁴²⁹⁷ In December 2019, former Prime Minister Imran Khan launched the Digital Pakistan Vision. This initiative set out Pakistan’s

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

digital ambition and was designed for the government and the private sector to work towards a digitally progressive and inclusive Pakistan.⁴²⁹⁸

The five strategic pillars that upheld the Vision were access and connectivity, digital infrastructure, e-government, digital skill and literacy, and innovation and entrepreneurship.⁴²⁹⁹ The vision focused heavily on human-centered development. Official language around the launch of the vision referred to the development of the inherent potential of the demographic youth bulge, and their existing tech-savviness and innovative mindset. It lauded the potential of widespread access and connectivity to transform the lives of all Pakistanis across all domains and promised to provide investment opportunities from diaspora communities to support in the human and social development of the country. There was however no reference made to human-centered AI.

In 2021, the MoITT announced a new Digital Pakistan Policy⁴³⁰⁰ with the aim to “improve citizens’ quality of life and economic well-being by ensuring the availability of modern, affordable, and reliable digital services.”⁴³⁰¹ The release of the Digital Pakistan Policy was initially planned for August 2021 but has been delayed.⁴³⁰² Since then, many changes have taken place in emerging technologies, making it necessary to cover them in a New Digital Pakistan Policy. The Ministry of IT and Telecom began working on Digital Pakistan Policy 2022 keeping in view current emerging technologies and Digital Pakistan Policy 2018, National Broadband Policy 2021, and National Freelancing Facilitation Policy.⁴³⁰³

In June 2024, the federal cabinet approved the Digital Nation Pakistan Act 2024 to establish the National Digital Commission and Pakistan Digital.⁴³⁰⁴ The Digital Pakistan Policy seeks to “serve as the foundation for the construction of a

holistic digital ecosystem with advanced concepts and components for the rapid delivery of next-generation digital services, applications and content. It will serve as an aggregator of demand for innovative digital services and as a supplier of data for value-added services and applications.⁴³⁰⁵

A few other initiatives also aim for Pakistan to bridge the digital divide. In 2018, the Presidential Initiative for AI and Computing (PIAIC) sought to reshape Pakistan by revolutionizing education, research, and business by adopting the latest technologies. The PIAIC envisioned Pakistan becoming a global hub for AI, data science, cloud-native computing, edge computing, Blockchain, augmented reality, and the internet-of-things.⁴³⁰⁶

The National Centre of Artificial Intelligence was created in 2018 “to grow the AI industry, aligning with international trends, and solving Pakistan’s problems to boost the knowledge-based economy.”⁴³⁰⁷ Since 2019, the annual Pakistan Artificial Intelligence Summit⁴³⁰⁸ brings academic, industry and government representatives together to discuss the most pressing issues confronting artificial intelligence and ICT in general in Pakistan.

Pakistan was one of the 11 countries which signed the Riyadh AI Call for Action Declaration (RAICA) launched during the 2022 Global AI Summit.⁴³⁰⁹ This declaration was signed by all members of the Digital Cooperation Organization (DCO) and is a commitment to identify and address present, emerging, and future humanitarian issues in the field of AI. The declaration highlights seven key pillars through which AI can be used as a tool to benefit lives around the world – bridging the digital divide, empowering underprivileged communities, promoting digital development, ensuring fairness and non-discrimination, driving innovation in AI, combatting climate change in AI, and engaging in international collaboration and cooperation in AI. With a strong human-centered AI, focus, the Declaration refers repeatedly to the promise and potential of AI to transform societies, economies, and humanity's most pressing global issues, including climate change. The Declaration calls explicitly for the creation, adoption and promotion of comprehensive AI ethical guidelines and appeals to signatory countries to work with various stakeholders, from

humanitarian organizations to innovative companies, to employ AI to advance universal human rights.⁴³¹⁰

In October 2022, the Government of Pakistan announced the China-Pakistan Digital Corridor, with a component of AI collaboration, building on the Sino-Pak strategic relationship through the China-Pakistan Economic Corridor.⁴³¹¹ The former Additional Director-General of the Federal Investigation Agency and founder of Digital Pakistan expressed that Pakistan must collaborate with China to develop AI capabilities, naming cybersecurity as a primary collaborative area. The digital corridor is intended to use AI to improve areas like food security, agricultural development, and green development.

A joint statement from 2024⁴³¹² advances the collaboration on AI as the countries agree to “strengthen policy coordination in the field of artificial intelligence, deepen relevant practical cooperation, and jointly seek to promote the development of AI technology.” They also agree to uphold the “principle of attaching equal importance to development and security in AI systems” and express a commitment to build an “open, fair and effective AI governance mechanism through dialogue, consultation and equal cooperation.”

Public Participation

In keeping with a culture of regional and neighborhood-based political decision-making, the government of Pakistan does not offer centralized public participation opportunities to citizens per se. However, in an unprecedented first, in 2021 the Ministry of Information Technology and Telecommunications launched an online survey form that provided citizens the opportunity to weigh in on the Digital Pakistan Policy. The Ministry then issued a consultation draft of the 2021 Personal Data Protection Bill.⁴³¹³ Accompanying the draft, the Ministry conducted a road show in the large Pakistani cities and issued press statements to publicize the drafting of the Policy and the accompanying bill.⁴³¹⁴

By October 2024, the website of the Ministry presented a list of draft policies under review and provided an email address for receiving feedback in relation to four of them: the Draft National Freelancing Facilitation Policy, the Draft Telecom Infrastructure Sharing Framework”, the Draft Framework for Frequency Spectrum Re-Farming, in addition to the Draft AI Policy already mentioned above.⁴³¹⁵ The Ministry also provides general contact information for MoITT officials, including telephone numbers and email addresses.⁴³¹⁶

In addition, since 2018, citizens have had access to the Prime Minister’s Performance Delivery Unit (PDU), an online platform offering direct connection between the Government and citizens. One of PDU’s initiatives is the Citizen’s Portal, an app where citizens can submit and track complaints and make requests directly to the relevant government body. To date, the portal—which is also available as a mobile phone app—registered over 4.9 million complaints, of which over 4.8 million have been resolved. The portal has a participation rate of over 4 million Pakistani citizens. Further, success stories and testimonies are published on the website and promoted through social media. The portal continues to serve as a direct conduit for information flowing between the government and Pakistani citizens.

Language is a primary obstacle regarding the accessibility of most of these tools. While government websites are bilingual, policy documents within the websites are published exclusively in English, with no translation available. As more than 50% of Pakistan’s population cannot read or write English, this serves as a major impediment to meaningful public participation from all levels of society.⁴³¹⁷

Meaningful connectivity and access to the internet also represent challenges to public participation, in particular access to online participatory tools and mechanisms. In 2024, the internet penetration in Pakistan is estimated to amount to 45.90%.⁴³¹⁸ The fixed broadband subscriptions per 100 persons in Pakistan stand at 1.4 and is phenomenally lower than the 30 subscriptions per 100 persons in high-income countries and lower than 4.4 in the lower-middle-income

countries.⁴³¹⁹ Pakistan has also experienced a number of internet disruptions in 2024, including: mobile network and social media disruptions; targeted shutdowns; a four-day blackout after the arrest of former Prime Minister Imran Khan in 2023; and blocked access to social media applications on more than six occasions over the past year.⁴³²⁰

Data Protection

The Pakistan Personal Data Protection Bill⁴³²¹ and the E-Safety Authority Bill 2023⁴³²² were approved by the cabinet in July 2023. The MoITT stated that the objective of the new legislation is to protect individuals and business communities' data and to provide them with a safe environment.⁴³²³

The PDPB governs the collection, processing, use, and disclosure of personal data and sanctions against violations of data subjects' rights.⁴³²⁴ The PDPB provides for rights regarding automated processing, including profiling: A data subject shall have the right not to be subject to a decision based solely on automated processing, including profiling.⁴³²⁵ The PDPB also provides for data subject rights with regard to the processing of personal data in clause 15 in the following words: "a data controller shall not process any sensitive and critical personal data of a data subject except under the following conditions: a) the data subject has given his explicit consent to the processing of the personal data

provided that this consent is not restricted by any other applicable law.”⁴³²⁶ However, immediately after this text, the draft mentions a list of caveats including legal compulsions, employment law, inability of data subject to provide consent, medical purposes, even “in order to protect the vital interests of the data subject or another person.” These exceptions provide great leeway in the interpretation of the proposed rules and raise concerns as to their potential interpretation.

The PDPB also provides for the establishment of a National Commission for Personal Data Protection of Pakistan within six months after the entry into force of the legislation. The authority is purported to have the same independent status as the Civil Courts: “The Authority shall be competent to decide complaints and pass any order. To decide complaints the Authority shall be deemed to be Civil Court and shall have the same powers as are vested in the Civil Court.”⁴³²⁷ However, due to government and especially military interference and undue pressure on the existing judiciary, concerns arise about the potential lack of independence of this authority, once it does come into existence.

As of November 2024, the PDPB has not passed into law. Hence, the Commission has not yet been formed. There is also no indication, as a matter of public record, when and whether the law will be published in the Official Gazette of Pakistan.⁴³²⁸

The Federal Cabinet also approved the Cloud First Policy and the Social Media Rules in 2022. The Cloud First Policy provides a governance instrument toward cloud infrastructure and internal and cross-border data flows.⁴³²⁹ Its purpose is to facilitate cloud adoption and to ease the provision of public services. The Policy references the need for cloud service providers to safeguard data privacy, though this is not explicitly listed as one of its twelve objectives.⁴³³⁰ Instead, the Policy states the following: “CSP (cloud service providers) implement technical and administrative controls to protect data—both stored and in transit. Furthermore, formal engagements with CSP generally define data protection standards and establish SLA (service level agreements) that outline security and

privacy measures. These measures including but not limited to adequate technical controls, such as end-to-end encryption or tokenization as well as data loss prevention tools.” The policy also provides data classification guidelines for public sector data, ranging from “open,” “public,” “restricted,” “sensitive/confidential,” to “secret.” The policy defines sensitive/confidential data as “Information not intended to be published, which shall be accessed only by certain people having proper authorization and which justifies moderate protective measures,” including such information as biometrics, addresses, and drafts of laws and regulations not yet in the public domain.⁴³³¹

Article 14 of Pakistan’s 1973 Constitution protects the right to privacy in the home. This right has been interpreted to extend to digital communications as well. However, more recent laws allow for this right to be circumvented and called into question. The 2016 Prevention of Electronic Crimes Act (PECA) includes various data protection- and privacy-related provisions to reduce cyber blackmailing, defamation, and bringing disrepute to natural persons with the use of photoshopped images.

Concerns arise about PECA provisions that grant government agencies access to citizen’s private data and restrict citizens’ access to their government data. Section 31, for example, allows an authorized agent to require a person to hand over data without producing a court warrant if reasonably required for a criminal investigation. Other provisions are intended to grant the Pakistan Telecommunications Authority (PTA) and other law enforcement agencies access to the private data of citizens, along with restricting citizens from gaining access to government data. Section 32 of the PECA requires internet service providers to retain specified traffic data for a minimum of one year and subject to the PTA’s demands outlined in Section 31. Section 42 outlined that powers are delegated to the government when it comes to sharing information with foreign entities.⁴³³²

In February 2022, PECA’s Ordinance (a series of proposed amendments) passed.⁴³³³ One of the passed amendments seeks to make the online defamation of authorities, including the military and judiciary, a criminal offense with harsh

⁴³³¹ Ministry of Information Technology & Telecommunication, *Pakistan Cloud First Policy* (Feb. 2022), <https://moitt.gov.pk/SiteImage/Misc/files/Pakistan%20Cloud%20First%20Policy-Final-25-02-2022.pdf>

penalties. Both Human Rights Watch⁴³³⁴ and Amnesty International⁴³³⁵ termed it as the latest in a concerted campaign to restrict freedom of expression and stifle dissent. While the PECA already contained broad provisions around the criminalization of the defamation of natural persons, the amendment expanded those provisions to include the government, military, and judiciary redefining what a “person” is considered. Other passed amendments include making defamation a nonbailable offense and increasing its prison term to five years, expanding the definition of those who can initiate criminal proceedings for defamation, among other passed amendments. The amendment made no mention of AI or its use in online or other forms of disinformation.

On February 23, 2022, the Islamabad High Court restrained the Federal Investigation Agency (FIA)—the primary investigative body for PECA—from making any arrests under the newly passed Ordinance.⁴³³⁶ Alongside this investigative restraint, the major opposition parties moved resolutions in the National Assembly to repeal the Ordinance⁴³³⁷ and the National Commission for Human Rights (NCHR) issued a statement⁴³³⁸ demanding the Ordinance’s immediate repeal, expressing serious reservations on the promulgation of the Ordinance, stating it breached the right to freedom of speech and expression enshrined under Article 19 of the Constitution of Pakistan⁴³³⁹ and protected under various international agreements to which Pakistan is a signatory, and violates the democratic process. In April 2022, PECA’s Ordinance was struck down by the Islamabad High Court,⁴³⁴⁰ a verdict lauded by the media⁴³⁴¹ and human rights organizations⁴³⁴² for upholding the constitutional right to freedom of speech.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Still, on August 20, 2024, the Punjab Provincial Government issued a draft Punjab Cybercrime Control Act 2024.⁴³⁴³ This proposed legislation incorporates comprehensive provisions for data protection and privacy and aligns with the 2016 PECA, while introducing stricter penalties of up to 15 years for cybercrime offenses.

In 2023, Pakistan issued the Pakistan Electronic Media Regulatory Authority (PEMRA) Ordinance, the Official Secrets Amendment Act, 2023, and the E-Safety Authority Bill 2023.

The PEMRA amendment lays out the procedures to register and monitor ratings of TV channels as well as elaborating on the definitions of disinformation and misinformation. It was first presented in the National Assembly on July 20, 2023, passed without deliberation or comment on August 2, 2023, and signed into law on August 15, 2023.⁴³⁴⁴ This law and the way it was adopted has garnered criticism and protest from many parties, including media, civil society, and human rights bodies.

Only five days after the promulgation of the PEMRA Ordinance, the Official Secrets Amendment Act, 2023 was signed into law.⁴³⁴⁵ The President denied having signed this bill into law. This law makes a person guilty of an offense if they “intentionally creates a problem of public order or acts against the state.” In addition, if a person “attacks or damages a prohibited place and the purpose of this is to directly or indirectly benefit the enemy,” this is also punishable.

The Social Media Rules were adopted in October 2020.⁴³⁴⁶ The spirit of these rules bears proximity to the 2016 Prevention of Electronic Crimes Act’s (PECA) Section 20 on the defamation of public institutions.⁴³⁴⁷ The rules compel social media companies to establish offices within the country, localizing their database servers. They specify a new position of National Coordinator to liaise with these companies and seem to indicate the aspiration of greater control over Pakistani users. AI was not featured in these rules explicitly, though online

disinformation was. They were updated and released again a year later.⁴³⁴⁸ Twitter came under intense state scrutiny when an unhappy public used the platform to express their discontent with the government, which led to further restrictions.⁴³⁴⁹ Twitter remains banned in Pakistan while other companies such as YouTube⁴³⁵⁰ and Signal⁴³⁵¹ remain hard to access if not banned.

Algorithmic Transparency

Algorithmic transparency is not yet established as a legal right in Pakistan. The Personal Data Protection Bill (PDPB) provides for the “right not to be subject to a decision based solely on automated processing, including profiling”⁴³⁵² without any further details. The definition of processing in the bill is “any operation or set of operations which is performed on personal data or on sets of personal data, whether or not by automated means, such as collection, recording, organization, structuring, storage, adaptation or alteration, retrieval, consultation, use, disclosure by transmission, dissemination or otherwise making available, alignment or combination, restriction, erasure or destruction.” Anonymized data means “personal data which has undergone the irreversible process of transforming or converting personal data to a form in which a data subject cannot be identified.” Furthermore, the Bill defines vital interests as “matters relating to life, fundamental rights, security of data subject to humanitarian emergencies, in particular in situations of natural and man-made disasters, and monitoring and management of epidemics.”⁴³⁵³

Smart Surveillance

Two Acts contain concerning provisions regarding surveillance in Pakistan. The 1996 Act providing for the reorganization of the Pakistan Telecommunications Authority (PTA) permits the government to authorize any person(s) to intercept calls and messages, or to trace calls through any telecommunication system in the interest of national security or in the

⁴³⁵³ *Ibid*, Section 2(oo)

apprehension of a person in relation to any offense.⁴³⁵⁴ Under the 2013 Investigation for Fair Trial Act, a judge has the power to issue a warrant of surveillance or interception, upon the fulfillment of certain conditions.⁴³⁵⁵

Aside from statutory provisions, some Pakistani software exhibits surveillance state aspects. Hotel Eye is software that combines surveillance technologies and government databases to track hotels and their customers. The software also collects citizens' data without their consent. Hotel Eye is now mandatory for hotel and private rest house operators throughout Pakistan.⁴³⁵⁶ Various provinces in Pakistan including Punjab, Balochistan,⁴³⁵⁷ and Gilgit-Baltistan have reported on the deployment of Hotel Eye for purposes of crime prevention, lauding its efficacy in helping trace, track, and surveil suspected criminals.⁴³⁵⁸ This widespread use raises concerns regarding surveillance of private citizens, in particular with regard to gender interactions and in view of discriminatory laws against women still in effect in the country.⁴³⁵⁹

In the case of the Balochistan province, technical, operational, and training support on the use of Hotel Eye (among other specialized software) was provided very recently by the United Nations Office on Drugs and Crime⁴³⁶⁰ under the European Union-funded Rule of Law Roadmap (RoLR) Balochistan project.⁴³⁶¹

The Government of Pakistan deployed several tech-related measures during COVID-19 that threaten the right to privacy, such as a track-and-trace system originally developed to track-and-trace possible terrorist activities. The system is opaque and lacks judicial oversight and reportedly combines personal

call-monitoring mechanisms and geofence tracking to identify when a person leaves a given geographic location.⁴³⁶²

Practices of surveillance in public space and use of facial recognition are of concern. A report by Privacy International identified such practices in Pakistan during the COVID-19 pandemic.⁴³⁶³ Privacy International found that the government of Pakistan retrofitted systems, originally designed for counter-terrorism purposes by the Inter-Services Intelligence directorate, for COVID-19 surveillance. The absence of explanation of how the system operates, raised grave concerns among digital rights privacy activists, about tracking and tracing, monitoring and tracking suspected patients through VPN⁴³⁶⁴.

One of China's Belt and Road Initiative's flagship project is the \$63 billion USD China-Pakistan Economic Corridor. China is supporting numerous Safe City projects to allegedly improve security within Pakistan's major urban centers by providing low-interest loans and urging the involvement of Chinese state-owned enterprises. Safe City projects have effectively installed much of the Xinjiang digital security system across numerous Pakistani cities, including Islamabad, Peshawar, Lahore, Quetta, Karachi, and Gwadar. An example is Lahore's Huawei-built Safe City which uses approximately 8000 high-grade CCTV cameras, 4G wireless connectivity, facial recognition, automated vehicle number plate recognition, multiple tracking options, integrated communication platforms, geographic information systems, and specialized apps for security personnel use. These systems are controlled through a large 10,000-square-meter integrated command, control, and communication center that uses AI, big data, and cloud computing technology.⁴³⁶⁵

By January 2023, the National Database Registration Authority (NADRA), a government body reporting directly to the Ministry of Interior Affairs and responsible for all identification documents, shared data and images of 4,000 wanted people to a Safe City Islamabad for biometric matching, to lead

to their arrest.⁴³⁶⁶ According to the report, Safe City Islamabad placed a request to NADRA in October 2021 for data on people suspected for serious crimes, including a category of “proclaimed offenders” (referring to individuals who avoided court warrants). By mid-January, Safe City Islamabad announced the arrest of three people and 887 alerts arising from facial recognition across the 106 cameras installed in the capital city.⁴³⁶⁷ The Safe City Islamabad project continues to be featured in the country’s annual budgetary appropriations for its Public Sector Development Program 2022–2023.⁴³⁶⁸

In January 2023, the NADRA announced the use of an AI-based solution to verify fingerprints/records of senior citizens.⁴³⁶⁹ The solution aims to supplement the physical, biometric verification of fingerprints.⁴³⁷⁰ The project was allocated funding in the Public Sector Development Program 2020–2021⁴³⁷¹ and is being developed under the supervision of the National Center of AI at the National University of Science & Technology.⁴³⁷²

On September 29, 2024, the Punjab Safe City project,⁴³⁷³ a joint project between Punjab Police and Punjab Information Technology Board (PITB), deployed the AI-powered Face Trace System (FTS) to increase the effectiveness of biometric criminal identification and detention.

Center for AI and Digital Policy

EdTech and Children Tracking

Pakistan is one of 49 countries subject of a 2022 study by Human Rights Watch about the use of government-endorsed Ed Tech tools for online learning during the COVID-19 pandemic.⁴³⁷⁴ Based on technical and policy analysis of 163 EdTech products, Human Rights Watch found that governments' endorsements of the majority of these online learning platforms put at risk or directly violated children's rights. In the case of Pakistan, the report found that the Muse App developed for K-5 students in Pakistan and used by more than 120,000 students across 1,000 schools by April 2020 targeted children with behavioral advertising. The report also found that the Pakistani government endorsed Apps with the capability to collect the Android Advertising ID and identify, tag, and track billions of users, including children (Muse App, Taleemabad App); collected the WiFi MAC address of children (Muse App); collected aggregate numbers used to trace mobile devices (Taleemabad App); engaged in ID bridging (to bypass privacy controls) (Muse and Taleemabad); and collected WI-Fi SSID, which can be used to infer information about a child's habits and relationships (Taleemabad). Other websites and Apps shared their users' data to Facebook Pixel, which could track every moment of interaction across their platforms (Khan Academy, Learn Smart Pakistan, Sabaq Foundation).⁴³⁷⁵

Use of AI by Courts

In April 2023, a judge in a Pakistani court used GPT-4,⁴³⁷⁶ Open AI's chatbot, to help render a judgment in a case.⁴³⁷⁷ This decision sparked widespread debate regarding AI's capabilities and the possibility of it replacing legal professionals, including judges. This seems to have been a one-off incident, though, and has not led to a formalization of the use of AI by courts in Pakistan.

Already in 2022, an academic study reported the planned use of artificial intelligence to aid judicial decision-making.⁴³⁷⁸ Plans to establish this project by the Deep Learning Lab of the National Centers for AI for this purpose were

reported on in 2020.⁴³⁷⁹ However, no further detail is available about this project.⁴³⁸⁰

Lethal Autonomous Weapons

Pakistan was one of the first nations to call for a ban on lethal autonomous weapons systems. Since 2013, Pakistan and 30 other countries have called for a ban on fully autonomous weapon systems, which will prohibit weapons systems that lack human control.⁴³⁸¹ The Human Rights Council of Pakistan argued that lethal autonomous weapons systems raise complex moral, ethical, and legal dilemmas. Pakistan delivered a statement on behalf of the Organization of the Islamic Conference, representing more than 50 states, alerting about the negative impact of removing human control from the use of force, as this “fundamentally changes the nature of war” and raises the potential for an “accountability gap.”⁴³⁸² Pakistan has presented multiple calls for a new international ban treaty of LAWS and denounced them as “illegal, unethical, inhumane, and unaccountable as well as destabilizing for international peace and security.”⁴³⁸³

Despite active participation in every meeting of the Convention on Certain Conventional Weapons from 2014–2019,⁴³⁸⁴ Pakistan has not acceded to the Convention. On October 2023, the Ministry of Foreign Affairs launched an official webpage to state Pakistan’s Positions & Policies on Arms Control, Non-Proliferation & Disarmament Related Issues. The ministry reaffirmed the country’s commitment to calling for a legally binding instrument regulating the use of Lethal Autonomous Weapons (LAWS) and denounced the use of trans-border unauthorized armed drones outside of international armed conflict.⁴³⁸⁵

Human Rights

Freedom House’s 2024 annual report rates Pakistan as “Partly Free” with a score of 35/100. The report points out that, despite the competitive multiparty

political system in the country, Pakistan's military exerts substantial influence over security and other policy issues, intimidation of media outlets, and use of indiscriminate or extralegal use of force to manage religious militancy and attacks on religious minorities and opponents.⁴³⁸⁶ Relations between military and civilian leaders have grown more contentious in recent years.

Pakistan is rated "Not Free" in Freedom House's 2024 report on global internet freedom.⁴³⁸⁷ Pakistan frequently blocks content critical of Islam or the military as well as pornography or nudity websites, and political and social content. There are also allegations that the Pakistani government uses censorship equipment to block and regulate its citizens' internet access.⁴³⁸⁸ According to another Freedom House report, digital controls tightened even further around the February elections. Mobile phone services and access to social media platforms were suspended nationwide on the day of general elections.⁴³⁸⁹ In addition, the report claims: "People are frequently prosecuted for their online activities, often receiving harsh sentences," including the death penalty in some cases.

Pakistan is signatory of several human rights conventions.⁴³⁹⁰ Pakistan is one of the original signatories of the Universal Declaration of Human Rights and signed the International Covenant on Civil and Political Rights (ICCPR) in 2008, which also upholds the right to privacy. In 1989, Pakistan adopted the Convention on the Rights of the Child, which include the right to privacy. In 1990, Pakistan signed the Cairo Declaration on Human Rights in Islam.⁴³⁹¹ In 2004, the country signed the International Covenant on Economic, Social and Cultural Rights (ICESR).⁴³⁹²

The UN Office of the High Commissioner for Human Rights, in its 2022 Universal Periodic Review of Pakistan,⁴³⁹³ made extensive recommendations⁴³⁹⁴ regarding the protection and promotion of human rights in Pakistan. These include recommendations on civil and political rights, liberty and security of the person, sexual and gender-based violence, freedom of thought, conscience and religion, and freedom from persecution for those criticizing state institutions Pakistan submitted to the OHCHR statements to committees on racial discrimination, human rights, rights of the Child, and committees against torture. The OHCHR issued 18 recommendations for the Government of Pakistan, concluding on the need to take administrative and legislative measures to improve the state of human rights in the country, to be integrated systematically in national implementation and monitoring plans.⁴³⁹⁵

OECD / G20 AI Principles

Pakistan is not a member of the OECD and has not endorsed the OECD AI principles as a non-member.⁴³⁹⁶ Pakistan does not submit reports to the OECD AI Policy Observatory in relation to policies, strategies, or activities associated with AI.⁴³⁹⁷

Council of Europe AI Treaty

Pakistan did not participate in negotiations for the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law⁴³⁹⁸ and has not signed this first legally binding AI treaty.⁴³⁹⁹

UNESCO Recommendation on AI Ethics

Pakistan is a UNESCO member since 1949 and therefore one of the 193 countries that endorsed the UNESCO Recommendation on the Ethics of AI.⁴⁴⁰⁰ Pakistan was part of the Member States providing input on the first Draft of the Recommendation.⁴⁴⁰¹ There is no evidence yet of measures (to be) adopted for the implementation of the Recommendation.

Evaluation

Pakistan is still in the early days of taking concrete measures to regulate AI. Pakistan's endorsement of the 2021 UNESCO Recommendation on the Ethics of AI and the 2022 Riyadh AI Call for Action Declaration on ethics of AI gives the country an opportunity to adopt a human-centered approach to AI. The Personal Data Protection Bill is also a positive step towards protecting data subjects' rights, although the right to algorithmic transparency is not provided. Pakistan's Digital Nation Pakistan Act approved in 2024 further signals the country's movement in a positive direction, as it establishes a national digital authority, and sets the tone for the country's commitment to developing AI policy and regulation. The Digital Nation Pakistan Act furthers the ongoing work towards refining and adopting the Digital Pakistan Policy, which is currently in the draft phase.

However, the widespread use of AI technology for surveillance purposes, coupled with political instability and endemic problems of discrimination against women, minorities and disadvantaged groups, are serious causes for concern. With the country benefitting from burgeoning and tech-savvy young, predominantly urban and rapidly urbanizing population, strengthening civic participation, promoting democratic values, facilitating the development of literacy (including digital literacy), and enabling digital access could go a long way in fostering the adoption of ethical, trustworthy, and human-centric AI and digital policies.⁴⁴⁰²

Peru

In 2024, Peru engaged industry stakeholders in a consultation for proposals to improve the AI ecosystem as part of efforts to complete the UNESCO Readiness Assessment Methodology (RAM). Peru reiterated its support for international

legal instruments to regulate autonomous weapons systems at the UN and the Vienna Conference. Peru also participated in the negotiations for the Council of Europe international AI treaty, although the country has not yet signed.

National AI Strategy

In 2021, the Government and the Digital Transformation Secretariat of the Presidency of the Council of Ministers, issued Peru's draft National Artificial Intelligence Strategy (ENIA) for the period of 2021–2026. As a leader in research, development and deployment of AI in Latin America, Peru's vision is to accelerate national development while promoting digital inclusion and ensuring the reduction of social gaps. ENIA aims to foster the necessary conditions to take advantage of the opportunities presented by developments in AI and to create value for the private and public sector, while mitigating potential risks.⁴⁴⁰³

The key objectives of ENIA are to

- Train and attract talent
- Promote AI development and use to boost the country's development and welfare
- Create and strengthen digital and telecommunications infrastructure to support the development of AI
- Develop a data infrastructure to make high quality public data available in an open, reusable, and accessible format
- Adopt ethical guidelines for sustainable, transparent, and replicable use of AI with clear definitions of responsibilities and data protection
- Facilitate a collaborative AI ecosystem at the national and international level, such as through a National Center for Innovation and AI.⁴⁴⁰⁴

Peru published Law No. 31814 to promote the use of AI for the economic and social development of the country in July 2023. The law designates the Presidency of the Council of Ministries as the supervising authority operating through the secretaries of Government and Digital Transformation through the National System of Digital Transformation.⁴⁴⁰⁵ The law was open for public consultation again in 2024 to refine the regulatory framework.⁴⁴⁰⁶

In addition to Law no. 31814, Emergency Decree No. 007-2020, regulates AI. The Decree approves the Digital Trust Framework, establishes that “public

entities and private sector organizations promote and ensure the ethical use of digital technologies, the intensive use of data, such as internet of things, AI, data science, analytics and big data processing.”⁴⁴⁰⁷

Public Participation

The Digital Government Secretariat of the Presidency of the Council of Ministers requested consultation from the public and private sectors, civil society, academia, and citizens to participate in the co-design of the National AI Strategy with the purpose of driving the digital transformation of the country for the benefit of all people. Registration was open to all, and consultation took place from August 5 to August 12, 2020 via Zoom.⁴⁴⁰⁸ The government presented a draft of the National Strategy and requested additional consultation from the public in 2021. No further public participation has been requested after the collection and analysis of the contributions in June 2021.⁴⁴⁰⁹

The Peruvian Government and Digital Transformation Lab launched the Participate Peru platform to receive suggestions and comments from citizens regarding current and potential regulations. Citizens can also send policy proposals on issues that interest them and make complaints about corruption in the public sector. To report the latter, citizens must provide an email address, where they will receive a report number, which they can then use to inform themselves about the status of their complaint.⁴⁴¹⁰

The Peruvian Government launched a public request for commentary on implementing the RAM methodology in the country on October 10, 2024. The request focused on the challenges, opportunities, and proposals to improve the current panorama of the AI ecosystem in Peru, emphasizing six thematic axes: health, education, productivity, data governance and cybersecurity, environment, and regulatory approaches. No further publications on this commentary have been compiled and shared at the time of writing.⁴⁴¹¹ The request expired on October 28.

Data Protection

The Personal Data Protection Law, passed in 2011, guarantees the fundamental right to personal data protection provided in Article 2, paragraph 6 of the Peruvian Constitution.⁴⁴¹² The law was amended in 2017 to provide Peruvians with an updated level of data protection.⁴⁴¹³ The law covers personal data, automated or not, regardless of the medium, regardless of the form or modality of their creation, formation, storage, organization and access.⁴⁴¹⁴ The law has established various principles that data controllers and processors must comply with when processing personal data.⁴⁴¹⁵ These principles include legality, purpose, proportionality, quality, security, and an adequate level of protection.

The National Personal Data Protection Authority (ANPD) was established in 2011 within the Ministry of Justice to enforce and impose sanctions for violations of the law. Sanctions include administrative and monetary penalties against parties who are found to have violated the provisions of the law.⁴⁴¹⁶ The ANPD hears, investigates, and resolves complaints lodged by the data subjects for the violation of the rights granted to them and issues provisional and/or corrective measures, as established in the regulation. The ANPD is also responsible for recommending any minor or major amendments to the data protection law to ensure it keeps up with both technological advancements and potential legal challenges.

The ANPD established a National Register of Personal Data Protection, which keeps a public record of all the data processors and the type of data being collected on Peruvian residents. The ANPD is also required to publish a yearly report on the state of data protection within the country as well as recommendations for organizations on how to better adhere to the Peruvian legislation related to data protection.⁴⁴¹⁷

The Ministry of Justice and Human Rights published a new draft regulation, Law on Protection of Personal Data, on August 25, 2023, which aims to modernize the existing framework. Under the draft regulation, data controllers

are required to notify the National Authority for Personal Data Protection (ANPD) within 48 hours of a security incident affecting personal data. Notifications must include details like the incident's nature, data types involved, affected individuals, and corrective or mitigation measures taken.

This update aligns Peru's standards with global best practices, especially those in the European Union. The draft regulation mandates DPIAs in specific cases. Organizations are now expected to evaluate risks in their data processing activities to preemptively identify and implement necessary organizational or security measures. The introduction of the right to data portability, allows individuals to receive their personal data in a structured format and transfer it between service providers. This promotes user control and aligns with international norms seen in the GDPR. Data portability encourages both innovation and secure data transfer practices, under the control of the data subject.

The new regulation's requirement for a designated representative, either within or outside Peru, to act as a contact between the ANPD and foreign companies processing Peruvian citizens' data enables the ANPD to enforce data protection standards even when data is handled abroad. This provision is crucial in maintaining oversight and accountability in cross-border data transfers, a common regulatory challenge.

The regulation also includes provisions for safeguarding minors' personal data, especially on social media and digital platforms. Organizations processing data of minors are required to take extra precautions to protect the rights of children in any digital service context. This focus aligns with global concerns about children's privacy and security in digital spaces.⁴⁴¹⁸ The new Law on the Protection of Personal Data was approved in November 2024 and enters into force in March 2025.⁴⁴¹⁹

The ADNP is a member of the Ibero-American Network for the Protection of Personal Data (*Red Iberoamericana de Protección de Datos*, RIPD), which comprises 16 data protection authorities from 12 countries. As a member, the ANDP adopted RIPD Standards for Personal Data Protection for Ibero-American States,⁴⁴²⁰ a series of guiding principles and rights for the protection of personal data were recognized, that can be adopted and developed by the Ibero-American States in their national legislation in order to guarantee a proper treatment of

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

personal data, and to have homogeneous rules in the region. The guiding principles are legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data and right to the limitation of treatment of personal data. ANDP has also adopted RIPD General Recommendations for AI-related data processing⁴⁴²¹ and Specific Guidelines for complying with these principles in AI projects.⁴⁴²²

The RIPD data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data. Concerns regarding the risk of misinformation. The action acknowledges: “ChatGPT does not have knowledge and/or experience in a specific domain, so the precision and depth of the response may vary in each case, and/or generate responses with cultural, racial or gender biases, as well as false ones.”⁴⁴²³

The Peruvian Data Protection Authority has been a member of the Global Privacy Assembly since 2012 but has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁴⁴²⁴ the 2020 GPA Resolution

on AI Accountability,⁴⁴²⁵ the 2022 GPA Resolution on Facial Recognition Technology⁴⁴²⁶ or the 2023 GPA Resolution on Generative AI.⁴⁴²⁷

Algorithmic Transparency

Peru's Data Protection Law does not contain a general right of algorithmic transparency and does not explicitly state the right to receive information about automated-decision systems or to object to a decision based solely on automatic data processing methods.⁴⁴²⁸ However, Article 23 on the rights of the data subject provides for the right not to be subjected to a decision with legal effects or affecting them significantly, supported only by a processing of personal data intended to evaluate certain aspects of their personality, unless it occurs within the negotiation, execution, or performance of a contract or in cases of evaluation with purposes of incorporation into a public entity, pursuant to the law, without prejudice to the possibility of defending his point of view for the protection of his legitimate interest. The data subject also has the right to obtain information processed about him in publicly or privately administered databases, the way his data were compiled, the reasons for their compiling, and at whose request the compiling was done, as well as the transfers made or planned to be made of such data.⁴⁴²⁹

The Draft Regulation of the revised Law on AI for Development introduced in May 2024⁴⁴³⁰ includes transparency and explainability as a guideline. The draft regulation states that algorithmic transparency and explainability measures must be incorporated and users must be given information

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

on how AI use will affect them. However, the current law does not establish specific AI compliance and accountability processes or address contestability.⁴⁴³¹

These requirements align with the RIPD Specific Guidelines for data protection in Artificial Intelligence Projects, “The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience.”⁴⁴³²

While Peru’s draft National AI Strategy highlights the development of a registry of AI algorithms in the public sector, and datasets used in use cases under its strategic objective of ethics, it remains unclear whether the registry will be publicly available.⁴⁴³³

Use of AI in Public Administration

The National Strategy proposal highlights not only the value creation for the private sector, but also for the public sector which must meet the new demands of a digital citizenship.⁴⁴³⁴ However, large economic groups have been the main driver of adoption of AI in Peru with fewer attempts made by the public sector.⁴⁴³⁵ The Peruvian Public Sector AI Status Survey conducted in January 2021 revealed that only 39 out of 488 public institutions use AI. Common uses include prediction of criminal acts, facial recognition, risk management and virtual assistants with most of this use attributed to local governments.

The Presidency of the Council of Ministers launched the program TranformaGob in October 2024 to train government officials on AI and its use in Public Administration. The program stems from a collaboration of the Secretariat of Government and Digital Transformation, the Presidency of the Council of Ministers, Asuntos del Sur, and the National Foundation for Democracy (NED). 534 Public Servants from 25 Local governments signed up for the program and 19

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

projects for digital innovation involving Artificial Intelligence were presented in it.⁴⁴³⁶

As a member of the Latin American Centre for Development Administration (CLAD), Peru approved the principles in the Ibero American Charter on Artificial Intelligence in Civil Service in late 2023.⁴⁴³⁷ The guiding principles include: human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection.

The Charter calls on member states to create policies and laws to require the assessment of the impact of AI systems on human rights and freedoms and the registration of algorithms to “anticipate risks, prevent undesirable effects and ensure its proper implementation.”⁴⁴³⁸ The Charter also proposes a risk classification mechanism that would require guardrails for middle-risk uses and prohibitions against high-risk applications. Prohibited uses include facial recognition systems; systems aimed at behavior and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly); and social ranking systems based on certain personality traits, individual behaviors, socio-demographic features or economic status.⁴⁴³⁹

Facial Recognition

Peru has deployed facial recognition technology across various sectors. On July 14, 2022, Peru’s Victoria Municipality was sanctioned by the Personal Data Protection Authority (ANPD) for not complying with security measures in the use of surveillance cameras.⁴⁴⁴⁰ The sanction followed an investigation initiated as a result of a complaint filed by civil society organizations Access Now and Hiperderecho in 2019 regarding the existence of facial recognition cameras in Victoria, which the organizations alleged were processing biometric data in contravention of Peru’s Personal Data Protection Law. Although the investigation concluded that facial recognition software was not in use, and the cameras were

only used to record and store images and videos to identify criminal activity reported to the National Police of Peru, the Authority sought to put corrective measures in place to address dangers that may arise in future because of the storing of personal data captured in the municipality's biometric system.⁴⁴⁴¹

Additionally, the director of APDP administered a fine to the municipality for failing to add safeguards in place to secure the images captured and for failing to provide information on how the images would be stored, and which entities could access them. The resolution also found that the municipality's conduct fell short of provisions in the Personal Data Protection Law relating to verification and management procedures for personal information. The municipality had 55 days to put in place appropriate documentation concerning the management of privileges and periodic verification of those privileges for the processing of personal data carried out within the video surveillance system.⁴⁴⁴²

The APDP announced in October 2020 that it had launched an investigation into the National University of San Marcos, following a complaint alleging that the personal data of applicants was inadequately processed, and biometric data was collected. In the event that facial recognition technology was used in the university's admissions process, ADPD would administer a fine in accordance with the Personal Data Protection law.⁴⁴⁴³ At the time of publishing, ADPD has yet to release a final report on this investigation.

RecFaces announced in 2024 that its Id-Guard facial recognition solution would be implemented at Jorge Chávez International Airport in Lima, Peru. This major airport, which handles over 20 million passengers annually, will use the technology to enhance security by monitoring for potential threats and suspicious individuals. The implementation aims to strengthen the overall security structure while simplifying work processes for security personnel and could have implications for customs control, privacy protection, and border processing of citizens, tourists, migrants, and asylum seekers.⁴⁴⁴⁴

Peru has expanded use of facial recognition technology, particularly in smart city projects spearheaded by major telecom operators. In 2023, Bitel

Center for AI and Digital Policy

invested significantly in smart city initiatives, notably in Trujillo's District Municipality of Salaverry, deploying advanced facial recognition and AI-powered surveillance systems aimed at enhancing public safety, urban services, and traffic management. The project integrates a Video Management System (VMS) and an intelligent operations center (IOC) software to enable real-time data analysis and response. Bitel's collaboration with the Municipality of Lima also introduced a \$500,000 smart city system utilizing facial recognition to bolster crime detection and response. Further pilots in cities like Chota and Moche reflect a broader trend of adopting biometric surveillance technologies to address public security challenges. However, these implementations raise critical concerns about compliance with Peru's Personal Data Protection Law, emphasizing the need for robust safeguards and transparent data management practices to protect citizens' rights.⁴⁴⁴⁵

Disinformation

Peru signed the Community of Latin American and Caribbean States (CELAC) Buenos Aires Declaration in January 2023, through which the 33 countries pledged to deepen integration, climate action, democratic institutions, and multilateralism.⁴⁴⁴⁶ The signatories recognized disinformation and the visible increase in cyber-attacks, including those through artificial intelligence and the use of algorithms, as generating risks to the stability of the essential infrastructure of States and companies and to the well-being of individuals. Furthermore, the signatories agreed that disinformation on social networks can create parallel realities and induce political radicalization, creating a threat to democratic values and the rule of law, all leading to the need to expand cooperation and coordination among States to advance in the fight against disinformation and illegal content on the Internet.⁴⁴⁴⁷

The COVID-19 pandemic and the fake news “infodemic” that it created presented a real challenge for Peru as it was among the top 15 countries in the world in reported COVID-19 cases and second in Latin America, only after Brazil.⁴⁴⁴⁸ The excessive and unfounded disinformation that spread on social media in Peru and other countries hindered an appropriate public health response.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The American Journal of Tropical Medicine and Hygiene highlighted the Peruvian government's response to the spread of disinformation and stated that disinformation about COVID-19 that occurred at the beginning of the pandemic became almost non-existent after the Ministry of Justice and Human Rights (MJDH) of Peru announced on April 8, 2020 via Twitter that “persons who share fake news and misinform others to obtain a benefit or to perturb the public tranquility can be sanctioned with a prison sentence.” The Ministry urged people to share only official information, accompanied by the hashtag “Don’t Spread #FakeNews.” It further indicated that those who create and/or share false information to benefit themselves or cause perjury to others will receive a 2- to 4-year prison sentence, and if the fake news causes panic and perturbs the public tranquility, the sentence may be 3–6 years. Peru became the first country in Latin America to implement prison sentences for creating and disseminating fake news.

To evaluate the legitimacy of MJDH’s statement, the organization Enfoque Derecho interviewed Peruvian lawyers. In conversation with César Landa, professor of Constitutional Law of the Catholic University of Peru and former President of the Constitutional Court, he concluded: “In this sense, in the context of COVID-19 pandemic, given that we are facing a situation of danger and threat, the dissemination of untruthful information is not a legitimate exercise of the right to freedom of expression or information. César Landa stated that such ‘news’ seeks to generate distress and disrupt public order. Thus, this type of information, which is practically inciting crime rather than protest, is obviously condemned by our constitutional legal system.”⁴⁴⁴⁹ This approach was widely applauded, as it appeared to result in a dramatic drop in fake news accounts.⁴⁴⁵⁰

Environmental Impact of AI

Peru has demonstrated support for the ethical, responsible and human-centric use of AI in favor of environmentally related global goals such as clean water, affordable and clean energy, sustainable cities and communities, responsible consumption and production, climate action, life below water, and life on land⁴⁴⁵¹ through commitment to climate action in the CELAC Buenos Aires Declaration⁴⁴⁵² and through sponsorship of the UN Resolution on Safe, Secure, and

Trustworthy AI.⁴⁴⁵³ The UN Resolution recognizes that safe, secure and trustworthy artificial intelligence systems [...] have the potential to accelerate and enable progress towards the achievement of all 17 Sustainable Development Goals and sustainable development in its three dimensions—economic, social and environmental—in a balanced and integrated manner.”⁴⁴⁵⁴

Lethal Autonomous Weapons

At the 77th UN General Assembly First Committee meeting in October 2022, Peru joined 69 other countries to endorse a joint statement on autonomous weapons systems. Peru stated that “Progress in military technology towards increasing autonomy has led us to a scenario where machines have the power and discretion to put an end to human life. This is morally unacceptable, but still uncertain in legal terms. LAWS are of great concern to humanity; they call for a legal and political response, which is urgent, from the international community. For Peru there is no other way than establishing legally binding prohibitions. Regulation through a new treaty is the most effective way of dealing with the increasing uncertainty about what is or is not acceptable for the increasingly complex systems of autonomous weapons.”⁴⁴⁵⁵

The joint statement addressed the need for “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations, and constraints.” “We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force,”⁴⁴⁵⁶ declared the States. Peru voted in support of the December 2023 UN General Assembly Resolution 78/241 on lethal autonomous weapons systems. Resolution 78/241 stressed the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems” and requested a report of members’ views on LAWS.⁴⁴⁵⁷ Peru’s submission to the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

report reiterated the need for international legal instruments to regulate autonomous weapon systems.⁴⁴⁵⁸

Peru endorsed the Belén Communiqué in February 2023,⁴⁴⁵⁹ along with 30 other countries from Latin America and the Caribbean. The Communiqué calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force. On this occasion, Peru issued a statement affirming the country’s commitment to multilateralism, disarmament, and non-proliferation, with the defense of international law—including international human rights law—as well as with the purposes and principles of the Charter of the United Nations.⁴⁴⁶⁰

Peru also endorsed the summary by the Chair of the 2024 Vienna Conference Humanity at the Crossroads: Autonomous Weapons Systems and the Challenge of Regulation in April 2024.⁴⁴⁶¹ The Chair’s Summary highlighted the commitment to “work with urgency and with all interested stakeholders for an international legal instrument to regulate autonomous weapons systems.”⁴⁴⁶² The Vienna Conference hosted representatives from more than 144 states, UN international and regional organizations, academia, industry, parliamentarians, and civil society to discuss the challenges and legal, ethical, and humanitarian implications of AWS and potential avenues to address them.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Human Rights

Peru has ratified 12 of the 14 UN human rights treaties, conventions, and protocols based on the Universal Declaration of Human Rights.⁴⁴⁶³ Freedom House rated Peru as “Partly Free” with a score of 66/100 with 27/40 for political rights and 39/60 for civil liberties in 2024.⁴⁴⁶⁴ Peru’s score fell from 70/100 in 2023. The report notes that while Peru’s democratic political institutions have facilitated multiple peaceful transfers of power, “high-profile corruption scandals have eroded public trust in government, while bitter divides within a highly fragmented political class have repeatedly produced political turmoil.” Meanwhile, “Indigenous groups suffer from discrimination and inadequate political representation.”⁴⁴⁶⁵

In 2022, Transparency International scored Peru at 36/100 on the Corruption Perceptions Index (CPI) and ranked the country at 105 out of 180 countries scored for being able to stop corruption.⁴⁴⁶⁶ The CPI is the most widely used global corruption ranking in the world. It measures how corrupt each country’s public sector is perceived to be, according to experts and businesspeople.

OECD / G20 AI Principles

Peru, alongside 41 other countries, adopted the OECD Principles on Artificial Intelligence in 2019, and to the AI Principles as updated in 2024.⁴⁴⁶⁷ and agreed to uphold international standards that aim to ensure AI systems are designed to be robust, safe, fair and trustworthy. According to OECD AI Principle 2.5 regarding international co-operation for trustworthy AI, “Governments, including developing countries and with stakeholders, should actively cooperate to advance these principles and to progress on responsible stewardship of trustworthy AI. Governments should work together in the OECD and other global and regional fora to foster the sharing of AI knowledge, as appropriate.”⁴⁴⁶⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The OECD acknowledges the work of the Inter-American Development and its “fAIr LAC” initiative to promote the responsible and ethical use of AI and improve the public services e.g., education, health, and social protection, in Latin American and Caribbean (LAC) countries.”⁴⁴⁶⁹ In 2022, the OECD, in partnership with the Development Bank of Latin America (CAF) also published a report on the Strategic and Responsible Use of Artificial Intelligence in the Public Sector of Latin America and the Caribbean that assessed Peru’s 2021 National AI Strategy draft.⁴⁴⁷⁰

The OECD recognized Peru’s progress implementing the OECD Recommendation at a Ministerial Meeting in 2024.⁴⁴⁷¹ The Report highlighted the advance in AI capabilities with the founding of a National Centre for Innovation and AI as part of a broader initiative to foster collaboration between academia, industry, and government to promote research, development, and innovation in AI. The Report also recognized that Peru is actively linking its data policies with AI strategies, focusing on the creation of platforms and data infrastructure to centralize public sector data.

Council of Europe AI Treaty AI

Peru contributed to the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy, and the Rule of Law as a non-member state.⁴⁴⁷² The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024.⁴⁴⁷³ This first legally binding international treaty on AI opened for signature by members and non-members on September 5, 2024. Peru has not signed the treaty.⁴⁴⁷⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

In November 2021, Peru, alongside 192 other states, adopted the Recommendation on Ethics of AI.⁴⁴⁷⁵ The CAF-Development Bank of Latin America and UNESCO signed a letter of intent to work together on the implementation of the Recommendation on the Ethics of Artificial Intelligence in Latin America and the Caribbean, in part through a Regional Council composed of national and local governments.

Peru signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.⁴⁴⁷⁶ It aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.⁴⁴⁷⁷

UNESCO and Peru signed an agreement in May 2024 to implement the Readiness Assessment Methodology (RAM), which is a key tool intended to help Member States implement the UNESCO Recommendation on the Ethics of AI.⁴⁴⁷⁸ This was followed by the launch of an industry consultation on 10 Oct 2024, seeking inputs on the challenges, opportunities and proposals to improve the AI ecosystem in Peru, that takes reference from the UNESCO RAM methodology of assessing readiness for AI.⁴⁴⁷⁹

Evaluation

Peru endorsed the OECD AI Principles and the UNESCO Recommendation on the Ethics of AI. Peru has a full-fledged, modernized data protection legal regime. The regular revisions to the National AI Strategy and law on the use of AI leave citizens and other stakeholders without firm guardrails for protecting rights or developing AI innovations. The country's record on corruption and use of facial recognition make the need for a clear vision and guardrails for the development of safe, secure, and trustworthy urgent.

Philippines

In 2024, the Philippines launched a new National AI Strategy Roadmap and a Center for AI Research and introduced two bills on AI Regulation and oversight in the House of Representatives.

National AI Strategy

The Philippines' Department of Trade and Industry (DTI) launched the country's national AI roadmap,⁴⁴⁸⁰ which aims to make the Philippines a regional AI "powerhouse," accelerating "the adoption and utilization of AI in the country to advance industrial development, generate better quality entrepreneurship, and higher-paying opportunities for Filipinos" in 2021.⁴⁴⁸¹ The roadmap was developed by the Philippines Council for Industry, Energy and Emerging Technology Research and Development (DOST-PCIEERD) under the country's Department of Science and Technology.⁴⁴⁸² The roadmap identifies various intended applications of AI, including its use in "real estate, banking and financial services, surveillance, retail and e-commerce, education, space exploration, agribusiness, urban planning, manufacturing, healthcare, and logistics and transportation."⁴⁴⁸³ The national AI roadmap describes the four important dimensions for AI readiness for implementation, infrastructure and investment, namely:

1. Digitization and Infrastructure
2. Research and Development
3. Workforce Development
4. Regulation.⁴⁴⁸⁴

Central to the DTI's roadmap is the establishment of the National Center for AI Research (NCAIR), whose full-time scientists and research engineers will assist micro, small, and medium enterprises (MSMEs) interested in using AI technology — an element of the country's approach to inclusive AI development. The roadmap also includes plans to build a national data center (NDC).⁴⁴⁸⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In November 2021, an AI bill was filed under House Bill No. 10457 “Artificial Intelligence Development Act”⁴⁴⁸⁶ establishing a National Strategy for the Development of Artificial Intelligence and Related Technologies, Creating for this Purpose the National Center for Artificial Intelligence Research, and for Other Purposes. The bill seeks to support and institutionalize the DTI’s Artificial Intelligence roadmap to help realize the potential of AI in the Philippines.

Furthermore, in February 2020, the DOST launched the Smarter Philippines through Data Analytics, Research and Development, Training and Adoption (SPARTA) initiative to retool and upgrade the skills of an initial 30,000 workers by 2022.⁴⁴⁸⁷ In a press release on November 2, 2022, the Development Academy of the Philippines shared that more than 40,000 scholarships have been awarded.⁴⁴⁸⁸ In May 2024, the AI Regulation Act (HB 10385) was introduced into the Philippine House of Representatives. The Act created an AI Bureau within the Department of Information and Communication Technology (DICT) and established general principles of AI governance.⁴⁴⁸⁹

The Department of Trade and Industry (DTI) launched a National AI Strategy Roadmap 2.0 (NAISR 2.0) and a Center for AI Research in July 2024. Emphasizing the integration of recent technological advancements, including Generative AI and addressing emerging concerns such as ethics and governance, the NAISR 2.0 outlines seven strategic imperatives focused on invigorating the AI ecosystem, boosting research and development, and fostering innovation within various sectors including agriculture, urban planning, and disaster resilience. The Center for AI Research (CAIR) is set to be the nation’s first AI hub, aimed at promoting socio-economic research and development (R&D) and enhancing the country's competitiveness in science and technology. Through these initiatives, the Philippines aspires to increase R&D spending to 1% of GDP, focusing on upskilling and reskilling the workforce to meet the future demands of AI-driven economies.⁴⁴⁹⁰

The AI Research Center emphasize the importance of accelerating R&D to strengthen AI competitiveness and harness AI to improve sectors like agriculture, urban planning, and disaster resilience.

⁴⁴⁸⁶ House of Representatives, *HB 10457* (Nov. 9, 2021), <https://ldr.senate.gov.ph/bills/house-bill-no-10457-18th-congress-republic>

⁴⁴⁹⁰ Department of Trade and Industry, *DTI Launches National AI Strategy Roadmap 2.0 and Center for AI Research, Positioning the Philippines as a Center of Excellence in AI R&D* (Jul. 2, 2024), <https://www.dti.gov.ph/archives/news-archives/dti-launches-national-ai-strategy-roadmap-2-0-center-ai-research-positioning-philippines-center-excellence-ai-rampd/>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The government also announced that it will launch a panel about Balancing AI Innovation and Responsible AI Adoption, convening public and private sector experts to discuss the government's AI strategy. DTI also announced the launch of the Center for AI Research (CAIR), an entity that will focus on performing AI research to leverage AI's potential to bolster the Philippine economy and improve the quality of life of Philippine citizens.⁴⁴⁹¹

The Artificial Intelligence Act (HB 10944) was introduced in the Philippine House of Representatives in September 2024. The Act created the Philippine Artificial Intelligence Board (PAIB). The purpose of the board is to exercise regulatory and supervisory authority over the development, research, application and use of AI systems.⁴⁴⁹²

Public Participation

There is some evidence of a public consultation process in the development and implementation of the country's national AI policy. The roadmap mandated the establishment of a "committee of experts in data and AI ethics who will guard against abuse/misuse of data and AI algorithms," but it is unclear whether this committee has been formed and if it will have a mechanism for public consultation.⁴⁴⁹³ On October 28th, 2021, pursuant to the DTI's Inclusive Innovation Strategy, the DTI hosted "Artificial Intelligence: Opportunities and Challenges for Philippine Industries," a virtual session open to the public intended to "bring together participants from the government, industries, and academia not only to deliberate on matters of common interest concerning AI but more so to bring everyone into the fold as we embrace and adapt to our new economic realities."⁴⁴⁹⁴

The National Privacy Commission's website includes opportunities for the public to vocalize data-related concerns through its AskPRIVA tool and includes contact information to file complaints or to contact relevant authorities.⁴⁴⁹⁵ It includes contact information to file complaints or to contact relevant authorities.

⁴⁴⁹¹ Department of Trade and Industry, *DTI Launches National AI Strategy Roadmap 2.0 and Center for AI Research, Positioning the Philippines as a Center of Excellence in AI R&D* (Jul. 2, 2024), <https://www.dti.gov.ph/archives/news-archives/dti-launches-national-ai-strategy-roadmap-2-0-center-ai-research-positioning-philippines-center-excellence-ai-rampd/>

⁴⁴⁹⁵ AskPriva, <https://www.privacy.gov.ph/askpriva/>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

DTI which is the primary government agency that developed the Philippines' National AI strategy is working on a white paper for a “Philippine AI Governance Framework” led by Mr. Peter A. Sy from the University of the Philippines. A live version of the white paper is open for stakeholder consultation, review, comments, and suggestions.⁴⁴⁹⁶ On April 2024, the Civil Service Commission (CSC) and the Department of Information and Communications Technology hosted a public consultation and released a Joint Memorandum Draft⁴⁴⁹⁷ to discuss guidelines to ensure responsible use of AI in the government. The event sought to “gather valuable inputs from various stakeholders, ensuring the promotion of responsible use of AI in government agencies while prioritizing transparency, fairness, and accountability.

Data Protection

The Philippines put in place the Data Privacy Act of 2012 (DPA) “to protect the fundamental human right of privacy, of communication while ensuring free flow of information to promote innovation and growth.” The Act also ensures that “personal information in information and communications systems in the government and in the private sector are secured and protected.”⁴⁴⁹⁸ Penalties are imposed for violations of the Data Privacy Act under Rule XIII of the DPA IRR with imprisonment and fine.⁴⁴⁹⁹

The Act mandated the creation of the National Privacy Commission, an independent body, “To administer and implement the provisions of [the Data Privacy Act of 2012], and to monitor and ensure compliance of the country with international standards set for data protection.”⁴⁵⁰⁰ It was established in March 2016 and is required to make rules, provide advice and guidance, and public education, in addition to its compliance, monitoring, and enforcement duties.⁴⁵⁰¹ Its mission is to:

⁴⁵⁰¹ *Ibid*, Section 1

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

1. Be the authority on data privacy and protection, providing knowledge, know-how, and relevant technology.
2. Establish a regulatory environment that ensures accountability in the processing of personal data and promotes global standards for data privacy and protection.
3. Build a culture of privacy, through people empowerment, that enables and upholds the right to privacy and supports the free flow of information.

The Commission appears to be active. According to the Commission, by 2018, it had “a total of 23,081 registered Data Protection Officers (DPOs). The number of privacy-related cases the agency received so far, [in 2018] has also increased by 145% from 2017. Of the 542 cases in 2018, 35.52% involved unauthorized processing while 36.44% were on data breaches.”⁴⁵⁰²

The National Privacy Commission, the Philippines’ independent data protection enforcement agency, is a co-sponsor to the Global Privacy Assembly (GPA)’s 2018 Resolution on AI and Ethics, its 2020 GPA Resolution on AI and Accountability and its 2022 GPA Resolution on Facial Recognition. However, the National Privacy Commission did not endorse the 2023 GPA Resolution on Generative AI.⁴⁵⁰³

A proposal to amend the Data Privacy Act under House Bill No. 5612⁴⁵⁰⁴ was issued in November 2019. Its intention was to redefine the categories of “sensitive personal information” to include biometric and genetic data, and political affiliation, considering the innate sensitivity of these classes of personal data. Generally, the DPA amendment proposal seeks to improve the Data Privacy Act’s implementation and alignment with international standards for data privacy and security. It also aims to address current data privacy challenges as concerns about privacy and other aspects of cross-border data processing are impediments to the country’s digital transformation strategy and the creation of a knowledge-based economy.

Meanwhile, the NPC also issued in August 2022 the Advisory on the Adoption of International Data Protection Standard⁴⁵⁰⁵ based on ISO/IEC standards recommending its adoption for information and communication technology (ICT) systems or services where privacy controls are required for

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

personal data processing. This framework is a representation of international privacy principles which include:

- Consent and choice
- Purpose legitimacy and specification
- Collection limitation
- Data minimization
- Use, retention, and disclosure
- Accuracy and quality
- Openness, transparency, and notice
- Individual participation and access
- Accountability
- Information security
- Privacy compliance.

The National Privacy Commission issued NPC Circular No. 2022-04⁴⁵⁰⁶ as of December 2022 updating the requirement on registration of “Automated Decision-Making Systems.” The Circular establishes the framework for the registration of data processing systems in the Philippines and imposes other requirements to achieve the following objectives:

- Ensure that personal information controllers (PICs) and personal information processors (PIPs) keep a record of their data processing activities
- Make information about data processing systems operating in the country accessible to both the Commission, for compliance monitoring, and data subjects, to facilitate the exercise of their rights under the DPA; and
- Promote transparency and public accountability in the processing of personal data.

In November 2023, the National Privacy Commission released a Guideline on Deceptive Design Patterns⁴⁵⁰⁷, which provides personal information controllers about deceptive design patterns and their impact on lawful personal data processing in relation with the data subject’s consent, and general privacy principles. In August 2024, the National Privacy Commission issued Guidelines on sensitive personal data processing.⁴⁵⁰⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Algorithmic Transparency

The Philippines' national AI policies do not explicitly promulgate any commitments to transparency, but its Data Privacy Act mandates "adherence to the principles of transparency, legitimate purpose, and proportionality."⁴⁵⁰⁹ It also includes provisions related to transparent automated processing. Notably, Section 16 furnishes citizens have the right to be informed whether their personal information pertaining to their identity is being or has been processed, with the right to information regarding the "Methods utilized for automated access, if the same is allowed by the data subject, and the extent to which such access is authorized," and the right "to access, correction, as well as the right to complain to the Commission."⁴⁵¹⁰ These are all elements of transparency, which the National Privacy Commission has formally endorsed through its co-sponsorship of the 2020 and 2018 Global Privacy Assembly resolutions⁴⁵¹¹ noted above.

Additionally, in November 2023, the Philippine Digital Workforce Competitiveness Act (or Implementing Rules and Regulations of Republic Act n. 11927)⁴⁵¹² was launched, which talks about algorithmic transparency in section 10, and in section 11 about the right to refuse AI-driven evaluations and requests for an alternative method.

Biometric Identification

The government is in the process of registering 105 million citizens, including infants, in its biometric national ID system, PhilSys, which is to include facial, iris, and thumbprint biometrics.⁴⁵¹³ Law enforcement in the Philippines has also implemented and encouraged the use of real-time facial recognition software to identify "persons with Warrants of Arrest, High-Value Targets, and members of communist terror groups evading law enforcers."⁴⁵¹⁴ According to Crizaldo Nieves, the regional director of the Cagayan Valley Police, all police will eventually have smartphones that enable real-time tracking, and "appropriate

awards [will be given] to the first 10 police stations that will affect an arrest through this technology.”⁴⁵¹⁵

As of August 2024, PhilSys has launched new services allowing registered individuals to update their demographic information in accordance with Section 11 of the Philippine Identification System Act (Republic Act No. 11055). This includes updates and corrections to nationality, age, status, and other details, facilitated by the Philippine Statistics Authority (PSA). Individuals must personally appear at a PSA registration center for updates, bringing their PhilID or an affidavit of loss if necessary. Additionally, a Digital National ID service has been launched to enhance service delivery and transaction ease, available through the eGov PH application or PhilSys website. The new system allows individuals to download their Digital National ID, authenticate through facial recognition, and use a QR code for verification. This digital advancement aims to improve efficiency, security, and transparency in transactions, aligned with the country's broader digitalization efforts.⁴⁵¹⁶

Environmental Impact of AI

In response to the growing environmental concerns associated with AI and digital technologies, the Philippines is actively pursuing a "twin transition" that encompasses both digital transformation and environmental sustainability. Recognizing these intertwined challenges, the Philippine government prioritizes sustainable consumption and production patterns to ensure that technological advancement does not come at the expense of environmental health, according to policies reflected in the Philippine Development Plan 2023-2028 and the National Innovation Agenda and Strategy Document. In addition, the University of the Philippines, a public university, has published its own Principles for Responsible and Trustworthy Artificial Intelligence, which incorporate references to environmental sustainability in AI in its principles as follows: ‘Environment Friendly. AI should be evaluated in terms of its impacts on sustainability. AI models and tools must minimize risks to the environment. Developers should use computing resources more efficiently.’⁴⁵¹⁷

In addition, there have been growing concerns around the significant energy usage by AI data centers. The Philippines faces an increasing demand for energy-intensive data processing infrastructure, which further accentuates the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

need for sustainable practices within the AI sector. The substantial growth in data center operations, driven by AI developments, emphasizes the urgency of adopting energy-efficient technologies and leveraging renewable energy sources to mitigate potential environmental impacts.⁴⁵¹⁸ As a consequence, the Department of Energy (DoE) said it has asked hyperscale data center developers to submit their plans to draw power from renewable sources in order to properly gauge the industry's demand, noting that all (government entities) are subject to energy audit within the current year and every three (3) years thereafter," according to the DoE's Administrative Order No. 15.⁴⁵¹⁹

Lethal Autonomous Weapons

Last July 2022, the Philippines along with 10 other countries submitted a draft treaty⁴⁵²⁰ that would ban autonomous weapon systems incapable of being controlled by humans to the UN Group of Government Experts (GGE) under the framework of the UN Convention on Conventional Weapons (CCW). Together with countries like Argentina, Costa Rica, Ecuador, El Salvador, Kazakhstan, Nigeria, Panama, Sierra Leone, and Uruguay, the Philippines collaborated in drafting and submitting the draft treaty to the Group of Government Experts (GGE) tasked with discussing proposals to address the issue of autonomous weapon systems under the framework of the UN Convention on Conventional Weapons (CCW). The proposed ban also includes autonomous weapon systems that violate international humanitarian law. It requires countries to regulate other autonomous weapon systems to ensure "meaningful human control is retained" throughout their entire life cycle.

The Philippines agrees that there is a need to firm up negotiations towards a robust and future-proof legally binding instrument to address the threats of autonomous weapons systems. "House Bill 10944, filed on September 18, 2024, the draft Artificial Intelligence Act, incorporates a definition of Lethal Autonomous Weapons as "Autonomous Weapons Systems (LAWS) refer to weapons that use artificial intelligence to identify, select, and kill human targets without human intervention," making this the first official proposed definition under PH laws. The same bill likewise included an outright prohibition on LAWS, stating that "It shall be unlawful for any person to use any AI system that shall cause unnecessary, unjustifiable and indiscriminate moral or pecuniary damage to

individuals. The use of lethal autonomous weapon systems (LAWS), creation and proliferation of ‘deep fake’ videos, as well as any misuse of AI systems, are hereby prohibited.”⁴⁵²¹

Likewise, the Manila Meeting on Indo-Pacific Perspectives on Autonomous Weapons Systems in the country on 13–14 December 2023, and the Philippines’ input to the United Nations Secretary General Report on Resolution 78/241 (Lethal autonomous weapons systems) included a statement that⁴⁵²² the Philippines believes that there is a need to firm up negotiations towards a robust and future-proof legally binding instrument to address the threats of autonomous weapons systems.”

Human Rights

The Philippines has adopted the Universal Declaration of Human Rights, having taken part in its formulation in 2008.⁴⁵²³ However, its human rights implementation record is highly contested. The country is ranked “Partly Free” on the Freedom House Freedom in the World report, earning a middling score of 58/100.⁴⁵²⁴ The report explains that the “rule of law and application of justice is haphazard and heavily favor political and economic elites” in the country.⁴⁵²⁵

Moreover, a 2020 Amnesty International report found instances of harassment, detention, unjust charges, and extrajudicial executions of human rights defenders and political activists, as well as other human rights violations, and “severe” curtailing of media freedom.⁴⁵²⁶

Additionally, Republic Act (RA) 11934, or the SIM Registration Act was signed into law by President Ferdinand Marcos Jr. October 10, 2022. Users were required to register all mobile subscriber identity module (SIM) cards with respective public telecommunications entities within 180 days from December

2022. Privacy advocates raised concerns about the potential for abuse of the massive data collection mandated by the new regulation.⁴⁵²⁷

AI Safety Summit

In November 2023, the Philippines participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁴⁵²⁸ The Philippines thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible for the good of all. The next AI Safety Summit took place in France in 2025. The Philippines took part in sideline meetings at the Paris AI Action Summit that took place on February 10–11, following the UK AI Safety Summit in 2023 and the AI Seoul Summit in May 2024. The AI Action Summit 2025 was the most anticipated international event of the year on artificial intelligence moving away from an exclusive focus on safety to one on “action.”⁴⁵²⁹

OECD / G20 Principles

The Philippines is not a member of the OECD or the G20, and its roadmap makes little direct mention of the OECD or G20 AI principles. However, the Philippines is a member state of the Association of Southeast Asian Nations (ASEAN), an organization that participates in the OECD Southeast Asian Regional Programme and has adopted the OECD AI Principles that AI should be innovative and trustworthy and respect human rights and democratic values.⁴⁵³⁰ Despite having no explicit endorsement of these international principles, comments from leaders and provisions from the roadmap embody a commitment to OECD principles for human rights, inclusive growth, and

transparency. In a keynote speech, DTI Secretary Ramon Lopez remarked how regulation “will protect human rights and put into place equitable AI-activating opportunities into place.”⁴⁵³¹

In the same speech, Lopez noted that the roadmap itself is the “manifestation”⁴⁵³² of the Philippine Innovation Act, which articulates and mandates commitments to “innovation efforts to help the poor and the marginalized, enable micro, small and medium enterprises (MSMEs) to be a part of the domestic and global supply chain, and catalyze the growth of Philippine industries and local economies.”⁴⁵³³ To this end, the roadmap itself includes plans to:⁴⁵³⁴

- Build a national data center (NDC) with reliable and robust data infrastructure and data management system
- Encourage government agencies, research institutions, top universities, and big state universities to main their own data centers linked to the NDC
- Make internet accessible and affordable and improve its quality
- Promote data literacy for all
- Identify jobs that are vulnerable to automation and other Industry 4.0 technologies and map the skills that need upgrading or retooling.

A Protection of Labor against Artificial Intelligence (AI) Automation Act (HB9448) was introduced in the Philippine House of Representatives in November 2023. With the aim to protect jobs and ensure fair treatment of workers, it focused on regulating AI use in company processes, covering hiring decisions and employee evaluations.⁴⁵³⁵ Supreme Court Senior Associate Justice Marvic M.V.F. Leonen emphasized in August 2024 that the path moving forward is for the Philippine legal system to keep up with emerging technology while working to protect people’s rights.⁴⁵³⁶

Center for AI and Digital Policy

Council of Europe AI Treaty

The Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law was opened for signature by member and non-member States on September 5, 2024. The Philippines did not participate in its elaboration and has so far not endorsed this first legally binding international AI treaty.⁴⁵³⁷

UNESCO Recommendation on AI Ethics

As a member of UNESCO, the Philippines along with all other member states adopted the Recommendation on the Ethics of Artificial Intelligence in November 2021, the first global standard on the ethics of artificial intelligence.⁴⁵³⁸

In November 2023, UNESCO in the Philippines initiated the consultative process to assist the Philippines with the assessment of preparedness to utilize AI, using the internationally agreed AI Readiness Assessment Methodology, developed by the United Nations Educational, Scientific and Cultural Organization (UNESCO) as part of its implementation of the 2021 Recommendation on the Ethics of AI.

In February 2025, at the sidelines of the Artificial Intelligence (AI) Action Summit co-hosted by France and India, UNESCO organized a ministerial session on AI Governance entitled Preparing AI for the World, Preparing the World for AI, which sought to build on the momentum established by UNESCO's first and second Global Forum on the Ethics of AI held in Czech Republic in 2022 and in Slovenia in 2024, as well as the series of Global Dialogues on AI Governance in 2024. The session also set the stage for the third Global Forum on the Ethics of AI, scheduled to take place in Thailand this year.⁴⁵³⁹

Evaluation

The Philippines continues to make strides in national AI policy, after having endorsed the UNESCO Recommendation on the Ethics of AI,⁴⁵⁴⁰ Currently the country is implementing the Readiness Assessment Methodology (RAM) of UNESCO.⁴⁵⁴¹ AI is in use across several initiatives in the country, including law

enforcement,⁴⁵⁴² healthcare,⁴⁵⁴³ autonomous vehicles, infrastructure, and data processing.⁴⁵⁴⁴ The diligent work of the Philippines National Privacy Commission on both domestic issues and at the Global Privacy Assembly contributes to the country's overall favorable score.

Poland

In 2024, Poland released draft acts on AI systems and on data management. The country also carried out public consultations on implementing the EU AI Act and a digitization strategy to align with the EU digitization goals.

National AI Strategy

In September 2020, the Polish Council of Ministers Committee for Digital Affairs⁴⁵⁴⁵ adopted the Policy for the Development of Artificial Intelligence in Poland.⁴⁵⁴⁶ The Policy was then adopted by the Council of Ministers in December 2020.⁴⁵⁴⁷

The Policy is designed to support and complement the work of the EU and the OECD in AI. Strategic documents the Policy considers include: the EU Communication's Coordinated Plan on Artificial Intelligence;⁴⁵⁴⁸ the High-Level Expert Group on AI's Ethics Guidelines for Trustworthy Artificial

Center for AI and Digital Policy

Intelligence;⁴⁵⁴⁹ the High-Level Expert Group on AI's Policy and Investment Recommendations for Trustworthy Artificial Intelligence;⁴⁵⁵⁰ and the OECD Council Recommendation on Artificial Intelligence.⁴⁵⁵¹

The Policy establishes goals and actions for Poland in the field of AI in the short-term (until 2023), medium-term (until 2027), and long-term (after 2027).⁴⁵⁵² Six key thematic areas are identified: AI and society; AI and innovative companies; AI and science; AI and education; AI and international cooperation; and AI and the public sector.

The Polish strategy is providing strategic guidance and identifies some key policy initiatives to develop a holistic AI ecosystem. The main objectives are: Reforming the educational system and providing lifelong learning opportunities in AI-related fields; Encouraging growth and innovation of AI companies through dedicated support in AI research, including the provision of sufficient financial resources; Increasing national and international partnerships in AI; Creating a data ecosystem with trustworthy and high-quality data and increased data exchange mechanisms.

The Polish Council of Ministers Committee for Digital Affairs oversees steering the implementation of the strategy and evaluating its implementation on a yearly basis.

The Polish strategy was drafted based on the 2018 Assumptions to AI Strategy in Poland⁴⁵⁵³ released by the Minister for Digital Affairs. The Assumptions states that Poland's approach to ethical and legal issues with AI should: be proactive in creating ethical standards and legislation; be inclusive and cooperative; consider the specific circumstances in Poland; be flexible; instate consistent supportive measures; engage in discussion and consultation; and be firm in response to violations of ethical and legal standards.

The primary goals to be achieved listed in the Assumptions include developing transparent and effective mechanisms ensuring the protection of fundamental rights, gaining understanding of the social effects of AI, setting ethical standards, and creating high-quality legislation. The Assumptions identify

⁴⁵⁵³ Ministry for Digital Affairs, *Assumptions for the AI Strategy in Poland* (Nov. 9, 2018), <https://www.gov.pl/attachment/1a3fba75-c9f9-4aff-96d8-aa65ce612eab>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

key fundamental rights and values for the development of a legal and ethical approach to AI in Poland: dignity; freedom (described as including freedom to understand processes with which individuals interact and the making of free and independent decisions); privacy and data protection; equality; and justice. The Assumptions call for the development of an ethical impact assessment mechanism.

Where AI projects are supported by public funds, ethical impact assessments should take place at various stages of a project's implementation, not just at the application stage. The Assumptions also propose the establishment of an entity designed to, amongst other things: monitor the social impact of AI; recommend regulatory actions; participate in the development of regulations and ethical standards; and perform ethical impact assessments on publicly funded projects. It is envisioned that such an entity would include representatives from science, government, business, and NGOs.

To that end, in January 2022, an inter ministerial task force was established for the implementation of the AI Policy. The tasks of the Team included: giving opinions on implementation plans submitted by each minister, conducting ongoing monitoring and evaluation of the implementation work of the AI Policy and Preparing proposals for recommendations for the Council of Ministers Committee for Digital Affairs.⁴⁵⁵⁴ In February 2024, the Council of Ministers Committee for Digital Affairs set an advisory council for AI development with representatives from different stakeholders, to organize regular consultations with social partners and experts on AI issues, and to report on the progress and outcomes of the strategy.⁴⁵⁵⁵

Article 30 of the Polish Constitution—which protects the inherent and inalienable dignity of the person—forms the basis of the Policy approach. While Poland recognizes the importance of the Charter of Fundamental Rights and international human rights treaties in providing a foundation for ethical principles, the Policy suggests that Article 30 of the Polish Constitution provides broader protection.

In response to the EU Commission's White Paper on Artificial Intelligence, Poland professed to sharing the Commission's view on the need to define a clear European regulatory framework that would contribute to building confidence in the AI among consumers and businesses, thereby accelerating the spread of this technology, while ensuring socially, environmentally, and

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

economically optimal results and compliance with EU's laws, principles, and values. However, Poland suggests limiting regulatory action "to the areas of intervention that are only necessary and that promote legal certainty and relations, ensure coordination within the EU, and limit any negative social impact."⁴⁵⁵⁶ Poland states that regulation "should be sufficiently effective to achieve their objectives, but should not be overly prescriptive, as this could lead to disproportionate burdens, especially for SMEs and MSMEs." Poland endorsed incentives for voluntary ex ante control rather than mandatory control. In particular, Poland cautioned against the imposition of mandatory certification regimes.

The Polish government introduced a draft law to integrate the European Union's Artificial Intelligence Act (Regulation 2024/1689) into national legislation in October 2024. The draft act aims to implement the EU AI Act by establishing a monitoring committee and a social council for diverse input, promoting safe AI use, ensuring transparency, and providing best practice recommendations for ethical implementation.⁴⁵⁵⁷

The Prime Minister and the Minister of Digital Affairs also presented the first draft of Poland's Digitization Strategy until 2035.⁴⁵⁵⁸ The document outlines a comprehensive, cross-sector approach aimed at enhancing citizens' quality of life through digital advancements by 2035. Aligned with the European Union's digital goals, the strategy focuses on boosting computerization across state, citizen, and business sectors. The Digitization Strategy emphasizes the need to raise digital standards, foster international cooperation among government, academia, society, and businesses, as well as the importance of ensuring that digital progress protects the environment and workers' rights. Key areas include cybersecurity, responsible AI use, and child safety online. The strategy aligns with related national documents, including Poland's Cybersecurity Strategy, National Broadband Plan, and Digital Competence Development Program.⁴⁵⁵⁹

In relation to the key area of cybersecurity, the Polish government introduced a draft act to amend the act on the national cybersecurity systems. The amendments strengthen protection against AI-powered cyber threats and address emerging risks to enhance resilience in both the public and private sectors. The amendments have significant implications for AI in cybersecurity by mandating

risk management protocols and reporting for critical entities, which will enhance AI-based threat detection and response capabilities across various sectors. Additionally, the increased supervisory powers enable more effective AI-driven monitoring, analysis, and intervention strategies, fostering a resilient cybersecurity environment that can rapidly address emerging threats in public and private sectors.⁴⁵⁶⁰

Public Participation

Documents relating to Poland's development of its AI policy are accessible on the internet through the public archive's website of the Government Legislation Centre.⁴⁵⁶¹ The process that led to the drafting of the Assumptions to AI Strategy in Poland involved the participation of a broad range of stakeholders, from science, business, social organizations and public administration.⁴⁵⁶² The subsequent draft Policy document was released for public consultation in August 2019 until September 2019.⁴⁵⁶³ According to the government website, 46 entities took part in the consultation. Furthermore, in 2024 the Polish Ministry of Digital Affairs launched two relevant public participation opportunities for the development of the country's AI regulatory framework. The first one concerned the creation of a uniform regulatory framework for the implementation of the EU AI Act. All interested parties were invited to submit comments, questions, and recommendations with particular focus on the provisions of Article 5. The second public participation opportunity was focused on the 2035 Digitization Strategy and offered the possibility to submit any comments and feedback on the first comprehensive draft. In both cases, public inputs could be submitted via email.⁴⁵⁶⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

EU Digital Services Act

As an EU member state, Poland shall apply the EU Digital Services Act (DSA).⁴⁵⁶⁵ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation. The DSA bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs, and bans targeted advertising to minors based on profiling.

EU AI Act

As an EU member State, Poland is bound by the EU AI Act.⁴⁵⁶⁶ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI. The AI Act entered into force August 1, 2024.⁴⁵⁶⁷

The Polish government has introduced a draft law to integrate the European Union's Artificial Intelligence Act (Regulation 2024/1689) into national legislation.⁴⁵⁶⁸ This initiative aims to establish a comprehensive framework for the development, deployment, and oversight of AI systems within Poland. A central component of this framework is the creation of the Committee on Development and Security of Artificial Intelligence (the "Commission"), which will serve as the national market surveillance authority for AI technologies. The Commission will be led by a President appointed through an open and competitive process by the Prime Minister and will include representatives from key institutions involved in AI development. Its responsibilities encompass monitoring AI systems, processing applications for high-risk AI deployments, investigating complaints, and collaborating with public institutions to ensure compliance with the AI Act.

In addition to the Commission, the draft law designates the Minister of Digital Affairs as the notifying authority responsible for accrediting conformity assessment bodies, ensuring that AI systems meet established standards. The law

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

also outlines procedures for addressing violations of the AI Act, including mechanisms for lodging complaints and imposing administrative penalties. Decisions made by the Commission can be appealed to the District Court in Warsaw, specifically the Court of Competition and Consumer Protection. This legislative effort reflects Poland's commitment to fostering a secure and innovative AI ecosystem, aligning with broader European objectives to regulate and promote artificial intelligence responsibly. The Ministry of Digital Affairs initiated a public consultation to submit comments, questions, suggestions, and recommendations regarding the implementation of the EU AI Act by the end of December 2024.⁴⁵⁶⁹

Data Protection

Since Poland is an EU Member State, the General Data Protection Regulation (GDPR)⁴⁵⁷⁰ is directly applicable in Poland and to Poles. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”⁴⁵⁷¹ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. The Polish Personal Data Protection Act (PDPA) of 10 May 2018 also entered into force on 25 May 2018. It aims to help implement the GDPR in Poland. The old Personal Data Protection Act of 29 August 1997 has been repealed. The PDPA is accompanied by the 2019 GDPR Implementation Act. The Implementation Act amended Polish sectoral laws, such as labor, consumer protection, insurance, banking or telecommunication laws, in order to ensure compliance with the GDPR.

Poland transposed the EU Data Protection Law Enforcement Directive (LED)⁴⁵⁷². “The directive [will] ensure that the personal data of victims, witnesses,

⁴⁵⁶⁹ Service of Republic of Poland, *The Ministry of Digital Affairs Invites You to Participate in the Implementation of the AI Act*, gov.pl (Sept. 27, 2024), <https://www.gov.pl/web/cyfryzacja/ministerstwo-cyfryzacji-zaprasza-do-udzialu-w-pracach-nad-wdrozeniem-ai-act>

⁴⁵⁷² *Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and*

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”⁴⁵⁷³ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.⁴⁵⁷⁴

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Poland is also a member of the Council of Europe and ratified the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.⁴⁵⁷⁵

The Polish data protection authority (DPA) is called the Office of Personal Data Protection (*Urząd Ochrony Danych Osobowych*).⁴⁵⁷⁶ In December 2022, President of the Personal Data Protection Office approved the first Polish code of conduct compliant with the GDPR. The code of conduct, developed by the Federation of Healthcare Employers' Unions (FZPOZ), concerns the protection of personal data processed in small medical facilities.

The Polish supervisory authority has also granted accreditation to RS Jamano, which will act as a monitoring body for the application of the code. The Polish DPA stated, “the purpose of the code of conduct is to ensure the protection of the personal data of patients and other persons in healthcare facilities. Certainly, the adopted code of conduct will not only help medical facilities to comply with the requirements of the GDPR but also raise awareness of data protection among patients. Raising awareness and broadening of knowledge of the role of personal data protection and building appropriate attitudes among both controllers and

citizens is a process in which the Personal Data Protection Office is actively involved.”⁴⁵⁷⁷

The Polish DPA is a member of the Global Privacy Assembly (GPA) since 2002. The DPA co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence⁴⁵⁷⁸ and the 2020 GPA Resolution on AI Accountability.⁴⁵⁷⁹ However, it did not endorse the 2022 GPA Resolution on Facial Recognition Technology⁴⁵⁸⁰ or the 2023 GPA Resolution on Generative AI.⁴⁵⁸¹

Regarding data retention, the Polish DPA took the position that a controller should delete the data, right after a relationship with a data subject ends. As a result, the controller cannot claim it has a legitimate interest to keep the data for the purpose of potential future legal claims. Polish courts overturned such decisions, stating a controller cannot predict if and when a data subject may raise a claim. But this does not exclude such claims being raised in the future, and the controller has a right to store data to defend itself or exercise its claims.⁴⁵⁸²

In March 2019, the Polish DPA fined Bisnode, a digital marketing company, €220,000 for not notifying data subjects it had acquired their personal data through data scraping methods. The data protection authority ordered the company to reach out directly to these individuals, stating that a notice on its website would not be sufficient notification. It is to be noted that the company had reached out to 679,000 persons whose email addresses it had access to, but did not

reach out directly to the data subjects in relation to the 5.7 million other records, which it had estimated would cost it €8 million.⁴⁵⁸³

The Polish government introduced a draft act on data management in September 2024. The act aims to implement missing solutions according to the Data Governance Act (DGA) by establishing regulatory frameworks, designating responsible entities, and ensuring procedural compliance and data reuse for public sector data. The approach centers on regulating only those areas where the EU explicitly allows or requires Member State intervention. The proposed measures include designating specific bodies and authorities for implementing DGA's key elements, including data management, single information points, appeals processes, data brokerage, and data altruism.

The President of the Central Statistical Office (GUS) will oversee re-use provisions for protected data, while the Ministry of Digital Affairs will serve as the central information point for accessible data resources, supporting data re-use under DGA guidelines. To ensure compliance and proper oversight, the draft law designates the Minister of Digital Affairs as the primary appeals body for decisions on protected data re-use and the President of the Office for Personal Data Protection as the authority for data brokerage services and registration of data altruism organizations. These roles ensure that public sector data access, data brokerage, and data altruism activities comply with DGA standards. The regulatory environment within the draft law also aligns with established EU data regulations such as the GDPR, creating a consistent and integrated approach to data governance, monitoring, and penalties for non-compliance, thereby promoting a secure and efficient data-sharing ecosystem within Poland.⁴⁵⁸⁴

Algorithmic Transparency

Poland is subject to the GDPR and Convention 108+. Poles have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁴⁵⁸⁵

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁴⁵⁸⁶ specifically emphasizes requirements on transparency, accountability and effective remedies.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

With regard to transparency, the Recommendation provides that “States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs.”⁴⁵⁸⁷

The Recommendation also clarifies with regard to “contestability: Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily-readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”⁴⁵⁸⁸

In 2019, while taking steps to implement the GDPR, Poland provided all banking customers with the right to an explanation regarding their creditworthiness assessment when applying for a loan.⁴⁵⁸⁹ STIR—*System Teleinformatyczny Izby Rozliczeniowej*—is a government tool that analyses information collected by financial institutions to detect illegal activity. If suspicion arises, the financial institution can block a flagged account for 72 hours at the request of the tax authorities.⁴⁵⁹⁰ On the other hand, algorithms are used by Polish courts to aid in their decision-making, such as when assessing cases or rendering judgments. While some believe AI will transform the justice system, others are

Center for AI and Digital Policy

concerned about the impact on judge's decisions as well as the lack of transparency and critical evaluation.⁴⁵⁹¹

Unemployment Scoring System

In 2014, an unemployment scoring system was introduced in Poland. The profiling system was dividing unemployed people into three categories based on their responses to a series of questions asked during a computer-based interview.⁴⁵⁹² In a report on the issue, the NGO, Panoptykon, described the process as the computer system calculating the “employment potential” of a given person on the basis of the provided answers.⁴⁵⁹³ The amount of assistance the individual received was determined by their categorization. The Polish data protection supervisory authority expressed reservations regarding the use of profiling in this context. In particular, concerns were raised regarding the protection of personal data and the absence of a transparent procedure to facilitate appeals.⁴⁵⁹⁴ In addition, concerns were raised by the Polish Supreme Audit Office (Najwyższa Izba Kontroli) and the Human Rights Commissioner. Eventually, Poland's Constitutional Court found the system to be in breach of the Polish Constitution. The system was abolished by the end of 2019.⁴⁵⁹⁵

Ultima Ratio

Poland has begun an online arbitration court which incorporates AI techniques. Ultimately, according to *Polish Science*, “artificial intelligence will automatically prepare a ready draft judgment together with justification, processing for this purpose the data and positions of the parties collected in the course of the proceedings.”⁴⁵⁹⁶ The first modules began in 2020. Ultimately, artificial intelligence will automatically prepare a ready draft judgment together with justification, processing for this purpose the data and positions of the parties

collected in the course of the proceedings. The Ultima Ratio judgment has the same legal force as a decision before a common court.⁴⁵⁹⁷ The main legal issue raised by Ultima Ratio is whether it is compatible with Article 47 of the EU Charter on Fundamental Rights, which guarantees the right to a fair trial before an independent and impartial court.

Environmental Impact of AI

Poland has included the government's commitment to sustainable objectives into its 2035 Digitization Strategy and policy documents on AI. The draft Digitization Strategy until 2035 sets specific objectives to be reached within this timeframe, and one of them concerns the support for sustainable development in connection with the green energy transition and broader EU goals.⁴⁵⁹⁸ Similarly, Poland's National AI Strategy recommends the implementation of trustworthy AI systems that enhance positive social change and support sustainable development as well as ecological responsibility.⁴⁵⁹⁹ Furthermore, the Policy for the Development of AI in Poland fosters an AI ecosystem based on OECD principles such as inclusive and sustainable growth and well-being.⁴⁶⁰⁰ The document highlights the opportunity offered by AI to positively impact the energy sector as well as climate and the environment at large by allowing the integration and stabilization of renewable energy sources and the efficient management of energy consumption.⁴⁶⁰¹ Environmental protection, water retention, agriculture, and therefore land use are mentioned among the sectors for which the development of AI-based solutions is encouraged.⁴⁶⁰² Although a dedicated action plan for implementing environmental sustainability objectives is not yet present in Poland's AI regulatory framework, the inclusion of sustainability goals within the country's policy documents on AI establishes a positive foundation for advancing these objectives.

Lethal Autonomous Weapons

Poland was among the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”⁴⁶⁰³

At the 78th UN General Assembly First Committee in 2023, Poland voted in favor of resolution L.56⁴⁶⁰⁴ on autonomous weapons systems, along with 163 other states.⁴⁶⁰⁵ The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Poland participated in the REAIM international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands in February 2023. At the end of the Summit, Government representatives, including Poland, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.⁴⁶⁰⁶ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” States also “stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts,

opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain.”⁴⁶⁰⁷

Poland also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁴⁶⁰⁸

The Responsible AI in the Military Domain (REAIM) Summit 2024 in Seoul, South Korea was a follow-up to the inaugural summit held in The Hague in 2023. The event aimed to forge a global consensus on the responsible development and use of AI in military applications. The “Blueprint for Action” adopted at the summit provides a roadmap for setting guidelines on AI use in the military including emphasizing transparency, accountability, and human oversight. Poland is one of the 63 countries that endorsed the Blueprint for Action.⁴⁶⁰⁹

Human Rights

Poland is a member of the European Union and Council of Europe and is, accordingly, committed to the upholding of the Charter of Fundamental Rights and the European Convention on Human Rights. In addition, Poland has acceded to international human rights treaties and has signed the Universal Declaration of Human Rights. The Polish Constitution also grants basic rights to citizens and includes prohibitions against discrimination.⁴⁶¹⁰ While Poland is considered “Free” with a score of 80/100 in the Freedom House 2024 Freedom in the World Report, concerns were raised about the fairness of parliamentary elections, media freedom, judicial reforms, and LGBT+ rights.⁴⁶¹¹

While NGOs rightly highlight several ongoing human rights issues, the government coalition formed in December 2023 has been working to restore judicial independence and bring Poland’s policies in line with European Union

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

standards, in contrast to the previous conservative administration.⁴⁶¹² The EU has in fact decided to end the procedure for rule of law scrutiny in light of the country's commitment to reinvigorate democracy. Nevertheless, concerns remain over Poland's political transition as the new government's action plan has not been fully implemented yet, highlighting the need to continue monitoring the status of rule of law and fundamental rights.⁴⁶¹³ Poland's ranking in the World Press Freedom Index has increased from 66th to 47th place in 2024.⁴⁶¹⁴

In 2020, the Presidency of the Council of the EU failed to secure unanimous support from the Member States for its conclusions on the application of the Charter of Fundamental Rights in the AI context.⁴⁶¹⁵ Poland objected to the inclusion of "gender equality." Poland was the only member state in the European Union to oppose the resolution on AI and fundamental rights.⁴⁶¹⁶ Although Ambassador Andrzej Szoros said that Poland will work to support the conclusions in the future, he also stated that: "The Treaties refer to equality between women and men, similar to the Charter of Fundamental Rights. The meaning of 'gender' is unclear; the lack of definition and unambiguous understanding for all member states may cause semantic problems. Neither the Treaties nor the Charter of Fundamental Rights use the term 'gender.'"⁴⁶¹⁷

The position occurs in the context of the Polish government opposition to the Convention on Preventing and Combating Violence against Women and Domestic Violence.⁴⁶¹⁸ While consensus was not reached as regards the Presidency's conclusions, the Presidency stressed that the core elements of the conclusions, anchoring the Union's fundamental rights and values in the age of digitalization, fostering the EU's digital sovereignty and actively participating in

the global debate on the use of artificial intelligence with a view to shaping the international framework, were shared by all delegations.⁴⁶¹⁹

OECD / G20 AI Principles

As a member of the OECD, Poland is committed to the OECD Principles on Artificial Intelligence and references the OECD principles in its AI Policy document.

In December 2020, Poland joined the Global Partnership on AI (GPAI), a multi-stakeholder initiative that aims to foster international cooperation on AI research and applied activities and is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”⁴⁶²⁰

Council of Europe AI Treaty

Poland contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Framework Convention on artificial intelligence and human rights, democracy, and the rule of law was opened for signature in September 2024.⁴⁶²¹ The treaty lays forth a legislative framework that addresses the hazards that AI systems may pose and spans their whole lifecycle, all the while encouraging ethical research.⁴⁶²² It is also open to non-members of the CoE. The European Union has endorsed the CoE Treaty, but Poland has not individually signed it.⁴⁶²³

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

Poland is a member of the UNESCO and has endorsed the 2021 UNESCO Recommendation on AI Ethics.⁴⁶²⁴ In 2024, however, Poland did not apply UNESCO's Readiness Assessment Methodology (RAM) to implement the recommendation on the ethics of AI. This methodology is designed to help nations assess and strengthen their preparedness to address ethical issues in AI by evaluating legal, institutional, and policy frameworks. Despite the importance of RAM in promoting responsible and ethical AI governance, Poland has not undertaken this assessment, leaving gaps in aligning with UNESCO's guidelines. This absence of action may affect Poland's ability to ensure AI is developed and used in ways that protect human rights, promote transparency, and prevent misuse.⁴⁶²⁵

Evaluation

Poland's development in AI governance in 2024 reflects both promising strides and areas requiring refinement. The introduction of the draft law to incorporate the EU AI Act into national legislation signifies Poland's commitment to align with EU standards, establishing the Committee on Development and Security of Artificial Intelligence to oversee and regulate AI applications. This framework provides a structured approach to managing high-risk AI, engaging with stakeholders, and ensuring compliance. However, while these measures promote ethical and safe AI deployment, challenges remain in balancing regulatory thoroughness with innovation flexibility, particularly as the AI sector rapidly evolves. As a member of the EU, the Council of Europe, and the OECD, Poland has made commitments to upholding human rights and ethics and endorsed the OECD AI Principles. However, it still has substantial ground to cover in advancing human rights, for instance, by implementing the UNESCO recommendation on the Ethics of AI and signing the CoE Treaty.

The Polish government has made notable progress in reinforcing data protection and cybersecurity, with amendments to the national cybersecurity system and a new data management act addressing critical aspects of AI-related data and security. The cybersecurity amendments provide a foundation for risk management and incident reporting, fostering resilience against emerging threats. The Data Management Act aligns with the Data Governance Act, designating roles for data stewardship and reuse of public sector data. In addition, Poland endorsed the “Blueprint for Action”, a global roadmap for setting guidelines on AI use in the military including emphasizing transparency, accountability, and human

oversight and further attention to practical enforcement and interagency coordination will be essential. Finally, despite the absence of a concrete action plan towards environmental sustainability objectives through AI, Poland's commitment to integrating sustainable development into the use of AI sets a constructive framework for leveraging AI solutions to achieve broader environmental and societal targets.

Portugal

In 2024, Portugal advanced toward implementation of the EU AI Act by naming 14 agencies as supervisory authorities. Portugal updated policy commitments and implementation with revisions to the Digital Strategy 2030 and AI Portugal 2030. Portugal also supported the EU signature of the Council of Europe AI Treaty.

National AI Strategy

Portugal released its national artificial intelligence (AI) strategy under the name AI Portugal 2030 in February 2019.⁴⁶²⁶ The strategy is promoted by the technical coordination of the National Initiative Digital Competencies e.2030 program,⁴⁶²⁷ in cooperation with the Portuguese Science and Technology Foundation (*Fundação para a Ciência e a Tecnologia*, FCT), the National Innovation Agency, the Living Science Academy and the Agency for Administrative Modernization (AMA).

The implementation of the national strategy is supposed to be monitored by a committee coordinated by the FCT and reviewed annually.⁴⁶²⁸ Representatives of the Portuguese government shared in 2024 that the work on drafting the National Data Strategy, National Web 3.0 Strategy, and review of the National Strategy for AI had been completed at the end of 2023 and handed over to the Executive.⁴⁶²⁹ The portfolio was passed on to the new Government in 2024

⁴⁶²⁶ Portugal INCoDe.2030, *AI Portugal 2030* (Feb. 2019), <https://www.portugal.gov.pt/pt/gc21/comunicacao/documento?i=estrategia-inteligencia-artificial-2030>.

⁴⁶²⁷ Portugal INCoDe.2030 is an integrated public policy initiative dedicated to strengthening digital skills. It aims to increase the knowledge, qualifications and skills of the population, as well as to improve Portugal's positioning and competitiveness in the international context. In order to achieve these goals five lines of action have been defined: inclusion, education, qualification, specialization, and research. INCoDe.2030, <https://www.incode2030.gov.pt/>.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

and it was announced that the documents would soon be put out for public consultation.

AI Portugal 2030 is considered an important milestone for AI in Portugal. The aim is to promote research and innovation in AI for its development and application in the public and private sectors. One of the main goals of AI Portugal 2030 is to “foster a strong investment in AI at national and European levels, mobilise key actors, identify key areas for development and mitigate risks for the citizens and society.”⁴⁶³⁰

The general objectives to reach by 2030 are: (1) Added economic growth;⁴⁶³¹ (2) Scientific excellence;⁴⁶³² (3) Human development, which includes increasing “the qualifications of the labour force, in particular the technological qualifications, while promoting inclusion and awareness at all levels of education”⁴⁶³³ and taking into account the need for “societal robustness by building a clear vision of the impacts of AI on democracy, privacy, security, fairness, the labour market, governmental and commercial transparency and equity. Although AI is highly disruptive in all these dimensions it also provides, if made ethical-by-design, a set of powerful tools to actually improve society and democracy.”⁴⁶³⁴

The defined action lines to achieve these objectives comprise:

- Inclusion and education. These are considered essential to provide the Portuguese population with minimum knowledge and skills to use the tools available, understand the benefits thereof and also “the risks and threats they have to face, from being screened and targeted with false information to being driven to options that are not necessarily in their benefit.”⁴⁶³⁵ It is further stated that “safety and privacy are critical issues where an acute sense of risk and responsibility should be achieved.”⁴⁶³⁶ “Young students should understand the risks and threats that they face in the same way as the rest of the community aggravated with the fact that they spend most of their time immersed in cyberspace with the false feeling that since they are “digital natives”, so at ease with technology and devices, their – frail and superficial - expertise protects them from hazards and attacks.”⁴⁶³⁷
- Qualification and specialization. AI brings enormous potential for productivity growth in several sectors, but it requires a qualified workforce trained to

identify AI opportunities, develop engineering solutions, adapt working environments, and deploy solutions following safe and ethical standards.⁴⁶³⁸

- Research, which should also address the challenges involved in “building trust through data curation in order to avoid biases assuring transparency in the way judgements are made promoting accountability and explainability.”⁴⁶³⁹

AI Portugal 2030 features a human-centered approach. “Portugal’s AI Strategy will be based on the fundamental principle of not compromising the dignity of citizens, strongly anchored by the promotion of wellbeing, fairness and quality of life.”⁴⁶⁴⁰ “People are the central element of research, innovation, deployment and usage of any AI manifestation.”⁴⁶⁴¹ According with the vision set forth in the AI Portugal 2030, “AI will improve the quality of services and the efficiency of processes while guarantying fairness, wellbeing and quality of life.”⁴⁶⁴² The promotion of a better society should be encompassed by “strong ethical guidelines” protecting “the fundamental rights of citizens and core values.”⁴⁶⁴³

AI Portugal 2030 also establishes specific steps to uphold its core values, such as human-centered AI, and to understand its impact on society. These steps are to:

1. “Define regulatory frameworks (also through the creation of regulatory sandboxes);”
2. “Define and deploy guidelines for ethical-by-design AI through an ethical committee for AI and automation;”
3. “Spread awareness on AI and technology in the entire population to promote inclusion;” and
4. “Study the impacts of AI on society (i.e., employment, democracy, and fairness) through focused observations and by promoting research in the respective scientific areas.”⁴⁶⁴⁴

To face “societal challenges brought by AI” in terms of “Ethics and safety,” the AI Portugal 2030 mentions that it will be necessary to apply “best practices to assess AI projects in terms of risks to safety and ethics and mechanisms to detect and prevent misuse of advanced AI techniques. The legal framework will have to be adjusted to determine liability in conflicts with the involvement of AI decision making.”⁴⁶⁴⁵

⁴⁶⁴⁵ *Ibid*, p. 35

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

At European and international levels, AI Portugal 2030 also lists some related objectives such as “Guarantee[ing] that AI is safely and ethically applied to the various domains”; “Help[ing] companies and regulators find appropriate legal frameworks”; “Further promot[ing] the participation in the European effort for developing regulation and protocols for an Ethical and Secure AI”; and “Develop[ing] regulatory sandboxes articulated with the EU.”⁴⁶⁴⁶

In October of 2020, the Portuguese government, along with thirteen other EU Member States published a position paper on innovative and trustworthy AI.⁴⁶⁴⁷ This paper sets out two visions for the EU’s development of AI: (1) promoting innovation, while managing risks through a clear framework and (2) establishing trustworthy AI as a competitive advantage. The countries call for a borderless single market for AI in the EU. They state that “[t]he main aim must be to create a common framework where trustworthy and human-centric AI goes hand in hand with innovation, economic growth, and competitiveness in order to protect our society, maintain our high-quality public service, and benefit our citizens and businesses. This can help the EU to protect and empower its citizens, stimulate innovation and progress in society, and ensure its values are protected.”

Regarding public administration and its modernization, AI Portugal 2030 also recalls the objective of ensuring the ethical use of AI.⁴⁶⁴⁸ Portugal further implemented such objective by means of for an Ethical, Transparent and Accountable AI in Public Administration developed by AMA and published in February 2022.⁴⁶⁴⁹

The AI Guide sets out the main guidelines for implementing AI solutions in the Public Administration. The Guide outlines a set of values and principles in line with human rights protection, and addresses the themes of inclusion, equality, sustainable development and well-being. Harmful effects associated to the use of AI systems are also tackled, along with the importance of implementing rigorous monitoring, auditing, security and safety mechanisms in such cases. Although it was developed for the public sector, the AI Guide is also intended to serve as a reference for the private sector: “From a reflection that considers both discussions, it is intended to ensure the protection of democracy, the rule of law and fundamental rights, with the operationalization of these concepts in the way AI

services are thought, designed, and provided, both in the public and private sectors.”⁴⁶⁵⁰ Relatedly, a risk assessment app has been developed based on two aspects: identification and mitigation, thus allowing support to public policies related to Data Science, Big Data, Machine Learning (ML), and AI, namely, to disseminate best practices and to establish assessment criteria that may support prior opinions and funding applications.⁴⁶⁵¹

The AI Guide provides an extensive list of safeguards that the government must establish concerning the implementation of AI. These are:

- The respect for privacy, the inviolability of human rights and the principle of social equity;
- The planning of security mechanisms to protect systems from errors, such as distortions, discrimination, manipulation and misuse of data;
- The mitigation of risks associated with its implementation and change;
- The regulation of data use;
- Compliance with a code of ethics;
- The efficiency and sustainability of technologies while enabling them to create benefits for the citizen, society, the environment, the economy and the country;
- Individual participation, social inclusion, freedom of action and self-determination of each citizen in relation to AI;
- Encouraging investment in AI research and development;
- Promoting the potential of emerging technologies;
- The growth of the business fabric, including small and medium enterprises;
- The creation of value in public administration and society; and
- The integration of an employment policy that facilitates the transition.⁴⁶⁵²

The AI Guide further highlights concerns about the impact of AI programs and applications on human rights, and the importance of regulation to address them. The Guide specifies that “the values and principles should be respected by all actors during the life cycle of AI systems, should be promoted through continuous evaluation and evolution of existing laws, regulations, and various international guidelines, notably in relation to human rights, and be aligned with the goals of social, political, environmental, educational, scientific, and economic sustainability.”⁴⁶⁵³

The AMA published an interim report on the status of the implementation of the Strategy for the Digital Transformation of Public Administration 2021–

⁴⁶⁵⁰ Ibid, p. 6

2026, at the end of the first three-year period in September 2024.⁴⁶⁵⁴ The report stated that the progress achieved had contributed to the fulfillment of 12 out of the 40 strategic objectives of ETDAP 2021–2026, through the completion of 39 cross-cutting actions and 124 sectoral initiatives. A total investment of approximately 217 million euros was planned, of which 26.9 million euros has already been executed with the 2021–2023 Action Plan and 46 million euros with sectoral initiatives.

One of the key pillars of the 2020 Action Plan for Digital Transition⁴⁶⁵⁵ consists in the Digitalization of the State. The Action Plan refers to the need to define and implement a National Smart Cities Strategy. A working group was established to present a proposal for a national strategy. The working group has defined some guidance on Smart cities,⁴⁶⁵⁶ however, no further development has taken place to date.

The Strategy for the Digital Transformation of Public Administration 2021–2026 was approved in 2021.⁴⁶⁵⁷ The 2021 Strategy established as one of its objectives the assessment of all ongoing artificial intelligence projects regarding criteria ethics and responsibility, and such a report took place in 2024.⁴⁶⁵⁸

EU Digital Services Act

As an EU member state, Portugal shall apply the EU Digital Services Act (DSA).⁴⁶⁵⁹ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation. Signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of

political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

In the beginning of 2024, the Portuguese government designated the Portuguese National Communication Authority (*Autoridade Nacional de Comunicações*, ANACOM—the national body tasked with the regulation of the communication sector—as Digital Services Coordinator (DSC).⁴⁶⁶⁰ As a DSC, ANACOM sits on the European Board for Digital Services.⁴⁶⁶¹ This designation, however, does not give the competent authorities, including ANACOM, formal powers such as the imposition of sanctions for DSA noncompliance.

In further support of the alignment of national laws with the DSA, the Portuguese Council of Ministers set up a working group under ANACOM coordination. The group includes two other competent authorities: the Regulator for Social Communication (*Entidade Reguladora para a Comunicação Social*, ERC) and the General Inspectorate for Cultural Activities (*Inspecção-Geral das Atividades Culturais*, IGAC). The group will oversee the needs for legal and regulatory changes to ensure the application of the DSA.⁴⁶⁶²

In its draft strategic guidelines and objectives for the triennial period 2025–2027, ANACOM committed to “take on a relevant role in defining digital policies, namely by coordinating the implementation of the applicable legal framework and the protection of users as Digital Services Coordinator.” ANACOM will “actively participate in the discussion of developments concerning the supervision and regulation of digital services and markets, Artificial Intelligence, international connectivity, data regulation, quantum applicability and processing capacity.”⁴⁶⁶³ The regulator opened the draft for public consultation. The results are currently under review.⁴⁶⁶⁴

Contributing to the implementation of the DSA and the EU Code of Practice on Disinformation, ANACOM issued a statement informing citizens on opportunities to report illegal or harmful content or disinformation in the context of the European

Parliament elections 2024.⁴⁶⁶⁵ Similarly, ERC launched an awareness campaign on the risks of disinformation during the election period.⁴⁶⁶⁶ The XXIV Constitutional Government also made a commitment to “encourage the development of codes of conduct by political parties and agents” with “mechanisms to monitor and report cases of disinformation and fake news, namely through the use of generative artificial intelligence.”⁴⁶⁶⁷

Despite these efforts, in April 2024, the European Commission opened infringement procedures against Portugal and five other EU countries, stating that “despite designating their Digital Services Coordinators, Cyprus, Czechia and Portugal still have to empower them with the necessary powers and competences to carry out their tasks, including the imposition of sanctions in cases of non-compliance.”⁴⁶⁶⁸ A second round of communication from the Commission followed in October 2024, stating that “despite exchanges since April, these Member States have still not empowered their designated Digital Service Coordinators, to implement the Digital Services Act.” In case of continued non-compliance, the Commission “may refer the Member States to the Court of Justice of the European Union.”⁴⁶⁶⁹

EU AI Act

As an EU member State, Portugal is bound by the EU AI Act.⁴⁶⁷⁰ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

Center for AI and Digital Policy

The Portuguese Ministry of Youth and Modernization named 14 governmental agencies charged with the protection of fundamental rights under Article 77 of the EU AI Act.⁴⁶⁷¹

Although Portugal has yet to name a national competent authority, the President of the National Data Protection Commission (*Comissão Nacional de Proteção de Dados*, CNPD) made a public statement in September 2024 stating that “it seems [...] that the CNPD, as Portugal's National Data Protection Authority, has a special vocation to be the Supervisory Authority within the scope of the AI Act.”⁴⁶⁷² CNPD's 2025 Activity Plan outlines key actions related to the governance of AI such as strengthening capacities and improving training in the context of AI, as well as increasing the effectiveness of sanctioning activities.⁴⁶⁷³

ANACOM has also publicly supported the EU AI Act. At the Fifth Global Standards Symposium,⁴⁶⁷⁴ the Chairwoman of the Board of Directors of ANACOM “referred to the need to balance stimuli for innovation in Artificial Intelligence (AI) with ethical considerations.” She also emphasized “the crucial importance of establishing ethical frameworks in AI, which protect human rights, privacy and promote justice and responsibility [...] integrating these principles into all phases of AI development.”⁴⁶⁷⁵

Finally, since 2024, the Agency for Administrative Modernization (*Agência para a Modernização Administrativa*, AMA) has been part of the EU AI Board,⁴⁶⁷⁶ contributing to “the next steps to be taken in creating rules and supporting the development of Artificial Intelligence solutions, ensuring the evolution of technology and the security of European citizens and companies” in light of the implementation of the EU AI Act.

Public Participation

AI Portugal 2030 clearly acknowledges that “[T]he opacity often seen around the implications of AI may be an obstacle for the wider society to make sense of it and take part in the dialogue. AI needs to integrate cognitive diversity to foster social inclusion and transformation. Therefore, we need a diversity of specialists that will foster different perspectives to better solve complex problems. But we also need the whole population to take part in the debate and to get involved in designing AI by voicing priorities of what AI should address in a human-centered approach.”⁴⁶⁷⁷

The definition and adoption of AI Portugal 2030 was preceded by several public discussions,⁴⁶⁷⁸ notably:

- The First National Forum on Digital Skills - INCoDe.2030, including specific sessions on AI (December 7, 2017);
- The preparatory meetings and consultations for developing new research activities and further developing competences in AI within Public Administration in Portugal, leading to the approval of the AI Guide (January–February 2018);
- The preparatory meetings and consultations for AI Portugal 2030 strategy (November 2018);
- Consultations with different entities and business enterprises (January–February 2019);
- Presentation and public discussion of the AI Portugal 2030 strategy at FCUP, Porto, with representatives of research centers working on AI (February 15, 2019);
- Presentation and public discussion of a draft version of AI Portugal 2030 in the second National Forum on Digital Skills - INCoDe.2030 (December 12, 2018);
- Launch of a call within the System to Support the Modernisation and Capacitation of Public Administration (SAMA2020) to finance Data Science and Artificial Intelligence projects within Public Administration (January 14, 2019);
- Presentation and public discussion of the AI Portugal 2030 strategy at INL, Braga, with EC’s Deputy DG Connect (February 12, 2019);
- Presentation and public discussion of the AI Portugal 2030 strategy in Porto, together with the presentation of OECD 2018 S&T Outlook (February 25, 2019); and

- Presentation and public discussion about the implications of AI Portugal 2030 strategy in Fórum de Governação da Internet 2022 in Lisboa, with multiple stakeholders.

The strategy adopted by Portugal involves a multisectoral approach that brings together many representatives from research, academia, companies, and public administration.⁴⁶⁷⁹ Some sectoral initiatives are also worth mentioning.

The AI Guide mentions the goal of bringing “into public discussion the need to establish the pillars of regulation, supervision, leadership, and governance, develop a code of ethics, and foster regulation and laws that provide guidance and support for technological developments.”⁴⁶⁸⁰ Additionally, recognizing that the risk assessment app is an “evolving platform” and should gather contributions from its users, AMA allows users to report, at any time, any errors or elements that may benefit its development, e.g. regarding assessment dimensions or issues crucial for the risk assessment of intelligent systems.⁴⁶⁸¹ After the AI Guide was first announced in late January 2022, AMA launched a public consultation on the text of the document in February 2022, with the goal of enriching the AI Guide with the contributions of experts and society as a whole.⁴⁶⁸²

In 2021, the Office for Strategy and Planning of the Ministry of Labor, Solidarity and Social Security and the Institute of Employment and Vocational Training launched a public consultation on a Green Paper on the Future of Work.⁴⁶⁸³ The goal was to move towards a broad and comprehensive discussion of the Green Paper with the “engagement of academics, thinkers, civil society, and social partners, creating guidelines to prepare the country for the challenges of the future of work, transform uncertainties into opportunities, respond to the challenges posed by the digital revolution.”⁴⁶⁸⁴ The final version of the Green Paper mentions that “the entire Paper, from the beginning to the final stages, was based on a process of participatory consultation – of social partners, experts, research centers, international organizations, companies, other stakeholders,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

different areas of government - culminating in the public consultation it underwent.”⁴⁶⁸⁵

Between June and July of 2022, the Portuguese Securities and Exchange Commission (CMVM) launched a public consultation on AI in the financial sector, more precisely regarding capital markets, inviting all interested parties to contribute to the public discussion.⁴⁶⁸⁶ The objective was to “deepen knowledge on implementing this technology in the Portuguese market and identify AI tools that may be used in areas under CMVM supervision.”⁴⁶⁸⁷ It was also CMVM's goal to “foster the use of responsible AI and improve the services and tools that investors can access to have more efficiency gains and create new business models.”⁴⁶⁸⁸

The opening of the consultation was accompanied by the launch of a consultation and reflection document, in which the CMVM presented a possible definition of AI and listed the economic developments it enables and the laws that frame it. It clarified that, in the specific case of capital markets, AI has a “transformative potential”, namely with the implementation of applications that offer advice to the general public or make automated decisions “based on the analysis of large amounts of data ” or “on the interpretation of information.”⁴⁶⁸⁹ It further acknowledged risks relating to the use of AI in capital markets: “alongside the potential benefits there are risks that may arise or be enhanced by the use of AI. At the investor level, if AI systems are not properly implemented and monitored, they can lead to potentially discriminatory outcomes, unfairly rewarding certain groups at detrimental to others. Additionally, the collection, storage and extensive use of data may raise privacy and data protection issues, for example if exploited inappropriately.”⁴⁶⁹⁰

Between August and September 2024, the Business Council of the Center/Chamber of Commerce and Industry of the Center (CEC/CCIC) conducted a public consultation to address the application of AI in automated contracts and data-driven commercial practices. The consultation sought to examine “new forms of contracting enabled by smart contracts and AI, and the economic relevance of using these technologies for a successful transition to a digital economy” and to evaluate “business practices in which companies use customer data to increase revenue and/or make business decisions.”⁴⁶⁹¹

Data Protection

Since Portugal is an EU Member State, the General Data Protection Regulation (GDPR)⁴⁶⁹² is directly applicable in Portugal and to Portuguese citizens. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”⁴⁶⁹³ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. Law no. 58/2019 of 8 August 2019 (Portuguese Data Protection Law, PDPL) adapts Portuguese law to the GDPR. The Portuguese Data Protection Law revoked the 1998 data protection law, Law no. 67/98, of 26 October 1998. In September 2019, the National Commission for Data Protection (CNPd) issued a resolution stating that it will disregard the parts of the PDPL which do not comply with the GDPR.⁴⁶⁹⁴

Regarding the activities of law enforcement authorities, Portugal transposed the EU Data Protection Law Enforcement Directive (LED)⁴⁶⁹⁵ in 2019

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Law no. 59. “The directive protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”⁴⁶⁹⁶ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.⁴⁶⁹⁷

EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights.”⁴⁶⁹⁸

The CNPD decided in March 2024 to suspend, in the national territory, the collection of biometric data on the iris, eyes and face carried out by the Worldcoin Foundation, with a view to safeguard the fundamental right to the protection of personal data, especially that of minors. This is relevant considering that during the year 2024 more than 300 thousand people in Portugal had already provided their biometric data, an essential condition to receive cryptocurrency, called Worldcoin.⁴⁶⁹⁹

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Portugal is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.⁴⁷⁰⁰

Center for AI and Digital Policy

The CNPD is a member of the Global Privacy Assembly (GPA) since 2002. The CNPD co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁴⁷⁰¹ as well as the 2020 GPA Resolution on AI Accountability.⁴⁷⁰² However, it did not endorse the 2022 GPA Resolution on Facial Recognition Technology⁴⁷⁰³ or the 2023 GPA Resolution on Generative AI.⁴⁷⁰⁴

AI Oversight

Portugal has a group of agencies responsible for institutional oversight on AI systems. The Government created the Council for Digital in Public Administration (CDAP) in July 2024 with a mandate that ends in December 2028.⁴⁷⁰⁵ A key objective of the CDAP is to contribute and develop the National Digital Strategy and related Action Plan by setting strategic objectives for the advancement of public service digitalization and the State's digital transformation. This includes clearly defining actions, assigning responsibilities, developing an implementation plan, setting performance indicators, and identifying expected impacts.⁴⁷⁰⁶

The CDAP enables institutional oversight in the governance of AI systems, among other new technologies, in the public administration. It harmonizes the governmental approach to developing and using new technologies. This institution is directly relevant in AI governance considering that the National Digital Strategy includes objectives related to AI systems in diverse sectors and is positioned as an

“innovation and growth strategy to foster Artificial Intelligence in Portugal in the European context.”⁴⁷⁰⁷

As a member of the Ibero-American Network for the Protection of Personal Data (RIPD), which comprises 16 data protection authorities from 12 countries, the CNPD endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence⁴⁷⁰⁸ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.⁴⁷⁰⁹ Both have been framed in accordance with the RIPD Standards for Personal Data Protection for Ibero-American States.⁴⁷¹⁰ The guiding principles of personal data protection are: legitimization, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data and right to the limitation of treatment of personal data.

Algorithmic Transparency

Portugal is subject to the GDPR and Convention 108+. Portuguese citizens have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁴⁷¹¹

AI Portugal 2030 also considers that AI-based systems must be able to explain their decisions, on top of promoting a high level of adaptability and accountability of their decision-making, advancing accountability and fairness. In order to face “societal challenges brought by AI” in terms of “Ethics and safety,” it is clearly recognized in AI Portugal 2030 that “AI systems will make important

⁴⁷¹¹ See Recital 63 and Article 22 of the GDPR. Article 9 c) of the Convention 108+ as well as Recital 77, *Explanatory Report, Convention 108+*, p. 24, <https://rm.coe.int/convention-108-convention-for-the-protection-of-individuals-with-regar/16808b36f1>

and critical decisions autonomously” and that “society will demand transparency (the ability to explain the decisions) and audibility (the ability to trace the flow of decisions and actions from humans to algorithm) in order to promote safety and ethical principles, including privacy protection and fairness.”⁴⁷¹²

Regarding policies involving algorithmic transparency, Portugal has proposed an Open Data Strategy in the scope of Portugal INCoDe.2030 to create knowledge in the scientific area and promote the efficient use of public resources as well as transparency within public administration. The strategy takes a pragmatic approach to “build social and technical bridges that enable the sharing and reuse of data.”⁴⁷¹³ The view is that the multisectoral and transversal strategy can bring together academia, so that it can propose practical principles and limits to the implementation of the open data policy; the economic agents that will be able to exploit such data; the public administration that will use such data in its accountability and transparency mechanisms; and society that has the right to be informed and participate in the decision-making processes that involve its data.⁴⁷¹⁴

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁴⁷¹⁵ also emphasizes requirements on transparency, accountability and effective remedies, with increased requirements for higher-risk systems. The Recommendation stresses that the right to contest a decision “may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”⁴⁷¹⁶

Use of AI in Public Administration

A Council of Ministers' Resolution in July 2024 established the Council for Digital in Public Administration (CDAP) to advance digital transformation and streamline Portugal's Public Administration. CDAP is tasked with developing, monitoring, and updating the National Digital Strategy and its action plans to promote standardization, modernization, and reduced bureaucracy in public services.⁴⁷¹⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Council comprises three committees: Strategic, Operational, and Advisory. The Strategic Committee, led by the Minister for Modernization, oversees high-level strategy and coordination. The Operational Committee, managed by the AMA, is responsible for implementation. Supporting these are technical working groups of Public Administration specialists focusing on areas such as AI, data governance, and cloud technologies. An Advisory Board of independent experts offers insights on global trends and best practices.

With a mandate until December 31, 2028, the CDAP must produce regular progress reports and a final activity report. Its operations are supported by the AMA and aligned with the Public Administration Forum.

As a member of the Latin American Centre for Development Administration (CLAD),⁴⁷¹⁸ Portugal approved the Ibero American Charter on Artificial Intelligence in Civil Service. The Charter aims to provide a roadmap and common framework for CLAD member states to adapt their AI policy strategies and laws for the challenges and opportunities involved in the implementation of AI in public administration. The guiding principles are human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection.

In addition to common principles, the Charter recommends specific tools for monitoring AI impact as well as a risk classification mechanism that guardrails for high-risk use cases and prohibitions against uses that violate human rights. Prohibited uses include facial recognition systems; systems aimed at behavior and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly); and social ranking systems based on certain personality traits, individual behaviors, socio-demographic features, or economic status.⁴⁷¹⁹

Use of AI in COVID-19 Response

In 2020, the Portuguese government intended to deploy a system called Smart Crowd to help control the occupation rates of the Portuguese beaches in the context of the COVID-19 pandemic. The system involved using cameras that collected images and processed them with machine learning (ML) technology to inform users about the occupancy level of a particular beach. The Portuguese Agency for Environment (APA) requested the CNPD to analyze the Smart Crowd system.

⁴⁷¹⁸ CLAD, Ibero American Charter on Artificial Intelligence in Civil Service (2024), <https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf>

⁴⁷¹⁹ Ibid, p. 21

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In June 2020, the CNPD issued a deliberation in response to APA's request.⁴⁷²⁰ The CNPD acknowledged that “people on beaches are particularly exposed, and therefore the capture of images is likely to lead to improper use with direct repercussions on their private lives.”⁴⁷²¹

With regards to the ML technology used by the system, the CNPD noted, “The documentation provided refers in this respect to “an ML (and others) algorithm”, which run internally in the computer without recourse to external libraries or functions. However, it is neither explained which algorithm is to be applied, nor what the others are. The use of AI, in particular when it involves self-learning techniques, requires an effort of transparency precisely to create indispensable trust in its use, especially in the context of the processing of personal data. Even if one may admit that the algorithm has only the purpose of adapting the characteristics of the photograph to the external environmental conditions (e.g., luminosity, wind), as it is alleged, it is up to those who develop the system and use it to demonstrate that these technologies are not able to generate discriminatory treatments to people. Moreover, in this context, it is incomprehensible how one can refer to ‘others’, without specifying what is at stake.”⁴⁷²²

The CNPD continues explaining that: “in the same way, the processing carried out on the server—which only accepts invocations from certain IP addresses—also applies a Machine Learning algorithm, “trained through the variables it collects, namely identifying the effective areas of sand and taking into account the useful variations of the same throughout the day due to the tidal effect, so that the result returned is as reliable as possible. The machine learning algorithm is trained to learn over time with different occupation patterns.” Now, this explanation of the rationality of the algorithm, although relevant, does not demonstrate the existence of guarantees that it is sufficiently shielded against the possible application of other factors that may generate discrimination. And this is a question that is not and cannot be ignored by those who use self-learning technologies. Furthermore, nothing is made clear as to how the learning is carried out over time, and it seems essential, in order for this to occur, to confirm the acuity of the learning (by the quality of the conclusions) and change the algorithm accordingly, which, unless otherwise demonstrated, will always require human intervention.”⁴⁷²³

⁴⁷²⁰ Comissão Nacional de Proteção de Dados (CNPD), *Resolution 2020/251* (3 June 2020) <https://www.cnpd.pt/umbraco/surface/cnpdDecision/download/121802>.

⁴⁷²² Ibid, p. 3

⁴⁷²³ Ibid

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The CNPD then concluded that it “believes that the responsible party should be able to demonstrate that the machine learning algorithms are sufficiently shielded against the possible application of other factors that may generate discrimination.”⁴⁷²⁴

Facial Recognition

In September 2021, a legislative proposal aimed at regulating the use of video surveillance for security purposes was submitted to the Portuguese Parliament.⁴⁷²⁵ The draft Article 18 allowed for the use of an “analytical management system for the data captured, by application of technical criteria under the purposes for which the systems are intended”; authorized the collection of biometric data for such purposes; and established that the analytical management system “may not allow the reversal, decoding and digitalized reproduction of the image of the biometric characteristic.”⁴⁷²⁶

Upon consultation by the Committee on Constitutional Affairs, Rights, Freedoms and Guarantees of the Portuguese Parliament, the CNPD issued an opinion on the Proposal on November 4, 2021.⁴⁷²⁷ The CNPD concluded that Article 18 contains a covert provision for the use of facial recognition and criticized such provision. “The circumstance that the national legislator, in the present Proposal, incorporates in the same article the permission to use data analytics technology and the permission to process biometric data, without expressly stating the permission to use facial recognition technology, is certainly surprising, when in a democratic State governed by the rule of law the restrictions to rights, freedoms and guarantees must be clearly and exhaustively determined by law.”⁴⁷²⁸

The CNPD continues, “it is, in fact, about giving a green light to mass surveillance by security forces and services, denying any dimension of privacy that might still remain in public space (and in private space open to the public). It allows the tracking of citizens enhanced by the possibility of relating the information available in the video-surveillance systems of public and private establishments and other private spaces open to the public, to which is added the use in the daily activity of the security forces and services of portable cameras also with drones. The impact that such control can have on any democratic society is clear, due to the ease with which this tool can be used as a means of repression of freedom of expression, demonstration and assembly, as recent examples from

other parts of the world have shown”.⁴⁷²⁹ The CNPD further considered that the error rates associated with facial recognition technologies, “and especially with the relevance that ethnic or racial origin assumes in its promotion, the risk of discrimination is too great to be taken lightly in our legislation.”⁴⁷³⁰

The CNPD concluded: “In short, Article 18 of the Proposal provides for a mass surveillance system through the generic use of data analytics and facial recognition technologies, which represents a restriction of citizens' fundamental rights, without complying with the rule of law, even as regards the essential clarity and transparency regarding the provision of these restrictions, and without providing any guarantees of these rights, and therefore proves to be in breach of the requirements set out in paragraphs 2 and 3 of Article 18 of the CRP [Portuguese Constitution]. This is contrary to the requirements laid down in Article 18(2) and (3) of the Charter of Fundamental Rights of the European Union and is liable to affect the essential content of the right to respect for private life, manifestly infringing the principle of proportionality.”⁴⁷³¹

The Proposal also suffered criticism from civil society organizations. On 15 November 2021, European Digital Rights (EDRi) released a statement⁴⁷³² in which it mentioned that the Proposal put “forward sweeping measures which would permit the constant video and biometric mass surveillance of each and every person” and that such law was “likely to be incompatible with the essence of Portugal’s constitutional obligations to ensure that restrictions on fundamental rights are necessary and proportionate (Article 18(2) CRP); with Portugal’s obligations under the Charter of Fundamental Rights of the European Union (including but not limited to articles 1, 7, 8, 11, 12, 20, 21, 41, 47, 48 and 49); and the European Convention on Human Rights.”⁴⁷³³

The following aspects of the Proposal were especially criticized by EDRi: (i) the removal of “current legal safeguards limiting the use of invasive video surveillance”; (ii) the possibility of “video surveillance by aerial drones without limits”; and (iii) the possibility of combining the video surveillance networks “with facial recognition and other AI-based systems in public spaces.”⁴⁷³⁴ EDRi maintained that the combination of these measures “would be highly likely to

unduly restrict the rights and freedoms of large parts of the Portuguese population and to constitute unjustified biometric mass surveillance practices.”⁴⁷³⁵

After all the public scrutiny and intense discussion in Parliament,⁴⁷³⁶ the Proposal was sent to the Committee for final drafting and on December 29, 2021, Law 95/2021 was passed with several significant changes to the initial wording. The installation of these systems now follows several additional principles of use and general obligations, namely:

- The video surveillance systems can only be used for the purposes provided in the Internal Security Law, approved by Law No. 53/2008 of August 29, and only for specific cases established in Article 3(1);
- The use of video cameras should be regulated by the principle of proportionality (Article 4(1));
- When considering, on a case-by-case basis, the specific purpose for which the video-surveillance system is intended, the possibility and degree of affectation of personal rights arising from the use of video cameras should be considered (Article 4(3));
- The capturing of images and sounds is forbidden when such capturing directly and immediately affects the sphere of the privacy of intimate and private life (Article 4(6));
- The installation of video surveillance systems using fixed cameras is subject to authorization by the member of the government that exercises control over the requesting security force or service or the National Authority for Emergency and Civil Protection (Article 5(1));
- The application for authorization to install video surveillance systems must be accompanied by the following elements – Article 6(1):
 - Justification of the need and convenience of installing the surveillance system by video cameras;
 - Identification of the location and area covered by the capture;
 - Identification of the camera installation points;
 - Technical characteristics of the equipment used;
 - Identification of the security force service responsible for the conservation and treatment of the data;
 - Procedures for informing the public about the existence of the system;
 - Description of the criteria used in the analytic management system of the captured data;
 - Mechanisms to ensure the correct use of the recorded data;

⁴⁷³⁵ Ibid, p. 2

- Proof of approval, capacity or guarantee of financing for the installation of the equipment used and the respective maintenance costs;
- Assessment of the impact of data processing on personal data protection;
- The authorization decision is preceded by an opinion from the CNPD on the request regarding compliance with the rules on the security of the processing of the data collected and those foreseen in cases involving sensitive data (Article 5(3)); and,
- For the purposes set out in Article 3, the data processing may be underpinned by an analytical management system for the data captured, by applying technical criteria in accordance with the purposes for which the systems are intended. In this context, the capture and processing of biometric data is not permitted (Article 16 (1) and (2)).

In 2022, the Legislative Assembly of the Azores Region requested the CNPD to issue an opinion on Law Proposal 15/XII, on the first amendment to Law 95/2021, of December 29 (“Regional Proposal”).⁴⁷³⁷ This proposal was aimed exclusively at extending the purposes of Article 3 of the proposed legislation to allow for the installation and use of systems for the protection and conservation of marine environments and the conservation and recovery of marine living resources. The CNPD recommended that the capture be prohibited as required and that a specific regime be established for the use of drones for this specific purpose, with the exclusion of the coastal zone. The Regional Proposal has not yet been voted by the Legislative Assembly of the Azores Region.⁴⁷³⁸

Use of AI in Education

The Conselho Nacional de Educação (CNE) issued a recommendation on the problems and scenarios of using AI technology in exams and admission to higher education, noting that “If algorithms are useful in automating tasks, it is no less true that special care must be taken to ensure that they do not increase social inequalities or reproduce prejudices. The concerns not only stem from bias in the data, but also from the people developing the systems.”⁴⁷³⁹ The recommendation calls attention to key questions such as “what level of transparency should be

guaranteed? What risks are possible, arising from prejudices and addictions that last over time? How to minimize their existence?”⁴⁷⁴⁰

CNE also published a State of Education 2022 (2023 edition) report, reflecting on five key problematic areas that “should be considered in the development of public education policies.” AI and its relationship with the educational and training system is one of these five areas.⁴⁷⁴¹ The report states that “Ethical issues, which were barely mentioned in the early days, are now unavoidable and extremely pertinent. The reasons are legitimate fears that the autonomy of students and teachers will be compromised, that data will be collected and diverted to other purposes, and that AI will introduce additional biases into educational decisions, increasing the inequalities that already exist.”⁴⁷⁴² Within this context, CNE calls for: a long-term strategy; training for educators and administrators focused on ethical as well as technological issues, including data management; and an AI training framework that reinforces the significance of public spaces and social learning. The CNE recommendations and annual report are substantively linked with the work and guidance on AI in education by the Council of Europe, UNESCO, and the OECD.

Portugal was among the countries identified as having developed specific AI curricula for the purpose of enabling citizens to “recognize AI in their environments, understand its benefits and potential challenges, and be empowered to advocate for safe, beneficial and transparent AI technologies”⁴⁷⁴³ in a UNESCO report on mapping government-endorsed AI curricula. In this regard, the representative for Portugal stated, “We have a clear vision of the impact of technology in the future, and the need for a workforce and citizens who relate to technology in a healthy way on a daily basis. This includes the concepts, awareness, and skills to improve these areas, work with machines, and see robotics as complementary to society. This is the big picture.”⁴⁷⁴⁴

Portugal’s progress on the digital and AI learning follows attention to setting up systems for protecting children and other users during the COVID-19 pandemic. The CNPD issued guidance for the use of technologies supporting distance learning in April 2020.⁴⁷⁴⁵ The CNPD considered that distance learning

could enhance “the automated collection of information and the subsequent analysis and prediction of aspects related, namely, to intellectual skills, professional skills, personality traits, professional performance and even the users' health. This is especially evident in platforms that provide educational content specifically tailored to each user, which results in automated decision-making based on artificial intelligence systems that analyze student behaviour and performance (learning analytics).”⁴⁷⁴⁶

The CNPD further noted that the use of such technologies could pose “risks for the fundamental rights of users, in particular, the right to respect for private and family life and the right to equality, in terms of non-discrimination.”⁴⁷⁴⁷ The guidance document intends to address such risks, framing the use of technology to “a set of legal obligations and good practices that mitigate the risks to privacy and prevent discrimination against students and professionals.”⁴⁷⁴⁸

The guidance was especially aimed at data controllers and processors, as well as public bodies taking decisions involving the use of technologies that encompass automated decision-making. In this context, it encompasses a set of specific recommendations aimed at minimizing the impact on the privacy of students and teachers. Regarding the use of automated decision-making technologies, “the use of any performance analysis algorithms (learning analytics) should always be judicious and done in a fair and transparent way to the data subjects and only if any of the conditions for the lawfulness of this treatment are met. It is important to reinforce here that no educational establishment can impose the use of this specific artificial intelligence technology on its students, as such use depends on the informed, free, specific and explicit will of the student or, when minor, of the person representing them. Clear information should be given to the bearers regarding how the analysis algorithms work, namely when automated decisions are involved. And the data subject's right to obtain human intervention in the process should always be guaranteed.”⁴⁷⁴⁹

In November 2020, the Council of Europe Consultative Committee of Convention 108 issued Guidelines on Children’s Data Protection in an Education Setting, also applicable to remote e-learning solutions and services.⁴⁷⁵⁰ The Committee recalls that “The UN Convention Committee on the Rights of the Child

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

set out in 2001, that ‘Education must be provided in a way that respects the inherent dignity of the child and enables the child to express his or her views freely.’”⁴⁷⁵¹

The Committee also states that: “Stakeholders should collaborate to create a rights-respecting environment, to uphold Article 8 of the European Convention on Human Rights and protect the human dignity and fundamental freedoms of every individual, in respect of data protection.”

Use of AI in the Health Sector

The 2019 Health Data Strategy “sets out the vision, key areas and principles for secondary use of data, advanced analytics and artificial intelligence to improve the Portuguese population’s health.”⁴⁷⁵² One of the key areas identified in the Strategy concerns the legal and ethical framework that should apply to the use of a data-driven national health service. “To ensure the best possible ethical framework for secondary use of data and sustainable AI, our strategy endorses strong commitment to the foundational values of the NHS and the rule of law, as well as to the ethical principles set out in the European Commission Ethics Guidelines for Trustworthy AI.”⁴⁷⁵³

“The positive impact that big data and AI systems already have and will continue having, both in public health and healthcare must ensure that the risks and other adverse impacts with which these technologies are associated are properly and proportionately handled. Citizens and health professionals will only have confidence in information and technology development and its applications if a clear and comprehensive framework for achieving trustworthiness is in place.”⁴⁷⁵⁴ It is further stressed that: “Trustworthy secondary use of data and AI must ensure compliance with all applicable laws and regulations, ethical principles and values and robustness both from a technical and social perspective. Development, deployment and use of health information technologies and AI systems must be made in a way that adheres to ethical principles (respect for human autonomy, prevention of harm, fairness and explicability); pays attention to situations involving more vulnerable groups such as children, persons with disabilities and others at risk of exclusion; and acknowledges that these systems pose risks that may be difficult to measure or anticipate.”⁴⁷⁵⁵

The Strategy also foresees the creation of an internal Health Information and Technology Ethics Board to ensure accountability with these principles and frameworks.⁴⁷⁵⁶ The Strategy provides that “accountability frameworks, including disclaimers as well as review and redress mechanisms should be facilitated by traceability and auditability procedures, particularly when dealing with AI systems in critical contexts or situations.”⁴⁷⁵⁷ Such a Board, however, has not yet been created.

Use of AI in Labor Relations

The 2022 Green Paper points out ways “to use artificial intelligence to minimize new risks, ensuring privacy and data protection, and also to take advantage of new technologies as a way of eliminating bureaucracy and ensuring greater effectiveness in the relationship between the State and citizens and businesses.”⁴⁷⁵⁸

The document comments on risks involved in the use of AI in the labour market, noting, for instance, that “AI is also expected to impact more strongly on social groups such as young people and women, since the risk of automation is higher among jobs performed by these groups. Moreover, women are under-represented in the STEM professional fields and AI can reinforce algorithmic gender bias and discrimination, especially if the machine learning teams that define how the algorithm works are not more diverse in terms of socio-economics, gender and ethnicity.”⁴⁷⁵⁹

“The lack of transparency and explanation about how the algorithms’ decisions and predictions work can lead to the exclusion of jobseekers due to factors unrelated to the profile of the job to be filled. This can also lead to workers’ insecurity. AI, by enabling the monitoring of workers’ performance, can increase pressure on workers and increase stress regarding productivity and how bosses interpret information.”⁴⁷⁶⁰

The Green Paper further acknowledges risks relating to automated management. “The use of algorithmic management has been on the rise and was strongly boosted with the COVID-19 pandemic through the use of remote working software that enables the collection and monitoring of work performance data. Although this type of algorithmic management has essentially emerged in the collaborative economy for work on digital platforms, as Adams-Prassl (2020)

points out, it is now commonplace in various industries, and is used to support management in information gathering, information processing and worker control based on that gathered information, often in a non-transparent manner.”⁴⁷⁶¹

The Green Paper contains a section with guidelines for reflection on public policies for the future of work in Portugal. The guidelines concerning technological diversity, AI and algorithms include a recommendation to “regulate the use of algorithms in their different dimensions, so as to promote transparency and responsibility in their use, particularly in the context of employment relations.”⁴⁷⁶² This is followed by a recommendation to “encourage, in particular, regulation of the use of algorithms in collective bargaining, involving social partners and ensuring that the issue is dealt with at the level of collective bargaining agreements, so as to ensure the appropriate adequacy of AI and to reflect the specific needs of each sector.”⁴⁷⁶³

The Green Paper also includes a recommendation to “introduce provisions in legislation that minimise the new risks associated with autonomous AI behaviour by setting requirements to ensure the protection of privacy and personal data, equality and non-discrimination (see specific points for further details), ethics, transparency and the explainability of algorithm-based systems, both in the selection of job applicants and in the performance of the work contract and the monitoring of the worker’s professional activity.”⁴⁷⁶⁴

Another recommendation seeks to “promote trusted AI by investing in infrastructure development, the integrated and regulated progress of the algorithmic bases of AI, improved use of public and industry data and the creation of data repositories.”⁴⁷⁶⁵

Finally, the Green Paper recommends that Portugal “invest, in coordination with universities, research centers and other agents, in building the skills of the State and Public Administration in the use of AI and its potential, so as to ensure the existence of public competence centers and the capacity for adequate regulation and supervision of the use of AI in different domains, including the labour market; encourage the use of AI in the public sector, with full respect for the ethical principles that should underlie it (see point on Public Administration).”⁴⁷⁶⁶

Amendments to the Portuguese Labor Code⁴⁷⁶⁷ in 2023 were introduced to integrate the use of algorithms and artificial intelligence within the scope of the law.⁴⁷⁶⁸ The changes to Article 3 allow for the conclusion of collective labor agreements in relation to AI use.⁴⁷⁶⁹ The updated Article 24 provides that “The worker or job seeker has the right to equal opportunities and treatment with regard to access to employment, training and promotion or professional career and working conditions” including “in the case of decision-making based on algorithms or other artificial intelligence systems.”⁴⁷⁷⁰ The revised Articles 106, 424, and 466 affirm, respectively, the individual and collective (workers’ committee and worker unions) right of workers to receive information from their employer about “The parameters, criteria, rules and instructions on which algorithms or other artificial intelligence systems are based that affect decision-making on access to and maintenance of employment, as well as working conditions, including profiling and control of professional activity.”⁴⁷⁷¹

The 2024 Program of the XXIV Constitutional Government also makes mention of the role of AI in the labor market, noting the need “to reform the education and vocational training system in order to bring it into line with the needs and potential of the Portuguese economy and its business fabric, to create an environment where universities and companies can connect, and to prepare the national workforce for the technological transformations underway and the fundamental changes in the future of work, namely through digitalisation and the transformations generated by the spread of artificial intelligence.”⁴⁷⁷²

Environmental Impact of AI

Portugal leverages AI to enhance environmental sustainability, such as in combating illegal fishing by identifying marine areas with high fish populations and determining species abundance in specific zones. Portugal plans a national pact centered on sustainable development that includes leveraging AI for climate management as well as decarbonization.⁴⁷⁷³ Additionally, Portugal uses AI

algorithms to analyze and control waste management, supporting biodiversity and ecosystem preservation.⁴⁷⁷⁴

The country presented their first National Strategy for Intelligent Territories (NSST) and became a Living-in.EU signatory in December 2023. Under the motto "transforming data into action," the Living-in program offers a benchmark to make life easier for people and companies through data, through efficient and sustainable management of the territory and based on innovation and transparency.⁴⁷⁷⁵

Lethal Autonomous Weapons

During the 2019 Group of Governmental Experts ("GGE") meeting, Portugal's statement reaffirmed the need for human oversight of such weapons: "The development, use and/or transfer of this specific type of military or security technologies must always safeguard human control and supervision during the entire Lethal Autonomous Weapon Systems ("LAWS") life cycle. The human-machine interaction must be designed and programmed in such a way that ensures that the persons responsible for supervising the use of LAWS are fully accountable for the effects of that use and are able to immediately interrupt an initiated attack should they decide to do so. Therefore, in the autonomy spectrum, the degree of independence of weapons systems has to be limited."⁴⁷⁷⁶

Portugal proposed for the GGE to confer a mandate "to produce a reference document compiling existing norms and principles of International Law applicable to LAWS and identifying related good practices for producers, commanders and operators".⁴⁷⁷⁷ This reference document "would be a useful and practical tool with a clarifying effect"⁴⁷⁷⁸ for the purpose of future negotiations regarding a convention on LAWS.

In August 2020, at the request of the Chair of the 2020 GGE on Emerging Technologies in the Area of LAWS within the Convention on Certain Conventional Weapons ("CCW"), Portugal commented on the operationalization of the 11 guiding principles on LAWS adopted at the 2019 Meeting of the High

Contracting Parties to the CCW.⁴⁷⁷⁹ Portugal's comments emphasize the need for a human-centered approach to LAWS. “Automation and artificial intelligence should be tools in assisting the human actors (enhancing human perception and human action) rather than being the (non-human) actors themselves—see our comment to Guiding Principle (i). The will and decision to use force must therefore always remain with a human being. Especially during the deployment phase, considering that no weapon is developed without defect or possibility of malfunction, its human users must be trained and able to quickly act in order to avoid or minimize the negative consequences of a malfunctioning LAWS. The use of force must be planned and executed in such a way that it can always be retraceable to the human being operating the machine, in order to prevent any accountability gaps for violations of international law—see our comment to Guiding Principle (d).”⁴⁷⁸⁰

Portugal was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”⁴⁷⁸¹

Portugal participated in an international summit on the responsible application of artificial intelligence in the military domain (REAIM) hosted by the Netherlands in February 2023. At the end of the Summit, Portugal endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.⁴⁷⁸² In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”⁴⁷⁸³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Portugal also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁴⁷⁸⁴

The second REAIM summit took place in September 2024 in Seoul. Portugal endorsed the outcome document titled Blueprint for AI Action, which offers specific actions for countries and the international community to take over the next year to ensure the responsible use of AI in defense.⁴⁷⁸⁵

At the 78th UN General Assembly First Committee in 2023, Portugal voted in favor⁴⁷⁸⁶ of resolution L.56⁴⁷⁸⁷ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

The Secretary-General of the United Nations issued the report in July 2024. Portugal’s contribution focused on the social and humanitarian impact of LAWS and the need for new prohibitions and regulations guided by international law, including international humanitarian law and international human rights law, to prevent the effects of displacement, injury and death of civilians, and destruction of civilian objects.⁴⁷⁸⁸

Human Rights

According to Freedom House, Portugal is classified as “free,” with a score of 96/100. Freedom House defines Portugal as “a parliamentary democracy with a multiparty political system and regular transfers of power between rival parties” in which “civil liberties are generally protected.”⁴⁷⁸⁹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Portugal is party to the most important international legal instruments for the protection and defense of human rights.⁴⁷⁹⁰

A Council of Europe Committee of Ministers recommendation on the human rights impacts of algorithmic systems in 2020 stressed to member States that their commitment to the Convention for the Protection of Human Rights and Fundamental Freedoms to “stands throughout the continuous processes of technological advancement and digital transformation.” As such, “member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”⁴⁷⁹¹

Parliament adopted the Portuguese Charter of Human Rights in the Digital Age (Charter) in May 2021 with the aim of promoting the free exercise of human rights and social inclusion in the digital environment.⁴⁷⁹² Article 9 of the Charter concerns the use of AI and establishes that it “must be guided by respect to fundamental rights, ensuring a fair balance between the principles of explainability, security, transparency and accountability, taking into account the circumstances of each specific case and establishing procedures to avoid bias and discrimination.”⁴⁷⁹³ The Charter further establishes that “decisions with a significant impact on recipients that are taken by the use of algorithms must be communicated to interested parties, be appealable and auditable, as provided by law.”⁴⁷⁹⁴

OECD / G20 AI Principles

Portugal is a member of the Organization for Economic Co-operation and Development (OECD) and endorsed the OECD AI Principles, including Principles

Center for AI and Digital Policy

updated in May 2024.⁴⁷⁹⁵ The OECD Survey on the implementation of the OECD AI Principles in 2021 took note of the Portuguese policy approach to AI.⁴⁷⁹⁶

Various Portuguese policy initiatives are inspired by and acknowledge the OECD AI Principles. This is the case of AI Portugal 2030, the AI Guide,⁴⁷⁹⁷ and the SPMS Health Data Strategy.⁴⁷⁹⁸ The Guide to Artificial Intelligence in the Public Administration increases accountability requiring the documentation of the robust and safe operation of AI systems.⁴⁷⁹⁹

Council of Europe AI Treaty

Portugal contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024.⁴⁸⁰⁰ In August 2024, 24 EU delegations, including Portugal, voted in favor of adopting the CoE Convention. In a statement to the Council Secretariat, the Portuguese Republic affirmed its commitment to adopt the treaty.⁴⁸⁰¹ However, the country has not signed independently from the EU.⁴⁸⁰²

UNESCO Recommendation on AI Ethics

Portugal has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.⁴⁸⁰³

The UNESCO developed the Readiness Assessment Methodology (RAM) to support the implementation of its Recommendation on the Ethics of AI. Many African and Latin American states have undergone this process, but only few did in Europe. Portugal has not initiated the RAM process.⁴⁸⁰⁴

Evaluation

In evaluating Portugal's AI initiatives, Portugal has demonstrated a strong commitment to international AI governance frameworks, particularly through its support of the Council of Europe's Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law, which the EU signed in September 2024.⁴⁸⁰⁵

Portugal's AI Strategy, AI Portugal 2030, and related policies included public feedback and participation in their making process with reports summarizing feedback published after. Although a public participation opportunity associated with the revision of AI Portugal 2030 was planned, it has not been launched yet, hence the decrease of the related score this year.⁴⁸⁰⁶ The same decrease was observed in the public access to AI policies in the Republic due to the lack of access to the evolution of these documents.

In terms of AI oversight, Portugal has recently enhanced its institutional framework by establishing the Council for Digital in Public Administration (CDAP) in July 2024. This oversight structure includes setting strategic objectives, defining clear actions, and developing implementation and evaluation metrics, providing a

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

robust governance framework for AI in the public sector.⁴⁸⁰⁷ Additionally, the National Data Protection Commission (CNDP) is bolstering its AI oversight capabilities, focusing on data protection within AI systems, with plans to further enhance its role in 2025.⁴⁸⁰⁸ Furthermore, in October 30, the working group on AI studied the diverse institutions that should oversee the implementation of the EU AIA,⁴⁸⁰⁹ later releasing a list of fourteen agencies tasked with supervising fundamental rights in the use of AI systems.⁴⁸¹⁰ However, Portugal has not officially named a competent authority or main contact for the AI Act.

Overall, Portugal's commitment to global AI standards is reflected in the Republic's alignment with the OECD AI principles, its endorsement of the UNESCO recommendations, and support of the CoE AI Treaty. In these engagements, Portugal showcases a commitment to transparency, fairness, and human oversight, prioritizing also sustainable AI applications.

Puerto Rico

In 2024, Puerto Rico passed data protection legislation modeled on the EU GDPR and California Consumer Privacy Act and a Cybersecurity Act to safeguard government data and systems from AI-enabled attacks.

National AI Strategy

Puerto Rico does not have a specific national AI strategy.

Puerto Rico (or officially the Commonwealth of Puerto Rico) is relatively self-governed but is an unincorporated territory of the United States. Even though new laws are proposed and ratified without U.S. approval, Puerto Ricans are U.S. citizens subject to most US federal laws without representation by voting members of Congress. Puerto Rico is a sub-national administrative division overseen by the U.S. government.

At the federal level, Puerto Rico follows the U.S. position on AI, composed of a 2020 Presidential Executive Order, a 2019 Executive Order, OMB Guidance

for Regulation of AI Applications, the recommendations of a National Security Commission on AI, and various initiatives and programs established by the National AI Initiative Act (NAIIA), explained further in the U.S. section of this report. An Executive Memorandum on Advancing U.S. Leadership in Artificial Intelligence was released in October 2024,⁴⁸¹¹ with further guidance for harnessing AI technologies for national security and contributing to international AI governance. Although the 2023 Executive Order⁴⁸¹² clarified in the memo was rescinded in January 2025, the memorandum was not rescinded at the time.⁴⁸¹³

Public Participation

The website of Puerto Rico's House of Representatives serves as an interactive space designed to engage citizens directly in public decision-making and legislative processes, promoting greater democratic participation and governmental transparency.⁴⁸¹⁴

The University of Puerto Rico at Río Piedras (UPRRP) has established the Puerto Rican Public Opinion Laboratory (LabPOP) to address the historical lack of current public opinion data on key political and social issues in Puerto Rico.⁴⁸¹⁵ With a \$724,347 grant from NSF's Build and Broaden program, LabPOP will conduct its first comprehensive national survey in January, employing 60 students. The two-year project will focus on examining public perceptions of U.S.-Puerto Rico relations.

The Coalition of Artificial Intelligence in Puerto Rico held an inaugural convention on public policy, cybersecurity, health, education, and human

resources in July 20224. The coalition is made up of government, civil society, academia and private sector actors.⁴⁸¹⁶

Data Protection

The right to privacy is a fundamental right enshrined in Section 8 of Puerto Rico's Bill of Rights.

U.S federal data protection regulations apply in Puerto Rico,⁴⁸¹⁷ though Puerto Rico has also implemented additional regulations. The existing U.S. legislation was created as an instrument of customer protection, in terms of establishing obligations and procedures when data breaches are detected and providing consumers with common privacy rights including the right to know, opt-out rights, and increased control over the sharing of personal information.⁴⁸¹⁸ Puerto Rico has also passed the Citizen Information of Data Banks Security Act, a breach notification and data disposal law.⁴⁸¹⁹

There is currently no data protection authority (DPA) in Puerto Rico. However, a new cybersecurity law mandates the creation of the Chief Information Security Officer (CISO) under the Puerto Rico Innovation & Technology Service (PRITS).⁴⁸²⁰ The Cybersecurity Act (Act 40) passed in January 2024 aims to create a framework prioritizing government data security to foster innovation, development, and sustainable economic growth through collaborative mandates and an expanded role for cybersecurity within the government.⁴⁸²¹ The Act 40 also mandates the establishment of an Officer of Cyber Incident Evaluation under PRITS.⁴⁸²²

The Consumer Data and Personal Information Protection Act was approved by the Puerto Rico Senate on November 8, 2023.⁴⁸²³ The bill aims to supersede data collection and privacy laws in Puerto Rico and aligns these laws with more regulated jurisdictions such as California’s Consumer Privacy Act or the EU’s General Data Protection Regulation (GDPR).

Algorithmic Transparency

There is no legislation, currently in force or pending, addressing algorithmic transparency. The Puerto Rico House Bill 2027, introduced on February 15, 2024, outlines policies on how government agencies should use AI algorithms. The Bill notes challenges from AI for “ethics, privacy, information security, and respect for human rights.”⁴⁸²⁴ However, in its current form, the Bill does not state any algorithmic transparency measures to be implemented.

Digitization of Public Administration

Law 75 of 2017 established the Puerto Rico Innovation and Technology Service (PRITS) that promotes public policy on the preparation, management, development, coordination and effective interagency integration of innovation and the technological and information infrastructure of the Government of Puerto Rico.⁴⁸²⁵ PRITS has been contributing to Puerto Rico’s digital transformation through several platforms such as CESCO Digital,⁴⁸²⁶ which enables vehicle and license renewal and payment of fines; VACU ID,⁴⁸²⁷ a smart health card capturing COVID vaccines; and IDEAL,⁴⁸²⁸ a platform that digitizes documents, certificates, and information held by the state on citizens, and serves as a citizen information portal provides government data to citizens to promote transparency.⁴⁸²⁹

AI in Public Administration

As a part of the Civil Service Reform, Puerto Rico through the Office of Human Resource Administration and Transformation (OARTH) and the Financial Oversight Management Board launched an AI pilot project for talent recruitment on March 11, 2024.⁴⁸³⁰ The project aims to increase efficiency and effectiveness in the government’s hiring process, pairing the candidates with the best role using the AI technology whilst minimizing biases.⁴⁸³¹ Several government agencies have participated in the project, such as PRITS and the Puerto Rico Department of Education (PRDE).⁴⁸³²

Smart Port

In February 2023, a California-based artificial-intelligence company announced that it would invest in the Port of Ponce, which serves Puerto Rico’s second city, to transform it into a “smart port of the future.” The company plans to “develop autonomous inspection systems, computer-assisted surveillance systems, and digital receipt registries that will track and monitor container movement.”⁴⁸³³

Facial Recognition

Since Puerto Rico is an unincorporated territory of the USA, the U.S. Customs and Border Protection announced the implementation of the Simplified Arrival process at the Luis Muñoz Marín International Airport, Puerto Rico. This process uses facial biometrics to automate the manual document checks that are required for admission into the United States.⁴⁸³⁴

Livescan systems are also in use at 130 USCIS Application Support Centers across America, as well as Puerto Rico. In November 2022, “Idemia Identity & Security North America has had its biometrics contract with U. S.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Citizenship and Immigration Services (USCIS) extended through 2027. The extension means Idemia I&S NA will provide biometric identity verification and criminal background screening as part of the immigration application process. Idemia Livescan will be used to capture fingerprint biometrics from applicants and submit them to the Federal Bureau of Investigation (FBI) and Office of Biometric Identity Management (OBIM). USCIS then carries out the checks and makes a decision on the application.”⁴⁸³⁵

Environmental Impact of AI

Puerto Rico itself has not created new policy on the environmental impact of AI. However, on February 1, 2024, the Artificial Intelligence Environmental Impacts Act of 2024 was introduced in the United States.⁴⁸³⁶ The legislation will “assess AI’s environmental footprint and create a standardized system for tracking energy use and emissions” and provide transparency of the AI industry.⁴⁸³⁷ The legislation will direct the US National Institute of Standards and Technology (NIST) to develop standards, reporting measures, and a voluntary framework for AI developers. As Puerto Rico is impacted by US legislation at the federal level, the impact of this Act may extend to Puerto Rico. The Act has been endorsed by groups like Greenpeace USA, Friends of the Earth Action, and CAIDP and is being considered in the Senate⁴⁸³⁸ with an identical bill in the House.⁴⁸³⁹ In both houses, the bills were referred to relevant committees and never acted on in the 2023–2024 session.

Lethal Autonomous Weapons

In July 2015, an open letter signed by several Puerto Rican researchers called for a ban on autonomous weapons. The open letter was released at a Joint

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Conference on Artificial Intelligence in Buenos Aires.⁴⁸⁴⁰ Nevertheless, there are no official comments on this topic.

As a commonwealth of the United States, Puerto Rico does not have representation to the United Nations and cannot vote on resolutions.

Human Rights

As an unincorporated territory of the United States, Puerto Ricans have limited representation in the federal government. The U.S. House of Representatives consists of 435 members serving two-year terms. Puerto Rico is represented by one elected delegate in the House who can perform most legislative functions but cannot participate in floor votes.⁴⁸⁴¹ Puerto Rico does not have electoral college votes in presidential elections.⁴⁸⁴²

Puerto Rico does not receive a separate ranking from Freedom House. Even though the United States scored 83/100 in 2024,⁴⁸⁴³ with wide civil liberties including a robust freedom of expression, the Freedom House report claims that in recent years its democratic institutions have gradually weakened, with “mistreatment and dysfunction in the criminal justice and immigration systems, harmful policies on immigration and asylum seekers, and growing disparities in wealth, economic opportunity, and political influence.” This affects Puerto Rico as an unincorporated territory. According to Freedom House report in 2016, access to justice is difficult for those who lack resources to pay legal fees and speak Spanish as their primary language, with federal court proceedings being conducted in English.⁴⁸⁴⁴

According to the Freedom on the Net report, Puerto Rico is recorded as having an internet penetration rate of 84.8% in 2024.⁴⁸⁴⁵

OECD / G20 AI Principles

As an unincorporated territory of the United States, Puerto Rico does not independently adopt international agreements such as the OECD AI Principles/G20 AI Guidelines. However, Puerto Rico aligns its policies with U.S.

⁴⁸⁴⁰ Jorge L. Colón, et al., *Autonomous weapons: an open letter from AI & robotics researchers, signatories*, Future of Life Institute (Jul. 28, 2015), <https://futureoflife.org/2016/02/09/awos-signatories/>

federal standards and has initiated strategies to implement the OECD AI principles.

The Puerto Rico Science, Technology, and Research Trust released a strategic document titled *Leveraging AI for Economic Development and Shaping the Future in Puerto Rico* in September 2024.⁴⁸⁴⁶ This strategy outlines initiatives to integrate AI across various sectors, including healthcare, smart cities, sustainable agriculture, education, and disaster management. The plan emphasizes ethical AI development, transparency, and inclusivity, reflecting OECD principles.

Council of Europe AI Treaty

The United States signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law when it opened on September 5, 2024.⁴⁸⁴⁷ Puerto Rico is subject to the treaty through the U.S. signature.

Although Puerto Rico has no independent representation to the CoE, the state's progress legislating Artificial Intelligence aligns to the treaty's aims to "ensure that activities within the lifecycle of artificial intelligence systems are fully consistent with human rights, democracy and the rule of law, while being conducive to technological progress and innovation."⁴⁸⁴⁸

UNESCO Recommendation on AI Ethics

The United States rejoined UNESCO in 2023, after leaving in 2018.⁴⁸⁴⁹ Although the Recommendation on the Ethics of Artificial Intelligence was established in the interim, the United States accepted the Recommendation on return.

Despite having no independent membership to UNESCO, Puerto Rico has engaged the organization to contribute to international dialogues on ethical AI and development. For example, the University of Puerto Rico (UPR) signed a collaborative agreement with UNESCO to "broaden the horizons of research on AI" and to address "the impact that this represents for society in all areas"⁴⁸⁵⁰

⁴⁸⁴⁶ Puerto Rico Science, Technology, and Research Trust, *Leveraging AI for Economic Development and Shaping the Future in Puerto Rico* (Sept. 2024), <https://prsciencetrust.org/wp-content/uploads/2024/09/Puerto-Rico-AI-Strategy-PRSTRT.pdf>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

following the first International Conference on Artificial Intelligence in Higher Education, hosted at the UPR Rio de Piedras Campus.

The United States, including Puerto Rico, has not initiated the Readiness Assessment Methodology (RAM) to facilitate implementation of the UNESCO Recommendation.⁴⁸⁵¹

Evaluation

The example of the Smart Port of Ponce might point to Puerto Rico, an unincorporated territory of the United States, becoming a testbed for AI. However, the lack of a national AI strategy, comprehensive data protection law, and data protection authority raises concerns about the protection of Puerto Ricans' fundamental rights in the age of AI. In a recent column, Roberto López Davila, a member of the Puerto Rican judiciary, asked: "When will Puerto Rico join other countries and begin its journey toward the elaboration of its own national AI strategy for these technologies not only to provide economic and industrial benefits but also to contribute to the improvement of the daily life and well-being of the whole Puerto Rican society? It should be a strategy that puts fundamental rights, respect for the rule of law and democratic institutions at its core, considering the risks that AI entails. In a context in which AI applications are gradually being deployed in the country, some of them for uses that are particularly concerning, calling for a national AI strategy has never been more urgent."⁴⁸⁵²

Qatar

In 2024, Qatar's National Cyber Security Agency, which oversees data protection, and the Ministry of Communications and Information Technology each introduced guidelines for the ethical AI deployment and use. The Qatar Central Bank also issued regulatory guidelines for the financial sector.

National AI Strategy

The Government of Qatar released a National Strategy for AI in October 2019. The aim of the strategy is to provide a realistic view of AI technologies and their potential in the 21st century. The strategy was developed from a blueprint

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

produced by Qatar Computing Research Institute (QCRI), part of Hamad Bin Khalifa University (HBKU).⁴⁸⁵³

The AI strategy sets two goals for Qatar:⁴⁸⁵⁴ 1) Qatar must become capable of producing world-class AI applications in areas of national interest and have a business environment enabling the use of AI as a driver for innovation. 2) Qatar must be an efficient consumer of AI, with a properly educated citizenry, sound laws, and ethical guidelines.

The AI strategy is divided into six pillars:⁴⁸⁵⁵

- Pillar 1: Race for Talent in the AI+x era
- Pillar 2: Data Access is Paramount (Data and Computing Infrastructure)
- Pillar 3: The Changing Landscape of Employment (AI Augmented Jobs)
- Pillar 4: New Business and Economic Opportunities (Knowledge Economy)
- Pillar 5: Qatar – AI + X Focus areas
- Pillar 6: Ethics and Public Policy.

Each pillar features components to build an inclusive AI framework. As part of Pillar 6, which focuses on Ethics and Public Policy, Qatar’s AI strategy emphasizes the importance of robust guidelines to ensure AI aligns with ethical principles and societal norms.⁴⁸⁵⁶ To fulfill this commitment, Qatar’s Ministry of Communications and Information Technology released *Artificial Intelligence in Qatar—Principles and Guidelines for Ethical Development and Deployment*.⁴⁸⁵⁷ This document emphasizes human-centered AI principles, including transparency, system robustness, and alignment with Qatari cultural values. The guidelines encourage responsible AI development focused on public benefit, security, and ethical deployment, reinforcing adherence to both international standards and local norms.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Qatar’s artificial intelligence (AI) committee launched in 2021⁴⁸⁵⁸ to ensure that the National AI Strategy is implemented with proper mechanisms and oversight and act as a connecting bridge between the ministries and relevant authorities in developing plans and programs “for preparing human cadres in the field of artificial intelligence applications.” The committee sits under the Ministry of Communications and Information Technology (MCIT) and includes representatives from the MCIT, Ministry of Interior, Ministry of Education & Higher Education, Ministry of Commerce and Industry, Hamad bin Khalifa University, Qatar National Research Fund, and Qatar Development Bank.⁴⁸⁵⁹

In addition to the overarching ethical framework set by the MCIT, Qatar’s National Cyber Security Agency (NCSA) introduced sector-specific ethical AI guidelines in March 2024.⁴⁸⁶⁰ These guidelines are designed to strengthen transparency, privacy, and security within AI applications in critical sectors such as healthcare, finance, and education. The NCSA guidelines provide targeted standards that address the specific regulatory and ethical requirements of each sector, reinforcing Qatar’s commitment to responsible AI deployment as outlined in the national AI strategy.

The AI strategy underlies Qatar’s Third National Development Strategy (NDS-3) for 2024–2030,⁴⁸⁶¹ which highlights AI as a pivotal sector for driving economic diversification and innovation. Complementing this, the Ministry of Communications and Information Technology launched the National Digital Agenda 2030 on February 27, 2024, serving as a roadmap to advance Qatar’s digital economy, emphasizing innovation, inclusivity, and sustainable development.⁴⁸⁶²

In the financial sector, Qatar Central Bank issued comprehensive guidelines in September 2024 to regulate AI use, emphasizing transparency,

⁴⁸⁵⁸ Hukoomi, *Cabinet Approves Draft Decision Setting Up Artificial Intelligence Committee* (Mar. 4, 2021), <https://hukoomi.gov.qa/en/news/cabinet-approves-draft-decision-setting-up-artificial-intelligence-committee>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

operational efficiency, and customer security.⁴⁸⁶³ These guidelines are part of Qatar's broader FinTech strategy, aligning with international standards to ensure ethical AI deployment in finance. Through recent guidelines and sector-specific standards, Qatar is signaling a commitment to ethical, human-centered AI practices that align with both international standards and national development priorities.

Public Participation

Qatar's National Development Strategy has set goals of developing modern public sector institutions, efficient and transparent delivery of services, and larger space for civil society.⁴⁸⁶⁴ Relatedly, the national Digital Government 2020 strategy identifies open government as a key strategic objective, and recognizes Open Data, e-Participation, and related policies as key initiatives.⁴⁸⁶⁵ The Open Data Policy of 2014 requires government agencies to ensure that their data is published using an open format both technically and legally. The e-Participation Policy established in 2015 requires the Ministry of Communications and Information Technology (MCIT) to promote e-Participation between government agencies and the public.⁴⁸⁶⁶

Qatar has enhanced the GaaS (Government as a service) initiatives, with an array of citizen Digital Government services such as Metrash, Hukoomi, Baladiya/Oun. These applications aim to facilitate Inter/Intra Government Departmental transfer of data to create a modern and efficient public sector. There are 1,400 Hukoomi Services, with 650 services that aim to show higher efficiency, transparency, and openness of the government.⁴⁸⁶⁷ This degree of interaction garnered Qatar the 2018 United Nations e-Gov benchmark as a "high level of interaction index."⁴⁸⁶⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The MCIT initiated a public consultation in 2024 to gauge digital inclusivity among citizens and residents.⁴⁸⁶⁹ While the survey was not specifically focused on emerging technologies like artificial intelligence, it aimed to gather valuable insights into how Qatar's population interacts with modern technologies.

Data Protection

Qatar adopted law 13 Concerning Personal Data Privacy Protection (PDPPL) in 2016.⁴⁸⁷⁰ Qatar became the first Gulf Cooperation Council member state to issue an applicable Data Protection Law, supplemented with a set of regulatory guidelines issued by the Compliance and Data Protection Department. The guidelines incorporate concepts from EU data protection legal frameworks providing further clarity for compliance purposes.

The PDPPL defines the rights of individuals to the processing of their data within “the framework of transparency, honesty, and respect of human dignity.”⁴⁸⁷¹ Chapter 4 establishes special permissions required to process Personal Data of Special Nature, namely ethnic origin, children, health, physical or psychological condition, religious creeds marital relations, and criminal offenses.

The National Cyber Governance and Assurance Affairs body under the National Cyber Security Agency oversees the PDPPL, including offering guidance, promoting good practice, investigating complaints, monitoring compliance, and supporting enforcement as necessary.⁴⁸⁷²

The Ministry of Transport and Communications was the authority designated in Article 20 of Decree-Law No 8 of 2016 to propose legislation, policies, and standards necessary to regulate government information technology systems, transactions, and services to enable government agencies to achieve their digital transformation objectives.⁴⁸⁷³ Restructuring created a Ministry of Communications and Information Technology (MCIT) to oversee digital transformation⁴⁸⁷⁴ and “supervise, regulate, and develop the sector of Information

and Communications Technology.”⁴⁸⁷⁵ The MCIT created a Data Management Policy to regulate data protection in government services in 2015.⁴⁸⁷⁶ The MCIT oversaw the related Open Data Portal until the function was taken over by the National Planning Council in 2023.⁴⁸⁷⁷ The Ministry released guidelines in 2021 to “help the target audience; individuals, regulated entities and stakeholders, understand their respective responsibilities, rights and practices” related to the data privacy protection law.⁴⁸⁷⁸

The Qatar Central Bank provides guidance for the protection of data in the financial sector. The Central Bank guidance on Artificial Intelligence noted that Providers of High-Risk AI Systems may process personal data only in compliance with the PDPPL and “to the extent that it is strictly necessary for the purposes of ensuring Bias monitoring, detection, and correction.”⁴⁸⁷⁹

The Qatar Financial Centre, a financial services free zone in Qatar, updated its Data Protection Regulations and Rules (originally issued in 2005), to align with international data protection laws, such as the GDPR in 2021.⁴⁸⁸⁰ Key changes include removing mandatory notification for sensitive data processing, requiring that consent is freely given and easily withdrawn, and expanding the definition of sensitive data to include criminal records. The new regulations also introduce accountability principles, data protection by design, and Data Protection Impact Assessments for high-risk processing. The QFC Data Protection Office can impose penalties up to \$1.5 million per infringement.

The Qatar National Cyber Security Agency became a member of the Global Privacy Assembly in 2024.⁴⁸⁸¹ The agency did not sponsor any of the earlier resolutions.

Center for AI and Digital Policy

Algorithmic Transparency

Qatar's Personal Data Privacy Protection Law does not address automated decision-making or impose requirements for algorithmic transparency. The Qatar Financial Centre updated provisions in 2021 offer some protection. The National Cyber Security Agency Guidelines for Secure Adoption and Usage of Artificial Intelligence highlights the importance of transparency and explainability along with human oversight in automated decision-making with regular references to the GDPR.⁴⁸⁸² However, these guidelines are voluntary.

The Technical Office of the Ministry of Labour of Qatar announced on February 6, 2023, the use of data algorithms in job localizations, as an initiative supported by United Nations Economic and Social Commission for Western Asia (UN ESCWA),⁴⁸⁸³ and two corporate partners.⁴⁸⁸⁴ The algorithm “automatically recommends Qatari employee percentage given the firms’ absorptive capacity,⁴⁸⁸⁵ tailoring the nationalization % based on the capital, number of employees, average salaries, and the entity's activity. The algorithm provides recommendations for up-skilling to candidates and develops statistics. The support of ESCWA to the Ministry of Labor and the Digital Transformation Unit includes creating the model, which is based on ESCWA’s Skills Monitor.⁴⁸⁸⁶ There is no disclosure about the specifics of the model and the extent of the complexity, accuracy, or reliability of the algorithm.

Facial Recognition

Qatar used AI to manage crowds during the 2022 FIFA World Cup and to control stadium conditions such as temperature.⁴⁸⁸⁷ The “connected stadium”

concept implemented during the event⁴⁸⁸⁸ included facial recognition receiving input from 22,000 security cameras installed at stadiums.⁴⁸⁸⁹ Data was set to predict crowd patterns based on the movement of people. All people attending the FIFA World Cup in Qatar were required to download the Hayya app⁴⁸⁹⁰ to enter stadiums and use public transportation.

Biometric Identification

In 2007, Qatar rolled out biometric-enabled national ID cards and developed an ambitious digital government program.⁴⁸⁹¹ In 2011, the Ministry of Interior introduced smart card services for expatriates⁴⁸⁹². These smart cards are of compulsory use as e-gate cards, storing biometric data (e.g. fingerprints and eye scan) on a chip. Residents can also use the smart cards for immigration control. Relevant information is protected under the Data Protection Law.

The Ministry of Interior launched the Qatar Digital Identity application in 2024.⁴⁸⁹³ The Qatar Digital Identity application provides digital versions of ID cards and documents, allowing users to access electronic services, through biometric data, without the need for physical documents. The application can be obtained on the Ministry of Interior's website or downloaded from Google Play.

Environmental Impact of AI

Qatar's National Vision 2030 addresses five major challenges facing the country, including environmental management.⁴⁸⁹⁴ Environmental protection and development is a central theme. The Vision emphasizes the need to establish legal frameworks and environmental institutions to safeguard the country's environmental heritage and stresses the importance of raising citizens' awareness of their role in

protecting the environment.⁴⁸⁹⁵ However, there are no specific guidelines or established authorities to concretely implement this vision.

Qatar's National AI Strategy highlights the potential for AI technology to facilitate national priorities such as food security but does not address the environmental costs of developing AI systems.⁴⁸⁹⁶

Human Rights

Qatar has endorsed the Universal Declaration of Human Rights (UDHR). Qatar is signatory to the International Covenant on Civil and Political Rights (ICCPR) and International Covenant on Economic, Social and Cultural Rights (ICESCR) (2018).⁴⁸⁹⁷

According to Freedom House Qatar is rated “Not Free,” with a score of 25/100. The report highlights “Political parties are not permitted and public participation in the political arena is extremely limited. While Qatari citizens are among the wealthiest in the world, most of the population consists of noncitizens with no political rights, few civil liberties, and limited access to economic opportunity.”⁴⁸⁹⁸

The Qatar Constitution is based on Sharia Law. The substantive list of rights (or protections) reside in Part 3: Public Rights and Duties, including equality of citizens in rights and duties (Art. 34); equality of “all persons” before the law and without discrimination “whatsoever” on “grounds of sex, race, language or religion” (Art. 35); protection against unlawful arrest or detention (Art. 36); protection of privacy (Art. 37); the right to elect and be elected (Art. 42); the right of assembly (Art. 44) and of association (Art. 45); freedom of expression (Art. 48); freedom of religion (Art. 50).⁴⁸⁹⁹

Media reports cite issues with human rights in Qatar, associated with deaths of migrant workers in the 10 years since Qatar was awarded World Cup

hosting rights.⁴⁹⁰⁰ Qatar has taken steps in passing laws to protect migrant workers, including adjustments in their minimum wage and living conditions.⁴⁹⁰¹

The World Bank’s Doing Business project, which also makes projections on the Strength of legal rights index (0–weak to 12–strong), scored Qatar as 1.⁴⁹⁰² Qatar’s international cooperation with multilateral entities (i.e. UNESCO, UN Development Programmes, World Bank, and others) are set to support the country in “measur[ing] progress towards the national and international development goals, human rights protection, transparency and the fight against corruption.”⁴⁹⁰³

The UN Committee on the Elimination of Racial Discrimination applauded Qatar in April 2024 for creating a memorial for enslaved Africans. The Committee discussed eliminating of the Kafala system and mandatory HIV testing for migrant workers.⁴⁹⁰⁴

OECD / G20 AI Principles

Qatar is not a member of the OECD and did not endorse the OECD AI principles.⁴⁹⁰⁵ The country has not submitted reports to OECD AI Observatory on AI initiatives.⁴⁹⁰⁶

and the Rule of Law⁴⁹⁰⁷ and has not signed this first legally binding international AI treaty.⁴⁹⁰⁸

UNESCO Recommendation on AI Ethics

Qatar is a member state of UNESCO since 1972,⁴⁹⁰⁹ and was one of the 193 countries that endorsed the UNESCO recommendation on the Ethics of AI.⁴⁹¹⁰ With The recent adoption of the Artificial Intelligence in Qatar – Principles and Guidelines for Ethical Use, the Qatari Ministry of Communications and Information Technology has provided guidelines for AI system users, aiming to promote the ethical use of AI.⁴⁹¹¹ These guidelines outline six key principles: safeguarding personal and organizational data, complying with relevant laws and regulations, ensuring the well-being of individuals and society, assuming accountability, acknowledging AI's capabilities and limitations, and do not use AI systems to perpetuate bias.

These principles closely align with the UNESCO Recommendations, which include concepts such as Do No Harm, Fairness and non-discrimination, Safety and security, Right to Privacy and Data Protection, and Responsibility and accountability. This alignment can be seen as Qatar's ongoing efforts to implement the UNESCO Recommendations. However, further steps and concrete actions are needed to fully integrate the UNESCO Recommendations such as completing the Readiness Assessment Methodology (RAM).⁴⁹¹²

Evaluation

Qatar is a forward-looking nation with a digital transformation agenda, to propel economic development and sustainability and build a path toward a knowledge-based economy. The formulation of the national AI strategy positions Qatar in a leading space in the Gulf region. Qatar's endorsement of the UNESCO Recommendation on the Ethics of AI might provide the country with an

opportunity to develop a trustworthy AI approach to policy developments in the field. The enactment of the Data Protection Law (DPL) of 2016 signals the commitment of the country to develop data governance rules, which needs to be furthered by a commitment to algorithmic transparency sustained by an independent supervisory authority.

Russia

In 2024, Russian President Vladimir Putin amended the National AI Strategy to further developments toward the 2030 goal. Putin also signed a law establishing legal requirements for handling the anonymization of personal data was also passed.

National AI Strategy

Russian president Vladimir Putin famously said, in a 2017 address to students in Moscow, “Artificial intelligence is the future not only of Russia but of all of mankind. There are huge opportunities, but also threats that are difficult to foresee today. Whoever becomes the leader in this sphere will become the ruler of the world.”⁴⁹¹³ Putin then stated that it is better to avoid a monopoly on the sector and promised that if Russia became the leader in developing AI, then Russia will share their technology with the rest of the world, just as they share their atomic and nuclear technology today. Later, Putin suggested that “the nuclear arms control treaties of the Cold War could be a guide” for addressing the social impacts of advances in areas such as artificial intelligence.⁴⁹¹⁴

Russia's national strategy for Artificial Intelligence (AI) was announced in October 2019⁴⁹¹⁵ with subsequent developments and actions in February 2024.⁴⁹¹⁶ This strategy defines the goals and primary objectives of the development of

artificial intelligence in the Russian Federation, as well as the measures aimed at its use for the purpose of protecting national interests and implementing strategic national priorities, including those in the field of scientific and technological development.

The goals of the development of AI in the Russian Federation include the improvement of the well-being and quality of life of its population, national security and rule of law, and sustainable competitiveness of the Russian economy, including leading positions the world over in the field of AI. The primary objectives of the Russian development of AI are to support scientific AI research, engineering AI software development, data quality, hardware availability, qualified personnel and integrated system to extend Russian artificial intelligence technology market.⁴⁹¹⁷

In the strategy, the basic principles of the development and use of artificial intelligence technologies include the protection of human rights and liberties, security, transparency, technological sovereignty, innovation cycle integrity, reasonable thrift, and support for competition in the field of artificial intelligence.

The use of AI technologies in sectors of the economy supports the efficiency of planning, forecasting, and management decision-making processes; the automation of routine production operations; the use of self-contained intelligent equipment, robotic systems, and intelligent logistic management systems; the improvement of employee safety during the performance of business processes; an increase in the loyalty and satisfaction of customers, and; the optimization of the personnel selection and training processes.⁴⁹¹⁸

The use of AI technologies in the social sphere facilitates the creation of conditions that favor the improvement of the standard of living of the population including an increase in the quality of healthcare services; the improvement of the quality of education services, and; the improvement of the quality of the provision of public and municipal services, as well as the reduction of the cost of their provision.⁴⁹¹⁹

In 2020, the Government of the Russian Federation adopted Decree No. 2129-r on the Development of Regulatory Relations in the Field of Artificial Intelligence and Robotic Technologies by 2024.⁴⁹²⁰ The main purpose of the Decree is to set forth basic approaches to transforming the regulatory framework

in the Russian Federation to enable the development and use of such technologies across various economic sectors while upholding citizens' rights and protecting the security of individuals, the public and the state. The Decree also enshrines some important principles. It clearly defines the need for accountability for possible negative consequences of using AI. The Decree also defined a human-centric approach, which asserts that the ultimate goal of the development of artificial intelligence and robotics technologies, guided by regulatory influence, is to ensure the protection of human rights and freedoms guaranteed by Russian and international law and to improve the well-being and quality of life of citizens.

Digital Economy in Russia

Russian government has put high priority and already achieved some remarkable accomplishments in the Digital Transformation. A key strategic objective formulated by its leadership in the May 2018 Presidential Decree (The Decree on the National Goals and Strategic National Development Tasks of the Russian Federation until 2024)⁴⁹²¹ is that policymakers must build on the country's traditional industrial strengths, develop new technology processes for fast implementation in all the main competitive domains and continuously tackle any obstacles.⁴⁹²²

The Russian government has centered the development of unmanned aircraft systems (UAS) in pursuing digital innovation. Two recent resolutions introduce experimental legal frameworks for the advancement of UAS in designated areas. Resolution No. 185, dated February 17, 2024⁴⁹²³, establishes an experimental regime in Innopolis, Tatarstan, aimed at fostering digital innovation through the development and testing of UAS technologies within a regulated environment. Resolution No. 641⁴⁹²⁴, dated May 23, 2024, extends this experimental regime to Moscow. This expansion aims to apply similar principles to a larger urban environment, exploring the potential integration of UAS within a highly populated city. Both resolutions underscore Russia's commitment to digital innovation by testing UAS in diverse environments, addressing regulatory needs, and setting the stage for broader adoption of drone technology in urban and innovative hubs.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Due to limitations on funding related to COVID-19 and sanctions, the funding available for development of AI projects was reduced. Moreover, the findings of 2021 research suggest that Russia's AI strategy had in many ways been stifled by the country's poor climate for innovation and investment, as well as budget cuts due to COVID-19.⁴⁹²⁵ IntelliNews announced in 2023 that the military invasion of Ukraine caused Russia to slash support for the development of AI technologies more than 10-fold.⁴⁹²⁶

AI Strategy for Russian Start-ups

Russia aims to increase the start-up ecosystem and many companies have been helped by the traditional hard science education in the country.⁴⁹²⁷ This report breaks down the importance of Artificial Intelligence in Russian startups, with a large number of startups active in AI. At the same time, the war with Ukraine has had a dramatic effect on the Russian IT industry. It has led to many IT professionals to leave the country, thus impacting the AI industry in the country.⁴⁹²⁸ However, the Russian government has sought avenues to reverse drawbacks of the war by promoting international cooperation, such with an AI cooperation agreement with China signed in August 2024.⁴⁹²⁹

AI Policy in Russia

Russian President Vladimir Putin approved a list of instructions in January 2019,⁴⁹³⁰ following the meeting of the supervisory board of the Agency for Strategic Initiatives. The list included instructions to the Russian government to create a national AI strategy. A draft version of a national AI strategy, developed by the country's largest bank – Sberbank, was announced September 2019.⁴⁹³¹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

According to the Future of Life Institute,⁴⁹³² several projects helped pave the way for a domestic approach throughout 2018. In March 2018, for example, a conference was organised by the Russian Defense Ministry, Education and Science Ministry and the Academy for Science on AI issues and alternatives and a 10-point AI development plan in Russia was subsequently published. The plan involves the establishment of an AI and Big Data Consortium among academic and industrial organisations; The development of a fund to assist provide knowledge on automated systems; Increased state aid to AI education and training; The establishment of an AI laboratory at the leading technological university; The establishment of a national AI R&D center.

Russia adopted law No. 123-FZ⁴⁹³³ to regulate the conditions for developing and implementing AI technologies in April 2020, though an amendment to the bill disallows foreign firms from applying to participate in the experimental regime. In addition to Russian firms whose share of participating in foreign legal entities registered in offshore zones amounts to 50 percent or more.⁴⁹³⁴

Russia is developing AI regulation in the fields of autonomous vehicles and healthcare. In the area of autonomous vehicles, the Russian Government issued a regulation on highly automated vehicles on public roads in 2018 to allow the testing of autonomous vehicles.⁴⁹³⁵ In 2020, Russia adopted the concept of road safety with autonomous vehicles on public roads and in 2021, the Russian government began developing measures for the testing of highly automated vehicles on public roads.⁴⁹³⁶ In the area of healthcare, Russia established Rules for registering AI systems as medical software devices to simplify AI system registration procedures.⁴⁹³⁷

Center for AI and Digital Policy

The Russian Government supports the initiative on autonomous vehicle development. In 2022, the Russian Government adopted regulation No. 1849⁴⁹³⁸ on "On establishing an experimental legal regime in the field of digital innovation and approval of the Program of experimental legal regime in the field of digital innovation for the operation of highly automated vehicles for the implementation of the initiative 'Unmanned logistics corridors.'" The regulation provides definition of Automatic driven system, Automatic control mode and Unmanned Cargo Transportation; establishes procedures and requirements for operators of vehicles, describes risks.⁴⁹³⁹

Digital Rights Law and AI Regulation

According to the OECD, Russia's Digital Rights Law, which came into force in October 2019 and introduced several new legal concepts, including digital rights, e-transactions, smart contracts, and big data.⁴⁹⁴⁰ The law aimed to enable the development of an efficient legal framework of digital economy in Russia, reflecting current digital technologies and challenges including big data and AI.

Russia's national AI strategy includes a draft legal framework on AI Technologies and Robotics that focuses on eliminating excessive legal barriers. The initiative aims to give guidance for regulators and is under the responsibility of the Ministry of Economic Development.⁴⁹⁴¹

Considering that AI technology is mainly used by state authority in Russia as a means of digital authoritarianism, the new initiative on the development of AI technology for the public authority needs to be drafted. Thus, in October 2022 the Russian State Duma passed a bill regulating the development of artificial intelligence and information technologies by means of concession agreements and agreements on public-private and municipal-private partnership.⁴⁹⁴²

Data Protection

There are many laws in Russia that regulate the processing of personal data, including the Constitution of the Russian Federation, the Council of Europe Convention 108+, and federal law.⁴⁹⁴³ The Law on Personal Data of 2006 is the most comprehensive federal law and sets out broad rights and responsibilities associated with the collection and use of personal data.⁴⁹⁴⁴ The Roskomnadzor, Russia's data protection agency, interprets the federal law and brings enforcement actions.

Russia is moving to update and expand its national data protection law.⁴⁹⁴⁵ A draft law on the Protection of Consumer Rights would limit the ability of companies to collect personal data from consumers, unless there is a legal basis or the data is necessary for the transaction. A proposed law in the Duma would expand penalties for breach of personal data confidentiality and infringement of personal data anonymization rules.

Russian President Vladimir Putin signed a law establishing guidelines for processing depersonalized personal data in August 2024.⁴⁹⁴⁶ This legislation permits the transfer of facial images and voice recordings of Moscow residents in a depersonalized format for further processing, without requiring the individual's consent. The law authorizes the Ministry of Digital Development (Минцифры) to define personal data categories that, once anonymized, can be grouped by specific characteristics, provided they remain non-identifiable.

The law excludes the formation of datasets from biometric information, and data security will be overseen by the Federal Security Service (FSB) and the Federal Service for Technical and Export Control (FSTEC). In Moscow, this law also introduces changes for an AI technology experiment, allowing regional authorities to use depersonalized facial images and voice recordings to enhance municipal and state administration. However, strict limitations prevent data use if it risks harming individuals, the environment, or national security. The law will

take effect on September 1, 2025, following further guidelines from Roskomnadzor on data anonymization standards.”

Algorithmic Transparency

The Parliamentary Assembly unanimously adopted an Opinion that considered the cessation of Russia’s membership to the Council of Europe (CoE) under Article 8 of the Statute on March 15, 2022.⁴⁹⁴⁷ However, Russia’s ratification of Convention 108 remains valid as a non-member state.⁴⁹⁴⁸ Russian data protection law does broadly provide rights of access and transparency to the data subject in automatic decision-making,⁴⁹⁴⁹ and Russia signed but has not ratified CoE Convention 108+.⁴⁹⁵⁰

Facial Recognition

Russia is moving rapidly to deploy AI-based face surveillance across the country, often with government funding that goes to business associates of President Putin. According to the *Moscow Times*, more than 43,000 Russian schools will be equipped with facial recognition cameras ominously named “Orwell.”⁴⁹⁵¹ The system will be integrated with face recognition developed by NTechLab, a subsidiary of Russian President Vladimir Putin’s associate Sergei Chemezov’s Rostec conglomerate. NTechLab has already deployed facial recognition technology in Moscow to identify criminal suspects across a network of almost 200,000 surveillance cameras. “Critics have accused the technology of violating citizens’ privacy and have staged protests against the system by painting their faces,” reported *Moscow Times*.

Kommersant daily reported in September 2020 that CCTV cameras with facial recognition software, already used in Moscow, will be installed by the regional authorities in public spaces and at the entryway of apartment buildings in 10 pilot cities across Russia with the purported aim of protecting public safety.⁴⁹⁵²

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Moscow authorities are also planning to expand the use of this technology, installing CCTV cameras with facial recognition software in trams and underground trains.

Human Rights Watch said “The authorities’ intention to expand the use of invasive technology across the country causes serious concern over the potential threat to privacy. Russia’s track record of rights violations means that the authorities should be prepared to answer tough questions to prove they are not undermining people’s rights by pretending to protect public safety.”⁴⁹⁵³ HRW also stated that Russian national security laws and surveillance practices enable law enforcement agencies to access practically any data in the name of protecting public safety.

Earlier in 2020, Amnesty International criticized Russia’s plans to broaden the use of widespread facial-recognition systems, saying their expected deployment during public gatherings will “inevitably have a chilling effect” on protesters.⁴⁹⁵⁴

The face detection system has been used for tracking conscripts in Moscow as stated on BBC in October 2022. According to a recent study by the information and analytical agency TelecomDaily, more than 13 million CCTV cameras existed in Russia in 2020. The face detection systems are spread over the Russian regions. When it came to the number of cameras per 1,000 people, Russia also ranked third, after the United States and China.⁴⁹⁵⁵ As BBC noted, the Moscow Unified Data Center (UDChD), which is connected to the facial recognition system, is planning to transfer data from other regions of Russia to collect and systematize personal data.⁴⁹⁵⁶

The facial recognition surveillance has been used to limit public expression. In 2022, police detained at least 43 people in the Moscow metro, clearly fearing protests. Among them were journalists and activists, whose photos were clearly marked in the system in a special way. In this case, as soon as the

right person enters the station, the system reports this to law enforcement agencies.⁴⁹⁵⁷

AI for Censorship

Roskomnadzor, a Russian agency founded to establish telecom licensing requirements, has become an online censorship authority monitoring online protest activities since 2020.⁴⁹⁵⁸ In every Russian region, local branches of Roskomnadzor trace “points of tension,” or events that could cause public discontent. Their primary goal is to identify local troublemakers whose names they then share with the Federal Security Services (FSB) and the Interior Ministry to ensure they are punished.

Independent investigative stories and the Russian pro-government business daily Kommersant have reported that Roskomnadzor is experimenting with the use of AI to enhance its control and censorship of online information. Specifically, the agency is testing AI technologies to refine its monitoring of news and information on Runet (the Russian Internet). This could lead to increasingly sophisticated censorship techniques that go beyond the current systems, which mainly focus on searching for prohibited keywords on the Internet and social media platforms.⁴⁹⁵⁹

Environmental Impact of AI

Russia has not implemented the UNESCO Recommendation on the Ethics of Artificial Intelligence, which emphasizes that environmental and ecosystem flourishing should be recognized, protected, and promoted throughout the AI system lifecycle. Therefore, all actors involved in the lifecycle of AI systems are expected to comply with applicable international law, domestic legislation, standards, and practices, such as precautionary measures aimed at environmental and ecosystem protection, restoration, and sustainable development.

Russia and Russian organizations have also made commitments to evaluating environmental impacts of AI in more local initiatives. Russia's National Strategy for Artificial Intelligence establishes that an effective system for assessing the results of implementing AI technologies should include the

evaluation of economic, social, ethical, environmental, and institutional outcomes.⁴⁹⁶⁰

Furthermore, the AI Alliance Russia Code of Ethics for Artificial Intelligence states that AI actors must not allow the use of AI technologies to cause harm to human life and/or health, the property of citizens and legal entities, or the environment. Additionally, any use, including the design, development, testing, integration, or operation of an AI system capable of purposefully causing harm to the environment, human life and/or health, or the property of citizens and legal entities, is prohibited.⁴⁹⁶¹

Lethal Autonomous Weapons

In the international debate about Lethal Autonomous Weapons Systems (LAWS), Russia officially opposes a ban on LAWS and limitations on the development of weaponized AI. In 2019 the Russian delegation at the UN Group of Governmental Experts on LAWS stated that human control over the operation of [LAWS] is “an important limiting factor,” but that “specific forms and methods of human control should remain at the discretion of States.”⁴⁹⁶²

Defense Minister Sergei Shoigu said that Russia has already begun producing “weapons of the future” such as combat robots that are “capable of fighting on their own,” just like those shown in science-fiction movies.⁴⁹⁶³

Moreover, Russia has actively used LAWS in Ukraine since February 2022. As Stop Killer Robot stated, Russia has used “one-way attack drone which carries an explosive payload of approximately 36kg/80lb, has a flight range of approximately 2500km, and possesses autonomous flight capabilities.”⁴⁹⁶⁴

Russia has also publicized the use of loitering munitions, particularly the KUB-BLA and the Lancet. The use of the KUB-BLA raised concerns about the deployment of an “AI-based autonomous weapon” because the system was

reportedly capable of “real-time recognition and classification of detected objects” using AI, or as some have put it, identify targets using AI.⁴⁹⁶⁵

Human Rights

Russia is a signatory to the Universal Declaration of Human Rights. Russia ceases to be a Party to the European Convention on Human Rights on September 16, 2022.⁴⁹⁶⁶ Also, as noted, since March 15, 2022, Russia is no longer a member of the Council of Europe, but ratification of the original Convention 108 is still valid. And a recent decision from the European Court of Human Rights, *Zakharov v. Russia*, found that Russia’s legislation on surveillance “does not provide for adequate and effective guarantees against arbitrariness and the risk of abuse.”⁴⁹⁶⁷ Freedom House rates Russia 13 out of 100 marks for political rights and civil liberties and marks as “Not Free” in the 2024 Freedom in the World report.⁴⁹⁶⁸ According to Freedom House, “Power in Russia’s authoritarian political system is concentrated in the hands of President Vladimir Putin. With subservient courts and security forces, a controlled media environment, and a legislature consisting of a ruling party and pliable opposition factions, the Kremlin manipulates elections and suppress genuine opposition. Rampant corruption facilitates shifting links among bureaucrats and organized crime groups.” Authorities have further restricted individual liberties to stifle dissent over the full-scale invasion of Ukraine in 2022.

Moreover, as Human Rights Watch reports, the Russian Supreme Court ordered the closure of Memorial, Russia’s most prominent human rights organizations: International Memorial Society and Memorial Human Rights Center for violations of the “foreign agents” law. The liquidation was finalized in February 2022, when the Supreme Court rejected their respective appeals. Moreover, in late December 2021, Russian authorities blocked the website of OVD-Info, a human rights watchdog focusing on freedom of assembly. In April 2022, Russian authorities revoked the registration of 15 foreign NGOs and

foundations, forcing them to shut their offices in Russia, including Human Rights Watch and Amnesty International.⁴⁹⁶⁹

Meanwhile, the United Nations Human Rights Office of the High Commissioner (OHCHR) documented violations of international human rights law and international humanitarian law (IHL) by the belligerent parties in relation to the treatment of prisoners of war and persons hors de combat.⁴⁹⁷⁰

OECD / G20 AI Principles

Russia, a member of the G20, endorsed the G20 AI Principles at the G20 Ministerial in 2019.⁴⁹⁷¹ However, Russia has not endorsed the OECD principles updated in 2024.⁴⁹⁷² The first OECD State of Implementation report on the principles acknowledged Russia's alignment with the principles in formulating a national AI strategy, developing legal frameworks such as the concept for regulations on developing robotics, and facilitating innovation through developments such as sandboxes.⁴⁹⁷³ However, Russia's profile on the OECD AI Policy Observatory is no longer available.

Council of Europe AI Treaty

The Council of Europe Framework Convention on Artificial Intelligence, Human Rights, Democracy, and the Rule of Law, commonly referred to as the Council of Europe AI Treaty, was opened for signatures on September 5, 2024.⁴⁹⁷⁴ However, Russia has not signed this first legally binding AI Treaty.⁴⁹⁷⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

UNESCO Recommendation on the Ethics of AI

Russia voted for the UNESCO Recommendation on the Ethics of AI, although it has not implemented it entirely. At least 17 executive bodies associated with the Russian Federation and more than 330 Russian organizations belong to the AI Alliance Network and adopted the AI Code of Ethics.⁴⁹⁷⁶ The Code which was developed by the Alliance Russia's Commission on AI Ethics, is non-binding and voluntary.⁴⁹⁷⁷

Russia has not initiated the UNESCO Readiness Assessment Methodology (RAM).⁴⁹⁷⁸ The RAM is a tool designed to help countries evaluate their preparedness to implement AI ethically and responsibly aligned to UNESCO's Recommendation on the Ethics of Artificial Intelligence.⁴⁹⁷⁹

Evaluation

Russia's development of a National AI Strategy, which has recently been amended to include sections that further the principles of transparency, security, and accessibility; endorsement of the G20 AI Principles; efforts to develop laws for digital rights and regulation of AI; and initiatives to involve the public in AI policy development, are positive steps forward. The adoption of an AI Ethics Code by more than 43 federal executive bodies and 17 executive bodies of the constituent entities of the Russian Federation, indicates a level of commitment to the ethical use of AI.

However, the use of Lethal Autonomous Weapon Systems (LAWS) in the war in Ukraine; lack of robust measures to limit surveillance and protect human rights; rapid adoption of facial recognition technology in public spaces; and use of AI to execute more sophisticated censorship and control of news and information on Runet (the Russian Internet), all raise concerns about the future implications of Russia's AI program.

Rwanda

In 2024, Rwanda launched the AI Playbook for Small States with Singapore and contributed to the East African Community (EAC) Data Policy Framework.

National AI Strategy

Rwanda, with Vision 2050, aspires to increase the quality of life and develop modern infrastructure⁴⁹⁸⁰ by strengthening capacity, service delivery, and accountability of public institutions; increasing citizens' participation and engagement in development; and strengthening justice and rule of law. National Strategy for Transformation (NST1) is the first medium-term strategy that implements the Vision 2050 from 2017–2024. The new National Strategy for Transformation (NST2) runs from 2025–2029 and focuses on job creation, economic growth and climate resilience.⁴⁹⁸¹ The government pledges to establish legal frameworks that spur economic development and instill fairness, transparency, and accountability across institutions. The Emerging Technologies Strategy and Action Plan aim to position Rwanda as an emerging technology test bed, solution, and export hub; propel the social and economic application of new technologies; prepare the foundations for new technologies and protect citizens and institutions from the negative consequences.⁴⁹⁸²

As a member of the African Union, Rwanda is taking concrete steps to align the country's efforts to the vision of the Union to build a continental digital transformation strategy.⁴⁹⁸³ The Government of Rwanda has legislated a national AI strategy to equip government agencies and other stakeholders in the country to empower AI developers, citizens, and users and support the beneficial and ethical adoption of AI.⁴⁹⁸⁴ A report by the Africa Policy Institute (AfriPoli) highlights Rwanda's National AI Strategy with an emphasis on data policies and access to public data. Critical to Rwanda's progress is the adoption of the Continental Data

Policy Framework, under the recommendation of the African Union’s Digital Transformation strategy⁴⁹⁸⁵

In 2020, the Ministry of ICT and Innovation (MINICT) engaged in National AI Policy Stakeholders Workshops with The Future Society (TFS) and GIZ FAIR Forward⁴⁹⁸⁶. The Future Society supports the development of Rwanda’s national artificial intelligence framework and development plans, along with the development of AI ethical guidelines, and a practical implementation strategy fit for the local context.⁴⁹⁸⁷ For implementation, Rwanda has the support of GIZ FAIR Forward—Artificial Intelligence for All.⁴⁹⁸⁸ FAIR Forward—Artificial Intelligence for All is a global initiative of German Development Cooperation, working together with Rwanda and four other countries to lay the foundations for developing local AI, to strengthen local skills and knowledge in AI; remove barriers of entry to developing AI and to develop AI policy frameworks on ethical AI, data protection and privacy.⁴⁹⁸⁹ FAIR Forward advocates for ethical AI that is rooted in human rights, international norms such as accountability, transparency of decision-making, and privacy and draws on European experiences such as the EU General Data Protection Regulation (GDPR).

The result of this partnership is the National AI Policy framework of the Government of Rwanda.⁴⁹⁹⁰ The Rwanda National AI Policy encompasses six priority areas for effective AI policy in Rwanda.

1. 21st-century skills and high AI literacy
2. Reliable infrastructure and compute capacity
3. Robust Data Strategy
4. Trustworthy AI adoption in the public sector
5. Widely beneficial AI adoption in the private sector, and
6. Practical Ethical Guidelines.

Center for AI and Digital Policy

The cooperation with GIZ FAIR Forward includes an AI Policy Maker network with Ministries of ICT and regulatory authorities from our African countries and India, to exchange knowledge and skills and AI policy experiences.⁴⁹⁹¹ The FAIR Forward project also supports the formulation of ethical guidelines for the use of AI, under the responsibility of Rwanda Utilities Regulatory Authority (RURA). The guidelines aim to support AI developers in Rwanda on risk management to protect against harms and threats of these systems.

Other institutions contributing to the development of human-centric AI initiatives are: The Center for the Fourth Industrial Revolution C4IR Rwanda, as responsible for the formulation of policy frameworks “to maximize the social benefits and minimize the risks of advanced science and technology,”⁴⁹⁹² and the Centre of Excellence in the areas of Digitalization and AI (CoE), for R&D investment and building human capacity and preparation for transition into future of work.⁴⁹⁹³ Rwanda has also been engaging internationally in AI policymaking. On September 22, 2024, Rwanda and Singapore launched the AI Playbook for Small States, providing strategic guidance on AI adoption and governance to address small nations' unique challenges in implementing AI policies.⁴⁹⁹⁴

AI Safety Summit

In November 2023, Rwanda participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁴⁹⁹⁵ Rwanda thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The successor of the AI safety summit was the AI Seoul summit that was co-hosted by the Republic of Korea and the United Kingdom in Seoul, South Korea, in May 2024.⁴⁹⁹⁶ While Rwanda was a participant,⁴⁹⁹⁷ they did not sign the Seoul Declaration for Safe, Innovative and Inclusive AI that was signed by ten participants of the summit. The declaration is a statement of intent toward international cooperation on AI safety science.⁴⁹⁹⁸ The next edition of the summit took place in France in February 2025.

Public Participation

Rwanda has yet to develop a systematic process for public consultation on matters of AI policy. The Ministry of ICT and Innovation (MINICT), in partnership with Rwanda Utilities and Regulatory Authority, the Rwanda Information Society Authority, engaged relevant stakeholders from the public and private sectors and civil society in the development of the AI policy 2023 of Rwanda.⁴⁹⁹⁹ The first workshop in September 2020 had the participation of civil society, private sector leaders, academics, and government representatives, focused on identifying and prioritizing AI opportunities, risks, and socio-ethical implications. A Second Collective Intelligence Workshop took place in 2021 (online due to COVID-19) to discuss seven categories of AI policy.⁵⁰⁰⁰ However, there are no recent reports of the outcomes of the 2nd session or information about new public consultation since then.

In 2024, the National Cyber Security Authority and GIZ Rwanda hosted a workshop for stakeholders in the data governance ecosystem to brainstorm collaboration opportunities in data protection and privacy. The workshop identified areas of collaboration in skills development, awareness creation and the

use of artificial intelligence to advance data protection and Privacy knowledge in Rwanda.⁵⁰⁰¹

Rwanda has been absent from other consultative meetings, like the APET African Union High-Level Panel on Emerging Technologies (APET) in 2022. These sessions with representatives of African nations focused on the review of policy implementation frameworks governing AI and demystification of the concept of AI in Africa⁵⁰⁰².

Data Protection

In 2019 Rwanda signed⁵⁰⁰³ and ratified the African Union Convention on Cyber Security and Personal Data Protection (Malabo Convention).⁵⁰⁰⁴ In June of that same year Rwanda adopted the Child Online Protection Policy (the COP Policy” designed to mitigate against risks and harms and to deliver a framework that meets children’s needs and fulfills their rights. This enactment makes Rwanda one of the first countries to adopt such protections.⁵⁰⁰⁵ The country had also been part of an initiative of UNICEF that aligned to policy guidance of AI for children.⁵⁰⁰⁶ The African Union (AU), of which Rwanda is a part, approved the African Union Child Online Safety and Empowerment Policy in May 2024.⁵⁰⁰⁷ The Policy establishes key principles such as children’s right to safety, privacy, and online participation, and covers the full range of children’s rights as set out in

Center for AI and Digital Policy

the Convention on the Rights of the Child adopted by the UN in 2021, and reinforced in 2023.⁵⁰⁰⁸

In 2021, pursuant to the Malabo Convention, the Ministry of Justice published Law No. 058/2021 of 13/10/2021 Relating to the Protection of Personal Data and Privacy.⁵⁰⁰⁹ The Law established principles of lawfulness, fairness and transparency, purpose limitation, and accuracy, requiring personal data protection impact assessments. Article 3 of the Privacy Law establishes privacy as a “fundamental right.”⁵⁰¹⁰

While the legislation did not establish an independent data protection agency, there were provisions for a supervisory authority, defined as a public authority in charge of cyber security. The National Cyber Security Authority (NCSA) was established in 2017, under Law No. 26/2017⁵⁰¹¹ but was only operational in 2020.⁵⁰¹² In 2018, the Law No. 60/2018 addressed prevention and punishment of cybercrimes⁵⁰¹³.

Following the GDPR, the Privacy Law seeks to safeguard fundamental rights to privacy by regulating the processing of data and providing the individual with rights over their data.⁵⁰¹⁴ The law establishes systems of accountability and clear obligations for those who control the processing of personal data. According to One Trust, “The Bill is relatively comprehensive and would introduce obligations related to data subject rights, data processing notifications, pseudonymization, sensitive data, data transfers, and data breach notifications.”⁵⁰¹⁵

Center for AI and Digital Policy

On March 31, 2022, the National Cyber Security Authority launched the Data Protection Office (DPO).⁵⁰¹⁶ The role of the DPO is to generate awareness of the Data Protection and Privacy Law and lead activities to ensure the law is followed. Those activities include registering processors and controllers, conducting audits, conducting investigations, and refining best practices to uphold the law. The office is also tasked with ongoing learning and research to keep pace with developments and advancements in the data protection ecosystem of control.

The DPO began an important national awareness campaign to help citizens understand the data protection and privacy afforded to them by the new Data Protection Law. The campaign covered basic data literacy topics (e.g., terms and definitions), risk mitigation topics (e.g., misinformation, helping seniors stay safe online, children's data protections), and a series of topics on individual data rights (e.g., portability, rectification, erasure). The office has developed several partnerships to expand the reach of its messaging within schools, public transportation areas, and local townships. The first Data Privacy Day took place on January 28, 2023⁵⁰¹⁷ and Safer Internet Day on February 7, 2023.⁵⁰¹⁸ The theme of the Safer Internet Day 2024, taking place across different schools in Rwanda over 3 weeks, was 'Promoting personal accountability for a constructive Internet atmosphere.'⁵⁰¹⁹

On October 25, 2024, The East African Community (EAC) approved the EAC Data Governance Policy Framework, aimed at promoting common standards for data protection, privacy, and security, laying a robust foundation for data protection and data sharing in the region.⁵⁰²⁰

Despite these initiatives, Rwanda has not sponsored any of the Global Privacy Assembly (GPA) resolutions and declarations. The DPO had not been established at the time the Declaration on Ethics and Data Protection in Artificial

Intelligence (2018)⁵⁰²¹ and the Resolution on Accountability in the Development and Use of Artificial Intelligence (2020)⁵⁰²² were passed. The DPO was functional in March 2022, when the GPA 2022 Declaration on Facial Recognition Technology⁵⁰²³ was issued, but it did not endorse it. Neither did it cosponsor the 2023 GPA Resolution on Generative AI.⁵⁰²⁴

Algorithmic Transparency

Rwanda does not yet have a dedicated AI oversight agency. However, Rwanda's National AI Policy of 2023 emphasizes algorithmic transparency by building regulatory capacity, establishing ethical guidelines, and creating roles dedicated to responsible AI. Key initiatives mentioned include “launching an annual participatory consultation forum to update the guidelines and create a network of AI Ethics Officers across government institutions to champion them.” Additionally, the policy includes the recommendation to establish a Responsible AI Office (RAI Office) during the first year of this policy, housed within the Ministry of ICT & Innovation (MINICT). These measures aim to build public trust and accountability in Rwanda's AI ecosystem. However, neither the RAI office nor the public consultation has materialized yet as of November 2024, despite more than one year having passed since the legislation of the policy. In the meantime, algorithmic transparency is partially enforced by Rwanda's Data Protection and Privacy Office (DPO), which oversees the lawful, fair, and transparent processing of personal data, as mandated by national data protection laws.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Human Rights

Freedom House scores Rwanda as “Not Free” with a score of 23/100 in 2023 and 2024,⁵⁰²⁵ with a steady yet slight increase from 2021 and 2022. The Ibrahim Index of African Governance scores Rwanda’s 2023 record on Participation, Rights, and Inclusion at 42.5 out of 100, which is lower than the African average of 48.7 out of 100. For overall governance, Rwanda scores 58.7 out of 100, which places the country 14 out of 54 African countries.⁵⁰²⁶

After the genocide of 1994, Rwanda had to rebuild its infrastructure and relations from the ground up. A unity and reconciliation process was followed by a combination of traditional systems of justice and international tribunals.⁵⁰²⁷ The National Commission for Human Rights was created in 1999 as an independent institution responsible for the promotion and protection of human rights in Rwanda.⁵⁰²⁸ The European Union concluded in its 2023 human rights and democracy report that “The human rights and democracy situation in Rwanda remained challenging”⁵⁰²⁹ and that “Freedom of expression remained limited: charges for inciting insurrection, spreading rumours or false information, genocide minimization, and others, stifled public dissent or criticism.” In 2023, restrictions on freedom of expression and individual rights in Rwanda persisted, with specific incidents such as imprisonment, torture, and suspicious deaths of journalists or commentators who do not align with the government’s narrative.⁵⁰³⁰

Ahead of the 2021 UN Universal Periodic Review of Rwanda, the government announced National Action Plan for Human Rights (NHRAP) 2017–2020, formulated through a participatory process. This is the first of its kind in Rwanda and builds on extensive work by the Rwandan government to create an inclusive society where all are valued and have equal opportunities. The government commits that the Universal Declaration of Human Rights should guide all future programs and policies in all sectors and all phases of the

programming process including monitoring and evaluation. The Rwandan judiciary is not completely independent from the executive because top judicial officials are appointed by the president and confirmed by the Senate,⁵⁰³¹ which is currently dominated by the governing party. However, the judiciary must function in an independent manner and enjoys administrative and financial independence.

Smart Cities

Established in 2000 and revised in 2012, the aim of Rwanda Vision 2020 was to “transform Rwanda from an agrarian economy to a knowledge-based society by 2020.” Under this vision, Smart Rwanda Master Plan had three goals: economic transformation, job creation, and accountable governance. In 2015, Rwanda adopted a National Urbanization Policy to demonstrate how urban development can drive economic transformation. One of the focuses is to “promote quality of life, mitigation of disaster risks, social inclusion and cultural preservation” through “digital service points for rural settlements, smart urban agriculture projects, sensor-based environmental data, and smart and green building labs.”⁵⁰³² The policy requires public engagement and open data as building blocks. The Rwanda smart city model is centered around 3 main pillars, 9 strategic building blocks, and 27 action initiatives. The three pillars are smart governance and planning; smart and efficient services and utilities; and localized innovation for social and economic development.

Kigali Innovation City (KIC) is the government’s flagship program to create a hi-tech ecosystem, modeling itself on the southeast Asian city-state of Singapore. The City of Innovation is to be built as part of Africa50. It is a 62-hectare development located in Kigali’s special economic zone (SEZ). The main goal is to create an innovative business hub in the heart of Africa that will include four first-rate universities, innovative agriculture, healthcare, technology, financial services, biotech firms, and both commercial and residential space.⁵⁰³³ The Government of Rwanda, Africa50, and the Arab Bank for Economic Development in Africa officially broke ground on the construction of the pioneering smart city project in September 2024.⁵⁰³⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Smart City Masterplan was developed in 2017, with the participation of various stakeholders in Rwanda, including regulatory bodies, local authorities, academia, civil society, and the private sector. The development was aligned with the Smart Africa Alliance Smart Sustainable Cities Blueprint for Africa.⁵⁰³⁵

Biometric Identification

Rwanda used biometric identification for its census in 2007 to unify all identity information under a single authority, the National Identification Agency (NIDA), and a unique National Identity Number (NIN). This number is now used for health, education, telecom, banking, electoral lists, social protection programs, and border crossings.⁵⁰³⁶ Rwanda's authorities also proposed to create a country-wide DNA database to crack down on crime, raising concerns that the data could be misused by the government and violate international human rights laws.⁵⁰³⁷ Rwandan regulations require mandatory SIM card registration and a limit of three cards per national ID per operator. Service providers are required to maintain databases and share information with law enforcement if necessary.

In a country that has bitter memories of genocide along ethnic identity lines, the right to data privacy becomes a crucial issue. The national social protection program, Ubudehe, database, was created in 2001⁵⁰³⁸ to classify wealth and identify the poorest households using community assessments. The database is interlinked with the national ID number. The lack of transparency on who makes the determination of wealth category and how this impacts an individual's access to opportunities and resources and the extent of stigmatization remains questionable.

A study by the World Health Organization (WHO) on the use of digital technologies to identify vulnerable populations, included Rwanda's CBHI (Community-based health insurance scheme) as a case study.⁵⁰³⁹ WHO concluded

that the use of a sophisticated data infrastructure (3MS system) to connect the Ubudehe system to the IREMBO-Rwanda online portal resulted in ease of tracking payments to households, cost savings, and fraud control. In a contrasting study, Algorithm Watch analyzed the Ubudehe case as a prime example of Rwanda's 'centralized, unified and biometric repository of the population.'⁵⁰⁴⁰ The process of collection, analysis, and interpretation and the source of decision-makers of such categorization lack transparency.

Environmental Impact of AI

The G20 Engagement Groups issued the São Luis Declaration, a joint declaration for ethical, sustainable, and inclusive Artificial Intelligence.⁵⁰⁴¹ With Rwanda's president leading the African Union delegation to the 2025 G20, seated in South Africa, the G20 could take action to promote action to curb AI's environmental impact and develop AI solutions to mitigate harms.⁵⁰⁴²

Lethal Autonomous Weapons

In 2019 Rwanda partnered with the World Economic Forum⁵⁰⁴³ to draft a framework for governing drones at scale and foster an ecosystem of unmanned aircraft systems. This decision followed the successful partnership with a startup, Zipline, to deliver blood, vaccines, and other medical supplies to rural hospitals in Rwanda, the country decided to regulate the use of drones. The Rwandan government was the first in the world creating a performance-based regulation focused on safety standards for all drones.⁵⁰⁴⁴

This partnership also resulted in The Advanced Drone Operations Toolkit which provides a modular approach for governments to enable societally

important and safe drone projects.⁵⁰⁴⁵ The country is looking to use these technologies to promote agricultural resilience and food security in Rwanda. It has not called for a prohibition on fully autonomous weapons.⁵⁰⁴⁶

Rwanda participated in the REAIM international summit hosted by the Netherlands in February 2023. At the end of the Summit, Rwanda, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.⁵⁰⁴⁷ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” States also “stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain.”⁵⁰⁴⁸

In December 2023, Rwanda voted in support of UN General Assembly Resolution 78/241 on lethal autonomous weapons systems.⁵⁰⁴⁹ The Resolution stressed the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems” and mandated the UN Secretary-General to prepare a report, reflecting the views of member and observer states on autonomous weapons systems and ways to address the related challenges and concerns they raise from humanitarian, legal, security, technological and ethical perspectives and on the role of humans in the use of force.

Rwanda is not a state party to the Convention on Certain Conventional Weapons, and it has not yet declared its position on the negotiation of a legally binding instrument on autonomous weapons systems. Rwanda is a member of the African Group in the United Nations, which supports the negotiation of a legally binding instrument on autonomous weapons.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The AU addressed the issue of lethal weapons by stressing the urgent need for stringent regulations and oversight to prevent their proliferation, particularly in conflict-prone regions. While we underscored the devastating impact of such weapons on civilian populations and the necessity for comprehensive disarmament initiatives. Emphasizing the role of international cooperation, we must advocate for collaborative efforts to strengthen legal frameworks and promote alternative security measures, thereby fostering a safer environment and enhancing regional stability.⁵⁰⁵⁰

OECD / G20 AI Principles

Rwanda applied in 2018 to be part of OECD and was accepted. Finally in 2024, Rwanda was admitted a member of the Organization for Economic Cooperation and Development (OECD) Development Center as its 55th member during the OECD Forum that took place in Paris, France.⁵⁰⁵¹

Rwanda continues to refine its AI policies and frameworks, reinforcing its commitment to sustainable development and collaboration with international bodies. Rwanda engages actively with G20 discussions, contributing to the development of global AI principles that emphasize transparency, accountability, and inclusivity. The OECD AI Observatory reports the progress of the collaborative work of the Rwanda Ministry of ICT and Innovation (MINICT), and the Rwanda Utilities Regulatory Agency (RURA), The Future Society, and GIZ FAIR Forward.⁵⁰⁵² According to the Observatory, the national AI policy framework is set to address three OECD AI principles: (1) Investing in AI R&D, (2) Fostering a digital ecosystem for AI, and (3) Providing an enabling policy environment for AI.⁵⁰⁵³

Council of Europe AI Treaty

The first legally binding global AI treaty protecting human rights, democracy, and the rule of law was developed in the Council of Europe with the participation of all member states, observer states, and a number of non-member

states.⁵⁰⁵⁴ The Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law opened for all countries to sign and ratify on September 5, 2024. Rwanda has not signed the international AI treaty.⁵⁰⁵⁵

UNESCO Recommendation on AI Ethics

Rwanda is a member state of UNESCO since November 1962⁵⁰⁵⁶ and is one of the 193 countries endorsing the Recommendation on the Ethics of AI.⁵⁰⁵⁷ According to UNESCO's Artificial Intelligence Needs Assessment Survey, Rwanda has ongoing initiatives to guide the development of AI at national level.⁵⁰⁵⁸ Rwanda is one of 24 countries in Africa that have requested support in the development of policies on AI and one of 21 countries that have requested UNESCO for help in setting standards.⁵⁰⁵⁹ The UNESCO report highlights Rwanda's policies and centers of excellence on AI as policy initiatives completed as of 2022. Strategies, legislation, and ethical guidelines are yet to be implemented.

Rwanda is currently completing the UNESCO Readiness Assessment Methodology (RAM),⁵⁰⁶⁰ a tool to support the effective implementation of the Recommendation.⁵⁰⁶¹ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.⁵⁰⁶²

The UNESCO Recommendation on the Ethics of AI, adopted by all 193 UNESCO Member States, formed the basis of a national workshop convened by UNESCO and Rwanda, and which focused on the implementation of the

Recommendation in Rwanda.⁵⁰⁶³ The 11 Policy Areas of the Recommendation, such as ethical governance, data policy, gender, education and research, and environment and ecosystems, feed into the risk assessment and ethical applications that Rwanda has been pioneering in Africa.

Evaluation

Rwanda's Vision 2050, the African Union Digital Transformation Strategy, and the SmartAfrica Blueprint set the framework for the formulation of a national AI strategy. The draft strategy achieved in cooperation with the MINICT, FAIR Forward AI for All and The Future Society set the intent of the country in aligning with the UNESCO Recommendation on the Ethics of AI. An independent AI oversight mechanism could also be a positive step in addressing AI-powered surveillance practices.

Rwanda is positioning itself as a key player in the global discourse on artificial intelligence. By voting in support of UN Resolution 78/241, Rwanda has demonstrated its commitment to addressing the challenges posed by ethical considerations and responsible usage. Its recent admission to the OECD Development Center signifies a strengthened commitment to aligning with global AI principles, enhancing its capacity for ethical governance and sustainable development.

Rwanda's collaboration with UNESCO to implement AI ethics; and its participation in G20 discussions on ethical AI further illustrate its proactive stance in shaping policies that prioritize transparency and inclusivity. Hosting a high-level AI summit and launching an AI playbook with Singapore highlight Rwanda's leadership in fostering regional cooperation and addressing the skills gap in ICT by updating their National Talent Policy.

Overall, these developments reflect Rwanda's strategic efforts to harness technology for social and economic progress while advocating for ethical frameworks and international collaboration.

Saudi Arabia

In 2024, the Kingdom of Saudi Arabia's Personal Data Protection Law and related Implementing Regulation took effect. Restricted political and civil liberties remain a concern exacerbated by AI-power surveillance.

⁵⁰⁶³ UNESCO, *Supporting Rwanda's Bold Steps towards Responsible and Ethical AI* (Nov. 2023), <https://www.unesco.org/en/articles/supporting-rwandas-bold-steps-towards-responsible-and-ethical-ai>

Artificial Intelligence and Democratic Values 2025

National AI Strategy

The Kingdom of Saudi Arabia (KSA)'s AI initiatives are led by the Saudi Data and AI Authority (SDAIA), which reports directly to the Prime Minister and consists of members chosen by the Prime Minister.⁵⁰⁶⁴ A Royal Decree established the SDAIA in 2019,⁵⁰⁶⁵ and its governance by a Board of Directors chaired by the Deputy Prime Minister. The SDAIA has the aim of fostering “the digital ecosystem while also supporting the suite of values-based G20 AI Principles.”⁵⁰⁶⁶

The SDAIA is to lead in the national trend for data and artificial intelligence to elevate the Kingdom to leadership among data-driven economies.⁵⁰⁶⁷ “Data is the single most important driver of our growth and reform and we have a clear roadmap for transforming KSA into a leading AI and data-driven economy,” said Dr. Abdullah bin Sharaf Al Ghamdi, president of SDAIA.⁵⁰⁶⁸

The SDAIA oversees three organizations: the National Data Management Office (NDMO), National Information Center (NIC), and National Center for AI (NCAI). The NDMO is responsible for data regulation, which includes standardization and regulation of artificial intelligence and compliance. The NIC oversees the operation of government data infrastructure and government analytics. The implementation of the national AI strategy is the main responsibility of the NCAI. This includes facilitating capacity-building, AI innovation, and awareness of AI such as through expanding education on AI.⁵⁰⁶⁹

The SDAIA developed the National Strategy for Data and Artificial Intelligence (NSDAI), approved by the Saudi High Commissioner on July 7, 2020⁵⁰⁷⁰ and published in August 2020.⁵⁰⁷¹ The National Strategy aims to advance

the KSA Vision 2030.⁵⁰⁷² The AI Strategy, also called ASPIRE, includes a roadmap with a “a multi-phased approach focused on addressing the national priorities by 2025, building foundations for competitive advantage in key niche areas by 2030, and becoming one of the leading economies utilizing and exporting Data & AI after 2030.”⁵⁰⁷³

The strategy supports national priorities by addressing the urgent needs to enable the transformation of the Kingdom in accordance with the priorities of Vision 2030.⁵⁰⁷⁴ By 2025, the strategy will focus on building specialized capabilities as the foundation for competitive advantage by specializing in specific areas.⁵⁰⁷⁵ And by 2030, the strategy will be directed at developing entrepreneurial competition by competing at the international level and joining the leading economies that benefit from data and artificial intelligence.

The AI Strategy has 6 pillars:⁵⁰⁷⁶

1. **Ambition:** Position KSA as the global hub where the best of Data & AI is made a reality, to be amongst the top 15 nations in development and application of AI by 2030.
2. **Skills:** Transform KSA’s workforce with a steady local supply of Data & AI-empowered talents. Train and host more than 20,000 data and AI specialists and experts by 2030.
3. **Policies & Regulations:** Enact the most welcoming legislation for Data & AI businesses and talents. Partner with leading AI nations, international organizations and private sector.
4. **Investment:** Attract efficient, stable funding for qualified Data & AI investment opportunities, of over US\$20B in data and AI.
5. **Research & Innovation:** Empower top Data & AI institutions to spearhead innovation and impact creation
6. **Ecosystem:** Stimulate Data & AI adoption with the most collaborative, and forward-thinking ecosystem, of more than 300 active data and AI start-ups, world-class regulatory sandboxes for the development and deployment of AI powered technology

Center for AI and Digital Policy

The goals focus on fostering an enabling business and regulatory environment, including education schemes that promote the development of a workforce that fits the industry's new needs. Major educational reforms aim to foster the development of digital skills for jobs in emerging technology including AI.⁵⁰⁷⁷

As part of the National Strategy, the Kingdom aimed at the creation of a framework to promote and support the ethical development of Data & AI research and solutions. The framework includes guidelines for the development of data protection and privacy standards.”⁵⁰⁷⁸ The NDMO worked on the development of policies and regulations related to data privacy and freedom of information, with Open Data platforms as a priority topic. The regulatory framework includes specifications on data collection, classification, sharing, open data policy, and freedom of information.⁵⁰⁷⁹

KSA's Deputy Minister of Technology Industry and Digital Capacities Dr. Ahmed Al-Theneyan emphasized the importance of regulation in the Kingdom's AI Strategy. This includes education plans that promote the development of a workforce that fits the industry's new needs. The government is undertaking major educational reform to foster the development of digital skills for jobs in emerging technology including AI.⁵⁰⁸⁰

Minister of Education Yousef bin Abdullah Al-Benyan and Saudi Data and SDAIA President Abdullah bin Sharaf Alghamdi launched the “One Million Saudi in AI” initiative in September 2024.⁵⁰⁸¹ The national initiative will train one million Saudi's to “understand AI, its uses, ethics, and to train on the skills and tools necessary to integrate AI into business and daily life effectively and safely.”

The SDAIA website provides information about the Kingdom's roadmap for AI,⁵⁰⁸² current activities, achievements, and general information about the authority and its work.⁵⁰⁸³ Further, the SDAIA provides a digitized version of the

strategy report.⁵⁰⁸⁴ The Vision 2030 Strategy was developed by the Council of Ministers.⁵⁰⁸⁵ The Vision 2030 website sets out broad policy objectives.⁵⁰⁸⁶ There are indicators and targets for every Theme as well as information on the respective initiatives. Vision 2030, however, encompasses many different objectives, AI is only one of many.

Public Participation

The Saudi AI initiatives are led by the Saudi Data and AI Authority, which reports directly to the Prime Minister and consists of members chosen by the Prime Minister.⁵⁰⁸⁷

In the most recent UN e-Government Survey of 2024,⁵⁰⁸⁸ Saudi Arabia ranked 6th out of 193 in the VHEGDI group in the E-Government Development Index (EGDI) and 2nd in the GCC. The UN report highlighted the e-participation initiatives at the national and local level and the integration of these programs through the Balady portal. The Balady (Arabic for ‘My country’) includes information on e-participation functions, including e-consultation, e-information, and e-decision making. The interactive platform includes options for “your voice is heard,” “self-evaluation,” and “your decision.”⁵⁰⁸⁹

The Bertelsmann Foundation country report 2024,⁵⁰⁹⁰ ranked Saudi Arabia 84th of 137 countries in the governance index, with low scores in Stability of Democratic Institutions and Political Participation. The report indicates that public debate about political issues is minimal.

The SDAIA announced in August 2022 that it had launched a consultation and was seeking public comments on its project entitled Principles of Ethics of Artificial Intelligence.⁵⁰⁹¹ In particular, SDAIA explained that AI ethics principles have been developed with the aim to enhance data governance and AI to reduce

the negative effects of AI systems and their potential threats. The survey ended two weeks later. Public comments are visible on the website and results and decisions can be downloaded (in Arabic).⁵⁰⁹²

The KSA Communications, Space, and Technology Commission (CITC) sought public comment on the Digital Content Platform Regulations Document in 2021. According to the Commission, “The initiative is aimed to regulate, govern, activate, and motivate digital content platforms to expand and grow. In addition to engage the private sector, empower entrepreneurs as well as attract investments and protect users of digital content platforms.”⁵⁰⁹³ The document remains available on the website, but no comments or responses were published.

Data Protection

The KSA Personal Data Protection Law (PDPL) was created by Royal Decree M/19 of September 2021 and Cabinet Resolution No. 98 of September 2021. Following public consultation on proposed amendments in November 2022, the Saudi Arabia Council of Ministers adopted the amendments to the PDPL in March 2023.⁵⁰⁹⁴ The amendments sought to assimilate further the PDPL definitions, concepts, and requirements to exemplary privacy laws such as the GDPR. The amendments introduced concepts such as personal data, controllers, and processors and added rights such as data portability and a requirement to maintain a record of processing activities.

The Implementing Regulation of the Personal Data Protection Law entered into effect along with the PDPL in September 2024.⁵⁰⁹⁵ The Implementing Regulation outlines key data subject rights such as the right to be informed of the purpose of data collection and the right to access, rectify, and delete personal data or withdraw consent. Furthermore, the regulation outlines the legal basis for personal data collection and processing outlining the controllers' obligations.”

The PDPL aims “to protect individuals' personal data privacy and regulate organizations' collection, processing, disclosure, or retention of personal data.”⁵⁰⁹⁶ Modeled after the EU’s General Data Protection Regulation (GDPR), the PDPL

Center for AI and Digital Policy

aims to prevent the misuse of personal data and specifically implements principles such as “purpose limitation and data minimization, controller obligations, including registration and maintenance of data processing records, data subject rights, and penalties for breach of provisions.”⁵⁰⁹⁷

The law grew from efforts by SDAIA to align the Kingdom with other countries in the region and with international standards as part of the Vision 2030.⁵⁰⁹⁸ Individuals now have the “right to be informed of the legal basis and purpose for the collection and processing of their personal data. Personal data cannot be collected or processed without the Data Subject’s express consent.” Data subjects will also have the “right to access personal data in possession of the Data Controller, including the right to correct, delete, or update personal data, destroy unnecessary data, and obtain a copy of the data in a clear format.”⁵⁰⁹⁹

Soon after the PDPL took effect, the SDAIA published the Personal Data Destruction, Anonymization, and Pseudonymization Guideline,⁵¹⁰⁰ which provides a framework to help entities comply with the requirements for data destruction, anonymization, and pseudonymization.

The Kingdom issued the E-Commerce Law of 2019, which focuses on increased transparency and consumer protection to enhance trust in online transactions and includes provisions for the protection of personal data of customers.⁵¹⁰¹ The Law sets obligations to service providers to protect the personal data of customers in their possession or under their control. The KSA E-Commerce Law prohibits service providers from using customers’ personal data for “unauthorized or impermissible” purposes and disclosing personal data to third parties without the customer’s consent.⁵¹⁰²

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The SDAIA Open Data Strategy 2022–2024 aimed to “Provide high-value and re-usable Open Data for the nation to increase transparency and foster innovation through collaboration, enabling a data-driven economy.” The SDAIA identified 4 strategic objectives to deliver on this mission:

- Empowering governance and regulatory clarity
- Enabling economic growth
- Prioritizing and publishing accessible, quality, and demanded datasets
- Creating impact through awareness, innovation, and international and local partnerships.⁵¹⁰³

The SDAIA was welcomed as a new Observer to the Global Privacy Assembly (GPA) in 2021 until 2025.⁵¹⁰⁴ The Authority did not endorse the GPA 2018 Declaration on Ethics and Data Protection,⁵¹⁰⁵ 2020 Resolution on Accountability in the Development and Use of AI,⁵¹⁰⁶ 2022 Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology,⁵¹⁰⁷ or 2023 GPA Resolution on Generative AI.⁵¹⁰⁸

Algorithmic Transparency

The PDPL Implementing Regulation⁵¹⁰⁹ that entered into force in September 2024 introduced provisions and mechanisms that enhance transparency and ensure accountability in the use of automated processing and algorithms. It ensures that data subjects are aware of, and consent to, such processing.

⁵¹⁰³ SDAIA, *Open Data Strategy 2022–2024* (2021), https://open.data.gov.sa/odp-public/static/en/assets/Open_Data_Strategy_2022_2024_En.pdf

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The regulation requires that when decisions are “made based entirely on automated processing of personal data,” explicit consent must be obtained from the data subject.⁵¹¹⁰ Another article requires controllers to conduct an impact assessment when processing involves “making decisions based on the automated processing of personal data.”⁵¹¹¹ The impact assessments include identifying potential risks and impacts on the privacy and rights of data subjects. Controllers must also clarify “whether decisions will be made based entirely on automated processing of personal data.”⁵¹¹²

Prior to the PDPL regulation, KSA public entities showed examples of adopting a culture of personal data protection. For example, the Saudi Tourism Authority in its website privacy statement explicitly informs users that no automated decision, including profiling is carried out, and informs of the obligation to notify users “how [they] use automated decision making and/or profiling—when and why.”⁵¹¹³

Human Rights Watch conducted a global investigation of EdTech products that were endorsed by 49 governments for children’s online education during the COVID-19 pandemic.⁵¹¹⁴ KSA was one of the analyzed countries. KSA was notably one of the nine governments that “directly built and offered eleven learning apps that may collect AAID [Advertising ID] from children. In doing so, these governments granted themselves the ability to track an estimated 41.1 million students and teachers purely for advertising and monetization.”

KSA’s educational App iEN included third-party tools like Google Crashlytics and Firebase Analytics, which have the technical capability to collect and process users’ data and access the Android Advertising ID and camera on users’ Android devices. On a positive note, the KSA educational website was one of only 12 websites of the 124 analyzed that did not collect and transmit data about children through third-party trackers, preserving their privacy.

Digital Government

Saudi Arabia is recognized by the 2022 World Bank’s GovTech Maturity Index as one of the 69 economies classified under Group A for their high level of digital government transformation.⁵¹¹⁵ Group A represents countries that have “high

Center for AI and Digital Policy

levels of maturity in their GovTech ecosystems by implementing innovative solutions and good practices across the four focus areas: Core Government Systems, Public Service Delivery, Digital Citizen Engagement, and GovTech Enablers.” KSA is a standout performer in the Middle East and North Africa (MENA) region.

The report highlights Group A’s robust digital infrastructure ensuring most public services are accessible online through user-friendly portals for its residents. The ranking underscores transparency initiatives to enhance government accountability by making public data accessible and maintaining government platforms that provide the opportunity for citizens to participate in policymaking and give feedback on public services. Finally, the index points out that Group A countries have comprehensive data protection and privacy laws.

The Kingdom initiated in 2020 a national data bank to consolidate more than 80 government datasets, the equivalent to 30 percent of the government’s digital assets. It is also planning to build one of the largest clouds in the region by merging 83 data centers owned by more than 40 government bodies.⁵¹¹⁶

In 2017 KSA granted the robot, Sophia, citizenship. This is a first worldwide and was met with mixed reactions. CNBC said, “Sophia has been touted as the future of AI, but it may be more of a social experiment masquerading as a PR stunt.”⁵¹¹⁷ Bloomberg noted that “Migrant laborers can’t become citizens; android Sophia can.”⁵¹¹⁸

Global AI Summits

The Global AI Summit, held in October 2020, is described as the “world’s premier platform for dialogue that brings together stakeholders from the public sector, academia, and private sector, to shape the future of Artificial Intelligence (AI).”⁵¹¹⁹ Speakers from across sectors explored the themes of AI for the Good of Humanity, AI for Good, and AI for All.⁵¹²⁰

The President of SDAIA emphasized the importance of working together internationally to ensure the sustainable development of AI⁵¹²¹ “to accelerate AI

for sustainable development in low and middle-income countries and to enable the sharing of AI best practices globally to ensure a more inclusive future powered by AI where no one is left behind.”

The 2nd Global AI Summit was held in September 2022 under the theme Artificial Intelligence for the Good of Humanity.⁵¹²² The Summit examined eight pillars: smart cities, capacity building, healthcare, transportation, energy, culture, environment, and economic mobility. More than 40 memoranda of understanding, declarations, and partnerships were signed between the public and private sectors towards investing in AI technologies, underlining the Kingdom’s aspirations to become a global AI hub as part of its Vision 2030 development program.

During the summit, the State Members of the Digital Cooperation Organization (DCO)⁵¹²³ adopted the Riyadh AI Call for Action Declaration (RAICA). The declaration was signed by all members of DCO including Bahrain, Cyprus, Djibouti, Kuwait, Morocco, Nigeria, Oman, Pakistan, Jordan, Rwanda, and Saudi Arabia.⁵¹²⁴ The declaration promotes the use of AI technology to benefit transnational and transcontinental communities, advancing the DCO’s commitment to identify and address present, emerging, and future humanitarian issues. The declaration highlights seven key pillars:

1. Closing the digital divide
2. Empowering underprivileged communities
3. Promoting digital development
4. Ensuring fairness and non-discrimination
5. Driving AI innovation
6. Combating climate change through AI
7. Engaging in international collaboration and cooperation.

The International Telecommunication Union (ITU) signed a new agreement with SDAIA, this time to formulate a Global AI Readiness Framework for key socio-economic domains, such as health and smart mobility. The agreement aims to establish best practices for AI regulatory frameworks and institutional reforms, allowing a variety of tools and activities to explore national AI best practices and countries’ readiness.

Google Cloud and SDAIA also launched the Elevate global program, which aims to reduce the gender gap in the technological sector, especially within AI. The program provides a four-month training program to women in tech and

science, empowering them to pursue growing job opportunities in the fields of cloud architecture, data engineering, machine learning engineering, and AI.

SDAIA announced the decision to join the World Bank's Digital Development Partnership (DDP) to help developing countries leverage digital innovations to tackle some of their most challenging issues. By joining the DDP, Riyadh aims to contribute to the overall digital development agenda, ensuring sustainable development for less privileged countries.

AI Safety Summit

In November 2023, Saudi Arabia participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁵¹²⁵ Saudi Arabia thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

The second AI Safety Summit took place in Seoul in May 2024 and Saudi Arabia was represented by the SDAIA President.⁵¹²⁶ Saudi Arabia signed the Ministerial Statement, which highlighted the need to enhance inclusivity alongside AI safety and innovation.⁵¹²⁷

Biometric Identification

Digital identity initiatives are on the agenda of the Kingdom. In 2021, Saudi Telecom Company (STC) signed an MoU with Thales on ample cooperation that encompassed Smart Cities, SIMs, IoT, and 5G Satellites.⁵¹²⁸ The Ministry of Interior of KSA announced the introduction of a biometric passport with advanced

securities, including an electronic processor chip with biometric information for authentication.⁵¹²⁹

The Jawazat in 2021 released a Digital ID (Muqem- Iqama) for Expats, within the new electronic application ABsher Individuals. Carrying the Iqama card was compulsory for ex-pats with fines for not adhering. However, later in the year, the Jawazat clarified that Expats could use the alternate plastic Muqem version as well.⁵¹³⁰ The Muqem card is under the Ministry of Interior in cooperation with the National Information Center.

Mass Surveillance

The Kingdom of Saudi Arabia was among the countries studied by the Carnegie Endowment for Peace in 2019 on the use of AI technology for mass surveillance.⁵¹³¹ According to the research, the Saudi government cooperates with several global technology firms to solidify digital infrastructure: Huawei to set up Safe cities, Google with cloud servers, BAE with mass surveillance systems, NEC with facial recognition technology, and Amazon and Alibaba with cloud computing centers within the smart city project. U.S. and Chinese technology firms also included Briefcam, Gatekeeper, Hikvision, Hugslock, and IBM, according to the study.⁵¹³²

Saudi Arabia's Makkah Region Development Authority (MRDA) implemented a crowd-control system to protect pilgrims during Hajj and increase security and safety. The system includes a wristband with digital ID information, special healthcare requirements, and location via GPS as well as surveillance cameras to monitor the holy sites in real-time. The General Security and SDAIA collaborated to implement artificial intelligence technologies at the Command and Control Center of the Hajj security forces in Makkah and the holy sites in 2024.⁵¹³³

During the fight against COVID-19, the SDAIA launched two apps: the Tawakkalna app⁵¹³⁴ to manage movement permits for government and private sector employees and Tabaud to notify citizens when they came in contact with

someone who was infected with the virus. MIT Technology Review reported that Tabaud is transparent, voluntary, and minimizes data collection.⁵¹³⁵

Smart Cities

The Kingdom initiated a smart city project called Neom. Neom “is an international project that will be led, populated and funded by people from all over the world.” Neom will be a “semi-autonomous region with its own government and laws” in northwest Saudi Arabia on the Red Sea and home to one million people by 2030.⁵¹³⁶ Neom is envisioned to become a region that “redefines the concept of urban development and what cities of the future will look like,” built on five principles: sustainability, community, technology, nature, and livability.⁵¹³⁷

During the third edition of the Global AI Summit, the SDAIA signed a partnership with NEOM to support the NEOM Project in developing talented human resources in innovations, encouraging creators, and building national and international capacities regarding AI in decision-making, AI adaptive inspection, and machine-executable legislation.⁵¹³⁸

The NEOM project aligns with plans announced in 2022 to build 200 smart cities. The plan will involve the Ministry of Municipal and Rural Affairs and Housing, SDAIA, and the Royal Commission for Riyadh City.⁵¹³⁹

Environmental Impact of AI

Principle 4 in the AI Ethics Principles states “AI systems should neither cause nor accelerate harm or otherwise adversely affect human beings but rather contribute to empowering and complementing social and environmental progress while addressing associated social and environmental ills.”⁵¹⁴⁰

The Kingdom of Saudi Arabia forged agreements and partnerships to support projects that would apply AI technology to improve environmental conditions at the Global AI Summit in 2022. For example, SDAIA and IBM signed

a strategic agreement to drive the adoption of AI across the Kingdom's carbon capture and industrial domains. Riyadh has also committed to achieving net zero emissions by 2060 and supporting multinational action to cut emissions.⁵¹⁴¹

SDAIA also initiated a partnership with Google Cloud, Climate Engine, and the Ministry of Environment, Water and Agriculture (MEWA) to launch the Earth Observation and Science Program. The program will apply observation technology and AI to develop sustainability solutions.

Lethal Autonomous Weapons

KSA is not a signatory of the Joint Statement on Lethal Autonomous Weapons of 2022⁵¹⁴² and has not acceded to the Convention. The country does, however, support the negotiation of a legally binding instrument on autonomous weapons systems. Saudi Arabia is a High Contracting Party to the Convention on Certain Conventional Weapons (CCW)⁵¹⁴³ and has participated in meetings of the Group of Governmental Experts (GGE) on Lethal Autonomous Weapons since 2014.⁵¹⁴⁴

Saudi Arabia is a member of two groups that support the negotiation of a legally binding instrument on autonomous weapons systems: The Arab Group within the United Nations and the Non-Aligned Movement (NAM). The NAM issued a statement during the 2020 UN General Assembly on the “urgent need to pursue a legally-binding [*sic*] instrument on LAWS.”⁵¹⁴⁵ The Kingdom has not issued any individual statement in this regard.

Saudi Arabia was a signatory⁵¹⁴⁶ to the Call for Action at REAIM (Responsible AI in the Military Domain) on February 2023 in The Hague.⁵¹⁴⁷

Center for AI and Digital Policy

Human Rights

Freedom House rated Saudi Arabia as “Not Free” with a score of 8/100,⁵¹⁴⁸ based on low marks on civil liberties and political rights. Freedom House reports, “Saudi Arabia’s absolute monarchy restricts almost all political rights and civil liberties. No officials at the national level are elected. The regime relies on pervasive surveillance, the criminalization of dissent, appeals to sectarianism and ethnicity, and public spending supported by oil revenues to maintain power.” Internet freedoms in Saudi Arabia remained highly restricted, despite the plans of the authority to digitize and expand internet connectivity across the country, as well as to regulate the online sphere.⁵¹⁴⁹

Saudi Arabia is a member of the United Nations and hence is bound to commit to uphold human rights standards, including those laid out in the Universal Declaration of Human Rights (UDHR).⁵¹⁵⁰ Saudi Arabia was one of the eight countries⁵¹⁵¹ and sole abstainer on the Declaration among Muslim nations, stating that it violated Sharia law.⁵¹⁵² The Kingdom is not a Party to the International Convention on Civil and Political Rights (ICCPR) and has not acceded to or ratified the International Covenant on Economic, Social, and Cultural Rights (ICSECR).⁵¹⁵³

The Kingdom of Saudi Arabia served as one of the 47 members of the Human Rights Council,⁵¹⁵⁴ a position that the country lost in 2020, amid the reports of human rights violations.⁵¹⁵⁵ The monitoring of KSA human rights activities and reports are under the OHCHR Regional Office of the Middle East

and North Africa (MENA) created in 2002.⁵¹⁵⁶ The Human Rights Commission in KSA was founded in 2005 with “full independence in the exercise of its tasks for which it was established and stipulated in its organization.” The Commission states that it “aims to protect and promote human rights in accordance with international human rights in all fields, raising awareness of them and contributing to ensuring that this is implemented in light of the provisions of Islamic Sharia.”⁵¹⁵⁷

OECD / G20 AI Principles

The Kingdom of Saudi Arabia is a member of the G20 and endorsed the G20 AI Guidelines, which align with the OECD Principles. The country has demonstrated efforts for the implementation of the Principles through submission of reports to the OECD AI Observatory about implementation, including the National Data and AI Strategy, National Centre of AI, Personal Data Protection Law, Saudi Data and AI Authority.⁵¹⁵⁸ The OECD also makes note of KSA’s National Center for AI (NCAI) and highlights SDAIA’s work toward trustworthy AI in health.⁵¹⁵⁹

In 2020, Saudi Arabia hosted the Meeting of the G20 Digital Economy Ministers in Riyadh, where AI policy was a focal point of discussion. The KSA Digital Economy Task Force released a new report on the implementation of AI cases that mapped to the OECD AI Principles during this meeting.⁵¹⁶⁰ The key agenda set by the Saudi government comprised: “Empowering People, by creating the conditions in which all people—especially women and youth—can live, work and thrive”; “Safeguarding the Planet, by fostering collective efforts to protect our global commons”; and “Shaping New Frontiers, by adopting long-term and bold strategies to share benefits of innovation and technological advancement.”⁵¹⁶¹

The G20 Leaders Declaration read: “We will continue to promote multi-stakeholder discussions to advance innovation and a human-centered approach to Artificial Intelligence (AI), taking note of the Examples of National Policies to Advance the G20 AI Principles. We welcome both the G20 Smart Mobility

Practices, as a contribution to the well-being and resilience of smart cities and communities, and the G20 Roadmap toward a Common Framework for Measuring the Digital Economy.”⁵¹⁶²

Council of Europe AI Treaty

The Kingdom of Saudi Arabia has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁵¹⁶³

UNESCO Recommendation on AI Ethics

As a UNESCO member-State since 1946,⁵¹⁶⁴ Saudi Arabia was one of 193 that endorsed the UNESCO Recommendation on AI Ethics in November 2021. Experts from the SDAIA contributed to the initial draft of the UNESCO Recommendation.

Saudi Arabia is a member of the Groups of Friends of UNESCO, created in February 2022 as an open initiative to support the implementation of the recommendations and to exchange good practices. UNESCO published Implementation of the Recommendation on Ethics of AI⁵¹⁶⁵ proposed by the Group of Friends—Cook Islands, Kuwait (chair of the Group of Friends), Liberia, Libya, Morocco, Netherlands, Oman, Saudi Arabia, and Togo—in October 2022.

The KSA launched the AI Ethics Principles during the 2nd World Summit on AI in Riyadh. The SDAIA designed the principles as a practical guide to incorporating AI ethics throughout the AI system development life cycle.⁵¹⁶⁶ The release of these principles demonstrates the commitment of KSA to the implementation of the UNESCO recommendations. Saudi Arabia and the Arab States are part of UNESCO activities in the region to achieve a unified view of Artificial intelligence.⁵¹⁶⁷

Countries are expected to carry out the UNESCO Readiness Assessment Methodology (RAM), a tool developed to assess a country's preparedness for the ethical and responsible development and implementation of Artificial Intelligence,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

as part of their implementation of the Recommendation.⁵¹⁶⁸ At the Global AI Summit (GAIN), SDAIA launched the initiative to advance the State of AI in Saudi Arabia, developed through RAM.⁵¹⁶⁹ The RAM noted that 100% of the population uses the internet but talent gaps exacerbated by women's limited access to STEM education reveal a need to develop the ecosystem further. Government funding in education and startups is one possible means to develop the system.⁵¹⁷⁰

Evaluation

Saudi Arabia has emerged as an influential leader among the G20 countries, the Arab region, and a powerful AI economic force globally. As a member of the Digital Cooperation Organization (DCO), the Kingdom achieved the endorsement of the RAICA Call for Action at the Global AI Summit in 2022 held by SDAIA. The SDAIA also published SDAIA AI Ethics Principles in September 2023.

The publication of the National Data and AI Strategy, the AI Ethics Principles, and the readily available documentation about related policies and strategies for AI show a positive intent of the country to involve constituents in this process. The Kingdom is keen to achieve its national vision and strategies related to adopting artificial intelligence technologies, encouraging research, development and innovation, raising awareness, and promoting economic growth to achieve the desired prosperity and development.

Areas of opportunity exist in the endorsement of international agreements related to Data Protection. The enactment of the new Personal Data Protection Law and Regulations addresses the rights related to automated decision-making; however, algorithmic transparency laws can be expanded. While Saudi Arabia was accepted as an Observer member of the Global Privacy Assembly, the absence of endorsement of the Global Privacy Assembly (GPA) resolutions remains an area of attention.

Senegal

In 2024, Senegal completed public consultation on a Digital Strategy 2025–2025 and endorsed the African Union Continental AI Strategy and African Digital Compact. The country continued to engage with UNESCO in

implementing the Recommendation on AI Ethics and endorsed the GPAI New Delhi Declaration to support an integrated partnership with the OECD.

National AI Strategy

The Senegalese Ministry of Communication, Telecommunications and the Digital Economy (MCTEN) launched the National Strategy for Artificial Intelligence in 2023. The strategy intends to promote digital innovation while focusing on responsible, ethical and trustworthy AI by creating an intellectual breeding ground conducive to innovation and to initiating a new entrepreneurial dynamic. The strategy focuses on regional solidarity in developing the Artificial Intelligence ecosystem and in the continuity of the collective intelligence process.⁵¹⁷¹

According to the Ministry of Communication, Telecommunications and the Digital Economy (MCTEN), Senegal's National Strategy focuses on four objectives, one of which is to ensure that artificial intelligence in Senegal is responsible, ethical, trustworthy and respectful of sovereign prerogatives, thereby increasing complete confidence in the use of artificial intelligence.

The strategy seeks to transform the country through artificial intelligence by leveraging the technology in pursuit of developmental objectives built on the United Nations Sustainable Development Goals (SDGs), thereby elevating Senegal as a leader in AI in Africa. The Strategy aims to strengthen and multiply data science skills (SD) and AI, particularly young women, by directing training towards the SDGs of inclusiveness, environmental and ethical responsibility, and digital entrepreneurship, thereby upholding the growth of Human Capital in Senegal. The Strategy addresses the following areas:

1. Talent and education
2. Quantitative Human Capital
3. Data Science
4. Socio-economic development
5. Research & Development and Innovation

The President of Senegal, Macky Sall, on X announced the finalization of the National Strategy on Artificial Intelligence in Senegal, which is focused on ethics and trust and aims to develop 90,000 data scientists in Artificial Intelligence by 2028 and to strengthen digital sovereignty.⁵¹⁷² An ethical approach to Artificial Intelligence forms an important part of Senegal's National AI Strategy, although the detail has yet to be elaborated. This strategy builds on the new Digital Strategy

⁵¹⁷¹ Senegalese Government, Ministry of Communications, Telecommunication and Digital Economy, *National AI Strategy (Summary)*, AI4D (Oct. 2023), <https://ai4d.ai/wp-content/uploads/2023/10/reesumee-strategie-nationale-ia-senegal.pdf>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

2025–2035⁵¹⁷³ and the existing National Data Strategy, National Cybersecurity Strategy along with other recent policies under the Emerging Senegal Plan.⁵¹⁷⁴

As a member of the African Union (AU), Senegal is committed to advancing the formulation and implementation of human-centered AI policies, in alignment with the goals of the AU Digital Transformation Strategy⁵¹⁷⁵ and the Continental Data Policy Framework. Senegal was among the more than 130 African ICT and Communications Ministers and experts that endorsed the African Union Continental AI Strategy and African Digital Compact in July 2024.⁵¹⁷⁶ The Continental AI Strategy was later endorsed by the AU Executive Council during its 45th Ordinary Session. The strategy represents Africa’s unified commitment to ethical and responsible AI practices.⁵¹⁷⁷

Public Participation

The National AI Strategy of Senegal identified a collaborative effort, led by the Ministry of Communication, Telecommunications, and the Digital Economy (MCTEN) with the participation of the entire digital ecosystem of Senegal. It drew on the collective expertise of Team Europe, via the implementing agencies of the AU-EU Digital for Development (D4D) Hub—led by Expertise France, alongside GIZ and Enabel.

The strategy was developed through exchange frameworks, workshops and collaborations with a strong representation of the Senegalese digital ecosystem, including potential AI service providers, consumers, educational institutions, financing entities and the government. Such a union of minds and resources, as seen with the Senegal tandem and Team Europe, illustrates that a shared vision and collaborative efforts reveal strategic and disruptive success stories. In an inclusive approach, the strategy underwent a series of review phases between June

⁵¹⁷³ Ministry of Communications, Telecommunication and Digital Economy, *Launch of the Senegal Digital Strategy 2025–2035* (Jul. 26, 2024), <https://www.adie.sn/lancement-strategie-2025-2035>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

and July 2023, where it was shared with a diverse audience to gather feedback from across the ecosystem.⁵¹⁷⁸

During summer 2024, leaders in the digital sector and ordinary citizens were invited to submit proposals for the Senegal Digital Strategy 2025-2035. Minister Alioune Sall expressed the inclusive nature of the public consultation: “Senegal must build its digital future with the active participation of all stakeholders.” The consultation gained around 700 contributions addressing strategic issues such as digital sovereignty, public services, and Senegal as a sub-regional hub and digital economy.⁵¹⁷⁹

Data Protection

The 2008 Act Concerning Personal Data Protection⁵¹⁸⁰ protects individuals against the violation of their privacy by the processing of personal data that identifies them directly or indirectly. The Personal Data Protection Act designates the Commission for the Protection of Personal Data (CDP) as the Independent Administrative Authority responsible for verifying the legality and security of the collection and processing of Senegalese personal data.

The legal framework for personal data in Senegal is built on human rights conventions; the constitution;⁵¹⁸¹ and laws governing personal data protection, the penal code, criminal procedure, electronic transactions, telecommunications, cybercrime, and cryptology.⁵¹⁸²

Senegal has also ratified the African Union Convention on Cyber Security and Protection of Personal Data known as the Malabo Convention adopted by the General Assembly of the African Union,⁵¹⁸³ Council of Europe Convention

108,⁵¹⁸⁴ Council of Europe Convention 185,⁵¹⁸⁵ and Council of Europe Additional Protocol to Convention 108 (Treaty No. 181).⁵¹⁸⁶ Senegal has signed the Economic Community of West Africa (ECOWAS) Supplementary Act on Personal Data Protection.⁵¹⁸⁷

The 2008 Act Concerning Personal Data Protection applies to natural persons, legal persons, and public entities. It also applies to foreign entities but excludes foreign entities that only transit personal data through the country.⁵¹⁸⁸

The establishment of the CDP, known as the *Commission des Données Personnelles*, marked a significant step in Senegal's efforts to safeguard individuals' personal data. The CDP's website stands out for its high accessibility and informative content, including regular reports on the commission's activities and valuable resources for citizens seeking to assert their rights under the law. For instance, the CDP publishes opinions issued, complaints received, and cases investigated.

During the second quarter of 2024, the CDP processed thirty (30) files, including fifteen (15) declarations, twelve (12) requests for authorization, and three (3) re-registered files. Additionally, the CDP decided to suspend the decisions in three (3) cases and prohibited the implementation of one (1) processing operation.⁵¹⁸⁹

In early 2020, the government initiated the Personal Data Protection Bill of 2019 for public comment. This initiative was part of a broader strategy outlined in the Digital Senegal 2016–2025 Strategic Plan, aimed at modernizing the legal and institutional framework of the technology and telecommunications sector by

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

2025.⁵¹⁹⁰ However, there appears to have been little progress on advancing the Bill since its publication.⁵¹⁹¹

Senegal also has a Data Strategy with the vision of “Making data an engine of socio-economic growth, inclusiveness, innovation and international openness, by 2028 in Senegal.”⁵¹⁹²

Senegal’s CDP is a member of the Global Privacy Assembly (GPA).⁵¹⁹³ However, Senegal did not sponsor the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁵¹⁹⁴ 2020 GPA Resolution on AI Accountability,⁵¹⁹⁵ 2022 GPA Resolution on Facial Recognition Technology,⁵¹⁹⁶ or 2023 GPA Resolution on Generative AI.⁵¹⁹⁷

Algorithmic Transparency

Although the fourth objective of the AI Strategy is to ensure that AI in Senegal is responsible, ethical, trustworthy and respectful of sovereign prerogatives, Senegal has not developed specific regulations on algorithmic transparency. However, Senegal is a signatory to the Convention 108+ (Convention for Protecting Individuals with the Processing of Personal Data),⁵¹⁹⁸ which includes a broad provision regarding algorithm transparency with

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

requirements that users know when they are subjected to automated decisions and have access to the factors in the decision and the means to contest them.⁵¹⁹⁹

The Senegalese Constitution stipulates that international law holds precedence over domestic law within the country.⁵²⁰⁰ As a result, international instruments are inherently integrated into the domestic legal framework of Senegal. This constitutional provision underscores the commitment of Senegal to adhere to its obligations under international agreements and treaties.

Facial Recognition

Senegal's Data Protection Commission rejected a company's application to use facial recognition for monitoring employees, citing significant privacy risks. This decision was accompanied by a directive limiting the use of biometric data in the workplace, thereby highlighting the authority's stance on safeguarding data subjects.⁵²⁰¹ By refusing authorization to data controllers to operate a biometric facial recognition system to control attendance time and access within a company, the CDP reaffirmed its desire to protect the individual rights of employees in their workplace, in accordance with its mandate.

Biometric Data

The European Union Trust Fund (EUTF)'s support program, starting from 2017 and involving a €28 million biometric identity system in Senegal, has raised concerns. The system aims to simplify identity verification by creating a national biometric identity file as part of a universal civil status information system. The project has sparked debate over the necessity of biometric solutions, which could serve as a basis for widespread surveillance despite the availability of simpler alternatives. The implication is that once an asylum seeker or migrant enters European borders, or is detected by European immigration enforcement, their biometric data will be collected. This data would be matched with information in the African systems to expedite returning the individual to their country of origin.⁵²⁰²

Disclosures revealed the European Union's financial involvement in developing extensive biometric identification systems in West Africa, including

Center for AI and Digital Policy

Senegal. This initiative, aimed at managing migration and facilitating deportations, is supported by the EU Trust Fund for Africa. Civipol, a company with connections to the French state and major arms manufacturers, has secured significant contracts in this effort. The project raises concerns over privacy, human rights, and the allocation of aid resources.

Environmental Impact of AI

Senegal's efforts regarding the environmental impact of AI have centered on applying AI to promote sustainable development in other sectors rather than the environmental costs of AI systems.

According to the Constitution, natural resources are owned by Senegalese people. As Senegal prepared to extract oil from its first field in 2024, the Prime Minister announced plans to implement AI to monitor the quantity of oil extracted, secure protection, and prevent environmental risks. This AI application is intended as part of the government efforts to ensure “a just transition that would promote sustainable and inclusive development in socio-economic and environmental terms.”⁵²⁰³

The Senegalese Government joined the German development agency (GIZ) initiatives FAIR Forward and Data Economy projects GIZ's initiatives in fighting against climate change with a sustainable development commitment. At an October 2024 co-creation workshop in Dakar, Data and Artificial Intelligence for the Climate, the group implemented two use AI cases—a climate data platform and the High Carbon Stock approach—and developed a roadmap for future action.⁵²⁰⁴

The UNDP Regional Bureau for Africa led the inauguration of the Innov space of Accelerator Lab (AccLab) in Senegal, which supports start-ups developing tech solutions to development issues such as climate change and access to health.⁵²⁰⁵ One start-up, TOLPI technologies, uses satellite images and AI to promote precision agriculture with consulting for plant maintenance. The digitization of datasheets allows farmers to reduce water waste by 80%, calculate more precise fertilizer applications, and maximize yields by optimizing planting and harvesting dates.

Lethal Autonomous Weapons

Senegal is not a signatory of the 2022 Joint Statement on Lethal Autonomous Weapons.⁵²⁰⁶ However, Senegal voted in favor of UN resolution L.56 on autonomous weapons systems,⁵²⁰⁷ along with 163 other states.⁵²⁰⁸ The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems” and mandated the UN Secretary-General to prepare a report analyzing members’ views on ways to address the challenges and concerns of autonomous weapon systems from humanitarian, legal, security, technological, and ethical perspectives. Senegal then sent four representatives to the 2023 meeting of High-Contracting Parties to the Convention on Certain Conventional Weapons (CCW) organized in Geneva.⁵²⁰⁹

Senegal participated in a REAIM regional workshop organized in Nairobi (Kenya), in partnership with the Centre for Humanitarian Dialogue (HD Centre) and the National Defence University-Kenya.⁵²¹⁰ The meeting aimed at enhancing “regional understanding and engagement on the military application of AI” in the run-up to the second REAIM Summit. Participating countries exchanged information on their national approaches, policies and practices pertaining to responsible application of AI in the military domain.

Senegal then participated in the second REAIM Summit organized in Seoul, Korea, and endorsed the REAIM Blueprint for Action.⁵²¹¹ Among the key provisions are the acknowledgement that AI applications in the military domain

Center for AI and Digital Policy

should be ethical and human-centric, as well as the commitment to “engaging in further discussions and to promoting dialogues on developing measures to ensure responsible AI in the military domain at the national, regional and international level, including through international normative frameworks.”

Human Rights

Freedom House rates Senegal as “Partly Free” with an overall score of 67/100.⁵²¹² The Freedom House report notes that different political parties have peacefully transferred power in Senegal since 2000, making the country one of Africa’s most stable electoral democracies. Nevertheless, in recent years, the opposition’s competitiveness has decreased due to politically driven indictments of opposition figures and even modifications to election legislation. Internet access blocks and disruptions,⁵²¹³ which have been clearly in violation of Article 8 of Senegal’s constitution and individual rights, have occurred and continue to do so. Mobile Internet access cut by the government⁵²¹⁴ and banned marches remain critical challenges to freedom of expression.⁵²¹⁵

Strategic orientation No. 6: Actions by specific objective in the AI strategy proposes sorting various AI systems according to the risks to rights that they may pose for people or society. This classification necessitates close cooperation with AI technical specialists.⁵²¹⁶ Senegal launched its own Initiative for the Development of Artificial Intelligence (IDIA) to improve and strengthen the use of AI in the region, in compliance with African Commission on Human and Peoples’ Rights (ACHPR) Resolution 473.⁵²¹⁷ Senegalese experts warn of “digital colonization” in Africa if foreign companies continue to feed on African data without involving local actors.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

OECD / G20 AI Principles

Senegal has not officially endorsed the OECD AI principles or G20 AI Guidelines in those bodies. However, Senegal is a member of Global Partnership on AI (GPAI), which partners with OECD to realize its mission for “the responsible development and use of artificial intelligence, grounded in human rights, inclusion, diversity, innovation and economic growth.”⁵²¹⁸ The 2024 New Delhi GPAI Declaration reaffirms GPAI’s “collective commitment to the OECD Recommendation on Artificial Intelligence” and announces an “integrated partnership with the OECD bringing together all current OECD members and GPAI countries on equal footing.”⁵²¹⁹ Supporting the OECD principles is now a condition of membership to the GPAI.⁵²²⁰

The Summary of Senegal’s AI Strategy issued by the Republic of Senegal in 2023 does not explicitly reference the OECD AI Principles or the G20 AI Guidelines. Nonetheless, the document underscores Senegal's commitment to formulating an AI strategy that is ethical, responsible, and in harmony with international standards. This indicates an acknowledgment of the significance of adhering to universally accepted principles for the development and application of AI.⁵²²¹

Council of Europe AI Treaty

Senegal has not endorsed the Council of Europe AI Treaty, the first legally binding international AI treaty, which opened for signature on September 5, 2024, to both EU and non-EU members.⁵²²² The Treaty sets out a legal framework that aims at ensuring the respect of human rights, the rule of law, and democratic legal standards in the use of AI systems.

UNESCO Recommendations on AI Ethics

As a UNESCO member state, Senegal is bound by the UNESCO Recommendation on the Ethics of Artificial Intelligence, which was unanimously adopted by all 193 Member States in 2021.⁵²²³ This adherence underscores

⁵²¹⁸ GPAI, *Members*, Community (2024), <https://gpai.ai/community/>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Senegal's commitment to upholding ethical standards in the development and application of AI.

The experts charged with developing Senegal's national AI Strategy are the same who engaged actively with UNESCO to complete the Readiness Assessment Methodology (RAM).⁵²²⁴ Senegal was among the first countries to complete the RAM, a tool to evaluate the country's AI maturity level and ethical considerations.⁵²²⁵ This involvement demonstrates Senegal's dedication to aligning its national AI strategy with the UNESCO Recommendation on the Ethics of Artificial Intelligence.

Senegal hosted and participated in an African sub-regional seminar organized by UNESCO to share knowledge about AI challenges and competencies needed in education.⁵²²⁶ UNESCO foresees in-country support on the development of national or local digital and AI competency frameworks following the seminar. The seminar built on various resources, including the UNESCO 2021 report on AI and Education: Guidance for Policy-Makers and the UNESCO 2023 report on Guidance for Generative AI in Education and Research. Hosting the seminar demonstrates Senegal's commitment to advance the Education and Research Policy Area of the UNESCO Recommendation.⁵²²⁷

Evaluation

Senegal has developed a robust national strategy for AI. It has also made efforts to promote public participation in the development of its national AI strategy. Senegal has established a comprehensive law for data protection that promotes algorithmic transparency. Senegal has supported the OECD / G20 AI Principles as a GPAI member but has not endorsed the AI Treaty. Senegal engaged with the UNESCO Recommendation on AI Ethics by participating in relevant workshops and RAM organized by UNESCO in accordance with the National AI Strategy. Senegal has a good record on human rights, though there is room for improvement regarding individual freedom of expression. Updates to ministry websites or reorganizations have limited some access to official documents since mid-2024, though earlier access suggests these limitations may be temporary.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Serbia

In 2024, Serbia designated a Working Group for a Draft Law on Artificial Intelligence and continued to finalize a refreshed National AI Strategy for 2024–2030 after public consultation and debate. Serbia began its term as Chair of the GPAI and hosted the GPAI 2024 Summit in Belgrade. Serbia participated in the Council of Europe Framework Convention on AI but has not yet endorsed the treaty.

National AI Strategy

The Government of the Republic of Serbia; Ministry of Education, Science and Technological Development; and Office for Information Technologies and eGovernment adopted a National Strategy for the Development of Artificial Intelligence (AI) for 2020–2025 in December 2019 and an Action Plan to enact the strategy in June 2020.⁵²²⁸ The Government of Serbia is currently finalizing a refreshed National AI Strategy for the period of 2024–2030.⁵²²⁹

The national strategy set the foundation for the country's ambitious plan to leverage AI for national development. The strategy, based on Serbia's Planning System Law⁵²³⁰ and the decision to create a Workgroup for AI Strategy, describes a detailed plan for using AI. In alignment with the European AI Initiative, Serbia's Strategy ensures conformity with EU policies and standards, positioning the country for closer integration into the European Research Area. This legal and strategic framework underscores Serbia's commitment to AI, both regionally and within the wider European context.

The strategy aims to harness AI for economic growth, public service improvement, scientific advancement, and skill development for future jobs, and for the advancement of the Sustainable Development Goals. It aligns with the European AI Initiative and is structured to ensure the safe and ethical development of AI in Serbia. However, the strategy's recognition of European principles remains non-binding. Serbia has not yet established enforcement mechanisms against discrimination from machine learning. In the context of alignment with the EU AI Act, Serbia has not adopted a framework that would categorize high-risk AI applications or limit their use.

The strategy includes the objectives:

⁵²²⁸ The Government of Serbia, *Strategy for the Development of Artificial Intelligence in the Republic of Serbia for the Period 2020–2025* (2019), <https://www.srbija.gov.rs/tekst/en/149169>

⁵²³⁰ UN Law and Environment Program, *Law on Planning System of the Republic of Serbia* (Apr. 19, 2018), <https://leap.unep.org/en/countries/rs/national-legislation/law-planning-system-republic-serbia>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- **Education Development:** Education is a key factor in the development of AI in Serbia. Tailoring education to modern society and economy needs, is influenced by AI advancement. This involves enhancing primary and high school curriculums, establishing minimal AI standards in basic studies of computer science, developing postgraduate AI programs, professional training through short courses, and promoting greater university collaboration for AI studies.
- **Science and Innovation:** Increasing support for AI researchers, offering special support for AI research in innovative fields, establishing scientific-industry-public sector cooperation, and founding an AI Institute.
- **Economic Development:** Supporting AI startups and SMEs, raising investment levels in AI development, establishing multi-sector AI solutions in public interest areas, and introducing a "regulatory sandbox" for AI-based solutions.
- **Public Sector Improvement:** Establishing an AI Council, opening and reusing public sector data, developing private sector data reuse mechanisms, establishing shared AI infrastructure, and improving public services through AI.
- **Ethical and Safe AI Application:** Ensuring personal data protection, preventing discrimination in AI implementation, and adhering to international ethical standards.

The strategy also recognizes the importance of adapting legal frameworks, opening data access, developing infrastructure, and addressing societal implications. It underscores the need for continuous monitoring and adaptation to leverage AI for societal benefit while mitigating potential risks.

The Strategy aligns with the European Artificial Intelligence Initiative,⁵²³¹ which outlines the European Commission's AI policy. Given Serbia's status as a candidate for EU membership and its participation in the European Union Framework Program for Research and Innovation, it aims to ensure compliance with EU standards. This effort facilitates full integration into the European Research Area and fosters closer cooperation with the EU.

The Research and Development Institute for Artificial Intelligence of Serbia was established in 2021 as one of the key steps in the Action Plan for the Implementation of the AI Strategy. The institute's vision is to foster the development of creative leaders in the field of artificial intelligence, as well as to establish Serbia as a global center of excellence in scientific research and technology transfer related to machine learning and artificial intelligence. The Institute promotes the fields essential for the creation of artificial intelligence, such

⁵²³¹ European Union, EUR-Lex, *Communication from the Commission: Artificial Intelligence for Europe*, COM/2018/237 final (2018), <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=COM%3A2018%3A237%3AFIN>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

as mathematics, computer science, biology, and linguistics, to modernize Serbia's economy and educational system.⁵²³²

For continuous evaluation and oversight to track progress against the strategic goals, regular reviews are conducted to assess the effectiveness of the various measures implemented under the strategy, such as advancements in AI education, research, economic development, public sector integration, and adherence to ethical standards. This process not only facilitates accountability but also allows for adaptive responses to emerging challenges and opportunities in the rapidly evolving field of AI. By employing such a systematic monitoring approach, the strategy aims to maintain alignment with its objectives, ensuring that Serbia's advancements in AI are coherent, sustainable, and aligned with the nation's broader economic and social goals.

In 2022, the Office for IT and eGovernment was assigned as a special organization to perform state administration tasks related to the development and implementation of standards and measures in the introduction of information and communication technologies in state administration bodies and Government services. The Office's charge includes monitoring and measuring the implementation of AI policy.⁵²³³

The Center for Security of the ICT System in Republic Bodies (CERT of Republic Bodies) was established within the Office for Information Technologies and eGovernment, in accordance with the Law on Information Security. The Office for Information Technologies is a body in charge of designing, developing, establishing, maintaining, and improving the unique information and communication network of eGovernment. The main task of the CERT of Republic Bodies is to provide information security of ICT infrastructure, Office services and the unique information and communication network of eGovernment. This includes effective response and resolution of incidents when they occur, preventive activities to minimize the number of possible incidents and raising of awareness of state authorities on ICT security.⁵²³⁴

The National Platform for AI was established in 2021 to advance and implement AI in public administration, academic research, and Serbia's broader industry, as well as to support startups in product development. This initiative

aligns with the objectives and actions outlined in Serbia's AI Development Strategy for 2020–2025.⁵²³⁵

Guidelines and Policies for Reliable and Responsible AI

The Serbian government adopted Ethics Guidelines for the Development, Implementation and Use of Reliable and Responsible AI⁵²³⁶ in 2023 to harmonize Serbia's legislative framework with the European Union. The Guidelines largely rely on UNESCO's Recommendation on the Ethics of AI adopted in 2021, to which Serbian representatives contributed. The objective is to implement a preventive mechanism that ensures the responsible evolution of this technology, along with methods to verify that systems based on machine learning comply with the highest ethical and security standards.⁵²³⁷ To date, these guidelines are not legally binding.

Serbia established the Council for Artificial Intelligence in 2024 to align and coordinate activities for implementation of the AI national strategy implementation. The Council will work as an independent advisory body to draft new laws for the development and application of AI in Serbia. This body comprises private sector experts, academics, and government representatives.⁵²³⁸

The Working Group for the upcoming Draft Law on Artificial Intelligence of the Republic of Serbia held its first meeting in 2024. Representatives from numerous state bodies, scientific and professional industries, law, and other economic entities began discussions to identify key problems, ideate adequate solutions, and set clear guidelines for effectively managing the preparation of the draft law. The Working Group expects to present the Draft Law at the end of the first quarter of 2025.⁵²³⁹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

International Partnerships and Collaborations on AI Strategy

Serbia was represented at the World Economic Forum's AI Governance Summit in November 2023 and joined the AI Governance Alliance (AIGA). Joining the AIGA grants Serbia access to collective expertise to address the complexities of AI governance while emphasizing sustainability, resilience, and safety in AI applications.⁵²⁴⁰

Serbia's Ministry of Information and Telecommunications and the Institute for Artificial Intelligence Research and Development signed a Memorandum of Understanding (MoU) with the United Arab Emirates Advanced Technology Research Council (ATRC) in early 2024. This landmark collaboration aims to leverage the technical expertise of ATRC and its subsidiaries for the integration of AI into Serbia's technological infrastructure. Under the terms of the MoU, Serbia will support the adoption of ATRC's Falcon large language models (LLM) and explore avenues of collaboration with ATRC around Falcon-powered solutions. Furthermore, both entities will work together to encourage organizations from Serbia to join the Falcon Foundation and contribute to the success of open-source Falcon models.⁵²⁴¹

Regulatory Sandboxes

In analyzing Serbia's position in the Flexibility of Regulatory Framework and Adaptation to the Digital Business sector, as measured by the Global Competitiveness Index, Serbia is ranked 68th, achieving a score of 3.6 out of 7.⁵²⁴²

The deployment and development of AI technologies raise significant regulatory challenges, especially in the domains of misuse prevention and data privacy protection. Crafting a regulatory approach that effectively balances the need for personal data protection with the imperative to foster innovation in AI is a complex endeavor.

In addressing these challenges, the Serbian government has introduced a regulatory sandbox aimed at AI technologies. This framework is intended to provide a controlled environment in which businesses can experiment with novel AI products and services under a regime that allows for certain exemptions from

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

full regulatory compliance.⁵²⁴³ This approach facilitates the exploration and advancement of AI solutions, mitigating the immediate impact of regulatory barriers.⁵²⁴⁴

Public Participation

The public was invited to a series of debates to discuss the Draft Strategy for the Development of Artificial Intelligence in Serbia for 2020–2025 through the end of December 2029. During this period, three panel discussions were organized for public participation. Throughout the public debate phase, 12 written submissions containing proposals and suggestions were received via contact and email addresses. Many of these contributions were incorporated into the final document.⁵²⁴⁵

In the process of drafting the Ethical Guidelines for Developing, Applying, and Using Reliable and Responsible Artificial Intelligence, the Ministry of Science, Technological Development and Innovation organized two public forums on consecutive days. At these events, 21 participants provided recommendations and feedback.⁵²⁴⁶

A consultative process was conducted during the implementation of the e-Government Development Programme for 2020–2022 and while planning for the 2023–2025 programming period. During the implementation of the ex-post impact assessment of the e-Government Development Programme 2020–2022, primary data were collected through semi-structured interviews involving 51 persons from 32 institutions.

The programming process and the preparation of the Action Plan for 2023–2025 lasted six months in 2022. After the publication of the program on the e-Consultation portal, a public debate was held on the portal. The e-Government

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

development Programme⁵²⁴⁷ and Action Plan for 2023–2025⁵²⁴⁸ were adopted in April 2023.

The Ministry of Science, Technological Development, and Innovation hosted a public debate for Serbia's Draft Strategy for the Development of Artificial Intelligence (2024–2030) with an extended deadline in July 2024 and allowed comments and suggestions through the e-Consultation portal. A third public event was held in the National Assembly, providing citizens and professionals an opportunity to share their feedback on the draft strategy.⁵²⁴⁹

Data Protection

Serbia's Law on Personal Data Protection (LPDP) aims for a comprehensive approach to data protection and aligns with some exceptions to the European General Data Protection Regulation (GDPR).⁵²⁵⁰ The Commissioner for Information of Public Importance and Personal Data Protection is the authority responsible for enforcing the data protection and raising public awareness about data rights and data-protection requirements.⁵²⁵¹

The country's existing legal frameworks cover various laws that address AI-related data-protection issues.

- The Serbian Constitution provides for the protection of privacy and personal data.
- The LPDP outlines the procedures for the processing and protection of personal data.

- The Law on Electronic Communications and the Law on Electronic Signatures have provisions that could apply to AI technologies.

Provisions of the LPDP mirror the GDPR in almost all aspects, including regulations around the territorial application of the LPDP, legal basis for data processing, privacy by design, data subject rights, security of processing and personal data breach, data protection impact assessments and officers, and the transfer of personal data. However, the transition to full implementation encountered challenges, including delays attributed to potential ambiguities in interpretation and a nine-month window between the law's adoption and enforcement. This timeline left many local entities, aside from international companies already adhering to GDPR, unprepared for the LPDP's requirements.

Inconsistencies between the LPDP and other Serbian personal data processing laws persist, undermining harmonized legal practice. The lesser penalties stipulated by the LPDP, in comparison to GDPR's more substantial fines, have insufficiently incentivized compliance among Serbian and multinational firms. Despite these challenges, a portion of companies have achieved or are actively working toward LPDP compliance, though most public authorities lag behind.

Serbia unveiled the Personal Data Protection Strategy for 2023–2030 in 2023 to address the rapidly evolving technological landscape and its implications on data protection⁵²⁵². This strategy outlines a comprehensive approach to enhance the legal framework, aiming for alignment with the GDPR. Key objectives include revising the LPDP to match GDPR standards fully, improving enforcement mechanisms, and increasing public awareness and education on data protection. Authorities ultimately aim to secure an adequacy decision from the European Commission to facilitate smoother data exchanges. The strategy also emphasizes the need for more precise regulations on new technologies such as AI, ensuring that Serbia's legal infrastructure keeps pace with technological advancements.

Serbia's Commissioner for Information of Public Importance and Personal Data Protection is a member of the Global Privacy Assembly (GPA).⁵²⁵³ However, Serbia did not sponsor the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁵²⁵⁴ 2020 GPA Resolution on AI Accountability,⁵²⁵⁵ 2022

Algorithmic Transparency

Serbia has engaged with international frameworks concerning AI by ratifying treaties such as the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data (Convention 108)⁵²⁵⁸ and acknowledging the principles of the General Data Protection Regulation (GDPR). These treaties offer a foundation for creating AI regulations that aim to safeguard the rights and freedoms of individuals. However, Serbia has no national legislation guaranteeing a right to algorithmic transparency and contestability.

AI in Public Administration

The cross-sectoral Strategy for the Development of the Information Society and Information Security in the Republic of Serbia from 2021 to 2026 aims to foster an information society and e-government that meet the needs of citizens and businesses while also improving information security for citizens, public administration, and businesses. The strategy frames the further development of information security as a precondition for the complete digitalization of the society.⁵²⁵⁹

The Office for IT and eGovernment established the “Smart Serbia,” platform in 2021 for the secure collection and processing of data from various public sources. The platform uses AI technology to deliver services and to provide the most advanced e-services for citizens and the state.⁵²⁶⁰

The Social Card Bill implemented in March 2022 requires a centralized electronic record of the social and economic status of individuals and their relatives. Personal data of those who receive some form of financial social assistance is collected and processed to assess their overall economic situation and redistribute the state budget.⁵²⁶¹ The system processes more than 130 different types of data on individuals, automatically collecting them from other registers handled by public authorities, such as the Tax Administration or Ministry of Interior.

The Social Card produces automated decisions. Once the Social Card algorithm processes the assessment of the individual case, it sends an alert to the local office managing the person's file. The officials have a window of time to verify the validity of the decision, but these offices are widely and severely understaffed, meaning the decisions may never undergo human review. The citizens only have 15 days to appeal the decision.

The Social Card system collects and processes extensive amounts of data, creating an invasive digital surveillance system that targets some of the most marginalized people in Serbian society. The system is not accessible to the public, even after NGOs made several attempts to access the algorithm, its source code, or at least its logic. Research data from UNHCR partner A11 shows that the number of people receiving social assistance fell from 211,266 to 189,036, a decrease of 10.5%, in the first six months the system operated.⁵²⁶²

Facial Recognition and Mass Surveillance

Although Serbian law prohibits the use of facial recognition technology for public surveillance,⁵²⁶³ the Serbian government has been determined to introduce a legal framework for the use of facial recognition technology in the country.⁵²⁶⁴ The decision to implement facial recognition technology, primarily

Center for AI and Digital Policy

supplied by the Chinese tech-giant Huawei,⁵²⁶⁵ sparked controversy.⁵²⁶⁶ Initially justified by authorities as a means to enhance public safety and deter crime, the lack of transparency regarding the technology's deployment and data handling raised concerns among civil society and international society. Human rights activists and civil society fear potential abuses by the government and have strongly resisted the full implementation of facial recognition technology.⁵²⁶⁷ The international response, particularly from the EU and the US, has emphasized concerns over potential misuse of the technology and its implications for democratic values.⁵²⁶⁸ However, the effectiveness of these responses remains limited, with Serbia continuing its collaboration with China in various sectors, including surveillance technology, amid geopolitical considerations and economic incentives.

BIRN Serbia (Balkan Investigative Reporting Network) released a report in June 2024, on the digital surveillance in Serbia and its impact on human rights. BIRN reported that Serbia has installed over 8,000 Chinese-style surveillance cameras and that the State seeks to use spyware against civil society representatives and investigative journalists.⁵²⁶⁹

Autonomous Vehicles

Serbia's Regulation on the Conditions for Autonomous Driving came into effect in December 2023. The Regulation details the conditions under which autonomous driving is allowed and the procedure for issuing permits for testing autonomous vehicles. This regulation aligns with the latest amendments to the Law on Traffic Safety and Roads and will provide a clear and predictable

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

procedure for individuals and institutions wishing to test vehicles with automated driving systems in real traffic conditions.⁵²⁷⁰

Environmental Impact of AI

The Serbian 2020–2025 National Strategy for AI mentions the importance of assessing the environmental impact of the development and use of AI systems. However, no framework for proposed regulation to promote sustainability or mitigate environmental harm has been established.⁵²⁷¹ While there is little discourse about the environmental costs of AI systems, Serbia has used AI to study climate change and help clean up the rivers in recent years.⁵²⁷²

Lethal Autonomous Weapons

Serbia convened at the Group of Governmental Experts (GGE) meeting under the auspices of the Convention on Conventional Weapons (CCW) to deliberate on lethal autonomous weapons systems (LAWS) in May 2023.⁵²⁷³ The meeting highlighted the urgent need to develop new international legislation to ensure meaningful human oversight over weapons systems and the application of force.

Serbia's involvement underscores the country's active role internationally to address the implications of emerging military technologies. Serbia contributes to the global discourse on integrating international humanitarian law (IHL) with the deployment of LAWS.

Serbia voted in favor of UNGA's Resolution 78/241 on Lethal Autonomous Weapons Systems,⁵²⁷⁴ which called for urgent global action to confront the challenges posed by autonomous weapons systems. The resolution directed the Secretary General to compile a report outlining member and observer states' views on the humanitarian, legal, and ethical issues these weapons raise, along with the role humans should play in the use of force. Serbia's submission to

the UN Secretary-General pursuant to Resolution 78/241 highlighted the country's shared concern over the development of lethal autonomous weapons systems. Serbia shared the opinion that these systems should be prohibited, or restricted in production, and then their use monitored. The submission also expressed serious concern over such systems' destructive potential and negative impact on peace and regional and global security.⁵²⁷⁵

Human Rights

Serbia ratified the Universal Declaration of Human Rights and 16 of the 18 UN human rights treaties.⁵²⁷⁶ The UN Human Rights Council (UNHRC) conducts a Universal Periodic Review to assess each member state's human rights record. Serbia's latest review took place in 2023, marking the country's fourth evaluation. The UNHRC issued recommendations aimed at bolstering the protection of human rights⁵²⁷⁷ and subsequently asked Serbia to provide updates on the implementation of recommendations related to hate crimes, freedom of expression and journalist safety, and participation in public affairs by March 29, 2027.⁵²⁷⁸

On the human rights index from Our World in Data, Serbia scored 0.79 on a 0–1 scale, where 1 represents the best possible score.⁵²⁷⁹ Freedom House categorizes Serbia as “partly free” assigning a score of 57 out of 100, down from 60 in 2023.⁵²⁸⁰ The Freedom House report cited threats against journalists and editorial and political pressure as well as increased broader surveillance among concerns undermining freedom of expression along with other political and civil liberties.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The U.S. Department of State Country Report on Human Rights Practices for 2021⁵²⁸¹ and 2022⁵²⁸² highlighted significant concerns in Serbia, including severe limitations on free expression and the press, with instances of unjust prosecutions of journalists. The reports also noted human rights violations against individuals with disabilities and members of the LGBTQI+ community.

OECD / G20 AI Principles

Serbia is not included among the OECD member countries nor among the six non-member nations that have endorsed the OECD AI principles. Additionally, Serbia is not counted among the G20 nations. Although Serbia has not explicitly endorsed the OECD / G20 AI, its national strategy echoes some of the key OECD AI principles. The OECD AI principles addressed in the National AI Strategy include “inclusive growth, sustainable development and well-being, human-centered values and fairness, transparency and explainability, accountability, investing in AI R&D, fostering a digital ecosystem for AI, providing an enabling policy environment for AI, building human capacity and preparing for labor market transition, and international co-operation for trustworthy AI.”⁵²⁸³

Serbia has further committed to the OECD AI Principles as a member of the Global Partnership for Artificial Intelligence (GPAI), which formalized an integrated partnership with the OECD in 2024.⁵²⁸⁴ Serbia will serve as a GPAI chair for 3 years beginning in 2024, a position that presents a significant opportunity to attract AI-related investments and reaffirms Serbia’s commitment to investing in science, technology, and education.⁵²⁸⁵ Serbia’s Ministry of Science, Technological Development and Innovation hosted the GPAI Summit from December 3-4, 2024 in Belgrade.⁵²⁸⁶ The summit, which was also supported by the OECD, brought together more than 100 experts and 1200 attendees “with the aim

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

of guiding the responsible and human-centric development and use of this technology.”⁵²⁸⁷

Council of Europe AI Treaty

The Council of Europe Framework Convention on AI outlines a comprehensive approach to AI regulation, focused on human dignity, autonomy, and equality. Serbia participated in the drafting of the Convention as Council member but has not signed the convention.⁵²⁸⁸ As a Council of Europe member, the country is subject to the Convention.⁵²⁸⁹

UNESCO Recommendation on AI Ethics

Since 2000, the Republic of Serbia has been a UNESCO member state, and all 193 member states have ratified the UNESCO Recommendation on the Ethics of AI. In March 2023, the Serbian government approved the Ethics Guidelines for the Development, Implementation and Use of Reliable and Responsible AI (Guidelines). The Guidelines draw heavily from UNESCO's Recommendation on the Ethics of AI, which Serbian representatives actively participated in creating, to set ethical standards for all AI systems and applications, including fairness, transparency, accountability, and fostering international collaboration and cooperation.⁵²⁹⁰ Moreover, the Guidelines can be considered a progression towards aligning Serbia's legal structure with the European Union's Proposal for an AI Regulation introduced two years earlier.

Serbia and ten other countries participated in piloting UNESCO's Global Index on Responsible AI in 2023. This Global Index is a new comprehensive measurement tool that tracks countries' commitments and capacities to building responsible AI ecosystems. This initiative serves as a mechanism to monitor the implementation of UNESCO's Recommendation on the Ethics of AI, especially at a national level, in a way that extends beyond the existence of legal frameworks and delves into the complexity of implementation by assessing the actions of government and relevant activities of non-state actors.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The overlap demonstrates a shared commitment to promoting responsible and ethical AI practices, ensuring that AI technologies benefit society while upholding fundamental human values.

Serbia has not begun the UNESCO Readiness Assessment Methodology (RAM), a vital tool to assist Member States in implementing the Recommendation on the Ethics of AI.⁵²⁹¹

Evaluation

The National AI Strategy of the Republic of Serbia embarked on a proactive approach to the regulation of the development, implementation, and use of AI within its borders. The national strategy sets a foundation for ensuring values of transparency, human rights, safety, and trust in AI systems. By aligning its national strategy on AI with EU standards and drawing from international guidelines, the UNESCO Recommendation on the Ethics of AI in particular, Serbia demonstrates a commitment to fostering responsible AI that benefits society while mitigating associated risks. Significant gaps between endorsement and implementation of key international principles such as those outlined by the OECD, Universal Declaration of Human Rights, national strategy, and Ethical AI Guidelines persist. However, the Draft Law in preparation offers hope that the country will develop the enforcement mechanisms and legal framework necessary to operationalize the principles of accountability, fairness, rule of law, fundamental rights, and transparency in the National AI Strategy.

Serbia signed the Universal Declaration of Human Rights, but human rights violations reported in credible sources raise concerns, especially around media freedom, civil rights, and freedom of expression. The government's use of facial recognition technology for mass surveillance and reliance on automated decisions without meaningful human oversight to determine social assistance deepen these concerns.

Singapore

In 2024, Singapore's Personal Data Protection Commission issued voluntary guidelines on using personal data in AI recommendation and decision systems and Parliament approved a bill to prohibit using Generative AI for disinformation or misinformation in elections. Singapore also furthered international engagement on AI Safety at summits and through bilateral agreements.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

National AI Strategy

Singapore launched its first National AI Strategy in 2019, with the objective for Singapore to “be a leader in developing and deploying scalable, impactful AI solutions, in key sectors of high value and relevant to its citizens and businesses,” by 2030.⁵²⁹² An updated Strategy (NAIS 2.0) was launched in 2023 to address new challenges and uplift Singapore’s collective economic and social potential over the next three to five years.⁵²⁹³ Both strategies are part of Singapore’s Smart Nation plan, which aims to make Singapore a Smart Nation, “A nation where people live meaningful and fulfilled lives, enabled seamlessly by technology, offering exciting opportunities for all.”⁵²⁹⁴

NAIS 2.0 outlines Singapore’s ambition and commitment to building a trusted and responsible AI ecosystem, driving innovation and growth through AI, and empowering people and businesses to understand and engage with AI.⁵²⁹⁵ In summary, Singapore’s strategy is:

- To orchestrate Industry, Government, and public research performers around meaningful use cases and problem statements to transform Singapore’s economy and society, steering efforts toward developing select peaks of excellence that can deliver outsized impact to Singapore and the lives of Singaporeans.
- To attract more top-tier researchers and engineers to work with and from Singapore, grow the pool of tech workforce charged with scaling novel AI solutions, and nurture a confident AI user base of enterprises and workers.
- To avail compute and data for AI innovation, provide a trusted environment where people can engage with AI with confidence and contribute to international AI developments.⁵²⁹⁶

In terms of ethics, NAIS 2.0 says that Singapore advocates for the responsible and ethical use of AI. Singapore established an Advisory Council on

Center for AI and Digital Policy

the Ethical Use of AI and Data in 2018,⁵²⁹⁷ one year before releasing the first National AI Strategy. The Council is chaired by the former Attorney-General of Singapore V.K. Rajah SC and includes “representatives from technology companies, users of AI, and those who can provide consumers’ and societal perspectives.”⁵²⁹⁸ The Minister for Communications and Information announced the first-term representatives of the Advisory Council at the AI Singapore’s 1st Year Anniversary Event in 2018.⁵²⁹⁹

The Council advises the Government on issues arising from the commercial deployment of AI that may require policy or regulatory attention and industry on the responsible development and deployment of AI.⁵³⁰⁰ The Council also assists the Government in developing voluntary codes of practice to guide corporate decision-makers, monitoring consumers’ acceptance of such data use, and making recommendations on ethical and legal issues that may require policy or regulatory changes. The Advisory Council members for 2022–2025 include representatives and executives from Google Research, Salesforce, Microsoft, IBM, and OECD among other prominent organizations.⁵³⁰¹

AI Governance Regulation

Singapore appears to be taking a sectoral approach toward AI governance regulation, with regulatory agencies adopting soft-law approaches to issue non-binding guidelines and recommendations.⁵³⁰² NAIS 2.0 says that it will establish a common platform for regulatory agencies to coordinate on AI developments in their sectors and share best practices in governing AI.

The Infocomm Media Development Authority (IMDA) and Personal Data Protection Commission (PDPC) have been the most active in respect of AI

⁵²⁹⁷ Personal Data Protection Commission, *Singapore’s Approach to AI Governance, Advisory Council on the Ethical use of AI and Data* (Nov. 3, 2023), <https://www.pdpc.gov.sg/help-and-resources/2020/01/model-ai-governance-framework>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

governance regulation.⁵³⁰³ In 2019, the PDPC released the Model AI Governance Framework at the World Economic Forum.⁵³⁰⁴ The Model Framework was the first in Asia to provide details and readily implementable guidance to private sector organizations to address key ethical and governance issues when deploying AI solutions. In the foreword to the second edition of the Framework, in 2020, then-Minister for Communications and Information S. Iswaran, noted that “The Model Framework’s unique contribution to the global discourse on AI ethics lies in translating ethical principles into practical recommendations that organisations could readily adopt to deploy AI responsibly. [...] This edition incorporates the experiences of organisations that have adopted AI, and feedback from our participation in leading international platforms, such as the European Commission’s High-Level Expert Group and the OECD Expert Group on AI. Such input has enabled us to provide clearer and effective guidance for organisations to implement AI responsibly.”⁵³⁰⁵

The Model Framework is based on two guiding principles that “promote trust in AI and understanding of the use of AI technologies”:

1. “Organizations using AI in decision-making should ensure that the decision-making process is explainable, transparent and fair”
2. “AI solutions should be human-centric” in the sense that “the protection of the interests of human beings, including their well-being and safety, should be the primary considerations in the design, development and deployment of AI.”⁵³⁰⁶

These principles are operationalized through recommendations grouped into four clusters:

1. “Internal governance structures and measures”, including defining roles, responsibilities, and staff training for oversight to ensure the ethical deployment of AI and monitoring and managing risks⁵³⁰⁷
2. “Determining the level of human involvement in AI-augmented decision-making,” beginning with clarity on the objective of using AI, considering the approach to oversight, and weighing risks and harm of using AI for decision-making⁵³⁰⁸
3. “Operations management” provides a generalized AI model development process beginning with data preparation and promoting explainability,

⁵³⁰³ Ibid

⁵³⁰⁴ IMDA and PDPC Singapore, *Model AI Governance Framework, 2nd Edition* (2020), <https://www.pdpc.gov.sg/-/media/files/pdpc/pdf-files/resource-for-organisation/ai/sgmodelaigovframework2.pdf>

⁵³⁰⁸ Ibid, pp. 28–34

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

repeatability, robustness, tuning, traceability, reproducibility, and auditability to minimize bias and manage risks in algorithms and models⁵³⁰⁹

4. “Stakeholder interaction and communication” consists of meaningful transparency to consumers, options to opt out (including by default), usability, and communication channels⁵³¹⁰

The IMDA and the PDPC, in partnership with the World Economic Forum Centre for the Fourth Industrial Revolution, released an Implementation and Self-Assessment Guide for Organisations (ISAGO) in January 2020. The ISAGO complements the Model Framework by allowing organizations to assess the alignment of their AI governance practices with the Model Framework, while providing industry examples and practices.⁵³¹¹

The Singapore Computer Society (SCS), supported by IMDA, launched the AI Ethics and Governance Body of Knowledge (AI E&G BoK). The AI E&G BoK is expected to “guide the development of curricula on AI ethics and governance and form the basis of future training and certification for professionals.” The document underlines that “accountability, transparency, explainability, and audibility must become the hallmark of all AI solutions” and that “ethical guidelines should not be an afterthought but integrated as part of standards and expectations from the onset of any AI-related effort.”⁵³¹²

Minister for Communications and Information Josephine Teo, announced the launch of AI Verify at the World Economic Forum’s Annual Meeting in Davos in 2022. AI Verify is a voluntary AI Governance Testing Framework and Toolkit “for companies who want to demonstrate responsible AI in an objective and verifiable manner.”⁵³¹³ AI Verify aims to build trust in AI through transparency.⁵³¹⁴ Singapore hopes to achieve three objectives: enable trust-building between businesses and their stakeholders; facilitate interoperability of AI governance

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

frameworks; and contribute to the development of international AI standards.⁵³¹⁵ Singapore participates in defining AI standards as a member of ISO/IEC JTC1/SC42 on artificial intelligence.⁵³¹⁶

The Pilot Testing Framework and Toolkit does not define ethical standards and validates AI system developer's/owner's claims about the approach, use, and verified performance of their AI systems. It does not guarantee that any AI system tested will be free from risks or biases or is completely safe.

Minister Teo announced the launch of the AI Verify Foundation (AIVF) in June 2023 at the ATxAI conference in Singapore. The AIVF seeks to “harness the collective power and contributions of the global open source community to develop AI testing tools for the responsible use of AI.”⁵³¹⁷

The IMDA and AI Verify Foundation unveiled the “first of its kind” Generative AI Evaluation Sandbox in October 2023.⁵³¹⁸ The sandbox is intended to aid model developers, app developers, and third-party testers. Companies such as Google, Microsoft, Anthropic, IBM, Deloitte, and EY joined the sandbox.

In January 2024, the IMDA issued for public consultation a draft Model AI Governance Framework for Generative AI⁵³¹⁹ (MGF-Gen AI) developed with the AIVF. The MGF-Gen AI identifies nine dimensions to support a comprehensive and trusted AI ecosystem: accountability, data, trusted development and deployment, incident reporting, testing and assurance, security, content provenance, safety and aligning research & development, and AI for public good. The Framework received endorsements for its holistic approach to concerns arising from generative AI systems and was finalized in May 2024.⁵³²⁰

In February 2024, IMDA and Enterprise Singapore launched the Gen AI Sandbox for small and medium-sized enterprises (SMEs), to enable local SMEs greater access to Gen AI.⁵³²¹ Singapore also launched an open-source tool designed to address the security and safety challenges experienced in the use of LLMs. The tool facilitates the evaluation of these applications throughout their lifecycle and stages of use.⁵³²²

The Cyber Security Agency of Singapore (CSA) developed Guidelines on Securing AI Systems in 2024 to help system owners adopt a proactive approach to secure AI throughout the lifecycle.⁵³²³ The CSA focused on traditional cybersecurity risks and AI-specific threats. The CSA also published a practical guide that provides specific security measures and industry-prescribed best practices as a companion to the securing AI systems.⁵³²⁴

The PDPC published the Advisory Guidelines on use of Personal Data in AI Recommendation and Decision Systems in March 2024.⁵³²⁵ The Guidelines aim to provide (1) certainty by clarifying how the Personal Data Protection Act (PDPA) applies when organizations use personal data to develop and train AI systems and (2) assurance to consumers by setting out baseline guidance and best practices for organizations on how to be transparent about whether and how their AI systems use personal data to make recommendations, predictions, or decisions.

In the financial services sector, in 2018, the Monetary Authority of Singapore (MAS) and the financial industry co-created a set of principles to guide the responsible use of AI, focusing on Fairness, Ethics, Accountability, and

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Transparency (FEAT).⁵³²⁶ The principles established a standard across the financial sector in Singapore. Subsequently in November 2019, the MAS announced that it had partnered the financial industry to create a framework for the responsible use of AI and Data Analytics (AIDA), known as Veritas.⁵³²⁷ Veritas aims to provide financial institutions with a verifiable way to incorporate the FEAT principles into their AIDA solutions, and will comprise open source tools that can be applied to different business lines.⁵³²⁸ The FEAT principles and Veritas are part of Singapore's National AI Strategy.⁵³²⁹

In the health sector, in October 2021, the Ministry of Health (MOH) published the Artificial Intelligence in Healthcare Guidelines (AIHGle), which it co-developed together with the Health Sciences Authority (HSA) and the Integrated Health Information Systems (IHIS), now known as Synapxe. AIHGle aims to share good practices with AI developers (e.g., manufacturers, companies) and AI implementors (e.g., healthcare institutions: hospitals, clinics, laboratories), and complements the existing HSA regulatory requirements of AI Medical Devices.⁵³³⁰

Public Participation

“The formation of the Advisory Council [on the Ethical Use of AI and Data] is one of three structured, interlinked initiatives to support the engagement of stakeholders to collaboratively develop a trusted and vibrant AI ecosystem and position Singapore as a leading hub for AI.”⁵³³¹ The Council assists the IMDA in engaging stakeholders on issues that support the development of AI governance capabilities and frameworks, including engaging ethics boards of commercial enterprises on ethical and related issues arising from private sector use of AI and data, consumer representatives on consumer expectations and acceptance of the

use of AI, and members of the private capital community on the need to incorporate ethical considerations in their investment decisions into businesses which develop or adopt AI.⁵³³²

Public consultations were also held for the initial version of Singapore's Model AI Governance Framework⁵³³³, AI Verify, the draft Model AI Governance Framework for Generative AI, and the Advisory Guidelines on use of Personal Data in AI Recommendation and Decision Systems.

ISAGO and its Compendium of Use Cases were developed in close consultation with the industry, with contributions from over 60 organizations, as well as input from the Council.⁵³³⁴ Likewise, more than 30 authors from the public and private sectors contributed to the AI E&G BoK, which contains 25 case studies/use-cases.⁵³³⁵

The Smart Nation and Digital Government Office (SNDGO), under the Prime Minister's Office (PMO), publicizes information about key Smart Nation projects and government digital transformation on its website.⁵³³⁶ The website includes a page with information for companies, researchers, and others to "be part our AI journey."⁵³³⁷

Data Protection

The Personal Data Protection Act (PDPA) was enacted in 2012. It entered into force in stages, with the main data protection rules coming into force in July

2012. A suite of amendments to the PDPA was passed in November 2020. They started taking effect in phases from February 2021.

The PDPA governs the collection, use, disclosure, and care of personal data in Singapore. It provides a baseline standard of protection for personal data.⁵³³⁸ It complements sectoral laws and regulations such as the Banking Act and Insurance Act. The PDPA recognizes both the right of individuals to protect their personal data and the need of organizations to collect, use, or disclose personal data for “legitimate and reasonable purposes.”⁵³³⁹ The law aims to strengthen Singapore’s position as a trusted hub for businesses by regulating the flow of personal data among organizations.⁵³⁴⁰

The PDPA applies to private sector organizations.⁵³⁴¹ Data management in the public sector is governed by the Public Sector (Governance) Act and the Government Instruction Manual on Infocomm Technology & Smart Systems Management.⁵³⁴²

The Personal Data Protection Commission was established in January 2013 to administer and enforce the PDPA.⁵³⁴³ The PDPC is currently part of the IMDA.⁵³⁴⁴ The functions of the Commission include administering and enforcing the PDPA, providing information to individuals, businesses, and data-protection professionals about their rights and obligations, and representing the Government internationally on matters relating to data protection.

In its 2018 “Discussion Paper on Artificial Intelligence (AI) and Personal Data—Fostering Responsible Development and Adoption of AI”, the PDPC noted that “[t]he benefits and risks of AI have been the subject of great public debate. On the one hand, AI has the ability to boost productivity, transform businesses, grow the economy and enhance people’s lives. On the other hand, AI may displace jobs and pose ethical challenges such as social profiling.” The PDPC

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

recommended for AI systems to be human-centric, and for decisions to be made by or with the assistance of AI should be explainable, transparent, and fair.⁵³⁴⁵

Singapore shares publicly available datasets⁵³⁴⁶ from 70 public agencies, API libraries, and resources for application developers using these data sets. On the commercial side, the IMDA introduced a Trusted Data Sharing Framework⁵³⁴⁷ as a guide to establishing safeguards and baseline “common data sharing language” and a systematic approach to understanding the broad considerations for establishing trusted data sharing partnerships. A Data Regulatory Sandbox⁵³⁴⁸ is offered to businesses to pilot innovative use of data in a safe environment, in consultation with the IMDA and the PDPC. The IMDA also provides a Data Protection Trustmark (DPTM), a voluntary enterprise-wide certification for organizations to demonstrate accountable data protection practices.⁵³⁴⁹

The PDPC is not a member of the Global Privacy Assembly (GPA), but IMDA and the PDPC have previously participated in the GPA as non-members.⁵³⁵⁰ Singapore did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁵³⁵¹ the 2020 GPA Resolution on AI

Accountability,⁵³⁵² the 2022 GPA Resolution on Facial Recognition Technology,⁵³⁵³ and the 2023 GPA resolution on Generative AI Systems.⁵³⁵⁴

Algorithmic Transparency

Singapore does not have a legally binding guarantee of algorithmic transparency. Singapore released advisory guidelines on the use of personal data in AI recommendation and decision systems, setting out accepted AI data practices in March 2024.⁵³⁵⁵ The guidelines encourage service providers to adopt standards of record maintenance, data mapping, and labelling. The guidelines clarify when organizations can use personal data to develop and deploy machine learning models, emphasizing meaningful consent and identifying particular exceptions. Organizations must also communicate the “policies about safeguards and practices they put in place to ensure that AI systems are trustworthy.”⁵³⁵⁶ However, the document specifies “These Guidelines are advisory in nature, are not legally binding on the Commission or on any other party, and do not constitute legal advice” and do not modify any laws such as the PDPA.⁵³⁵⁷

AI-Assisted Surveillance

Statutes in Singapore deal with aspects of privacy, but there is no discrete right to privacy protected under Singapore’s Constitution.⁵³⁵⁸ Singapore has not

ratified the International Covenant on Civil and Political Rights,⁵³⁵⁹ which protects against arbitrary or unlawful interference with privacy, family, home, or correspondence. Government agencies are not permitted to access data held by the private sector except where the access has been authorized by law or by a court order.⁵³⁶⁰ If a person believes that their personal data has been accessed unlawfully by any government agency, they can apply to the court for a judicial review of the agency's decisions or actions.⁵³⁶¹ The court may make a Mandatory Order obliging the government agency to exercise its duties, perform specific acts, or consider exercising a discretionary power as required by law; or a Prohibiting Order, an injunctive order directed at a prospective act or decision that would be unlawful; or a Quashing Order that quashes or sets aside illegal decisions or acts.⁵³⁶²

The Public Order Act⁵³⁶³ definition of assembly and its requirements for a permit for such assembly has recently extended to online conferences. The government's use of online surveillance tools and power to act without the need for legal authorization is a matter of concern regarding citizens' ability to exercise their rights of freedom of speech, expression, and assembly.

Singapore launched SingPass in 2003. The National Digital Identity initiative⁵³⁶⁴ is a personal authentication system that allows users to access various Government services. It is a move to digitalize all transactions in public and private spaces and share data. The app offers users an option to use a 6-digit passcode or options for biometrics such as fingerprint or face recognition.

Singapore introduced TraceTogether,⁵³⁶⁵ a COVID-19 contact tracing application in 2020, advising users that data would “never be accessed unless the user tests positive” for the virus. In January 2021, the Minister of State for Home Affairs clarified that under the Criminal Procedure Code, the Singapore Police Force can order anyone to produce data for the purpose of a criminal investigation,

including TraceTogether data.⁵³⁶⁶ The COVID-19 (Temporary Measures) (Amendment) Bill, which restricted the use of personal contact tracing data in criminal investigations to only serious crimes such as murder and terrorism, was passed in Parliament in February 2021.⁵³⁶⁷

According to the Singapore government, TraceTogether's technical design precludes its use as a surveillance tool.⁵³⁶⁸ The Singapore government has explained that the data is always stored in a device in an encrypted form and is automatically deleted after 25 days.⁵³⁶⁹ Data is only extracted when the person tests positive for COVID-19 and upon request by the health authorities to upload the data for contact-tracing purposes.⁵³⁷⁰

The Ministry of Health announced in February 2023 that the use of contact tracing systems including TraceTogether were being stepped down due to COVID-19 measures being eased.⁵³⁷¹ As of February 1, 2024, the government deleted all COVID-19 contact-tracing data collected through the TraceTogether and SafeEntry programs, except one set of data related to a murder case.⁵³⁷²

Facial Recognition

In August 2021, the Minister of State for Home Affairs advised that Singapore aims to have more than 200,000 police cameras by 2030, more than doubling current use.⁵³⁷³ Police started trialing patrol robots for surveillance, to

detect “undesirable social behaviors” and displaying messages to educate the public on proper behavior the following month.⁵³⁷⁴

In May 2022, the PDPC issued the Guide on Responsible Use of Biometric Data in Security Applications to help organizations such as Management Corporation Strata Title (MCST), building/premise owners, and security services companies, to ensure the responsible use of security cameras and biometric recognition systems to safeguard individuals’ biometric data where it is collected, used or disclosed.⁵³⁷⁵

Singapore utilizes ABBSS (Automated Biometrics & Behavioral Screening Suite) at immigration and border checkpoints. The system is a network of cameras with facial-recognition capabilities that can also be deployed as a body-worn cameras for officers. The system is used both to build a biometrics database of travelers and detect travelers wanted for various offenses.⁵³⁷⁶

By 2025, Singapore plans to establish a fully automated immigration clearance system for all travelers, including first-time social visitors.⁵³⁷⁷ The plans include AI for retinal and face-recognition procedures, which could potentially remove the need for passports. Singapore passed the Immigration (Amendment) Bill in September 2023, authorizing the disclosure of passenger information to airport operators to facilitate end-to-end biometric clearance.⁵³⁷⁸

Online Disinformation

The Protection from Online Falsehoods and Manipulation Act⁵³⁷⁹ was introduced in 2019. Its aim is “to prevent the electronic communication in Singapore of false statements of fact, to suppress support for and counteract the

effects of such communication, to safeguard against the use of online accounts for such communication and for information manipulation, to enable measures to be taken to enhance transparency of online political advertisements, and for related matters.”⁵³⁸⁰ The law applies to digital content that is accessible in Singapore, whether it is an online post, text, or chat message by a person or a bot. The law does not clearly define what is meant by “falsehood” and gives power to any government minister to declare that information posted online is “false” and instruct the correction or removal of such content if they think it is in the public interest to remove it.¹¹ A person found guilty of the offense can be fined or imprisoned.

In October 2021, Singapore Parliament passed the Foreign Interference (Countermeasures) Bill (FICA).⁵³⁸¹ “The legislation provides measures to prevent, detect and disrupt foreign interference in our domestic politics conducted through (i) hostile information campaigns (HICs) and (ii) the use of local proxies.” Among the tools and tactics used by these “hostile foreign actors” “to interfere in domestic political discourse, incite social tensions and undermine our sovereignty,” the act mentions: “Using bots on social media platforms or taking out advertisements to artificially boost the reach of these messages,” “Using inauthentic accounts and bots in combination to engineer an artificial sense that there is strong public support or opposition to a certain position or sentiment,” “Inciting other users to ‘troll,’ harass or intimidate a particular target.”⁵³⁸²

The Bill was adopted after a 10-hour debate and concerns were raised over the lack of public consultation.⁵³⁸³ Under the new law, the Minister for Home Affairs is granted powers to issue directions to the Internet and social media service providers and website operators to provide user information, block content, and remove applications. Authorities can also require politically significant persons to declare foreign affiliations. Recipients of directions or declarations may apply to the Minister for Home Affairs to vary or cancel the direction or declaration. If their application is refused, they may appeal to an

independent Reviewing Tribunal chaired by a sitting Supreme Court Judge to overrule the Minister.⁵³⁸⁴

The Ministry of Digital Development and Information in Singapore, in October 2024, introduced the Election (Integrity of Online Advertising) (Amendment Bill) to address the use of generative AI in elections.⁵³⁸⁵ The bill, which received legislative consideration, seeks to protect election integrity in Singapore by regulating digitally manipulated online election advertising, particularly audio-fakes and AI-generated images of untrue and misrepresented events.⁵³⁸⁶ The bill is set to tackle disinformation in election content while preserving normal online discourse by excluding private chats and entertainment content. The Prime Minister issued a notification that the Elections (Integrity of Online Advertising) (Amendment) Act 2024 would commence in January 2025.⁵³⁸⁷

Harmful Content

The Ministry of Communications and Information tabled the Online Safety (Miscellaneous Amendments) Bill for its first reading in Parliament in October 2022. The Parliament passed the Online Safety Bill in November 2022⁵³⁸⁸ and the Act came into effect on February 1, 2023.⁵³⁸⁹

The aim of the Act is to enhance the safety of online users, particularly children, and to curb the spread of harmful content on Online Communication Services accessible to users in Singapore.⁵³⁹⁰ The Act covers online

communication services “generated by a machine.”⁵³⁹¹ Harmful content includes sexual content, violent content, suicide and self-harm content; cyberbullying content; content endangering public health; and content facilitating vice and organized crime.⁵³⁹² Designated providers of such Online Communication Services will have to comply with Codes of Practice issued by the IMDA. The IMDA issued the Code of Practice for Online Safety in July 2023, meant to enhance online safety and “curb the spread of harmful content” with “additional protection for children.” The Online Safety Code establishes processes for managing harmful content, provides tools for users, applies age-based policies, and puts forth a plan for annual online safety reporting. The first annual report is expected to be published on IMDA’s website in 2024.⁵³⁹³

The Online Criminal Harms Act (OCHA) was passed in July 2023 and came into effect on February 1, 2024.⁵³⁹⁴ The OCHA enables the Singapore government to deal more effectively with online activities that are criminal in nature, for example scams and online child sexual exploitation.⁵³⁹⁵

Environmental Impact of AI

Singapore launched a Green Data Centre (DC) Roadmap that charts a sustainable pathway for the continued growth of DCs in Singapore in May 2024.⁵³⁹⁶ To support ambitions for the digital economy, where macro-trends such as increased use of AI, autonomous and robotic systems, and immersive virtual interactions are expected to propel demand for compute resources, the Roadmap aims to provide at

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

least 300 megawatts (MW) of additional capacity in the near term, with much more through green energy deployments.⁵³⁹⁷

The Roadmap outlines IMDA's plans to partner the industry to continue enhancing sustainability for DCs on two fronts.⁵³⁹⁸

1. Improving Energy Efficiency at Hardware and Software Levels by uplifting energy efficiency of all DCs in Singapore at the facility level, as well as by deploying energy-efficient IT equipment and optimizing operation of servers.
2. Accelerating DCs' Use of Green Energy by industry to deliver low-carbon energy sources.

Singapore hosted the Green Software Foundation Global Summit, a premier international initiative dedicated to reducing the carbon footprint of software development, in October 2024. Participants at the Summit discussed topics such as the role of government and industry in powering sustainable AI, how to make AI greener with open-source innovation, and the introduction of the Sustainable AI Innovation Centre (SAIIC) to drive sustainable practices in AI development.⁵³⁹⁹

Lethal Autonomous Weapons

The Dutch Government organized the first global Summit on Responsible Artificial Intelligence in the Military Domain (REAIM) in The Hague in February 2023. Singapore endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁵⁴⁰⁰

Singapore co-hosted the Responsible AI in the Military Domain (REAIM) Regional Consultations for Asia in February 2024.⁵⁴⁰¹ Singapore endorsed the outcome document, the Blueprint for Action, of the REAIM 2024 Summit in

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Korea in September 2024.⁵⁴⁰² Endorsing signals Singapore’s commitment to implementing the principles defined at the 2023 summit for action.⁵⁴⁰³

At the 78th UN General Assembly First Committee in 2023, Chile voted in favor⁵⁴⁰⁴ of resolution L.56⁵⁴⁰⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

Singapore submitted its statement on the topic of lethal autonomous weapons systems as part of the 79th session of the UN General Assembly’s First Committee in September 2024. In the submission, Singapore notes that its accession as a High Contracting Party to the Convention on Prohibitions or Restrictions on the Use of Certain Conventional Weapons Which May Be Deemed to Be Excessively Injurious or to Have Indiscriminate Effects (CCW) in March 2024 underscores the commitment to the continued codification and progressive development of the rules of international law applicable in armed conflict.⁵⁴⁰⁶ Singapore also reiterated support for the two-tier approach agreed in the GGE in 2023

In the report, Singapore shared the country’s approach to the responsible development and use of AI in the military realm with details about the national principles on responsible military AI announced in 2021, after “several years of extensive consultations with defence technologists, military planners, international law experts, and policy professionals.” The principles define four key areas of concern related to AI in the military domain:

- a. “Responsible—First, the risk of emergent AI behavior must be addressed. AI systems must have well-defined intended uses, and both developers and users are responsible for the outcomes of AI systems.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- b. Reliable—Second, the risk of errors or inaccuracies in an AI system’s output must be addressed. AI systems should be tested and assured to a level appropriate for their intended use. They should be designed to minimize unintended bias and produce consistent outputs.
- c. Robust—Third, the risks from the exploitation of AI by malicious actors must be addressed. AI systems should be designed with cyber and adversarial AI threats in mind. In order to address the ‘black box effect,’ their development process should be well-documented to support explainability.
- d. Safe—Fourth, we must focus on the risk of AI failure in safety-critical contexts. AI systems should be safe to use, not only in terms of the deployed platforms, but also the surrounding assets and personnel.”⁵⁴⁰⁷

Human Rights

Singapore has endorsed the Universal Declaration of Human Rights. Singapore was party to four of the core human rights treaties as of 2021, arguing that “rights and a society’s approach to them evolve over time as they change.”⁵⁴⁰⁸ The UN Human Rights Council Working Group consistently recommends that Singapore ratifies all international human rights treaties such as the International Covenant on Civil and Political Rights and the Optional Protocol to the Convention on the Elimination of All Forms of Discrimination against Women.⁵⁴⁰⁹

Singapore has an Inter-Ministerial Committee on Human Rights but no national human rights institution. The Minister for Home Affairs K Shanmugam said in Parliament in March 2021 that “regardless of which community, what your social, religious or sexual beliefs are, everyone will be protected here.”⁵⁴¹⁰ He said that action could be taken under the Maintenance of Religious Harmony Act to use religion to urge violence against any person or group, adding “LGBTQ persons, non-LGBTQ persons, we are all equal.”⁵⁴¹¹

The parliament voted to repeal a decades-old law criminalizing same-sex sexual relations in November 2022. However, lawmakers also voted to amend the constitution to preempt any changes to the legal definition of marriage as

⁵⁴⁰⁷ Ibid, pp. 2–3

⁵⁴¹¹ Ibid

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

exclusively between a man and a woman.⁵⁴¹² Apart from decriminalization, there are no legal protections against discrimination based on sexual orientation or gender identity.⁵⁴¹³

Singapore improved its Freedom House Score by 1 point from the previous year with a 2024 score of 48 out of 100, which continues to define Singapore as “partly free.”⁵⁴¹⁴ In the context of political rights (electoral process, political pluralism and participation, functioning of government) Singapore scores 19 out of 40. When it comes to civil liberties (freedom of expression and belief, associational and organizational rights, rule of law, personal autonomy and individual rights) it reaches 29 out of 60. Singapore’s “partly free” status was attributed primarily to State restrictions on the electoral process, civil liberties, and associational and organizational rights. According to Freedom House, “Singapore’s parliamentary political system has been dominated by the ruling People’s Action Party (PAP) and the family of current prime minister Lee Hsien Loong since 1959. The electoral and legal framework that the PAP has constructed allows for some political pluralism, but it constrains the growth of opposition parties and limits freedoms of expression, assembly, and association.”⁵⁴¹⁵

AI Safety Summit

Singapore participated in the AI Safety Summit organized by the UK at Bletchley Park in November 2023⁵⁴¹⁶ and signed the Bletchley Declaration, an international agreement on developing human-centric, trustworthy, safe, and responsible AI.⁵⁴¹⁷ Singapore participated in the AI Seoul Summit, co-organized by the Republic of Korea (ROK) and the UK in May 2024. This meeting was a

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

continuation of the U.K.'s AI Safety Summit that builds upon the Bletchley Summit's commitment to AI safety.⁵⁴¹⁸

As part of the AI Seoul Safety Summit, Singapore was one of the 10 nations to launch the first international network of AI Safety Institutes to boost cooperation on AI.⁵⁴¹⁹ Singapore designated the Digital Trust Centre as the country's AI Safety Institute (AISI), which will work with other countries' AI Safety Institutes to collectively address AI safety research. Singapore is already in discussions with the U.S. and U.K. AISIs to explore collaborations in AI safety, particularly around Generative AI (GenAI) evaluations. The designation of the Singapore AISI is an extension of ongoing efforts, such as expanding AI Verify to test for GenAI safety, and working with like-minded international partners to exchange insights and best practices in AI safety.⁵⁴²⁰

Other International Cooperation on AI

NAIS 2.0 says that Singapore is committed to being a serious and reliable international partner on AI, and that Singapore will continue to contribute to international AI developments by anchoring key bilateral relationships with selected partners from government and industry, demonstrating alignment with key international fora and supporting worthwhile platforms, sharing Singapore's experience, and curating meaningful partnerships for capacity building.

During the inaugural Critical and Emerging Technologies (CET) Dialogue held in Washington, DC, in 2023, Singapore announced the development of an interoperability framework or "crosswalk"⁵⁴²¹ between the U.S. Artificial Intelligence Risk Management Framework (RMF 1.0) developed by the National Institute of Standards and Technology (NIST) and Singapore's AI Verify framework.⁵⁴²² The establishment of a bilateral AI Governance Group and further research and technical collaboration in AI were also announced, focusing on

advancing “safe, trustworthy, and responsible AI innovation” as well as “safety and security including testing, validation, and certification.”

Singapore is a contributing member of the Association of Southeast Asian Nations (ASEAN). During the 4th ASEAN Digital Ministers’ Meeting (ADGMIN) in February 2024, the group issued the ASEAN Guide on AI Governance and Ethics, which seeks to establish common principles for trustworthy AI and suggests best practices for how to implement trustworthy AI in the region.⁵⁴²³

During the inaugural Singapore-China Digital Policy Dialogue (DPD) in June 2024, Singapore and China announced interest to foster bilateral discussions in enhancing mutual understanding of approaches to AI governance. Under the reporting of the work group for Artificial Intelligence Governance, both parties agreed to promote mutual learning across the private sector and research institutions in AI governance and to enhance mutual understanding of governance frameworks.⁵⁴²⁴

Singapore has formed bilateral and multilateral treaties with other economies, called Digital Economy Agreements (DEAs), which establish digital trade rules and digital economy collaborations.⁵⁴²⁵ Singapore has signed DEAs with Chile, New Zealand, Korea, Australia, and the UK. Some of these DEAs contain AI modules promoting the adoption of ethical governance frameworks for AI and, where appropriate, the alignment of governance and regulatory frameworks.⁵⁴²⁶ For example, the Korea-Singapore Digital Partnership Agreement (KSDPA) contains a module requiring both countries to promote the adoption of AI governance and ethics frameworks that support the trusted, safe, and responsible use of AI-based technologies.⁵⁴²⁷

The Statement of Intent (SOI) Singapore’s Ministry of Defence (MinDef) and the United States Department of Defense signed regarding Data, Analytics and Artificial Intelligence Cooperation in July 2024 offers an example of bilateral

agreements in defense. Under this SOI, both nations identified key areas of collaboration, such as quality data, the responsible development and use of AI, and talent management. The SOI is deemed as an important opportunity to deepen collaborative efforts, strengthen interoperability, and promote values-based global leadership on responsible AI in defense.⁵⁴²⁸

Singapore and the United Kingdom signed a new Memorandum of Cooperation (MoC) to enhance the safety and reliability of AI technologies in its development and use in November 2024. The MoC builds upon the longstanding digital partnership between Singapore and the UK and aims to pave the way for greater public trust in AI advancements.⁵⁴²⁹ This latest agreement aligns with the commitments made by the two countries at the AI Safety Summit held in the UK in November 2023, and the objectives of the international network of AI Safety Institutes to align their work on research, standards and testing. This agreement also builds on the Memorandum of Understanding on Emerging Technologies signed by both countries in June 2023, which included commitments to explore cooperation on AI.⁵⁴³⁰

Singapore launched the AI Playbook for Small States in September 2024.⁵⁴³¹ Developed in collaboration with Rwanda's Ministry of ICT and Innovation, the Playbook outlines key issues and considerations for policymakers in the development, use, and governance of AI, from the perspective of small states to enable countries to achieve the UN Sustainable Development Goals (SDGs). An anthology of best practices from different Forum of Small States (FOSS) members and stakeholders complements the issues and considerations.⁵⁴³²

OECD / G20 AI Principles

Singapore is not a member of the OECD or the G20 but endorses the OECD AI Principles through membership in the Global Partnership on AI (GPAI). The OECD noted several significant examples of positive AI practices in

Singapore.⁵⁴³³ For example, the Advisory Council on the Ethical Use of AI and Data, and the AI Governance Framework, which incorporates all the OECD AI Principles.

Singapore is a founding member of the GPAI.⁵⁴³⁴ The Centre for AI & Data Governance in Singapore was established to develop international thought leadership and advance scholarship and discourse on legal, ethical, regulatory, and policy issues arising from the use of AI and data and inform the implementation of the G20 AI Principles.

Council of Europe AI Treaty

Singapore is not a member state of the Council of Europe and has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁵⁴³⁵

UNESCO Recommendation on AI Ethics

Singapore was one of the 193 member states that adopted the UNESCO Recommendation on the Ethics of Artificial Intelligence at the General Conference in November 2021.⁵⁴³⁶ Since the adoption, Singapore has yet to make official announcements concerning the implementation of the UNESCO Recommendation on the Ethics of AI, such as initiating the Readiness Assessment Methodology (RAM).⁵⁴³⁷

Evaluation

Singapore is one of the leaders in providing guidance for the ethical development of AI, providing regulatory sandboxes for testing responsible practices, and developing risk-based governance frameworks. The country has focused on the voluntary adoption of these methods for both public and private use cases and has not passed legislation to regulate artificial intelligence. Singapore's data protection agency has significant responsibilities for data protection and a growing role in AI policy. Questions do remain about independent oversight of government AI systems.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Singapore has embarked on extensive international efforts to collaborate with countries bilaterally and multilaterally, and has contributed to many international events, summits, and conferences to build thought leadership and demonstrate its alignment as an advanced, responsible, and leading nation on AI. While Singapore has adopted the UNESCO Recommendation on the Ethics of AI, it has yet to make public announcements concerning the implementation of the UNESCO Recommendation.

Concerns exist regarding the use of AI technologies for surveillance purposes. In recent years, the Singapore Parliament enacted laws to regulate online content due to risks associated with harmful content and disinformation. The extent of the power conferred to public authorities for monitoring this content is concerning given the lack of independence and proper oversight or accountability, aside from judicial review.

Slovenia

In 2024, Slovenia co-sponsored the UN Resolution on Safe, Reliable, and Trustworthy AI and contributed to negotiations of the Council of Europe AI Convention. Slovenia is party to the CoE Convention as an EU Member State but has not signed independently.

National AI Strategy

In May 2021, the Slovenian Government adopted the National program promoting the deployment of AI in the Republic of Slovenia by 2025 (NpAI).⁵⁴³⁸ The NpAI lays out a detailed workplan for social and economic development, which includes specific indicators, guidance on measuring progress, and instruments for implementation and financing.⁵⁴³⁹ The NpAI is part of the Slovenian Development Strategy 2030,⁵⁴⁴⁰ which takes into account the digital transformation of society. “The fourth industrial revolution, which is characterised by the digital economy and the development of sensors, robotics and artificial intelligence, is creating new models of business, work and jobs, which demands

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

the development of new knowledge and skills and adaptation in numerous areas of economy, society and the environment.”⁵⁴⁴¹

The overarching strategy document for the development of the information society is the Digital Slovenia Strategy. “The strategy envisages actions aimed at eliminating the greatest development gaps in order to accelerate the digital transformation in all areas, increase the competitiveness of the country and the ICT industry, achieve the digitalisation of society, develop and build the digital infrastructure, improve cybersecurity, and promote the development of an inclusive information society.”⁵⁴⁴² The objectives of the NpAI include the establishment of efficient support to research and deployment of artificial intelligence by enhanced and systematic networking of relevant stakeholders; the strengthening of technological and industrial capabilities in the field of artificial intelligence; answering to socio-economic changes such as changes in the labor market and education system; providing an appropriate ethical and legal framework and increasing citizens’ trust in AI.⁵⁴⁴³

The Digital Slovenia Strategy is in the process of being renewed. The 2030 Strategy is expected to focus on digital inclusion, digital public services, smart digital transformation to achieve Society 5.0 (data, artificial intelligence, etc.). “In addition, the strategy will also cover related content, such as a supportive environment, digital rights, better regulation, innovation, and a proposal for a Slovenian governance model for this area.”⁵⁴⁴⁴

In her speech at the 2022 Ministerial Council of the Global Partnership on AI, the Minister Stojmenova Duh stated, “In Slovenia, we believe in human rights and a responsible approach to the development, deployment and use of artificial intelligence.”⁵⁴⁴⁵ With the NpAI, Slovenia commits to high quality, transparent and ethical AI in which citizens have confidence. The National Programme mentions that a legal and ethical framework will be established in cooperation with European partners, based on existing European guidelines governing the ethical and legal aspects of the development and use of AI. It will be based on the universal values of the European Union and on human rights and fundamental

freedoms, with an emphasis on privacy, dignity, the right to a fair trial, the protection of consumer rights and non-discrimination. The National Programme also refers to the principles of human action and control, technical robustness and security, privacy and data management, transparency, diversity, fairness, social and environmental well-being, and accountability.

The NpAI was elaborated following Slovenia's commitment to work with other EU Member States "on the most important issues raised by Artificial Intelligence, from ensuring Europe's competitiveness in the research and deployment of AI, to dealing with social, economic, ethical and legal questions." Slovenia signed the 2018 EU Declaration on Cooperation on Artificial Intelligence.⁵⁴⁴⁶ The NpAI is also consistent with the European Coordinated Plan on Artificial Intelligence 2021⁵⁴⁴⁷ which operationalizes the Declaration. The NpAI objectives are supported in part by various EU funding programs⁵⁴⁴⁸ such as the Horizon Europe programme for research and innovation, the Digital Europe Programme, the Connecting Europe Facility for digital infrastructure, the Recovery and Resilience Facility and the Structural funds. The NpAI also articulates specific support for Slovenian firms and institutions that develop standards in the field of AI and promotes collaboration with national, EU and international standardization organizations.⁵⁴⁴⁹

Public Participation

Led by an inter-ministerial working group, the national program was the result of a series of multi-disciplinary consultations with national experts and industrial representatives through the ICT Association of Slovenia⁵⁴⁵⁰ of the Chamber of Commerce and Industry of Slovenia,⁵⁴⁵¹ researchers and practitioners in the field of AI through the Slovenian Artificial Intelligence Society,⁵⁴⁵² and stakeholders of the Strategic Research and Innovation Partnerships on Smart

globe, in the same vein as the general data protection regulation, GDPR, in the area of protection of personal data.”⁵⁴⁶¹

The AI Act grants a right to lodge a complaint with a market surveillance authority to any natural or legal person having grounds to consider that the AI Act has been infringed. There is no restriction regarding the standing of a complainant, with the idea that signaling a violation of the AI Act is in the interest of society.

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office⁵⁴⁶² established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The EU Act gives national market surveillance authorities the power to enforce the rules with regard to high-risk systems, investigate complaints, and impose sanctions for non-compliance.

National public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction. As of yet, Slovenia has announced that the Ministry of Digital Transformation will be in charge of implementing the EU AI Act. However, Slovenia has not yet clearly identified market surveillance or competent authorities.⁵⁴⁶³

Data Protection

The protection of personal data is guaranteed by the Slovenian Constitution.⁵⁴⁶⁴ Article 38 of the Constitution ensures purpose limitation and

includes the right of access to the collected personal data and the right to judicial protection.⁵⁴⁶⁵

Since Slovenia is an EU Member State, the General Data Protection Regulation (GDPR)⁵⁴⁶⁶ is directly applicable in Slovenia and to Slovenians. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”⁵⁴⁶⁷ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. In July 2022, the European Commission sent a reasoned opinion to Slovenia for failing to implement important obligations under the GDPR, as well as for not making it possible for the Slovenian Information Commissioner to use all the corrective powers under the GDPR.⁵⁴⁶⁸

In December 2022, Slovenia adopted a new Personal Data Protection Act (PDPA), adapting the national legislation to the GDPR. The new legislation entered into force in January 2023 and replaces the 2004 Data Protection Act. Under the PDPA, the Slovenian Information Commissioner has the authority to impose fines pursuant to the GDPR. The PDPA also introduces rules on the age limit for a child’s consent (15 years old), use of CCTV, and biometric data as well as an obligation to maintain processing logs.⁵⁴⁶⁹

Regarding the activities of law enforcement authorities, Slovenia transposed the EU Data Protection Law Enforcement Directive (LED).⁵⁴⁷⁰ “The

directive protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism."⁵⁴⁷¹ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.⁵⁴⁷² The LED also requires for Member States, including Slovenia, to enable data subjects to exercise their rights via national data protection authorities.⁵⁴⁷³

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: "Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law."

Slovenia is also a member of the Council of Europe. It signed and ratified⁵⁴⁷⁴ the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.⁵⁴⁷⁵

The Slovenian Human Rights Ombudsman (since 2002) and the Information Commissioner (since 2007) are both members of the Global Privacy Assembly. However, they have not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁵⁴⁷⁶ the 2020 GPA Resolution on AI

Algorithmic Transparency

Slovenia is subject to the GDPR. Slovenians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁵⁴⁸⁰ Furthermore, in June 2023, Slovenia ratified Convention 108+, which also provides for algorithmic transparency.⁵⁴⁸¹

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁵⁴⁸² specifically emphasizes requirements on transparency, accountability and effective remedies. The Recommendation provides that “Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems.”⁵⁴⁸³ The Recommendation also clarifies requirements for contestability, requiring that “Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions,” including “an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision.”⁵⁴⁸⁴

Facial Recognition

A report by the Greens/EFA of the European Parliament,⁵⁴⁸⁵ revealed that Slovenia uses facial recognition technologies for “ex-post identification” in its criminal investigations.⁵⁴⁸⁶ In Slovenia, the use of facial recognition technology by the police was legalized five years after they started using it.⁵⁴⁸⁷ The Slovenian police confirmed to the Slovenian Information Commissioner that they had used Face Trace (a facial recognition software⁵⁴⁸⁸) back in 2014.⁵⁴⁸⁹ The Commissioner’s office raised the issue several times in the years 2015–2019.⁵⁴⁹⁰

Subsequent to the enactment of the 2017 Police Tasks and Powers Act, which permits the use of biometric and facial recognition tools by law enforcement authorities,⁵⁴⁹¹ the Human Rights Ombudsman and the Information Commissioner brought a formal complaint against the Act before the constitutional court of Slovenia.⁵⁴⁹² The complaint mentioned the excessive data gathering powers granted to the police through the use of drones and automated systems to recognize license plates, the uncontrolled use of passenger name records at airports, and the lack of sufficient protection for citizens with no criminal record.⁵⁴⁹³ However, the complaint did not include the use of facial recognition by law enforcement authorities. The reasoning of the Slovenian Human Rights Ombudsman for the

⁵⁴⁹³ *Ibid*

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

exclusion of facial recognition from the complaint was that this was an exceptional measure which would not justify recourse to the constitutional court.⁵⁴⁹⁴

In 2021, the Information Commissioner announced the completion of its investigation regarding the police's use of the Face Trace system.⁵⁴⁹⁵ The investigation concluded that even though Face Trace is a biometric data processing-based system, it does not yield identification. Accordingly, the Information Commissioner deemed the use of Face Trace in compliance with data protection law.

As a consequence, the 2017 Police Tasks and Powers Act is still in force and the Slovenian police still uses facial recognition systems in the framework of their activities.

The Slovenian Information Commissioner is a member of the European Data Protection Board (EDPB), in charge of issuing “guidelines, recommendations and best practices in order to ensure that the Member States apply the LED consistently.”⁵⁴⁹⁶

Environmental Impact of AI

Slovenia co-sponsored the UN General Assembly landmark resolution on Artificial Intelligence (AI) Systems for Sustainable Development in March 2024.⁵⁴⁹⁷ The resolution calls for global cooperation in the development and use of AI, ensuring that it benefits society while addressing risks.⁵⁴⁹⁸ It emphasizes the importance of ethics, human rights, and sustainable development, particularly in areas like climate action, healthcare, and education. The resolution calls to establish international norms and principles for responsible AI governance, ensuring that AI technologies are deployed for

public good, inclusive growth, and to help achieve the UN Sustainable Development Goals (SDGs).

The EU and member states, including Slovenia, issued a joint statement following the UN Resolution emphasizing the critical role of AI in advancing sustainable development, with a particular focus on environmental protection and climate action.⁵⁴⁹⁹

Lethal Autonomous Weapons

According to Human Rights Watch, Slovenia has expressed its concerns with regard to “the growth of new weapon technologies” and stressed the “necessity for human control over all autonomous weapons”. However, Slovenia has not commented on calls to ban fully autonomous weapons.⁵⁵⁰⁰

In October 2022, Slovenia was one of the 70 states which endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.⁵⁵⁰¹ In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”⁵⁵⁰²

In February 2023, Slovenia participated in the international summit on the responsible application of artificial intelligence in the military domain. At the end of the Summit, Slovenia endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military

Center for AI and Digital Policy

domain.⁵⁵⁰³ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” They also “affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data.” States also “stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain.”⁵⁵⁰⁴

Slovenia also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁵⁵⁰⁵

South Korea hosted the second REAIM Summit in 2024. Slovenia endorsed the outcome document, Blueprint for Action, expressing a commitment to implement the principles of the first REAIM summit with an international treaty and national action.⁵⁵⁰⁶

At the 78th UN General Assembly First Committee in 2023, Slovenia voted in favor⁵⁵⁰⁷ of resolution L.56⁵⁵⁰⁸ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states

Center for AI and Digital Policy

on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

According to Freedom House, Slovenia receives high scores for Political Rights and Civil Liberties for a combined score of 96/100 in 2024. The report notes that the government “generally operates with openness and transparency.”⁵⁵⁰⁹ Slovenia is a signatory to major human rights treaties.⁵⁵¹⁰

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers advised that “member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects”⁵⁵¹¹ as part of their compliance with the Council of Europe Convention for the Protection of Human Rights and Fundamental Freedoms..

OECD / G20 AI Principles

Slovenia is a member of the OECD and has endorsed the OECD AI Principles.⁵⁵¹² The Slovenian AI National Program expressly refers to the OECD AI Principles on Artificial Intelligence, which promote artificial intelligence that is innovative and trustworthy and respects human rights and democratic values.⁵⁵¹³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The OECD has mentioned Slovenia's Digital Coalition and AI4Slovenia as an example of national AI policies that are shaping an enabling environment for AI.⁵⁵¹⁴ Slovenia is also a founding member of the Global Partnership on AI.⁵⁵¹⁵

The Government of the Republic of Slovenia adopted the Strategy for the Cooperation of the Republic of Slovenia with the OECD until the end of 2025. The aim of the Strategy is to use benchmarking and good practices from OECD Member countries to support domestic reform processes to achieve the digital and green transformation and realize Slovenia's development potential. With the Strategy, "Slovenia pursues the objective of digital transformation based on the protection of human rights and fundamental freedoms, paying attention to gender equality and respect for the rights of older persons, and responding effectively to demographic changes. Slovenia will continue to strengthen its role in the regulation and ethical use of artificial intelligence. It continues to support the work of the OECD Artificial Intelligence Observatory based on the signed Memorandum of Cooperation. It will participate in the OECD Trust Survey and work with OECD experts to develop a sustainable public administration strategy to 2030 and to implement the digital transformation of the public administration."⁵⁵¹⁶

Council of Europe AI Treaty

Slovenia contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. The Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law was adopted in Strasbourg during the annual ministerial meeting of the Council of Europe's Committee of Ministers, which brings together the Ministers for Foreign Affairs of the 46 Council of Europe member states.⁵⁵¹⁷

Slovenia is party to the Convention as an EU Member State. However, Slovenia has not signed this first legally binding international AI treaty.⁵⁵¹⁸

UNESCO Recommendation on AI Ethics

As a UNESCO member state, Slovenia has endorsed the UNESCO Recommendation on the Ethics of AI.⁵⁵¹⁹

In March 2021, Borut Pahor, President of the Republic of Slovenia, and Audrey Azoulay, Director-General of UNESCO, inaugurated the International Research Centre on Artificial Intelligence (IRCAI), as a Category 2 center under the auspices of UNESCO in Ljubljana, Slovenia.⁵⁵²⁰ The IRCAI is designed to be a communication platform for the collection and dissemination of good practices and case studies on the use and deployment of AI in society.⁵⁵²¹ The IRCAI focuses on advancing research on the use of AI to achieve the UN Sustainable Development Goals.⁵⁵²² The core research functions of the Centre will be guided by its four international scientific committees on: AI and Climate; AI and Education that will focus on AI algorithms that can make Open Educational Resources more accessible and easier to use; AI and Assistive Technologies that will highlight the potential of using AI technologies to assist persons with disabilities; and AI and Healthcare that will focus on the use of AI in vaccine development processes.⁵⁵²³

In February 2024, Slovenia hosted the Global Forum on the Ethics of AI. The Global Forum was organized by the Ministry of Digital Transformation under the patronage of UNESCO. Hosting demonstrated Slovenia's clear commitment to the implementation of the UNESCO Recommendation and to human-centric

AI.⁵⁵²⁴ Slovenia's preparation of the UNESCO Readiness Assessment Methodology, currently in progress, is another indication.⁵⁵²⁵

Evaluation

In recent years, Slovenia has had a significant influence over the development of AI policy in Europe due to its Presidency of the Council of the European Union during the second half of 2021, its AI collaboration with UNESCO, and its work in support of the Council of Europe AI expert group, the CAHAI.⁵⁵²⁶ While the national AI strategy and other technology-related workplans pledge to implement a legislative and regulatory regime that also protects fundamental rights, Slovenia has been slower than most of its European counterparts in updating its data protection regime. The entry into force in January 2023 of the new Data Protection Act, and with it the possibility for the Slovenian Information Commissioner to impose fines provided for the GDPR is a positive step. With the adoption of the EU AI Act, Slovenia shall designate a national supervisory mechanism which, it is to be hoped, will be independent, and will take the protection of human rights seriously. Concerns remain regarding surveillance practices, especially by law enforcement authorities. Slovenia has actively contributed to the development of international norms and regulatory frameworks that align with EU values of sustainability, fairness, and human rights.

South Africa

In 2024, South Africa engaged in a consultation process on a National AI Plan that solidified into a National AI Policy Framework. South Africa also adopted the African Union Continental Artificial Intelligence Strategy and deepened cooperation with UNESCO to implement the Recommendation on AI Ethics.

⁵⁵²⁴ Republic of Slovenia, *Slovenia Hosts the Global Forum on the Ethics of Artificial Intelligence* (Feb. 9, 2024), <https://www.gov.si/en/news/2024-02-09-slovenia-hosts-the-global-forum-on-the-ethics-of-artificial-intelligence/>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

National AI Strategy

South Africa initially included AI as “the bedrock of the Fourth Industrial Revolution (4IR)”⁵⁵²⁷ and incorporated AI in the framework of an integrated Fourth Industrial Revolution (4IR) strategy.

The 4IR Presidential Commission established in 2019 released a diagnostic report in January 2020, which “sets out a vision for chartering the way forward for South Africa in the Fourth Industrial Revolution.”⁵⁵²⁸ The 4IR Commission worked from a diagnostic report to align a national 4IR strategy to South Africa’s vision for development, one “premised on resolving the nation’s historical scars, expressed as the “triple scourge”: Poverty, Unemployment and Inequality.”⁵⁵²⁹ The 4IR Commission thus “adopted an amended definition of the 4IR that ensures a human-centric approach.”⁵⁵³⁰ “The quest of the Commission is thus related to two key questions: South Africa’s economic competitiveness and the wellbeing of her people.”⁵⁵³¹

The 4IR Commission is “a lever, activated by the State, to provide leadership for all society in understanding and navigating what will be a fundamentally altered future [...] The role of the 4IR Commission is thus to clearly articulate the role of the State as well as all institutional actors and citizens in their capacity as equal protagonists in the story of our future.”⁵⁵³²

The 4IR Commission conducted a comparative analysis of some national strategies that address “the nature and implication of the 4IR for their societies.”⁵⁵³³ Most of these strategies focus on AI. On this basis, the 4IR Commission identified 8 Dimensions of Strategy: Preparation Through Experimentation, Regulation & Ethics, Human Capital Development, Global

Leadership, Technological Clarity & Commitment, Private Sector Capabilities, and Service Delivery.⁵⁵³⁴

As for Ethics & Regulation, the 4IR Commission clarifies that “a focus on Regulation, Ethics, and Cultural aspects of the internet is key, not only to create an enabling policy environment to support private and non-governmental organisations as well as the state but to ensure ethical and transparent use of these new technologies.”⁵⁵³⁵

Regarding service delivery, the 4IR Commission notes that “4IR strategies are typically based on and respond to service delivery challenges as well as a social and human development/wellbeing priorities. Particularly with respect to the government, there is a strong emphasis on e-government; using technology to improve mobility around cities and to enhance the quality and deployment of health services.”⁵⁵³⁶

Key implementing projects include “government digitisation” and “clustered proposed programmes” such as a National Integrated Social Protection Information System, Smart ID, use of vernacular languages in technologies, a drone unit in the police; digital court solutions, and digital visa integrated platform force.⁵⁵³⁷

The 4IR Commission mentions in its diagnostic report that “the State is central to planning and coordination in the 4IR. A high-level interdepartmental multi-stakeholder governance and coordination structure is understood to be the institutional custodian of the 4IR strategy.”⁵⁵³⁸ This task is currently being carried out by the Department of Communications and Digital Technologies (DCDT),⁵⁵³⁹ which came into operation on April 1, 2020.⁵⁵⁴⁰

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

One of the DCDT's key missions was to develop the "PC4IR Strategic Implementations Plans (PC4IR SIP) to realise the recommendations of the 4IR Commission Report."⁵⁵⁴¹ To this end, the 4IR Project Management Office (4IR PMO) was established within the DCDT⁵⁵⁴² in April 2020. The 4IR SIP is currently under consideration by Ministers and needs to be approved by the Cabinet.

The PC4IR SIP is based on three principles that will inform 4IR programs:

1. "Human centred: Develop People and Skills for a 4IR ecosystem; Promotion of Human Rights; Cybersecurity (human security, which reinforces human rights); Environmental protection
2. Economic focus (Economic development and inclusivity); International competitiveness
3. Technological advancement (Technological transformation, invention and innovation); Build sustainable infrastructure"⁵⁵⁴³

The 4IR SIP is to be aligned with existing key strategic development plans, primarily the National Development Plan and the Medium-Term Strategic Framework 2019–2024,⁵⁵⁴⁴ which is the implementation plan and monitoring framework for achieving the National Development Plan 2030 priorities. One of these priorities consists in achieving improved information and communication technologies (ICTs) by 2030.⁵⁵⁴⁵ Part of the strategy is to enhance ICTs through a national e-strategy that places South Africa on the international stage with international governance agencies such as the International Telecommunications Union (ITU) and the World Trade Organization (WTO).⁵⁵⁴⁶ The aim is to bridge the digital divide, boost economic activity, and improve the education, health,

transport, and labor sectors, fostering growth in digital technologies as part of the growth in ICTs.⁵⁵⁴⁷

Key objectives include the establishment of a 4IR Strategic Implementation Coordination Council and of an artificial intelligence institute, as well as the review and amendment of relevant policy and legislation.⁵⁵⁴⁸

Then-DCDT Minister, Khumbudzo Ntshavheni, launched the Artificial Intelligence institute of South Africa and AI hubs at the University of Johannesburg and at the Tshwane University of Technology in November 2022.⁵⁵⁴⁹ The DCDT Minister, together with representatives of these two universities and the incoming United Nations (UN) Under-Secretary General and Rector of the UN University, explained in an opinion article the pivotal role of the AI institute in the 4IR strategy. The AI institute is meant as “an innovation engine for public and private sectors in line with the PC4IR.” “The institute will focus on research and development, as well as implementation capabilities in AI” to “develop solutions to South African and African challenges.”⁵⁵⁵⁰

“The institute will also deal with arising legal and ethical issues. This is important. Failure to reflect on and provide possible solutions to legal and ethical questions will render the advances in AI capacities and applications meaningless and futile.” The AI institute will scientifically “support the development, review and amendment of legislation as envisaged by the PC4IR.”⁵⁵⁵¹ In this regard, Letlhokwa George Mpedi, the Vice-Chancellor and Principal of the University of Johannesburg, has been calling for “legislation that specifically speaks to AI.”⁵⁵⁵²

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The DCDT progressed toward this goal in April 2024 with dialogue on the National AI Plan at the National AI Summit.⁵⁵⁵³ The plan, conceived of as an AI Strategy,⁵⁵⁵⁴ aims to integrate AI across various sectors, establishing a roadmap for legal and regulatory frameworks to foster innovation and investment in AI technologies.

The National AI Plan, which evolved to a policy framework,⁵⁵⁵⁵ centers policy objectives on overcoming “challenges as historical inequalities, digital divides, and outdated regulatory frameworks” with “regulatory reforms and policies to encourage targeted investments in strategic areas in education and digital infrastructure to ensure equitable access and to maximize AI’s transformative potential. By aligning with global AI governance standards and addressing socio-economic disparities, South Africa can leverage AI to drive economic transformation, foster social equity, and enhance its global competitiveness in AI innovation.”⁵⁵⁵⁶

The Plan/Policy Framework sets out strategic pillars to achieve these objectives:

1. Talent/Capacity Development
2. Digital Infrastructure
3. Research, Development, and Innovation
4. Public-Sector Implementation “to enhance government efficiency through AI”
5. Ethical AI Guidelines Development “to ensure alignment with human rights principles”
6. Privacy and Data Protection
7. Safety and Security “to protect citizens and infrastructure”
8. Transparency and Explainability “to build public trust in AI”
9. Fairness and Mitigating Bias “to ensure equitable AI deployment”
10. Human Control of Technology (Human-Centered Approach) “to maintain human oversight over AI”
11. Professional Responsibility “to foster responsible AI development and use,” including through a Code of Conduct and ethics training for AI professionals

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

12. Promotion of Cultural and Human Values “to align AI development with societal values.”⁵⁵⁵⁷

African Union / Regional AI Strategy

The 4IR strategy also aims for South Africa to contribute to the development of a similar strategy at regional level. The African Union (AU) Commission developed a comprehensive Digital Transformation Strategy for Africa.⁵⁵⁵⁸ Its purpose is to foster an “integrated and inclusive digital society and economy in Africa that improves the quality of life of Africa’s citizens,” “breaks the digital divide,” and ensures “continental ownership with Africa as a producer and not only a consumer in the global economy.”⁵⁵⁵⁹ The AUC strategy envisions harmonization of policies, legislations, and regulations as key. The strategy also includes the design of “policies based on a human-centred and holistic approach that takes into account the local context and cross-cutting issues relevant to all stages of policy design and implementation. Special attention should be given to minorities and vulnerable groups.”⁵⁵⁶⁰ The AU Commission also expresses its support for the ratification of the Convention on Cyber Security and Personal Data Protection, also known as the Malabo Convention,⁵⁵⁶¹ as well as making the Convention “consistent with standards such as the modernized convention 108, the General Data Protection Regulation.”⁵⁵⁶²

When South Africa assumed the position of AU Chairperson for 2020, President Ramaphosa called for the creation of an AI Forum within the African Union to discuss how to address AI “in uniformity.”⁵⁵⁶³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In 2021, in line with the objectives of the 4IR SIP,⁵⁵⁶⁴ South Africa led the development of Smart Africa's Artificial Intelligence Blueprint for Africa,⁵⁵⁶⁵ "a precursor for the African continent to become a global player within the digital technology state affairs and a huge contribution to positioning Africa within the 4th Industrial Revolution." The aim is for the AI Blueprint "to set-up the African member states towards developing policies, strategies and plans that would ensure growth and prosperity within the digital revolution space."⁵⁵⁶⁶

A key chapter in the AI Blueprint is dedicated to AI and ethics. The chapter acknowledges "a need to ensure that ethics are integrated into AI systems to minimize structural discrimination and bias that can emerge from biased training data. Repercussions can lead to discrimination and impairment of rights in a myriad of circumstances including housing, medical care, education, and human rights. [...] In designing their national AI Strategy, countries should clearly elaborate the AI ethical framework."⁵⁵⁶⁷

Ethical frameworks would encourage safe and trustworthy use and development of AI such that "autonomous intelligent systems should be designed in ways that enable their decisions to be explained and humans to be accountable for their use," audits and certification would monitor systems for engineering and ethical compliance according to standards "developed using multi-stakeholder and multilateral approaches," "Life and death decisions should not be delegated to machines. AI systems should be designed taking into account such key concepts as people, the planet, prosperity and peace." After noticing that current AI ethics initiatives have been led by Western efforts, the AI Blueprint emphasizes that "participation from African nations is crucial and should be further encouraged."⁵⁵⁶⁸

In February 2022, the AU Executive Council, requested the AU Commission to pursue the development of a continental AI strategy. The AU High-Level Panel on Emerging Technologies (APET) reiterated the need for a continental AI strategy that "would enable African countries to enhance policymaking and implementation and improve stakeholder engagement on AI-

Center for AI and Digital Policy

related challenges and opportunities” in May 2022.⁵⁵⁶⁹ The APET organized two expert consultative meetings in 2022 and released an “AI for Africa report.”⁵⁵⁷⁰

The African Union endorsed the Continental Artificial Intelligence Strategy in Ghana in July 2024.⁵⁵⁷¹ The strategy underscores the AU’s commitment to an Africa-centric, development-focused approach to AI which promotes ethical, equitable and responsible AI development.⁵⁵⁷²

Public Participation

South Africa’s Department of Communications and Digital Technologies (DCDT) opened a formal public consultation on the AI policy framework in October 2024.⁵⁵⁷³ The consultations ran through November 29, 2024. The consultation on the draft framework followed the National AI Government Summit in April 2024, where the DCDT Minister shared the draft Plan with key stakeholders from government and industry. The Summit was part of a “pre-policy process [...] intended to collate the inputs and incorporate them into the draft plan.” The plan then went through the Cabinet System before the public consultation.⁵⁵⁷⁴

After the publication of the PC4IR Report in October 2020, a draft consultative process took place for the 4IR SIP in October–November 2020, followed by stakeholder consultations from February 2021 until July 2021. The PMO finalized its feedback analysis in August 2021 and submitted the final draft of the 4IR SIP in October 2021.⁵⁵⁷⁵ In 2018, South Africa’s Department of Cooperative Governance and Traditional Affairs, in partnership with a private

company, launched GovChat, an online citizen engagement AI-powered application which promotes accountable local governance⁵⁵⁷⁶ and allows citizens to engage with their local councilors.⁵⁵⁷⁷

Data Protection

The right to privacy is guaranteed under section 14 of the 1996 Constitution of South Africa. South Africa's data protection law, the Protection of Personal Information Act (POPIA) gained Parliament's assent in 2013. However, only after the COVID-19 outbreak and the proliferation of the use of personal data in relation to digital services, did POPIA take effect on July 1, 2020, and became fully enforceable one year later.⁵⁵⁷⁸ The Cybercrimes Act, which entered into force on December 1, 2021, also enhances personal data protection. The Act criminalizes hacking; unlawful interception, interference or acquisition of data; malicious or harmful communications.⁵⁵⁷⁹

Not only does the preamble of POPIA recall the constitutional nature of the right to privacy but it mentions that the right to privacy includes "a right to protection against the unlawful collection, retention, dissemination and use of personal information."⁵⁵⁸⁰

POPIA provides that "a data subject may not be subject to a decision which results in legal consequences for him [...], or which affects him [...] to a substantial degree, which is based solely on the basis of the automated processing of personal information intended to provide a profile of such person including his [...] performance at work, on his [...] credit worthiness, reliability, location, health, personal preferences or conduct."⁵⁵⁸¹ Exceptions to this principle apply based on a law or code of conduct which provides for appropriate measures to safeguard "the legitimate interests of data subjects" or based on an authorization granted by the South African Information Regulator when the public interest is at

stake such as the “interests of national security,” “the prevention, detection and prosecution of offences,” or “important economic and financial interests of a public body”⁵⁵⁸²

Unless a code of conduct has been issued,⁵⁵⁸³ POPIA requires a responsible party to “obtain prior authorisation from the Information Regulator if that responsible party intends to process any unique identifiers of data subjects (i) for another purpose than intended at collection, and (ii) with the aim of linking the information with information processed by other responsible parties.” “Unique identifier” can refer for instance to an identity number or employee number.⁵⁵⁸⁴

Such is also the case if that responsible party plans to “(b) process information on criminal behaviour or on unlawful or objectionable conduct on behalf of third parties; (c) process information for the purposes of credit reporting; or (d) transfer special personal information [...] or the personal information of children [...] to a third party in a foreign country that does not provide an adequate level of protection for the processing of personal information”⁵⁵⁸⁵

POPIA also established the South African Information Regulator.⁵⁵⁸⁶ The Information Regulator is an independent body responsible for monitoring and enforcing compliance with POPIA by public and private bodies. The Regulator is subject to the law and is accountable to the national assembly.⁵⁵⁸⁷

In October 2022, the Information Regulator, responsible for approving industry codes of conduct,⁵⁵⁸⁸ approved the Banking Association of South Africa’s Code of Conduct for the Processing of Personal Information by the Banking Industry.⁵⁵⁸⁹ The Code regulates the use of automated decision-making in “profiling, work performance, credit worthiness, location, health, reliability, personal preferences, or conduct.”⁵⁵⁹⁰ The Code requires banks to adopt measures

and safeguards for automated decision-making processes, such as identification, lawfulness, transparency, privacy notices/statements, and the ability of users to raise complaints in case of dissatisfaction with the result of an automated decision.⁵⁵⁹¹

The Information Regulator is a member of the Global Privacy Assembly (GPA) since 2017. The Information Regulator has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁵⁵⁹² the 2020 GPA Resolution on AI Accountability,⁵⁵⁹³ the 2022 GPA Resolution on Facial Recognition Technology,⁵⁵⁹⁴ or the 2023 GPA Resolution on Generative AI.⁵⁵⁹⁵

A specific issue identified in the 2022 AU Data Policy Framework⁵⁵⁹⁶ and pointed out by renowned researchers such as Emma Ruttkamp-Bloem and Christiaan Viljoen in the South African context is the absence of representation of a large part of the South African society in terms of data sets. In a 2022 study, these researchers reported that the digital divide is primarily a data divide fostered by and exacerbating the social divide.⁵⁵⁹⁷ According to Ruttkamp-Bloem and Viljoen, at least 50% of South Africans do not have a digital footprint, resulting in potential bias and discrimination because their experiences are absent from the data.⁵⁵⁹⁸ The practice of data-driven AI in a country like South Africa cannot be

Center for AI and Digital Policy

extracted from relations of social power. Thus, policymakers should not underestimate the inherent threat to fairness practices in machine learning both in terms of existing bias in training data and modelling practices and the socially powered situations in which predictions are interpreted and acted upon.

Algorithmic Transparency

According to POPIA, algorithmic transparency is ensured to the extent that “appropriate measures must (a) provide an opportunity for a data subject to make representations about a decision” regarding the sole use of automated decision-making and “(b) require a responsible party to provide a data subject with sufficient information about the underlying logic of the automated processing of the information relating to him or her to enable him or her to make representations in terms of paragraph (a).”⁵⁵⁹⁹

The 2022 Code of Conduct for the Processing of Personal Information by the Banking Industry also provides for algorithmic transparency.⁵⁶⁰⁰

South Africa’s National AI Policy Framework also includes Transparency and Explainability as one of twelve strategic pillars, which suggests intentions for a guarantee of at least a measure of algorithmic transparency. In addition to educating the public on AI technologies, the framework considers transparency as “The clear and open operation of AI systems, ensuring that their processes, decision-making criteria, and outcomes are understandable and accessible to users and stakeholders, including insights into model functionality, data usage, decision logic, and potential impacts.”⁵⁶⁰¹

EdTech and Tracking Children

Human Rights Watch published a global investigative report on the education technology (EdTech) in May 2022 endorsed by 49 governments, including South Africa, for children’s education during the pandemic. Based on technical and policy analysis of 163 EdTech products, Human Rights Watch found that governments’ endorsements of the majority of these online learning platforms put at risk or directly violated children’s rights.

Some EdTech products, such as Extramarks, apparently exclusively designed for children’s use and with an estimated 100,000 users in South Africa, targeted children with behavioral advertising. Extramarks sent children’s data to

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online. According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising.⁵⁶⁰²

Environmental Impact of AI

South Africa passed its first sweeping climate change law in July 2024.⁵⁶⁰³ The legislation will allow South Africa to meet its emissions reduction commitments under the Paris Climate Change Treaty. The law is a significant move for South Africa, which is one of the top 15 greenhouse gas emitters globally. The emissions reductions targets in the new bill require all industry, including AI and data centers, to limit their emissions by a given amount over a period of time.

Lethal Autonomous Weapons

South Africa is a signatory to the United Nations Convention on Certain Conventional Weapons.⁵⁶⁰⁴ At the 2018 Convention on Certain Conventional Weapons (CCW) meeting, South called for a ban on Lethal Autonomous Weapons Systems (LAWS) on behalf of the African Group.⁵⁶⁰⁵ At the 2021 CCW meeting, South Africa advocated for the adoption of a legally binding instrument on LAWS: "It is high time for further work on LAWS, to move towards concrete negotiations and more active diplomatic efforts. Should the GGE's further work result in the adoption of an instrument on LAWS that is of a political nature only and as a final product, with no prospect of elevating further work to the level of a legally binding instrument, South Africa would regard the process as having been a failure."⁵⁶⁰⁶

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The South African Military Academy launched the Defence Artificial Intelligence Research Unit (DAIRU) to enhance military capabilities, focusing on AI-driven technologies, cyber resilience, and security. Officials highlighted the transformative power of AI and the importance of regulation amidst global digital competition.⁵⁶⁰⁷

Human Rights

South Africa maintains a score of 79/100 and a status of “Free” according to the Freedom House Freedom in the World 2024 report.⁵⁶⁰⁸

South Africa is a party to the African Charter on Human and Peoples’ Rights. In its 2019 Declaration of Principles on Freedom of Expression and Access to Information in Africa, the African Commission on Human and Peoples’ Rights (ACHPR) in charge of interpreting the Charter⁵⁶⁰⁹ called on states to ensure that the “development, use and application of AI, algorithms and other similar technologies by internet intermediaries are compatible with international human rights law and standards, and do not infringe on the rights to freedom of expression, access to information and other human rights.”⁵⁶¹⁰

In February 2021, the ACHPR adopted Resolution 473 having recognized that emerging technologies such as AI have a bearing on the enjoyment of human rights under the African Charter on Human and Peoples’ Rights (the African Charter).⁵⁶¹¹ The ACHPR called on state parties to the African Charter, South Africa included, to:

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- Ensure that the development and use of AI, robotics and other new and emerging technologies is compatible with the rights and duties in the African Charter and other regional and international human rights instruments, in order to uphold human dignity, privacy, equality, non-discrimination, inclusion, diversity, safety, fairness, transparency, accountability and economic development as underlying principles that guide the development and use of AI, robotics and other new and emerging technologies.
- Ensure transparency in the use of AI technologies, robotics and other new and emerging technologies and that decisions made in the use of AI technologies, robotics and other new and emerging technologies are easily understandable to those affected by such decisions.
- Work towards a comprehensive legal and ethical governance framework for AI technologies, robotics and other new and emerging technologies so as to ensure compliance with the African Charter and other regional treaties.

In September 2022, the Special Rapporteur on Freedom of Expression and Access to Information in Africa, Ourveena Geereesha Topsy-Sonoo, recalled that, with Resolution 473, the Commission, “recognizing the need to better understand the legal, ethical, safety and security opportunities and challenges raised by AI, robotics and other new and emerging technologies in Africa, observed in its Resolution [...] that new and emerging technologies present both opportunities and perils for the promotion and protection of human and peoples' rights in Africa. The Commission further observed that whilst making government services and information digital enhances transparency and accessibility and artificial intelligence allows for a number of benefits in the society, it has to be accompanied by human rights considerations and a bridging of the digital divide.” The Special Rapporteur also declared that “State Parties are encouraged to develop domestic legal frameworks regulating AI and e-governance; ensure these technologies are developed and used transparently; and ensure that imported AI and e-governance systems align with the African Charter.”⁵⁶¹²

OECD / G20 AI Principles

Although South Africa is not a member of the Organization for Economic Co-operation and Development (OECD), as a member of the G20, the country

<https://www.caidp.org/app/download/8308244063/CAIDP-ACHPR-Res473-04052021.pdf?t=1637335261>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

endorsed the G20 AI principles that draw from the 2019 OECD AI Principles.⁵⁶¹³ The G20 AI principles highlight challenges in the use of AI including privacy, security, ethical issues, new digital divides and the need for AI capacity building. However, the country has not endorsed the OECD Principles updated in May 2024.⁵⁶¹⁴

As a Key Partner of the OECD, South Africa contributes to the OECD's work in a sustained and comprehensive manner, including public governance.⁵⁶¹⁵ South Africa's presidency of the G20 in 2025 will facilitate this cooperation.

Council of Europe AI Treaty

South Africa has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁵⁶¹⁶ The Convention is the first legally binding international framework to govern AI, ensuring that AI technologies are aligned with human rights, democratic values, and rule of law standards.

UNESCO Recommendation on AI Ethics

South Africa endorsed the 2021 UNESCO Recommendations on the Ethics of AI.⁵⁶¹⁷ South Africa's Minister of Communications and Digital Technologies Khumbudzo Ntshavheni expressed commitment to regulating AI in an address at the UNESCO-Southern Africa sub-Regional Forum on Artificial Intelligence (SARFAI) which took place in Windhoek, Namibia in 2021. The SARFAI provided a platform for the discussion of the sustainable development-oriented and ethical use of artificial intelligence, as steps for implementation of the UNESCO Recommendation in the region.

South Africa endorsed the resulting 2022 Windhoek Statement on Artificial Intelligence in Southern Africa.⁵⁶¹⁸ The Windhoek Statement calls for the establishment of a Southern African coordination mechanism for the

Center for AI and Digital Policy

implementation of the UNESCO Recommendation. The proposal is set to be submitted to the 2023 Joint Meeting of SADC Ministers responsible for Education and Training and Science, Technology and Innovation, for discussion and adoption, with a clear action plan, timelines, and a monitoring and evaluation framework.⁵⁶¹⁹

Complying with the Recommendation is enshrined in the Department of Communications and Digital Technologies' South Africa's Artificial Intelligence (AI) Planning.⁵⁶²⁰ South Africa's National Artificial Intelligence Policy Framework shares significant similarities with UNESCO's principles on artificial intelligence. Both frameworks emphasize the development of AI technologies based on ethical principles and a human-centered approach, aiming for safe, transparent, and fair AI deployment. Elements such as transparency, accountability, data protection, and bias mitigation in the South African policy align well with UNESCO's values of respecting human rights and ensuring equality in AI use. The framework is crafted with a vision to distribute AI's economic and societal benefits broadly, prioritizing human well-being, much like UNESCO's emphasis on a people-centered approach.⁵⁶²¹

South Africa is currently completing the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.⁵⁶²² The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.⁵⁶²³

Evaluation

South Africa is a leading figure in the development of a human-centered approach at regional and international levels. South Africa has been a key player in the development of Smart Africa's Artificial Intelligence Blueprint for Africa, which calls for ensuring that ethics are integrated into AI systems to minimize structural discrimination and bias. The 2021 AI Blueprint was a first step towards

⁵⁶¹⁹ UNESCO, *Implementation of the Recommendation on the Ethics of Artificial Intelligence (AI)* (Oct. 7, 2022), <https://unesdoc.unesco.org/ark:/48223/pf0000382931>

Center for AI and Digital Policy

the adoption of a continental AI strategy, which the African Union achieved in 2024. Endorsing the 2022 Windhoek Statement on Artificial Intelligence in Southern Africa, demonstrated South Africa's commitment to take concrete steps to implement the UNESCO Recommendation on the Ethics of AI.

South Africa's collaboration with the UNESCO AI Ethics Centre and the explicit alignment with the Recommendation in the National AI Plan exemplifies how the Recommendation on AI Ethics can inform national policies. The outcome of the RAM currently in progress will provide further guidance. South Africa has not signed the Council of Europe AI Treaty, a significant international framework to align AI applications with human rights, democracy, and rule of law. While South Africa collaborates actively with the OECD in the technology sector, the Council of Europe AI Treaty would present an opportunity to reinforce its commitment to ethical AI governance on a global scale.

South Africa took steps toward a human-centered National AI Strategy and policy framework with the 2020 4IR Strategy and consultations on the 2024 National AI Plan and AI Policy Framework. However, these have yet to be adopted.

South Africa's data protection law addresses automated decision-making and algorithmic transparency among the rights provided for by the legislation. However, the South African Information Regulator has not fully addressed issues pertaining to the use of AI systems. Concerns exist regarding the use of AI for surveillance purposes and its potential impact on the digital divide. There is also an urgent need to tackle structural bias in AI systems rooted in the digital divide and the absence of a digital footprint and representation of a significant part of South African society.

Spain

In 2024, Spain updated the AI Strategy to emphasize transparency, accountability, and security. Spain also formally inaugurated the Spanish Agency for AI Oversight, the body in charge of implementing the EU AI Act. Spain initiated the UNESCO RAM and is party to the Council of Europe AI Treaty as an EU Member State. However, Spain has not signed the treaty independently.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

National AI Strategy

Spain has identified artificial intelligence (AI) as “one of the disciplines most likely to influence the rapid transition to a new society and economy.”⁵⁶²⁴ Spain unveiled the National Strategy for Artificial Intelligence (ENIA) on December 2, 2020.⁵⁶²⁵ The Spanish government stated it will allocate €600 million for the implementation of the strategy from 2021 to 2023.⁵⁶²⁶ Spain updated the AI Strategy in 2024.⁵⁶²⁷ The updates reinforce the ENIA 2020 principles by emphasizing transparency and the trustworthiness of AI systems, promoting cybersecurity framework, enhancing data governance, prioritizing energy efficiency in AI-related infrastructure, and cementing the oversight functions of the Spanish AI Agency (AESIA).⁵⁶²⁸

The objective of the ENIA is to generate trust in the development of inclusive and sustainable AI that focuses on the needs of the citizens. The ENIA comprises six main goals, including establishing an ethical and normative framework to strengthen the protection of individual and collective rights and to guarantee inclusion and social wellbeing.⁵⁶²⁹

The ENIA also sets out five measures for a successful ethical and regulatory framework:

1. the development of a national seal of quality for AI
2. the creation of observatories for ethical and legal evaluation of AI systems
3. the development and release of a Digital Rights Charter
4. the implementation of a national governance model for ethics in AI through the AI Advisory Council

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

5. and the promotion of multisectoral national and international fora for dialogue, awareness, and participation.⁵⁶³⁰

The ENIA is part of several overlapping policy initiatives launched by the Spanish government. The 2025 Digital Agenda enumerates 50 measures for the government to take between 2020 and 2025 across 10 thematic axes to propel the country's digital transformation. The ninth axis is "Data Economy and Artificial Intelligence" and one of the measures contained therein is the accomplishment of the goals set out by the AI Strategy.⁵⁶³¹

The ENIA is also part of the Plan for Recovery, Transformation, and Resilience for the Spanish economy launched in April 2021. The ENIA inscribes itself in the framework of the pact for science and innovation, with the aim to reinforce the National Health System's capacities.⁵⁶³² The Plan describes Spain's ambition to become a global leader in AI integration into a digitalized economy. The Plan refers to Spain's aspiration to "humanist digitalization," with the development of AI in a human-centric way, thanks to the elaboration of a Charter of Digital Rights.⁵⁶³³

The ENIA intersects with the Spanish government's 2015 Plan for the Advancement of Language Technologies (HTL).⁵⁶³⁴ Within the HTL framework, the Spanish government, in collaboration with the Barcelona Supercomputing Center, created in 2021 the world's first massive Spanish-language AI system, which can generate and analyze texts in Spanish. This is part of Spain's strategic objective to promote the development of AI systems in Spanish and co-official languages, instead of relying on English-language systems.⁵⁶³⁵

The ENIA follows from the Spanish Research, Development, and Innovation (RDI) Strategy for AI, published in 2019.⁵⁶³⁶ The RDI Strategy for AI

set out Priorities and Recommendations “to be developed in initiatives and activities defined and financed through the Science, Technology, and Innovation Stores Plans, mobilizing the synergies between the different levels of public administration and through the co-development of the public and private sectors.”⁵⁶³⁷ The Spanish RDI Strategy included plans to create a National AI Strategy, a Spanish AI Observatory, and a strategic framework for the development of AI in compliance with the Spain’s “ethical, legal, and social commitments” and the European ecosystem.⁵⁶³⁸

The ENIA also has a European dimension. Spain supports the 2018 AI ethical Guidelines of the EU High Level Expert Group.⁵⁶³⁹ In this framework, Trustworthy AI “(1) should respect fundamental rights, applicable regulation and core principles and values, ensuring an ‘ethical purpose’ and (2) should be technically robust and reliable because, even with good intentions, a lack of technological mastery can cause unintentional harm.”⁵⁶⁴⁰ The Spanish government, along with thirteen other EU Member States, published a position paper on innovative and trustworthy AI in October 2020.⁵⁶⁴¹ The paper delineates a two-fold vision of AI development in the EU based on (1) promoting innovation while managing risks through a clear framework and (2) establishing trustworthy AI as a competitive advantage. “The main aim must be to create a common framework where trustworthy and human-centric AI goes hand in hand with innovation, economic growth and competitiveness in order to protect our society, maintain our high-quality public service and benefit our citizens and businesses. This can help the EU to protect and empower their citizens, underpin innovation and progress in society and ensure that their values are protected.”⁵⁶⁴²

Artificial Intelligence Advisory Council

The Ministry of Economic Affairs and Digital Transformation established the Artificial Intelligence Advisory Council in July 2020 to analyze, assess, and

support the government on matters related to AI. The Advisory Council is intended to provide recommendations to the government on measures for the safe and ethical use of AI. It is composed of Spanish experts in science, economics, education, and other relevant fields responsible for analyzing the implications of AI in = areas such as industry, the future of work, protection of fundamental rights, data management, the fight against discrimination, and the elimination of social disparities.⁵⁶⁴³

Charter of Digital Rights

The Spanish Government released the Charter of Digital Rights in July 2021. The Spanish Prime Minister Pedro Sanchez declared, “With the publication of the Digital Rights Charter, Spain is moving forwards in the promotion of humanistic digital transformation that seeks to continue placing our country in a position of international leadership in protecting citizens' rights and to actively contribute to the different initiatives and debates that are being developed at European and global levels. This consolidates Spain's leadership in the development of a free, open and inclusive digital society, defining ‘fair rules’ for common development and coexistence in the new digital reality, and guaranteeing the social nature of technological transformation.”⁵⁶⁴⁴

The Charter contains a set of principles and rights to guide future regulatory projects and the development of public policies to guarantee the protection of individual and collective rights in new digital scenarios. The Charter “recognizes the challenges posed by the adaptation of existing rights to the virtual environment, and proposes a frame of reference for their protection in that context.”⁵⁶⁴⁵ The Charter articulates updates to existing rights enshrined in various legal texts such as the Declaration of Human Rights and the Spanish Constitution. The Charter includes six main categories of rights: (1) rights pertaining to freedom such as the right not to be traced or profiled; (2) equality rights such as the right to equality and non-discrimination in the digital environment; (3) participatory rights in the public sphere; (4) rights related to the working and business environment, including impact assessment in the use of algorithms; (5) rights in

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

specific settings such as AI; and (6) guarantees such as the right to administrative and judicial protection in the digital environment. The Charter provides that AI should ensure a people-centered approach and the right to non-discrimination should be guaranteed in the development of AI systems. The Charter also proclaims the inalienable dignity of human beings.

Public Participation

The Spanish Government opened the proposed Digital Rights Charter for public comment in November 2020.⁵⁶⁴⁶ This participatory process generated contributions from experts in the field and advocacy associations, as well as from citizens, together with input from the private sector, service providers, and the public sector with relevant competences. Following this period of public consultation, the final Digital Rights Charter was unveiled in July 2021.⁵⁶⁴⁷

According to a report of the European consumer organization (“BEUC”), 83% of those in Spain think that consumers should be well informed when they deal with an automatic decision system and 80% believe they should have the right to say “no” to automated decision-making.⁵⁶⁴⁸ The BEUC report also found high levels of concern in Spain about the potential failure of AI machines, the privacy of voice assistants, manipulation of consumer decisions, and unfair discrimination. More than half of those from Spain surveyed in the BEUC poll “disagree or strongly disagree that current regulation is adequate to efficiently regulate AI.”⁵⁶⁴⁹

EU Digital Services Act

As an EU member state, Spain shall apply the EU Digital Services Act (DSA).⁵⁶⁵⁰ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation. The DSA requires online intermediaries and platforms to

⁵⁶⁴⁶ Subdirección General para la Sociedad Digital, *Consulta pública para la elaboración de una Carta de Derechos Digitales* (Jan. 20, 2021), https://portal.mineco.gob.es/es-es/ministerio/participacionpublica/audienciapublica/Paginas/SEDIA_Carta_Derechos_Digitales.a_spx

implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content. The Act also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs and targeted advertising to minors based on profiling.

The Spanish Data Protection Agency (*Agencia Española de Protección de Datos*, AEPD) enforces the DSA and related mitigation measures such as the 2022 Strengthened Code of Practice on Disinformation.⁵⁶⁵¹ The AEPD took action to fulfill these obligations in May 2024 by ordering a halt to the implementation of Meta's Election Day Information and Voter Information Unit functions and the associated data collection and processing in Spain.⁵⁶⁵² The decision aims to prevent data collection, user profiling, and third-party data transfers, ensuring personal data isn't used by unknown parties for unspecified purposes.

The action also aligns with the Commission's Guidelines under the DSA for the mitigation of systemic risks online for elections.⁵⁶⁵³ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI.

EU AI Act

Spain held the Presidency of the Council of the EU during the second part of 2023 and played a key role in securing a compromise between member states and with the European Parliament, regarding in particular general purpose AI.⁵⁶⁵⁴ The EU AI Act was approved in 2024 and is now being implementing.⁵⁶⁵⁵ The EU AI Act is a risk-based market regulation, which supports the objective of

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

The EU Act gives designated national market surveillance authorities the power to enforce the rules on high-risk systems, investigate complaints, and impose sanctions for non-compliance. The penalties can be very high. “National public authorities or bodies which supervise or enforce the respect of obligations under Union law protecting fundamental rights in relation to the use of high-risk AI systems referred to in Annex III” are also involved in implementation and enforcement. This is not the case when GPAI models are concerned. National public authorities or bodies have the power to request and access any documentation created or maintained under the EU AI Act in accessible language and format when access to that documentation is necessary for effectively fulfilling their mandate within the limits of their jurisdiction.

Spain created the Spanish Agency for Artificial Intelligence Oversight (*Agencia Española de Supervisión de la Inteligencia Artificial*, AESIA) as a regulator to enforce the EU AI Act in August 2023.⁵⁶⁵⁶ The AESIA is the first dedicated AI oversight agency in the European Union.

AI Oversight

The Spanish Data Protection Agency (AEPD) was the main national supervisory authority in Spain until the inauguration of the National Agency for AI Oversight (AESIA). The AESIA inaugurated offices in A Coruña⁵⁶⁵⁷ and named a director in June 2024. AESIA Director Ignasi Belda is charged with staffing the agency and developing a plan of action.⁵⁶⁵⁸ The director coordinates work between the AESIA and other bodies such as the AEPD. While the AEPD ensures compliance with the GDPR and contributed to debates on AI oversight, the AESIA is charged with compliance with the EU AI Act.

The Law 22/2021 of December 28, 2021 provides for the creation of the Spanish Agency for the Supervision of Artificial Intelligence (AESIA).⁵⁶⁵⁹ The Spanish Law provides for AESIA to act in an independent, transparent, objective, and impartial manner. The Agency shall carry out measures aimed at minimizing significant risks to people’s safety, health, and fundamental rights that may arise

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

from the use of AI systems. AESIA will have the capacity to act on its own, in coordination with other competent authorities, and in support to private entities.
5660

AESIA is to be attached to the Secretary of State for Digitalization and Artificial Intelligence. The Agency will benefit from full organic and functional independence from the public administrations. It will be endowed with public legal personality, its own assets, autonomy in its management and administrative powers.⁵⁶⁶¹ While the AESIA is expected to start working in Autumn 2023, with a budget of 5 million euros and a staff of 40 employees, details of its plans and powers are still being discussed between Ministries.

The Ministry of Economic Affairs and Digital Transformation, leading this project, has announced that the AESIA will include a “regulatory sandbox” open for companies that wish to test the compliance of their AI systems with the new rules on AI and more particularly those of the proposed EU AI Act. “The Government of Spain will deploy an AI Sandbox to put the proposed requirements for high-risk AI systems into practice. [...]The Spanish AI Sandbox will provide practical experience through applying the various features of the [EU AI Act] proposal to specific AI projects (e.g. requirements, conformity assessments and certain post-market activities) and making guidelines, toolkits and good-practice materials accessible to all. Such actions are expected to be useful for the development of harmonised European standards and the other preparatory work at national and EU level.”⁵⁶⁶² The Ministry has issued a public tender “for the procurement of services that develop impact assessments of AI, a national AI certificate and research studies on the use of controlled experimentation activities to test AI systems.”⁵⁶⁶³

Data Protection

Since Spain is an EU Member State, the GDPR⁵⁶⁶⁴ is directly applicable in Spain and to Spaniards. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

companies and public bodies in the digital single market.”⁵⁶⁶⁵ The GDPR entered into force on May 24, 2016 and applies since May 25, 2018. The Spanish Parliament approved the Spanish Fundamental Law on Data Protection and Digital Rights (NLOPD), which supplements the GDPR, in December 2018. In progressive developments during 2024, the Spanish Data Protection Agency adopted a technical note on LIINE4DU 1.0, a new Privacy & Data Protection Threat Modelling Framework. The proposal focuses “on protecting rights and freedoms and regulatory compliance in accordance with GDPR principles.”⁵⁶⁶⁶

After some delays, Spain transposed the EU Data Protection Law Enforcement Directive (LED)⁵⁶⁶⁷ through the Spanish Act on Data Protection in the Area of Police and Criminal Justice.⁵⁶⁶⁸ The LED “protects citizens’ fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”⁵⁶⁶⁹ The LED also prohibits any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.⁵⁶⁷⁰ Given the “serious risks to individual rights and freedoms” posed by the processing of personal data and biometric data in facial recognition technology, the European Data Protection Board of which the Spanish Data Protection Agency is a part stresses that such tools should be used only “if

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

necessary and proportionate, as laid down in the Charter of Fundamental Rights” and in strict compliance with the LED.⁵⁶⁷¹

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Spain is also a member of the Council of Europe and ratified the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.

The AEPD has also endorsed the Ibero-American Network for the Protection of Personal Data (RIPD) standards and guidelines and committed to integrated the principles of legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality in national policies.⁵⁶⁷² The 16 data protection authorities representing 12 countries initiated a coordinated action on ChatGPT, developed by OpenAI, in May 2023 on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data because of the potential for “responses with cultural, racial or gender biases, as well as false ones.”⁵⁶⁷³

Despite being a member of the Global Privacy Assembly (GPA) since 2002, the AEPD has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁵⁶⁷⁴ the 2020 GPA Resolution on AI Accountability;⁵⁶⁷⁵ the 2022 GPA Resolution on Facial Recognition

⁵⁶⁷¹ European Data Protection Board, *EDPB adopts Guidelines on calculation of fines & Guidelines on the use of facial recognition technology in the area of law enforcement*, Press release (May 16, 2022), https://edpb.europa.eu/news/news/2022/edpb-adopts-guidelines-calculation-fines-guidelines-use-facial-recognition_en

Center for AI and Digital Policy

Technology,⁵⁶⁷⁶ or the 2023 GPA Resolution on Generative AI.⁵⁶⁷⁷ The regional data protection agencies of Catalonia (since 2004), the Basque Country (since 2005), and Andalusia (since 2022) are also GPA members.⁵⁶⁷⁸

Algorithmic Transparency

Spain is subject to the GDPR and Convention 108+. Spaniards have a general right to know when they are subjected to automated decisions and obtain access to information about decisions that affect them and to the factors and logic of an algorithm.⁵⁶⁷⁹ They also have a right to contest decisions. The 2024 AI Strategy cements this protection via Initiative 8.2 by charging the Spanish AI Agency (AESIA) to ensure transparent and trustworthy AI.⁵⁶⁸⁰

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁵⁶⁸¹ specifically emphasizes requirements on transparency, accountability, and effective remedies. With regard to transparency, the Recommendation provides that “States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors..”⁵⁶⁸²

The AEPD has published a detailed guide on “GDPR compliance of processings that embed AI”⁵⁶⁸³ That clarifies transparency and explainability

⁵⁶⁷⁶ Global Privacy Assembly, *Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology* (Oct. 2022), <https://globalprivacyassembly.org/wp-content/uploads/2022/11/15.1.c.Resolution-on-Principles-and-Expectations-for-the-Appropriate-Use-of-Personal-Information-in-Facial-Recognition-Technology.pdf>

obligations. In this guide, the AEPD explains that “complying with this obligation by making a technical reference to the algorithm implementation may be obscure, confuse or excessive and leading to information fatigue. However, sufficient information must be provided to understand the behaviour of the relevant processing.”⁵⁶⁸⁴ The AEPD provides many examples of the information that “must be provided” to understand the behavior of the relevant processing, with regard for example the relative importance or weight of each data category in the decision making, the quality of training data and the type of patterns used, and any reference to audits, “especially on the possible deviation of inference results, as well as certification or certifications performed on the AI system.”⁵⁶⁸⁵ The AEDP also published audit requirements for personal data processing activities involving AI in January 2021⁵⁶⁸⁶ and a reference map of personal data processing incorporating AI in November 2022.⁵⁶⁸⁷

The Ministry of Employment and Social Security contributed to the clarification with practical guideline on corporate obligations in the workplace. The guide complements the update of the workers’ statute with specific guidelines for employers’ use of automated-decision systems.⁵⁶⁸⁸

The Charter of Digital Rights strengthens principles of Algorithmic Transparency. The Charter protects citizens against discrimination from decisions based on algorithms and maintains that “transparency, auditability, explicability and traceability” will be ensured. People have the right not to be the subject of a decision based solely on automated decision-making, thus recognizing the right to “request human supervision and intervention and challenge automated or algorithmic decisions.” The Charter recognizes that citizens must be explicitly informed when they are talking to an artificial intelligence system and that assistance by a human being must be guaranteed if the person concerned requests it.⁵⁶⁸⁹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In July 2022, a new Law on equal treatment and non-discrimination entered into force. Article 23 of this Law establishes rules on AI and automated decision-making mechanisms, creating special obligations for public administration entities in relation to the AI algorithms they use for decision-making.⁵⁶⁹⁰ This Law establish that, within the framework of the ENIA and the Charter of Digital Rights in Spain, public administrations shall favor algorithms that take into account “criteria of minimization of bias, transparency and accountability, whenever technically feasible.” Such mechanisms shall “include their design and training data, and will address their potential discriminatory impact,” through impact evaluations to determine potential discriminatory bias. “Public administrations, within the framework of their competencies in the field of algorithms involved in decision-making processes, shall prioritize transparency in the design and implementation and the interpretability of the decisions adopted by them.” Additionally, public administrations and companies “shall promote the use of an artificial intelligence that is ethical, reliable and respectful of fundamental rights, following especially the recommendations of the European Union in this regard.”. A quality seal for algorithms is also to be created.⁵⁶⁹¹

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Spain approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.⁵⁶⁹² The guiding principles include: human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection.

The Charter calls on member states to create policies and laws to require the assessment of the impact of AI systems on human rights and freedoms and the registration of algorithms to “anticipate risks, prevent undesirable effects and ensure its proper implementation.”⁵⁶⁹³ The Charter also proposes a risk

classification mechanism similar to the EU AI Act that would require guardrails for middle-risk uses and prohibitions against high-risk applications. Prohibited uses go even beyond the EU AI Act to include facial recognition systems; systems aimed at behavior and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly); and social ranking systems based on certain personality traits, individual behaviors, socio-demographic features or economic status.⁵⁶⁹⁴

The Minister of the Presidency, Justice, and Relations with the Parliament, Félix Bolaños announced an AI tool in 2024 that will make it easier for citizens to understand court decisions. An announcement about the tool highlights that it will contribute to the “materialization of the right to clear and comprehensible information, a right recently incorporated into the new Organic Law on the Right of Defence, currently being processed in the Congress of Deputies.”⁵⁶⁹⁵

Environmental Impact of AI

The 2024 AI strategy includes initiatives for the creation of environmentally sustainable data centers (DPCs) and the implementation of energy efficiency strategies in AI-related infrastructures. Spain is implementing the EU's Energy Efficiency Directive, requiring data centers over 500 kW to report on energy performance, renewable use, water footprint, and demand. In their initiative 2.2. Planning and management in the installation of DPCs, the Ministry for Digital Transformation and Civil Service looks at key primary objectives including Incentivizing the installation of sustainable data centers, encouraging investment in key infrastructure, and fostering sustainability and efficiency. Data centers above 1 MW must also adopt waste heat recovery strategies.⁵⁶⁹⁶

Lethal Autonomous Weapons

Spain has responded to the threat of Lethal Autonomous Weapons Systems (LAWS) by affirming that the Spanish military does not have and will not develop such technology and emphasizing the need for meaningful human control for weapons systems to be compliant with international humanitarian law. Spain has consented as well to the 11 Principles on LAWS launched by France in 2019.⁵⁶⁹⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Spain was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”⁵⁶⁹⁸

Spain also submitted a working paper with Sweden, Finland, France, Germany, the Netherlands and Norway to the 2022 Chair of the Group of Governmental Experts (GGE) on emerging technologies in the area of Lethal Autonomous Weapons Systems.⁵⁶⁹⁹ This working paper presents a two-tier approach. Accordingly, States should commit to (1) outlaw fully autonomous lethal weapons systems operating completely outside human control and a responsible chain of command, and (2) regulate other lethal weapons systems featuring autonomy to ensure compliance with the rules and principles of international humanitarian law by preserving human responsibility and accountability through appropriate human control and risk mitigation measures.

Spain participated in the REAIM 2023 international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Spain endorsed a joint call stressing the “paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”⁵⁷⁰⁰ Spain also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁵⁷⁰¹ Spain also attended the REAIM

2024 Summit in Seoul, South Korea,⁵⁷⁰² and endorsed the resulting Blueprint for Action, which outlines a plan for implementing the REAIM principles.⁵⁷⁰³

At the 78th UN General Assembly First Committee in 2023, Spain voted in favor⁵⁷⁰⁴ of resolution L.56⁵⁷⁰⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. Spain submitted comments to the Secretary General reiterating full support for the guiding principles on LAWS established by the GGE in 2019 and for the two-tiered approach.⁵⁷⁰⁶

Human Rights

Spain ranks highly for political rights and civil liberties, with a score of 90/100 and “free” in the Freedom House Freedom in the World report.⁵⁷⁰⁷ According to Freedom House, “Spain’s parliamentary system features competitive multiparty elections and peaceful transfers of power between rival parties. The rule of law prevails, and civil liberties are generally respected. [...] Restrictive legislation adopted or enforced in recent years poses a threat to otherwise robust freedoms of expression and assembly.”⁵⁷⁰⁸

Spain met a new milestone in October 2024 with their election as a member to the UN Human Rights Council. “As an elected member of the Council, Spain assumes the responsibility to contribute to improving the effectiveness of the international protection of human rights. Spain will play an active role in the search for common ground in consultations and negotiations.”⁵⁷⁰⁹

AI Safety Summit

Spain participated in the first AI Safety Summit and endorsed the Bletchley Declaration in November 2023.⁵⁷¹⁰ Spain thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

OECD / G20 AI Principles

Spain endorsed the OECD AI Principles in 2019 as well as the updated principles in 2024.⁵⁷¹¹ Spain explicitly incorporated many of the principles into the ENIA, Digital Rights Charter,⁵⁷¹² and updated 2024 National AI Strategy⁵⁷¹³ Spain is also a member of the Global Partnership on AI, a multi-stakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”⁵⁷¹⁴

Council of Europe AI Treaty

Rights, Democracy, and the Rule of Law.⁵⁷¹⁶ The European Union has signed this first legally binding international AI treaty, making Spain party to the treaty. However, Spain has not signed as an independent nation.⁵⁷¹⁷

UNESCO Recommendation on AI Ethics

Spain endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.⁵⁷¹⁸ Spain is in process of completing the UNESCO Readiness Assessment, a tool to support the effective implementation of the UNESCO Recommendation on the Ethics of Artificial Intelligence.⁵⁷¹⁹ The RAM exercise helps countries and UNESCO identify and address any institutional and regulatory gaps in legal and policy frameworks, technical infrastructure, human capital, and ethical considerations.⁵⁷²⁰

Evaluation

Spain has developed a strong ethics-focused national AI strategy, created an independent Advisory Council, installed a Director of AESIA to guide implementation of the strategy, introduced an AI Sandbox to test robustness of algorithms in accordance with the AI Act, enacted a Charter for Digital Rights, and has played a key role enabling the EU AI Act. Spain benefits from a strong data protection legal framework with an active data protection agency that has shown it could be active in AI oversight to foster a better protection of citizens' rights. The Government is taking steps to address the environmental impacts of AI use, the challenges of Lethal Autonomous Weapons, and has demonstrated continued alignment with UNESCO's RAM, OECD AI Principles, and the Universal Declaration of Human Rights.

Sweden

In 2024, Sweden's National AI Center updated the National AI Strategy centered on AI adoption and trust, value-creation, and cross-sector collaboration while aligning with democratic values. The country also appointed authorities to oversee the EU Digital Services Act (DSA). Sweden is party to the Council of Europe AI Treaty through the EU endorsement but has not clarified whether it will apply the treaty to the private as well as public sector.

National AI Strategy

Sweden issued the National Approach to Artificial Intelligence in May 2018. The National Approach reflects the government's goal "to make Sweden a leader in harnessing the opportunities that the use of AI can offer, with the aim of strengthening Sweden's welfare and competitiveness."⁵⁷²¹ This goal "is closely linked to the digital transformation goal adopted by the Riksdag [Swedish Parliament] and complements the Government's Digital Strategy."⁵⁷²²

Sweden emphasized that a "cross-cutting theme should be sustainable AI, meaning that AI applications should be ethical, safe, secure, reliable and transparent." The Swedish Government acknowledged potential threats from AI and the "the use of AI algorithms," including "challenges related to rule of law procedures and the automation of agency decisions," "risks to both society and individuals," "fundamental needs for privacy," "discrimination, loss of trust," and consequences for the functioning of democracy.

Accountability is not mentioned. The emphasis is on responsible design and use of AI. For example, "it is important that AI systems are carefully designed to prevent them from doing harm. It is therefore important that companies and public institutions collaborate with relevant academics, for example through joint projects or staff exchanges."⁵⁷²³

The Government defines "key conditions for realising the potential of AI as (1) Education and training, (2) Research, (3) Innovation and use, and (4) Framework and infrastructure. Three Ministries—Ministry of Infrastructure, Ministry of Enterprise and Innovation, and Ministry of Education and Research—are responsible for AI policies and independent agencies under these Ministries implement these policies.

Under Innovation, the National Approach highlights pilot projects, testbeds and development environments in public and private sectors, efforts to prevent and manage risks, and partnerships and collaborations, especially within

⁵⁷²¹ Government Offices of Sweden, *National Approach to Artificial Intelligence*, OECD, p. 5 (May 2018),

Center for AI and Digital Policy

the EU, as specific needs “that can “contribute to the use of AI evolving in a safe, secure and responsible manner.”⁵⁷²⁴ Under framework and infrastructure, the Swedish approach highlights “rules, standards, norms, and ethical principles to guide ethical and sustainable AI and the use of AI”; national and international standards and regulations; continual review of digital infrastructure and greater availability of data; and an active role in assisting efforts to promote digitization in the EU.⁵⁷²⁵

The Swedish Government acknowledged the General Data Protection Regulation (GDPR) as “an important part of the AI framework”⁵⁷²⁶ because of the strong privacy protection in personal data processing. The National Approach to AI notes that “How different stakeholders are able to implement the GDPR in their respective activities will play a major role in how well Sweden is able to manage both the benefits and risks of AI.”

The Swedish National Approach to AI should also be read against the background of a 2020 position paper to the European Commission’s White Paper on AI known as a “non-paper.”⁵⁷²⁷ Sweden and 13 other EU member states describe human-centric and trustworthy AI “as a competitive advantage.” According to the non-paper, Sweden supports the use of hard law tools for “creating a genuinely single market for AI.” Sweden also favors the use of “soft law solutions such as self-regulation, voluntary labelling and other voluntary practices as well as robust standardisation process[es].” As for risks to individuals or to society stemming from the use of AI, Sweden advocates for an evidence-based and “well-calibrated and proportionate approach.”

The national center for applied AI, AI Sweden, which was created in 2019 and supported by public- and private-sector funds, launched an adoption-centric AI strategy in March 2024. The new strategy promotes AI adoption aligned with democratic values to leverage AI capabilities, value creation, and cross- sector collaboration. The strategy is premised on the vision that Sweden must “[seize] the opportunity of AI to solve key societal and business challenges for the benefit of a prosperous society characterized by democratic values and high quality of life.

⁵⁷²⁴ Government Offices of Sweden, *National Approach to Artificial Intelligence*, OECD, p. 8 (May 2018), https://wp.oecd.ai/app/uploads/2021/12/Sweden_National_Approach_to_Artificial_Intelligence_2018.pdf

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

This is powered by a robust, highly attractive, and ambitious Swedish AI ecosystem that has a positive global impact on people and the planet.”⁵⁷²⁸

Developed under a “strong sense of urgency,” the strategy outlines six “fundamental standpoints and perspectives”:

- competitiveness, highlighting the role of the private sector in leading AI through a “reinforcement loop” that attracts talent, generates value and increases investments
- speed, emphasizing the need to identify “new ways of working, new incentives, new funding processes, and new ways of collaborating” to keep up with the pace of AI developments
- availability, the need to “prioritize investments driving adoption and value-creation based on such proprietary data [i.e., data held by companies and organizations]
- bold leadership
- skills and talent, including education, re-/upskilling and the need for cross-disciplinary and context-dependent skills
- collaboration, emphasizing its relevance to “build enough capability and competence” both in the private sector and the Swedish public sector characterized by “high decentralization.”⁵⁷²⁹

The AI Sweden strategy also provides a framework for benchmarking progress focused on three main areas: 1) enablers, 2) investments, and 3) use and value creation. Metrics to evaluate progress on each of these indicators are suggested. As an indicator of progress, the strategy suggests the country should pursue ranking among the top 10 countries in the Global AI Index.⁵⁷³⁰

AI Sweden also established a Legal Expert Group, which consists of legal experts from its partners. The Group discusses legal questions related to AI and data and they “collaborate in trying to create, for example, white papers, guidelines and/or common interpretations and solutions for legal issues that could benefit all partners within AI Sweden.”⁵⁷³¹ In 2021, the Legal Expert Group met numerous times and discussed matters such as the practical use of applied AI, the concept of Federated Learning, questions regarding anonymization and pseudonymization, the EU Proposal for an AI Act, intellectual property rights, and standardized agreements for sharing data. AI Sweden and the Legal Expert Group also initiated a collaboration with the Swedish Authority for Privacy Protection

(IMY). Future discussions will concentrate on using AI in a legal context, such as using natural language processing (NLP) as a tool in legal work.⁵⁷³²

In this regard, AI Sweden collected data and initiated training to develop a large generative pre-trained model (GPT) to perform on Nordic languages.⁵⁷³³ The model, GPT-SW3, is an open-source generative language model that will be publicly available for individuals and organizations. The ambition is to ultimately develop a model family available for download to be modified, fine-tuned, researched, and commercialized.

Similar projects are also being developed, most notably, the Swedish multimodal AI model and the EU-funded TrustLLM project, which aims to develop European “trustworthy, sustainable and democratized” large language models (LLMs), and runs until October 2026.⁵⁷³⁴

The Swedish Government announced the appointment of the AI Commission in December 2023. The AI Commission is charged with ensuring Sweden’s competitiveness in the AI field and that the country “takes advantage of the opportunities while managing the risks in order to realize the full potential of AI.”⁵⁷³⁵ The AI Commission will “analyze the conditions for, among other things, higher education to be sufficient to meet tomorrow’s needs in AI use and AI development; identify how Sweden can act to promote a competitive and secure AI within the EU and globally; propose how Sweden can attract venture capital and facilitate innovation for strengthening the competitiveness of AI; propose how public administration can be streamlined by using AI; and analyze how the use of AI can affect and promote Sweden’s security and counteract undue influence on democracy.”⁵⁷³⁶

The government assigned the AI Commission with producing a report to “identify needs for and submit proposals that promote competitive, safe and ethical AI development and AI use in Sweden; identify priority international efforts and submit proposals for how Sweden can act proactively and coordinated in the development of international policies and regulations for AI; analyze and describe

Center for AI and Digital Policy

how the use of AI can affect and promote Sweden's security and democracy; and if necessary, make legislative proposals."⁵⁷³⁷ The assignment is due on July 1, 2025.

National AI Legislation

The International Bar Association released an updated report in September 2024 which echoed earlier reports on the status of AI legislation in Sweden: "there are currently no "AI laws" in Sweden. Historically, the legislative approach in Sweden has been to pass technology-agnostic legislation that does not need to be changed with every advance in technology."⁵⁷³⁸ Thus, "it is of central priority for the Swedish legislature to assess current legislation from an AI perspective and implement necessary changes. Furthermore, support in the interpretation of legislation is required from courts and public authorities. Access to data, information security and robustness, together with the ethical use of AI, are principles of central importance in the future regulatory approach."⁵⁷³⁹

EU AI Act

Sweden held the Presidency of the Council of the European Union in the first half of 2023. Ann Christin Linde, Minister for Foreign Affairs of Sweden, while addressing the 77th Session of the General Assembly of the UN in September 2022 stated that Sweden would work to "protect, promote and defend democratic principles, human rights and the rule of law."⁵⁷⁴⁰ The EU AI Act⁵⁷⁴¹ is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

The Swedish Ministry of Finance launched a directive in 2024 to revise and adapt national regulations to ensure that the country adheres to the EU AI Act, to be concluded by the end of September 2025.⁵⁷⁴² The aim is to "submit proposals on how the system for market surveillance, market control, governance and control

Center for AI and Digital Policy

of compliance should be designed; identify other needs for national adaptation resulting from the AI Regulation and propose how such needs are to be met; make the necessary legislative proposals.”⁵⁷⁴³

Nordic-Baltic and Nordic Cooperation on AI

As for the regional landscape, Peter Eriksson, the Swedish Minister for Housing and Digital development, signed the declaration on “AI in the Nordic-Baltic region” establishing a collaborative framework on “developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used” and “on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability.”⁵⁷⁴⁴

The ministerial declaration Digital North 2.0⁵⁷⁴⁵ builds on the common priorities of the Nordic-Baltic countries and follows the previous ministerial declaration, Digital North 2017–2020. “In order to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration, a council of ministers for digitalisation (MR-DIGITAL) was established in 2017. The aim is to promote development in three areas: (1) Increase mobility and integration in the Nordic and Baltic region by building a common area for cross-border digital services; (2) Promote green economic growth and development in the Nordic-Baltic region through data-driven innovation and a fair data economy for efficient sharing and re-use of data; and (3) Promote Nordic-Baltic leadership in the EU/EEA and globally in a sustainable and inclusive digital transformation of our societies.”⁵⁷⁴⁶

The MR-DIGITAL announced a focus on digital inclusion in November 2021. They committed to implementing measures to make digital services more accessible to all inhabitants in the region and to ensure that those who do not possess the necessary skills get the opportunity to acquire them.⁵⁷⁴⁷

The Nordic and Baltic ministers issued a common statement on the importance of cooperation on digital security in the Nordic-Baltic region in 2022,

⁵⁷⁴³ Ibid

following the COVID-19 pandemic and the war in Ukraine. The ministers stressed that this “rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities.” The ministers declared that they “have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefits from digitalisation regardless of age, wealth, education or level of digital skills.” The ministers acknowledged that “Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services” and committed “to continue our efforts to make our digital public services human centric and accessible.”⁵⁷⁴⁸

As part of its action plan for Vision 2030 (2021–2024), the Nordic Council of Ministers also identified innovation, digital integration, the safe use of artificial intelligence, data development and open data, education and digitalization as key objectives.⁵⁷⁴⁹ The Nordic Council of Ministers also emphasizes the involvement of civil society in efforts relating to our vision for 2030 thanks to “a Nordic civil society network and public consultations.”⁵⁷⁵⁰

The Nordic Ethical AI Expert Group from Nordic Innovation—an organization under the Nordic Council of Ministers—launched five recommendations in June 2024 to guide members' development of ethical AI.⁵⁷⁵¹ The recommendations are: “1) Develop a joint Nordic strategy for ethical and responsible AI; 2) Establish a Nordic center for ethical and responsible AI focused on AI innovation; 3) Promote and coordinate large language models (LLMs)s for Nordic languages; 4) Cultivate a skilled workforce and competent society; 5) Enhance transparency in sustainability of AI technology.”⁵⁷⁵²

followed.⁵⁷⁵³ Aligned with the adoption-focus of the AI Sweden strategy, the Nordic AI Center would focus on AI application and development on a Nordic and Baltic level by supporting countries to drive AI adoption, increasing collaboration, building stronger relevance for the region internationally, and serving as a repository for investments in knowledge, technology, and solutions.⁵⁷⁵⁴

Public Participation

As for public participation, the Government states in the National Approach that “For Sweden to reap the benefits of AI, all sectors of society must be involved.”⁵⁷⁵⁵ According to AlgorithmWatch, however, most of the funding and strategic development takes place in universities and as support for business environments.⁵⁷⁵⁶ Nevertheless, AlgorithmWatch also describes the addAI initiative, “a collaboration between experts in academia, government and companies to discuss and explore the impact of smart algorithms and AI on society through the organisation of workshops and participation in public events.”

An AI Sustainability Center funded by VINNOVA (Swedish Innovation Agency) has been functional in Stockholm, Sweden since 2018 as “a knowledge-sharing network dedicated to the sustainable and ethical use of AI and data-driven technologies,” while assisting organizations to comply with EU regulations.⁵⁷⁵⁷ The unique composition of the center constitutes a participation of companies, academic institutions, public agencies, and civil society helping organizations to align with ethical AI principles.⁵⁷⁵⁸

Since 2022, an AI Council has been operational under AI Sweden with participation of members from twelve Swedish municipalities.⁵⁷⁵⁹ The council

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

offered a series of recommendations for initiatives aimed at enhancing the ability of Swedish municipalities to utilize AI for the Swedish welfare sector. The council's work is led in collaboration between AI Sweden and the Swedish Association of Local Authorities and Regions (SKR).

The AI council offered five key recommendations in 2023.⁵⁷⁶⁰ These five recommendations were to formulate a national AI strategy, create long term funding and collaboration support for municipality-led AI projects, develop standards and shared infrastructure for data management and AI applications, promote a skill development initiative to enhance AI competence in the municipality, and establish AI policies and regulations to support unified legal interpretations across Sweden.⁵⁷⁶¹ National and local authorities have begun to implement the recommendations. The city of Stockholm, in collaboration with AI Sweden and Sigtuna Municipality, is serving as a leading example of municipality-wide digital competency programs to enhance digital skills.⁵⁷⁶²

AI Sweden established The Civil Society Forum for Responsible AI in September 2024. The Forum engages civil society to play a key role “in shaping and upholding social values” by collectively developing guidelines and best practices for AI use within the NGO and social sectors. Between the fall of 2024 and the spring of 2025, the group is due to meet six times to share best practices and develop “guidelines that promote sustainability, collaboration, and sound operational principles related to AI.”⁵⁷⁶³ This initiative is part of AI Sweden's AI for Impact project funded by Google.org. The project also comprises a hackathon that brings AI experts and civil society organizations together for “developing solutions with lasting social impact.”⁵⁷⁶⁴

EU Digital Services Act

As an EU member state, Sweden shall apply the EU Digital Services Act (DSA).⁵⁷⁶⁵ The DSA regulates online intermediaries and platforms to prevent

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

illegal and harmful activities online, including the spread of disinformation. Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content. The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs, as well as targeted advertising to minors based on profiling.

Signatories to the DSA commit to naming national authorities to enforce the DSA and hold companies and platforms accountable. Signatories must also take action to reduce online harms, specifically under the 2022 Strengthened Code of Practice on Disinformation,⁵⁷⁶⁶ which counts as a mitigation measure under the DSA. Under the DSA, Sweden is charged to create conditions for a safe information ecosystem, demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

To comply with the DSA, the Swedish government assigned three agencies as competent authorities to supervise providers of intermediary services and enforcement of the DSA regulation in February 2024: Swedish Consumer Agency, the Swedish Media Authority, and the Swedish Post and Telecom Agency (PTS). PTS was also appointed national Digital Services Coordinator for digital services, responsible for supervision and enforcement of the DSA in Sweden.⁵⁷⁶⁷ However, the European Commission opened an infringement procedure against Sweden in July 2024 for not yet endowing PTS “with the necessary powers and competences to carry out their tasks, including the imposition of sanctions in cases of non-compliance.”⁵⁷⁶⁸ A report by The Future of Free Speech issued in May 2024 raised concerns on the effects of content moderation regulations, such as the DSA, on free speech, after determining that most of the content removed from social media

platforms in Sweden, Germany, and France, was legal. In Sweden, for example, the percentage of legal content removed was nearly 94%.⁵⁷⁶⁹

Data Protection

Since Sweden is an EU Member State, the GDPR⁵⁷⁷⁰ is directly applicable in Sweden and to Swedes. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”⁵⁷⁷¹

The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. In April 2018, the Swedish parliament adopted the Data Protection Act (DPA), with complementary provisions to the GDPR. The DPA replaced the old Personal Data Act as of the application of GDPR.

The Swedish Patient Data Act for its part enshrines requirements for public and private healthcare providers’ personal data processing in relation to healthcare activities, including the obligation to keep medical records.

A committee directive from the Ministry of Finance in October 2024 called for a special investigator to promote alignment with the GDPR. The special investigator has one year to propose amendments, legislation, and regulations in Swedish legal frameworks that will ensure Sweden can fulfill its enforcement and sanctioning obligations under the GDPR.⁵⁷⁷²

Regarding the activities of law enforcement authorities, Sweden transposed the EU Data Protection Law Enforcement Directive (LED)⁵⁷⁷³ through

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

the Swedish Criminal Data Act. The Criminal Data Act applies to personal data processing in law enforcement activities such as the Swedish Police Authority and hospitals if someone is sentenced to compulsory psychiatric care. The Swedish Police Data Act supplements the Swedish Criminal Data Act in relation to personal data processing carried out by the Swedish Police Authority, the Swedish Economic Crime Authority, and the Swedish Security Service. The LED “protects citizens’ fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”⁵⁷⁷⁴

The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and prohibits profiling that results in discrimination.⁵⁷⁷⁵ The LED also requires Member States, including Sweden, to enable data subjects to exercise their rights via national data protection authorities.⁵⁷⁷⁶

The Swedish Camera Surveillance Act supplements the GDPR and applies to processing of personal data in connection with camera surveillance. However, the Swedish parliament considered amendments to the Act in late 2024 to allow live camera surveillance and facial recognition technology, even for minors,⁵⁷⁷⁷ to assist in police investigation, in part as a response to a rise in shootings and bombings in 2023.⁵⁷⁷⁸

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the

basis of the consent of the person concerned or some other legitimate basis laid down by law.”⁵⁷⁷⁹

Sweden is a member of the Council of Europe. It signed but has not yet ratified⁵⁷⁸⁰ the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.⁵⁷⁸¹

The Swedish Government acknowledged the GDPR as “an important part of the AI framework.”⁵⁷⁸² Sweden’s Authority for Privacy Protection (IMY) is charged “to uphold the protection of personal data, monitoring that they are handled correctly and do not fall into the wrong hands.”⁵⁷⁸³

The IMY issued its first fine in a case involving facial recognition in 2019. The IMY concluded that a school that conducted a pilot using facial recognition to keep track of students’ attendance in school violated the GDPR and imposed a fine on the municipality of approximately 20,000 euros.⁵⁷⁸⁴ The IMY has also held the police accountable for the unlawful use of facial recognition technology, which is detailed further in the facial recognition section.⁵⁷⁸⁵ The IMY has also taken action against private industry, issuing an administrative fine of SEK 35 million against an insurance company Trygg- Hansa (then Moderna Försäkringar) in August 2023.⁵⁷⁸⁶

The IMY will also provide legal guidance and supervision for a decentralized AI pilot project launched in August 2022 in conjunction with

Sahlgrenska University Hospital, Region Halland, and AI Sweden. The IMY will work with the three organizations on the potential privacy and data protection pitfalls that may arise from using AI.⁵⁷⁸⁷

Cybersecurity is an important aspect of data security that can offer privacy protection. AI Sweden initiated the formation of the AI & Cybersecurity Consortium in October 2024 to mitigate risks associated with cybersecurity attacks by leveraging the earlier cybersecurity projects of Honeypots and LeakPro.⁵⁷⁸⁸ Honeypots are deceptive computer systems designed to simulate real environments, luring attackers into exposing their tools.⁵⁷⁸⁹ LeakPro offers a locally run holistic platform to assess information leakages of machine learning models.⁵⁷⁹⁰

Despite being a member of the Global Privacy Assembly (GPA) since 2002, the IMY has not endorsed the 2018 Declaration on Ethics and Data Protection in Artificial Intelligence,⁵⁷⁹¹ 2020 Resolution on AI Accountability,⁵⁷⁹² 2022 Resolution on Facial Recognition Technology,⁵⁷⁹³ or 2023 Resolution on Generative AI Systems.⁵⁷⁹⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Algorithmic Transparency

Sweden is subject to the GDPR which established rights to “meaningful information about the logic involved” as well as about “the significance and the envisaged consequences.”⁵⁷⁹⁵ The Swedish Data Protection Authority is competent to handle complaints in this regard.⁵⁷⁹⁶ However, in 2019, the Equality Ombudsman [*Diskriminerings Ombudsmannen*, DO] Agneta Broberg warned that the sanctions available under the Swedish Discrimination Act not sufficient to tackle the challenges of AI and discriminatory algorithms.⁵⁷⁹⁷

Following the Trelleborg episode concerning automated decisions by municipalities, the Union for Professionals called for the creation of an algorithm ombudsman: “The Union has, among other things, conducted a survey that shows that the requirement for an Algorithm Ombudsman has broad support among the public—and that transparency and openness are absolutely crucial for there to be trust in algorithms and automation.”⁵⁷⁹⁸ In this regard, a 2020 survey organized by BEUC, the European Consumer Organization, and involving the Swedish Consumer Organization revealed that “more than half of Sweden's consumers feel that artificial intelligence (AI) is used to manipulate them. And over 60 percent wish they could say no to automated decision making.”⁵⁷⁹⁹

AI in Public Administration

Sweden’s Agency for Digital Administration (DIGG) recommended in a 2020 report on promoting AI in public administration that the Government establish a center with expertise in AI; develop a platform for collaboration, co-development and innovation; develop an AI guide; create legal conditions to facilitate experimental activities; develop vocational and role-specific training in

Center for AI and Digital Policy

AI; and develop a national data strategy for public administrations.⁵⁸⁰⁰ DIGG serves as an expert group to facilitate Sweden's digitization, working with public administration "to make the transition a reality, and to the benefit of everyone."⁵⁸⁰¹ The Ministry of Finance assigned DIGG and the Privacy Protection Agency (IMY) to develop Guidelines for the use of Generative AI in Public Administration in August 2024.⁵⁸⁰² DIGG published the guidelines along with educational information and webinars about AI on a sub-site from the agency website.⁵⁸⁰³

DIGG responded to a Ministry of Infrastructure call from 2019 to increase the availability of data by launching Sweden's data portal with new functionality for APIs and establishing principles, guidelines, and recommendations "to increase the public administration's ability to make open data available."⁵⁸⁰⁴ Much of this work was based on DIGG's piloted projects with business, academia, and civil society. Since then, Sweden's data portal has become a strategic societal resource for business, society, and the public sector with more than 17,000 data sets being used by 335 different organizations. The portal demonstrates Sweden's ambition to enhance innovation and move Swedish society forward.⁵⁸⁰⁵

The Trelborg Controversy

The automation of government services has been underway in Sweden since the 1970s. By 2019, "more than 80% of all government decisions that the National Audit has reviewed were automated. This involves 121 million decisions

by 13 authorities.”⁵⁸⁰⁶ Various benefits, including Welfare payments, parental benefits, and dental-care subsidies, are allocated without any human intervention.

As for municipalities, which oversee social services, a 2019 report published by the Union for Professionals, found that “only 16 out of a total of 290 municipalities have implemented RPA [Robotic Processing Automation] in their administration of social benefits.”⁵⁸⁰⁷ The Trelleborg Municipality was the only one to implement solely automated decision-making.

In 2019 journalist Freddi Ramel and Union for Professionals chief economist Simon Vinge challenged the Trelleborg automated decision system. According to AlgorithmWatch, the Swedish Parliamentary Ombudsman has so far failed to determine whether the municipality provided “meaningful information” as required by Article 15 of the GDPR.⁵⁸⁰⁸ However, Ramel obtained access to the source code after a court ruled that the code was a public record under the Swedish Freedom of Information Act. The Trelleborg municipality subsequently undertook an investigation.

Facial Recognition

In 2019, the Swedish DPA issued its first fine in a case involving facial recognition. A school in northern Sweden conducted a pilot using facial recognition to keep track of students' attendance in school. The Swedish DPA concluded that the test violates the GDPR and imposed a fine on the municipality of approximately 20,000 euros. The school processed sensitive biometric data unlawfully and failed to do an adequate impact assessment including seeking prior consultation with the Swedish DPA. The school based the processing on consent, but the Swedish DPA considers that consent was not a valid legal basis given the clear imbalance between the data subject and the controller.⁵⁸⁰⁹

The data protection officer for the Swedish police undertook an investigation in March 2020 to determine whether the police used ClearView AI,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

an AI product for mass surveillance enabled by facial recognition.⁵⁸¹⁰ The Swedish police confirmed that they had used Clearview AI, after previously denying use of the face surveillance tool.⁵⁸¹¹ Subsequently, the IMY investigated the case and found in 2021 that the Swedish Police Authority had processed personal data in breach of the Swedish Criminal Data Act by using Clearview AI to identify individuals.⁵⁸¹² The investigation concluded that Clearview AI had been used sometimes without prior authorisation. The Police had failed to implement sufficient organisational measures to ensure and be able to demonstrate that the processing of personal data had been carried out in compliance with the Criminal Data Act. For example, no impact assessment had been concluded. As a result, the IMY imposed a 250,000 Euros fine.

The IMY noted that the European Data Protection Board (EDPB) “will produce guidance on how law enforcement authorities should approach facial recognition technology. Sweden is one of the driving countries in the world.” The EDPB indeed issued guidelines on the use of facial recognition technologies in law enforcement in May 2022.⁵⁸¹³ The EDPB Chair said: “While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms.” The EDPB stressed that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights.⁵⁸¹⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In 2019, the Swedish DPA did approve the use of facial recognition technology by the police to help identify criminal suspects. However, such an authorization relates to the use of biometric templates in databases under the control of public authorities and established under Union or Member States law.⁵⁸¹⁵ As the Chair of the European Data Protection Board subsequently emphasized, “[t]he possible use of a service such as offered by Clearview AI by law enforcement authorities would, however, be fundamentally different, in that it would imply, as part of a police or criminal investigation, the sharing of personal data with a private party outside the Union and the biometric matching of such data against the latter’s mass and arbitrarily populated database of photographs and facial pictures accessible online.”⁵⁸¹⁶ She also clearly questioned the legality of the use of Clearview AI by public authorities.

In October 2023, Sweden’s Ministry of Justice published a press release announcing a proposal to expand the use and increase access by Swedish Police to video surveillance, facial recognition, and automatic number plate recognition tools to enhance crime prevention. According to the press release, “the Government appointed an inquiry on video surveillance. The inquiry’s task consists of two parts. The first is to investigate the need for simplified rules on video surveillance for municipalities and regions [...] aiming to abolish permit requirements for municipalities and regions that want to use video surveillance in public places. The second part is a broadly formulated assignment to investigate expanding the video surveillance powers of the Swedish Police,” such as through the use of drones.⁵⁸¹⁷ The Prime Minister alluded to these measures, including increased surveillance of children, in a speech in September 2023.⁵⁸¹⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The IWY and investigators for Parliament have worked to align these measures with the restrictions, though not prohibitions,⁵⁸¹⁹ on the use of AI systems for remote biometric identification and categorization.⁵⁸²⁰ The bill to allow police to use facial recognition and DNA genealogy was accepted for Parliament's consideration in late 2024,⁵⁸²¹ and fast-tracked in January 2025, following a series of gang-related offenses.⁵⁸²²

Environmental Impact of AI

Sweden has played an extensive role in utilizing AI for climate change and taking initiatives to mitigate climate risks posed by AI development and use. The landmark GPAI Report of 2021 offers recommendations for governments to encourage responsible AI use in climate action, focusing on both positive and negative environmental impacts of AI.⁵⁸²³ The report aims to ensure AI supports climate goals while minimizing its environmental footprint. It highlights two key areas to address to reduce greenhouse gas (GHG) emissions arising from AI:

1. Compute-related impacts: Energy use and emissions from AI computations and hardware.
2. Application-related impacts: AI's role in either reducing or increasing greenhouse gas emissions.

Center for AI and Digital Policy

Sweden is pursuing Climate Policy Framework goals to achieve zero net emissions of greenhouse gases by 2045 (net zero approach).⁵⁸²⁴ As such, the country is progressively addressing both compute and application related impacts. While application related impacts are difficult to ascertain, the compute related impacts are majorly generated through data centers supporting AI based applications.

From 2024, under Article 12 of the recast EU Energy Efficiency Directive, data centers of member states will be required to publish information on their energy performance and sustainability.⁵⁸²⁵ RISE, Sweden's research institute and innovation partner, estimates that by 2030 there will be doubling of energy use from data centers compared to 2020 because of AI and Generative AI-related computations.⁵⁸²⁶ However, Sweden has taken proactive steps to mitigate the situation by adopting the EU Eco-design Regulations for servers and data storage products.⁵⁸²⁷ The EcoDataCenter—Sweden is world's first "climate-positive data center" completely supported through renewable energy sources. The heat output generated from the data center supports district heating and cooling system.⁵⁸²⁸

RISE has noted that Sweden's leadership in international AI and innovation for climate change would be hugely beneficial to trade and industry: "The climate challenge is too important an issue to not adopt that perspective. There is no contradiction in investing in AI and investing in AI for the climate, or in developing AI applications and developing applications for the climate."⁵⁸²⁹ The Sustainable AI and AI for Sustainability event hosted by the Swedish Presidency of the Council of Europe and the Ministry of Finance in May 2023 was one of a

number of sporadic events organized by the Swedish government to set out a clear pathway Envisioning sustainable AI.⁵⁸³⁰

Swedish representatives attended the Global Conference on Energy and AI in December 2024 as part of the International Energy Agency (IEA) Energy for AI, and AI for Energy initiative.⁵⁸³¹ Brainstorming on comprehensive assessment of the potential implications of AI in the energy sector during the conference and the endorsement and implementations of the outcome of this event will be of interest to policymakers in the coming years.

The UN climate conference COP28 rendered a significant focus on digital transformation and environmental sustainability through the formation of the Green Digital Action Initiative supported by EU member states in 2023.⁵⁸³² COP29 in Baku, Azerbaijan, in November 2024 provided high-level discussion on mitigating the environmental impact of digital technologies including AI. The Swedish Energy Agency and Business Sweden led the Swedish contingent to the event.⁵⁸³³

Projects supported by AI Sweden seek to apply AI and digital technology to combat climate change. One such project, in collaboration with WWF-Sweden, explores the possibilities for AI to accelerate a deep green transition in global food systems.⁵⁸³⁴ The Swedish Space Data Lab 3.0 is another such project. The lab would use space data for weather forecasting, climate monitoring, forestry, and agriculture.⁵⁸³⁵

Lethal Autonomous Weapons

Beginning in 2013, Swedish NGOs called for Sweden to endorse an official ban of LAWS.⁵⁸³⁶ As one NGO coalition stated in 2020, “A future where

machines themselves decide over life and death, what and who is to be attacked in an armed conflict, is not the future we want. But the fact is that we are on our way there—and development is fast.”⁵⁸³⁷ Previously, leaders in the Swedish government declared that “Sweden must take a leading role in the work for a ban on deadly autonomous weapon systems.” However, the position adopted by Sweden so far has been more nuanced.

The Swedish government has emphasized human control and said “multilateralism remains our only chance to address our many common challenges and to ensure international peace and security.”⁵⁸³⁸ At the 75th UN General Assembly meeting in October 2020, Sweden’s Ambassador stated “Sweden is of the strong conviction that human control over the use of force always must be upheld.” She also expressed Sweden’s support to the 11 LAWS Guiding Principles.⁵⁸³⁹ Earlier, Sweden also explained that the “specific measures required for human control will thus need to be context dependent and assessed on a case-by-case basis” and referred to a report, supported by Sweden, together with Germany, Switzerland, and the Netherlands.⁵⁸⁴⁰ The Swedish government has also set up a working group on autonomous weapons. According to the NGO Swedish Peace and Arbitration Society, this “working group is defense-oriented, with a majority of its members coming from defense-related authorities and institutions.”⁵⁸⁴¹

Sweden was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular

International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”⁵⁸⁴²

Sweden also submitted a working paper with Finland, France, Germany, the Netherlands, Norway, and Spain to the 2022 Chair of the Group of Governmental Experts on emerging technologies in the area of Lethal Autonomous Weapons Systems.⁵⁸⁴³ The working paper presents a two-tier approach. Accordingly, States should commit to (1) outlaw fully autonomous lethal weapons systems operating completely outside human control and a responsible chain of command, and (2) regulate other lethal weapons systems featuring autonomy to ensure compliance with the rules and principles of international humanitarian law, by preserving human responsibility and accountability, ensuring appropriate human control, and implementing risk mitigation measures.

At the 78th UN General Assembly First Committee in November 2023, Sweden was amongst 164 countries voted in favor of resolution L.564991 on autonomous weapons systems.⁵⁸⁴⁴ The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Sweden’s contribution to the report reiterated its support for the two-tier approach. The comments underline the importance that the Governmental Group of Experts (GGE) deliver on its mandate to develop regulation, acknowledging that even an agreement that might fall short of some delegations’ expectations would still amount to a step forward. Sweden’s view on preservation of meaningful human control over the use of force is a key objective.⁵⁸⁴⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Sweden has also been active in international summits on the responsible application of artificial intelligence in the military domain (REAIM). At the end of the REAIM2023 Summit, Sweden endorsed a joint call for action on the responsible development, deployment, and use of artificial intelligence in the military domain.⁵⁸⁴⁶ States stressed “the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain.”⁵⁸⁴⁷ Sweden also endorsed the Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁵⁸⁴⁸

Following the second Responsible AI in the Military Domain (REAIM) summit in Seoul, Korea, in 2024, Sweden signed Blueprint for Action along with 62 other nations of the 90 in attendance.⁵⁸⁴⁹ The Blueprint was more action-oriented than the earlier statement in keeping with advanced discussions and developments in the military such as AI-enabled drones being rolled out by Ukraine. The Blueprint provides guidance on what kind of risk assessments should be made, conditions such as human control, and how confidence-building measures can be taken to manage risks.

Endorsement of the Blueprint for Action coincides with Sweden’s growing military investment amid growing instability in Europe, particularly given the war in Ukraine. The shift also coincides with Sweden’s decision to abandon its long-standing policy of neutrality by applying to join NATO in 2022.⁵⁸⁵⁰ AI in Swedish defense, including LAWS, is still at an early stage of conception. However, developments already in use, such as cloud-based data lakes for “real-time predictions about the physical behaviors of where people, ships or planes are going, and also predict the contextual behaviors of what these people,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

ships or planes are actually doing” highlight the necessity for responsible and accountable use of AI with human involvement in the initiative.⁵⁸⁵¹

Human Rights

Sweden is a signatory to many international human rights treaties and conventions, among which the Universal Declaration of Human Rights and the Council of Europe’s European Convention on Human Rights. However, it has not yet ratified the modernized version of the Council of Europe Convention 108 for the protection of individuals with regard to the processing of personal data.⁵⁸⁵²

Sweden typically ranks among the top nations in the world for the protection of human rights and transparency in the annual Freedom House Freedom in the World report. In 2024, Sweden earned recognition as “free” with a score of 99/100, down one from the score of 100 in 2023.⁵⁸⁵³

AI Sweden promotes responsible use of AI and suggests “AI systems must be designed and operated in a manner that respects human rights, values, and cultural diversity.”⁵⁸⁵⁴ However, while this approach is supported through an AI strategy, Sweden has not yet implemented legislation or regulation to enforce these principles. Human dignity is a fundamental human right and associated closely with concepts of autonomy and privacy. A recent debate sparked in Sweden over use of real time facial recognition for identifying suspected criminals reveals potential challenges to the privacy and civil liberties of Swedish people. On the other hand, such measures may help reduce gang violence.⁵⁸⁵⁵

Sweden has an Equality Ombudsman (DO) serving as a government agency that works on behalf of the Swedish parliament and government to promote human rights associated with equal rights and opportunities and to combat discrimination. The DO supports human rights and equity broadly but engages with discrimination related to AI systems and data, such as with its 2023 report on AI in working life.⁵⁸⁵⁶

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

OECD / G20 AI Principles

Sweden is an OECD member and has endorsed the AI Principles.⁵⁸⁵⁷ In 2021, the OECD noted that Sweden published a document outlining its national approach to AI in 2019. “The purpose of this document was to identify an overall direction for AI-related work in Sweden and lay the foundation for future priorities.” Sweden also described an AI governance structure with three Ministries—Ministry of Infrastructure, Ministry of Enterprise and Innovation, and Ministry of Education and Research—responsible for AI policies and related agencies in charge of implementation.⁵⁸⁵⁸ OECD considered the strategy a positive step toward implementing the OECD AI Principles.

The landmark OECD AI principles were revised in May 2024 to address challenges related to privacy, intellectual property rights (IPR), safety and information integrity, considering the emergence of Gen AI.⁵⁸⁵⁹ Sweden has implemented many of the values-based principles as well as the five recommendations for policymakers.

In line with principle 1.1, which emphasizes inclusive growth, sustainable development and wellbeing, multiple initiatives have been taken.⁵⁸⁶⁰ To augment human capabilities and enhance creativity, for example, AI Sweden reported international collaboration with Unity Health, Toronto to integrate Canadian insights into the Swedish healthcare system.⁵⁸⁶¹ VINNOVA (the Swedish innovation agency) supported information-driven healthcare to offer personalized and scalable healthcare through AI applications.⁵⁸⁶² Citizen consultation on the recent draft of the digitization policy in 2024 has also been key to social dialogue and attempts to include diverse communities in policymaking, thereby promoting inclusive societal growth. To address gender inequalities through AI, VINNOVA

tasked Ramboll and Women in AI (WAI) to study the potential of AI for achieving gender equality.⁵⁸⁶³

The recent AI Sweden strategy also emphasizes human-centered values and fairness (principle 1.2) and informs good governance. Transparency (OECD principle 1.3) is core to the AI strategy.⁵⁸⁶⁴ Furthermore, Wallenberg AI, Sweden's largest individual research program, led a conference (WASP4ALL) in Stockholm involving participation from academics, government officials, and industry experts to explore how EU regulations affect AI research and development in Sweden and emphasized the importance of human-centered AI.⁵⁸⁶⁵

Algorithmic impact assessment is one of the key components for addressing robustness, security, and safety (principle 1.4) in AI. The Add AI collaborative initiative, involving government officials, academicians, and tech companies, explores the impact of smart algorithms and AI on the Swedish society.⁵⁸⁶⁶

In terms of accountability (principle 1.5), AI Sweden, has declared that all AI solutions should be developed and used within the rule of law, and that stakeholders will be held accountable for their applications.⁵⁸⁶⁷

Recently, VINNOVA was tasked by the government to propose strategically important technologies that can strengthen Sweden's global competitiveness. As a result, VINNOVA has recommended that the government prioritize AI and autonomous systems for societal change.⁵⁸⁶⁸ In this way, Sweden continues to foster an enabling policy environment for AI (principle 2.3). Implementation of the EU AI Act and ratification of the Council of Europe AI Treaty will further enable the policy environment.

The national cooperation initiative for education in AI has been in effect in Sweden since June 2018 with the recent inclusion of AI Sweden, WASP Education Development Program (WASP-ED), Expert Learning Labs (ELs) and multiple

Center for AI and Digital Policy

universities. The focus is on upskilling and reskilling the labor workforce.⁵⁸⁶⁹ Moreover, AI jobs, skills and investments in AI sector has increased in 2024 compared to previous years. These initiatives and data suggest Sweden is effectively implementing OECD recommendation of AI skills, jobs, and labor market transformation (principle 2.4).

Sweden is a member of the Global Partnership on AI (GPAI), a multi-stakeholder initiative that aims to foster international cooperation on AI research and applied activities. GPAI is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”⁵⁸⁷⁰ GPAI membership aligns with principle 2.5 on international and multistakeholder cooperation.

Council of Europe AI Treaty

Sweden contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy, and the Rule of Law.⁵⁸⁷¹ The EU, to which Sweden belongs, signed this first legally binding international treaty on AI when it opened for signature on September 5, 2024.⁵⁸⁷²

UNESCO Recommendation on AI Ethics

Sweden has endorsed the UNESCO Recommendation on the Ethics of AI, the first ever global agreement on the ethics of AI.⁵⁸⁷³ Sweden has taken several initiatives to implement the UNESCO Recommendation, which outlines 11 areas of policy action along with components for monitoring and evaluation.⁵⁸⁷⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

However, several of these policy areas have yet to be fully implemented. While AddAI is providing oversight for smart algorithms, for example, Sweden has not carried out the Ethical Impact Assessment (EIM) or Readiness Assessment Methodology (RAM).⁵⁸⁷⁵ Many of the initiatives pose technical solutions to AI challenges without clear legal or policy bases for enforcement.

Evaluation

Sweden endorsed the OECD AI Principles and begun to implement them in part through a commitment to developing trustworthy AI and preparing citizens through educational and training opportunities. Sweden ranks at the top among nations for the protection of political rights and civil liberties and has proactive ombudsman institutions and an active data protection agency.

However, Sweden's opposition, along with other Nordic and Baltic countries, to a strong regulatory framework for AI raises concern about Sweden's commitment to take the necessary measures to prevent and mitigate ethical risks. The establishment of a Nordic AI Center, announced in August 2024, could be a key catalyzer in this direction, for it represents an opportunity to advance an ethical agenda for AI. The Nordic Ethical AI Expert Group has called for the development of "a joint Nordic strategy for ethical and responsible AI".⁵⁸⁷⁶ To date, however, the prioritization of AI adoption and development has not been accompanied by sufficient emphasis on the ethical alignment of AI systems.

With the adoption of the EU AI Act, Sweden shall establish a national supervisory mechanism that, it is to be hoped, will be independent and committed to the protection of human rights. Although to date no supervisory mechanism has been established for AI oversight under the EU AI Act, the appointment of the AI Commission could be an important step in this direction, especially given its emphasis on the need for "competitive, safe and ethical AI development and AI use in Sweden."⁵⁸⁷⁷

Despite its excellent human rights record along with establishment of Equality Ombudsman, the absence of ratification of the modernized version of the Council of Europe Convention 108+ for the protection of individuals with regard to the processing of personal data raises questions. Likewise, developments on the implementation of the OECD AI Principles and UNESCO Recommendation on the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Ethics of Artificial Intelligence has been prominent but marred by the lack of a conclusive Ethical Impact Assessment (EIA) and Readiness Assessment Methodology (RAM). Developments in the field of AI Policy and democratic values have been significant, but questions remain over how Sweden will protect human rights, democratic values, and the rule of law as it pursues leadership in AI development and use.

Switzerland

In 2024, Switzerland updated the Digital Switzerland Strategy to focus on AI regulation aligned with human rights and innovation. The new Foreign Policy Strategy 2024–2027 also emphasizes ethical AI governance and the goal to make Switzerland a Global AI hub. Switzerland contributed to negotiations for the Council of Europe International AI Treaty but has not yet signed.

National AI Strategy

The Swiss government announced AI Guidelines for the Federal Government in 2020.⁵⁸⁷⁸ The AI Guidelines are intended to ensure a coherent government policy for AI. The AI Guidelines emphasize putting people at the center; Framework conditions for the development and use of AI; Transparency, traceability, and explainability; Human accountability; Safety and security; Active participation in the governance of AI; and Involvement of all affected national and international actors. Specific AI guidelines will be formulated for education and science. Future AI work will be undertaken by the Federal Office of Communications (OFCOM) together with the federal agencies concerned. The Digital Switzerland Strategy,⁵⁸⁷⁹ which encompasses AI, and the Digital Foreign Policy Strategy 2021–2024⁵⁸⁸⁰ will serve as reference frameworks for the implementing the guidelines.

The Swiss Federal Council emphasized the need for a joint strategic approach to artificial intelligence within the Federal Administration at its meeting

⁵⁸⁷⁸ Federal Council, *Artificial Intelligence Guidelines for the Federal Administration Adopted* [Leitlinien, “Künstliche Intelligenz” für den Bund], Media Reports (Nov. 25, 2020), <https://www.admin.ch/gov/de/start/dokumentation/medienmitteilungen.msg-id-81319.html>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

in September 2024.⁵⁸⁸¹ The Council tasked the Federal Department of Home Affairs (FDHA) and the Federal Chancellery with developing a comprehensive proposal by the end of 2025 to coordinate all relevant AI activities. This initiative aims to foster synergy, promote innovation, and build public trust in the application of AI across the public sector. The strategy will address key areas such as infrastructure, regulatory development, workforce training, and stakeholder engagement, ensuring that AI adoption aligns with democratic principles and societal needs.”⁵⁸⁸²

The AI Guidelines follow from the Digital Switzerland Strategies dating back to 2016.⁵⁸⁸³ These strategies are binding for the Federal Administration and encompass the government’s principles and key objectives for digital transformation across.⁵⁸⁸⁴ Although these reports extend beyond AI, the federal government has taken further action to focus on AI.⁵⁸⁸⁵ For example, the AI Guidelines aligned with the principles and objectives of the 2020 Digital Switzerland Strategy, which included “data, digital content, and artificial intelligence” among nine fields of action.⁵⁸⁸⁶ The 2025 strategy includes Artificial Intelligence: Legal Situation and the Use of AI in the Federal Administration as one of three focus themes.⁵⁸⁸⁷

The AI Guidelines introduced in 2020 derived in part from a 2019 Report of the Interdepartmental Working Group on Artificial Intelligence that summarized three reports by the federal government.⁵⁸⁸⁸ The report gave an

Center for AI and Digital Policy

overview of AI and the current legal situation and then considered AI in 17 different policy areas. The Working Group report emphasized the need for transparency, fairness or non-discrimination, accountability, and compliance with fundamental and human rights. The group points out that the more human or fundamental rights are impacted, the more transparency and comprehensibility are required. They concluded that no fundamental change to the Swiss regulatory framework was necessary because the legal principles of Swiss technology policy are formulated in a technology-neutral manner that allows them to be applied to AI systems. However, the group made several recommendations:

- AI should be monitored continuously as the report is only a snapshot of the current situation and respective legal action need to be taken when new developments are identified
- The Swiss government should engage in more international information and knowledge sharing on AI governance
- AI policy should be integrated into the Digital Switzerland Strategy
- Clarification of the 17 policy areas is necessary.

The Digital Switzerland Strategy 2024 built on its predecessors, emphasizing a forward-thinking framework to guide the country's digital transformation. Key priorities include ensuring digital sovereignty, promoting sustainable and resilient digital infrastructures, and fostering skills and competencies across the population, economy, and government.⁵⁸⁸⁹

The strategy's focus in 2024 has expanded to address artificial intelligence governance, enhanced cybersecurity partnerships, and the development of policies that reflect the rapid pace of technological advancements. A standout feature of the 2024 strategy is its commitment to digital sovereignty and the regulation of emerging technologies like AI, which were not emphasized in earlier strategies. This shift reflects the growing global importance of data governance and innovation frameworks.

Swiss Foreign Policy and AI

Switzerland is a hub for international policy as many international organizations are based in Geneva. The United Nations hosted the first annual AI for Good Global Summit in 2017. Switzerland leverages this internationalism in AI policy.

Digitization was one of the thematic focus areas of the Swiss Foreign Policy Strategy 2020–2023. The Federal Department of Foreign Affairs wrote,

https://www.sbf.admin.ch/dam/sbf/de/dokumente/2019/12/bericht_idag_ki.pdf.download.pdf/bericht_idag_ki_d.pdf

⁵⁸⁸⁹ Federal Council, Federal Chancellery FCh, *Digital Switzerland Strategy 2024*, Digital Switzerland, Further Information, Archive, <https://www.bk.admin.ch/bk/en/home/digitale-transformation-ikt-lenkung/digitale-schweiz.html#-1304610111>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

“The focus is on people’s needs. The rule of law and universal human rights—such as freedom of expression and information and the right to privacy—must also be guaranteed online. It is important to defend liberties such as press freedom.”⁵⁸⁹⁰ Furthermore, the Department seeks to “position Geneva as the location for global digitalisation and technology debate” and to promote sustainable development using digital technologies, digital self-determination and cyber diplomacy.⁵⁸⁹¹

Switzerland's Foreign Policy Strategy 2024–2027, reflects a commitment to open, inclusive governance that respects human rights and promotes democratic values. In this period, Switzerland plans to advance a strategic approach to AI policy, emphasizing its role in the creation of international regulations that support transparency, fairness, and ethical standards.⁵⁸⁹²

Public Participation

Switzerland is a direct democracy, which means that citizens have the right to decide on policy directly by optional referendums⁵⁸⁹³ or popular initiatives.⁵⁸⁹⁴ Further, policy revisions or proposals of importance go through a consultation procedure with relevant stakeholders to include their opinions and needs and therefore to minimize the chance of a referendum.⁵⁸⁹⁵

Further specifically in technology policy, the website for the “Digital Switzerland” Strategy provides a summary of the Strategy and lists related initiatives and committees. Updates on how the Strategy is being implemented are also published on a website.⁵⁸⁹⁶ Organizations, companies, municipalities, and cantons can upload proposals to be considered for the Digital Switzerland action plan on the digital dialogue website.⁵⁸⁹⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In 2018, the Federal Council established the OpenData website, “the Swiss public administration’s central portal for open government data.”⁵⁸⁹⁸ The website, managed by the Federal Statistical Office, “supports organisations in publishing their open data” and “continuously monitors the quality of the catalogue.”

The Swiss Tripartite Platform (*Plateforme Tripartite Suisse*) is an information hub and platform to exchange dialogue. The platform was established to prepare for the World Summit on the Information Society (WSIS) conference in 2003. It now “serves as a national forum for the informal exchange of information and experience on WSIS implementation and follow-up activities. It is open to all interested representatives from the administration, the business sector, civil society and the internet community at the national level and meets on an ad-hoc basis.”⁵⁸⁹⁹

The Federal Administration launched the Competence Network for Artificial Intelligence (CNAI) in 2022 to “foster the use of and confidence in AI and other new technologies within and outside the Federal Administration in a sustainable way.”⁵⁹⁰⁰ The CNAI informs the public and facilitates information-sharing from the public to the administration. Its project overview enables it to help ensure the transparency of ongoing AI projects.

The CNAI serves as an enabler and facilitator, built on two communities: the community of practice (CoP) and the community of expertise (CoE). The CoP is open to anyone and brings together people interested in AI to learn from each other and exchange information, for example, about best practices in using AI or concrete project experiences.⁵⁹⁰¹ CNAI curates the CoE as a group of experts available to consult on projects related to their specialty areas.⁵⁹⁰² Citizens and organizations can request a referral for an expert in fields such as data science or machine learning, for example, through the website.

Switzerland hosted the AI Policy Summit 2024 organized by ETH Zurich and RegHorizon. The Summit was a pivotal forum for multistakeholder dialogue on AI policy.⁵⁹⁰³ The summit covered crucial topics such as global AI policy, AI

risk management, and AI's role in achieving the UN Sustainable Development Goals. The event encouraged public participation by broadcasting sessions globally, thus providing a platform for engagement across various sectors, including academia, business, government, and civil society. It underscored Switzerland's commitment to an inclusive approach to AI policymaking.

In addition, digitalswitzerland [sic] published a white paper on Generative AI (GenAI) that incorporated insights from 279 Swiss professionals through workshops and surveys. The paper stressed the importance of public participation in developing policies to address challenges such as workforce reskilling and the broader implications of generative AI. The paper also stressed the importance of critical thinking in education along with adoption of AI tools and recommended that policymakers act swiftly to create principles-based, technology-neutral regulations.⁵⁹⁰⁴

Data Protection

The Federal Constitution states that every person has the right to respect for their private and family life, home, and correspondence, post, and telecommunications, and to protection against misuse of their personal data.⁵⁹⁰⁵

The Federal Law on Data Protection enshrined this protection in law in July 1993.

⁵⁹⁰⁶ The FADP established the Federal Data Protection and Information Commissioner (FDPIC) as the authority in charge of enforcing and overseeing data protection.

The FADP was substantially revised into what's known as the new Data Protection Act (FADP). The FADP was passed in 2020 and came into effect along with the new Data Protection Ordinance (DPA) on September 1, 2023. The revisions address modern technological and social conditions, enhancing transparency, increasing data subjects' autonomy, and aligning with international standards such as the EU GDPR. For example, the FADP creates obligations to undertake privacy impact assessments in certain circumstances.⁵⁹⁰⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The revised FADP allowed the Swiss president to present the instrument of ratification to the Council of Europe Secretary General to confirm the country's adoption of Convention 108+.⁵⁹⁰⁸

In addition, numerous provisions on the protection of personality also exist in other laws and areas. Articles 28–28l of the Civil Code (ZGB)⁵⁹⁰⁹ specify how legal action is taken in the event of personality violations.

Switzerland's FDPIC is a member of the Global Privacy Assembly (GPA), along with data protection commissioners from the cantons of Basel-Landschaft, Basel-Stadt, Zug, Zurich, and Bern.⁵⁹¹⁰ The FDPIC sponsored or co-sponsored the 2018 Declaration on Ethics and Data Protection in Artificial Intelligence,⁵⁹¹¹ 2022 Resolution on Facial Recognition Technology,⁵⁹¹² and 2023 Resolution on Generative AI.⁵⁹¹³ However, the FDPIC did not sponsor the 2020 GPA Resolution on AI Accountability.⁵⁹¹⁴

AI Oversight

The Federal Data Protection and Information Commissioner (FDPIC) is the “competent authority for data processing by federal bodies and private persons, including enterprises.” Data processing by cantonal or communal authorities is supervised further by cantonal and communal data protection commissioners.⁵⁹¹⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The FADP amendments extended the duties and powers of the FDPIC, which will increase the number of investigations.⁵⁹¹⁶

Established in 2019, the National Human Rights Institute (NHRI) extends its oversight to include AI applications, reflecting its broad mandate to safeguard human rights across all sectors.⁵⁹¹⁷ According to the Federal Council, “The NHRI will be independent, include members from across society and receive an annual financial support from the Confederation.”⁵⁹¹⁸ The NHRI developed from a pilot project by the Swiss Centre of Expertise in Human Rights (SCHR), which completed over 200 projects to further human rights in Switzerland before its mandate ended in 2022.⁵⁹¹⁹

On the cantonal level, Zurich was the first canton to establish a regulatory sandbox for AI in 2022. The Innovation Sandbox for Artificial Intelligence aims to “promote responsible innovation by allowing public administration and participating organizations to collaborate closely on regulatory issues and enabling the use of new data sources.”⁵⁹²⁰ The Sandbox grants organizations access to regulatory know-how. In exchange, the organizations publicize their findings and results.

Algorithmic Transparency

Switzerland signed the Council of Europe Convention 108+ in 2019 and ratified in 2023.⁵⁹²¹ Convention 108+ ensures algorithmic transparency by granting every individual the right to request the logic behind automated decisions, the right to correct or erase data handled improperly, and the right to remedy “where his or her rights under this Convention have been violated.”⁵⁹²²

A key amendment to the FADP increased transparency in data processing, requiring notification when data is processed for automated decisions and the right

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

to know “logic behind the decisions.”⁵⁹²³ This introduces the general concept of automated individual decisions in Swiss law.

The FADP states that: (1) “The person responsible shall inform the person concerned of a decision that is based exclusively on automated processing that is associated with a legal consequence for them or significantly affects them (automated individual decision) and (2) “On request, it shall give the data subject the opportunity to state his or her position. The data subject may request that the automated individual decision be reviewed by a natural person.”

Finally, there is a specific labeling requirement for an automated individual decision if it is issued by a federal body: 21(4) If the automated individual decision is issued by a federal body, it must label the decision accordingly. This requirement shows that higher demands are placed on government action in general, and in particular with regard to transparency.

These amendments grew in part from increasing calls from civil society, including organizations calling for an ADM register for public administration.⁵⁹²⁴ Demands for a register were taken up at the federal level⁵⁹²⁵ as well as at the cantonal level.⁵⁹²⁶ The Federal Council rejected the federal motion, and it was subsequently written off. Developments in the canton of Zurich advanced farther. As part of the revision of the Information and Data Protection Act, the government council of the canton of Zurich proposed to establish a registry for automated decision-making systems (ADM systems).⁵⁹²⁷ Neither parliamentary motion deals with all algorithmic systems, but with those that appear to be particularly problematic from the point of view of the comprehensibility of the decision-making process.

Data Scraping

The FDPIC and international data protection and privacy counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy, following engagement with industry on an earlier statement.⁵⁹²⁸ The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”⁵⁹²⁹

The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”⁵⁹³⁰

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

AI and Criminal Justice

According to AlgorithmWatch, Swiss federal and canton institutions are using AI systems in a variety of applications. Federal government agencies are using AI systems to triage inmates as part of the process to develop an inmate’s release plan and for automatic vehicle detection and traffic monitoring at state borders. The Federal Customs Administration uses a data processing system to help assess goods coming into the country. Some cantons use a police software to

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

predict domestic burglaries. AlgorithmWatch allays some concern about the use of the extension of these AI applications to predictive policing by noting “the use of predictive policing in Switzerland is currently limited to a relatively small and clearly defined area of preventive police work.”⁵⁹³¹

Although there is no legal framework in the Criminal Procedure Code (CrimPC) governing the use of facial recognition technology by police,⁵⁹³² police occasionally use facial recognition to compare mug shots. A cantonal police database of known criminals is compared with another, e.g., a cross-cantonal database. The images often come from surveillance cameras of injured parties, such as a clothing store that has been robbed. The concrete identification of the suspected person is still the responsibility of a police officer and not of a software.⁵⁹³³

Facial Recognition

The Swiss government submitted a draft amendment to the Aviation Act in August 2024 for consultation. The amendment would allow airports and airlines in Switzerland to use facial recognition to identify and move passengers through baggage drop-off, check-in, ticket control, and boarding.⁵⁹³⁴ The amendment allows for passengers to opt out of facial recognition, noting that “the current process without biometric data must be offered as an alternative for people who reject this.”

Civil society organizations are campaigning hard for a ban on facial recognition in public spaces. Amnesty International, AlgorithmWatch CH, and the Digital Society are joined together⁵⁹³⁵ and launched a petition calling for a ban on automatic facial recognition and biometric mass surveillance in Switzerland.⁵⁹³⁶

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The petition was signed by more than 10,000 people and has also led to effects at the political level.⁵⁹³⁷

Several local parliaments have discussed and even passed bans on facial recognition in public spaces. The St. Gallen city parliament agreed by a narrow margin to move toward a ban on facial recognition applications in public spaces in September 2019, becoming the first city in Switzerland to do so.⁵⁹³⁸ The councils in Zurich,⁵⁹³⁹ Lausanne,⁵⁹⁴⁰ and the canton of Basel-Stadt⁵⁹⁴¹ followed, each considering motions for a ban on facial recognition. Similar motions are in progress in other Swiss cities. In a national survey, 78% of parliamentary candidates supported such a ban.⁵⁹⁴²

Environmental Impact of AI

Switzerland aims to rely solely on renewable energy by 2050. The World Economic Forum sees “tremendous potential” in artificial intelligence to “help accelerate the global energy transition.”⁵⁹⁴³

The Swiss government has tasked the Federal Office of Energy (SFOE) with monitoring and tackling the challenges AI poses for the energy industry, though no official policy or strategy has been announced.⁵⁹⁴⁴

Lethal Autonomous Weapons

Switzerland supports a two-tiered approach in international agreements related to Lethal Autonomous Weapons Systems (LAWS). The two-tiered approach would prohibit AWS that cannot be used in compliance with international law and international humanitarian law in terms of reliability or the extent or timing of the use of the force. For weapons that can be used in compliance, Switzerland supports regulation focused on “risk mitigation, including positive obligation to uphold human control and imposing limitations on weapon parameters and deployment contexts, all while considering military, security policy, and ethical considerations.”⁵⁹⁴⁵

In comments to the UN Secretary-General for the report on LAWS, Switzerland underlined support for the Convention on Certain Conventional Weapons (CCW)’s Group of Governmental Experts (GGE) on LAWS to “consider and formulate elements of an instrument on AWS by 2026 at the latest.”⁵⁹⁴⁶ Switzerland was a lead sponsor on the Lethal Autonomous Weapons resolution 78/241 and participates actively in CCW and GGE meetings.

Switzerland’s statement to the UN Secretary-General acknowledges the potential benefits and opportunity of AI and autonomous weapons in the armed forces, noting “autonomy can provide advantages, including improved safety and efficiency. Also, [...] in specific applications and under certain conditions such technologies could contribute to better protecting civilians and civilian objects or to avoiding collateral damage.”⁵⁹⁴⁷

Human Rights

Switzerland is a signatory to many international human rights treaties and conventions. Switzerland typically ranks among the top nations in the world for the protection of human and political rights. Freedom House scored Switzerland 96/100 in 2024,⁵⁹⁴⁸ unchanged from 2021,⁵⁹⁴⁹ and noted that “Political rights and civil liberties are generally respected, though laws and policies adopted in recent years have reflected a growing wariness of immigration and ethnic minority groups, whose members face societal and systemic discrimination.”

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Guaranteeing human rights is also one of Switzerland's key goals for the Council of Europe's AI framework.⁵⁹⁵⁰ As the Federal Council noted in a press release ahead of negotiations in 2022 noted that "The new legal framework should regulate the negative effects of artificial intelligence rather than the technology itself. It is also important to foster innovation while guaranteeing human rights, including data protection."

AI Safety Summits

Switzerland participated in the first AI Safety Summit and endorsed the Bletchley Declaration in November 2023.⁵⁹⁵¹ Switzerland thus committed to participate in international cooperation efforts on AI "to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential." Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible."

The second AI safety Summit was a primarily virtual event co-hosted by Britain and South Korea with in-person events in Seoul. Swiss Ambassador Benedikt Weschsler, head of digitalization at the department of foreign affairs, attended the event in-person.⁵⁹⁵²

The third AI Safety Summit took place in February 2025 in Paris, France. France rebranded the event as the AI Action Summit to better encompass the scope of concerns and goals that will be covered.⁵⁹⁵³

OECD / G20 AI Principles

Switzerland endorsed the G20 AI Guidelines and adheres to the OECD AI Principles.⁵⁹⁵⁴ The OECD notes Switzerland's active involvement in relevant international organizations and processes as evidence of progress on

⁵⁹⁵⁰ Press Releases by the Federal Council, *Switzerland's Participation in Negotiations on Artificial Intelligence* (Sept. 16, 2022), <https://www.admin.ch/gov/en/start/documentation/media-releases.msg-id-90367.html>

implementation of the principles. In a report on AI policies, the G20 Digital Economy Task Force noted that “Particularly important for Switzerland is to ensure that fundamental and established values and norms such as human rights are respected and that all relevant stakeholders are involved in decision-making.”⁵⁹⁵⁵

Council of Europe AI Treaty

Switzerland contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI and Human Rights, Democracy, and the Rule of Law. Switzerland chaired the Council of Europe Committee on AI. However, the Swiss neutrality was questioned. According to an article published in the Swiss press, Switzerland prioritized the potential global reach of the Convention at the expense of the Council of Europe’s human rights standards.⁵⁹⁵⁶ The Committee on AI approved the Draft Framework Convention at its 10th Plenary session in March 2024.⁵⁹⁵⁷

Switzerland did not sign the treaty in 2024.⁵⁹⁵⁸ However, a Federal Council press release in February 2025 announced that “Switzerland is to ratify the Council of Europe Convention on Artificial Intelligence (AI) and make necessary adjustments to Swiss law.”⁵⁹⁵⁹ The announcement followed a meeting in which the Council defined the basic values to orient its work on AI regulation in 2025 along with three objectives: “the strengthening of Switzerland as an innovation location, the preservation of the protection of fundamental rights including economic freedom, and the strengthening of the confidence of the population in AI.”

UNESCO Recommendation on AI Ethics

Switzerland is a member of UNESCO and as such supported the adoption of the UNESCO Recommendation of the Ethics of AI. In his speech before the 41st session of the General Conference of UNESCO, Federal Councilor Ignazio

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Cassis emphasized “Switzerland's unwavering commitment to encouraging respect for fundamental rights” and “support for the recommendation on the ethics of artificial intelligence.”⁵⁹⁶⁰

Despite not yet having AI-specific regulations implementing UNESCO's Recommendation on the Ethics of AI, Switzerland has shown commitment to upholding fundamental rights in the Digital Switzerland Strategy and other developments. However, Switzerland has not initiated UNESCO's Readiness Assessment Methodology (RAM) to help ensure ethical implementation of AI.⁵⁹⁶¹

Evaluation

Switzerland has established a national set of guidelines on ethics that are aimed at the public administration. Further, most reports and initiatives consider, integrate, and implement ethics in the government's work on AI policy. The Federal Council announced that its approach to issuing a firm mandate for an AI regulatory project in 2025 will be based on a report analyzing existing Swiss law.⁵⁹⁶² The project will define responsibilities with the goal of drafting national AI regulations, though the Council has indicated they will likely reserve cross-sectoral policies for areas requiring protections for fundamental rights like data protection.⁵⁹⁶³

In recent years, initiatives on the federal as well as the cantonal level demonstrate, that the topic of AI policy is picking up speed in Switzerland. With the Federal Department of Foreign Affairs 2022 report and Switzerland's contribution to the Council of Europe AI framework, the country's ambitions for AI policy have become clear, attesting to its commitment to technological development that is compatible with human rights. However, there is no clear regulatory strategy for the private sector. The ethics guidelines for public administration signal a step toward implementation of the UNESCO Recommendation combined with the history of commitment to human rights despite lack of progress on UNESCO tools such as the RAM. Switzerland's educational efforts and programs such as the Competence Network for AI align to the OECD AI Principles. Ratification of Convention 108+ solidified algorithmic

transparency. Signing and ratifying the CoE AI Treaty and extending to the sector can help ensure Switzerland's AI governance protects rights from AI system sin the private as well as public sector.

Taiwan

In 2024, Taiwan carried out public consultation on the Draft AI Basic Law before submitting for legislative review. The Preparatory Office for the Personal Data Protection Commission initiated work on amendments to the personal data law ahead of the Commission's establishment in August 2025.

National AI Strategy

In 2018 the Government of Taiwan officially introduced its four-year AI Action Plan, which aims to propel Taiwan “into the ranks of the world's leading smart nations.”⁵⁹⁶⁴ “Guided by the principles of deregulation, open access and technology investment,” the AI Action Plan is designed to “sharpen Taiwan's advantages, prioritize innovation and real-world implementation, and develop software and hardware in tandem, thereby injecting greater momentum into Taiwan's industries.”

To this end, the Action Plan focuses on five action areas: 1) developing AI talent; 2) promoting Taiwan's lead role in AI by expanding its world-leading position in the semiconductor chip industry; 3) building Taiwan into an AI innovation; 4) liberalizing laws and opening test grounds to ease restrictions on innovative technologies; and 5) Transforming industry with AI.

The AI Action Plan follows on the five-year AI strategy developed by the Ministry of Science and Technology (MOST),⁵⁹⁶⁵ now known as the National Science and Technology Council (NSTC), to “cultivate AI technology specialists and create an environment for AI scientific research.” This “Grand Strategy for a Small Country”⁵⁹⁶⁶ builds on Taiwan's “strengths and potential advantages, such as semiconductors and information and communications technology.”

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The AI Strategy aims to “develop select fields for the future, including the internet of things, security solutions and driverless vehicles” and has five “key facets”: 1) R&D services with the creation of an AI cloud service and high-speed computing platform; 2) Value-added innovation with the establishment of four AI innovation research centers; 3) Creativity and practice with an AI Robot Makerspace; 4) Industrial pilot program with an AI semiconductor "moonshot" project; and 5) Social participation with three Formosa Grand Challenge technology competitions to uncover talent, develop technology, and stimulate creativity. Ethical questions are also targeted in Taiwan as one of the many aspects related to AI.⁵⁹⁶⁷

The Executive Yuan announced the Taiwan Artificial Intelligence (AI) Action Plan 2.0 in June 2023⁵⁹⁶⁸ to run from 2023 through 2026. According to the NSTC,⁵⁹⁶⁹ the emphasis of the AI Action Plan 2.0⁵⁹⁷⁰ is Human-Centered AI, with a focus on the following five main tasks:

1. Optimize and expand the talent pool
2. Deepen AI software and core chip technology
3. Improve data governance and AI legal environment
4. Actively participate in international AI-related organizations
5. Address humanistic and social issues

The Ministry of Digital Affairs (MoDA) would “establish an AI evaluation center, which, alongside draft acts for AI regulation, would provide a legislative basis for AI usage, and allow for more laws to be drafted as AI technology is implemented in other fields, such as medicine, finance and transportation.”⁵⁹⁷¹

AI Core Values

Taiwan’s AI Technology R&D Guidelines were announced in September 2019, “in a bid to create a reliable environment conforming to international trends

of AI R&D and to provide directions for Taiwan AI researchers to follow.”⁵⁹⁷² When presenting the Guidelines, Minister Chen Liang-gee said that his ministry “has the responsibility of helping humans be able to trust” AI⁵⁹⁷³ and that “those who provide digital tools must be ethical.”⁵⁹⁷⁴ He also explained that the whole world is still watching the evolution of artificial intelligence and that it is right now “more appropriate to adopt guidelines than sanctions.”

The AI R&D Guidelines are based on three core values.⁵⁹⁷⁵

1. Human-centered: the human being should be at the heart of research; an AI-based society should respect human dignity, rights and freedom; and application of AI is to prompt human welfare and hike human living standards)
2. Sustainable development: AI R&D should seek balance among economic growth, social progress, and environmental protection to reach co-existence and common prosperity among human being, society and environment
3. Diversity and inclusion: AI R&D is to create an AI-based human society of diverse value concepts and backgrounds via interdisciplinary dialog mechanisms.

“AI research and development must be people-oriented,” the Minister said, asking that research teams retain the source codes and AI training materials so that the work can be traced. The complexity of AI means that it is vulnerable to misuse, which countries are seeking to mitigate by establishing standards for its development, he said. AI technology systems can perpetuate and amplify human biases, he said,⁵⁹⁷⁶ adding: “After an artificial intelligence program is written, it evolves based on the data provided to it. If the data is discriminatory, the program will be discriminatory. If the data is deviant, it will be deviant.”

More precisely, eight guidelines derive from Taiwan’s AI core values, including 1) Common good and well-being; 2) Fairness and non-discrimination; 3) Autonomy and control; 4) Safety; 5) Privacy and data governance; 6)

⁵⁹⁷² AI Taiwan, *Ministry Releases Guidelines for AI Research* (Sept. 24, 2019), <https://ai.taiwan.gov.tw/news/ministry-releases-guidelines-for-ai-research/>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Transparency and traceability; 7) Explainability; and 8) Accountability and communication.⁵⁹⁷⁷

The official press release points to the fact that the core of AI technology is its people-oriented nature, so researchers must safeguard human rights and preserve human dignity and that the guidelines' eight criteria emphasize promoting shared benefits and common well-being, with researchers who should aim to develop systems that are free of discrimination. Likewise, AI tools should support human policies, and people using the tool.⁵⁹⁷⁸

“Human-centered AI” for Taiwan AI start-up iKala means the involvement of people in AI development and applications, as well as the creation of ethical, humane AI. As an illustration, iKala Co-founder and CEO Cheng cites the example of an innovative picture-as-a-service (PicaaS) technology which automatically edits product pictures to allow companies to circulate clean photos of their products. However, following complaints that it could potentially be used to infringe on image owners' intellectual property rights, Cheng and his team re-trained the software to recognize and reject copyrighted images. “That’s the kind of responsible AI we want to be working on,” says Cheng. “Putting humans in the equation—not just stealing and not just replacing people.”⁵⁹⁷⁹

The NSTC submitted a draft AI Basic Law in 2024 to reinforce these core values.⁵⁹⁸⁰ The legal framework would help to ensure that AI development and application align with human rights and democratic principles.⁵⁹⁸¹

Smart Country Program (2021–2025)

The Smart Nation Program (2021–2025) was passed by the Executive Yuan in May 2021. The National Communications Commission (NCC) states that this program builds on the foundation and achievements of the Digital Nation and Innovative Economic Development Program, 2017–2025 (DIGI+ Program)⁵⁹⁸² The DIGI acronym reflected Taiwan’s commitment to development, innovation, governance, and inclusion, with the “+” reflecting the government’s intention to

apply the strategy toward promoting innovation at every level of society and the economy.⁵⁹⁸³

The DIGI+ Program highlights are:

- “Enhance soft infrastructure to create an environment conducive to digital innovation: DIGI+ calls for the construction of an innovation-friendly legal framework and the cultivation of interdisciplinary technical talent, matched to the research and development of advanced digital technologies.
- Promote development of the digital economy
- Create a service-oriented digital government and promote open governance: This includes the development of an open application programming interface (Open API) for government data, and the establishment of demand-oriented, one-stop smart government cloud services.
- Develop a vibrant online society with equality of access: The DIGI+ program aims to ensure broadband internet access for the disadvantaged, implement participatory democracy, promote digital infrastructure in remote regions and outlying islands, build a comprehensive legal foundation for digital human rights, and provide citizens with equal opportunities for digital development.
- Build sustainable, smart cities and townships.”⁵⁹⁸⁴

Taiwan inaugurated the new Ministry of Digital Affairs (MoDA) in August 2022. According to the new Minister, Audrey Tang, MoDA “is aimed to build digital resilience for all, connect the digital technologies with civil affairs, strengthen industrial competitiveness and cybersecurity practices, accelerate social digital development and realize the vision of a smart country.”⁵⁹⁸⁵

MoDA is responsible for promoting Taiwan’s overall digital policy innovation and reform. Major digital development policies include holding deliberative assemblies⁵⁹⁸⁶ to determine the development direction of AI policy. The assemblies provided opportunities for public participation and informed the Executive Yuan in drafting the Basic Law on Artificial Intelligence.⁵⁹⁸⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Taiwan's National Science and Technology Council (NSTC) announced a draft Artificial Intelligence (AI) Basic Law in September 2024.⁵⁹⁸⁸ This draft represents Taiwan's commitment to advancing a "human-centered AI ecosystem" where research, development, and application of AI safeguard the essential dimensions of life, health, and safety, while preserving citizens' rights, national welfare, cultural values, and societal resilience.⁵⁹⁸⁹

The draft AI Basic Law is guided by 7 basic principles: 1) Sustainable development and well-being, 2) Human autonomy, 3) Privacy Protection and Data Governance, 4) Security and safety, 5) Transparency and explainability, 6) Fairness and non-discrimination, and 7) Accountability. Governance provisions within the draft ensure that AI "supports human agency, safeguards fundamental rights, and reflects Taiwan's cultural heritage," all while fostering an environment of accountability and transparency.⁵⁹⁹⁰ Taiwan's draft AI Basic Law aims to shape an AI landscape that serves both the individual and society, paving the way for an inclusive digital future.⁵⁹⁹¹

Public Participation

One of the key goals of DIGI+ is to further participatory democracy.⁵⁹⁹² The 2021 Taiwan Open Government National Action Plan goes in the same direction and aims at "deepening democratic values and strengthening international ties," applying technology toward furthering government transparency and increasing public participation in government policies.⁵⁹⁹³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

For the last few years, Taiwan has organized public debates via the citizen-run vTaiwan platform.⁵⁹⁹⁴ vTaiwan's (for Virtual Taiwan) algorithms highlight where there is consensus in a debate while minimizing the voices at the most extreme ends.⁵⁹⁹⁵ This system is officially and routinely part of the law-making process of Taiwanese institutions, involving thousands of citizens in varying degrees.⁵⁹⁹⁶ The outcomes of vTaiwan have been put in front of Parliament by government to form the core of 11 laws and regulation, with eight more on everything from revenge porn to fintech regulation still pending.

The vTaiwan process is giving weight to the citizen voice and has led to regulatory innovations at four stages: (1) informing the public; (2) collecting the strategic approaches through Polis,⁵⁹⁹⁷ an open-source self-learning algorithm; (3) deliberating; and (4) observing decision-making.⁵⁹⁹⁸

"When people started using Polis, we found that it became a consensus-generating mechanism," co-founder Colin Megill told *Wired*.⁵⁹⁹⁹ To bring the groups closer together, Polis has reengineered many of the features we take for granted on social media. No reply button, hence no trolling. No echo-chambers, replaced by an attitudes map showing you where you are in relation to everyone else. The statements that get attention are those that find support not only in one cluster, but across other groups, too.

The MoDA partnered with the international nongovernmental organization Collective Intelligence Project (CIP) to participate in the Alignment Assemblies project in May 2023 to ensure the governance and application of artificial intelligence is consistent with the people's interests.⁶⁰⁰⁰ The first Alignment Assembly focused on Democratizing AI Futures. The second focused on Utilizing AI to Enhance Information Integrity. These activities are recognized as innovative policy making⁶⁰⁰¹ processes.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The MoDA anticipates that these alignment assemblies will provide critical information to policymakers and technology developers through the CIP⁶⁰⁰² pilot demonstration to ensure that the AI Basic Act and AI development is consistent with the interests of the people.

The public release of the General Explanation and Provisions of the Draft Basic Law on Artificial Intelligence⁶⁰⁰³ by the NTSC provided a meaningful opportunity for public participation. There was a sixty-day period for anyone to comment on the draft AI Basic Law, including CAIDP.⁶⁰⁰⁴ Minister Lang has also stated that the MoDA will be involved in the development of the AI Basic Law.⁶⁰⁰⁵

In comments on the AI Basic Law, the Center for AI and Digital Policy (CAIDP) commended Taiwan for centering the draft law on human rights and democratic values.⁶⁰⁰⁶ However, CAIDP recommended that Taiwan establish red lines to prohibit practices that violate privacy laws and require protections such as human and civil rights impact assessments, algorithmic transparency, and human oversight and control, including a termination obligation if the system fails to uphold rights.

Data Protection

Personal data protection in Taiwan is essentially subject to the 2015 Personal Information Protection Act (PDPA), which applies to the public and private sectors.⁶⁰⁰⁷ The 2016 Enforcement Rules of the Personal Data Protection Act supplement the original.⁶⁰⁰⁸ Local and national government authorities enforce the Act.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Taiwan Government has considered amending the PDPA to meet the EU GDPR standards to obtain an adequacy decision⁶⁰⁰⁹ and held several public hearings in 2019 to solicit public comments. Among the various topics discussed during the public hearings, the government contemplated the adoption of data breach notification obligations and cross-border data transfer restrictions similar to those under the GDPR. Taiwan continues to dialogue with the EU in this regard.

According to the National Development Council's website, "The Personal Data Protection Office under the National Development Council was established on July 4, 2018, in response to the implementation of the GDPR and to ensure a coherent enforcement of the PDPA. The National Development Council replaced the Ministry of Justice to become the governing authority of the PDPA, so that all matters relating to the PDPA may be handled and coordinated by the Council in a coherent matter."

Taiwan's Digital Minister said in 2020 that she supported the idea of establishing a dedicated agency for personal data protection before the electronic identification cards (eID) were rolled out in 2021.⁶⁰¹⁰ However, as of March 2023, this does not seem to have happened.

In a landmark August 2022 case concerning the secondary use of the National Health Insurance Research Database,⁶⁰¹¹ the Taiwanese constitutional court ruled that since the PDPA and other related laws in Taiwan lack an independent supervision mechanism for personal data protection, such protection is inadequate and potentially unconstitutional. The Constitutional Court also ruled that a competent authority should be established within three years⁶⁰¹² from the decision. In response, the Taiwan Legislative Yuan passed amendments to the Personal Data Protection Act in May 2023, including Article 1-1,⁶⁰¹³ with the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

provision that the competent authority of the PDPA is the Personal Data Protection Commission (the PDPC). The Preparatory Office of the PDPC was established in December 2023 and is now responsible for completing the enactment of the organic statute and officially establishing the PDPC by August 2025.⁶⁰¹⁴

Algorithmic Transparency

The PDPA regulates “the collection, processing and use of personal data so as to prevent harm on personality rights, and to facilitate the proper use of personal data.”⁶⁰¹⁵ The PDPA covers data retrieval and management by automated and non-automated means. However, the PDPA does not provide for algorithmic transparency or mention automated decisions or algorithms.⁶⁰¹⁶

While the draft AI Basic Law seeks to address this gap by including provisions related to transparency and traceability, the language is vague. As written, the draft law does not include clear and enforceable requirements for algorithmic transparency and explainability to ensure that users are always informed when they are interacting with AI systems and are provided with clear and valid reasons for decisions affecting them.⁶⁰¹⁷

The 2019 AI Technology R&D Guidelines identify “transparency and traceability,” as well as “explainability” as “core AI values.”

Medical Data and AI Ethics

Research projects on AI Ethics in the medical and biomedical areas are ongoing with government support. One such project examines the Ethical, Legal, and Societal Issues Surrounding Artificial Intelligence-Assisted Medical Care (ELSI-AIM),⁶⁰¹⁸ This project includes four subprojects: (1) The deliberation of ethical issues on artificial intelligence-assisted medicine; (2) legal and policy implications of artificial intelligence in medicine; (3) the implications of societal issues on artificial intelligence-assisted end-of-life physician-patient communication: opportunities and challenges; and (4) artificial intelligence-based medicine assisted system from analytical design to practical application. The project is still in literature review and planning phases.

Center for AI and Digital Policy

The Taiwan Biobank created in 2012 is a repository of tissues/information but is not allowed to carry out research directly. Information on participants, all voluntary, whose samples are included in the biobank will link several sources of data: national identification number, National Health Insurance system, cancer registry, and cause of death registry. Biobank operations are regulated by detailed legislation.

Current discussions focus on how the Taiwan Biobank can be transformed by leveraging digital technologies. For some, greater participant engagement and the uptake of Information Technology and AI applications can be used in partnership with vertical and horizontal integration as part of a four-pronged approach to promote biobank sustainability and facilitate the biobank's transformation.⁶⁰¹⁹

Others seem more cautious,⁶⁰²⁰ pointing to key issues raised by the current ethical governance of the Taiwan Biobank, namely i) the handling of ethnicity, including the special requirements that it imposes with respect to obtaining participant consent, and ii) transparency (and accountability) around governance. Taiwan Biobank established an Ethics and Governance Council (EGC) to act as an independent guardian of the Ethics and Governance Framework, and to advise the Competent Authority (the MOHW) on its revision from time to time.⁶⁰²¹

COVID-19 and Big Data Analytics

In January 2020, Taiwan integrated its national health insurance database with its immigration and customs database to begin the creation of big data for analytics and allow case identification by generating real-time alerts during a clinical visit based on travel history and clinical symptoms.⁶⁰²²

"The combination of these two sets of data allows us to generate alerts to tell healthcare staff when a patient returns from a risk area," said Yu-Lun Liu, doctor in the intelligence department of the Taiwan Center for Disease Control (CDC). The identified patients are then treated through a separate circuit, limiting

contact with other patients.⁶⁰²³ To strengthen this new dataset, the authorities are “working with telephone providers, on the basis of roaming data, to identify people whose last stopover is not necessarily an area at risk, but who have made trips with stops in areas affected by the epidemic.” The authorities are developing a model for processing public video surveillance images to estimate the proportion of masked people. “This artificial intelligence-based model has allowed us to see a rapid increase in the number of people wearing masks. We have chosen to stop their export and increase local production,” recalls Yu-Lun Liu.

In March 2020, the BBC reported that when the phone belonging to an American University student in Taiwan, who was subject to 14 days quarantine after returning from Europe, ran out of battery power, in less than an hour he had received phone calls from four different local administrative units, a text message notifying him he would be arrested if he broke quarantine, and a visit from two police officers. The phone tracking system uses phone signals to triangulate locations of the more than 6,000 people subject to home quarantine; an alert was sent to the authorities if the phone is turned off for more than 15 minutes.⁶⁰²⁴

Autonomous Vehicles

In November 2018, the Legislative Yuan passed the Act for Unmanned Vehicle Technology Innovative Experiments, which was enacted by the President in December 2018. Entered into force in May 2019, the Act frees autonomous vehicles and drones from the limits of some traffic regulations in their test runs.⁶⁰²⁵ Moreover, the regulations specifically call for AI-boosted algorithmic unmanned platforms.⁶⁰²⁶ Taiwan CAR (Connected, Autonomous, Road-test) Lab,⁶⁰²⁷ the nation's first closed field for testing self-driving cars, also opened for use in 2019.

Facial Recognition

Facial recognition has been implemented in Taiwan across various sectors, including banks,⁶⁰²⁸ retail stores,⁶⁰²⁹ airports,⁶⁰³⁰ and law enforcement.⁶⁰³¹ In June 2019, the Taiwan Railways Administration announced that, due to privacy concerns, its surveillance system trial would no longer apply facial recognition technology.⁶⁰³² AI-based surveillance will still be capable of monitoring railway passenger behavior, including trespassing, loitering in restricted areas, and prohibited acts.⁶⁰³³

In 2019, Liao Wei-min, an associate professor at Taiwan National Chung Hsing University's Department of Law called for legislation limiting facial recognition and similar private data collection. "What is essentially a beneficial technology is deeply problematic given the lack of precise and targeted legislation, and this is the fault not of civil servants, but their politically appointed masters. Something needs to be done to address this."⁶⁰³⁴ As yet, however, there have been no formal proposals by Taiwan's government to protect citizens from the risks of facial recognition used for surveillance.

EdTech and Children Tracking

A recent report from Human Rights Watch⁶⁰³⁵ highlighted a practice exacerbated by the need for virtual learning during the COVID-19 pandemic by which educational technology governments required students to use shared children's personal data with advertising technology companies. Taiwan-based

Center for AI and Digital Policy

technology companies produce several of the educational technology and advertising technology products implicated by the report. Additionally, Taiwan's government produced three of its own, proprietary educational technology products that transmitted personal data about children to advertising technology companies. As the report notes, by making it compulsory for children to use this technology to access public education, these governments not only subjected children to potential exploitation of their data but also left no alternative for children and families to opt out of this privacy infringement.⁶⁰³⁶

Lethal Autonomous Weapons

Taiwan is not a member of the United Nations and thus was not a party to the UN's October 2022 Joint Statement on Lethal Autonomous Weapons. The Taiwan government has not taken a formal policy position on the application of these lethal technologies.

Environmental Impact of AI

In Taiwan's draft AI Basic Law, Sustainable Development is the first of seven key principles.⁶⁰³⁷ The principle stipulates that the research and use of AI should be human-oriented, with the goals of benefiting the people and promoting sustainable development. Referencing the G7 Hiroshima Process Code of Conduct for Organizations Developing Advanced AI Systems,⁶⁰³⁸ AI stakeholders shall engage in responsible AI management to benefit humanity and the planet. The Bill focuses on promoting social fairness and a sustainable environment. The inclusion of sustainable development as a core principle aligns Taiwan's draft AI law with international trends and guidelines for responsible AI development. However, the bill has not yet become law.

Human Rights

Taiwan is ranked by Freedom House as a global leader in its protection of human rights and transparency, with a combined score for political and civil liberties of 94 out of 100.⁶⁰³⁹ This rating underscores Taiwan's robust protection of political rights (38 out of 40) and civil liberties (56 out of 60), positioning it second in Asia behind Japan and tied for seventh globally with nations like Iceland

and the Czech Republic. Taiwan's Human Rights Commission⁶⁰⁴⁰ continues to provide national oversight.

Although in 2024 internet freedom in the Asia-Pacific Region declined,⁶⁰⁴¹ Taiwan saw an improvement, up 1 to 79, earning it the highest Internet Freedom score in the region. On internet freedom, Freedom House awarded Taiwan top marks for internet freedom, characterizing the nation as, “one of the freest online environments in Asia. An independent judiciary protects free expression. Civil society, the technology sector, and the government have taken innovative action to counteract the impact of disinformation campaigns originating from China.”⁶⁰⁴² Freedom House notes that a prominent concern threatening the continuation of these liberties relates to “the Chinese government's efforts to influence policy-making, the media, and democratic infrastructure in Taiwan.”⁶⁰⁴³

In April 2022, the Executive Yuan authorized the establishment of the Department of Human Rights and Transitional Justice under its authority and approved the first national action plan on human rights that May. In the announcement, Premier Su Tseng-chang pointed out that “to date, Taiwan has created its own laws to implement five of the United Nations' nine core international human rights instruments” and issued national reports addressing their implemented.

The human rights action plan lays out open and transparent procedures and involves widespread participation by government, civic groups, and scholars and experts from all sectors “to reconcile and align the nation's policies to human rights values.” The plan includes efforts such as those “to prevent digital technologies from violating human rights” among the actions and indicators designed to address emerging human rights issues in addition to “striving for equality and nondiscrimination against vulnerable groups such as children and youth, the elderly, mentally or physically disabled people, indigenous peoples, migrant workers and the LGBTI community.”⁶⁰⁴⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

OECD / G20 AI Principles

Although Taiwan is not an OECD member country, many of its AI policies align with the OECD AI Principles. The Ministry of Science and Technology noted in the announcement of the AI Technology R&D Guidelines that “many countries and organizations have established ethical standards for AI R&D, such as the EU's Ethics Guidelines for Trustworthy AI, OECD's Principles on Artificial Intelligence and IEEE's Ethically Aligned Design-Version II.”⁶⁰⁴⁵

Taiwan AI Labs and Taiwan Federated Learning were invited to participate in the 2021 Global Partnership on AI (GPAI) Annual Meetings. “Members and participants of GPAI are brought together first and foremost by a shared commitment to the values expressed in the OECD Recommendation on Artificial Intelligence. All GPAI activities are intended to foster responsible development of AI grounded in these principles of human rights, inclusion, diversity, innovation and economic growth.”⁶⁰⁴⁶

Council of Europe AI Treaty

Taiwan is not an EU member state. Taiwan's unique geopolitical status precludes participation in this legally binding international AI Treaty.⁶⁰⁴⁷

UNESCO Recommendation on AI Ethics

Taiwan has not been a member of the United Nations since 1971, when the country was expelled via United Nations Resolution 2758, in deference to the People's Republic of China, which was henceforth recognized as “the only legitimate representative of China to the United Nations.”⁶⁰⁴⁸ Taiwan is not a party to the UNESCO Recommendation on the Ethics of AI.

Evaluation

While Taiwan's unique geopolitical status precludes its formal membership in organizations like UNESCO, the OECD, and the EU, its AI policies demonstrate a strong alignment with international trends, frameworks, and guidelines for AI development and deployment. The latest draft of AI Basic Law emphasizes human-centered AI and democratic values, showing progress in policy development. Additionally, Taiwan seeks alignment through the AI Action

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Plan 2.0 and aims to participate in other related trustworthy AI initiatives such as the Global Partnership on AI (GPAI)⁶⁰⁴⁹ and strives to be a GPAI observer.⁶⁰⁵⁰

The country upholds human rights by endorsing the Universal Declaration of Human Rights (UDHR)⁶⁰⁵¹ and establishing an independent National Human Rights Commission.⁶⁰⁵² Public participation is encouraged through the Ministry of Digital Affairs (MoDA) initiatives and public consultations⁶⁰⁵³ on the policy initiatives including the AI Action Plan 2.0 and AI Basic Law.

An independent AI oversight agency has not yet established, but a preparatory office has been set up to operationalize the Personal Data Protection Commission (PDPC) by August 2025.⁶⁰⁵⁴ While AI policy goals are articulated, issues remain regarding algorithmic transparency, as current provisions are considered vague with more scope for further improvement. Taiwan is not a signatory to the GDPR, Council of Europe AI Treaty, or the UNESCO Recommendation on the Ethics of AI, and has limited engagement with the Global Privacy Assembly (GPA).

Thailand

In 2024, Thailand drafted a royal decree on Business Operations that Use Artificial Intelligence Systems and an Act on Artificial Intelligence Promotion and Support. The country also began preparations for the UNESCO Readiness Assessment Methodology (RAM).

National AI Strategy

The Prime Minister's Cabinet Office approved the Thailand National AI Strategy and Action Plan 2022–2027 on July 26, 2022.⁶⁰⁵⁵ The vision of the strategy is for Thailand to have an effective ecosystem for developing and

applying AI, one proven to enhance the economy and improve the quality of life of Thais by 2027.

Thailand's National AI Strategy has 5 sub-strategies with 15 more actionable work plans and measures.⁶⁰⁵⁶ These are:

1. Preparing Thailand's readiness in social, ethics, law, and regulation for AI application, including policies, standards, awareness, and education for AI Ethics as part of enforceable AI Law and Regulation
2. Developing Infrastructure for Sustainable AI Development by increasing investment in digital infrastructure by 10% per year, improving the Government AI Readiness index to the top 50 globally, creating AI expert networks, creating a national platform for advanced data analytics and management, creating a national AI service platform, and developing High-Performance Computing (HPC) infrastructure
3. Increasing human capability and improving AI education to develop AI talent for more than 30,000 citizens by improving AI education and knowledge creation, AI Scholarship programs, and cooperation mechanisms with researchers & experts from abroad
4. Driving AI technology and innovation development to strengthen AI technology by developing at least 100 R&D prototypes within 6 years and to facilitate wide adoption of AI research, development, and innovation that helps create business & social impact of at least 48 billion Baht by 2027 by applying AI technology and innovation for strategic sectors developing AI core technology and platform
5. Promoting the use of AI in public and private sectors so the number of agencies (government, business & new entrepreneurs) using AI innovation increases to at least 600 agencies in 6 years and Thailand's AI competitiveness is increased by AI applications

Thailand's National AI Strategy targets development in 10 sectors: Manufacturing, Energy and Environment, Medical and Wellness, Food and Agriculture, Education, Tourism and Creative Economy, Security, Logistics and Transformation, Finance and Commerce, and Government Service.⁶⁰⁵⁷

The national policy and plan are formulated with an emphasis on digital technologies, empowering people to increase their "citizen well-being and quality of life." Increasing the transparency and accountability of public agencies is mentioned several times in these plans. However, it is not clear how the goals will be adopted by the agencies and how the actions will be coordinated across different levels of government.

⁶⁰⁵⁶ Ibid

⁶⁰⁵⁷ AI Thailand, *Thailand National AI Strategy and Action Plan, 2022–2027* (Jul. 26, 2022), <https://www.ai.in.th/en/about-ai-thailand/>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The strategy and action plan make no explicit mention of concepts such as fundamental rights, human rights, rule of law, and fairness with respect to AI. The 12th National Economic and Social Development Plan acknowledges that Thailand “has high inequality and a lack of fairness”⁶⁰⁵⁸ across society. The only mention of specific AI ethics guidelines is acknowledging the existence of EU Ethics Guidelines for Trustworthy AI, and the World Government Summit’s Ethical AI Systems Design through a reference in a Thailand Digital Government Development (TDG) Plan summary document.⁶⁰⁵⁹ The Electronic Government Agency (EGA), as the agency responsible to implement standards, models, measures, principles, and approaches in the form of digital technology, only mentions openness, integrity, and collaboration under its eight core values.⁶⁰⁶⁰

In 2019, the Ministry of a Digital Economy and Society, academics and experts from Mahidol University and Microsoft Thailand joined together to draft Digital Thailand: Draft AI Ethics Guidelines.⁶⁰⁶¹ The Ethics Guidelines serve as a manual and provide ethical codes regarding AI development for government agencies, private firms, regulatory bodies, researcher, designers, developers, and users. The draft guidelines cover six aspects of development: competitiveness and sustainable development; legal regulations and international ethical standards; operational codes and duties; security and privacy; equality, diversity, and fairness; and credibility.

Digital Thailand: AI Ethics Guideline was published in November 2019,⁶⁰⁶² taken up by the Cabinet of Thailand in December 2020,⁶⁰⁶³ and approved by the Cabinet in February 2021. The guideline is freely available and accessible online; however, the document is currently only in the Thai language.⁶⁰⁶⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

ethical issues in genetic engineering and technology; artificial intelligence, robotics, and big data; climate change and environment; research ethics; and communications and youth engagement in science and technology policy development.⁶⁰⁶⁵ One outcome was the Bangkok Statement on the Ethics of Science and Technology and Sustainable Development.⁶⁰⁶⁶ The statement calls for concerted efforts of all stakeholders to take action on the ethics of science and technology so that new technologies can progress and develop to benefit mankind.

While Thailand's National AI Strategy seeks to enhance the development of AI across multiple sectors of the economy, the Thailand Development Research Institute (TDRI) has also highlighted the risk of job disruption due to AI.⁶⁰⁶⁷ The TDRI estimated that 3 million Thais work in high-risk occupations with an over-70 percent likelihood to be replaced by AI.⁶⁰⁶⁸ The International Labor Organization (ILO) warned that women in Thailand face a higher risk of job disruption from AI as they currently lack access to STEM education and training opportunities.⁶⁰⁶⁹

A report commissioned by the Institute of Public Policy and Development predicted: "If Thai workers whose jobs are at risk of automation fail to retrain, by 2035, the employment rate could fall by 23 percentage points," requiring decisive policies to reform workforce development.⁶⁰⁷⁰ Whether AI adoption in Thailand will result in job disruption or job transformation will be determined by the overall readiness and AI-preparedness of both younger and older Thais.⁶⁰⁷¹ These findings demonstrate the significance of Thailand's National AI Strategy envisioning the increase of human capability and the improvement of AI education.⁶⁰⁷²

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The National Science and Technology Development Agency shared in February 2024 the McKinsey & Company report on the recommendations on questions to be answered before government agencies use Gen AI. The list of questions include whether the government is able to address risks posed by the AI tool.⁶⁰⁷³ In addition, in March 2024, the Ministry of Higher Education, Science, Research and Innovation and the Ministry of Digital Economy and Society discussed the National Artificial Intelligence Action Plan for the Development of Thailand Phase 2, 2024–2027.⁶⁰⁷⁴ A Thai Large Language Model was discussed, among other topics.

Public Participation

The Digital Government Plan (2017–2021) defined improving government transparency and public participation by facilitating easy access to government data as one of four goals.⁶⁰⁷⁵ Two of the indicators that the plan commits to measuring itself against are “Promoting Country’s Open Data Index to place in the World’s top 25” and “Creating e-Gov Act.” However, the plans and initiatives relating to AI have been developed by the central government without meaningful public participation. The National AI Strategy includes no indication of public participation or consultation.⁶⁰⁷⁶

Data Protection

Thailand’s Personal Data Protection Act (PDPA) is the country’s first consolidated law on data protection, framing the collection, use, and disclosure of personal data. The PDPA draws key concepts and principles from the EU General Data Protection Regulation (GDPR) and establishes a Personal Data Protection Committee.⁶⁰⁷⁷ Enforcement of the PDPA began on June 1, 2022.⁶⁰⁷⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The PDPA defines personal data as “any information relating to a Person, which enables the identification of that Person, whether directly or indirectly.”⁶⁰⁷⁹ The PDPA mandates that Data Protection Officers (DPO) be appointed for government agencies and firms with large-scale data processing. DPOs will be responsible for helping organizations ensure that personal data is processed in compliance with the PDPA. DPOs will also serve as contact points on PDPA issues with authorities and data subjects.⁶⁰⁸⁰

Research on the PDPA highlights gaps in data protection, such as provisions that grant the Thai government preferential exemptions and allow the government to exercise a relative degree of flexibility to expand its powers should it deem necessary.⁶⁰⁸¹ For example, the PDPA currently mandates the outright exclusion of public authorities involved in national security, law enforcement, and the National Credit Bureau from its ambit.⁶⁰⁸² The definition of personal data in the PDPA also lacks clarity as to whether it covers IP addresses and cookie identifiers.⁶⁰⁸³ Moreover, the PDPA does not provide a definition of anonymized or pseudonymized data.⁶⁰⁸⁴

The Digitalization of Public Administration and Services Delivery Act requires the establishment of a government data exchange center to act as a sharing center for digital data and digital registration between State Agencies. The exchange center would support agency operations in the provision of services to the people via digital means.⁶⁰⁸⁵ The data exchange center shall also determine policies and standards in relation to interconnectivity and sharing of digital data and present them for the approval of the Digital Government Development

Commission.⁶⁰⁸⁶ The Act mandates that the public shall have free access to the digital data from state agencies and be able to distribute or utilize the data or use it as a means to develop services and innovation in various ways.⁶⁰⁸⁷ As per the Act, the Digital Government Development Commission will prescribe standards and rules on the disclosure of such data.⁶⁰⁸⁸

The Electronic Transactions Development Agency (ETDA), under the Ministry of Digital Economy and Society, builds confidence in innovation with the ETDA Sandbox testing field. The ETDA cooperates with the Bank of Thailand to expand the scope of innovation testing, which covers innovations in health tech and AI. The ETDA and Bank of Thailand also cooperate in driving operations corresponding to the government policy of the Face Verification System (FVS).⁶⁰⁸⁹

Thailand does not have a representative in the Global Privacy Assembly (GPA). Thus, the country did not co-sponsor the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁶⁰⁹⁰ the 2020 GPA Resolution on AI Accountability,⁶⁰⁹¹ the 2022 GPA Resolution on Facial Recognition Technology,⁶⁰⁹² or the 2023 GPA Resolution on Generative AI.⁶⁰⁹³

Algorithmic Transparency

Thailand's PDPA does not provide for algorithmic transparency and no other protections guarantee such a right. Draft legislation or the Digital Thailand

ethical principles may provide guidance for such a right, but they are not available in English.

AI System for Surveillance

The AI System for Surveillance and Criminal Analysis in Public in east Bangkok links with security cameras at crime hotspots under Huai Kwang police jurisdiction. The system's facial recognition compares faces against photos in a database of arrest warrants, while its behavior analysis aims to prevent petty crime.⁶⁰⁹⁴ The Thai government positioned the pilot program in 2019 as a public safety tool under its wider Thailand 4.0 and Smart Cities initiatives. Following a pilot phase, the Bangkok Metropolitan Administration ordered its Traffic and Transportation Department to install more CCTVs along Khao San Road, one of the top tourist destinations. The Administration is also considering using AI in other ways to boost safety.⁶⁰⁹⁵

The Interim report of the United Nations (UN) Special Rapporteur on freedom of religion or belief to the 75th session of the UN General Assembly in 2020 found that Thai authorities reportedly used AI-enabled closed-circuit television system, biometric data, and frequent police checks to surveil minority Muslim groups.⁶⁰⁹⁶ The Thai military denied using AI to surveil Muslims in the restive southern provinces where an armed insurgency since 2004 has killed more than 7000 people.⁶⁰⁹⁷

Anti-Fake News Centre

Thailand launched the Anti-Fake News Centre in November 2019. The Ministry of Digital Economy and Society (MDES) defines “fake news” as any viral online content that misleads people or damages the country's image. The Centre is staffed by around 30 officers at a time, who review online content gathered through “social listening” tools. Coupled with a law prohibiting criticism of the monarchy, the Centre allows the government to censor or suppress any news

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

it finds broadly affecting “peace and order, good morals, and national security”⁶⁰⁹⁸ without the need for evidence.

In February 2022, the Cabinet of Thailand approved a regulation to set up centers at three different levels to coordinate efforts to tackle fake news on social media. A central coordination center would be set up at the permanent secretary’s office of MDES. Furthermore, each ministry will also set up its own center to deal with fake news. The Provincial Administration Department of the Interior Ministry would also set up similar centers in all provinces under the leadership of provincial governors or their deputies.⁶⁰⁹⁹ According to the regulation, officials must alert the public immediately in the event of the spread of fake news and inform the Public Relations Department within one hour to correct the news and take action against those spreading it. Officials must also promptly notify the MDES to remove the fake news from the computer system.⁶¹⁰⁰

However, the Move Forward Party considers that the original Centre failed in its task and asked to cut the total budget. According to their metrics, the Centre received 5.47 million complaints about fake news in September 2023 from which 539 messages were flagged for fact-checking. Of those items, 235 were verified and deemed able to be disseminated.⁶¹⁰¹

Digital ID

Thailand is currently working on legislation that would replace physical ID cards with the Digi-ID as the backbone of e-commerce transactions in the country. The Digi-ID would use blockchain to securely exchange user data but also require facial-recognition verification in an effort toward a “self-sovereign” digital identity management system.⁶¹⁰² It remains unclear how the government conducted the risk or impact assessment on the mandatory use of biometric data.

The Digital Economy and Society Ministry began working on a Digital ID Framework for Thailand to ease the process to access online services by using a digital ID.⁶¹⁰³ The first phase of this framework, 2022–2024, comprised eight strategies including making the Ministry of Interior the main agency providing

Center for AI and Digital Policy

identity information; giving Thai citizens, corporations, and foreigners Digital ID; and making Electronic Transactions Development Agency (ETDA) the entity responsible for Digital ID policy.⁶¹⁰⁴ ETDA issued a Royal Decree on the Supervision of Regulated Digital Identification Authentication and Verification Service Businesses to regulate business operators that provide digital identification authentication and verification services.⁶¹⁰⁵

During this first phase, digital ID cards were introduced for people who use public services provided by agencies under the Ministry of Interior. To access D.Dopa, the digital ID mobile application, the citizens had to register with their district office's registry division using their physical ID cards.⁶¹⁰⁶

The Digital Economy and Society Ministry approved the draft of phase 2 of the Framework, which will cover 2025–2027, in November 2024. Phase 2 will seek to increase the number of e-government services that accept digital ID.⁶¹⁰⁷

EdTech and Children Tracking

According to a report by Human Rights Watch (HRW), Thailand's Digital Education Excellence Platform (DEEP) is one of 56 EdTech products built or financed by governments that transmitted children's data to AdTech companies.⁶¹⁰⁸ This represents a violation of children's privacy. In addition, HRW found that Edmodo, an online learning platform used by Thailand and several other countries, may have granted access to users' contact data to third-party companies.⁶¹⁰⁹ Furthermore, HRW found that Edmodo has the capability to collect Android Advertising ID (AAID) for those using an Android device, which enables advertisers to track a person over time and across different apps installed on their device for advertising purposes.⁶¹¹⁰ HRW highlighted that an AAID is neither

necessary nor relevant for an app to function.⁶¹¹¹ Thailand's usage of Edmodo for children's learning during the COVID-19 pandemic, therefore, compromised children's privacy.

Environmental Impact of AI

The Thailand National AI Strategy and Action Plan considers Social and Environmental Impact among the objectives.⁶¹¹² More specifically, the strategy aims to provide for a better environment and efficient use of natural resources.

Lethal Autonomous Weapons

Thailand is not a party to the Convention on Conventional Weapons (CCW).⁶¹¹³ However, Thailand voted in support of the United Nations General Assembly Resolution 78/241 on lethal autonomous weapons systems (LAWS) in December 2023. The Resolution stresses the need to address challenges and concerns raised by LAWS.⁶¹¹⁴ Additionally, Thailand voted in favor of Draft Resolution L.77 on Lethal Autonomous Weapons Systems, adopted at the United Nations General Assembly in October 2024.⁶¹¹⁵

Human Rights

Thailand has experienced 19 constitutional changes in less than a century. The government acknowledges that Thailand is both a destination and transit country for human trafficking linked to illegal immigration, child labor, and prostitution.⁶¹¹⁶ However, most of the plans put the responsibility of respecting human rights on the citizens and not the government.

In 2020, citizen protests criticize the government and requested reform of the monarchy. In response, the Thai government extended the powers of an emergency decree.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Under the 2017 Constitution, members of the NCPO are protected from prosecution for human rights violations committed during NCPO rule.⁶¹¹⁷ This protection is concerning given the reports of torture, extrajudicial executions, and enforced disappearances against human rights defenders.

The 2019 Thailand Cybersecurity Act gives the government the authority to monitor and seize data and equipment without a court order in the name of cybersecurity risk and denies a right to appeal to anyone targeted by the law in the cases of a crisis or critical threat.⁶¹¹⁸

Despite continuous promises of reform, Thai authorities continue to suppress and prosecute citizens criticizing the monarchy or the military. The combination of AI policing, Fake-News monitoring, and the Cybersecurity Act creates further concerns about fundamental rights. A group of international public and private experts and NGOs launched the study *Thailand's Cybersecurity Act: Towards a Human-Centered Act Protecting Online Freedom and Privacy, While Tackling Cyber Threat* to help build the discourse on the necessity of applying a human rights-based approach to cybersecurity legislation.⁶¹¹⁹

Thailand inched up from “not free” to a “partly free” mark for political and civil liberties in its *Freedom in the World 2024* report due to “highly competitive” parliamentary elections.⁶¹²⁰ However, unelected parties got to exclude the party that got the most votes out of the government. Freedom House highlighted that in 2021 the combination of democratic deterioration and frustrations over the role of the monarchy in Thailand's governance triggered large and regular anti-government protests. The government responded with authoritarian tactics, such as arbitrary arrests, intimidation, lèse-majesté charges, and harassment of activists.⁶¹²¹ Freedom House also noted that “press freedom remains constrained, due process is not guaranteed, and there is impunity for crimes committed against activists.”⁶¹²²

Thailand passed the Gender Equality Act in 2015. However, the legislation still allows for exceptions to gender discrimination on grounds of religion and national security.⁶¹²³

Thailand endorsed the Universal Declaration of Human Rights in 1948.

OECD / G20 AI Principles

Thailand has not endorsed the OECD AI Principles.⁶¹²⁴ However, an evaluation by the OECD AI Observatory shows that various OECD AI principles are reflected in the Thailand National AI Strategy.⁶¹²⁵

Thailand is also the only country from Southeast Asia to benefit from an OECD Country Program, which comprises 15 projects drawing from four key strategic pillars: good governance and transparency, business climate and competitiveness, “Thailand 4.0,” and inclusive growth. It includes peer reviews, capacity-building activities, inclusion in the OECD’s statistical tools, participation in eight OECD Committees or their subsidiary bodies, and adherence to nine OECD legal instruments.⁶¹²⁶

Council of Europe AI Treaty

Thailand has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law, which opened for signature in September 2024.⁶¹²⁷

UNESCO Recommendation on AI Ethics

Thailand adopted the UNESCO Recommendation on the Ethics of AI.⁶¹²⁸ Thailand is currently in the preparatory stages of the Readiness Assessment

Methodology (RAM).⁶¹²⁹ The RAM will highlight any institutional and regulatory gaps in Thailand's ethical AI implementation, allowing UNESCO to support the country in mending such gaps and implementing the UNESCO Recommendation.

Evaluation

Thailand has taken steps to govern AI and protect personal data with the release of its National AI Strategy, Digital Thailand: AI Ethics Guideline, enforcement of the Personal Data Protection Act (PDPA), and adoption of the UNESCO Recommendation on the Ethics of AI. The Draft Royal Decree on Business Operations that Use Artificial Intelligence Systems and the Draft Act on Thailand Artificial Intelligence Promotion and Support being considered and developed by relevant Thailand authorities offer insight into upcoming policy action.⁶¹³⁰ However, concerns remain regarding AI-powered surveillance practices, especially given limited human rights protections.

Trinidad and Tobago

In 2024, Trinidad and Tobago continued work to realize the National Digital Transformation Strategy 2023–2026 with IDB support. However, the Ministry of Digital Transformation failed to deliver updates to the Data Protection Act and to staff the country's data protection authority, the Office of the Information Commissioner. Trinidad and Tobago signed the CELAC Kingstown Declaration emphasizing the need for ethical, people-centered AI to support sustainable development and address associated risks.

National AI Strategy

Trinidad and Tobago has not developed a national AI strategy. However, other relevant policy initiatives, including a Digital Transformation Strategy, address AI and other technologies as they relate to inclusion, access, safety, and security.

The Ministry of Digital Transformation,⁶¹³¹ the entity in charge of the digitalization of Trinidad and Tobago, released a draft national digital

transformation strategy in August 2022.⁶¹³² The strategy identifies three pillars of digital transformation: Digital Society, described as “people centered and knowledge based—access, skills, participation (inclusion), connected communities”; Digital Government focusing on “Public value—efficiency in service delivery, citizen-centric, no-wrong door”; and Digital Economy.⁶¹³³ The strategy includes guidelines such as inclusion (digital, social, financial), access, safety and security (protection of fundamental rights), for policymakers supporting digital transformation.

In this context, the Government of Trinidad and Tobago’s e-Government Interoperability Framework (e-GIF) sets out specifications for integrating ICT systems across the public sector to facilitate seamless communication between agencies and secure data sharing. According to the IMF, this framework is part of a broader strategy to enhance public sector efficiency, citizen engagement, and service delivery through initiatives such as building a government cloud and data center to establish a reliable foundation for digital transformation.⁶¹³⁴ According to UNDP, the aim is “to increase the ease of access and efficiency of government services for members of society,”⁶¹³⁵ particularly benefiting underserved and vulnerable populations such as persons with disabilities, rural residents, and women.

Key interoperability projects include the National Electronic Identification (e-ID), which provides a secure digital identity for accessing government services online; the Health Information Management Systems (HIMS), which streamlines healthcare data management; and the Integrated Financial Management Information System (IFMIS), which improves financial operations in government entities. These projects align with the objectives of the National Digital

Center for AI and Digital Policy

Transformation Plan (2024–2027), which emphasizes inclusive, accessible, and efficient government services.⁶¹³⁶

The national digital transformation strategy is part of the National Development Strategy (NDS) 2016–2030, Vision 2030. The Vision is “intended to provide for an orderly long-term development process, inclusive of the United Nations (UN) Sustainable Development Goals (SDGs).”⁶¹³⁷ Keith Rowley, Trinidad and Tobago’s Prime Minister stated, “I am committed to rebuilding our country and economy, restoring confidence, equity and social justice, and improving every area of national life. We recognise that, as a nation, we face several challenges—some triggered by global events beyond our control, with consequential ripple effects at the national level.”⁶¹³⁸

The Ministry of Digital Transformation aims to turn Trinidad and Tobago into a digital society.⁶¹³⁹ The objective is “a new way to address the end-to-end consumption and delivery of goods and services to customers using appropriate digital technology”⁶¹⁴⁰ and to “ensure that all citizens and residents are able to participate in a digital society and to have access to digital resources.”⁶¹⁴¹

The “implementation arm” of the Ministry for Digital Transformation is the National Information Communication and Technology Company, IgovTT. IgovTT was tasked with the procurement, project management, and implementation of IT solutions for the Government of Trinidad and Tobago.⁶¹⁴² IgovTT was established in 2009 after various mergers among communications, information, and technology ministries to reflect “the government’s unwavering commitment to leveraging technology for national development.”⁶¹⁴³

Trinidad and Tobago also developed a Cloud Computing Consideration Policy advancing the adoption of cloud services and procurement from the public

sector together with a National Hybrid Cloud (GovNeTT NG) enabling public sector entities to acquire greater information security controls.⁶¹⁴⁴

Trinidad and Tobago's digital policy will be supported by the Inter-American Development Bank (IDB). In December 2023, Trinidad and Tobago signed a US\$90 million IDB credit line and an initial US\$42 million loan to help step up its digital transformation strategy by enhancing public services, cybersecurity, and AI capabilities. The program will boost digital skills, support over 150 firms, and increase digital inclusion to drive innovation and inclusive growth.⁶¹⁴⁵ According to Minister of Planning and Development Penelope Beckles, the program reflects the government's commitment to fostering a secure and inclusive digital economy.⁶¹⁴⁶ The loan supports key initiatives such as the National e-ID system, the Interoperability Framework, and cybersecurity modernization. These align with the Ministry of Digital Transformation's 2024 budget allocation of TT\$329 million, which prioritizes \$50 million for the Digital Government Program, encompassing e-ID development and cybersecurity strategies, and \$20 million for digital society initiatives such as broadband expansion and ICT access centers.⁶¹⁴⁷ Combining IDB funding with national budget commitments demonstrates Trinidad and Tobago's commitment to the implementation of concrete policies to enhance AI implementation, bolster cybersecurity, and promote digital inclusion, ensuring a more citizen-centric and secure digital transformation.

The Ministry of Digital Transformation, Government of Trinidad and Tobago established the Caribbean Data Centre Association (CDA) in March 2024 to boost "regional digital collaboration efforts to provide a robust platform for digital transformation and the development of the regional digital economy."⁶¹⁴⁸ This is significant as the Trinidad and Tobago government is collaborating with

regional peers to develop data infrastructure as they “pursue sustainable digital transformation in the Caribbean.”⁶¹⁴⁹

Trinidad and Tobago has also been part of the Caribbean Artificial Intelligence Initiative led by the UNESCO Cluster Office for the Caribbean and the Broadcasting Commission of Jamaica (BCJ), with the support of UNESCO Information for all Program (IFAP) National Committee of Jamaica.⁶¹⁵⁰ The Initiative “aims to develop a sub-regional strategy on the ethical, inclusive and humane use of AI in the Caribbean Small Island Developing States.” The Caribbean AI Policy Roadmap was released in June 2021,⁶¹⁵¹ following a period of stakeholder consultation in which Trinidad and Tobago participated.

The Caribbean AI Policy Roadmap acknowledges that “AI systems raise new types of ethical issues that include, but are not limited to, their impact on decision-making in employment and labour, social interaction, health care, education, media, freedom of expression, access to information, privacy, democracy, discrimination, and weaponization. Furthermore, new ethical challenges are created by the potential of AI algorithms to reproduce biases, for instance regarding gender, ethnicity, and age, and thus to exacerbate already existing forms of discrimination, identity prejudice and stereotyping. As Caribbean nations expand their adoption of AI tools and other exponential technologies, stakeholders (policymakers, citizens, private sector, academia, and NGOs) must proactively collaborate to create strategies for the humanistic development of guidelines, regulations and laws. Boundaries should be defined to regulate the AI decision-making, AI rights, inclusion of manual overrides and AI accountability protocols.”⁶¹⁵²

The Policy Roadmap was developed based on a series of assumptions about the Caribbean and Artificial Intelligence. These include: “Human creativity is inextricably linked to Caribbean identity, economic viability and sustainable development”; “AI is a product of human creativity”; “AI is in service of humanity”; “AI must be inclusive, fair, transparent, accountable”; “AI must be regulated”; “Human rights supersede AI rights”; “Bias is everywhere in AI”; “We

Are Our Data”; “Data rights will be the civil rights movement of the 21st century.”⁶¹⁵³

The Policy Roadmap is based on six principles: Resiliency, Governance, Transformation, Upskilling, Preservation and Sustainability.⁶¹⁵⁴ For each principle, the Roadmap includes specific strategies and deliverables that UNESCO recommends “to enable the Caribbean’s effective adaption of AI technologies and digital transformation of its economies.”⁶¹⁵⁵ For example, under the Governance principle, the Roadmap includes actions like establishing national and regional oversight boards and licensing regimes, developing tools to monitor biases in AI, and protecting personal privacy as ways to “Develop Responsible AI Governance, Oversight, Principles & Policies to Do No Harm and to enhance safety, security and accountability of AI.”⁶¹⁵⁶

Public Participation

Following release of the draft national digital transformation strategy, the Ministry of Digital Transformation sought public and stakeholder engagement. According to the Ministry, “co-creation and stakeholder engagement are key elements of the development of the National Digital Transformation Strategy. Contributions will be curated by four Technical Working Groups under the categories of Digital Society; Digital Economy; Digital Government; and Regional Integration and Global Linkages.”⁶¹⁵⁷

The Ministry of Digital Transformation website continues to host a form for citizen input⁶¹⁵⁸ based on their review of the national strategy.⁶¹⁵⁹ However, neither the public comments nor information about their integration into the strategy are easily accessible.

Vision 2030 was also the object of public consultation.⁶¹⁶⁰ The Trinidad and Tobago Bureau of Standards issued a draft Voluntary National Standard for

Artificial Intelligence and Information Technology for public comment in 2024.⁶¹⁶¹ This voluntary national standard would specify the requirements and provide guidance for “establishing, implementing, maintaining and continually improving an AI management system within the context of an organisation.”⁶¹⁶² The standard applies to all types of organizations, including public sector organizations, private sector organizations, small and medium-sized enterprises, and conformity assessment bodies, enabling them to demonstrate compliance with AI management best practices.⁶¹⁶³

Data Protection

Trinidad and Tobago’s Data Protection Act (DPA)⁶¹⁶⁴ was enacted in 2011 to protect personal data of citizens in the private and public sector but is only partly proclaimed. In January 2012, the following sections were proclaimed with Legal Notice: Preliminary Provisions; general objective of the Act; and the provisions concerning the Office of the Information Commissioner.⁶¹⁶⁵ In August 2021, two additional sections regarding the Protection of Personal Data by Public Bodies were proclaimed with Legal Notice.⁶¹⁶⁶ Most of the other provisions covering the protection of personal data are not yet in force. The Data Protection Act is also notably missing the right to erasure, the right to object or opt out of consent, the right to data portability, and the right not to be subject to data processing decisions based solely on automated decision making.⁶¹⁶⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

A draft bill, inspired by the GDPR “to be in greater compliance with more recent legislation in Jamaica and Barbados,” was expected to be read in Parliament in 2022.⁶¹⁶⁸ However, no such bill has been reported.

In February 2023, the parliamentary opposition introduced a motion calling for the Government to fully proclaim the Data Protection Act.⁶¹⁶⁹ The Trinidad and Tobago Guardian reported that Senator Jearlean John stressed that “the PNM Government is keeping T&T in the Stone Age, failing to protect citizens’ information by not fully proclaiming the Data Protection Act 2011. This is the situation at a time when people’s lives are stored on phones, there’s ChatGPT technology and the US Government has banned TikTok on government-issued devices following security concerns.”⁶¹⁷⁰

In March 2023, Parliament granted an 18-month extension for updating and operationalizing the Data Protection Act.⁶¹⁷¹ Opposition senator Wade Mark highlighted that while some sections of the Act were operationalized in 2012 and 2021, critical provisions necessary to safeguard citizens’ privacy remain unproclaimed. He urged the Senate to call on the government to address this gap immediately.⁶¹⁷²

Implementation of the DPA as proclaimed has also been delayed. Despite the Attorney General of Trinidad and Tobago announcing in the press in December 2020 that the position of the Information Commissioner “is expected to be filled with immediacy,”⁶¹⁷³ as of March 2023, there was “no office. There is no Information Commissioner.”⁶¹⁷⁴ The Office of the Information Commissioner will be responsible for the oversight, interpretation and enforcement of the DPA.⁶¹⁷⁵

Media sources reported in November 2023 that the Ministry of Digital Transportation expected to conclude updates to the Data Protection Act and operationalize the Office of the Information Commissioner by 2024.⁶¹⁷⁶ As of October 2024, however, no updates to the DPA have appeared nor has an Information Commissioner been named. The lack of progress raises concerns about government accountability and the protection of citizens' fundamental right to privacy.

Algorithmic Transparency

Although transparency and explainability are mentioned in the Caribbean AI Policy Roadmap, no law in Trinidad and Tobago guarantees a right to algorithmic transparency.

Online Disinformation

On the occasion its seventh summit, the Community of Latin American and Caribbean States (CELAC), released the Buenos Aires Declaration in January 2023. Trinidad and Tobago endorsed the Declaration. The Declaration strengthens the signatories' commitment to safeguard the rights and interests of citizens, fostering greater regional integration and collaboration.⁶¹⁷⁷ The signatories also recognized the need for further integration and collaboration to fight against disinformation with AI and algorithms and their impact on state infrastructures, firms, and people's well-being.⁶¹⁷⁸

Digital ID Initiative

In its post-COVID recovery plan, the government of Trinidad and Tobago stresses the importance of a digital society.⁶¹⁷⁹ The plan includes the goal of a cashless society and the creation of an e-identity for every citizen. The e-identity will be mandatory for using governmental services and aims at integrating existing identifiers. In effect, the e-identity will be used for government services as well as

digital commerce. The e-identity should also address the digital divide between different social groups.⁶¹⁸⁰

The e-identity integrates with a larger ecosystem for access digital government that will include “all GoRTT services, digital signing, accessing financial, education and health services as well as Private Sector services.”⁶¹⁸¹

Facial Recognition

Prime Minister Keith Rowley stated in November 2022 that “the Government was spending \$80 Million to acquire and install 2500 CCTV cameras across the country.” A few days later, the Acting Police Commissioner announced that facial recognition software to detect and prevent crime will soon be used. There is currently no legal framework in Trinidad and Tobago regarding the use of facial recognition, no guidelines made public to prevent racial profiling/biases, no algorithmic transparency, and no opportunity for public comment.⁶¹⁸²

Environmental Impact of AI

While there has been no concrete development specifically targeting the environmental impacts of AI in Trinidad and Tobago, the country has begun integrating sustainability considerations into its broader digital transformation agenda. Initiatives like the establishment of a government cloud and secure data center aim to reduce paperwork and improve efficiency, indirectly contributing to environmentally responsible practices.⁶¹⁸³

Moreover, Trinidad and Tobago has actively engaged in regional efforts, participating in the Second Ministerial and High-Level Authorities Summit on the Ethics of Artificial Intelligence in Montevideo. As a signatory of the Montevideo Declaration, it has committed to prioritizing “environment, sustainability, and climate change”⁶¹⁸⁴ in AI governance, supporting measures to align AI technologies with sustainable development.

Center for AI and Digital Policy

ECLAC has further emphasized the need for regulatory frameworks that mitigate environmental harm, promote data-efficient AI models, and encourage innovation through AI sandboxes, aligning with the region’s sustainability goals.⁶¹⁸⁵ The Caribbean AI Policy Roadmap to which Trinidad and Tobago contributed recommends concrete applications for AI to “Enable Environmental Management and Climate Change Fight.” These include early warning systems for climate-related disasters, remote monitoring, and public education.⁶¹⁸⁶

Lethal Autonomous Weapons

Trinidad and Tobago endorsed the Bélen Communiqué in February 2023, along with more than 30 other Latin American and Caribbean states.⁶¹⁸⁷ The Bélen Communiqué calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

On this occasion, Trinidad and Tobago issued a statement acknowledging “that new and emerging technologies hold great promise for the advancement of human welfare, yet it is becoming increasingly evident that the introduction of new technological applications, such as those related to autonomy in weapon systems, raise serious concerns from humanitarian, legal, security, technological and ethical perspectives. The risk is real. It has not yet been demonstrated that any algorithm can reliably make the human-like decisions and judgments required to comply with international law.”⁶¹⁸⁸

Trinidad and Tobago’s Office of the Attorney General co-hosted CARICOM (Caribbean Community) member states and civil society organizations including Stop Killer Robots for a two-day regional Conference on the Human Impacts of Autonomous Weapons in September 2023. At the end of the conference, the member states issued the CARICOM Declaration on

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Autonomous Weapons, which called for the “urgent pursuit of an international legally binding instrument, incorporating prohibitions and regulations on autonomous weapons systems.”⁶¹⁸⁹

Trinidad and Tobago cited the CARICOM statement and Bélen Communiqué in the country’s input to the Report of the UN Secretary on Lethal Autonomous Weapons Systems.⁶¹⁹⁰ Trinidad and Tobago’s input cited concerns over a lack of conformity with international criminal, human-rights, and humanitarian laws and “the implications of LAWS for non-proliferation and the risks of diversion to non-state actors, including criminals and terrorist groups and the challenges of LAWS to internal and domestic security.” The statement concluded by reiterating the country’s support for “an international legally binding instrument that prohibits unpredictable or uncontrollable autonomous weapons systems, capable of using force without meaningful human control [...] while implementing regulations for other forms of autonomous weapons systems.”

Human Rights

Trinidad and Tobago received a score of 82/100 by Freedom House and is thus classified as “Free.”⁶¹⁹¹ The country has a functioning parliamentary democracy with an active and free civil society. However, discrimination against LGBT+ people, violence against women, and human trafficking persist.

Trinidad and Tobago has endorsed the Universal Declaration of Human Rights and ratified a number of UN treaties protecting these rights. These treaties include the International Covenant on Civil and Political Rights, Convention on the Elimination of All Forms of Discrimination against Women, International Convention on the Elimination of All Forms of Racial Discrimination, Convention on the Rights of the Child, and the Convention on the Rights of Persons with Disabilities.⁶¹⁹²

OECD / G20 AI Principles

Trinidad and Tobago has not endorsed the OECD AI principles.⁶¹⁹³ According to OECD AI Principle 2.5 regarding international co-operation for trustworthy AI, “Governments, including developing countries and with stakeholders, should actively cooperate to advance these principles and to progress on responsible stewardship of trustworthy AI. Governments should work together in the OECD and other global and regional fora to foster the sharing of AI knowledge, as appropriate.” The OECD acknowledges the work of the Inter-American Development and its “fAIr LAC” initiative to promote the responsible and ethical use of AI and improve the public services e.g., education, health, and social protection, in Latin American and Caribbean (LAC) countries,”⁶¹⁹⁴ which includes Trinidad and Tobago.

In 2022, the OECD, in partnership with the Development Bank of Latin America (CAF) also published a report on “The Strategic and Responsible Use of Artificial Intelligence in the Public Sector of Latin America and the Caribbean” including Trinidad and Tobago.

Council of Europe AI Treaty

Trinidad and Tobago has not signed the first legally binding international treaty on AI, the council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁶¹⁹⁵

UNESCO Recommendation on AI Ethics

Trinidad and Tobago is a member state of UNESCO⁶¹⁹⁶ and endorsed the UNESCO Recommendations on AI Ethics.⁶¹⁹⁷ Trinidad and Tobago has taken steps to implement the UNESCO Recommendation through regional initiatives such as those organized in cooperation with the CAF (Development Bank of Latin America and the Caribbean) and UNESCO.⁶¹⁹⁸ Although Trinidad and Tobago

did not participate in the first meeting of the regional council on AI ethics in Santiago, Chile, in 2023, the country endorsed the Montevideo Declaration, the outcome document from the Second Ministerial and High-Level Summit in 2024.⁶¹⁹⁹

The Caribbean AI Policy Roadmap to which Trinidad and Tobago contributed was developed in collaboration with UNESCO “as a framework for policy development and regional collaboration [based on] The Recommendation on the Ethics of Artificial Intelligence.”⁶²⁰⁰

Trinidad and Tobago has also called for responsible, secure, inclusive, and people-centered AI systems as a member of the Community of Latin American and Caribbean States (CELAC). The CELAC 2024 Declaration of Kingston asserts “We recognize that the responsible, inclusive, people centered, and ethical design, development, deployment, and use of secure artificial intelligence systems has the potential to accelerate sustainable development, we also acknowledge that A.I. systems pose risks that are particularly challenging for developing countries.”⁶²⁰¹

Trinidad and Tobago has not initiated the UNESCO Readiness Assessment Methodology (RAM), a tool to help countries identify and address challenges to integrating AI ethically and responsibly.⁶²⁰²

Evaluation

Trinidad and Tobago endorsed the UNESCO Recommendation on the Ethics of AI and can help foster implementation through regional cooperation with other Caribbean or Latin American countries. At the national level, Trinidad and Tobago has developed a national digital strategy, however it has not turned its attention to artificial intelligence. Likewise, its 2012 Data Protection Act has not

fully been enacted, most importantly the provisions regarding data subjects' rights, and it would need to be updated for concerns related to AI such as establishing rights such as algorithmic transparency. The lack of progress to implement the protections in the privacy law that have been proclaimed, such as opening the Office of the Information Commissioner, deepens concerns about Trinidad and Tobago's ability to protect fundamental rights in the AI era. Initiatives such as the development of an e-identity and the use of facial recognition technology for crime prevention and detection are, without proper legal frameworks and oversight mechanisms, of particular concern.

Tunisia

In 2024, the Tunisian parliament passed laws to implement biometric identity cards and passports, deepening concerns over surveillance. The country also continued to advocate in the UN for a legally binding treaty to restrict lethal autonomous weapons.

National AI Strategy

Tunisia's path toward the establishment of a National AI Strategy started in 2018 when the Minister of Higher Education in partnership with the National Agency for the Promotion of Scientific Research (ANPR) produced a five-year AI development plan (2016–2020). The ANPR set up a Task Force to provide oversight of the project and a Steering Committee to define a methodology and action plan.⁶²⁰³ This was further discussed during workshops organized by the UNESCO Chair on Science, Technology and Innovation Policy.⁶²⁰⁴

Tunisian's political instability curtailed the plans to move the initiative forward.⁶²⁰⁵ In 2019, the Ministry of Industry, Mines and Energy led the development of a 5-year AI roadmap for 2021–2025 with the aims to:⁶²⁰⁶

- Raise awareness of the real challenges and possibilities of AI

- Strengthen the ecosystem to develop AI by addressing the main pillars of AI
- Implement AI pilot projects in public and private sectors.

The Ministry of Industry, Mines and Energy (MIEM) and the National Institute of Normalization and Intellectual Property also drafted a bill to protect the Intellectual Property of Algorithms.⁶²⁰⁷

The Ministries of Communication Technologies; Industry, Mines and Energy; Economics & Planning; and Higher Education & Scientific Research signed a memorandum aiming to define the general orientations of the national artificial intelligence strategy and to follow up on the results of a study planned for this purpose.⁶²⁰⁸

As a member of the African Union, Tunisia is committed to working toward the alignment of the country's efforts with the vision of the Union to build a continental digital transformation strategy⁶²⁰⁹ and a continental AI strategy.⁶²¹⁰

For engagement beyond the African region, with the aim of cooperation on Artificial Intelligence, Tunisia signed a Memorandum of Intent with the Ministry of Companies and Industry of Italy to advance digital technology,⁶²¹¹ a Memorandum of Understanding with the Ministry of Science and Communication Technologies of Korea centered on developing 5G,⁶²¹² and discussions with the Swedish Minister of Public Administration and others to enhance cooperation and shared expertise on digital areas such as AI strategies and legislative frameworks.⁶²¹³

Center for AI and Digital Policy

Public Participation

The Tunisian government does not have a systematic public participation process to develop policies in general or AI policies in particular. Discussions took place among the task forces and steering committees designated by the Tunisian government. Since September 2021, The Future Society (TFS) and GIZ Digital Transformation Center Tunisia have also supported a multi-stakeholder process to develop Tunisia's National AI Strategy with the Tunisian Ministry of Communication Technologies, Ministry of Economy and Planning, Ministry of Higher Education and Scientific Research, and the Ministry of Industry, Mines, and Energy. According to TSF, "The project's goal is to capitalize on Tunisia's strengths in AI in order to support economic growth, promote social inclusion, and ensure better service to citizens." This project emphasizes the Tunisia Government's efforts to consult with civil society and different stakeholders in the drafting process.⁶²¹⁴

Notwithstanding the various initiatives put forth by the Tunisian government to establish a national AI policy, not all the documents are available on the government's official websites. Only the Organic Act No. 2004-63 for Personal Data Protection is available online.⁶²¹⁵

The first ever political consultation took place in January 2022 on the matter of the referendum to revise the constitution. The government set the website E-Istichara (e-consultation) as the repository of public input.⁶²¹⁶ The initiative had mixed reviews due to the requirement of a national identity number and a validation code sent to mobile phones. While E-Istichara is presented as a portal for citizens to express their opinions, under the motto "your opinion, our decision," reservations were evident about the degree of inclusiveness and privacy of the platform.⁶²¹⁷ The National Center for Informatics, the Ministry of Communication Technologies, and the Ministry of Youth and Sports oversee operation of E-Istichara.⁶²¹⁸

Center for AI and Digital Policy

The OECD offered guidance and technical assistance to support the Tunisian government in improving public participation and creating citizen charters for public projects in three municipalities.⁶²¹⁹ Earlier in 2016, the OECD worked with Tunisia to create a citizen dialogue platform, activating working groups to promote stakeholder participation. The enactment of the Access to Information (ATI) Law of 2016, led to the publication of the Access to Information Guide for public officials, which was adopted by over 600 public institutions in Tunisia. The Guide aims to promote the participation of civil society, government, and ATI stakeholders in matters of public governance.

In August 2020, the UNESCO Maghreb office, the Ministry of Industry and SMEs organized a reflection workshop entitled “Inclusive Dialogue on the Ethics of AI” to draft international recommendations and establish a normative instrument on the ethics of AI.⁶²²⁰ Tunisian AI experts, such as start-ups, university researchers, and public officials attended the event.

The Ministry of Communication Technology launched a platform for citizen participation, including submission of complaints, an ideation forum, and access to open data and government documents.⁶²²¹ In 2021, the Ministry of Interior called for a public consultation on a new national ID and biometric database, yet the results of the process are not public.

Tunisia set up a National Digital Observatory in 2023 with the aim of informing public decision-making in the digital sector.⁶²²²

In the most recent UN e-Government Survey of 2024, Tunisia ranked 99th out of 193 countries in the world in e-participation⁶²²³ and among the top 3 African countries, in terms of the e-Government development index (EGDI).⁶²²⁴

Data Protection

The protection of personal data was included in the review of the Tunisian constitution of 1959 in 2002, with Article 9, mentioning: “protection of personal data shall be guaranteed, save in exceptional cases prescribed by law.”⁶²²⁵ The Constitution of 2014 expanded the rights to data protection by including Article 24 about Privacy and Personal Data⁶²²⁶ which provides that “the state protects the right to privacy and the inviolability of the home, and the confidentiality of correspondence, communications, and personal information.” Following a referendum, Tunisia created a new Constitution of 2022 that maintains protection of the right to privacy (Art 30), endorsing Law No. 2004-63, to protect the rights and freedoms of Tunisians.

In 2004, the Ministry of Justice established a legal framework for data protection rights that later led to the enactment of the Organic Act no. 2004-63 of July 27, 2004 on the Protection of Personal Data.⁶²²⁷ The National Authority for Protection of Personal Data (INPDP) was created that same year, later renamed National Personal Data Authority. This entity is deemed an independent oversight body for data protection.

Under the authoritarian regime of Ben Ali, the National Agency for Data Protection (INPDP) did not operate as an independent body. After the Tunisian Jasmine Revolution of 2011, processors began to regularly declare their personal data processing activities under the law.⁶²²⁸

The Data Protection Law of 2004 includes only certain provisions on transparency, related to notifications that data is being processed but it does not include provisions to notify the authority or data subjects in case of a data breach. In terms of accountability, there is no explicit provision for civil liability, but the Data Protection Authority is designated to investigate cases and subpoena or require evidence, and to impose penalties.⁶²²⁹

While the 2004 Organic Act is based on principles of lawfulness, processing, and accountability, the multiple exemptions for law enforcement,

tribunals and universities, public entities, and employers weaken the protection of personal data.⁶²³⁰

The Ministry of Justice was expected to propose a review of the framework for the protection of personal data. The review project of the Law was under parliamentary scrutiny since 2017. However, in March 2018, a new legislative project was introduced before the Tunisian Parliament. The new draft law on the Protection of Personal Data is aligned with the GDPR.⁶²³¹ Tunisia's general data protection regime strongly seeks to align with that of the EU. Negotiations in 2015 between Tunisia and the EU in the framework of the Deep and Comprehensive Free Trade Area, increased the Tunisian government's awareness of the need for alignment.

Tunisia ratified the Council of Europe Convention 108 for the Protection of Individuals with regard to Automatic Processing of Personal Data in 2015.⁶²³² Basic Law No. 2017/33 on the Approval of the Accession of the Republic of Tunisia to Convention 108 and its additional protocol was passed by the Parliament in 2017.⁶²³³ Tunisia has signed but not yet ratified the Protocol amending the Convention for the Protection of Individuals about Automatic Processing of Personal Data (Convention 108+).⁶²³⁴

In 2019, Tunisia also signed the African Union (AU) Convention on Cyber Security (Malabo Convention).⁶²³⁵ However, the country has not ratified the Convention yet.⁶²³⁶ The Convention emphasizes that each country is to develop its legislative framework, observing the African Charter on Human and People's

Rights. Tunisia's 2022 Cybercrime Decree⁶²³⁷ has instead been used to stifle free speech.⁶²³⁸

Tunisia's Data Protection Authority was accredited to join the Global Privacy Assembly (GPA) during the 34th Session held in 2012 in Uruguay.⁶²³⁹ Tunisia has not endorsed the GPA 2018 Declaration on Ethics and Data Protection,⁶²⁴⁰ the GPA 2020 Resolution on Accountability in the Development and Use of AI,⁶²⁴¹ the GPA 2022 Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology,⁶²⁴² or the 2023 GPA Resolution on Generative AI.⁶²⁴³

Algorithmic Transparency

Since Tunisia has not ratified Convention 108+ yet, the right to algorithmic transparency in Tunisia remains limited.⁶²⁴⁴ The Law of Protection of Personal Data applies to automatic processing of personal data as well as non-automatic processing of personal data carried out by individuals or by legal entities. The law

imposes mandatory obligations on individuals or legal entities responsible for the automated processing of personal data and their sub-contractors to take all the required technical steps to ensure that they provide the data subject, their heirs or their tutor a means for rectification, modification, correction, or deletion of their personal data through request by e-mail.⁶²⁴⁵ However, the law does not explicitly address automatic decision-making.

The Ministry of Finance of Tunisia has plans to apply AI in several applications, including fraud analysis and risk management.⁶²⁴⁶ The goal of the ministry is to use algorithms to sort through data that supports a more open government, including making the algorithms available for public review.

AI Projects in the Public Sector

The ecosystem of AI innovation is in the nascent stages in Tunisia. A report by UNESCO mapping the AI ecosystem of the Maghreb countries (Tunisia, Morocco, and Algeria) included government initiatives to support AI startups.⁶²⁴⁷ The Smart Tunisia Program was launched through a Public-Private Partnership to create 50,000 jobs in the digital sector.⁶²⁴⁸ The Program offers multiple opportunities for the promotion of entrepreneurship and investment in digital start-ups through cooperation with different Tunisian bodies.

As of 2020, the government has launched AI projects in the public sector through the Directorate of Innovation and Technology Development. Projects included a predictive model for fraud detection, voice transcriptions for parliamentary deliberations, image recognition to monitor mask-use in public, industry chatbots, chatbots for questions related to COVID-19, and imaging to detect COVID-19.

International cooperation supports the Tunisian initiatives in the AI landscape. The FIRST program (Fiscal Reform for a Strong Tunisia) is an initiative of the United States Agency for International Development (USAID) to support the government of Tunisia through the Ministry of Finance in matters of tax policy and fiscal reforms. The project relies on an AI algorithm and general

algebraic modeling system (GAMS) software to analyze data as input to policy decisions.⁶²⁴⁹

Tunisia received a score of B (or high) for its digital government transformation by the World Bank's GovTech Maturity Index (GTMI) for 2022.⁶²⁵⁰ The index evaluates core government system indexes, public service delivery, digital citizen engagement, and gov tech enablers in the country.

The Ministry of Communication Technologies published the Electronic Government (e-Government) policy in a circular in early 2024. The policy requires all government authorities to adopt common building blocks centered on 12 Rules designed to accelerate digitization and modernize how the state serves citizens and businesses through online administrative procedures.⁶²⁵¹

Tunisia launched its first public institute dedicated to Artificial Intelligence at the University of Tunis in September 2024. The Minister of Higher Education and Scientific Research announced the launch of the institute during an earlier seminar titled "AI for a Resilient Economy."⁶²⁵²

The Minister of Higher Education and Scientific Research emphasized the importance of expanding the application of AI in Tunisia while ensuring the ethical use and protection of citizens' data. The aim of the AI Institute is to promote Tunisia's 2035 vision, which can be summed up as "fostering a knowledge-based society based on the development of AI programs across various Tunisian institutions." The AI Institute's objective is to teach AI to everyone, not just experts, so that Tunisia's economic, industrial, and technological challenges can be addressed.

In addition, the AI Institute will help Tunisia play a pioneering role in AI training in the region and on the African continent, which will be advantageous for developing comprehensive AI legislation and using AI for good.⁶²⁵³

Biometric ID

The Tunisian Parliament approved draft laws on Biometric Identity Cards and Biometric Passports in March 2024.⁶²⁵⁴ This decision comes despite a campaign led by Access Now and civil society partners in Tunisia since 2016 advocating against the creation of a mandatory biometric ID system without robust data protection and privacy safeguards for Tunisian citizens.⁶²⁵⁵

Biometric data such as fingerprints and photographs will be recorded and stored in a database managed by the Ministry of Interior, particularly by the central administration of information. Only specifically authorized agents, such as the police, national guard, and customs, will have access to this information through automated readers.⁶²⁵⁶

The implementation of the biometric ID project will fall under the National Personal Data Protection Authority despite critics arguing that “this data protection agency lacks the necessary authority to enforce effective privacy and security measures.” To ensure respect for individual rights in this transition to biometrics, the rights and freedoms commission proposes the creation of a new oversight body.

The laws must still receive approval from the President of the Republic and be published in the Official Gazette. No estimate has yet been provided of when the laws would take effect.⁶²⁵⁷

Facial Recognition

Reports of practices of mass surveillance in Tunisia are closely linked to the history of authoritarian regimes and the suppression of political opposition.⁶²⁵⁸ Following the Jasmine Revolution of 2011, the new government dismantled intelligence services and created new ones. In 2015, the Tunisian government declared a state of emergency as the result of a terrorist attack and in 2016 announced the installation of more than 1,000 surveillance cameras in 30 electronic checkpoints in Tunis and at least four cities.

Practices of surveillance in public spaces and the use of facial recognition are concerning. A report by Privacy International identified surveillance practices in public spaces under the pretense of enforcement of the COVID lockdown.⁶²⁵⁹ The Ministry of Interior of Tunisia operated a robot that patrolled the streets and required ID documentation to be shown to the camera. The PGuard robot was equipped with infrared and thermal imaging cameras to question “suspected violators” of the lockdown.⁶²⁶⁰ These robots, valued at \$100,000–140,000 were donated to the Ministry.

Smart Cities

The concept of Smart Cities is in the early stages in Tunisia, promoted by the Tunisian Smart Cities Association (TSC) in cooperation with the General Public-Private Partnership Authority (IGPPP) and the Fund Deposits and Consignment (CDC).⁶²⁶¹ The initiative has more than 260 partners from the public, private sector, and civil society engaged in working groups to build a three-year plan. No reports exist about the progress of this initiative or the cooperation with multi-lateral entities, such as UNDP.

Environmental Impact of AI

The Future Society reported on its contribution to the drafting of Tunisia's National AI Strategy 2021–2025 and the aim to harness AI responsibly to achieve national objectives and inclusive and sustainable development goals.⁶²⁶²

Reports suggest that the application of AI in environment-impacting sectors like agriculture are well under way.⁶²⁶³ Tunisian officials announced in late 2024 that the AI Strategy to be launched in 2025 will aim to integrate AI into the environmental sector, among others.⁶²⁶⁴

Lethal Autonomous Weapons

Tunisia is a UN Member State and High Contracting Party to the Convention on Certain Conventional Weapons (CCW)⁶²⁶⁵ and has participated in several meetings since 2015.⁶²⁶⁶ Tunisia is not among the 30 states of the Africa Group that called for a ban on lethal autonomous weapons.⁶²⁶⁷

Tunisia supports the negotiation of a legally binding instrument on autonomous weapons systems. Tunisia is a member of three groups that support the negotiation of a legally-binding instrument on autonomous weapons systems: The African Group and Arab Group in the United Nations and the Non-Aligned Movement. The African Group called for reflection on the “ethical, legal, moral and technical questions” raised by autonomous weapons systems and urged concrete policy recommendations, including prohibitions and regulations to be adopted.⁶²⁶⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In February 2023, Tunisia participated in the first international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, known as REAIM, Tunisia, together with other countries, agreed on a joint call for action on the responsible development, deployment, and use of artificial intelligence in the military domain.⁶²⁶⁹ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”⁶²⁷⁰ Tunisia did not endorse the outcome document, *Blueprint for Action*, from the Second REAIM Summit, hosted by South Korea.⁶²⁷¹

Tunisia supported Draft Resolution L.77 on Lethal Autonomous Weapons Systems adopted by the United Nations General Assembly in November 2024. The resolution raises concerns about the “negative consequences and impact of autonomous weapon systems on global security and regional and international stability, including the risk of an emerging arms race, of exacerbating existing conflicts and humanitarian crises, miscalculations, lowering the threshold for and escalation of conflicts and proliferation, including to unauthorized recipients and non-State actors” and stresses the “the importance of the role of humans in the use of force to ensure responsibility and accountability and for States to comply with international law.” It also notes “the repeated calls by the Secretary-General to urgently conclude negotiations of a legally binding instrument with prohibitions and regulations for autonomous weapons systems, in line with a two-tier approach.”⁶²⁷²

autonomous weapon systems on global security and regional and international stability, including the risk of an emerging arms race, of exacerbating existing conflicts and humanitarian crises, miscalculations, lowering the threshold for and escalation of conflicts and proliferation, including to unauthorized recipients and non-State actors” and stresses the “the importance of the role of humans in the use of force to ensure responsibility and accountability and for States to comply with international law.” It also notes “the repeated calls by the Secretary-General to urgently conclude negotiations of a legally binding instrument with prohibitions and regulations for autonomous weapons systems, in line with a two-tier approach.”⁶²⁷⁴

Human Rights

Freedom House scored Tunisia as “Partly Free” with a score of 51/100 in 2024,⁶²⁷⁵ down from 64/100 in 2022.⁶²⁷⁶ As Freedom House reported, “Tunisia’s score reflects an increasingly authoritarian state under President Saïed, high rates of arrests that have left little to no political pluralism, and a repressive media environment.”⁶²⁷⁷ Tunisia scored 60/100 for net freedom and 18/40 on users’ rights on the Freedom on the Net Report.⁶²⁷⁸

The Ibrahim Index of African Governance in 2024 scored Tunisia at 61.2/100 for overall governance, and 56.1/100 in Participation Rights & Inclusion, placing the country in position 9 out of 45 African countries, with an overall decreasing trend since 2014.⁶²⁷⁹

Tunisia endorsed the Universal Declaration of Human Rights (UDHR) and ratified the African Charter on Human and Peoples’ Rights (African Charter). Tunisia is a member of the Arab League but has not ratified the Arab Charter on Human Rights.⁶²⁸⁰ The country ratified various covenants including the International Convention on Civil and Political Rights (ICCPR) and the

International Covenant on Economic, Social and Cultural Rights (ICSECR).⁶²⁸¹ Other agreements Tunisia is a Party to are: The African Charter on the Rights and Welfare of the Child; the Convention on the Rights of the Child; the United Nations Convention against Transnational Organized Crime, and the United Nations Convention Against Corruption.⁶²⁸² Tunisia acceded to the Council of Europe Convention on Cybercrime (Budapest Convention) in early 2024.⁶²⁸³

Tunisia's transition to a democratic system was an imperative to guarantee human rights and respect for fundamental freedoms. The road to restore democracy has not been smooth, however, and required the drafting of a Tunisian constitution as a "social contract between state and citizens."⁶²⁸⁴ The government promoted the new constitution as the foundation for a modern and democratic society that respects human freedom and aligns to the commitment to the international human rights system.

Nevertheless, human right organizations have continued to warn about the risks to the future of human rights and democracy in Tunisia.⁶²⁸⁵ The new 2014 Constitution shifted power from the parliament to the presidency and won approval in a referendum later that month, with a voter turnout of roughly 31 percent.⁶²⁸⁶ In July 2021, the government banned the Assembly of People's Representatives (ARP) from meeting and dismissed the Head of Government. Increasing travel bans affecting several segments of the population, house arrests, use of military courts to try civilians and hate speech spreading in the country raised concerns. Restrictions to freedom of the press escalated with the announcement of a state of exceptional measures.⁶²⁸⁷ The President of Tunisia

issued a new electoral law by presidential decree, and the first round of elections for a new parliament was held in late December 2021. Amid an opposition boycott, voter turnout was extremely low at 11 percent. A second round of voting took place in January 2023 with a low turnout.⁶²⁸⁸

OECD / G20 AI Principles

Tunisia is not a member of the OECD or the G20 and has not endorsed the G20 or the OECD AI principles.⁶²⁸⁹ The country has submitted the National AI Strategy and reports to OECD AI Observatory on AI use cases in the public sector, the law on the protection of personal data, and a draft bill on intellectual property policy for AI to protect algorithms. OECD recognized alignment with the value-based principles of inclusive growth, sustainable development, and well-being; human rights and fairness; and robustness; and security and safety. OECD also recognized the National AI Strategy's alignment with recommendations for policymakers to invest in AI R&D and build human capacity and prepare for labor market transition.⁶²⁹⁰

Council of Europe AI Treaty

Tunisia has not endorsed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁶²⁹¹

UNESCO Recommendation on AI Ethics

Tunisia is a member state of UNESCO since 1956,⁶²⁹² and is one of 193 countries that endorsed the UNESCO Recommendation on AI Ethics in November 2021.⁶²⁹³ Tunisia was also one of only five African nations that offered comments on the first draft of the Recommendation.⁶²⁹⁴ However, the 2021 UNESCO AI

Needs Assessment Survey did not include responses from Tunisia.⁶²⁹⁵ Tunisia is currently preparing for the Readiness Assessment Methodology (RAM), a key step to implementing the UNESCO Recommendation.⁶²⁹⁶

Evaluation

Although Tunisia has yet to formulate a National AI policy, the 2021–2025 AI Roadmap is a starting point.⁶²⁹⁷ Despite taking preliminary steps to implement the UNESCO Recommendation on AI Ethics with preparation for the RAM, the approval of biometric ID systems and persistence of AI-powered surveillance deepen human rights concerns in the context of restricted freedom of expression and political rights. The ratification of Council of Europe Convention 108+ and a comprehensive modernization of the country’s data protection legal regime would contribute to strengthening the protection of human rights in the digital age.

Türkiye

In 2024, Türkiye’s government issued a resolution outlining principles for ethical use of AI systems by public officials. The Data Protection Authority issued AI recommendations focused on rights and freedoms and an information note on the data and privacy implications of chatbots with special attention to children. Internationally, Türkiye further prepared to undergo the UNESCO Readiness Assessment Methodology (RAM).

National AI Strategy

In 2020, the Digital Transformation Office (DTO) of the Turkish government published a National Artificial Intelligence Strategy.⁶²⁹⁸ The Strategy was prepared in accordance with the Eleventh Development Plan⁶²⁹⁹ and

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Presidential Annual Programs,⁶³⁰⁰ and in line with the Digital Türkiye vision and the National Technology Initiative.⁶³⁰¹ The Strategy is based on six strategic priorities:

1. Training AI Experts and Increasing Employment in the Domain
2. Supporting Research, Entrepreneurship and Innovation
3. Facilitating Access to Quality Data and Technical Infrastructure
4. Regulating to Accelerate Socioeconomic Adaptation
5. Strengthening International Cooperation
6. Accelerating Structural and Labor Transformation.

The National AI Strategy dedicates a section to AI values and principles and cites frameworks published by international organizations including OECD, G20, EU, and UNESCO. The Strategy explicitly adopts these values:

- Respect for Human Rights, Democracy, and Rule of Law such that “Human dignity, human rights and fundamental freedoms must be essential throughout the lifecycle of AI systems. [...] No human should be harmed physically, economically, socially, politically or psychologically at any stage in the lifecycle of AI systems.”⁶³⁰²
- Flourishing the Environment and Biological Ecosystem
- Ensuring Diversity and Inclusiveness such that “Respect, protection and promotion for diversity and inclusiveness must be ensured throughout the lifecycle of AI systems, in a manner consistent with demographic, cultural, social diversity and inclusiveness, as well as international human rights law, standards and principles. [...] The production, development and implementation of AI technologies should not result in discrimination in any way, and datasets should be audited in this regard.”⁶³⁰³
- Living in Peaceful, Just and Interconnected Societies

The “trustworthy and responsible AI” principles in the Strategy are Proportionality, Safety and Security, Fairness, Privacy, Transparency and Explainability, Responsibility and Accountability, Data Sovereignty, and Multi-Stakeholder Governance.⁶³⁰⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

While preparing the national AI strategy, Ali Taha Koç, the President of the DTO, acknowledged the importance of transparency, security, and accountability for AI. He stated that “To eliminate the concerns that may arise, this system must first be human-centered, it must be fair, it must increase social welfare, it must be transparent, reliable, accountable, value-based, and dependent on national and ethical values.”⁶³⁰⁵

The Digital Transformation Office has committed to pursuing projects “with the purpose of ensuring the privacy and security of data,”⁶³⁰⁶ making Black Box algorithms explainable, and preventing misleading artificial intelligence algorithms. Projects include methods such as Federated Learning and Differential Privacy technologies, though the objectives have not yet been detailed.

The National Artificial Intelligence Strategy Steering Committee, which is responsible⁶³⁰⁷ for the appointment of the ministries that will prepare and coordinate the implementation of the detailed action plans regarding the measures in the Strategy, the preparation of said action plans in harmony with each other, and the coordination between institutions, held its first meeting under the presidency of Fuat Oktay, the Vice-President of the Republic of Türkiye in January 2022.⁶³⁰⁸ The Steering Committee is in charge of the implementation of the National Strategy and its coordination with the relevant Ministries. In a statement before second Steering Committee, Mr Oktay stated that a draft of the Action Plan for the National AI Strategy consisted of 120 actions and 451 execution steps had been prepared.⁶³⁰⁹ Among these actions, Mr Oktay emphasized the preparation of Data Governance Guidance, along with the establishment of an AI Ecosystem Advisory Committee and the Türkiye AI Portal.⁶³¹⁰

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Building on the National Artificial Intelligence Strategy for 2021–2025, the DTO and the Ministry of Industry and Technology released a new National AI Action Plan for 2024–2025. This plan articulates 19 strategic initiatives, including comprehensive AI legislation, targeted talent attraction, educational enhancement, infrastructure investment, and the introduction of a Trusted AI Seal certification system. It identifies six strategic priorities: (1) training AI experts and increasing recruitment in relevant fields; (2) supporting research, entrepreneurship, and innovation; (3) expanding access to quality data and technical infrastructure; (4) enacting regulations to foster socioeconomic integration; (5) strengthening international cooperation; and (6) facilitating structural and labor market transitions.⁶³¹¹

Public Participation

Türkiye has consulted multistakeholder groups to consult on digital policies. Türkiye established a Working Group in January 2020 to develop the AI Technology Roadmap. The working Group comprised representatives from academia, the private sector, and major umbrella NGOs.⁶³¹² The Working Group operates under the Science, Technology and Innovation Policy Council of the Turkish Presidency, via the technical contribution of the Scientific and Technological Research Council of Türkiye.

The purpose of the Working Group is to help ensure effective intergovernmental coordination and to identify frontier scientific themes and priority sectoral applications of AI technologies. The National AI Strategy explicitly addressed the AI Technology Roadmap⁶³¹³ and views from this multistakeholder group to establish priorities and development of the National AI Strategy.⁶³¹⁴ Workshops and evaluations by domain experts provided additional opportunities for stakeholder input.⁶³¹⁵

Public participation continues after the entry into force of the National Strategy. The Steering Committee for the National AI Strategy will be supported

Center for AI and Digital Policy

in its work by an AI Ecosystem Advisory Group and various working groups representing all relevant stakeholders.

The National Strategy is publicly available on the official website of the Digital Transformation Office of the Presidency of Türkiye both in English and in Turkish.⁶³¹⁶

In 2019, Türkiye's Ministry of Industry and Technology published the 2023 Industry and Technology Strategy, taking a holistic approach to the fields of industry and technology, and aiming to ensure wide participation and to mobilize society.⁶³¹⁷ The Industry and Technology Strategy 2023 includes sectoral and R&D competency mapping on AI technology and AI and machine learning, with a view to strengthening Türkiye's capacity of scientific research and product development.

This vision of AI and industrialization includes applying emerging technology in military and defense. According to an Atlantic Council report, "Turkey's military-industrial sector has focused heavily on innovation and increasing research and development, driven by a desire for self-sufficiency and operational sovereignty. The country's National Artificial Intelligence Strategy 2021–2025 outlines these ambitions."⁶³¹⁸ The report mentions loitering munitions, drones, and robotics.

Data Protection

The Turkish Constitution establishes rights for privacy and for data protection with limits.⁶³¹⁹ The Turkish Law on the Protection of Personal Data was published in April 2016 protects those rights.⁶³²⁰ Türkiye ratified Convention 108 of the Council of Europe and its data protection law originates from European Union Directive 95/46/EC.

The data protection legislation ensures:

- data is processed lawfully and fairly; accurate and where necessary, kept up to date; processed for specified, explicit and legitimate purposes; relevant, limited and proportionate to the purposes for which they are processed; and

stored for the length of time determined by the relevant legislation or the period deemed necessary for the purpose of the processing.⁶³²¹

- explicit consent is required by an individual for data collection and data transfer. Further, data transfer outside of Türkiye is strictly regulated.⁶³²²
- individuals have the right to access and complain regarding data collection.⁶³²³

The Law on the Protection of Personal Data adopts a broad definition of the processing of personal data that encompasses both “automated means and non-automated means.”⁶³²⁴

The Law on the Protection of Personal Data established the Turkish Data Protection Authority (DPA), an independent regulatory authority. The DPA is composed of the Personal Data Protection Board and the Presidency. The Personal Data Protection Board implements and interprets the data protection law in line with the GDPR. Currently, efforts are also underway to adopt a new data protection law, based on the GDPR.⁶³²⁵

The mission of the DPA is to provide personal data protection and to develop public awareness in line with the fundamental rights related to privacy and freedom stated in the Constitution.

Concerning personal data processing in relation to AI, the DPA issued its Recommendations on the Protection of Personal Data in the Field of Artificial Intelligence in September 2021.⁶³²⁶ The DPA specifies that: “In the process of developing and adopting AI applications, the fundamental rights and freedoms of data subjects should be respected and there should be no violation of any right. [...] An approach, that focuses on avoiding and mitigating the potential risks and considers human rights, functioning of democracy, social and ethical values, should be adopted in processing of personal data. [...] Data subjects should be able to have control over the processing activities, considering the effect of processing activities on individuals and society.”⁶³²⁷

⁶³²⁷ Ibid, p. 17

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The 2021 Recommendations continued: “The role of human intervention in decision-making processes should be ensured.”⁶³²⁸ The DPA makes clear that the principles enshrined in the Protection of Personal Data Law and applicable in general to the processing of personal data are applicable when AI is involved. These include lawfulness, fairness, proportionality, accountability, transparency.

Building on the 2021 Recommendations, the DPA issued a specific information note for chatbots in November 2024. The note emphasized the need for transparency about data usage, secure data transmission, risk assessments, and adherence to international standards to mitigate privacy risks for users, especially children.⁶³²⁹

The DPA is a member of the Global Privacy Assembly (GPA) since 2017. The DPA hosted the 2022 GPA in Türkiye. However, the DPA did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁶³³⁰ the 2020 GPA Resolution on AI Accountability,⁶³³¹ the 2022 GPA Resolution on Facial Recognition Technology,⁶³³² or the 2023 GPA Resolution on Generative AI.⁶³³³

The Human Rights and Equality Institution of Türkiye, affiliated with the Ministry of Justice, could also provide independent oversight of AI practices. Established by Law No. 6701 in 2016,⁶³³⁴ the Human Rights Institution is a public body endowed with an independent legal status and administrative and financial autonomy. The mission of the Human Rights Institution is to ensure the protection and promotion of human rights, to guarantee individuals’ right to equal treatment, and to prevent discrimination in the exercise of rights and freedoms.

Center for AI and Digital Policy

The Ombudsman Institution of the Republic of Türkiye could also provide independent oversight. The Ombudsman was established in 2012 as a constitutional public entity affiliated with the Grand National Assembly of Türkiye.⁶³³⁵ The Ombudsman has its own private budget, headquarters in Ankara, and an office in Istanbul. According to the Ombudsman Law, the Ombudsman shall be responsible for examining, investigating, and submitting recommendations to the Administration regarding all sorts of acts and actions as well as attitudes and behaviors of the Administration upon complaint. The Ombudsman Institution aims to increase the service quality of the administration, contribute to internalizing principles of good administration, foster transparent and accountable administration, improve human rights standards, and strengthen a culture of seeking legal remedies among citizens.⁶³³⁶

Algorithmic Transparency

Transparency and explainability are among the AI values and principles enshrined in the National AI Strategy. The Strategy provides that: “Person(s) and organizations involved in the lifecycle of AI systems should ensure that the AI system is transparent and explainable in accordance with its context. People have the right to be informed of a decision that was made based on AI algorithms and to request explanatory information from public institutions and private sector organizations in such cases. It should be possible to explain to the end user and other stakeholders in non-technical terms and in plain language, why, how, where and for what purpose the decisions made based on automatic and algorithmic decisions, the data leading to said decisions and the information obtained from that data are used.”⁶³³⁷

Türkiye has not signed yet the protocol modernizing Council of Europe Convention 108, which enshrines the right to algorithmic transparency.⁶³³⁸ The Law on the Protection of Personal Data provides for the obligation of data controller to inform the data subjects about “the method and legal basis of collection of personal data.”⁶³³⁹ Data subjects are also entitled “to object to the

Center for AI and Digital Policy

occurrence of a result against the person himself/herself by analyzing the data processed solely through automated systems.”⁶³⁴⁰ However, the principles of transparency, algorithmic transparency, and explainability are not enshrined explicitly in the Law on the Protection of Personal Data.

As for the DPA’s Recommendations on the Protection of Personal Data in the Field of Artificial Intelligence, they provide that “the Artificial intelligence and data collection works that rely on processing of personal data should be based on the principles of [...] transparency and accountability.”⁶³⁴¹

Amendment to the Law No. 5651 on Regulating Broadcasting in the Internet and Fighting Against Crimes Committed through Internet Broadcasting (Internet Law), which entered into force in October 2022, imposed a new obligation on the foreign and local social network providers that receive over one million daily visits from Türkiye.⁶³⁴² Additional Article 4/5 states that the said social network providers shall submit biannual reports containing information on their algorithms, advertising policies, and transparency policies regarding title tags and featured or reduced-access content to the Information Technologies and Communication Authority of Türkiye.

The following statements are included in the same article: “social network provider shall include on its website in a clear, understandable and easily accessible manner which ‘parameters’ it uses when providing suggestions to users. Social network provider shall take the necessary measures to update users’ preferences regarding the content it recommends and to offer the option to limit the use of their personal data, and shall include these measures in its report.”⁶³⁴³

With the 18th paragraph added to Additional Article 4 on the date above, the Information Technologies and Communication Authority of Türkiye is authorized to request explanations from the social network provider regarding the provider’s compliance with this Law, including organizational structure, information systems, algorithms, data processing mechanisms, and commercial attitudes.⁶³⁴⁴

The DTO Big Data and Artificial Intelligence Department has carried out the COVID-19 Detection with Artificial Intelligence project,⁶³⁴⁵ in which the predictions made by the developed AI models using the X-Ray and Computed Tomography images and the reasoning for these predictions can be presented to the relevant doctors.⁶³⁴⁶

Open Data Project

Türkiye's Open Data Project, which was launched under the coordination of the Digital Transformation Office of the Presidency of the Republic of Türkiye, aims to establish an open data portal to make public data available "as open data under privacy principles in order to increase transparency, accountability and participation and to enable production of new value-added services."⁶³⁴⁷ As a platform for the datasets needed for developing AI technologies and applications, the initiative will contribute to fostering a digital ecosystem for AI.

The Project includes managing the regulatory and legislative area of open data, which are necessary steps for participation in the Open Government Partnership.⁶³⁴⁸ The initiative also aims to provide effective coordination in preparing the labor market for digital transformation.⁶³⁴⁹

Some municipalities, including Istanbul and İzmir, the 1st and the 3rd biggest cities in Türkiye respectively, have already launched their own open data portals.⁶³⁵⁰ Furthermore, Ankara Metropolitan Municipality implemented the Transparent Ankara⁶³⁵¹ project, the first and only map-based open data platform

in the world.⁶³⁵² Turkish citizens from all over the world can easily access data such as transportation boarding data, social benefits, green areas, level of dams, population and demographic information, weather conditions, WiFi hotspots, bicycle paths, and trekking routes in Ankara from the open data on this platform 24/7.⁶³⁵³

Freedom of Expression

In October 2020, a law entered into force requiring all domestic and foreign social network providers that serve more than one million users in Türkiye to have local representation in Türkiye. The law gives authority to the Information and Communication Technologies Authority to order social network providers to remove or block content related to violation of personality and privacy rights, listed crimes, threats to public order or security, or other pressing and immediate dangers within 48 hours.⁶³⁵⁴

The Turkish Criminal Code was amended in October 2022 with Article 217/A on Openly Disseminating Misleading Information. The criminal code now provides that “publicly disseminating false information about the internal and external security, public order and general health of the country, in a way that is suitable for disturbing the public peace, solely for the purpose of creating anxiety, fear or panic among the people” constitutes a crime to be punished by imprisonment.⁶³⁵⁵

EdTech and Children Tracking

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Türkiye, for children’s education during the pandemic. Based on technical and policy analysis of 163 EdTech products, including some built and offered by the Turkish Government, Human Rights Watch found that governments’ endorsements of the majority of these online learning platforms put at risk or

directly violated children's rights. Some EdTech products targeted children with behavioral advertising. Many more EdTech products sent children's data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online.⁶³⁵⁶

Against this background, the 2024 DPA's information note on chatbots emphasizes the importance of safeguarding children's data in digital environments, aligning with international standards such as the United Nations Convention on the Rights of the Child (UNCRC) and GDPR. The DPA stresses the need for parental consent and the principle of the best interests of the child in data processing. These actions align with concerns raised by Human Rights Watch regarding the risks posed by EdTech platforms. While the DPA's guidance supports stronger protections, further development may be needed to address the broader risks identified in digital education tools.

Digital ID

Türkiye is currently working on a project that citizens can log into e-Government⁶³⁵⁷ with digital IDs created in the blockchain network via the e-wallet mobile application.⁶³⁵⁸ As Dr. Koç stated, with the e-Wallet Application to be offered by the DTO, citizens will be able to securely store their digital identities and log into the e-Government Gateway with their digital identities.⁶³⁵⁹

Digital Government

DTO initiated the preparation of the Digital Government Strategy to set out Türkiye's Roadmap during the transition from e-Government to Digital Government in 2022 with the participation of all stakeholders.⁶³⁶⁰ The OECD Digital Government Review for Türkiye is being conducted under the coordination of the DTO and will serve as a foundation for the Digital Government Strategy.⁶³⁶¹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

DTO first submitted a survey to public institutions and organizations to analyze the status of Türkiye in terms of the OECD's recent Digital Government Policy Framework and conducted peer review studies with representatives from public institutions and peer countries. The DTO committed to producing policy recommendations in line with the needs and opportunities identified by the OECD and to prepare and publish the Digital Government Review Report for Türkiye. The DTO explicitly stated that “the findings and recommendations of the OECD Digital Government Review will also serve as a foundation for the Digital Government Strategy,” which was expected to be released in 2023.⁶³⁶²

The first focus group meeting was held in January 2023 with 137 representatives from the government, universities, NGOs, and private sector to carry out solution development studies on six main pillars, especially data management of the private sector in the public sector and digital inclusion and participation.⁶³⁶³

Environmental Impact of AI

Türkiye's National AI Strategy identifies “Flourishing the Environment and Biological Ecosystem” as an AI value.⁶³⁶⁴ The Strategy advises that “All actors involved in the lifecycle of AI systems should adhere to relevant international and national legislation, standards and practices designed for the protection, restoration and sustainable development of the environment and ecosystem.” However, Türkiye has published no information on specific requirements or regulations to limit the negative environmental impact of AI development, deployment, or use.

Lethal Autonomous Weapons

Türkiye is one of the most important lethal autonomous weapon systems (LAWS) developers and exporters in the world. “Though Turkey's defense sector remains small compared with giants like China, it has outsized influence because of the impact of its drones in recent conflicts. The country's Bayraktar TB-2

drones have been used in at least four different conflicts—Ukraine, Syria, Libya⁶³⁶⁵ and in Azerbaijan’s conflict with Armenia.”⁶³⁶⁶

Türkiye has participated in every Convention on Certain Conventional Weapons (CCW) meeting on lethal autonomous weapons systems between 2014 and 2023. At the 2022 meeting of the CCW Meeting High Contracting Parties, Türkiye stated that “We believe that the development and use of autonomous weapons systems which does not have meaningful human control are undesirable and risk compliance with our obligations steaming from the International Humanitarian Law. Humans (commanders and operators) have to be involved in the decision loop and bear the ultimate responsibility when dealing with the decision of life and death in order to ensure compliance with International Law, in particular International Humanitarian Law.”⁶³⁶⁷ Türkiye also repeated its commitment to fully implement the CCW and its annexed Protocols.

However, Türkiye abstained from voting on Resolution 78/241 on lethal autonomous weapons, adopted by the UN General Assembly in December 2023. This resolution aimed to address the development, use, and potential consequences of lethal autonomous weapons systems (LAWS), calling for an international regulatory framework to prevent the weaponization of autonomous systems that could undermine human accountability in warfare.⁶³⁶⁸

Türkiye endorsed the Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023,⁶³⁶⁹ following the first global Summit on Responsible Artificial Intelligence in the Military Realm in the Hague. At the

Summit, attendees issued joint call to action on the responsible development, deployment, and use of artificial intelligence in the military domain.⁶³⁷⁰

Türkiye also endorsed the Blueprint for Action, the outcome document from the second REAIM summit in 2024, hosted by the Republic of Korea.⁶³⁷¹ The Blueprint for Action is the first step toward operationalizing the commitments from the first REAIM Summit.

Human Rights

According to Freedom House, Türkiye is “Not Free.”⁶³⁷² Türkiye receives low scores for political rights and civil liberties (33/100) in 2024. This assessment reflects ongoing restrictions on freedoms of expression, assembly, and political participation, alongside concerns over judicial independence and human rights practices.

According to the 2022 Freedom House report, “President Recep Tayyip Erdoğan’s Justice and Development Party (AKP) has ruled Turkey since 2002. After initially passing some liberalizing reforms, the AKP government showed growing contempt for political rights and civil liberties and has pursued a wide-ranging crackdown on critics and opponents since 2016. Constitutional changes in 2017 concentrated power in the hands of the president, removing key checks and balances. While Erdoğan continues to dominate Turkish politics, a deepening economic crisis and opportunities to further consolidate political power have given the government new incentives to suppress dissent and limit public discourse.”⁶³⁷³

Regarding transparency, Freedom House reports that while Turkish law official grants citizens access to information, “in practice the government lacks transparency and arbitrarily withholds information on the activities of state officials and institutions.”

AI Safety Summit

Türkiye participated in the first AI Safety Summit and endorsed the Bletchley Declaration in November 2023.⁶³⁷⁴ Türkiye thus committed to participate

in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

OECD / G20 AI Principles

As a founding member of the OECD, NATO ally, and G20 member, Türkiye adopted the OECD AI Principles. According to the OECD, Türkiye’s AI Technology Roadmap is a multistakeholder effort that supports implementation of the G20 AI Principles on inclusive growth, robustness, and accountability.⁶³⁷⁵ The National AI Strategy explicitly acknowledges that Türkiye is a stakeholder of human-centric AI principles determined by OECD and adopts “trustworthy and responsible AI” values and principles.⁶³⁷⁶

Türkiye is an active member of the OECD Network of Experts on Artificial Intelligence with representatives at ministerial and presidential levels⁶³⁷⁷ and contributes to the OECD Committee on Digital Economy Policy (CDEP) Working Party on Artificial Intelligence Governance (WPAIGO) meetings and policy documents at both the technical and bureau membership levels.⁶³⁷⁸

The application of Türkiye for membership to the Global Partnership for Artificial Intelligence (GPAI) was approved⁶³⁷⁹ by consensus at the GPAI Ministerial Council Meeting in Tokyo in November 2022. With its membership in GPAI, Türkiye will be able to partake in the ongoing international cooperation on the responsible development and use of AI and benefit from the multi-stakeholder cooperation within GPAI to adopt trustworthy AI, share multi-disciplinary research, identify knowledge gaps, maximize coordination, and identify and mitigate potential challenges.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Türkiye's government adopted an AI Ethics Decision mandating public sector compliance with several principles for ethical behavior, emphasizing human-centered design and rights in September 2024.⁶³⁸⁰ The Ethics Decision enables the country to make further strides in implementing OECD principles. Focused on public sector applications that could impact citizen welfare, the decision highlights human rights concerns in line with international AI guidelines. It underscores the importance of accountability, transparency, and fairness in AI usage, aligning with Türkiye's broader focus on maintaining data sovereignty and enforcing strict data protection protocols.

Council of Europe AI Treaty

Türkiye contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. The Framework Convention opened for signature in September 2024.⁶³⁸¹

The DTO served as the national coordinator and secretariat for the Council of Europe Ad Hoc Committee on Artificial Intelligence (CAHAI)⁶³⁸² and represented Türkiye⁶³⁸³ as one of the lead coordinators of the Policy Development subworking⁶³⁸⁴ group and Legal Frameworks group.⁶³⁸⁵ The DTO also served as the national coordinator and secretariat for the Committee on Artificial Intelligence (CAI) that took over after the CAHAI mandate expired. Türkiye was represented at the plenary meetings by the observers and government-appointed representatives.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Despite these contributions, Türkiye has not signed this first legally binding international treaty on AI.⁶³⁸⁶

UNESCO Recommendation on AI Ethics

Türkiye has endorsed the 2021 UNESCO Recommendations on the Ethics of AI. The Turkish National AI Strategy mentions that the “country is a stakeholder of human-centric AI principles determined by [...] UNESCO, and adopts “trustworthy and responsible AI” values and principles,”⁶³⁸⁷ although it does not refer specifically to the UNESCO Recommendation.

Türkiye carried out its membership in the Executive Board of UNESCO for the period of 2017–2021. In addition, in the election of Members to the Executive Board held at the 41st General Conference of UNESCO in November 2021, Türkiye was re-elected for the 2021–2025 period.⁶³⁸⁸ The Ministry of Foreign Affairs states that Türkiye “embraces the purpose and ideals of UNESCO,” believes “in the significance of maintaining active support to all levels of the Organization,” and “will continue to contribute strengthening UNESCO’s activities and values as a member of the Executive Board.”⁶³⁸⁹ Following the adoption of the UNESCO Recommendation on the Ethics of Artificial Intelligence, Türkiye started to participate and contribute to meetings by the Group of Friends of the Implementation of the Recommendation on the Ethics of Artificial Intelligence.⁶³⁹⁰

It is worth underlining that the Executive Board adopted a decision to include a section on the Implementation of the Recommendation on the Ethics of Artificial Intelligence at its 215th session held in October 2022.⁶³⁹¹

Türkiye has taken the step to prepare for the Readiness Assessment Methodology (RAM).⁶³⁹² As of 2024, Türkiye is participating in a UNESCO project in partnership with the Patrick J. McGovern Foundation to advance the RAM and develop a robust ethical framework for AI governance. This initiative aims to translate UNESCO's AI Ethics Recommendation into Türkiye's national institutional and regulatory frameworks while fostering a national consensus on a shared vision for AI.⁶³⁹³

Evaluation

Türkiye is an emerging market for AI and a regional leader in AI. Türkiye adopted a National AI Strategy with a clear human-centered approach. The country demonstrated a focus on operationalizing the strategy with an action plan for 2024–2025. In the absence of any AI legislation and despite the lack of provisions in the Law on the Protection of Personal Data regarding algorithmic transparency, the Turkish Data Protection Authority has issued Recommendations on the Protection of Personal Data in the Field of Artificial Intelligence, including a note on the use of chatbots.

Although the DPA hasn't adopted any AI-related decisions, Türkiye's government adopted an AI Ethics Decision mandating public sector compliance with several principles of ethical behavior, emphasizing human-centered design and rights.

Uganda

In 2024, Uganda drafted a National Data Strategy, a step toward amending existing data protection laws to accommodate artificial intelligence. Uganda was also party to the African Union Continental AI Strategy. Concerns remain over Uganda's use of biometric IDs and facial recognition for mass surveillance.

National AI Strategy

Uganda is yet to issue a national AI strategy. The Uganda Communications Commission (UCC) recently announced a taskforce made up of experts from the UCC and academia to develop a comprehensive concept note addressing various

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

aspects of AI to “inform relevant interventions.”⁶³⁹⁴ However, no further information has been published, and local authorities continue to call for a law.⁶³⁹⁵

According to the OECD AI observatory, the country has a national task force to advise the government on the localization of fourth industrial revolution technologies to propel economic development.⁶³⁹⁶ The Taskforce led the process of development of Uganda’s National 4IR Strategy: A continental 4IR HUB that enables a smart and connected Uganda society, published in 2019.⁶³⁹⁷ The Taskforce analyzed global trends in emerging technologies with a focus on Uganda and the East African region’s development goals and aspirations.⁶³⁹⁸

Under the coordination of the Office of the Prime Minister, Uganda’s National Fourth Industrial Strategy (National 4IR) aims to transform the country into a continental 4IR hub with a view to transform and accelerate Uganda’s development into an innovative, productive and competitive society using 4IR technologies by 2040.⁶³⁹⁹ The four pillars of the strategy are: Agriculture, Industry, Service, and ICTs.

The 4IR Strategy outlines 7 objectives:

1. To enhance the deployment and use of 4IR technologies in Uganda’s key economic sectors to drive productivity, value addition, and commercialization
2. To build a strong healthy, knowledgeable and productive population by leveraging emerging technologies
3. To generate jobs through digitally traded exported services, automated financial services, and digitally augmented logistics and trade
4. To leverage 4IR technologies in the establishment of smart cities and the management of critical resources
5. To transform government performance and service delivery of improved standards of living, quality of life, and well-being
6. To strengthen and stimulate research and innovation in 4IR
7. Supporting national security in the physical and digital world

⁶³⁹⁹ Ibid

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Critical enablers of the 4IR strategy include: 4IR connectivity, regulatory agility, upskilled population, e-Government, and resource mobilization. The enabler of regulatory agility will require improving governance; closing gaps between regulation, legislation, and strategy; and enacting data protection legal frameworks to facilitate data sharing, meet global standards for data protection, and harmonize with emerging technologies. The implementation of the strategy requires the coordination of the 4IR initiatives through the Prime Minister's office, the facilitation of an ecosystem of centers of excellence, and the coordination of funding through the ICT Sector Working Group (SWG). In December 2022, the Task Force presented the first 4IR strategy report to the Prime Minister of Uganda.⁶⁴⁰⁰

The National Vision 2040 frames the National 4IR in Uganda. The Vision identifies Science, Technology Engineering, and Innovation (STEI) as key drivers for development. Uganda's National Vision 2040 aspires to transform the country from a predominantly peasant and low income country to a competitive upper-middle-income country.⁶⁴⁰¹ The Vision 2040 is in line with the East African Vision 2050,⁶⁴⁰² which affirms that Science Technology, and Innovations (STI), whether embodied in human skills, capital goods, or practices and organizations, is one of the key drivers of economic growth and sustainable development. Uganda's policy aims to strengthen infrastructure (energy, transport, water, oil and gas, and ICT); Science, Technology, Engineering, and Innovation (STEI); land use and management; urbanization; human resource; and peace, security and defense.

The National Development Plan (NDPIII) sets the aspirations articulated in Uganda Vision 2040.⁶⁴⁰³ Within the theme of sustainable industrialization for inclusive growth and sustainable wealth creation, the goals of the (NDPIII) 2020/21–2024/25 are: increased household incomes and improved quality of life of Ugandans. The NDPIII plan includes a Digital Transformation Program aiming to realize 18 projects to increase ICT penetration and use of ICT services for social and economic development, ICT incubation and increasing e-government services.

The focus of the Digital Transformation Program for Artificial Intelligence is on capacity-building but not on policy or regulatory framework, or strategic

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

intent in the field of AI. Notable in the NDPIII, however, is the commitment to a Human-Rights Based Approach (HRBA) for sustainable economic development, expressed as follows: “Ensure inclusive sustainable development [...] with particular attention to human rights principles of equality and non-discrimination, empowerment and participation and attention to vulnerable groups. [...] All sectors, ministries, departments, agencies, and local governments are expected to adopt HRBA in their respective policies, programs, legislation, and plans.”⁶⁴⁰⁴

In line with both the Vision 2040 and NDPIII, the National Science, Technology and Innovation (STI) Policy of 2009⁶⁴⁰⁵ guides innovations in these fields.⁶⁴⁰⁶ The Ugandan government established the Ministry of Science, Technology, and Innovation to coordinate STI efforts in the country, creating linkages with all actors, and providing clear policy direction and supervision of STI initiatives.

Other supportive policies for the creation of an STI ecosystem is the National Science, Technology and Innovation Plan (NSTP) 2012/2013–2017/2018 and the Science, Technology, and Innovation Sector Development Plan (SDP) 2019/2020–2024/2025.⁶⁴⁰⁷ The seven strategic objectives of the SDP include the enhancing policies, planning, and coordination in the sector; developing infrastructure; funding public and private funding for science, technology, and innovation; improving education and outreach in the sector; increasing transfer of technologies and adoption; strengthening R&D capacities and applications; and implementing a legal-regulatory framework to guide the safe and appropriate use of new technologies.

At the regional level, Uganda has been actively participating in several relevant policy initiatives. As a member of the African Union (AU), Uganda is committed to take specific measures to formulate and implement human-centered policies, in alignment with the goals of the AU digital transformation strategy,⁶⁴⁰⁸ the AU Continental Data Policy Framework,⁶⁴⁰⁹ and the AU Continental Artificial

Intelligence Strategy.⁶⁴¹⁰ Ugandan representatives from government, academia and private sectors form part of the committees and AI working groups that hold discussions around AI and ICT for social-economic development in Smart Africa and the African Union. The Smart Africa initiative is a new commitment of more than 36 African Heads of State and Government to accelerate sustainable social-economic transformation using ICTs and affordable broadband access.⁶⁴¹¹ Uganda has been actively participating in the drafting of the recently published “AI for Africa” Blueprint strategy report⁶⁴¹² by Smart Africa. Uganda has also contributed to the work of the African Union High-Level Panel on Emerging Technologies (APET),⁶⁴¹³ mandated to advise the AU on harnessing emerging technology innovations for Africa’s social-economic transformation.

Public Participation

The Republic of Uganda set a Guide to Policy Development & Management for the country in 2013⁶⁴¹⁴ to address the lack of a formalized process for policy management. The government set forth a commitment to public consultations to promote democratization and empowerment. Modes of public consultation range from information consultations to one-time meetings with stakeholders to discussion papers and draft legislation. Recommendations included reasonable periods for consultation and participation in the early stages of policy formulation. The government of Uganda in collaboration with UN Global Pulse organized the Expert National Task Force on Fourth Industrial Revolution, under the leadership of the Ministry of ICT & National Guidance.⁶⁴¹⁵ The process involved 23 experts from academia, engineering, science, and policy-

makers.⁶⁴¹⁶ The draft strategy validated in October 2020⁶⁴¹⁷ guides the Ugandan government in harnessing emerging technologies.

In the most recent UN e-Government Survey of 2024, Uganda ranked 150th out of 193 countries in the world and in the bottom ten among African countries, in terms of the e-Government development index (EGDI).⁶⁴¹⁸ Uganda has yet to establish a systematic process to engage stakeholders in meaningful participation in policymaking.

Data Protection

The Data Protection and Privacy Act (DPPA)⁶⁴¹⁹ was enacted in 2019 and ancillary regulations known as the Data Protection and Privacy Regulations were published in 2021.⁶⁴²⁰ The DPPA took the European Union GDPR as a model and seeks to “protect the privacy of individual and personal data by regulating the collection and processing of personal information; to provide for the rights of the persons whose data is collected (data subjects) and the obligations of data collectors, data processors and data controllers; and to regulate the use or disclosure of personal information; and for related matters.”

The DPPA provides also that all personal data must be handled in accordance with the principles of accountability, lawfulness, minimization, retention, quality, transparency, and security.⁶⁴²¹ The Law establishes the Personal Data Protection Office under the National Information Technology Authority, Uganda (NITA-U) to oversee the implementation of and be responsible for the enforcement of the Act.⁶⁴²²

The Ministry of Information and Communications Technology and National Guidance (MoICT & NG) drafted a National Data Strategy, which is

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Uganda is not a party to the AU Convention on Cyber Security and Personal Data Protection (Malabo Convention).⁶⁴³¹ The Convention addresses the development of information and communication technologies while upholding fundamental rights and freedoms.

Algorithmic Transparency

Section 27 of the Data Protection and Privacy Act addresses the rights of data subjects related to automated decision making.⁶⁴³² However, it does not provide for a right to algorithmic transparency.

Biometric Identification

Uganda's National Identification (ID) program was launched in 2014 and further expanded after the passage of the Registration of Persons Act in 2015, making purchasing a SIM card mandatory and making registration essentially a pre-requisite for getting online.⁶⁴³³ Registration for the National ID is also required for a range of other vital services, including accessing public education or healthcare services; obtaining a passport; opening a bank account; voting and public service verification, which has led to the weeding out of many "ghost" workers; citizen verification for passport issuance; and tax identification.⁶⁴³⁴

Under the National ID system citizens' biometric data is captured and validated for adults and children. Infants are issued a National Identification Number (NIN) or an ID card upon registration of their birth. The National ID system managed by the National Identification & Registration Authority (NIRA) is moving towards the development of its digital ID ecosystem that was to be put in place by 2024, including a new biometrics registration drive.⁶⁴³⁵ The process

will expand the system to forms of biometrics other than fingerprints, including iris and face biometrics. However, the system has also been plagued by technical challenges since its inception, including allegations of a major data breach in June 2017. Though the government denied these reports, it admitted that citizens' biometric data had been shared with telecommunications companies as part of the process of verifying SIM cards.⁶⁴³⁶

A coalition of civil society organizations filed a lawsuit in the High Court of Kampala for digital exclusion in 2022.⁶⁴³⁷ The case Initiative for Social and Economic Rights [ISER], the Health Equity and Policy Initiative [HEAPI], & Unwanted Witness v. Attorney General and National Identification and Registration Authority (NIRA) alleges that the digital ID system, also known as Ndaga Muntu, poses an exclusionary barrier that violates women's rights to health care, and the right to social security benefits.⁶⁴³⁸ The alleged exclusion has been fatal, especially among the elderly and pregnant women who have been barred from healthcare and welfare services. Research conducted by the plaintiffs estimates that up to 33% of adults in Uganda have yet to receive the biometric ID card launched in 2015, limiting their access to a range of public services from welfare benefits and maternity care to college enrollment, formal employment, and opening bank accounts.⁶⁴³⁹

Facial Recognition

The government of Uganda has actively used AI and new technologies for purposes of mass surveillance, policing, and crime prevention. The government rushed the procurement of 24-hour CCTV cameras in crime-prone areas in Kampala and surrounding areas following a wave of murders. These crimes included high-profile Ugandan citizens, Muslim clerics, military and police officers, Cabinet Ministers, among others. The first phase of the plan included the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

installation of 1,940 cameras in 2018 in the capital city area.⁶⁴⁴⁰ The second phase cost the Ugandan public over USD 104 million, in a procurement deal hastened through Parliament under vague loan terms.⁶⁴⁴¹

The Ugandan Parliament endorsed the deployment of the technology for policing functions without legislating a corresponding legal framework fostering issues of the legality of such actions.⁶⁴⁴² Human rights concerns emerged over the fact that the system was operated on a centralized database, with the potential of negatively affecting citizens' right to privacy, and freedom of peaceful assembly.

The CCTV project was not well received due to the lack of openness, and transparency in the procurement process and in the management of the system, hindering public trust. Reports of unexplainable leaked footage from CCTV cameras⁶⁴⁴³ raised further questions on the ethical standards and requirements to manage the retrieval, sharing and elimination of public CCTV footage.⁶⁴⁴⁴ Additionally, concerns exist about how the infrastructural deficiencies (poor or no street lighting, limited connectivity, low standards of maintenance) have undermined the benefits of the use of CCTV in several instances of application of the system. Despite these reservations, the Ugandan police proceeded with the plans to integrate their CCTV camera and forensic system with other key agencies' data such as Uganda Revenue Authority (URA), NITA-U, NIRA, and the immigration office. In the second phase of this plan, started in 2020, 20 facial recognition cameras were installed and connected to 107 monitoring centers at different police stations within 2,319 mapped countryside municipalities and major towns.⁶⁴⁴⁵

Key concerns around transparency and accountability of both resources and personal data remain unanswered, in particular the use of AI facial recognition technologies to indiscriminately deal with persons of interest, including

dissidents.⁶⁴⁴⁶ In a report regarding concerns in the use of AI in Africa, AfriPoli found the use of facial recognition systems in the 2020 Ugandan elections, to monitor, track and arrest 836 supporters of the opposition.⁶⁴⁴⁷ The participation of Huawei AI in 16 African countries, including Uganda has led to the use of mass surveillance data to local law enforcement.⁶⁴⁴⁸

Tracking

In 2020, the government adopted a measure that linked the RECS system to the efforts to combat the spread of COVID-19.⁶⁴⁴⁹ A task force that included the Uganda Revenue Administration Commissioner General and the Uganda Trade Minister, set up to discuss how the RECS could trace the movement of trucks (and their drivers) in real-time across trade routes. The plans came about after a COVID-positive truck driver was intercepted at the border upon mandatory testing, a condition to clear Customs.

The Ugandan government later announced a plan to install GPS trackers on every vehicle in the country.⁶⁴⁵⁰ The project would require the registration of all number plates for every public and private vehicle, water vessel, and motorcycles (commonly known as Boda Bodas.). This plan posed an evident risk to freedom of mobility as the government would potentially be able to track the whereabouts of a particular person at all times.

In the original plan, the Ugandan government signed a Memorandum of Understanding and a 10-year agreement with the Russian firm Joint-stock Company Global Security, under a project dubbed Intelligent Transport

Monitoring System (ITMS).⁶⁴⁵¹ While the government presented these plans as an effort to curb the rampant transport kidnappings and robberies to aid during investigations, legal groups sued the government over these plans, and pleaded to the High Court to halt and restrain the implementation of the compulsory digital surveillance, due to privacy concerns.⁶⁴⁵² The lawsuit includes a request for explanations to the government regarding the adjudication of the contract to a foreign entity without due diligence. The government planned to deploy the systems in March 2023.

Environmental Impact of AI

Uganda does not have formal policies addressing the environmental impact of AI.

Lethal Autonomous Weapons

The governance and control of Unmanned Aerial Systems (UAS), Remotely Piloted Aircraft Systems (RPAS), or drones, have been a concern of the Uganda authorities. In a report of 2019, the Uganda Civil Aviation Authority and Customs officials started awareness sessions about the threats that non-registered drones pose to national security.⁶⁴⁵³ Uganda developed laws to regulate drones under the Civil Aviation Authority (CAA) Remotely Piloted Aircraft Systems Regulations 2020, but is lacking a unified legal framework.⁶⁴⁵⁴ Such a framework is in the draft stage in consultation with the Civil Aviation Safety and Security Oversight Agency (CASSOA). The Uganda Communications Commission issued guidelines for the operation of remotely piloted aircraft (RPAS)/drones in Uganda in 2021.⁶⁴⁵⁵

Uganda was part of the African Group that issued a joint statement calling for an international discussion on the “ethical, legal, moral and technical

questions” raised by the use of autonomous weapons systems and urging concrete policy recommendations, including prohibitions and regulations.⁶⁴⁵⁶

Human Rights

According to the 2024 Freedom in the World Report, Uganda is not free in terms of human rights protection, with a score of only 34/100.⁶⁴⁵⁷ Uganda’s civil society and independent media sectors suffered from legal and extra-legal harassment and state violence. Increasing accusations of the overreach of the Executive over Judicial independence, as well as an increase in systemic corruption are the most salient conclusions of the Freedom House report.

The Ibrahim Index of African Governance in 2021 scores Uganda at 47.5/100 for overall governance and 38.9/100 in Participation Rights & Inclusion, placing the country in position 31 out of 45 African countries, with a decreasing trend since 2012.⁶⁴⁵⁸

Uganda is a signatory of the Universal Declaration of Human Rights and has ratified various covenants including the International Convention on Civil and Political Rights (ICCPR) and International Covenant on Economic, Social and Cultural Rights (ICSECR).⁶⁴⁵⁹ Uganda ratified the African Charter on Human and People’s Rights in 1986.⁶⁴⁶⁰ Chapter four (4) of the Constitution of Uganda of 1995 provides for the protection of fundamental civic, economic, social, and political rights and freedoms. Article 20 (1) of the Constitution stipulates that the fundamental rights and freedoms of individuals are inherent and not granted by the State.

In line with the Constitution, the country has a Uganda Human Rights Commission that monitors human rights violations.⁶⁴⁶¹ There is a Human Rights Committee in Parliament⁶⁴⁶² scrutinizing the work of the government, making

recommendations aimed to improve human rights protection, and overseeing the National Action Plan on Human Rights.⁶⁴⁶³

Uganda is a multiparty democracy, yet the same party (National Resistance Movement) and President have ruled since 1986 with fast-rising opposition to the incumbency.⁶⁴⁶⁴ In the 2021 elections, media reports indicated that the political campaign was marred by killings, arrests, beatings, and disappearances by security forces as well as harassment and intimidation of journalists.⁶⁴⁶⁵

The Human Rights Foundation's universal periodic review (UPR) report of Uganda⁶⁴⁶⁶ found actions by the Uganda government such as ordering internet blackouts on the evening of elections in 2018. A five-day internet shutdown and blockage of social media, compounded by a government decision to replace a 200 shilling (\$0.05) social media tax with a 12 percent tax on internet data. The government adopted further regulations to restrict freedom of expression by levying fees on the use of online communication. A new shutdown of social media services occurred close to the date of the 2021 elections. The UPR report exhorts the Ugandan government to ensure the protection of all individuals and cooperate with international human rights organizations and generate an internal dialogue toward peace.

Amnesty International highlighted that freedom of expression has become increasingly constrained and civic space significantly narrowed as Human Rights defenders (HRDs) and organizations working on electoral accountability were particularly targeted for their work.⁶⁴⁶⁷

OECD / G20 AI Principles

Uganda is not a member of the OECD and is not a signatory to OECD AI Principles.⁶⁴⁶⁸ The OECD AI Observatory reports that the 4IR strategy is aligned

with two OECD AI principles: (1) Fostering a digital ecosystem for AI and (2) Providing and enabling policy environment for AI. However, no reports are available for implementation.⁶⁴⁶⁹

Council of Europe AI Treaty

Uganda has not endorsed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and Rule of Law, the first legally binding international treaty on AI and human rights.⁶⁴⁷⁰

UNESCO Recommendation on AI Ethics

Uganda is a member of UNESCO since 1962⁶⁴⁷¹ and is among the member states that adopted the UNESCO Recommendation on the Ethics of AI.⁶⁴⁷²

According to the UNESCO AI Needs Assessment Survey in Africa, Uganda is one of the countries in Africa that established AI as a priority in their national development plans. Strategies and policies are underway, but legislation and ethical guidelines as well as the operation of Centers of Excellence are yet to be implemented. Uganda reported work in progress in the establishment of a legal framework and plans for education programs to introduce government officials to AI skills. Uganda has requested support from UNESCO to guide the development of AI at the national level.⁶⁴⁷³

Uganda has not initiated the UNESCO Readiness Assessment Methodology (RAM) to support implementation of the UNESCO AI ethics Recommendation.⁶⁴⁷⁴

Evaluation

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

NDP III indicate the country's intent to spearhead digital transformation. The 4IR strategy is a first step in the formulation of a dedicated AI policy and the 2019 Data Protection and Privacy Act provides for protection of data subjects' rights. However, the absence of a national AI strategy with a human-centered approach at its core and of data subjects' right to algorithmic transparency, as well as the lack of independence of the data protection authority create additional hurdles in tackling the widespread use of AI for surveillance purposes. Should Uganda take its commitment to the UNESCO Recommendation on the Ethics of AI seriously, the Recommendation could provide a template for regulating the deployment of AI in way that respects human rights.

Ukraine

In 2024, Ukraine issued Guidelines on the Responsible Use of AI in the News Media. The country also initiated public consultations on a white paper on AI regulation and a draft act for using AI technologies in the country. Ukraine continued to prepare the UNESCO Readiness Assessment Methodology (RAM) as part of its implementation of the UNESCO Recommendation on the Ethics of AI.

National AI Strategy

Ukraine's government approach to AI is set out in two Orders issued by the Cabinet of Ministers of Ukraine. The Cabinet published its first Order,⁶⁴⁷⁵ which approved the "Concept for the Development of Artificial Intelligence in Ukraine." The order recognized that deployment of AI systems must include compliance with fundamental principles, such as those enshrined in personal data protection legislation and respect the constitutional rights to privacy and private and family life. The second order approved the Action Plan for implementing the Concept between 2021–2024.⁶⁴⁷⁶ The Order comprises a list of initial, specific tasks assigned to the relevant ministries.

The Action Plan elaborates on AI priorities for Ukraine, highlighting the use of AI in support of defense and public welfare while emphasizing responsible

⁶⁴⁷⁶ Order of the Cabinet of Ministers of Ukraine, *On the Approval of the Plan of Measures for the Implementation of the Concept of the Development of Artificial Intelligence in Ukraine for 2021–2024* (May 12, 2021), <https://zakon.rada.gov.ua/laws/show/438-2021-%D1%80#n10>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

and trustworthy AI use.⁶⁴⁷⁷ The Cabinet of Ministers of Ukraine is charged with the responsibility for the overall management and oversight of the Plan implementation. An Expert Committee on the Development of Artificial Intelligence – an independent expert body established under the Ministry of Digital Transformation of Ukraine—assists in strategic planning of the activities, advises on the thematic issues, and facilitates cooperation between key stakeholders.⁶⁴⁷⁸

The Ministry of Education and Science of Ukraine has also published its proposed, much more detailed National Strategy for the Development of Artificial Intelligence for 2021–2030.⁶⁴⁷⁹ In particular, the strategy notes that as a member of the Council of Europe Ad Hoc Committee on Artificial Intelligence, Ukraine should focus primarily on the standards of the EU, the Council of Europe, and other pan-European institutions that work on AI-related matters. The strategy also acknowledges the need to ensure alignment with the OECD AI Principles and the principles enshrined in the EU Charter of Fundamental Rights including human dignity, non-discrimination, and consumer protection.

Recent updates from the Ministry of Digital Transformation reaffirm these principles, with Ukraine joining global AI governance efforts through participation in summits such as the AI Seoul Summit.⁶⁴⁸⁰ The strategy has not been formally approved by the Ukrainian government since the priorities have changed following the Russian full-scale invasion.⁶⁴⁸¹ Instead, the government decided to develop a regulatory roadmap.

The Expert Committee on the Development of Artificial Intelligence in Ukraine in cooperation with the Ministry of Digital Transformation presented a

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Roadmap for the regulation of AI in Ukraine.⁶⁴⁸² The Roadmap proposes a bottom-up approach to AI regulation, which involves a gradual “moving from less to more,” starting from self-regulatory initiatives and ending up with the legislative acts. A phased approach further detailed in the 2024 White Paper on Artificial Intelligence Regulation in Ukraine emphasizes readiness tools like AI regulatory sandboxes.⁶⁴⁸³ The document proposes two phases for AI regulation.

Phase one, which is estimated to take 2–3 years, prioritizes self- and co-regulation by providing businesses with tools for future compliance. This involves developing capabilities of both the state to regulate and enforce and the industry to comply with future legislative requirements by introducing regulatory sandboxes, AI and human rights impact assessments (including Council of Europe HUDERIA methodology), AI labeling tools, voluntary codes of conduct, guidelines and recommendations.⁶⁴⁸⁴ Ukraine also intends to establish an AI Transparency Centre, which will serve as a one-stop shop for all information on AI regulation, general and thematic guidelines.

One of the thematic recommendations released by the National Council of Television and Radio Broadcasting addresses the responsible use of AI in the media. The guidelines provide specific frameworks for transparency, ethics, and human oversight in AI use for journalism.⁶⁴⁸⁵

The second phase reaffirms Ukraine’s commitment to adopt a law similar to the EU AI Act in the framework of its accession plan to the European Union. The Roadmap notes that implementation may be a gradual process that commences with the implementation of the most important or demanding provisions. The Roadmap emphasizes the importance of protecting Ukrainians’ fundamental rights in the digital space and their personal data. The Ministry of

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Digital Transformation published comprehensive AI guidelines prioritizing human rights and personal data protection, including recommendations for responsible AI governance.⁶⁴⁸⁶

The Ukraine Parliamentary Commissioner for Human Rights also announced the initiation of a project with EU4DigitalUA concerning AI regulation.⁶⁴⁸⁷ This initiative, which was completed in March 2024, explores how advanced AI impacts fundamental rights such as privacy and outlines the legal frameworks required to ensure ethical and lawful use of these technologies. Developed with Ukrainian governmental and civil stakeholders, the EU4DigitalUA initiative draws from international laws and standards, including GDPR and UN guidelines, and provides recommendations for balancing technological progress with the protection of rights and freedoms. The initiative further highlights Ukraine's goals to align with global standards while addressing unique domestic challenges like data protection and ethical AI use. By emphasizing transparency, accountability, and risk management, EU4DigitalUA seeks to ensure safe AI adoption that supports societal progress without compromising individual rights.⁶⁴⁸⁸

Public Participation

The Institute of Artificial Intelligence Problems of the Ministry of Education and the National Academy of Sciences of Ukraine sent letters of inquiry to more than 300 different organizations for their views that would inform the development and implementation of the National Strategy for the Development of Artificial Intelligence for 2022–2030. These included most ministries in Ukraine, scientific institutions, public and private institutions of higher education, and commercial entities.⁶⁴⁸⁹

The Roadmap for the regulation of AI in Ukraine was developed following a series of meetings with representatives of business, education, science, NGOs, and the parliament, as well as the Expert Committee.⁶⁴⁹⁰

⁶⁴⁸⁶ EU4Digital, *Human Rights in the Era of Artificial Intelligence: Challenges and Legal Regulation*, European Union (Feb. 2024), <https://eufordigital.eu/eu4digitalua-and-ukrainian-officials-present-artificial-intelligence-guidelines/>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Interested individuals can also engage by applying to join the Expert Committee on the Development of Artificial Intelligence under the Ministry of Digital Transformation.

The Ministry of Strategy and Industry of Ukraine also published a public consultation on the draft Act regarding the State targeted scientific and technical program for the use of AI technologies in priority sectors of the economy of the period until 2026. The electronic consultation will enable individuals, legal entities and their associations to comment on proposals to create favorable conditions for the development and deployment of innovative AI technologies in priority sectors of the economy and to strengthen Ukraine's position in the world market.⁶⁴⁹¹ The Law on Access to Public Information allows Ukrainians to submit requests for information, including on AI policies and state decisions in this area.⁶⁴⁹² Another platform for citizen input consists of electronic petitions on the President's website. These petitions must garner 25,000 supporters within 90 days to be reviewed by the President.⁶⁴⁹³

Data Protection

The primary legislation governing data protection in Ukraine is the Law of Ukraine on Personal Data Protection (PDP), enacted in 2010. The legislation has been amended several times. The law outlines fundamental requirements and obligations concerning the collection, processing, and use of personal data by both private entities and the Ukrainian government.

The Constitution of Ukraine, the Council of Europe Convention 108 for the Protection of Individuals with regard to Automatic Processing of Personal Data, the Civil Code of Ukraine, and various by-law documents and recommendations approved by the Ukrainian Parliament Commissioner for Human Rights⁶⁴⁹⁴ constitute sources of personal data protection standards in Ukraine.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Ukraine is in the process of modernizing its data protection laws to align with the GDPR. The Association Agreement between the European Union and Ukraine underscores cooperation to ensure an adequate level of personal data protection in line with European and international standards. Several drafts, including a Draft Law on Protection of Personal Data and the Draft Law on the National Commission on Personal Data Protection and Access to Public Information, reflect ongoing efforts to align Ukrainian legislation with EU requirements. The aim is to establish a comprehensive framework for personal data protection in both public and private sectors.⁶⁴⁹⁵

An expert discussion on the Draft Law on Personal Data Protection was held on June 14, 2023, involving MPs, government representatives, NGOs, and experts. The Draft Law was anticipated to be approved by the Parliament in 2023 and take effect on January 1, 2024. However, the Parliament failed to reach consensus regarding the proposed bills and there are currently undergoing another round of review processes.

The Draft Law incorporates key GDPR principles but introduces some variations, regarding for example the certification of Data Protection Officers, adherence to EU guidelines and case law, CCTV recording retention periods, extraterritoriality, posthumous personal data processing, cross-border transfer, data breach notification or reasonable fees for data subject requests.

Articles 18(15), 19, and 25 would, with certain exceptions, provide data subjects with a right not to be subject to a decision based solely on automated processing, including profiling, which produces legal effects concerning individuals or similarly significantly affects such individuals.

The Office of the Ukrainian Parliament Commissioner for Human Rights, also known as the Ombudsman, is an independent, authoritative institution that oversees the protection of human and citizen rights and freedoms across Ukraine and for Ukrainians abroad.⁶⁴⁹⁶ Specifically, the Department for Personal Data Protection, an independent structural unit of the Secretariat of the Verkhovna Rada of Ukrainian Parliament Commissioner for Human Rights, ensures compliance and aligns Ukraine's personal data protection practices with national and EU standards.⁶⁴⁹⁷

The Parliament Commissioner publishes an annual report on the state of protection of citizens' rights and freedoms in Ukraine. The latest report relating to 2023 highlighted the progress on legislation to protect personal data and the access

⁶⁴⁹⁵ Council of Europe, *Opinion on the Draft Law of Ukraine "On Personal Data Protection," No. 8153 as of 25 October 2022* (Apr. 24, 2023), <https://rm.coe.int/opinion-on-the-draft-law-on-personal-data-protection-in-ukraine-final-/1680ab9e06>

Center for AI and Digital Policy

to information.⁶⁴⁹⁸ The report noted the increased threat of cyberattacks given the ongoing war with Russia. The report noted that the Commissioner acted on violations of human rights in the following high-risk areas: Unlawful processing of personal data, Fraudulent actions with personal data, Unlawful publication of videos containing personal data (including images of people), Violation of the right to access personal information, Issues of organization of personal data processing.

The Draft Law on the DPA proposes to establish an independent government agency that would be responsible for both policymaking (adopting mandatory regulations) and enforcement (prosecuting infringers) in the sphere of data privacy and access to public information.

Algorithmic Transparency

Ukraine has not yet signed and ratified the modernized version of Council of Europe Convention 108 which provides for algorithmic transparency.⁶⁴⁹⁹ Ukraine has no specific law granting a right to algorithmic transparency. However, the Ministerial Statement from the AI Seoul Summit, an international agreement signed by Ukraine and 26 other countries, commits the country to uphold transparency in the public use of AI applications.⁶⁵⁰⁰

Articles 8(12) and 8(13) of the Ukrainian Data Protection Law does provide data subjects with the right to: (i) be made aware of the automatic processing of personal data; and (ii) be protected from automated decisions that have legal consequences,⁶⁵⁰¹ i.e. request the provision of public services by humans as an alternative to algorithmic processing.⁶⁵⁰²

Use of AI in the Media

The Ministry of Foreign Affairs introduced an AI-generated spokesperson, Victoria Shi, to provide accurate consular information to the public and media. This initiative marks a significant step in Ukraine's use of AI to enhance

⁶⁴⁹⁸ Ombudsman of Ukraine, *Report on the State of Observance and Protection of Rights and Freedoms of Persons and Citizens in Ukraine in 2023* (2024), <https://ombudsman.gov.ua/report-2023/rozdil-9-informatsiini-prava>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

governmental communication and transparency, offering a model for integrating AI in public services responsibly.⁶⁵⁰³

The AI-generated spokesperson followed the Ministry of Digital Transformation published Recommendations for Responsible Use of Artificial Intelligence in the Media.⁶⁵⁰⁴ “The purpose of the recommendations is to implement and use the Guidelines for the Responsible Use of Artificial Intelligence Systems in Journalism, as well as to disseminate current international practices, principles and approaches to the responsible use of AI systems in the media to respect human rights and professional ethical standards.” The recommendations can be applied to content creation using generative AI systems, analyzing large amounts of data, administration and automation of work processes, content management such as searching and verifying content, and translating material.

The basic principles of using AI in the media include: responsible editorial decision (implementation of AI systems based on a conscious decision of the editorial staff taking into account the understanding of the mission of media outlets), legality, regular assessment of risks associated with the use of AI systems, transparency and clarity (disclosure of information on the use of AI systems), confidentiality and data protection (preventing leakage of personal data or other confidential information through the AI systems used), diversity and non-discrimination (ensuring audience access to diverse content when using personalization tools), human oversight, responsibility and adaptability (improvement in line with technological development of AI systems and changes in legal regulation). Significant attention is paid to the labeling requirement and content curation mechanisms.

Use of Facial Recognition

According to media reports, the Ukrainian government is using Clearview AI’s facial recognition technology for a range of potential purposes related to its wartime efforts including uncovering Russian soldiers, combating misinformation, and identifying personnel at checkpoints, abducted children, and

⁶⁵⁰³ Ministry of Foreign Affairs of Ukraine, *Announcement of AI-generated Spokesperson Victoria Shi* (May 2024), https://x.com/MFA_Ukraine/status/1785558101908742526?ref_src=twsrc%5Etfw%7Ctwcamp%5Etweetembed%7Ctwterm%5E1785558101908742526%7Ctwgr%5Ecf55ae8f51a49c4cdb38fa5bd23832379ffe64d7%7Ctwcon%5Es1_c10&ref_url=https%3A%2F%2Fwww.ndtv.com%2Fworld-news%2Fukraine-introduces-ai-generated-spokesperson-for-foreign-ministry-5570521

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

deceased servicemen.⁶⁵⁰⁵ This use, while potentially advantageous for national security, raises substantial privacy concerns as the technology has been widely criticized for its lack of transparency and accuracy.⁶⁵⁰⁶

More than 1,500 officials across 18 Ukrainian government agencies were using the facial-recognition tool as of November 2023.⁶⁵⁰⁷ The use of this type of surveillance technology is unprecedented in a war context and remains controversial as Clearview AI faces several legal challenges including infringement of privacy rights.

Facial recognition is also used in street surveillance cameras. In 2021, the then-Minister for Internal Affairs even threatened to use facial recognition to identify protesters.⁶⁵⁰⁸ Journalistic investigation also revealed that some systems used by the municipal authorities were based on Russian software TRASSIR.⁶⁵⁰⁹

A Draft Law on video surveillance has since been introduced in Parliament. However, Ukrainian civil society finds the law to be overly permissive toward the technology and lacking safeguards against abusive practices because it allows law enforcement to access both private and public surveillance infrastructure without a court order.⁶⁵¹⁰

Environmental Impact of AI

Ukraine has not published specific documents addressing the environmental impacts of AI. However, as a member of the United Nations (UN), Ukraine has agreed to the resolution on Seizing the Opportunities of Safe, Secure,

and Trustworthy Artificial Intelligence Systems for Sustainable Development, which was adopted by the General Assembly. This resolution includes commitments to seizing the benefits while mitigating the negative impact of rapid technological change on the achievement of the UN Sustainable Development Goals. Potential negative impacts include those to the environment.⁶⁵¹¹

Lethal Autonomous Weapons

The Concept of AI Development in Ukraine prioritizes the development of AI capacities for command-and-control tasks and AI use in weapons and military equipment. Russia's invasion of Ukraine has intensified work on applying AI in the military industry. The Ministry of Defense is advancing its logistics and supply operations by diversifying technological resources to better equip the Armed Forces of Ukraine for effective mission support.⁶⁵¹² According to media reports, Ukraine is becoming a testing field for weapons using AI components to strengthen defense capabilities. Particularly, Ukraine uses “AI to analyze satellite imagery, open-source data, drone footage, and reports from the ground to present commanders with military options.”⁶⁵¹³

Ukraine has secured an extensive contract covering 1.8 million drones through collaboration between the Ministry of Defense and the Ministry of Digital Transformation.⁶⁵¹⁴ Fully autonomous drones are already being used to defend Ukrainian energy facilities from other drones, thus being anti-vehicle weapon systems. Mykhailo Fedorov, Deputy Prime Minister, Minister of Digital Transformation of Ukraine, stated “so far, six systems to counter enemy drones have been purchased. These are the most advanced defensive technologies that are used to protect strategic facilities in the US. Radar jamming and deception systems help detect and block enemy UAVs, then the system releases its own drones. For example, the Fortem DroneHunter F700 is an autonomous drone with radar control and artificial intelligence that flies at speeds of over 100 km/h, and

intercepts and lands enemy drones. The operators have already been trained and the systems have been installed at energy plants.”⁶⁵¹⁵

Ukraine deployed the world’s first drones that are capable of both detecting and attacking targets autonomously in September 2023.⁶⁵¹⁶ The Ukrainian government stresses that a key challenge implies an active use of autonomous weapons by Russia and a need to counterbalance it and gain a military advantage, which is currently impossible to achieve with the conventional means.⁶⁵¹⁷ Ukraine is also using multiple situation awareness systems, which assist in planning operations, conducting intelligence and predicting threats, e.g. Delta and Palantir systems.⁶⁵¹⁸ Ukraine is also using Clearview AI facial recognition systems for a number of military purposes, most notably to identify Russian army soldiers, conduct intelligence operations or find kidnapped Ukrainian children.⁶⁵¹⁹

The efforts around research and development of AI MilTech are currently coordinated by the defense state-governed cluster Bravel, which unites industry representatives and the relevant state authorities.⁶⁵²⁰

At the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea, nearly sixty states agreed to issue a joint call to action on the responsible development, deployment and use of AI in the military domain.⁶⁵²¹ Ukraine endorsed the resulting Political Declaration.⁶⁵²²

Ukraine participated in the second REAIM summit took place in Korea.⁶⁵²³ As the focus was on responsible behavior in military AI, it was concluded with a more concrete Blueprint for Action,⁶⁵²⁴ negotiated by 35 countries including Ukraine prior to the event. The document outlines specific commitments across the summit's themes and aims to pave the way for a more structured Plan for Action in 2025.

Ukraine signed the Convention on Certain Conventional Weapons.⁶⁵²⁵ At the 78th UN General Assembly First Committee in 2023, Ukraine voted in favor of resolution L.56 on autonomous weapons systems, along with 163 other states. Resolution L.56 stressed the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report, reflecting the views of member and observer states on autonomous weapons systems and ways to address the related challenges and concerns they raise from humanitarian, legal, security, technological and ethical perspectives and on the role of humans in the use of force.⁶⁵²⁶

Human Rights

According to Freedom House 2024 report on Ukraine, the country is “Partly Free.”⁶⁵²⁷ This was already the case before the Russian invasion in February 2022, but the situation has deteriorated since then. According to the report, “the Russian armed forces has inflicted massive civilian and military casualties and destroyed civilian infrastructure. Millions of Ukrainians have been displaced from their homes, and Russian troops have engaged in extrajudicial executions, torture, and sexual violence against residents. In areas subjected to longer periods of occupation, Russian authorities have used intimidation, arbitrary detention, and torture to assert control over political expression, the education system, and many other aspects of civilian life.”

Center for AI and Digital Policy

A number of civil liberties and freedoms have been curtailed as a result of the martial law in force.⁶⁵²⁸ Martial law was extended for a thirteenth time until February 2025.⁶⁵²⁹

As a result of Russia's invasion of Ukraine, an essential part of the Ukrainian Parliament Commissioner for Human Rights work in Ukraine is to assist citizens daily.⁶⁵³⁰ Freedom House identifies deliberate Russian interference with online communication, indirect loss of access to online communications arising from the current conflict, and new domestic laws aimed at tackling online disinformation and the sharing of sensitive data as possible threats to online freedoms.⁶⁵³¹ Reports from Human Rights Watch⁶⁵³² and Amnesty International⁶⁵³³ voice similar concerns related to the humanitarian crisis in Ukraine. Amnesty International highlights the degradation of workers' rights and the disproportionate impact of the war on older people.

The Law About Electronic Communications,⁶⁵³⁴ which requires service providers to retain data relating to their users and to share that data with state authorities to facilitate the investigation and prosecution of offenses, could be used to limit citizens' speech even before the Russian invasion.

Ukraine's commitment to human rights is enshrined in its constitution. Article 9 incorporates international treaties as part of domestic legislation. An action plan for the National Human Rights Strategy 2021–23⁶⁵³⁵ re-asserts Ukraine's commitment to the principles of international human rights law, their implementation in domestic law and public institutions, and engagement with

international human rights bodies. Ukraine also committed to an annual internal review by a new Interagency Working Group. Ukraine expanded this commitment by continuing the annual review process, with the Interagency Working Group intensifying efforts to monitor and adapt the strategy to address evolving human rights challenges, especially in the context of digital rights and AI governance.⁶⁵³⁶

Ukraine became a member of the United Nations in October 1945 and ratified the Universal Declaration of Human Rights, the International Covenant on Civil and Political Rights (ICCPR), and the International Covenant on Economic, Social and Cultural Rights. Collectively those three instruments constitute the UN International Bill of Human Rights. The UN reports that Ukraine has ratified 16 out of 18 key international human rights treaties.⁶⁵³⁷ Following the full-scale invasion, Ukraine submitted a declaration with derogation from international obligations under the European Convention on Human Rights and the ICCPR.

The UN Human Rights Council periodic review of Ukraine's peace-time human rights position in 2018 remarked positively on the country's efforts in the field of judicial reform, discrimination, prevention of torture, gender equality, and the treatment of people with disabilities.⁶⁵³⁸ The UN Human Rights Council also noted the work being done to reform policing and tackle corruption. 190 recommendations were made to Ukraine and the government accepted 163 of those.

The UN Human Rights Council created an Independent International Commission of Inquiry on Ukraine to investigate all alleged violations and abuses of human rights and violations of international humanitarian law, and related crimes in the context of the Russian aggression against Ukraine. The Commission's report expressed concerns regarding "continuing patterns of violations of human rights and international humanitarian law" by Russia.⁶⁵³⁹

OECD / G20 AI Principles

The OECD has been working in close partnership with Ukraine for more than 30 years to support its reform agenda.⁶⁵⁴⁰ Ukraine is not a member of the

OECD but endorsed the OECD AI Principles in 2019.⁶⁵⁴¹ Ukraine also committed to the updated OECD AI Principles.⁶⁵⁴² The 2020 Order of the Cabinet of Ministers of Ukraine expressed commitment to implement the OECD AI Principles.⁶⁵⁴³

The OECD Council recognized Ukraine as a prospective Member and opened an initial accession dialogue, following a request from the Government.⁶⁵⁴⁴ The OECD and the Government of Ukraine later began implementing a four-year OECD-Ukraine Country Programme that supports Ukraine's agenda for reform, recovery, and reconstruction, and helps the country advance its ambitions to join the OECD and European Union.⁶⁵⁴⁵

Ukraine is not a member of the Global Partnership on AI,⁶⁵⁴⁶ a multistakeholder initiative which aims to foster international cooperation on AI research and applied activities, and which is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”⁶⁵⁴⁷

The most recent OECD report on the state of implementation of the OECD AI Principles highlights that Ukraine's has a national AI strategy (2021–2030) that is designed to leverage the country's existing AI capabilities to achieve strategic national objectives. These objectives include “advancing Ukraine's digital economy, improving public administration efficiency, and enhancing the quality of life for its citizens.” The OECD recognizes that this strategy prioritizes AI applications in education, defense, security, and key economic sectors.⁶⁵⁴⁸

Council of Europe AI Treaty

Ukraine contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy, and the Rule of Law. Ukrainian civil society with Observer

Center for AI and Digital Policy

status also actively participated in these processes. However, Ukraine has not signed the legally binding international treaty.⁶⁵⁴⁹

UNESCO Recommendation on AI Ethics

Ukraine has been a member of UNESCO since 1954⁶⁵⁵⁰ and along with 192 other member states it adopted the UNESCO Recommendation on the Ethics of Artificial Intelligence in November 2021.⁶⁵⁵¹ The UNESCO Recommendation is not explicitly referenced in Ukraine's current AI policy framework even though Ukraine's emerging policy framework reflects many of the concerns and priorities in the UNESCO recommendation.

Ukraine has also initiated alignment with the Recommendation by preparing to implement the UNESCO Readiness Assessment Methodology (RAM). The RAM helps countries assess their legal, social, cultural, scientific, educational, technical, and infrastructural capacities to implement AI responsibly.⁶⁵⁵² Ukraine is listed as “in preparation” for implementing the RAM on UNESCO's Global AI Ethics and Governance Observatory's Global Hub.⁶⁵⁵³

Evaluation

The Russian invasion of Ukraine caused severe human rights violations, especially on the territories currently under Russian occupation. In response to the invasion, Ukraine has imposed martial law and derogated its obligations under certain human rights treaties. Reacting to the rapid digitalization of warfare, Ukraine has become a field for the development and use of autonomous weapons, which raises serious concerns among Ukrainian and international civil society.

As Ukraine obtained the status of EU candidate country, the AI policy landscape will likely be strengthened by reforms designed to align Ukrainian legal frameworks with the corresponding EU laws, including the GDPR, the EU AI Act or the Digital Services Act. Ukraine has continued to make progress toward implementing the OECD AI Principles and UNESCO Recommendation as well as national AI legislation.

United Arab Emirates

In 2024, the United Arab Emirates (UAE) released a charter for the development and use of artificial intelligence. The Cabinet also approved the country's official stance on participation in international AI policy, including the development of standards for AI sustainability. The UAE co-sponsored UN General Assembly Resolution on Seizing the Opportunities of Safe, Secure, and Trustworthy Artificial Intelligence Systems for Sustainable Development.

National AI Strategy

In 2017, the UAE became the first country in the world to appoint a Minister of State for Artificial Intelligence. H.E. Omar Al Olama was later appointed as Minister of State for Artificial Intelligence, Digital Economy and Remote Work Applications in July 2020.⁶⁵⁵⁴ The responsibilities of the Ministry included enhancing the government performance levels by investing in the latest technologies of artificial intelligence and applying them in various sectors.

The UAE Cabinet formed the UAE Council for Artificial Intelligence (AI) and Blockchain to facilitate the implementation of AI policies, and oversee AI integration in government departments and the education sector.⁶⁵⁵⁵ The Council is tasked with proposing policies to create an AI-friendly ecosystem, encourage advanced research in the sector and promote collaboration between the public and private sectors, including international institutions to accelerate the adoption of AI.⁶⁵⁵⁶

The UAE Government also launched the UAE Strategy for Artificial Intelligence (AI).⁶⁵⁵⁷ The strategy aligned with UAE Centennial 2071,⁶⁵⁵⁸ which has an ambitious goal to make the UAE the best country in the world by 2071. In the plan, AI will play a significant role in education, economy, government development, and community happiness through applications in various sectors, including energy, tourism, and education.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The National AI Strategy outlines eight strategic objectives:⁶⁵⁵⁹

1. Build a reputation as an AI destination.
2. Increase the UAE's competitive assets in priority sectors through the deployment of AI.
3. Develop a fertile ecosystem for AI.
4. Adopt AI across customer services to improve lives and government.
5. Attract and train talent for future jobs enabled by AI.
6. Bring world-leading research capability to work with target industries.
7. Provide the data and supporting infrastructure essential to become a test bed for AI.
8. Ensure strong governance and effective regulation.”

The UAE AI guidelines center on AI governance, Data governance, Cybersecurity, and Bias.

Government entities, such as the Digital Dubai Authority (DDA) followed the plans of the National AI Strategy, with specific strategies and guidance on AI. The Dubai Digital Authority published an AI Ethical impact assessment framework and established a governing AI ethics board, comprised of government policy, academic, legal, and industry experts to oversee and guide the strategic development of the AI Ethics Guidelines.

The Dubai AI Ethics Guidelines describe the key principles of a fair, transparent, accountable, and explainable AI system.⁶⁵⁶⁰ Launched in January 2019, the AI Principles and Guidelines for the Emirate of Dubai demonstrate Dubai's broader approach to ethical AI. Accompanying the Principles and Guidelines is an Ethical AI Self-Assessment Tool built to enable AI developers or operator organizations to evaluate the ethics level of an AI system.

The AI Ethics Guidelines provide an assessment (from proof of concept to production) of the ethical issues that may arise throughout the development process and how specific AI applications could be improved to ensure fairness, transparency, accountability, and explainability. The Ethical Toolkit also aims to ensure adoption of AI that optimizes the innovation potential and delivers economic and social value. The Executive Council of Dubai directed government entities to use the principles and guidelines when considering AI development, and entities including the Road and Transport Authority and the Dubai Police have formally acknowledged their adoption of the self-assessment tool when developing AI.⁶⁵⁶¹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Federal government set up the UAE National Program for Artificial Intelligence,⁶⁵⁶² which is a comprehensive set of resources on advances in AI and Robotics. The program encompasses free courses for UAE residents to raise awareness and understanding of AI technologies.⁶⁵⁶³ The government has endeavored to upskill the student population and government employees by providing relevant trainings to them.⁶⁵⁶⁴

Preceding the publication of the National AI Strategy, the UAE launched the Fourth Industrial Revolution (4IR) Strategy.⁶⁵⁶⁵ The strategy encompasses six pillars:

1. The Human of the Future
2. The Security of the Future
3. The Experience of the Future
4. The Productivity of the Future
5. The Frontiers of the Future
6. The Foundations of the Future

Innovations in robotics for healthcare are included in Pillar 1. Innovations in intelligent government services, intelligent cities, and next-gen mobility are in Pillar 3. 4IR policies and regulations to maintain the privacy and well-being of citizens and 4IR Values and Ethics are part of Pillar 6.

The UAE co-sponsored the UN General Assembly Resolution on Seizing the Opportunities of Safe, Secure and Trustworthy Artificial Intelligence Systems for Sustainable Development,⁶⁵⁶⁶ which addresses the potential of AI in accelerating global development while also recognizing associated risks. The main objectives include bridging the AI and digital divides between and within countries; promoting safe, secure, and trustworthy AI systems; and accelerating progress towards achieving the 2030 Agenda for Sustainable Development. This resolution marks a significant step in global AI governance, aiming to harness the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

technology's potential for sustainable development while addressing associated challenges and risks.

The UAE AI Office later launched the Charter for Development and Use of AI,⁶⁵⁶⁷ stipulating 12 priorities, including strengthening Human-Machine Ties, safety, algorithmic bias, data privacy, transparency, human oversight, governance and accountability, technological excellence, human commitment, peaceful coexistence with AI, promoting AI awareness for an inclusive future, commitment to treaties and applicable laws. The charter aims to position the UAE as a global hub for AI innovation, ensure ethical and responsible AI development, protect privacy and data security, balance technological advancement with social values, and encourage innovation and support economic growth. The charter reflects the UAE's National Strategy for AI goal of becoming a leading AI nation by 2031.

The Dubai Electronic Security Centre (DESC) launched the Dubai AI Security Policy⁶⁵⁶⁸ to support AI development with the aim of protecting Dubai from cyber risks. This policy aims to bolster confidence in AI solutions and technologies, promote the growth and development of AI, and mitigate electronic security risks associated with AI. The policy was unveiled during DESC's participation as the official cybersecurity partner at the inaugural Dubai AI and Web3 Festival 2024 at Madinat Jumeirah.

The UAE and released a Framework Statement with the United States forging intergovernmental cooperation on AI governance.⁶⁵⁶⁹ The statement was issued following a meeting between UAE President H.H. Sheikh Mohamed bin Zayed Al Nahyan and U.S. President Joseph R. Biden, Jr. The framework statement, endorsed by U.S. Assistant to the President for National Security Affairs Jake Sullivan and UAE National Security Advisor H.H. Sheikh Tahnoun bin Zayed Al Nahyan, outlines several key aspects of cooperation. The statement acknowledges the potential of AI to drive economic growth, transform various sectors, and promote sustainability. However, it also recognizes the challenges and risks associated with this emerging technology. The framework statement sets the stage for deeper cooperation between the two nations in AI governance, with potential implications for global standards and practices.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The UAE Cabinet approved the country's official stance on AI policy internationally,⁶⁵⁷⁰ marking a significant step in the UAE's commitment to global AI governance and development. This policy is built on six core principles and includes several key foreign policy initiatives: advancement, cooperation, community, ethics, sustainability, and security. This policy underscores the UAE's commitment to responsible AI development and its ambition to play a leading role in shaping the global AI landscape while balancing technological advancement with societal welfare.”

Public Participation

The UAE has a robust system of information and services for the public. The UAE Strategy for Government Services, Unified Digital Platform Policy, the Digital Participation Policy, and the Digital Customer and Digital Government Service Policy, aim to provide access to digital services.

The UAE Digital Participation Policy⁶⁵⁷¹ establishes what can be posted on the public platforms, the conditions to facilitate a healthy environment for sharing information, and enabling meaningful discussion on topics concerning the services of the UAE Digital Government and life in the UAE in general. The Sharik.AE platform created in 2022 is an interactive interface to keep the UAE public informed and seek consultations on matters related to government activities.⁶⁵⁷² Sharik.AE includes an interface for input for the co-creation of public services, community engagement, and participatory budget.

The UAE, through the Ministry of Artificial Intelligence, launched the “Think AI” initiative to develop legislation, policies, and initiatives for a responsible and efficient adoption of artificial intelligence (AI) within the private sector. “Think AI” established to facilitate a series of roundtables, workshops, and panel discussions with the participation of more than 100 government officials, representatives from the private sector, and experts from local and international organizations. The dialogue aimed to support the UAE's efforts to accelerate the adoption of artificial intelligence in key sectors such as infrastructure, governance and legislation to strengthen the position as a global hub for artificial intelligence.⁶⁵⁷³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Ministry of AI of the UAE ensures public awareness and digital participation through a variety of initiatives. The AI Camp 5.0 in 2023 attracted more than 8,000 participants aiming to develop their digital skills.⁶⁵⁷⁴ The AI Camp 6.0 in 2024 will cover seven main areas: the future of artificial intelligence; data science and machine learning; AI in education, healthcare, and finance sectors; web development and robotics; AI ethics and governance; cybersecurity; and virtual and augmented reality.⁶⁵⁷⁵

The Ministry of Human Resources & Emiratisation launched a public consultation on the use of AI and automated systems for contract completion in 2023 and 2024.⁶⁵⁷⁶

At the emirate level, Digital Dubai has set a vision to make Dubai the happiest city on earth, through initiatives of government effectiveness, in G2C Government to Consumer and Government to Government (G2G) services⁶⁵⁷⁷. Dubai has a website with information about AI principles and ethics for public access. Dubai's Ethical AI Toolkit is particularly helpful for three main types of users: Government Entities, Private Sector Entities, and Individuals.⁶⁵⁷⁸ The Digital Dubai Authority (DDA) introduced new methods of e-participation for the public on various issues including AI Ethics work.⁶⁵⁷⁹

Data Protection

In November 2021, the UAE adopted sweeping legislative reforms, including the Personal Data Protection Law, and Federal Decree-Law on the Protection of Personal Data, modeled after the GDPR. The Personal Data Protection (PDD) Law has extraterritorial geographical effect and applies to data controllers and data processors within UAE or located outside of the UAE, processing personal data of UAE residents.⁶⁵⁸⁰ The draft of the PDD Law had the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

participation of 30 major technology companies and came into force in January 2022.⁶⁵⁸¹ Four principles underpin the Law.⁶⁵⁸²

1. Single Data Authority
2. Right for Consent
3. Incentivizing SMEs
4. Allows Cross Border Data Flow

Introduced by the Minister of AI as “the law with the lowest cost of compliance,” the PDD Law is an integrated framework to ensure the confidentiality of information, protect the privacy of individuals, achieve proper governance for data management and data protection, in addition to defining the rights and duties of all concerned parties.⁶⁵⁸³ The rights established in the PDD Law are the right of access to information, the right to request personal data portability, the right to rectification or erasure of personal data, right of processing and automated processing. The PDD Law also addresses Cross Border Data Transfer.⁶⁵⁸⁴ The oversight is the responsibility of the UAE Data Office (DO), as the federal data regulator, overseeing policies, standards, and legislation, and responding to inquiries and complaints about the PDD Law. The DO affiliated with the Cabinet is responsible for a wide range of tasks that include:⁶⁵⁸⁵

1. Preparing policies and legislations related to data protection,
2. Proposing and approving the standards for monitoring the application of federal legislation regulating this field,
3. Preparing and approving systems for complaints and grievances, and
4. Issuing the necessary guidelines and instructions for the implementation of data protection legislation.

Provisions of the law include the prohibition of processing of personal data without the consent of its owner, with noted exceptions of protection of public interest, legal procedures and rights, and previous knowledge by the data owner. The law defines the controls for the processing of personal data and sets the obligations of security, confidentiality, and privacy.

The law does not apply to government data, government authorities that control or process personal data, or personal data processed by the security and judicial authorities.⁶⁵⁸⁶ The law also does not cover the processing of health, banking, and credit data that are subject to sector-specific legislation, and companies and institutions located in free zones that have specific data protection laws, such as the Dubai International Finance Centre (DIFC) and the Abu Dhabi Global Market (ADGM). Significant divergences with the GDPR include the limited legal basis, with a focus on consent as the primary legal basis, and less comprehensive transparency requirements.⁶⁵⁸⁷ The data protection law also has less onerous transparency requirements (only certain limited information will be required before processing) than the GDPR and no specific privacy notice requirement.

Other UAE laws that provide general rights to privacy include:

1. The UAE Constitution: Addresses privacy in that freedom of communication by post or other means of communication and the secrecy thereof is guaranteed in accordance with the law⁶⁵⁸⁸
2. The UAE Penal Code: Prohibits those who have access to an individual's personal data from disclosing or publicizing that information⁶⁵⁸⁹
3. The Federal Decree-Law No.34 of 2021 on Combatting Rumors and Cybercrime: Article (6) criminalizes the misuse of the personal data of others⁶⁵⁹⁰

Algorithmic Transparency

While the UAE regulations do not include a specific law on algorithmic transparency, Article 18 of the PDD Law,⁶⁵⁹⁵ gives data subjects the right to object to automated decision-making that may impact them, including profiling, with some exceptions given by other UAE laws.⁶⁵⁹⁶

Under the Charter for Development and Use of Artificial Intelligence the government intends to prioritize transparency for clear understanding of AI and how AI systems operate and make decisions. The government aims to foster trust and enhance responsibility and accountability in the use of AI technologies.⁶⁵⁹⁷

The UAE's Artificial Intelligence Guide⁶⁵⁹⁸ issued by the Ministry of AI addresses the subject of AI transparency in several sections. Section 3.4 describes the principles established in the Ethical AI Toolkit of the Smart Dubai Office by which systems should be ethical, fair, accountable, transparent, explainable, safe, secure, and “serve to protect humanity.” The AI Guide highlights the Smart Dubai ethical self-assessment tool for government companies, private firms, and individuals.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The UAE AI Guide includes a restatement of the focused efforts of the UAE in removing bias in the algorithms of AI systems. Section 3.5 includes examples and case studies to avoid the perpetuation of racial and gender bias. The recommendations include the implementation of evaluations of the decision-making process based on AI for fairness and posing the question “Should we build AI?”⁶⁵⁹⁹

Facial Recognition

The UAE’s digital transformation has led to the adoption of an AI-powered facial recognition system. In 2021, the UAE Government announced the enhancement of the UAE Pass, by adding biometric face recognition systems (Facial ID) to register users into the application.⁶⁶⁰⁰ The integration of facial recognition was set to reduce the transaction time from 20 minutes to 5 minutes.

In November 2022, Abu Dhabi Airports replaced passport checks with facial recognition technology.⁶⁶⁰¹ Biometric data is used to check in travelers, clear immigration, access lounges, and board their flights. The first phase of the project took place at one of the terminals at Abu Dhabi International Airport at the United States Customs and Border Protection (CBP) facility. The Managing Director and CEO of Abu Dhabi Airports presented this innovation as the “first of its kind in the UAE and the world, to further enhance our passenger journey.”⁶⁶⁰² The country plans to implement the system across the entire airport in 2025.⁶⁶⁰³

The Railway Transport Agency (RTA) commenced the use of emotional AI for tram drivers. Drivers wear armbands to detect heart rate, speech patterns, and reaction times to determine driving style and deviations based on drivers’ profiles.⁶⁶⁰⁴ Dubai Police introduced Giath vehicles, equipped with a 360-degree

Center for AI and Digital Policy

camera backed with facial and plate recognition technology. The system includes drones to extend surveillance outreach.⁶⁶⁰⁵

Plans are underway for the use of face biometric payments by Carrefour, the hypermarket chain operating in the UAE, in a partnership with the US-based biometric PopID.⁶⁶⁰⁶ The Face Pay biometric system is set to be piloted in selected stores in Dubai. PopID presents this payment method as an innovation for “superior customer experience and [...] robust security protocols.” Carrefour faced legal pushback in the EU because of the use of biometric data collection systems for payments at the register without user consent in 2020.⁶⁶⁰⁷

Biometric Identification

The UAE Pass launched in 2018 is the first digital national ID for citizens and residents to access 6,000 government services and to sign documents digitally.⁶⁶⁰⁸ The app was developed in a cooperation by Digital Dubai, Telecommunications and Digital Government Regulatory Authority (TDRA), and Abu Dhabi Digital Authority. By 2022 the number of people registered on the UAE Pass app was over 1.38 million, including 628,000 individuals with verified accounts. The system includes a digital vault that stores digital documentation and enhances the seamless completion of government transactions. The system has Blockchain technology to improve traceability and security.

The UAE Pass aligns with the protection of privacy and digital identity provisions outlined in the Federal Decree Law on Combatting Rumors and Cybercrime,⁶⁶⁰⁹ and the Electronic Transactions and Trust Services Law.⁶⁶¹⁰

Mass Surveillance

In 2017 the Dubai Police released the 2018-31 strategic plan for artificial intelligence.⁶⁶¹¹ The plan includes the use of AI techniques in criminal forensic investigation and in police operations to predict crimes. AI techniques were set to forecast crime, perform crowd management, enhance traffic safety and road security, and manage crises and disasters.

In 2018, Dubai Police announced the launch of Oyoon, an artificial intelligence surveillance program⁶⁶¹² that had the support of the government, semi-government, and private sector entities. The system intended to “provide a safer living experience.”⁶⁶¹³ The system operates through tens of thousands of cameras with facial recognition software and microphones to track and analyze the movements of suspected would-be thieves. The system would give verbal warnings before the commitment of the crime.⁶⁶¹⁴

Abu Dhabi Monitoring and Control Center (ADMCC) released the Falcon Eye system in 2016. The Falcon Eye system operated with a live feed to thousands of cameras installed in key locations to “observe events and monitor and limit violations.”⁶⁶¹⁵

Human Rights Watch reported the use of advanced mass surveillance technologies “to pervasively monitor public spaces, internet activity, and even individuals’ phones and computers, in violation of their right to privacy, freedom of expression, association, and other rights.”⁶⁶¹⁶

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Environmental Impact of AI

The UAE has undertaken initiatives aimed at leveraging AI for environmental sustainability. The Dubai Electricity and Water Authority (DEWA) is using AI to enhance energy sustainability and efficiency through its Digital DEWA initiative, which seeks to use autonomous systems for renewable energy, storage, and delivery of water and electricity services.⁶⁶¹⁷

DEWA's AI-powered smart waste bins and waste-to-energy projects are revolutionizing waste management in the UAE.⁶⁶¹⁸ Additionally, the UAE's official stance on AI policy internationally aims to address environmental challenges such as climate change and energy efficiency in the AI development efforts. According to this policy, the UAE aims to participate in platforms that contribute to the development of international standards for AI sustainability.⁶⁶¹⁹

Lethal Autonomous Weapons

The UAE is one of 127 High-Contracting Parties in the Convention of Certain Conventional Weapons (CCW) and endorsed Protocol I (Non-detectable Fragments), III (Incendiary Weapons), and V (Explosive Remnants of War).⁶⁶²⁰

As a member of the Non-Aligned Movement (NAM), the UAE supported the negotiation of a legally binding instrument on autonomous weapons systems to ensure that the weapons respect human rights and remain accountable.⁶⁶²¹

Human Rights

The UAE has agreed to uphold the principles outlined in the Universal Declaration of Human Rights (UDHR).⁶⁶²² UAE has not ratified any binding agreements such as the International Covenant on Civil and Political Rights (ICCPR) or the International Covenant on Economic Social and Cultural Rights

(ICESCR)⁶⁶²³ nor withdrawn existing reservations or declarations. The Universal Periodic Review (UPR) of the UAE in 2018, noted the transparent and gradualist approach of the UAE to align legislative and administrative norms with the commitments to human rights protection.⁶⁶²⁴ Recommendations of the report related to the implementation of mechanisms, laws, and regulations to protect human rights in line with international developments. The UAE has made voluntary pledges⁶⁶²⁵ related to engagement with UN human rights agencies, formulating a national human rights plan, protecting labor rights, and pursuing SDGs.⁶⁶²⁶

Freedom House scored UAE 18/100 concerning political rights and civil liberties and rated the country “Not Free.”⁶⁶²⁷ Freedom House reports the ban of political parties in UAE and the concentration of all executive, legislative, and judicial authority with the hereditary Rulers of the seven emirates. Human Rights Watch raised concerns about the UAE's stark contrast between its carefully crafted progressive image and its actual practices of suppressing dissent, maintaining long-term detention of activists (particularly in the UAE94 case),⁶⁶²⁸ and perpetuating systematic abuse of migrant workers who face both labor exploitation and heightened climate risks.⁶⁶²⁹

AI Safety Summit

The UAE participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁶⁶³⁰ The UAE thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully [realize] their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

The UAE also participated in the second AI Safety Summit,⁶⁶³¹ which took place in Seoul, Korea.

OECD / G20 AI Principles

The UAE is not a member of the OECD and has not endorsed the OECD AI Principles.⁶⁶³² The UAE engages with the OECD as member of the Development Assistance Committee (DAC). UAE was the first participant of the DAC since July 2014 upon OECD’s invitation.⁶⁶³³

The OECD.AI Observatory reports on the efforts of the UAE in governance through the enactment of the UAE National AI Strategy. The strategy addresses the OECD AI principles of (1) inclusive growth, sustainable development, and well-being; (2) fostering a digital ecosystem for AI, and (3) building human capacity and preparing for labor market transition.⁶⁶³⁴ The OECD also acknowledges the AI Principles and Ethics for the Emirates of Dubai⁶⁶³⁵ and the Federal Data Protection Law as actions of AI guidance and regulation mapping to OECD AI principles.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Council of Europe AI Treaty

As of December 2024, the UAE has not endorsed the COE Framework Convention on Artificial Intelligence and Human Rights, Democracy, and Rule of Law.⁶⁶³⁶ The UAE did not participate in the drafting of the first international legally binding treaty on artificial intelligence.

UNESCO Recommendation on AI Ethics

The UAE has been a UNESCO member since 1972, only one year after their foundation as a country. UAE was among the member states that endorsed the UNESCO Recommendations on the Ethics of AI.⁶⁶³⁷ The pact promotes human rights and contributes to the accomplishment of the Sustainable Development Goals, encompassing chapters on data governance, education, culture, employment, health, and the economy, addressing issues of transparency, accountability, and privacy.⁶⁶³⁸

The UAE has not explicitly addressed implementation of the UNESCO Recommendations through actions such as completing the Readiness Assessment Methodology (RAM).

However, the 2020 UAE report about the National Strategy for AI shows some alignment with the Recommendations, which came after.⁶⁶³⁹ AI oversight falls under two entities. (1) The Digital Dubai Authority (DDA)⁶⁶⁴⁰ ensures the adoption of the Dubai AI Ethics Guidelines and the accompanying Ethical AI Self-Assessment Tool.⁶⁶⁴¹ (2) The UAE Artificial Intelligence and Blockchain Council, overseeing the implementation of AI technology in society and across government.⁶⁶⁴²

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Dubai AI Ethics Guidelines, though not explicitly, maps the UNESCO recommendations, as follows:⁶⁶⁴³

- Policy Area 1: Ethical Impact Assessment – Covered by the Dubai AI Ethics Guidelines (DAEG) and the accompanying Ethical AI Self-Assessment Tool by the DDA.
- Policy Area 2: Ethical Governance and Stewardship & Principles – Accountable, explainable and transparent. All three are set out in the DAEG.
- AI Oversight Board – AI Ethics Advisory Board created by the Dubai Digital Authority.

Evaluation

The UAE stands out as the first country with a Ministry of AI, signaling the country's foresight regarding the impact of artificial intelligence in the lives of its citizens. The release of the National Strategy for AI in 2017 and the establishment of an AI Council are concrete efforts toward AI governance. The Dubai AI Ethics Guidelines and the accompanying Ethical AI Self-Assessment Tool are pioneering tools, aligned with the UNESCO Recommendations on the Ethics of Artificial Intelligence. The UAE has a Personal Data Protection Law that regulates automated decision-making and a Data Protection Office, although the right to algorithmic transparency has not been adopted. Calls for reinforcing the safeguards for human rights are increasing and so are mass surveillance practices for which there is no proper regulation or oversight.

United Kingdom

In 2024, the UK deepened the government commitment to a pro-innovation approach to AI regulation that includes safety. The national legislature introduced a bill to regulate automated decision-making tools in the public sector that will continue to be debated in 2025. The UK also signed the Council of Europe AI Treaty.

National AI Strategy

The United Kingdom (UK) National Artificial Intelligence (AI) Strategy⁶⁶⁴⁴ followed roadmaps including the National Data Strategy (2020), a Plan for Digital Regulation (2021), and the UK Innovation Strategy (2021). The UK is

⁶⁶⁴³ UNESCO, *Implementation of the Recommendation on the Ethics of Artificial Intelligence (AI)* (Oct. 7, 2022), <https://unesdoc.unesco.org/ark:/48223/pf0000382931>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

ranked third in the world for research and innovation in AI but eleventh for their ability to realize innovation and impact from it. The AI Strategy sets out a ten-year plan with the vision, “to remain an AI and science superpower fit for the next decade.” Recently, Prime Minister Keir Starmer announced a shift to the national AI strategy intended to cut costs and reduce government investments in industry, moving away from their previous commitments to global safety initiatives and towards more localized, efficient adoption of AI across the public sector. The anticipated plan has not yet been shared publicly.⁶⁶⁴⁵

The UK AI Strategy has three main pillars: (1) investing and planning for the long-term requirements of the UK’s AI ecosystem; (2) supporting the transition to an AI-enabled economy across all sectors and regions of the UK; and (3) ensuring that the UK gets the national and international governance of AI technologies right to encourage innovation and investment and to protect the public and the country’s fundamental values. Regarding the third pillar, the government proclaimed its intention to develop the most trusted and pro-innovation system for AI governance in the world, aiming to “harness the benefits of AI as we embed our values such as fairness, openness, liberty, security, democracy, rule of law, and respect for human rights.”

The UK government updated an earlier AI Regulation Policy Paper,⁶⁶⁴⁶ which subsequently commissioned a new AI Action Plan aiming to leverage AI for improved public service delivery and economic growth.⁶⁶⁴⁷ The Department for Science, Innovation, and Technology published its response to A Pro-Innovation Approach to AI Regulation in February 2024.⁶⁶⁴⁸ The updated AI Regulation Policy Paper, like the original, prioritizes the government’s intention to develop regulations true to the core principles of “context-specific,” “pro-innovation and risk-based,” “coherent,” and “proportionate and adaptable.”⁶⁶⁴⁹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

These policy updates clarify that UK government departments would share oversight for AI systems and their consequences across the regulatory structures that exist within those departments. For example, healthcare-related AI systems would be regulated by the UK Department of Health & Social Care (DHSC), while broadcasting-related AI systems would be overseen by Ofcom, the UK’s communications regulator.⁶⁶⁵⁰ The policy paper highlights the role of a new regulatory advisory office, the Digital Regulation Cooperation Forum (DRCF), formed in July 2020 as a coordinating body convening regulators from the Information Commissioner’s Office (ICO), the Competition and Markets Authority (CMA), the Financial Conduct Authority (FCA) and Ofcom, to ensure “coherence” across regulations.⁶⁶⁵¹

While strongly endorsing continued AI innovation and investment, the original Policy Paper emphasized, “the success of our AI ecosystem is in part down to the UK’s reputation for the quality of its regulators and its rule of law. This includes the transparency of the UK’s regulatory regime, the detailed scrutiny that proposed regulation receives and comprehensive impact assessments [...] To maintain our leading regulatory approach, we must make sure that the rules that govern the development and use of AI keep pace with the evolving implications of the technologies.”⁶⁶⁵² The updated AI Regulation White Paper⁶⁶⁵³ and government response⁶⁶⁵⁴ reiterate the importance of “high-quality regulators,” the UK’s “strong approach to the rule of law,” and the critical nature of transparency and impact assessments.

The UK’s cross-sectoral regulatory policies will continue to “be implemented on a non-statutory basis and implemented by existing regulators. This approach makes use of regulators’ domain-specific expertise to tailor the implementation of the principles to the specific context in which AI is used.” They

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

will continue to work with regulators to detect any barriers to the implementation of the principles and monitor whether this “non-statutory framework” has the “desired effect.”⁶⁶⁵⁵ As DCMS stated, “regulators will lead the process of identifying, assessing, prioritizing and contextualizing the specific risks addressed by the [stated] principles... These principles provide clear steers for regulators but will not necessarily translate into mandatory obligations. Indeed, we will encourage regulators to consider lighter touch options in the first instances—for example, through a voluntary or guidance-based approach for uses of AI that fall within their remit.”⁶⁶⁵⁶

The updated policy paper and government response promise to build on “a strong foundation of regulatory coordination, via the DRCF’s published vision for a joint approach to digital regulation and a “multi-agency advice service for digital innovators pilot underway, supported by government’s Regulators’ Pioneer Fund.”⁶⁶⁵⁷ the cross-sectoral, non-statutory governmental oversight of AI. The DCMS acknowledged, “Regulatory coordination will be important for our approach to work and to avoid contradictory or very different approaches across regulators [...] We will look for ways to support collaboration between regulators to ensure a streamlined approach. [...] We also need to ensure that UK regulators have access to the right skills and expertise to effectively regulate AI.”⁶⁶⁵⁸

The UK AI Action Plan for its part updated progress that had been made regarding the three pillars of focus mentioned within the original National AI Strategy: long term investments in AI, ensuring AI benefits all sectors and regions, and governing AI effectively.⁶⁶⁵⁹ The AI Action Plan described a variety of recent regulatory tools and initiatives in keeping with the UK’s policy of cross-sectoral responsibility for AI oversight including:

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- “one of the world’s first national algorithmic transparency standards to strengthen the UK’s position as a world leader in AI governance” developed within the Cabinet office;
- an “AI Assurance Roadmap, to provide meaningful information about AI systems to users and regulators” developed by the UK Centre for Data Ethics and Innovation (CDEI);
- an “AI Standards Hub [...] to coordinate UK engagement in AI standardization globally” led by The Alan Turing Institute and supported by the British Standards Institution and the National Physical Laboratory;
- and a formal consultation on “reforming the UK’s data protection regime” led by DCMS.⁶⁶⁶⁰ Regarding the UK’s coordination on AI governance with key international organizations, the AI Action Plan highlights collaboration between UK government regulators and the G7, OECD, Council of Europe, UNESCO, the Future Tech Forum, and the Global Partnership on AI.⁶⁶⁶¹

The DCRF published a workplan in 2024 to respond to many of these goals, mapping out activities that aim to promote responsible AI by working together in line with the government’s AI framework and engage on a range of activities supporting prudent development of the AI auditing market.”⁶⁶⁶²

The AI Action Plan provides additional regulatory updates with a clear ethical focus including:

- a policy statement from the Ministry of Defence (MOD), titled *Ambitious, Safe, Responsible: Our Approach to the Delivery of AI-Enabled Capability*, detailing how they will “augment [MOD’s] robust and long-standing approach to legal, ethical and safety issues to address challenges related to the use of AI technology;”⁶⁶⁶³
- the UK government’s Arts and Humanities Research Council, part of the UK Research and Innovation Agency (UKRI) launched “a major research program on AI ethics and regulation with its collaboration partner, the Ada Lovelace Institute;”⁶⁶⁶⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- the Department of Health and Social Care (DHSC) published a report in coordination with the Ada Lovelace Institute detailing ethical and governance issues related to personal data and algorithms within the healthcare context with advice to regulators within that domain.⁶⁶⁶⁵

A 2022 Digital Regulation Cooperation Forum (DRCF) report detailed the challenges presented by algorithmic processing tools for regulators across government agencies. The report identified the UK government regulators' shared objectives to: "protect individuals from harm; uphold individual rights; enable participation in online markets; encourage consumer trust and innovation; promote effective competition; promote resilient infrastructure and systems."⁶⁶⁶⁶

In February, 2023, the UK Prime Minister's Office announced the creation of a dedicated Department for Science, Innovation and Technology, which would henceforth house the Office for Artificial Intelligence (formerly co-housed by DCMS and BEIS).⁶⁶⁶⁷ This newly created department released a Science and Technology Framework,⁶⁶⁶⁸ reiterating the government's commitment to "a system of regulation and standards that is pro-innovation, easy to navigate and facilitates widespread commercial science and technology applications. [...] Regulation covering critical technologies will be world-leading [...] We will play an active role in the WTO, G7, G20, OECD, NATO, Council of Europe, Commonwealth, and the UN [as an] author of international rules and conventions for critical technologies."⁶⁶⁶⁹ An updated Science and Technology Framework reiterated these goals and commitments.⁶⁶⁷⁰

The Department of Science and Technology published a statement⁶⁶⁷¹ following the Chancellor of the Exchequer's announcement that the government's

new budget would commit £3.5 billion “to support the government’s ambitions to make the UK a scientific and technologic superpower.” The Department of Science and Technology reiterated the government’s intention to provide “a new approach to AI regulation, focusing on the applications of AI rather than setting rigid rules for products with an AI component” and announced plans for the government “to begin working at pace to lead the way in clarifying the application of intellectual property law regarding generative AI.”

However, a later speech by King Charles proposed more binding regulations on “those working to develop the most powerful artificial intelligence models.”⁶⁶⁷²

Public Participation

The UK government has a firmly established practice of making draft policies available to the public for consultation and of providing the public with access to the findings gleaned from consultation.⁶⁶⁷³ The UK Cabinet Office has pledged to “use more digital methods to consult with a wider group of people at an earlier stage in the policy-forming process. We will make it easier for the public to contribute their views, and we will try harder to use clear language and plain English in consultation documents.”⁶⁶⁷⁴

Recently, the Secretary of State for Science, Innovation, and Technology announced plans to create “an ambitious AI opportunities action plan,” including next steps for regulating frontier AI systems. The institution invited consultation “to harness the insights and expertise of the AI industry, academia, and civil society.”⁶⁶⁷⁵

The ICO also launched a series of consultations on generative AI and data protection. The consultation informed a chapter series covering the “lawful basis for web scraping to train generative AI models,” how to apply purpose limitation across the lifecycle of generative AI, “accuracy of training data and model

outputs,” how to engineer “individual rights into generative AI models,” and how to allocate “controllership across the generative AI lifecycle.”⁶⁶⁷⁶

The recent consultation followed participation such as the earlier Online Harms White Paper.⁶⁶⁷⁷ Consultation on the white paper resulted in “2400 responses ranging from companies in the technology industry including large tech giants and small and medium sized enterprises, academics, think tanks, children’s charities, rights groups, publishers, governmental organizations and individuals.” The government provided an overview of consultation responses and enumerated the links between the revised policy proposals and the input obtained during public consultation.⁶⁶⁷⁸

A revised Online Safety Bill⁶⁶⁷⁹ released to the public with key provisions aimed at preventing online exploitation, particularly of children and vulnerable adults, and to bolster responsible journalism. The Bill was granted Royal Assent and became the Online Safety Act.⁶⁶⁸⁰

Following publication of the AI Regulation Policy Paper in July 2022, DCMS provided a ten-week period for “views and evidence” from stakeholders about “how the UK can best set the rules for regulating AI in a way that drives innovation and growth while also protecting our fundamental values.”⁶⁶⁸¹ Responses informed the AI Regulation White Paper a year later.⁶⁶⁸²

The UK government is additionally attempting to engage members of its communities that have traditionally been excluded from participation in building artificial intelligence and playing a role in its governance through the Alan Turing Institute, created in 2015 as a “national institute for data science” and more recently adding “and artificial intelligence.” The Turing Institute announced

funding for seven innovative projects to boost public engagement with data science and AI across the UK in 2022.⁶⁶⁸³ The initiative aimed to attract members of underrepresented groups to “widen participation by inspiring members of the public who may not usually interact with science to take an interest and have a voice in AI and data science.”⁶⁶⁸⁴

Data Protection

Data protection in the UK is governed by both the 2018 Data Protection Act (DPA)⁶⁶⁸⁵ and the UK GDPR.⁶⁶⁸⁶ The UK GDPR essentially mirrors the EU GDPR; the DPA updated this regulation with clarification regarding oversight and enforcement powers.⁶⁶⁸⁷ The Information Commissioner’s Office (ICO) was established as an “independent regulator for Data Protection and Freedom of Information” in accordance with the DPA, as it had previously been designated in accordance with the EU GDPR requirements.⁶⁶⁸⁸ The ICO is a non-departmental public body that reports directly to the UK Parliament. It is sponsored by the Department of Science, Innovation, and Technology, emphasizing its role in overseeing data protection laws and promoting transparency in public bodies.

While the EU GDPR has extraterritorial applicability regardless of the organization’s location, the UK GDPR primarily applies to organizations based in the UK or those outside the UK processing data of individuals in the UK.

Also, while each EU member state has its supervisory authority, coordinated by the European Data Protection Board (EDPB), the UK GDPR is enforced by a single entity, the Information Commissioner's Office (ICO). Importantly, the EU GDPR generally excludes personal data collected for national security and intelligence services from its scope. In contrast, the UK GDPR allows certain exceptions. Other important differences concern the age of consent for data processing practices and fines.

Despite these differences, and following Brexit, the UK is considered a “third country” by the EU. However, it benefits from an adequacy decision that allows free data flows between the EU and the UK.

Center for AI and Digital Policy

The UK remains an active member of the Council of Europe⁶⁶⁸⁹ and a signatory to the Council of Europe Convention 108+, requiring the safeguarding of rights pertaining to the automated processing of personal data including: the right to be informed; the right to not be subject to automated decision-making, the right to object, the right to remedy following violation of rights, and the right to assistance from a supervisory authority in exercising these rights.⁶⁶⁹⁰ In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers reaffirmed that “member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or [minimizing] possible adverse effects.”⁶⁶⁹¹

The ICO has also clarified how to assess the risks to rights and freedoms that AI pose from a data protection perspective and the appropriate measures that can be implemented to reduce these risks.⁶⁶⁹² With respect to data protection, the updated guidance advises organizations building or integrating AI systems on the conduct of data protection impact assessments (DPIAs).⁶⁶⁹³ “You should not see DPIAs as simply a box ticking compliance exercise. They can effectively act as roadmaps for you to identify and control the risks to rights and freedoms that using AI can pose. They are also an ideal opportunity for you to consider and demonstrate your accountability for the decisions you make in the design or procurement of AI systems.”

The ICO has also mapped existing data protection principles to those purposed for regulating AI in response to a government request for key regulators to define their regulatory strategies in alignment with the UK's AI White Paper.⁶⁶⁹⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The goal is to demonstrate how “the ICO already has active experience of implementing the aims and objectives of the AI Regulation White Paper principles.”⁶⁶⁹⁵

Given that AI systems often process personal data, the ICO emphasizes that these systems fall under its regulatory remit. The ICO has been actively involved in AI regulation for over a decade, providing guidance on various applications such as biometric recognition technologies. To support innovation while ensuring compliance with data protection laws, it has established resources such as an AI risk toolkit and a regulatory sandbox.

The ICO's strategic approach represents a significant step in establishing a coherent framework for regulating AI in the UK. By aligning its efforts with existing data protection laws and working with other regulators, the ICO aims to foster innovation while addressing the inherent risks associated with AI technologies. Continued collaboration and updates to guidance will be crucial as developments unfold in this rapidly evolving landscape.

The ICO has been a member of the Global Privacy Assembly (GPA) since 2002 and co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence⁶⁶⁹⁶ and the 2023 GPA Resolution on Generative AI.⁶⁶⁹⁷ The ICO was one of the authors of both the 2020 GPA Resolution on AI Accountability⁶⁶⁹⁸ and the 2022 GPA Resolution on Facial Recognition Technology.⁶⁶⁹⁹

Center for AI and Digital Policy

Algorithmic Transparency

The UK government lays claim to being a global leader in establishing algorithmic transparency standards.⁶⁷⁰⁰ First, the UK remains a member of the Council of Europe and is a party to Convention 108+, which enshrines the right to algorithmic transparency.⁶⁷⁰¹ The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithmic systems⁶⁷⁰² addresses additional human rights impacts of AI technologies with guidance on obligations of states and responsibilities of companies. The Recommendation specifically emphasizes requirements on transparency, accountability, and effective remedies.

The Recommendation provides that “States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors. The legislative frameworks for intellectual property or trade secrets should not preclude such transparency, nor should States or private parties seek to exploit them for this purpose. Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs.”⁶⁷⁰³

The Recommendation also clarifies contestability: “Affected individuals and groups should be afforded effective means to contest relevant determinations and decisions. As a necessary precondition, the existence, process, rationale, reasoning and possible outcome of algorithmic systems at individual and collective levels should be explained and clarified in a timely, impartial, easily readable and accessible manner to individuals whose rights or legitimate interests may be affected, as well as to relevant public authorities. Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and

⁶⁷⁰⁰ UK Cabinet Office CDDO, *UK Government Publishes Pioneering Standard for Algorithmic Transparency* (Nov. 2021), <https://www.gov.uk/government/news/uk-government-publishes-pioneering-standard-for-algorithmic-transparency>.

⁶⁷⁰² Council of Europe, Committee of Ministers, *Recommendation CM/Rec(2020)1 of the Committee of Ministers to Member States on the Human Rights Impacts of Algorithmic Systems* (Apr. 8, 2020), https://search.coe.int/cm/pages/result_details.aspx?objectid=09000016809e1154

⁶⁷⁰³ Ibid

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”⁶⁷⁰⁴

Algorithmic transparency is also provided for by the UK GDPR⁶⁷⁰⁵ and DPA. “Articles 13 and 14 of the GDPR give individuals the right to be informed of the existence of solely automated decision-making, producing legal or similarly significant effects; meaningful information about the logic involved; and the significance and envisaged consequences for the individual. Article 15 of the GDPR gives individuals the right of access to information on the existence of solely automated decision-making producing legal or similarly significant effects; meaningful information about the logic involved; and the significance and envisaged consequences for the individual.”⁶⁷⁰⁶

The concept of algorithmic transparency derived from the UK’s data protection framework is addressed in some detail in the ICO AI Guidance.⁶⁷⁰⁷ In addition to requiring transparency regarding the use of personal data within algorithmic systems, the purposes of this personal data use, the retention periods for that personal data, and information about anyone with whom it might be shared, the guidance requires that organizations contributing to decisions made via algorithmic systems offer transparent “explanations” for these systems. More explicitly, organizations using algorithmic system must make available: a rational explanation, “reasons that led to a decision delivered in an accessible and non-technical way; a responsibility explanation, “who is involved in the development, management and implementation of an AI system, and who to contact for a human review of a decision; a data explanation, “what data has been used in a particular decision and how; a fairness explanation including, “steps taken across the design and implementation of an AI system to ensure that the decisions it supports are generally unbiased and fair; safety and performance explanation, “steps taken across design and implementation of an AI system to maximize the accuracy, reliability, security and robustness of its decisions and behaviors; and an impact explanation, “steps taken across the design and implementation of an AI system and its decisions to consider and monitor the impacts...[the] system and its decisions has or may have on an individual and on wider society.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Centre for Data Ethics and Innovation (CDEI), formerly a government task force and now an arm of the Department for Science, Innovation and Technology,⁶⁷⁰⁸ published its review into bias in algorithmic decision-making.⁶⁷⁰⁹ The Center focused on the use of algorithms in significant decisions about individuals in four sectors (policing, local government, financial services and recruitment). Key recommendations include:

1. Government should place a mandatory transparency obligation on all public sector organizations using algorithms that have an impact on significant decisions affecting individuals.
2. Organizations should be actively using data to identify and mitigate bias. They should make sure that they understand the capabilities and limitations of algorithmic tools and carefully consider how they will ensure fair treatment of individuals.
3. Government should issue guidance that clarifies the application of the Equality Act to algorithmic decision-making. This should include guidance on the collection of data to measure bias, as well as the lawfulness of bias mitigation techniques (some of which risk introducing positive discrimination, which is illegal under the Equality Act).

The Office for Artificial Intelligence published the Ethics, Transparency, and Accountability Framework for Automated Decision-Making for public sector organizations on how to use automated or algorithmic decision-making systems in a safe, sustainable and ethical way.⁶⁷¹⁰ This guidance was built upon through the Cabinet Office's Central Digital and Data Office (CDDO) with the publication of a pioneering standard for algorithmic transparency and public sector bodies, following up on commitments made in the National AI and National Data Strategies.⁶⁷¹¹ The Cabinet Office announced that this "made the UK one of the first countries to develop a national algorithmic transparency standard, strengthening the UK's position as a world leader in AI governance."⁶⁷¹² CDDO developed the standard collaboratively through working with external experts and

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

civil society groups. Also, it is informed by a public engagement study run by the Center for Data Ethics and Innovation and Britain Thinks.⁶⁷¹³

The CDEI and CDDO later updated the prior standard for public sector organizations and released this refined Algorithmic Transparency Recording Standard following a pilot phase.⁶⁷¹⁴ The revised standard aims to help public sector organizations provide clear information about the algorithmic tools they use and why they are using them. The guidance specifies that algorithmic transparency requires openness on how algorithmic tools support decision-making, which includes providing information on algorithmic tools and algorithm-assisted decisions in a complete, open, understandable, easily accessible, and free format. The standard is part of the Government's National Data Strategy, which includes a commitment to explore an appropriate and effective way to deliver greater transparency on algorithm-assisted decision-making in the public sector.⁶⁷¹⁵

Data Scraping

The ICO and 16 of its international data protection and privacy counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy.⁶⁷¹⁶ The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”⁶⁷¹⁷ The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and

Center for AI and Digital Policy

update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”⁶⁷¹⁸

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

AI Grading Controversy

A widely reported controversy over the use of AI in the UK public sector erupted in the Summer of 2020 during the COVID-19 global pandemic.⁶⁷¹⁹ With students having completed their studies remotely, the UK Office of Qualifications and Examinations (Ofqual) applied an algorithm to estimate the exam results these students might have received given in-person assessments. Nearly 40 percent of students saw their grades reduced after the government reevaluated exams, known as A-levels.⁶⁷²⁰ The software model incorporated the school's past results and students' earlier results on mock exams. The calculations favored students from elite backgrounds.⁶⁷²¹ As the BBC explained, the algorithm “locks in all the advantages and disadvantages—and means that the talented outlier, such as the bright child in the low-achieving school, or the school that is rapidly improving, could be delivered an injustice.”⁶⁷²²

As the Open Data Institute pointed out, a student would have received a high grade in math only because historically someone from her school had

Center for AI and Digital Policy

received a high grade, even if the same student was predicted at B or C.⁶⁷²³ Wired UK reported that some researchers stated that “[rather than the algorithm getting it wrong, [...] it was simply the wrong algorithm.”⁶⁷²⁴ However, others thought that the application of Article 22 of the GDPR (prohibition of decisions solely made by automated decision making) was at stake, albeit disputed by the governmental agency that suggested the computer generated score. Ultimately, protests in front of the British Parliament and a pending lawsuit led the government to withdraw the system.⁶⁷²⁵

Karen Hao, a reporter with MIT Technology Review, wrote “The problem began when the exam regulator lost sight of the ultimate goal—and pushed for standardization above all else.”⁶⁷²⁶

Facial Recognition

Human rights organizations have long criticized the UK government for the almost unparalleled deployment of CCTV.⁶⁷²⁷ Early in 2020, London’s Metropolitan Police began deploying live facial recognition, an automated process using an AI-driven system to match faces against a database.⁶⁷²⁸ The Met reported its use of the controversial technology would be targeted to “specific locations where intelligence suggests we are most likely to locate serious offenders.”⁶⁷²⁹ Silkie Carlo, the director of Big Brother Watch, called the move “an enormous expansion of the surveillance state and a serious threat to civil liberties in the UK.” There is currently no law in the UK governing facial recognition. More worrisome,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

between 2016–2019, Met Police use of facial recognition technology was 93% inaccurate, with 3,000+ people wrongly identified by police.⁶⁷³⁰

In August 2020, the Court of Appeal ruled that the use of live facial recognition (LFR) by South Wales Police was unlawful as it violated privacy rights, data protection laws, and equality duties.⁶⁷³¹ The court found that there was no clear guidance or oversight on how LFR should be deployed, who should be included on watchlists, and how long the data should be retained. The court also noted that LFR had a disproportionate impact on ethnic minorities and women, who were more likely to be misidentified or discriminated against by the technology. Following this ruling, some police forces suspended their use of LFR until further legal clarity was provided. However, many, including the London Metropolitan Police, continued to use LFR with only slightly revised policies and procedures.⁶⁷³²

The ICO's Information Commissioner produced a formal opinion on the use of facial recognition technology in public places in 2021.⁶⁷³³ The report specifies that any deployment of facial recognition technology “must comply with all relevant parts of the UK GDPR and DPA 2018. This includes the data protection principles [...] including lawfulness, fairness, transparency, purpose limitation, data minimization, storage limitation, security, and accountability. [...] Together, these requirements mean that where LFR is used for the automatic, indiscriminate collection of biometric data in public places, there is a high bar for its use to be lawful.”

Despite this published opinion, live facial recognition technology continues to be used across police departments throughout the country with no opportunity for members of the public to opt out, nor any meaningful efforts towards data minimization.⁶⁷³⁴ The House of Lords Justice and Home Affairs Committee has raised questions regarding the legality and regulatory framework of LFR technology. In January 2024, the committee expressed concerns about the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

lack of a clear legal foundation and consistent standards for LFR deployment, recommending the establishment of a legislative framework to regulate its use.⁶⁷³⁵

The British Standards Institute (BSI) later released a code of practice titled *Facial Recognition Technology: Ethical Use and Deployment in Video Surveillance-based Systems*. This standard aims to guide organizations in the ethical deployment of FRT, emphasizing principles such as governance, accountability, privacy, and data protection.⁶⁷³⁶

Automated Visa Application

In 2020, migrants' rights campaigners successfully challenged the automated decision-making system used by the Home Office to process visa applications.⁶⁷³⁷ The algorithmic "streaming tool" was eliminated by the Home Office ahead of a judicial review by the Joint Council for the Welfare of Immigrants, which found the tool opaque and discriminatory toward applicants from certain nationalities and race groups. The Home Office committed to a "redesign of the process and the way in which visa applications are allocated for decision-making."⁶⁷³⁸

The introduction of eVisas, or online records of an individual's immigration status, was a significant development in this direction. This initiative aims to replace physical documents like biometric residence permits (BRPs) and biometric residence cards (BRCs) by 2025. The move to e-Visas is intended to enhance security, reduce fraud, and streamline the process of proving immigration status.⁶⁷³⁹

Lethal Autonomous Weapons

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

weapon systems. In practice, however, some concepts and capabilities may prove impossible to deliver in a safe and responsible manner—and we are very clear that there must be context-appropriate human involvement in weapons which identify, select and attack targets. This could mean some form of real-time human supervision, or control exercised through the setting of a system’s operational parameters. We believe that AI can substantially augment the performance of our people and significantly enhance our capabilities. However, given concerns about the ethics and risks of delegating certain decisions to AI, it is also important to state that we do not believe that “more autonomous” necessarily means “more capable.” We believe that Human-Machine Teaming delivers the best outcomes, in terms of overall effectiveness, optimal use of resources, the practicalities of integration and the ease with which we can address issues arising; it is therefore our default approach to AI adoption. The appropriate degree of system “autonomy” and type of “human control” need to be considered carefully on a case-by-case basis.”⁶⁷⁴⁰

In February 2023, the UK participated in the first global Summit on Responsible Artificial Intelligence in the Military Domain (REAIM 2023). Together with other government representatives, the United Kingdom agreed a joint call to action on the responsible development, deployment and use of artificial intelligence in the military domain.⁶⁷⁴¹ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”⁶⁷⁴² The UK endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁶⁷⁴³

The UK participated in the second REAIM summit in 2024, hosted by South Korea.⁶⁷⁴⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The UK has reaffirmed its commitment to international discussions on lethal autonomous weapon systems (LAWS). In response to a parliamentary question, the UK government confirmed its ongoing participation in United Nations discussions on LAWS through the Convention on Certain Conventional Weapons (CCW).⁶⁷⁴⁵

In response to a House of Lords Artificial Intelligence in Weapons System Committee Report, the government committed to ensuring meaningful human control and accountability throughout the lifecycle of AI-enabled military systems. However, the government fell short on the recommendation to adopt a specific operational definition for autonomous weapons systems.⁶⁷⁴⁶

Human Rights

According to Freedom House, the UK is “Free” with a score of 91/100 for political rights and civil liberties in 2024.⁶⁷⁴⁷ The country “is a stable democracy that regularly holds free elections and hosts a vibrant media sector.” The Freedom House also notes that: “While the government enforces robust protections for political rights and civil liberties, recent years have featured new restrictions on the right to protest as well as rising Islamophobia and anti-immigrant sentiment.”⁶⁷⁴⁸

All UK AI initiatives must comply with the UK Human Rights Act of 1998. Post-Brexit, the UK remains a part of the European Convention on Human Rights and is subject to the jurisdiction of the European Court of Human Rights in Strasbourg. Therefore, even if the GDPR can no longer be enforced in the UK through judgments of the EU Court of Justice European Union in Luxembourg, the existence of structures like the UK’s Information Commissioner’s Office and, generally, the remnants of EU’s *Acquis Communautaire* make it clear that the UK has in place a relatively robust system of human rights protection.⁶⁷⁴⁹

As a member of the council of Europe, the UK abides by the 2020 Recommendation that states “must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent

and interrelated, with a view to amplifying positive effects and preventing or [minimizing] possible adverse effects.”⁶⁷⁵⁰ The Alan Turing Institute also issued guidelines on AI and non-discrimination/human rights.⁶⁷⁵¹

AI Safety Summit

The UK is engaged internationally in the development of AI governance in line with the values of fairness, freedom and democracy. This engagement includes working with partners to shape AI governance under development including the EU AI Act and the Council of Europe legal framework.⁶⁷⁵²

In November 2023, the UK convened the first AI Safety Summit and endorsed the Bletchley Declaration.⁶⁷⁵³ The UK thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully [realize] their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

The UK established the AI Safety Institute (AISI) in late 2023. The AISI focuses on assessing the safety of advanced AI systems, aligning its evaluations with ethical standards such as those outlined by UNESCO.⁶⁷⁵⁴

The launch of an AI assurance platform designed to help businesses identify and mitigate AI-related risks furthered these interests. This initiative aims to build greater trust in AI technology and drive demand for the UK's AI assurance sector.⁶⁷⁵⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

OECD / G20 AI Principles

The UK is a member of the OECD and the G20 and has endorsed the OECD AI Principles.⁶⁷⁵⁶ The OECD/G20 AI Principles are not referred to in the National AI Strategy. However, the UK is actively involved in the OECD's AI Governance Working Party. In this role, the UK promotes the practical application of trustworthy AI guidelines globally by contributing case studies on its AI Assurance Techniques to the OECD's Catalogue of Tools and Metrics.⁶⁷⁵⁷

The UK is a founding member of the Global Partnership on AI (GPAI)⁶⁷⁵⁸ and invested in GPAI's data trust research.⁶⁷⁵⁹ Additionally, UK defense has a strong record of collaborating with international partners and allies, including engagement with NATO supporting the AI Partnership for Defense. On the bilateral front, in September 2020 the UK and the U.S. signed to establish dialogue on their shared vision for driving technological breakthroughs in AI and to explore an AI R&D ecosystem that "promotes the mutual wellbeing, prosperity, and security of present and future generations." The Declaration mentions, as one objective, to protect "against efforts to adopt and apply these technologies in the service of authoritarianism and repression."⁶⁷⁶⁰

Council of Europe AI Treaty

The UK contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. During a conference of Council of Europe Ministers of Justice in Vilnius, Lithuania, the UK, along with other nations, signed the Framework Convention on Artificial Intelligence. This treaty

represents the first legally binding international agreement on AI, providing a comprehensive legal framework covering the entire lifecycle of AI systems.⁶⁷⁶¹

UNESCO Recommendation on AI Ethics

The UK endorsed the 2021 UNESCO Recommendation on the Ethics of AI.⁶⁷⁶² The UK has integrated UNESCO's ethical guidelines into its national AI policies. During a 2023 parliamentary debate, the government reaffirmed its commitment to the UNESCO framework, emphasizing its role in shaping the UK's approach to AI governance.⁶⁷⁶³

The UK has been a proactive participant in UNESCO's efforts to promote ethical AI. The UK contributed to the Global Forum on the Ethics of Artificial Intelligence held in Kranj, Slovenia. This forum brought together international experts and policymakers to discuss the implementation of UNESCO's Recommendation on the Ethics of AI, focusing on ethical governance and responsible AI development.⁶⁷⁶⁴

Evaluation

The UK continues to act as a global leader in AI, highlighted by a flourishing policy and legal framework, proactive government initiatives, growing economic investment, and international cooperation.

The UK continues to establish robust regulatory frameworks to ensure AI's safe and trustworthy development, driven by the consultation on the white paper detailing the Department for Science, Innovation, on the approach to AI

⁶⁷⁶¹ Council of Europe, *Council of Europe Opens First-Ever Global Treaty on AI for Signature* (Sept. 5, 2024), <https://www.gov.uk/government/news/uk-signs-first-international-treaty-addressing-risks-of-artificial-intelligence>

Center for AI and Digital Policy

regulation.”⁶⁷⁶⁵ Upcoming AI⁶⁷⁶⁶ and Algorithmic Decision-making⁶⁷⁶⁷ bills could further solidify the UK's dedication to responsible AI governance.

The UK is also committed to international collaboration. Prime examples are the Memorandum of Cooperation signed with Singapore⁶⁷⁶⁸ and the U.S.,⁶⁷⁶⁹ as well as the UK's endorsement of the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁶⁷⁷⁰

Following Brexit, the UK shifted from a legislative approach based on rights and obligations, such as that applied in the data protection field, to a regulatory approach to AI based on ethical standards and cross-ministerial coordination. From this perspective, the UK's development of a strong algorithmic transparency framework appears to be a corrective tool but not a safeguard against AI-based harm. The widespread use of live facial recognition across multiple UK law enforcement agencies in contradiction with the ICO's own guidance raises questions about the merits of a purely regulatory approach. In these circumstances, the resilience of the UK AI policy framework will be only as good as the virtues and merits of its oversight mechanisms.

United States

In 2024, U.S. government agencies provided guidance and processes to implement the 2023 Executive Order on Safe, Secure, and Trustworthy AI. The OMB Guidance on AI in the public sector is perhaps one of the most important. The United States introduced the UN Resolution on the Safe, Secure, and

Trustworthy AI Systems and signed the Council of Europe Framework Convention on AI.

National AI Strategy

The United States promotes AI policies that seek to maintain American leadership and competitiveness for the protection of civil and human rights, to ensure technology is working for the American people, and to foster global alliances prioritizing democratic values and a collective defense. Speaking to the United Nations General Assembly in September 2021, President Biden reaffirmed the U.S. commitment to “work together with our democratic partners to ensure that new advances in areas from biotechnology, to quantum computing, 5G, artificial intelligence, and more are used to lift people up, to solve problems, and advance human freedom—not to suppress dissent or target minority communities.”⁶⁷⁷¹ He urged the G7 nations to stand up for “democratic values.”⁶⁷⁷²

In domestic AI policy, President Biden has underscored that seizing the benefits of AI requires the government to first mitigate its risks.⁶⁷⁷³ Discussing his administration’s approach toward the industry, he stated, “First, the companies have an obligation to make sure their technology is safe before releasing it to the public. That means testing the capabilities of their systems, assessing their potential risk, and making the results of these assessments public. [...] Companies have a duty to earn the people’s trust and empower users to make informed decisions.”⁶⁷⁷⁴

The current U.S. position on AI comprises President Biden’s 2023 Executive Order (14110) on the Safe, Secure, and Trustworthy Development and use of Artificial Intelligence,⁶⁷⁷⁵ the 2024 Office of Management and Budget

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Federal laws have been passed in Congress either as standalone legislation or as AI-focused provisions in broader acts. These include the National Artificial Intelligence Initiative Act (NAIIA) of 2020,⁶⁷⁸⁴ the AI in Government Act of 2020, and the Advancing American AI Act of 2022.⁶⁷⁸⁵

In May 2023, Senate Majority Leader Chuck Schumer convened the Bipartisan Senate AI Working Group along with Senators Mike Rounds (R-S.D.), Todd Young (R-Ind.), and Martin Heinrich (D-N.M.).⁶⁷⁸⁶ The working group convened a series of “Insight Forums” to complement the traditional approach of committee hearings.⁶⁷⁸⁷ There were nine forums in the series with representation from tech companies, AI experts, civil society, think tanks, research, and academia. In his opening statement Sen. Schumer announced that the insight forums would build “a foundation for bipartisan AI policy that Congress can pass.”⁶⁷⁸⁸ “More than 300 AI-related proposed bills were introduced in the 118th congressional session [beginning in January 2023]. They range all over the place, from controlling misinformation to how we can stimulate AI innovation and research.”⁶⁷⁸⁹ However, no AI legislation was passed in the 118th Congress.

Executive Order 14110 on Safe, Secure, and Trustworthy AI

Executive Order 14110 on the Safe, Secure, and Trustworthy Development and Use of Artificial Intelligence was issued for the purpose of harnessing AI for good and realizing its myriad benefits by mitigating its substantial risks.⁶⁷⁹⁰ Executive Order 14110 builds on prior work to support the development of responsible AI technologies and policies, including the Office of Science and Technology Policy’s (OSTP) Blueprint for an AI Bill of Rights and the National

Institute of Standards and Technology’s (NIST) AI Risk Management Framework (AI RMF).⁶⁷⁹¹ The order has eight overarching policy areas:

- *“Safety and security.* The EO promotes the development and implementation of repeatable processes and mechanisms to understand and mitigate risks related to AI adoption, including with respect to biosecurity, cybersecurity, national security, and critical infrastructure.
- *Innovation and competition.* The EO compels actions to attract AI talent to the United States, understand novel intellectual property (IP) questions, protect inventors and creators, and promote AI innovation, including at startups and small businesses.
- *Worker support.* The EO states that AI adoption may be disruptive to the workforce and directs agencies to research and develop potential mitigations against such disruptions.
- *Consideration of AI bias and civil rights.* The EO states that AI models may perpetuate biases and their implementation may lead to civil rights violations. The E.O. includes a section on equity and civil rights considerations for use of AI in the criminal justice system and the administration of federal government programs and benefits.
- *Consumer protection.* The EO instructs agencies to enforce existing, technology-agnostic authorities in an effort to minimize harms to consumers, and to identify needed authorities related to AI.
- *Privacy.* The EO calls for the evaluation and mitigation of privacy risks—potentially exacerbated by AI—associated with the collection, use, and retention of user data.
- *Federal use of AI.* The EO requires the Office of Management and Budget (OMB) to establish an interagency council to coordinate AI use by federal agencies and develop guidance on AI governance and risk management activities for agencies. It acknowledges the ubiquity of generative AI (GenAI) tools and directs agencies to move toward adoption with safeguards in place. The EO also calls for additional agency hiring and training activities to increase the AI workforce capacity across the federal government.
- *International leadership.* The EO declares that the United States should be a global leader in AI development and adoption by engaging with international allies and partners, leading efforts to develop common AI regulatory and

accountability principles and advancing responsible global technical standards for AI.”⁶⁷⁹²

The administration is tracking progress against the actions directed in the Executive Order and informs the public through published factsheets.⁶⁷⁹³ The White House reported that agencies had completed each 90-day, 120-day, and 150-day action on time.⁶⁷⁹⁴

The 2023 Executive Order (14091) builds on “previous equity-related Executive Orders by extending and strengthening equity-advancing requirements for agencies” and aims to “promote equity in science and root out bias in the design and use of new technologies, such as artificial intelligence.”⁶⁷⁹⁵ Section 4 of Executive Order 14091 provides for “embedding equity into government-wide processes” by directing agencies to design, develop, acquire, and use artificial intelligence and automated systems, consistent with applicable law, in a manner that advances equity.⁶⁷⁹⁶ The order also provides for “affirmatively advancing civil rights” by directing agencies to “ensure that their respective civil rights offices are consulted on decisions regarding the design, development, acquisition, and use of artificial intelligence and automated systems.”⁶⁷⁹⁷ The order defines “algorithmic discrimination” as “instances when automated systems contribute to unjustified different treatment or impacts disfavoring people based on their actual or perceived race, color, ethnicity, sex (including based on pregnancy, childbirth, and related conditions; gender identity; intersex status; and sexual orientation),

religion, age, national origin, limited English proficiency, disability, veteran status, genetic information, or any other classification protected by law.”⁶⁷⁹⁸

The 2019 Executive Order emphasized the need to maintain American leadership in Artificial Intelligence, and sets out a range of policies and practices, including funding, research, training, and collaboration.⁶⁷⁹⁹ It also describes the need protect “civil liberties, privacy, and American values.”⁶⁸⁰⁰ The 2020 Executive Order on Promoting the Use of Trustworthy Artificial Intelligence in the Federal Government reflects earlier goals set in the 2019 Executive Order and established common guidance to encourage federal agencies to use AI, consistent with nine principles.⁶⁸⁰¹ The 2020 Executive Order states that “[t]he ongoing adoption and acceptance of AI will depend significantly on public trust.”⁶⁸⁰² It also emphasizes the need to ensure that “the use of AI remains consistent with all applicable laws, including those related to privacy, civil rights, and civil liberties.”⁶⁸⁰³ Executive Order 13960 characterized Trustworthy AI as being lawful, respectful of our civil rights, accurate, reliable, safe, understandable, responsible, transparent, accountable and regularly monitored.⁶⁸⁰⁴

OMB Guidance on AI

Following the 2023 Executive Order, the OMB released updated guidance for the regulation of artificial intelligence encapsulated in two key memoranda: Memorandum M-24-10⁶⁸⁰⁵ and Memorandum M-24-18.⁶⁸⁰⁶ These memoranda collectively aim to ensure that AI technologies are developed and used to protect public trust, promote innovation, and safeguard privacy and civil rights. The OMB

⁶⁸⁰⁶ OMB, *Memorandum M-24-18 Advancing the Responsible Acquisition of Artificial Intelligence in Government* (Sept. 24, 2024), <https://bidenwhitehouse.archives.gov/wp-content/uploads/2024/10/M-24-18-AI-Acquisition-Memorandum.pdf>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

outlined several key principles for AI regulation, including promoting transparency, accountability, and equity in AI systems. Federal agencies are directed to implement these principles while developing regulations and policies for AI to ensure that these technologies are used responsibly and ethically. The guidance also emphasizes the importance of risk-based approaches, encouraging agencies to focus their regulatory efforts on high-risk AI applications that could significantly impact safety, privacy, or civil liberties.

M-24-10 focuses on advancing governance, innovation, and risk management for agency use of AI. It provides a framework for agencies to enhance AI governance, encouraging the establishment of clear governance structures; integrating AI risk assessments into decision-making processes; and fostering responsible AI innovation aligned with public interests. The second memorandum (M-24-18) guides acquiring AI capabilities, emphasizing transparency, fairness, and the ethical use of AI in government procurement. It sets requirements for evaluating AI vendors, focusing on privacy, algorithmic transparency, and compliance with ethical standards to ensure that AI solutions acquired by federal agencies are trustworthy and align with federal values.”

The Scope of the OMB AI Guidance is narrowly tailored to “a subset of AI risks as well as governance and innovation issues that are directly tied to agencies’ use of AI.”⁶⁸⁰⁷ The memorandum addresses risks that “result from any reliance on AI outputs to inform, influence, decide, or execute agency decisions or actions, which could undermine the efficacy, safety, equitableness, fairness, transparency, accountability, appropriateness, or lawfulness of such decisions or actions.”⁶⁸⁰⁸

The 2024 OMB AI Guidance sets out the most comprehensive requirements for managing risks in government use of AI to date. The Guidance requires agencies to ensure minimum practices for safety-impacting and rights-impacting and provides a deadline for these practices to be implemented.⁶⁸⁰⁹ All AI that matches the definitions of “safety-impacting AI” or “rights-impacting AI” must follow the minimum practices. Safety-impacting AI includes impacts on humans, climate or environment, infrastructure, and strategic assets or resources.⁶⁸¹⁰ Rights-impacting AI includes systems who impact civil rights and privacy, equal opportunities, and access to government resources and the ability

⁶⁸⁰⁹ Ibid, p. 14, Section 5

⁶⁸¹⁰ OMB AI Guidance, Section 6, p. 30

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

to apply for them.⁶⁸¹¹ The Guidance also defines uses automatically presumed to be rights-impacting or safety-impacting.⁶⁸¹²

To protect these rights and safety, agencies are required conduct AI impact assessments, testing for performance in a real-world context, independently evaluations, ongoing monitoring, mitigation of emergent risks, ensuring adequate human training and assessment, establish human oversight and accountability measures, public notice and plain-language documentation mandates.⁶⁸¹³ Where AI systems are determined to be rights-impacting agencies are required to ensure additional minimum practices including equity, fairness impact assessments and mitigation of algorithmic discrimination, consultation with impacted communities, notifying negatively impacted individuals, human consideration and remedy processes, opt-out mechanisms for AI-enabled decisions.⁶⁸¹⁴

Memorandum M-24-10 stresses transparency and public access to data but does not explicitly address safeguards for personal data or indicate how such protections would align with the increased data access initiatives. Similarly, Memorandum M-24-18, which focuses on AI acquisition, encourages transparency in AI systems but lacks explicit guidelines on managing sensitive personal data that might be part of the procurement process.

Prior to the memoranda, in November 2020, OMB issued the Guidance for Regulation of Artificial Intelligence Applications,⁶⁸¹⁵ which followed from the Executive Order on American Leadership in AI and stated that “when considering regulations or policies related to AI applications, agencies should continue to promote advancements in technology and innovation, while protecting American technology, economic and national security, privacy, civil liberties and other American values, including the principles of freedom, human rights, the rule of law, and respect for intellectual property.” It is explicitly addressed to AI applications “developed and deployed outside of the federal government.”⁶⁸¹⁶

Joint Statement of Enforcement Agencies

Leaders from four agencies issued a Joint Statement on Enforcement Efforts Against Discrimination and Bias in Automated Systems.⁶⁸¹⁷ The statement

does not create any new rights or liabilities but restates Agencies' existing enforcement authorities and their application to automated systems that contribute to unlawful discrimination and otherwise violate federal law. The statement uses the term "automated systems" broadly to mean software and algorithmic processes, including AI, that are used to automate workflows and help people complete tasks or make decisions.⁶⁸¹⁸ The statement identifies three sources of discrimination in automated systems: Data and Datasets, Modal Opacity and Access, and Design and Use.⁶⁸¹⁹

The Department of Education, Department of Health and Human Services, Department of Homeland Security, Department of Housing, and Urban Development and Department of Labor later joined in the statement.⁶⁸²⁰

Voluntary Commitments of Tech Companies

Ahead of the issuance of Executive Order 14110, tech companies developing and deploying advanced AI systems provided voluntary commitments to the Biden-Harris administration. The commitments were made to promote the safe, secure, and transparent development and use of generative AI (foundation) model technology. "The Biden Administration convened representatives from seven AI companies—Amazon, Anthropic, Google, Inflection, Meta, Microsoft, and OpenAI—and announced voluntary commitments from each of them [...]. According to the Administration, the voluntary commitments 'are consistent with existing laws and regulations,' and 'companies intend these voluntary commitments to remain in effect until regulations covering substantially the same issues come into force.' Additionally, the Administration reportedly consulted on the voluntary commitments with other countries and has stated that it 'will work with allies and partners to establish a strong international framework to govern the development and use of AI.'"⁶⁸²¹ The Commitments are:⁶⁸²²

Center for AI and Digital Policy

1. Internal and external red-teaming of models or systems in areas including misuse, societal risks, and national security concerns, such as bio, cyber, and other safety Areas
2. Information sharing among companies and governments regarding trust and safety risks, dangerous or emergent capabilities, and attempts to circumvent safeguards
3. Investing in cybersecurity and insider threat safeguards to protect proprietary and unreleased model weights
4. Incentivizing third-party discovery and reporting of issues and vulnerabilities
5. Developing and deploying mechanisms that enable users to understand if audio or visual content is AI-generated, including robust provenance, watermarking, or both, for AI-generated audio or visual content
6. Publicly report model or system capabilities, limitations, and domains of appropriate and inappropriate use, including discussion of societal risks, such as effects on fairness and bias
7. Prioritizing research on societal risks posed by AI systems, including on avoiding harmful bias and discrimination, and protecting privacy
8. Developing and deploying frontier AI systems to help address society's greatest challenges

NIST Risk Management Framework

The National Institute of Standards and Technology (NIST) within the Department of Commerce plays a key role in implementing the actions under Executive Order 14110.

Before the EO, NIST released Version One of its Artificial Intelligence Risk Management Framework (AI RMF).⁶⁸²³ The AI RMF followed an initial mandate⁶⁸²⁴ by Congress in 2020 for NIST to lead the charge, which subsequently led to a request for information, a concept paper, two drafts, and three public workshops.⁶⁸²⁵

“The Framework is intended to be voluntary, rights-preserving, non-sector-specific, and use-case agnostic, providing flexibility to organizations of all sizes and in all sectors and throughout society to implement the approaches in the Framework.”⁶⁸²⁶ As an integral part of the framework, NIST highlights core

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

functions such as governance, risk assessments and management and documentation, ranging from organizational roles and responsibilities to the AI system’s knowledge limits.⁶⁸²⁷

The “RMF describes four specific functions to help organizations address the risks of AI systems in practice. These functions—GOVERN, MAP, MEASURE, and MANAGE—are broken down further into categories and subcategories. While GOVERN applies to all stages of organizations’ AI risk management processes and procedures, the MAP, MEASURE, and MANAGE functions can be applied in AI system-specific contexts and at specific stages of the AI lifecycle.”⁶⁸²⁸ NIST launched the Trustworthy and Responsible AI Resource Center, which will facilitate implementation of and international alignment with the AI RMF in early 2023.

NIST has also responded to the rise of generative AI by publishing Artificial Intelligence Risk Management Framework: Generative Artificial Intelligence Profile (GenAI Profile) as a companion resource to the AI RMF. Additionally, NIST published “A Plan for Global Engagement on AI Standards,” designed to drive the worldwide development and implementation of AI-related consensus standards, cooperation and coordination, and information sharing.”⁶⁸²⁹ Specifically, the publication calls for “context-sensitive, performance-based, human-centered, and responsive to societal considerations.”⁶⁸³⁰ Despite the role it plays in AI research and development, there are reports of NIST facing resource constraints due to budget cuts, to which some in the AI community worry that underfunding NIST makes it vulnerable to industry influence.⁶⁸³¹

AI Safety Institute

Coinciding with the AI Safety Summit and the Bletchley Park Declaration, the Biden-Harris Administration announced the establishment of the U.S. Artificial Intelligence Safety Institute (USAISI) to lead the U.S. government’s efforts on AI safety and trust, particularly for evaluating the most advanced AI

models.⁶⁸³² The announcement states that “USAISI will facilitate the development of standards for safety, security, and testing of AI models, develop standards for authenticating AI-generated content, and provide testing environments for researchers to evaluate emerging AI risks and address known impacts.”⁶⁸³³ The USAISI is housed within NIST and focuses on the priorities assigned to the institution under Executive Order 14110.⁶⁸³⁴

The Biden-Harris administration also announced the establishment of the AI Safety Consortium including 200 AI stakeholders to support the work of USAISI. The announcement stated that the consortium will “unite AI creators and users, academics, government and industry researchers, and civil society organizations in support of the development and deployment of safe and trustworthy artificial intelligence (AI).”⁶⁸³⁵ The U.S. Secretary of Commerce later announced collaboration with a network of AI Safety Institutes.⁶⁸³⁶ This network serves strengthen and expand on USAISI's previously announced collaborations with the AI Safety Institutes of the UK, Japan, Canada, and Singapore, as well as the European AI Office and its scientific components and affiliates, and will catalyze a new phase of international coordination on AI safety science and governance.

Chief Digital and Artificial Intelligence Office (CDAO)

The Chief Digital and Artificial Intelligence Office (CDAO) was established through the consolidation of the Joint Artificial Intelligence Center (JAIC), Defense Digital Services (DDS), the Chief Data Officer, and the enterprise platform Advana.⁶⁸³⁷ The CDAO’s mission is “to accelerate DoD adoption of data, analytics, and artificial intelligence from the boardroom to the battlefield to enable decision advantage.”⁶⁸³⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The U.S. and EU, in their joint statement following the fourth ministerial meeting, identified “Robust Transatlantic Cooperation on Emerging Technologies” as one of the key outcomes.⁶⁸⁴⁴ On AI specifically, the joint statement affirmed “their commitment to a risk-based approach to AI” and emphasized cooperation to promote “responsible AI innovation that respects rights and safety and ensures that AI provides benefits in line with our shared democratic values.”⁶⁸⁴⁵ The joint statement also stated the decision to “add special emphasis on generative AI” and “complement the G7 Hiroshima AI process.”⁶⁸⁴⁶

At the fifth ministerial meeting, the TTC emphasized expanding transatlantic cooperation on artificial intelligence to promote “interoperability in emerging approaches to AI governance.”⁶⁸⁴⁷ In the joint statement following the sixth ministerial meeting, the U.S. and EU confirmed their understanding that “transparency and risk mitigation are key elements to ensure the safe, secure, and trustworthy development and use of AI”⁶⁸⁴⁸ and their continued commitment to “multilateral initiatives such as the G7, the OECD, G20, Council of Europe, and UN processes to advance the responsible stewardship of AI.”

The Council agreed to further cooperation on implementing the joint AI roadmap and promoting international standards for AI, making it easier for AI technologies to be deployed responsibly across both regions. The TTC also addressed concerns related to data flows and privacy and agreed to strengthen mechanisms for cross-border data transfers, ensuring compliance with GDPR and U.S. data protection regulations. This alignment is a significant step toward creating a trusted AI development and innovation environment.⁶⁸⁴⁹

Public Participation

Several agencies launched requests for information (RFI) in 2024, showing a desire for enhanced public participation. First, the AI Safety Institute (AISI) released for public comment new technical guidelines to help AI developers manage the evaluation of misuse of dual-use foundation models.”⁶⁸⁵⁰ The AISI has also sought insights from the public on current and future practices and methodologies for the responsible development and use of chemical and biological (chem-bio) AI models.⁶⁸⁵¹

The Office of Critical and Emerging Technologies has sought public comment to provide a national AI capability for the U.S. Department of Energy (DOE).⁶⁸⁵²

Finally, the OMB has also requested public input on issues related to Federal agency collection, processing, maintenance, use, sharing, dissemination, and disposition of commercially available information (CAI) containing personally identifiable information (PII).⁶⁸⁵³ OMB also incorporated public comment to inform future action on federal procurement of AI to ensure that federal contracts align with OMB’s AI guidance and address such issues as the protection of privacy, civil rights, and civil liberties.⁶⁸⁵⁴

The 2024 opportunities followed a surge in request for public comments on AI related issues and rulemaking from 2022 onwards.⁶⁸⁵⁵ Civil society

organizations in the United States actively participate in discussions and advocacy related to artificial intelligence (AI). The involvement of these organizations is important for promoting transparency, accountability, and ethical considerations in the development and deployment of AI technologies. Some of these organizations focus on specific aspects of AI, such as privacy, bias, accountability, and the impact of AI on various social issues. Examples of civil society organizations involved in AI-related discussions in the United States include the Center for AI and Digital Policy, the Center for Humane Technology, the AI Now Institute, Algorithmic Justice League, Public Citizen, Public Knowledge, the Allen Institute for AI, Data & Society, the Electronic Privacy Information Center, Leadership Conference on Civil Rights, Brennan Center for Justice, the Partnership on AI, Encode Justice, and Fidutam.

The United States has considered public comments in the development of AI Policy, strategies, priorities, research and innovation. The National Artificial Intelligence Research Resource Task Force launched in 2021 to “develop a roadmap to democratize access to research tools that will promote AI innovation and fuel economic prosperity”⁶⁸⁵⁶ is one example, along with the White House Office of Science and Technology Policy (OSTP) and the National Science Foundation (NSF) implementation plan for a National Artificial Intelligence Research Resource (NAIRR).⁶⁸⁵⁷

Comments submitted in response to a White House request for input on U.S. national priorities and future actions on AI informed the development of the AI Executive Order and other executive actions.⁶⁸⁵⁸

Civil society organizations in the United States actively participate in discussions and advocacy related to artificial intelligence (AI). The involvement of these organizations is important for promoting transparency, accountability, and ethical considerations in the development and deployment of AI technologies. Some of these organizations focus on specific aspects of AI, such as privacy, bias, accountability, and the impact of AI on various social issues. Examples of civil

Center for AI and Digital Policy

society organizations involved in AI-related discussions in the United States include the Center for AI and Digital Policy, the Center for Humane Technology, the AI Now Institute, Algorithmic Justice League, Public Citizen, Public Knowledge, the Allen Institute for AI, Data & Society, the Electronic Privacy Information Center, Leadership Conference on Civil Rights, Brennan Center for Justice, the Partnership on AI, Encode Justice, and Fidutam.

Civil society has also participated in the development of and advocacy for state legislation. California Senate Bill 1047, the “Safe and Secure Innovation for Frontier AI models Act,” provoked a heated debate over the future of AI regulation in the state, with both opposition and support from various stakeholders. Several civil society organizations such as Encode Justice⁶⁸⁵⁹ and CAIDP⁶⁸⁶⁰ voiced support for the bill. Although the bill initially passed Congress, the Governor vetoed it.

The United States government provides access to all final policy proposals concerning AI. Federal agencies have undertaken public rulemaking and requested public comment. However, the National Security Commission NSCAI attempted to keep its deliberations secret. A federal court later determined that the AI Commission had violated U.S. open government laws and was required to make both its records and its meetings open to the public.⁶⁸⁶¹ Oddly, the AI Commission initially made agency documents available on a proprietary platform rather than an agency website.⁶⁸⁶²

Data Protection

The United States does not have an overarching privacy law, such as the GDPR, nor is there a privacy agency. However, the United States has two members in the Global Privacy Assembly (GPA), the FTC (since 2010) and the recently accredited California Privacy Protection Agency (CPPA) (since 2022).⁶⁸⁶³ Neither voting U.S. member has endorsed the GPA’s key resolutions: the Declaration on Ethics and Data Protection in Artificial Intelligence,⁶⁸⁶⁴ the

Resolution on Accountability in the Development and Use of Artificial Intelligence,⁶⁸⁶⁵ and the Resolution and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology,⁶⁸⁶⁶ and the latest Resolution on Generative Artificial Intelligence Systems.⁶⁸⁶⁷

Both the FTC and the CPPA have taken several steps to address data protection, along with action from other agencies. For example, the National Science Foundation (NSF) and DOE established a research network⁶⁸⁶⁸ dedicated to advancing the development, deployment, and scaling of privacy-enhancing technologies (PETs). Two OMB Requests for Information (RFIs) in 2024 also addressed privacy concerns. The first focused on federal agencies' handling of personally identifiable information (PII) contained within commercially available data. The second aimed to enhance the effectiveness of privacy impact assessments conducted by federal agencies, particularly considering emerging technologies like AI.

The U.S. still lacks a comprehensive federal privacy law and a dedicated federal privacy agency. There is no general law that establishes a right to algorithmic transparency. The draft American Data Privacy and Protection Act, which was introduced in the House of Representatives, provided for greater data privacy rights, as well as oversight and enforcement mechanisms, including protections against algorithms deemed to discriminate on the basis of race, color, religion, national origin, sex, or disability.⁶⁸⁶⁹ After passing through committee, the act stalled in the Senate.

The Federal Trade Commission has been issuing business guidance since 2021 to put companies on notice about unlawful data and algorithmic practices.⁶⁸⁷⁰

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In February 2023, following the widespread public awareness of GPT-4, the FTC warned, “false or unsubstantiated claims about [an AI] product’s efficacy are our bread and butter [...] You don’t need a machine to predict what the FTC might do when those claims are unsupported.” In the May 2023 business guidance on consumer trust and generative AI tools, the FTC states that, “Design or use of a product can also violate the FTC Act if it is unfair.”⁶⁸⁷¹ The FTC has also issued business guidance that would guide the downstream uses and integrations of LLM products.⁶⁸⁷²

Apart from business guidance, since 2019, the FTC has proposed five disgorgement orders including against Cambridge Analytica and Amazon.⁶⁸⁷³ In the 2023 Privacy and Security Report to Congress, the FTC stated: “The Commission has been leading efforts to ensure that AI and similar technologies are not deployed in harmful ways. In addition to obtaining orders against Rite Aid, Ring, and Amazon to ensure that companies are disincentivized from using data that was wrongfully collected or trained to develop AI, we have initiated a market study of social media and video streaming platforms on the use of AI, announced a public contest to develop new approaches to protect consumers from AI-enabled voice cloning harms, proposed rules to crack down on AI-fueled impersonator and fake review fraud, and issued numerous business guidance alerts.”⁶⁸⁷⁴

At the state level, the California Consumer Privacy Rights Act (CPRa) updated the state's privacy law (the CCPA), created a privacy protection agency (the CPPA), and established a right to limit algorithmic profiling.⁶⁸⁷⁵ The CPRa strengthens accountability measures by requiring companies to conduct privacy risk assessments and cybersecurity audits, and regularly submit them to regulators. In addition, it supplements the individual rights in the CCPA with new notification requirements, clarifies that individuals have the right to opt out of both the ‘sale’

and ‘sharing’ of personal information, and adds protections for a new category of ‘sensitive data.’”⁶⁸⁷⁶

Virginia and Colorado followed the CPRA in 2021, bypassing the Virginia Consumer Data Protection Act (“VCDPA”) and Colorado Privacy Act (“CPA”). The Virginia law took effect on January 1, 2023, and the Colorado law took effect on July 1, 2023. Utah also recently passed the Utah Consumer Privacy Act (“UCPA”), which closely follows the Virginia law and took effect on December 31, 2023.

Connecticut became the 5th U.S. State to enact comprehensive data privacy legislation with the Connecticut Data Privacy Act (“CTDPA”), which took effect on July 1, 2023. These state laws give consumers more control over their personal information by providing them with certain rights and mandating businesses to be transparent about their privacy practices. However, there are notable differences in applicability, consumer rights, and enforcement.

Utah became the first state to enact AI-specific consumer protection legislation in March 2024.⁶⁸⁷⁷ The Artificial Intelligence Policy Act establishes liability for use of artificial intelligence (AI) that violates consumer protection laws if not properly disclosed.⁶⁸⁷⁸ The National Conference of State Legislatures summarized the state of play on AI legislation in 2023 as follows:

“In the 2023 legislative session, at least 25 states, Puerto Rico and the District of Columbia introduced artificial intelligence bills, and 18 states and Puerto Rico adopted resolutions or enacted legislation. Examples of the enacted legislation and adopted resolutions include:

- Connecticut required the state Department of Administrative Services to conduct an inventory of all systems that employ artificial intelligence and are in use by any state agency and, beginning Feb. 1, 2024, perform ongoing assessments of systems that employ AI and are in use by state agencies to ensure that no such system shall result in unlawful discrimination or disparate impact. Further, the legislation requires the Office of Policy and Management to establish policies and procedures concerning the development, procurement, implementation, utilization and ongoing assessment of systems that employ AI and are in use by state agencies.

⁶⁸⁷⁸ *Ibid*

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- Louisiana adopted a resolution requesting the Joint Committee on Technology and Cybersecurity to study the impact of artificial intelligence in operations, procurement and policy.
- Maryland established the Industry 4.0 Technology Grant Program to assist certain small and medium-sized manufacturing enterprises with implementing new “industry 4.0” technology or related infrastructure. The definition of industry 4.0 includes AI.
- North Dakota enacted legislation defining a person as an individual, organization, government, political subdivision, or government agency or instrumentality, and specifying that the term does not include environmental elements, artificial intelligence, an animal or an inanimate object.
- Texas created an AI advisory council to study and monitor artificial intelligence systems developed, employed or procured by state agencies, with North Dakota, Puerto Rico and West Virginia also creating similar councils.

State lawmakers also are considering AI’s benefits and challenges—a growing number of measures are being introduced to study the impact of AI or algorithms and the potential roles for policymakers.”⁶⁸⁷⁹

Algorithmic Transparency

No laws guarantee a right to algorithmic transparency, though both the FTC and the CPPA have taken several steps to address algorithmic transparency. Guidance and actions from federal agencies such as OMB and FTC provide a measure of transparency and accountability and some access to contest decisions.

Federal and state legislatures previously introduced bills to provide algorithmic transparency and protect against harms from automated decision-making. California’s legislation on Automated Decision Tools, for example,⁶⁸⁸⁰ proposed privacy impact assessments to address algorithmic discrimination in the context of consequential decisions.⁶⁸⁸¹ Likewise, the U.S. Congress proposed the Algorithmic Accountability Act to conduct impact assessments to mitigate the harmful effects of automated decisions.⁶⁸⁸² Both failed.

More targeted state and local legislation has been more successful. For example, Illinois’s Artificial Intelligence Video Interview Act requires that employers disclose whenever they use AI to analyze applicant-submitted

⁶⁸⁷⁹ National Conference of State Legislatures, *Artificial Intelligence 2023 Legislation* (Jan. 12, 2024), <https://www.ncsl.org/technology-and-communication/artificial-intelligence-2023-legislation>

interview videos.⁶⁸⁸³ The act also requires employers who rely solely on AI analysis of video interviews to make employment decisions to report demographic data annually to a state agency, and for the state agency to report whether the data discloses a racial bias from the use of AI. New York City’s Local Law 144 requires bias audits on any automated employment decision tools and notice on the use of such tools to employees and job seekers.⁶⁸⁸⁴

CAIDP Complaint and FTC Investigation into OpenAI

In March 2023, CAIDP filed a detailed Complaint with the Federal Trade Commission against OpenAI.⁶⁸⁸⁵ CAIDP explained that OpenAI released a product GPT-4 for the consumer market that is biased, deceptive, and a risk to privacy and public safety. The CAIDP Complaint quoted extensively from the GPT-4 Technical Report, highlighted that the outputs of ChatGPT cannot be proven or replicated, and no independent assessment was undertaken prior to deployment.⁶⁸⁸⁶ CAIDP’s complaint was grounded on violations of Section 5 of the FTC Act, FTC’s numerous Guidance for AI Products, and Rules for Governance of AI. CAIDP asked the Commission to begin an investigation of OpenAI and to prevent the release of further models until necessary guardrails are established.

In a supplement to the original complaint, CAIDP accused OpenAI of “unfair and deceptive practices.” CAIDP outlined the numerous investigations from consumer agencies around the world since the original CAIDP complaint and sheds light on newly surfaced issues not fully captured in the initial complaint.⁶⁸⁸⁷

Both the *New York Times* and the *Wall Street Journal* reported in 2023 that the FTC had launched the investigation sought by CAIDP.⁶⁸⁸⁸ Subsequently, CAIDP filed a second supplement that urged the FTC to move forward the investigation and issue an order to establish safeguards and guardrails for

ChatGPT.⁶⁸⁸⁹ However, no order has yet been issued by the FTC in this investigation.

Facial Recognition

There is growing opposition to the deployment of facial recognition technology in the United States. Still, as the National Academies of Sciences, Engineering, and Medicine report “With few exceptions, the U.S. does not currently have authoritative guidance, regulations, or laws to adequately address issues related to facial recognition technology use.”⁶⁸⁹⁰

The Facial Recognition Act of 2023⁶⁸⁹¹ introduced during the 118th Congress proposed limitations on the use of biometric surveillance systems including facial recognition technology by federal, state and local government entities. The bill and a related House act would have regulated law enforcement use of facial recognition technology within the United States of America, but it has not progressed beyond committee.

State and local governments have taken action to limit facial recognition technology. San Francisco, California became the first city in the U.S. to ban the use of facial recognition technology by city agencies in 2019.⁶⁸⁹² Other cities, including Cambridge, Massachusetts; Oakland, California; and Portland, Oregon followed suit.⁶⁸⁹³ California prohibited facial recognition technology in police body cameras.⁶⁸⁹⁴ However, the technology can be used in other ways, such as in

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

stationary cameras, and the prohibition does not apply to federal agencies such as the FBI.⁶⁸⁹⁵

The same members of Congress who introduced a bill to ban the use of facial recognition by law enforcement agencies in 2022⁶⁸⁹⁶ urged federal agencies to end the use of Clearview AI Facial Recognition technology.⁶⁸⁹⁷ In letters to the Department of Homeland Security (DHS), Department of Justice (DOJ), Department of Defense (DOD), Department of Interior (DOI), and Department of Health and Human Services (HHS), they wrote, “[f]acial recognition tools pose a serious threat to the public’s civil liberties and privacy rights, and Clearview AI’s product is particularly dangerous. We urge you to immediately stop the Department’s use of facial recognition technology, including Clearview AI’s tools.”⁶⁸⁹⁸

State biometric privacy laws regulate the collection and use of facial recognition technology in the private sector. In October 2023, the Maryland General Assembly introduced legislation that would limit law enforcement use of facial recognition technology.⁶⁸⁹⁹ The bill was introduced in passed by both chambers in April 2024. Among other provisions it would require the Governor’s Office of Crime Prevention and Policy, on or before October 1 each year, to report to the General Assembly information reported by law enforcement agencies using facial recognition technology.

After multiple lawsuits alleging that Facebook had violated state and federal privacy laws as well as repeated recommendations to the FTC that the company’s business practices, including the collection and use of facial images, violated a 2011 settlement with the Commission, Facebook announced it would shut down its facial recognition system and delete the face scans of more than one

billion users it had gathered.⁶⁹⁰⁰ In February 2022, and after months of criticism by advocacy groups, the Internal Revenue Service announced that it would halt its program with identity verification company ID.me to use facial recognition technology to verify taxpayers' identities.⁶⁹⁰¹

The Federal Trade Commission (FTC) issued a press release, "FTC Recommends Best Practices for Companies That Use Facial Recognition Technologies," promoting consumer protection innovation and best practices guidance to companies developing and deploying facial recognition technologies.⁶⁹⁰² The statement included the release of a staff report, "Facing Facts: Best Practices for Common Uses of Facial Recognition Technologies," a product of the Commission's December 8, 2011, workshop, "Face Facts: A Forum on Facial Recognition Technology" and the Commission's March 2012 report, "Protecting Consumer Privacy in an Era of Rapid Change."⁶⁹⁰³

In May 2023, the FTC issued its Policy Statement on Biometric Information and Section 5 of the Federal Trade Commission Act.⁶⁹⁰⁴ In its policy statement, the FTC noted "facial recognition technology, may perform differently across different demographic groups in ways that facilitate or produce discriminatory outcomes."⁶⁹⁰⁵ The FTC's Biometric Policy Statement serves as "warning that the increasing use of consumers' biometric information and related technologies, including those powered by machine learning, raises significant consumer privacy and data security concerns and the potential for bias and discrimination."⁶⁹⁰⁶

Center for AI and Digital Policy

In December 2023, the FTC filed a lawsuit against Rite Aid for using “facial recognition technology in its stores without taking reasonable steps to address the risks that its use would likely harm consumers due to false-positive match alerts, especially women consumers and consumers of color.”⁶⁹⁰⁷ In March 2024, the FTC filed its proposed stipulations and order requiring, among others, that “Rite Aid to discontinue using any such technology if it cannot control potential risks to consumers.”⁶⁹⁰⁸

In September 2023, the Government Accountability Office (GAO) reported that “Seven law enforcement agencies in the Departments of Homeland Security (DHS) and Justice (DOJ) reported using facial recognition services provided by commercial and nonprofit entities. GAO made ten recommendations to DHS and DOJ relating to safeguards for civil rights, training, and privacy related to their use of facial recognition technology to support criminal investigations.”⁶⁹⁰⁹

The 2024 report of the National Academies highlights that “FRTs are highly personal, uniquely powerful, and potentially extremely intrusive. Opting out of showing one’s face is not a realistic option in most circumstances”⁶⁹¹⁰ This report has revived congressional action to regulate facial recognition technology.⁶⁹¹¹

In response to the federal government’s increasing use of facial recognition technology (FRT), the United States Commission on Civil Rights (USCCR) examined the Department of Justice (DOJ), Department of Homeland Security (DHS), and the Department of Housing and Urban Development (HUD)’s use of facial recognition technology and produced the 2024 Statutory Enforcement

Center for AI and Digital Policy

Report titled on the civil rights implications of facial recognition technology.⁶⁹¹² The report provides recommendations to federal agencies on AI uses, concerns, and best practices.

Environmental Impact of AI

In a blog post on the OECD's AI Wonk platform, researchers from the Loughborough University warned about the growing environmental costs of AI, emphasizing that by 2026, computation for AI is projected to require a similar amount of annual electricity to countries like Austria and Finland. The researchers emphasize the need for sustainability-focused guidelines and increased awareness among AI practitioners about the environmental consequences of their work.⁶⁹¹³

The U.S. issued a first-ever report analyzing AI's near-term potential to support the growth of America's clean energy economy in 2024.⁶⁹¹⁴ The U.S. Department of Energy (DOE) also issued a report identifying opportunities in AI for energy over the next decade. The DOE also launched the Frontiers in AI for Science, Security, and Technology (FASST) initiative⁶⁹¹⁵ to harness AI for scientific discovery, national security, as well as energy and electric grid resilience.⁶⁹¹⁶ The U.S. Global Change Research Program has released the Fifth National Climate Assessment, outlining the country's dire climate status. The report discusses climate justice and emphasizes the critical need to proactively mitigate the environmental harms associated with rapid technological shifts.⁶⁹¹⁷

The Senate moved on legislation to regulate the environmental impact of AI systems with the Artificial Intelligence Environmental Impacts Act. The bill requires the Administrator of the Environmental Protection Agency to carry out a

study on the environmental impacts of artificial intelligence, the Director of the National Institute of Standards and Technology (NIST) to convene a consortium on such environmental impacts, and the Director to develop a voluntary reporting system on the environmental impacts of artificial intelligence.⁶⁹¹⁸

Lethal Autonomous Weapons

The United States are among the 161 countries that approved a draft resolution on lethal autonomous weapons systems (LAWS) at the 79th UN General Assembly.⁶⁹¹⁹ The resolution expressed concern over LAWS exacerbating existing conflicts and humanitarian crises and approved including discussions of LAWS in the next session.⁶⁹²⁰ 70 countries that endorsed a joint statement on autonomous weapons systems at the UN General Assembly meeting. In this joint statement, States urge “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”⁶⁹²¹ The United States also supported a later UN General Assembly Resolution on lethal autonomous weapons systems.⁶⁹²²

The United States participated in the first global Summit on Responsible Artificial Intelligence in the Military Domain (REAIM 2023) hosted by the government of The Netherlands. Government representatives, including the United States, have agreed a joint call to action on the responsible development,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

deployment and use of artificial intelligence (AI) in the military domain.⁶⁹²³ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” States also “stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain.”⁶⁹²⁴

At REAIM, the United States issued the Political Declaration on Responsible Military Use of Artificial Intelligence and Autonomy.⁶⁹²⁵ The declaration sets out 10 guiding principles in the development, deployment, or use of military AI capabilities, including those enabling autonomous functions and systems.⁶⁹²⁶ The declaration seeks to provide a normative framework addressing the use of these capabilities in the military domain.⁶⁹²⁷

The Department of State, in collaboration with the Department of Defense (DoD), convened the inaugural plenary meeting of States endorsing the Political Declaration to operationalize and implement this initiative in March 2024.⁶⁹²⁸ 49 states have endorsed the political declaration led by the United States.⁶⁹²⁹

The DoD has continued to commit to developing and employing new and emerging technologies responsibly with an update to a 2023 policy directive on Autonomy in Weapons Systems.⁶⁹³⁰ The Directive is valid for 10 years and supports existing documents such as the DoD AI Ethical Principles which were

instituted in 2020,⁶⁹³¹ the DoD Responsible AI Strategy and Implementation Pathway,⁶⁹³² and the DoD 2023 Data, Analytics, and Artificial Intelligence Adoption Strategy.⁶⁹³³ The directive also supported the United States Department of Defense Responsible AI Toolkit,⁶⁹³⁴ which is publicly available to demonstrate this commitment and to encourage transparency internationally.

Human Rights

The United States endorsed the Universal Declaration for Human Rights, published a detailed annual report on human rights, and has historically ranked high for the protection of human rights. But in its 2024 index, Freedom House reported “in recent years its democratic institutions have suffered erosion, as reflected in rising political polarization and extremism, partisan pressure on the electoral process, mistreatment and dysfunction in the criminal justice and immigration systems, and growing disparities in wealth, economic opportunity, and political influence.”⁶⁹³⁵ Freedom House scored the United States at 83/100 in 2024.⁶⁹³⁶

Several initiatives aiming to enhance human rights protection were developed since the last AIDV. First, the Department of State, in close coordination with NIST and the U.S. Agency for International Development, elaborated the Risk Management Profile for AI and Human Rights,⁶⁹³⁷ a list of recommended actions based on the NIST AI RMF for governments, the private sector, and civil society worldwide, to identify and manage risks to human rights arising from the design, development, deployment, and use of AI. Following President Biden’s Executive Order on safe and trustworthy AI, the Justice Department, joined by five federal agencies, has also pledged to enforce civil

rights laws in cases arising from AI and has stressed the government's commitment to holding accountable entities that fail to address unfair and discriminatory outcomes resulting from AI.⁶⁹³⁸

Second, in relation to gender, child, and sexual abuse, the Gender Policy Council and Office of Science and Technology Policy (OSTP) issued a call to action to combat image-based sexual abuse, including synthetic content generated by AI,⁶⁹³⁹ which has emerged as one of the fastest growing harmful uses of AI to date.

The Justice Department has also taken unprecedented legal action against the misuse of generative AI for producing and distributing child sexual abuse material (CSAM), aligning with the UN's call to address emerging GenAI risks to human rights, especially when it concerns children.⁶⁹⁴⁰

Relatedly, the U.S. launched a 15-country Global Partnership for Action on Gender-Based Online Harassment and Abuse with the aim to advance international policies to address online safety and spur new programs to prevent and respond to technology-facilitated gender-based violence, including through AI.⁶⁹⁴¹

Third, regarding risks related to deepfakes and facial recognition and their impact on human rights and marginalized populations, the FTC has proposed to extend protections against AI impersonation scams and deepfakes.⁶⁹⁴² The U.S. Commission on Civil Rights also released a report on The Civil Rights Implications of the Federal Use of Facial Recognition Technology, highlighting

Center for AI and Digital Policy

concerns about potential discrimination and bias in AI systems used by federal agencies, especially for marginalized groups.⁶⁹⁴³

Fourth, regarding risks specific to the use of AI in healthcare, the Department of Health and Human Services (HHS) has established an AI Safety Program to track harmful incidents involving AI's use in healthcare settings and evaluate mitigations for those harms. The HHS has also finalized a civil rights regulation that requires healthcare entities to take steps to identify and mitigate discrimination when they use AI for care.⁶⁹⁴⁴

These initiatives build on prior developments. The Blueprint for an AI Bill of Rights furthered the “Biden-Harris Administration’s work to hold big technology accountable, protect the civil rights of Americans, and ensure technology is working for the American people.”⁶⁹⁴⁵ The White House indicated that the Blueprint is “fully consistent” with the OECD AI Principles and with Executive Order 13985 on Advancing Racial Equity and Support for Underserved Communities.⁶⁹⁴⁶

Speaking at the UK AI Safety Summit, Vice President Harris stated: “to define AI safety, I offer that we must consider and address the full spectrum of AI risk—threats to humanity as a whole, as well as threats to individuals, communities, to our institutions, and to our most vulnerable populations.”⁶⁹⁴⁷

The U.S. strongly supported the United Nations resolution on Artificial Intelligence. Vice President Harris stated: “Too often, in past technological

revolutions, the benefits have not been shared equitably, and the harms have been felt by a disproportionate few. This resolution establishes a path forward on AI where every country can both seize the promise and manage the risks of AI.”⁶⁹⁴⁸

OECD / G20 AI Principles

The United States fully supported the OECD AI policy process, endorsed the OECD AI Principles, and is a founding member of the Global Partnership on AI. The OECD notes that the United States has taken several steps to implement the AI Principles.

The United States continued its commitment to the OECD AI Principles with endorsement of the updated Principles in May 2024.⁶⁹⁴⁹ The update addresses advancements in AI technologies, including general-purpose and generative AI. These updates focus on privacy, intellectual property rights, safety, and information integrity.

Representatives of the U.S. Department of Commerce have stated that the Blueprint for an AI Bill of Rights was largely inspired by the OECD AI Principles.⁶⁹⁵⁰ Three agencies within the U.S. Department of Commerce – the National Institute of Standards and Technology (NIST), the National Telecommunications and Information Administration (NTIA), the International Trade Administration (ITA) participate in the OECD Working Party on AI Governance.⁶⁹⁵¹

The U.S. has consistently supported the G7 processes on artificial intelligence. It joined the leaders’ statement on the Hiroshima AI Process which committed to “foster an open and enabling environment where safe, secure, and trustworthy AI systems are designed, developed, deployed, and used to maximize the benefits of the technology while mitigating its risks, for the common good worldwide, including in developing and emerging economies with a view to

closing digital divides and achieving digital inclusion.”⁶⁹⁵² Subsequently the U.S.-Japan consultative committee issued a joint statement which states,

“We welcome progress under the Hiroshima AI Process, particularly the Hiroshima Process International Guiding Principles for Organizations Developing Advanced AI Systems and the Hiroshima Process International Code of Conduct for Organizations Developing Advanced AI Systems and affirm our determination to further advance the Hiroshima AI Process together with other G7 members.”⁶⁹⁵³

Council of Europe AI Treaty

The U.S. is not a member of the Council of Europe but signed and ratified the COE Convention on Cybercrime,⁶⁹⁵⁴ as COE conventions are open for ratification by non-members states.

The U.S. was one of the non-member states of the COE intergovernmental drafting body on the Framework Convention on AI.⁶⁹⁵⁵ During the diplomatic negotiations in Strasbourg to finalize the text of the Convention, there was considerable concern about the U.S. role in watering down the treaty.⁶⁹⁵⁶ The Center for AI and Digital Policy led a coalition of civil society organizations and AI experts urging negotiators not to “Abdicate Our Rights.”⁶⁹⁵⁷

The U.S. signed⁶⁹⁵⁸ the Council of Europe’s Framework Convention on AI and Human Rights, Democracy, and the Rule of Law. Signing signals positive prospects for the United States as the country could become a ratifying party to the first multilateral treaty focused on artificial intelligence.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

The United States rejoined UNESCO as a full member in 2023,⁶⁹⁵⁹ after the UNESCO Recommendation on the Ethics of AI were adopted. The Recommendation is applicable to all 194 member states of UNESCO.

While several countries are implementing the Readiness Assessment Methodology (RAM) to determine whether they are prepared to implement the Recommendation, the U.S. has not completed the RAM.⁶⁹⁶⁰

Evaluation

The U.S. lacks a unified national policy on AI. Executive Order 14110 and the agency actions taken to implement it reflect a whole-of-government approach to guide the development of safe, responsible, and trustworthy AI. These actions resulted from White House consultations with tech CEOs, academic experts, civil society leaders, labor organizers, and agency heads.⁶⁹⁶¹ However, the nature of Executive Orders make them susceptible to political whims.

The United States has endorsed the OECD/G20 AI Principles. Successive administrations have issued Executive Orders on AI that reflect democratic values, and a federal OMB directive mandates that agencies adopt safeguards for AI. Several agencies such as the AI Safety Institute (AIS), Office of Critical and Emerging Technologies, and Office of Management and Budget have launched requests for information, showing a desire for enhanced public participation. States have made progress.

Despite encouraging steps in Congress with the introduction of bipartisan bills, the overall U.S. policy-making process remains opaque. The AI Insight Forums convened by Congress under the leadership of Sen. Schumer reflect these concerns. Congressional attention to AI should be welcome but the closed-door sessions raise concerns about public participation as does the lack of attention to developments in China and the EU.⁶⁹⁶²

The Federal Trade Commission has failed to act on several pending complaints concerning the deployment of AI techniques in the commercial sector, including the CAIDP complaint regarding OpenAI.

Uruguay

In 2024, Uruguay updated its National AI Strategy and the National Data Strategy. Uruguay also completed the UNESCO Readiness Assessment Methodology. However, concerns remain over the use of facial recognition technology.

National AI Strategy

Uruguay's revised AI Strategy, 2024–2030, aims to “promote the ethical, responsible, safe, critical, creative, and innovative development and use of artificial intelligence for the benefit of people and all sectors of society.”⁶⁹⁶³ The strategy was built on ten core principles:

1. AI for the good of people and sustainable development
2. Strengthening democracy
3. Respect for dignity and human rights
4. Equity and non-discrimination
5. Protection and privacy of personal data
6. Transparency and explainability
7. Responsibility and accountability
8. Trustworthiness and security
9. Responsible and safe innovation
10. Multiple stakeholders

The 2024–2030 AI Strategy also identifies various considerations across three pillars: Governance, AI Capacity, and Sustainable Development. Regulatory frameworks (Line 1.2) and international articulation (Line 1.3) under the Governance pillar and AI and society (Line 3.3) and Impacts of AI on employment (3.5) under Sustainable Development relate most closely to human rights and democratic values.

The updated strategy extends the application of earlier strategies, which focused on AI in the public sector, to include the private sector. The new strategy also represents the first comprehensive AI strategy. The previous version, called the Artificial Intelligence Strategy for Digital Government (AISDG) 2020,⁶⁹⁶⁴ focused on AI development for the digital government. The Agency for the Development of Electronic Government and Information Society (AGESIC) led the preparation of the AISDG and the revised AI strategy.

⁶⁹⁶³ AGESIC, *Uruguay National Artificial Intelligence Strategy 2024–2030* (Nov. 19, 2024), <https://www.gub.uy/agencia-gobierno-electronico-sociedad-informacion-conocimiento/comunicacion/publicaciones/estrategia-nacional-inteligencia-artificial-uruguay-2024-2030/estrategia>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The AI strategies were part of Uruguay's Digital Agendas. Uruguay has published five digital government agendas (in 2008, 2010, 2015, 2020, and 2021). The issues associated with AI were considered in the 2020 Digital Government Plan,⁶⁹⁶⁵ Digital Agenda 2020,⁶⁹⁶⁶ and Digital Agenda 2021–2025. After publishing the most recent, called Digital Agenda 2025, Uruguay began to revise the national AI strategy in 2023.⁶⁹⁶⁷

Uruguay's digital government strategies aim to advance implementation of the Declaration of Principles of the World Summit on the Information Society commitment “to build a people-centered, inclusive and development-oriented Information Society, where everyone can create, access, utilize and share information and knowledge, enabling individuals, communities and peoples to achieve their full potential in promoting their sustainable development and improving their quality of life, premised on the purposes and principles of the Charter of the United Nations and respecting fully and upholding the Universal Declaration of Human Rights.”⁶⁹⁶⁸

Uruguay adopted the AISDG after a public consultation.⁶⁹⁶⁹ The general objective of the AISDG is to promote and strengthen the responsible use of AI in Public Administration. AISDG comprises nine general principles and four pillars, each with specific objectives and areas of action.

The general principles are:

1. Purpose: AI must enhance the capabilities of human beings, complementing them as much as possible, aiming to improve the quality of people's life, facilitating processes and adding value to human activity
2. General interest: AI-based solutions promoted by the State should be oriented toward protecting the general interest, guaranteeing inclusion and equity

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

3. Respect for human rights: Any technological solution that uses AI must respect human rights, individual freedoms, and diversity
4. Transparency: AI solutions used in the public sphere must be transparent and comply with the regulations in force
5. Responsibility: Technological solutions based on AI must have a clearly identifiable person responsible for the actions derived from the AI solution
6. Ethics: When the application and/or development of AI-based solutions present ethical dilemmas, they must be addressed and resolved by human beings
7. Added value: AI-based solutions should only be used when adding value to a process
8. Privacy by design: AI solutions should consider people's privacy from their design stage. Personal data-protection principles in force in Uruguay are considered strategic components
9. Security: AI developments must comply, from their design, with the basic principles of information security. The guidelines and regulations related to cybersecurity in force in Uruguay that apply to the development of AI are considered components of this strategy.

The four pillars of the Artificial Intelligence Strategy for the Digital Government are:

1. AI governance in public administration: Ensure that the principles and comply with the recommendations outlined in the strategy
2. Capacity development for AI: Should focus on training civil servants in different capacities related to AI
3. Use and application of AI: Implies generating technical guides for the good use of AI in public administration, promoting algorithm transparency and designing specific action plans in strategic sectors
4. Digital citizenship and AI: Prepare citizens to take advantage of opportunities and face the challenges that AI poses, as well as to generate the necessary confidence in people to develop and use new technologies

The 2022 OECD report assessing the use of AI in the public sector across Latin America and the Caribbean acknowledges that the AISDG is one of the few AI strategies in the region “to be fully dedicated to the public sector.”⁶⁹⁷⁰ Concerning implementation, the OECD notes that “Uruguay’s strategy does not

⁶⁹⁷⁰ OECD Public Governance Reviews, *The Strategic and Responsible Use of Artificial Intelligence in the Public Sector of Latin America and the Caribbean*, chapter 1, subchapter “Public Sector Components of National Strategies” (Mar. 22, 2022), https://www.oecd-ilibrary.org/governance/the-strategic-and-responsible-use-of-artificial-intelligence-in-the-public-sector-of-latin-america-and-the-caribbean_1f334543-en

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

always include measurable goals, leaving some actions open to interpretation”⁶⁹⁷¹ and does “not generally include specific time frames.”⁶⁹⁷²

The Uruguay Government started to address these issues as part of a budget and funding law that formally assigned AGESIC the task of designing and developing a national data and artificial intelligence strategy based on international standards, covering both the public and private sectors. This law also mandated joint action with the Regulatory and Control Unit for Personal Data (URCDP) in all matters related to the processing of personal data.⁶⁹⁷³ The law, which includes provisions for controlled AI testing environments (sandboxes) to promote innovation, followed collaboration with UNESCO and the Development Bank of Latin America and the Caribbean (CAF) to review the AI strategy and create a data strategy.⁶⁹⁷⁴

Uruguay established the Observatory of Artificial Intelligence in the State in 2024,⁶⁹⁷⁵ realizing plans to promote transparency around the AI Strategy and to enhance trust and mitigate risks around the use of AI technologies.⁶⁹⁷⁶ The Observatory will allow citizens to monitor and follow-up on action plans for the new AI and Data Strategies.⁶⁹⁷⁷ As part of this effort, the AGESIC joined with the Personal Data Regulatory and Control Unit (URCDP) to publish Recommendations on Algorithmic Transparency.⁶⁹⁷⁸

The Uruguayan government currently has projects for AI solutions in sectors including public education and public health in different stages of testing

and implementation. These models include a predictive model to detect disengagement among high-school students, prepared jointly with the Public Education National Administration (ANEP).⁶⁹⁷⁹ The model for educational purposes was initially tested on a small scale to identify possible errors, and the teachers will be taught how to interpret the underlying information.⁶⁹⁸⁰ The model is among cases of AI applied in the public sector that the Artificial Intelligence Observatory includes in a list with key information. An AGESIC official has acknowledged that a predictive model for cardiovascular disease, which is currently undergoing tests, involves the use of sensitive personal data and raises ethical challenges.⁶⁹⁸¹

Public Participation

Uruguay created both the Draft Data Strategy 2024–2030 and current Artificial intelligence Strategy through a participatory process and public consultations. The 11 Data Strategy proposals are published on the site and are currently under review.⁶⁹⁸²

The current Artificial Intelligence Strategy for Digital Government (AISDG) resulted of a public consultation on a draft prepared by AGESIC.⁶⁹⁸³ The revised AI Strategy (called the Uruguay Artificial Intelligence Strategy 2024–2030) was created after an extensive participatory process that gathered input from more than 300 individuals from various disciplines and fields and representing many organizations, including over 40 government institutions, 11 civil society organizations, 45 private sector organizations, academia, and other interest groups. CAF and UNESCO supported the consultation process.⁶⁹⁸⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

As AGESIC explained when it announced the public consultation, “This new National Strategy is the cornerstone for the deployment of a national AI policy that involves the public sector, the private sector and all stakeholders, and that enhances the sustainable development of Uruguay in all its dimensions, contributing to economic growth, social inclusion, environmental sustainability of the country and the strengthening of its sovereignty.”⁶⁹⁸⁵ The 29 proposals AGESIC received during the consultation, including CAIDP’s comments, are available on the public consultation site, along with a report on the consultation.⁶⁹⁸⁶

CAIDP participated in this public consultation, noting as part of its comments that “the draft Uruguay AI Strategy demonstrates alignment with regional and international ethical AI frameworks.” CAIDP provided five key recommendations to the draft AI Strategy: 1) adopt a stronger human rights-based approach, 2) enhance explicit transparency and accountability measures, 3) require mandatory Ethical Impact Assessments, 4) prohibit high-risk applications, and 5) carry out continuous inclusive multi-stakeholder engagement.⁶⁹⁸⁷ Of these recommendations, Uruguay adopted a strong human rights-based approach, improved the monitoring and review frameworks, and expanded access for multi-stakeholder participation.⁶⁹⁸⁸

Data Protection

The draft National Data Strategy will be “the cornerstone for the deployment of a national data policy” covering the private and public sector.⁶⁹⁸⁹ International commitments such as the Universal Declaration of Human Rights, American Convention on Human Rights or Pact of San José de Costa Rica, and Council of Europe Convention 108 for the protection of individuals with regards to the Processing of Personal Data inform the legal framework for data protection

Center for AI and Digital Policy

in Uruguay. Article 72 of the Constitution and a law on Personal Data Protection and Habeas Data Action (LPDP)⁶⁹⁹⁰ provide legal protections.

Uruguay's data-protection system follows EU data-protection rules and has regulations that adapt to the General Data Protection Regulation (GDPR). The European Commission formally approved Uruguay's status as a country providing "adequate protection" for personal data within the meaning of the European Data Protection Directive.⁶⁹⁹¹

Continuing with the process of full GDPR adaptation, Uruguay passed provisions relating to data protection that address, among others, the proactive responsibility principle (which supposes the implementation of appropriate technical and organizational measures such as privacy by design and privacy by default); the obligation to designate a data-protection officer, and data-breach notification rules. A follow-up decree⁶⁹⁹² regulates the implementation and enforcement of the provisions.

The Personal Data Protection and Habeas Data law established the Personal Data Regulatory and Control Unit (URCDP)⁶⁹⁹³ as the country's supervisory data-protection authority. The URCDP is an autonomous entity of the AGESIC.

As a member of the Ibero-American Network for the Protection of Personal Data (RIPD), which comprises 16 data protection authorities of 12 countries, the URCDP endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence⁶⁹⁹⁴ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.⁶⁹⁹⁵ Both have been

Center for AI and Digital Policy

framed in accordance with the RIPD Standards for Personal Data Protection for Ibero-American States.⁶⁹⁹⁶ With the adoption of the Standards, a series of guiding principles and rights for the protection of personal data were recognized, that can be adopted and developed by the Ibero-American States in their national legislation to guarantee a proper treatment of personal data and to have homogeneous rules in the region. The guiding principles of personal data protection are legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety, and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data, and right to the limitation of treatment of personal data.

The RIPD data protection authorities initiated a coordinated action regarding ChatGPT in May 2023 on the basis that the service may entail risks for the rights and freedoms of users in relation to the regarding the risk of misinformation. The action stated: “ChatGPT does not have knowledge and/or experience in a specific domain, so the precision and depth of the response may vary in each case, and/or [the machine may] generate responses with cultural, racial, or gender biases, as well as false ones.”⁶⁹⁹⁷

Uruguay has been an accredited member of the Global Privacy Assembly since 2009 and is represented by the Personal Data Regulatory and Control Unit. The 34th International Conference was hosted in Canelones, Uruguay in 2012.⁶⁹⁹⁸ The URCDP was among the co-sponsors of the 2022 GPA Resolution on Facial

Recognition Technology⁶⁹⁹⁹ and the 2023 GPA Resolution on Generative AI Systems.⁷⁰⁰⁰

Algorithmic Transparency

Several provisions in Uruguay define a right to algorithmic transparency. Most recently, AGESIC and the Unit of Access to Public Information (UAIP) published Recommendations on Algorithmic Transparency⁷⁰⁰¹ as part of the State Observatory on AI. The recommendations promote transparency, access to information, and explainability to ensure the ethical and responsible use of AI systems while seeking to strengthen people's trust in the technology.

The new Recommendations build on international commitments and national strategies dating back to 2019. The RIPD Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects, which the URCDP endorsed, provide “The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language.”⁷⁰⁰²

AGESIC published guidance for the preparation of Algorithmic Impact Studies as part of an earlier AI Strategy on Digital Government. According to the OECD, the Uruguayan Algorithmic Impact Study was designed “as a tool for analyzing automated decision support systems that use machine learning” to “identify key aspects of systems that merit more attention or treatment.”⁷⁰⁰³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Uruguay also ratified Council of Europe Convention 108+, which includes a broad provision regarding algorithm transparency.⁷⁰⁰⁴

Use of AI in Public Administration

Uruguay has acted on its objective to “promote and support the ethical, responsible, safe, and trustworthy use” of artificial intelligence technology through various national and international frameworks, institutions, and tools. Uruguay’s first AI Strategy (2020) focused on the use of AI in public administration. This strategy for digital government emerged from a two-decade-long tradition of digital government agendas (referred to as Digital Uruguay). Uruguay has published five digital government agendas with periodic revisions and subject to public consultations. The latest revision of the current digital government agenda was (Digital Agenda 2025).⁷⁰⁰⁵

An AI Observatory formally launched in 2024 after public consultations provides public oversight for AI in public administration by documenting use cases.⁷⁰⁰⁶

In addition, AGESIC created the Public Sector Strategic Committee for Artificial Intelligence and Data⁷⁰⁰⁷ to collaborate in the process of creating and implementing the corresponding strategies. The Committee is chaired by AGESIC and composed of representatives from different Ministries.

The Uruguayan government currently has several projects to implement AI solutions in various sectors, including public education and public health. This includes a predictive model to identify those at risk of repeating in or dropping out of secondary education, prepared jointly with the Public Education National Administration (ANEP)⁷⁰⁰⁸ and a predictive model for cardiovascular disease,⁷⁰⁰⁹

which is currently undergoing tests, supported by a grant from the National Agency for Research and Innovation.⁷⁰¹⁰

Finally, as a member of the Latin American Centre for Development Administration (CLAD),⁷⁰¹¹ Uruguay approved the Ibero American Charter on Artificial Intelligence in Civil Service. The Charter aims to provide a roadmap and common framework for CLAD member states to adapt their AI policy strategies and laws for the challenges and opportunities involved in the implementation of AI in public administration. In addition to common principles, the Charter recommends specific tools for monitoring AI impact as well as a risk classification mechanism that outlines prohibited AI uses as well as guidelines for the guardrails in high-risk uses.

Facial Recognition

Uruguay's Data Protection Authority was among the co-sponsors of the 2022 GPA Resolution on Facial Recognition Technology, which set forth "principles and expectations for the appropriate use of personal information in facial recognition technology," including the need for lawful basis; reasonableness, necessity, and proportionality; protection of human rights; transparency; and accountability.⁷⁰¹²

Uruguay's Ministry of the Interior announced in 2024⁷⁰¹³ that it will apply an AI-based analytical system to video surveillance camera networks.⁷⁰¹⁴ The initiative consists of two thousand new cameras with software based on algorithms developed to recognize specific images and movements. By these means, the behavior and movements of people will be studied with the aim to detect and anticipate criminal patterns.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Even if the systems recently acquired by the Ministry of the Interior for surveillance purposes reportedly allow for a rapid response to criminal acts and even prevent them, there is no available information or assessment on Uruguay has no regulation related to the police use of AI.

Uruguay began developing a facial-identification database for public-safety purposes under the Ministry of the Interior in 2020.⁷⁰¹⁵ The system was approved as an “omnibus law” through the National Budget Act, meaning tight deadlines prevented proper discussion.⁷⁰¹⁶ The Ministry of the Interior is responsible for developing the database based on the database for issuing identification cards currently under the control of the National Directorate of Civil Identification. The database will include facial images of adults, first and last names, sex, date of birth, nationality, and identification card number, as well as issue and expiration dates. The Ministry of the Interior has already purchased automated facial recognition software and currently has a system of 8,433 cameras distributed in the country in the 19 departments, in addition to private surveillance systems. The national government has admitted that the intended use of this facial-identification database is automated surveillance using facial-recognition algorithms.⁷⁰¹⁷

Environmental Impact of AI

Uruguay is a recognized regional leader in renewable energy usage. The International Energy Agency found that 91.1% of the country's electricity in 2022 came from renewable sources.⁷⁰¹⁸ Although Uruguay has no specific policy to address the environmental impact of AI, the General Environmental Protection Law includes environmental impact assessments among the tools for protecting the environment.⁷⁰¹⁹

The Ministry of Environment authorized a Google data center project in Canelones in 2024, representing more than \$850 million in investment.⁷⁰²⁰ After an environmental impact assessment, the Ministry required provisions to reduce water usage and integrate renewable energy.

Lethal Autonomous Weapons

Uruguay co-authored several documents submitted during the 7th Meeting of Governmental Experts (GGE) on Lethal Autonomous Weapons Systems (LAWS) in 2022. These included a Working Paper on emerging technologies in the area of lethal autonomous weapons systems,⁷⁰²¹ setting considerations for the future work of the GGE, including the acknowledgment of the “centrality of the human element in the use of force” and the “urgent need for adequate rules and limits on the development, deployment, and use of autonomous weapon systems to ensure sufficient human involvement and oversight.”

Uruguay contributed to a joint commentary to the UN calling for a legally binding instrument on autonomous weapon systems⁷⁰²² and a proposal for a roadmap towards new protocol on autonomous weapons systems.⁷⁰²³ The group submitted a revised draft version of a protocol VI to the Convention on Certain Convention Weapons containing updates and revisions based on ongoing discussions and proposals.⁷⁰²⁴ A proposed ban includes autonomous weapon systems that violate international humanitarian law. The treaty would require

countries to regulate other autonomous weapon systems to ensure “meaningful human control is retained” throughout their entire life cycle.⁷⁰²⁵

Human Rights

Freedom House ranked Uruguay as “free” with a score of 96/100 points for 2024.⁷⁰²⁶ Freedom House acknowledges that Uruguay has “a historically strong democratic governance structure and a positive record of upholding political rights and civil liberties while also working toward social inclusion,” even though “there are still disparities in treatment and political representation of women, transgender people, Uruguayans of African descent, and the Indigenous population.”

Uruguay is among the countries with a very high level of formal adherence to the international human rights protection system, as it has ratified practically all existing international instruments. However, according to some reports, Uruguay has serious shortcomings when it comes to effective compliance with such standards.⁷⁰²⁷ Likewise, a 2013 report by the Office of the United Nations High Commissioner for Human Rights mentions the debts that the country maintains related to certain human-rights categories contained in the treaties ratified by Uruguay.⁷⁰²⁸

Impunity for crimes against humanity committed during the military dictatorship (1973-1985) persists and is still an open issue. In 2020, Uruguayan NGO Peace and Justice Service (SERPAJ) reported that “35 years after the democratic transition, the scenario of denial of justice for the victims of crimes against humanity of the dictatorship of Uruguay shows how the country is still far from developing and implementing satisfactory and successful public policies regarding the search for justice for serious human rights violations.”⁷⁰²⁹

OECD’s 2022 report assessing the use of AI in the public sector across Latin America and the Caribbean notes that at the end of 2013 the Uruguayan

Center for AI and Digital Policy

government acquired Predpol, an “AI-enabled policing software to predict the potential for crimes in different areas of the country.”⁷⁰³⁰ While the system “offered predictions based on data collected by the Ministry of the Interior,” concerns remain over the possibility that historical biases in the criminal justice system could lead to decisions that disproportionately harm people from marginalized groups. Knowledge about the model design was not made public, undermining efforts to explain its decisions, although, according to public information, the machine learning algorithm relied on four variables: type of crime, location, date and time.”⁷⁰³¹

Uruguay’s deployment of Predpol raised human rights concerns. A study on the deployment of algorithms and AI solutions in Latin America, including Predpol, suggested that “these models generate a feedback loop: a greater police presence in a given area makes it more likely for crime to be detected. The more crimes recorded in an area, the more likely that police forces will be deployed. According to HRDAG, this means officers will be repeatedly sent to the same areas of the city, usually those where minorities are concentrated, regardless of the true crime rate in that area.”⁷⁰³²

The study reported that Human Rights organization SERPAJ expressed similar concerns about PredPol in 2017, warning of a vicious cycle, “Basically legitimizing arbitrary police behavior, which translates into police abuse, and is often the product of racism or classism.”⁷⁰³³

The project was discontinued after an evaluation by the Uruguayan Ministry of Interior concluded it did not perform better than “a more traditional annual retrospective reporting system based on statistical tools created by the Police’s Tactical Information Directorate.”⁷⁰³⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

An AI-enabled facial recognition surveillance system proposed by the Ministry of Interior raises similar human rights concerns.⁷⁰³⁵

OECD / G20 AI Principles

Uruguay has not endorsed and is not listed among countries formally adhering to the OECD AI Principles.⁷⁰³⁶ However, Uruguay formalized its adherence to the OECD Council Recommendation on Artificial Intelligence in late 2024. The OECD Recommendation “incorporates the OECD AI principles and establishes guidelines for the development and deployment of AI systems, promoting innovation and trust in this technology, while ensuring respect for human rights and democratic values.”⁷⁰³⁷

Further, OECD’s 2022 report assessing the AI use in the public sector across Latin America and the Caribbean analyzed the consistency of the Uruguayan AI strategy for the public sector (AISDG) with the OECD AI principles. For instance, OECD found that “Uruguay’s ‘General Interest’ principle aligns with OECD principles 1 and 2. The first part of the principle sets a social goal, namely, protecting the general interest, and guaranteeing inclusion and equity. The second part states that ‘work must be carried out specifically to reduce the possibility of unwanted biases in the data and models used that may negatively impact people or favor discriminatory practices.’”⁷⁰³⁸

OECD also noted that the AISDG and complementary tools such as the Algorithmic Impact Study (EIA) allow for interpretations that provide for transparency and explainability.⁷⁰³⁹ The OECD further takes note of the fact that “Uruguay’s AI principles include a requirement that technological solutions based on AI must have a clearly identifiable person responsible for the actions derived from the solutions.”⁷⁰⁴⁰

Center for AI and Digital Policy

Uruguay is not a member of the Global Partnership on AI. However, it is a member of Digital Nations,⁷⁰⁴¹ the Open Government Partnership,⁷⁰⁴² and the Electronic Government Network of Latin America and the Caribbean.⁷⁰⁴³ Uruguay also has endorsed the Digital Agenda for Latin America and the Caribbean⁷⁰⁴⁴ in the context of the Seventh Ministerial Conference on the Information Society in Latin America and the Caribbean.⁷⁰⁴⁵ OECD assesses these memberships favorably in terms of international cooperation.

Council of Europe Convention on AI

Uruguay contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. However, Uruguay has not signed the treaty.⁷⁰⁴⁶

UNESCO Recommendation on AI Ethics

Uruguay has endorsed the UNESCO AI Recommendation⁷⁰⁴⁷ and completed the UNESCO Readiness Assessment Methodology (RAM).⁷⁰⁴⁸ The RAM supports effective implementation of the Recommendation by helping countries and UNESCO identify and address any institutional and regulatory gaps.⁷⁰⁴⁹

⁷⁰⁴¹ AGESIC, *Uruguay in Digital Nations* (Nov. 15, 2021), <https://www.gub.uy/agencia-gobierno-electronico-sociedad-informacion-conocimiento/politicas-y-gestion/uruguay-digital-nations>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Uruguay also signed the Santiago Declaration to Promote Ethical Artificial Intelligence.⁷⁰⁵⁰ The Santiago Declaration aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.⁷⁰⁵¹ The High Authorities from Latin America and the Caribbean who established the Santiago Declaration committed to collaborating with CAF and UNESCO to implement the Recommendations for AI Ethics across the region as part of a regional council.⁷⁰⁵²

Uruguay presented the RAM report at the Second Ministerial Summit on the Ethics of Artificial Intelligence, the realization of the regional council.⁷⁰⁵³ The RAM report found that Uruguay has a solid enabling regulatory framework that establishes the bases for the development of AI in the country. In addition, the RAM identified an integrated vision of AI and data, which facilitates a more cohesive implementation of strategies in this area. The connectivity and coverage indicators are very good, highlighting 100% coverage in educational institutions, which is a key factor for the deployment and development of the Ceibal Plan, a Uruguayan initiative to provide each child with a laptop.⁷⁰⁵⁴

In terms of areas to be improved, the RAM report points to the lack of indicators and impact measurement tools, which makes it difficult to effectively evaluate the initiatives implemented.

Leaders at the Ministerial Summit also agreed to the Montevideo Declaration⁷⁰⁵⁵ and approved a Roadmap for Ethical Artificial Intelligence for

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Latin America and the Caribbean 2024–2025.⁷⁰⁵⁶ The Roadmap defines five lines of action: Governance and Regulation, Skills and the future of work, Protection of vulnerable groups, Environment, Sustainability and Climate Change, and Infrastructure.

Evaluation

Uruguay initially focused its policies on digital government, and it did well. Proof of this achievement is the Digital Government of the United Nations (UN) 2020 global-index report, which ranks Uruguay as the Latin American regional leader and places the country 26th globally.⁷⁰⁵⁷ The OECD also acknowledged the soundness of Uruguay’s AI strategy for the public sector.

Uruguay’s data protection legal regime, which is largely aligned with the GDPR, presents a promising view of the future for the country’s AI regulation. Uruguay also has mechanisms in place to promote algorithmic transparency, especially in the public sector.

Uruguay moved from its initial approach on AI in the public sector to a more comprehensive one. Uruguay revised the AI strategy and elaborated on its data strategy with support by UNESCO and the CAF. Both draft strategies, were created through an open, participatory process. The AI Strategy has been approved and published. The Data Strategy is expected by the end of 2024.

As stated in the RAM report, “Uruguay is committed to the implementation of the UNESCO Recommendation on the Ethics of AI as part of the need to update its current AI strategy [...] and aims to align the country with international ethical principles, a human rights framework, technical standards, and technological developments, as well as address its growing challenges and opportunities.” As part of the alignment with international standards, Uruguay committed to the OECD Recommendations in July 2024.⁷⁰⁵⁸

Venezuela

In 2024, Venezuela continued advocating internationally for a ban against lethal autonomous weapons.

⁷⁰⁵⁶ Latin American and Caribbean Summit for Ethical Artificial Intelligence, *Roadmap for Ethical Artificial Intelligence for Latin America and the Caribbean 2024-2025* (Oct. 2, 2024), https://www.gub.uy/agencia-gobierno-electronico-sociedad-informacion-conocimiento/sites/agencia-gobierno-electronico-sociedad-informacion-conocimiento/files/documentos/noticias/ENG_IA%20Roadmap%20approved.pdf

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

National AI Strategy

The Venezuelan government has not articulated a comprehensive national AI Strategy. However, the government has used AI in various sectors, including citizen surveillance and control. For example, Venezuela has used AI in biometric systems to track citizens' activities.⁷⁰⁵⁹

According to reports collected by Global Information Society Watch (GIS),⁷⁰⁶⁰ there are laws that regulate the use and management of emerging technologies, such as:

- Organic Law of Science, Technology and Innovation
- Reform of the Organic Law of Science, Technology and Innovation
- National Science, Technology and Innovation Plan
- Law of the Government
- National Plan of Information Technologies for the State
- Telecommunications Law
- Law Against Computer Crimes
- Law on Data Messages and Electronic Signatures
- Law on the Simplification of Administrative Procedures⁷⁰⁶¹

The use of technology is also included in the following development plans and programs:

- The Second National Economic and Social Development Plan 2013–2019
- The Homeland Plan 2019–2025
- The Economic Recovery Program for Growth and Prosperity
- The Plan for the Country's Future, which was created by the political opposition

Public Participation

Venezuela has experienced continued and wide-ranging restrictions to civic and democratic spaces thus hindering public participation. The Office of the High Commissioner for Human Rights (OHCHR) observed cases of stigmatization, criminalization, and threats against dissenting voices, civil society, media, and trade unionists that affect their capacity to effectively carry out their legitimate duties.⁷⁰⁶² While the report by the United Nations High Commissioner

⁷⁰⁵⁹ Antonio Garrastazu and Beatriz de Anta, *The AI Revolution Is Coming for Latin America. Is It Ready?*, Americas Quarterly (Aug. 3, 2023), <https://www.americasquarterly.org/article/the-ai-revolution-is-coming-for-latin-america-is-it-ready/>

for Human Rights observed some willingness by the government to open dialogue with civil society organizations following two high level meetings between the government and Foro Civico (a group of civil society organizations) in April 2022, the above challenges persist.⁷⁰⁶³

The Report of the United Nations High Commissioner for Human Rights further observes that reforms relating to public participation must be supported by genuine engagement with civil society actors through meaningful, inclusive, genuine consultation. “A favourable environment for work by civil society must be strengthened allowing zero tolerance for attacks against human rights defenders and journalists implementing preventive policies and ensuring effective accountability mechanisms.”⁷⁰⁶⁴

There is currently no consultation process in the field of AI but should Venezuela develop a national AI strategy, the drafting would benefit from citizen insights.

Data Protection

There is no specific regulation regarding data privacy. However, Article 28 of the Constitution (CRBV) defines the Habeas Data as a ground for individual complaints before the Constitutional Court: “Anyone has the right of access to the information and data concerning him or her or his or her goods which are contained in official or private records, with such exceptions as may be established by law, as well as what use is being made of the same and the purpose thereof, and to petition the relevant court for the updating, correction or destruction of any records that are erroneous or unlawfully affect the petitioner's right. He or she may, as well, access documents of any nature containing information of interest to communities or groups of persons.”⁷⁰⁶⁵ Article 60 establishes a right to the “protection of their honor, private life, intimacy, self-image (*propia imagen*), confidentiality, and reputation” and extends legal protections to electronic information.⁷⁰⁶⁶

⁷⁰⁶⁶ Ibid, p. 181–182

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The e-Government law (*ley de Infogobierno*) also provides in its Article 75 for the right to information about automated data collection.⁷⁰⁶⁷ Also of relevance are the 1991 Law on the Protection of the Privacy of Communications,⁷⁰⁶⁸ the 2001 Special Law Against Computer Related Crimes,⁷⁰⁶⁹ and the 2018 Regulation for the Protection of the Rights of Users in the Provision of Telecommunications Services.⁷⁰⁷⁰

Supreme Court decisions establish arguments for data principles such as informed consent, legal collection, data quality, use limitation, security, and confidentiality.⁷⁰⁷¹

Despite the fact that these laws exist, there are reports of challenges in implementation due to the lack of an independent data protection oversight authority.⁷⁰⁷² Further, there are concerns of government surveillance and counterintelligence activities through the introduction of public digital ID programs such as Carnet de la Patria as well as the mobile app VeQR-Somos that requires vast amounts of personal data that can be used to track both personal data and location.⁷⁰⁷³

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Venezuela approved the principles in the Ibero American Charter on Artificial Intelligence in Civil Service in late 2023.⁷⁰⁷⁴ The guiding

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

principles include: human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection.

The Charter recommends that member states require assessment of the impact of AI systems on human rights and freedoms and registration algorithms to “anticipate risks, prevent undesirable effects and ensure its proper implementation.”⁷⁰⁷⁵ The Charter also proposes a risk classification mechanism that would require guardrails for middle-risk uses and prohibitions against high-risk applications. Prohibited uses include facial recognition systems; systems aimed at behavior and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly); and social ranking systems based on certain personality traits, individual behaviors, socio-demographic features or economic status.⁷⁰⁷⁶

Deepfakes and Computational Propaganda

According to experts, deepfakes are the latest tool used in disinformation campaigns promoting Venezuela. In 2023, short Youtube videos have been circulating with fake hosts of a seemingly Western news broadcast to spread propaganda. The purported journalists on screen are artificial intelligence avatars created by a company called Synthesia that for just \$30 a month will say whatever the buyer wants.⁷⁰⁷⁷ President Maduro disregarded criticism of the AI-generated propaganda, calling it “popular intelligence” and “revolutionary intelligence.”⁷⁰⁷⁸

According to the 2023 Freedom on the Net Report, “progovernment propaganda generated by AI was viewed widely on social networks.”⁷⁰⁷⁹ Journalists in Venezuela also started employing AI as a tool for circumventing

government repression and censorship in 2024.⁷⁰⁸⁰ This effort, named Operación Retuit, has been used anonymously by Venezuelan journalists to spread content that the AI generated journalistic personas refer to as “real, verified, high-quality and created by journalists.”⁷⁰⁸¹ According to LatAm Journalistic Review (LJR), “Operación Retuit is [verified] information from independent media, except we have to use avatars to protect the identity and integrity of journalists/activists.”⁷⁰⁸²

Environmental Impact of AI

Venezuela does not currently have specific environmental law and policies dealing with the impact of AI technologies on the environment. Nonetheless, Venezuela’s use of AI may have environmental implications because of the energy and natural resources generally involved in AI operations. For example, data centers supporting AI may require considerable electricity, which if sourced from fossil fuels, would contribute to carbon emissions. As AI adoption grows, cooling needs for data systems also intensify water usage—a substantial issue in regions already facing water scarcity.⁷⁰⁸³

Lethal Autonomous Weapons

Venezuela is a High Contracting Party to the Convention on Certain Conventional Weapons (CCW),⁷⁰⁸⁴ which aims to prohibit or restrict the use of certain types of weapons that are considered to cause unnecessary or unjustifiable suffering to combatants or to affect civilians indiscriminately. The CCW does not specifically address lethal autonomous weapons, but the topic has been discussed in CCW meetings, and some countries have called for a ban on their development, production, and use.

Venezuela endorsed, together with 69 other countries, a joint statement on autonomous weapons systems at the UN General Assembly meeting in October 2022. In this joint statement, States urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International

Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”⁷⁰⁸⁵

Venezuela endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,⁷⁰⁸⁶ which calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

In May 2024, Venezuela and 21 peers from the Ibero-American Summit of Heads of State and Government, sent a joint reply to the United Nations General Assembly regarding Lethal Autonomous Weapons Systems. The joint reply acknowledged the need for further action to “collaborate to promote the urgent negotiation of a legally binding international instrument containing prohibitions and regulations on autonomy in weapons systems, in order to ensure compliance with international law, including international humanitarian law and international human rights law, and ethical perspectives, as well as the prevention of the social and humanitarian impact that autonomy in weapons systems entails.”⁷⁰⁸⁷

Human Rights

In 2024, Freedom House scored Venezuela as “not free” (15/100).⁷⁰⁸⁸ The 2023 Report by Freedom House on digital rights and the status of human rights on the net in Venezuela gives the country a 29 out of 100 score.⁷⁰⁸⁹ The report highlights cases of lack of access and blockage of the Internet by the government, violations of right to privacy, and surveillance among other violations of digital rights. The score increased slightly in 2024 to 30, though concerns remain over censorship, disinformation, and harassment of dissenters.⁷⁰⁹⁰

Center for AI and Digital Policy

The United Nations Human Rights Council put in place the Independent Fact-Finding Mission for Venezuela to investigate allegations of human rights violations.⁷⁰⁹¹ The report released in September 2022 indicated continued human rights violations, including acts of torture, sexual violence, and mass surveillance by the Venezuelan government to repress dissenting voices. Following this report, the United Nations Human Rights Council extended the mandate of the fact-finding mission for an additional 2 years.⁷⁰⁹² According to Amnesty International's latest report,⁷⁰⁹³ the government continues to use repression and intimidation to silence dissent and maintain its grip on power with widespread human rights abuses committed by security forces and pro-government armed groups.

OECD / G20 AI Principles

Venezuela is not a member of the OECD⁷⁰⁹⁴ and has not endorsed the OECD AI principles.

Council of Europe AI Treaty

Venezuela has not endorsed the Council of Europe's Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁷⁰⁹⁵

UNESCO Recommendation on AI Ethics

Venezuela is a member state of UNESCO having joined on September 25, 1946.⁷⁰⁹⁶ Venezuela endorsed the UNESCO Recommendation on the Ethics of AI in November 2021.⁷⁰⁹⁷

Venezuela has participated in regional initiatives to implement the UNESCO Recommendation, including the Regional Council developed through

collaboration with CAF, the development bank of Latin America, and UNESCO.⁷⁰⁹⁸

Venezuela signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence, which emerged from the first Regional Forum on AI Ethics.⁷⁰⁹⁹ The Declaration aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.⁷¹⁰⁰

Beyond this endorsement, Venezuela has taken little action to implement the Declaration. For example, Venezuela is not among the countries that have implemented or are in the process of implementing the Readiness Assessment Methodology (RAM).⁷¹⁰¹

Evaluation

Venezuela has neither an AI strategy nor a data protection law with an independent supervisory authority. In a country deemed “not free,” the use of AI to maintain the power in place and reinforce authoritarian practices is a major concern. However, Venezuela’s endorsement of the UNESCO Recommendations on the Ethics of AI, the Ibero-American Charter on AI in the Civil Service,⁷¹⁰² and the Santiago Declaration to Promote Ethical AI⁷¹⁰³ could prove useful in taming the risks posed by AI and its misuse.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Vietnam

In 2024, Vietnam introduced a draft personal data protection law for public consultation and voluntary guidelines with principles for the research and development of responsible AI systems. However, the expanded use of AI systems, including facial recognition, for national identification raises concerns about surveillance, especially given the lack of a guarantee of algorithmic transparency.

National AI Strategy

The Prime Minister's Office for the Socialist Republic of Vietnam published the government's National Strategy on R&D and Application of Artificial Intelligence in 2021. The Strategy outlines Vietnam's AI ambitions projected through 2030, with specific, measurable, and incremental targets by 2025 and 2030.⁷¹⁰⁴ The bulk of the Strategy focuses on planned investments in education, innovation, and infrastructure, aimed at helping Vietnam become a leading hub for AI technologies within the Association of Southeast Asian Nations (ASEAN).

The Strategy proclaims AI as “the background technology for the Fourth Industrial Revolution,” pledging to align the nation's AI development and applications with socio-economic development and to “strengthen national defense and security, develop science and technology; unlock the potential of the entrepreneurs, effectively mobilize all resources; gradually receive, master and then upgrade technology transfer.”⁷¹⁰⁵ Vietnam's AI strategy additionally outlines the government's commitment to creating a legal framework and policies for AI aimed at “developing and applying AI with people and entrepreneurs at the center, avoiding technology abuse and infringement upon legitimate rights and interests of organizations and individuals.”⁷¹⁰⁶

The strategy assigns to Vietnam's Ministry of Public Security a lead role in “develop[ing] and supplement[ing] additional legal documents on privacy protection, human rights, security related to the development and application of AI and in ensuring network security for AI-related activities.”⁷¹⁰⁷

In keeping with principles of digital inclusivity, the Strategy commits to applying AI toward elevating public services, pledging to “improve the

⁷¹⁰⁴ Socialist Republic of Viet Nam, Government News, *National Strategy on R&D and Application of Artificial Intelligence* (Mar. 17, 2021), <https://en.baochinhphu.vn/national-strategy-on-rd-and-application-of-artificial-intelligence-11140663.htm>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

operational efficiency of the public administrative management system in social resources allocation and mobilization, social management and urban planning, especially in big cities such as Hanoi and Ho Chi Minh City and Da Nang.”⁷¹⁰⁸

Vietnam’s AI strategy also forecasts plans to design AI applications in military and defense, including to modernize equipment and weapons and to develop operational plans and to deploy AI systems in “national security systems, immigration management systems, high-tech crime control systems, and [to] develop proactive technical solutions to prevent crimes using scientific achievements on AI.”⁷¹⁰⁹

Vietnam’s strategy does not mention creating AI aligned with the principles of fairness and accountability. However, the Prime Minister's Decision on the National Strategy suggests plans that AI systems can promote greater transparency for consumers with the pledge to “Promote AI applications in agricultural hi-tech production, in order to improve intelligence, automate production processes, improve productivity and quality of agricultural products, ensure transparent production process, origin, and clean food supply for consumers.”⁷¹¹⁰

Public Participation

Vietnam’s AI strategy does not mention any structured process for public participation in the development of AI policy. As noted, the strategy tasks the Ministry of Public Security with devising a legal structure that places “people and entrepreneurs at the center,” yet there has been no indication of a formal opportunity for the public to give feedback on potential AI regulations since the release of the strategy. AI policies and updates are accessible to the public on the Ministry of Information and Communications’ “Document” and “Data, Reports” pages, including a section on draft legal documents open for consultation.⁷¹¹¹ Vietnam’s Ministry of Science and Technology leads the annual Vietnam Artificial Intelligence Day (AI4VN), a forum for sharing AI research and innovations that support sustainable development. AI4VN promotes discussions on how AI can drive Vietnam’s digital transformation. The venue aligns with Vietnam’s AI development plan (2018-2025), which aims to boost economic growth through AI innovation, produce “Made-in-Vietnam” AI products, and build a skilled technical workforce, especially in AI.

Public consultation opportunities have been more visible in data protection laws. A draft Personal Data Protection Bill was issued for public consultation on February 9, 2021.⁷¹¹² The ratified data protection law, Decree No. 53, which aimed to boost cybersecurity in Vietnam, went into effect on October 1, 2022; yet no evidence was available regarding whether or how public participation meaningfully contributed to the recent data privacy legislation.⁷¹¹³ The first draft of a new Law on Personal Data Protection and was open for public consultation for nearly three months in 2024.⁷¹¹⁴

Data Protection

While Vietnam has not yet enacted a comprehensive data protection law, the country's constitution includes provisions identifying rights pertaining to personal data. As per article 21 of the Constitution of Vietnam, "everyone is entitled to the inviolability of personal privacy, personal secrecy, and familial secrecy and has the right to protect his or her honor and prestige."⁷¹¹⁵ Several related laws and regulations also exist.

The Vietnamese government ratified a Law on Cybersecurity, Decree No. 53/2022/ND-CP ("Decree 53/2022") in August 2022 which became fully effective in October 2022.⁷¹¹⁶ In keeping with OECD Principle 1.4 on "robustness, security, and safety," the law prescribes measures aimed at shoring up data security and restricting illegal activities, in part via a "data localization" requirement mandating that foreign entities store certain categories of data pertaining to users in Vietnam within the country's borders. However, there is insufficient infrastructure to prevent cybersecurity and digital rights violations of Vietnamese

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

citizens.⁷¹¹⁷ Also, as indicated in this report, there is State-sponsored espionage and surveillance that infiltrates the digital real estate of Vietnamese citizens.⁷¹¹⁸ Citizens of Vietnam remain both a source and victim of cyberattacks. In 2019, Kaspersky, a leading cybersecurity firm declared Vietnam the “second most cyber-attacked country in the world.”⁷¹¹⁹ In 2018, over 992,952 cyberattacks originated in Vietnam.⁷¹²⁰

Data protection norms have additionally been developed through other laws, notably the 2016 Law on Network Information Security (“LNIS”).⁷¹²¹ This law assigns organizations the responsibility of protecting the personal data to which they are given access and identifies legal consequences for individuals and organizations that violate these provisions. Section 2 of the law stipulates a requirement of consent from individuals when organizations collect personal information (Article 17), and explicitly requires the deletion of personal data upon accomplishment of the purpose (Article 18). Sanctions punishing violations of personal data use can also be found in other regulations. For example, Vietnam’s 2020 Decree No.15/2020/ND-CP assigns fines for infringements of personal information and privacy including email, postal and telephonic spam.⁷¹²²

None of these data protection rules apply to the state itself. While the new law requiring data localization may indeed strengthen cybersecurity, it also provides the Vietnamese government with additional authoritarian leverage, cementing restrictions on residents’ access to international media, social media, and other applications.⁷¹²³

Vietnam’s landscape of data governance is a collage of legal instruments variously reflected in the country’s constitution, criminal code, civil code, and a raft of sectoral and procedural regulations. The Ministry of Public Security’s

Center for AI and Digital Policy

(MPS) much-anticipated Draft Decree on Personal Data Protection (“draft PDPD”) and the Draft Decree on Sanctions against Administrative Violations in Cybersecurity (“draft cybersecurity decree”) constitute the Vietnamese government’s ambitious effort at consolidating its numerous regulations into one comprehensive law.

The Vietnamese Government issued Resolution 13 to formally approve all the Personal Data Protection Decree (PDPD) formulation dossier, including the draft decree’s content, as well as to seek appraisal comments from the National Assembly Standing Committee (NASC) on the draft decree. Resolution 13 signifies the upcoming issuance of the PDPD.⁷¹²⁴

One of the significant developments out of Resolution 13 is that until then the Vietnamese law, including the prior published version of the Draft PDPD, had never used the terms “data controller,” “data processor,” or “parties controlling and processing personal data.” According to Tilleke & Gibbins,⁷¹²⁵ the inclusion of these terms suggests that the latest version of the Draft PDPD has adopted the GDPR-like concepts of “data controller” and “data processor.” However, until the latest version of the Draft PDPD can be assessed, it is uncertain how these concepts are defined and whether they are fully in line with GDPR definitions, let alone rights and obligations.⁷¹²⁶

Vietnam does not have a dedicated data protection agency. On September 24, 2024, Vietnam issued the first draft of its new Personal Data Protection Law (Draft PDPL), which was open for public consultation until November 24, 2024. The draft is expected to be presented to the National Assembly before the end of 2024 and submitted for adoption in May 2025, with a tentative entry into force on January 1, 2026. The new draft recognizes new data protection services, aiming to build trust and provide sector-specific regulations on personal data protection.⁷¹²⁷

Algorithmic Transparency

Vietnam’s AI strategy commits to the development of a legal infrastructure that will uphold “privacy protection, human rights, security related to the development and application of AI,” yet there is no mention in either this or other

⁷¹²⁴ Tran MH, *Vietnam: Latest Updates on the Draft Personal Data Protection Draft Decree*, via Connect Tech (Feb. 2023), <https://www.connectontech.com/vietnam-latest-updates-on-the-draft-personal-data-protection-draft-decree/>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

official documents of a pledge to ensure algorithmic transparency.⁷¹²⁸ It remains to be seen what whether the final provisions of the PDPD will guarantee this right once adopted.

In June 2024, Vietnam’s Ministry of Science and Technology introduced voluntary guidelines to set out general principles for the research and development of responsible AI systems, known as Decision No. 1290. Deputy Minister Bui The Duy noted these principles are a starting point and will require coordination with many other ministries. The Ministry developed the guidelines in the “spirit of cooperation, promoting innovation, transparency, controllability, safety, security, privacy, respect for human rights and dignity, and accountability.”⁷¹²⁹ The Decision lacks enforceable measures, so there is no legal obligation for transparency or accountability in algorithmic decisions impacting individuals. While Vietnam’s 2021 National Strategy on AI supports human-centered, responsible AI, it does not guarantee public access to information on AI decisions or provide recourse for algorithmic harm.⁷¹³⁰

Based on the Freedom House Country Report on Vietnam,⁷¹³¹ the government uses a variety of legislative machinery to acquire citizens’ personal data and engineer sophisticated forms of mass surveillance. These include the Cybersecurity Law 2019, the Publishing Law, the Penal Code, the Law on Protection of State Secrets 2018, the Law on Information Security 2016, and a number of decrees. One notable example is Bluezone, a tracking application ostensibly introduced to control COVID-19. Freedom House reports that the application “shared user data with the government without disclosing that fact to users. The source code was not made available for external auditing. In late May 2021, the Ministry of Health issued an instruction to local governments that recommended sanctioning people who did not install Bluezone and other COVID apps before entering certain public places and facilities; local authorities were tasked with determining the specific sanction. As of May 2021, Bluezone had reached 31.88 million downloads.” The report also cites examples of State-supported phishing attacks to acquire the personal data of citizens, especially

dissidents and activists. No right to algorithmic transparency exists to allow citizens to obtain judicial redress, should it be a possibility.

Rice ATMs

In the early months of the COVID-19 lockdown in 2020, a business leader in Vietnam partnered with community organizations to deploy “rice ATMs” (automatic rice-dispensing machines) enabled with AI-facial recognition technology to ration food to people in need.⁷¹³² This program was widely publicized internationally, credited as an instance of applying advanced technology towards resolving basic human needs during this public health crisis.⁷¹³³ This popular program reportedly helped cement a benign view of AI and facial recognition technology within the country’s population.⁷¹³⁴

Smart City Initiatives

Vietnam’s “smart city” initiative began as a directive from the prime minister in 2018 to promote sustainable cities.⁷¹³⁵ The country’s 2021 national AI strategy elaborated on this plan, promising substantial AI investments to upgrade and target resources in the country’s most populous cities—namely Hanoi, Ho Chi Minh, Da Nang, and Can Tho—to benefit the quality of life and improve services ranging from energy distribution to traffic control to water supply to education. Vietnam’s Ministry of Information and Communication released codified principles regarding the smart cities project, committing to “a people-centered approach [to] encourage the neutrality of technology [to] pilot new services with improvements based on the experience of users; [to] use open standards or open sources.”⁷¹³⁶ The OECD AI Policy Observatory has identified the smart cities

initiative as addressing its core principle 2.2, “Fostering a digital ecosystem for AI.” Vietnam’s smart city policies additionally echo OECD’s core principle 1.1 pertaining to “inclusive growth, sustainable development, and wellbeing.” Alongside these potentially vast benefits, however, there are credible reasons for concern that the smart cities project will include surveillance technologies that will further the government’s capacity for authoritarian control.⁷¹³⁷

Aus4Innovation: Innovation Policy Exchange with Australia

In 2017, Australia and Vietnam announced an “innovation partnership” named “Aus4Innovation”, aimed at building prosperity within Vietnam and furthering a strategic and economic partnership between the two countries. Currently overseen by CSIRO, the Australian Government agency responsible for scientific research, Aus4Innovation includes a notable “policy exchange”, aimed at helping Vietnam “bring up the living standards of all of [its] citizens over the coming decades”, while setting the stage for Australia to be a source of policy influence in establishing “an international best practice review based on expert input from Australia.”⁷¹³⁸ The OECD AI Policy Observatory has identified Aus4Innovation as representing an instance of its core principle 2.5, “International cooperation for trustworthy AI.”⁷¹³⁹ The Aus4Innovation Program also supported 2022 Vietnam Artificial Intelligence Day, (AIV4N), a conference that brings together government representatives, policymakers, and practitioners to discuss the latest development in Vietnam’s AI landscape.⁷¹⁴⁰

The Australian Government’s Aus4Innovation program was reported to have awarded A\$1.45 million to strengthen Vietnam’s agriculture sector through advanced technologies in August 2024. Managed by CSIRO, the initiative funds three projects focusing on sustainable farming and climate resilience. The projects integrate artificial intelligence, geospatial tools, and digital traceability systems to boost agricultural productivity and market development. For example, the Griffith University and Hanoi University of Science & Technology are creating an AI-driven platform for carbon farming. Additionally, AI-powered certification

systems by Griffith University and Vietnam's Commission of Standards aim to enhance sustainability and product traceability.⁷¹⁴¹

Public Security and Identity Verification

Since April 2021, the Inspection Commissions of Party organizations at all levels in the People's Public Security Forces have been required to build action plans to realize the Party resolutions regarding digital technology, artificial intelligence, and the 4th Industrial Revolution, contributing to building elite and modern public security forces by 2030.⁷¹⁴²

In December 2022, Deputy Minister Luong Tam Quang asked the Immigration Department to deploy 37 level 4 public services related to entry and exit, perfect the issuance of electronic passports, and promote research and application of science and technology, artificial intelligence, and biometric identification to the management of entry and exit.⁷¹⁴³

Vietnam's Ministry of Public Security expanded biometric data collection for the national ID system, including iris scans, voice samples, and DNA, under the Amended Law on Citizen Identification (2023) to enhance national security.⁷¹⁴⁴ Vietnam has also trialed facial recognition for immigration, aiming to streamline identity verification for travelers, mandated by a 2024 directive on tourism and immigration. Additionally, facial recognition is used for digital payment verification as part of Vietnam's digital transformation efforts. However, limited privacy protections raise concerns about potential misuse or overreach in state surveillance.⁷¹⁴⁵

Predictive Policing

In its July 2022 report on inclusive development and artificial intelligence in Southeast Asia, the Asia Society Policy Institute notes, if AI adoption is "nascent" in Vietnam, "the topic of ethics in relation to AI has barely begun to

percolate in the country.”⁷¹⁴⁶ The institute highlights with particular concern Vietnam’s stated plans to use AI applications in policing and immigration, “to proactively prevent crimes,” with the implication that Vietnam intends to apply surveillance technologies in developing predictive policing. The Asia Society Policy Institute report summarizes, “While there is some degree of recognition in Vietnam of the importance of AI ethics, their formulation and application remain underexplored.”

EdTech and Children Tracking

Human Rights Watch conducted an analysis of education technology (EdTech) products between March and August 2021 on the prevalence and frequency of tracking technology embedded in each product. This report is a global investigation of EdTech products endorsed by 49 governments for children’s online education learning during the Covid-19 pandemic. Vietnam was one of the 49 countries analyzed.

Of 65 EdTech products built or financed by governments, the majority—56, or 86 percent—were found transmitting children’s data to AdTech companies, according to a report. Included in the 56 government-built EdTech products is Vietnam’s OLM, which was also noted to have failed to offer any privacy policy at all, thus keeping students in the dark about how the government was handling their personal data and privacy.⁷¹⁴⁷

Environmental Impact of AI

There is no evidence that Vietnam has developed or introduced new regulations aimed at governing the environmental impacts of emerging technologies, including AI. The National AI Strategy includes the management of environmental and natural resources among potential applications for AI systems but does not acknowledge the environmental impact of developing and deploying such systems.⁷¹⁴⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Human Rights

Vietnam has been designated as “Not Free” by Freedom House, scoring 19 out of 100 in the think tank’s “freedom in the world” metrics, with particularly low marks (4 out of 40) for “political rights”, and a low score (15 out of 60) for metrics pertaining to “civil liberties.”⁷¹⁴⁹ As the most recent Freedom House global report elaborates, “freedom of expression, religious freedom, and civil society activism are tightly restricted” within Vietnam, with leaders having increasingly “cracked down on citizens’ use of social media and the internet to voice dissent and share uncensored information.” Vietnam’s data protection laws, requiring “data localization” within the country’s borders for a range of applications, additionally restricts residents’ ability to access information and media from abroad. Freedom House further ranks Vietnam 22 out of 100, “Not Free,” in its Freedom on the Net Report for 2024. This was attributed primarily to State restrictions over content access and its escalation of digital surveillance and harassment of digital activists.⁷¹⁵⁰

OECD / G20 AI Principles

Although Vietnam endorsed the 2019 OECD AI Principles, it has not yet endorsed the 2024 OECD AI Principles.⁷¹⁵¹ Yet, several elements of its national strategy echo some of the OECD AI principles. For example, OECD AI Principle 1.2, “AI systems should be designed in a way that respects the rule of law, human rights, democratic values, and diversity and should include appropriate safeguards to ensure a fair and just society.”⁷¹⁵² The Vietnam AI Strategy endorses “developing and applying AI with people...at the center, avoiding technology abuse and infringement upon legitimate rights and interests of organizations and individuals,” and pledges to “develop and supplement additional legal documents on privacy protection, human rights, security related to the development and application of AI and on ensuring network security for AI-related activities.”

Vietnam most robustly endorses a version of OECD AI principle 2.1, “Governments should facilitate public and private investment in research and development to spur innovation in trustworthy AI.”⁷¹⁵³ Vietnam’s AI Strategy

Center for AI and Digital Policy

document mirrors this language in its pledge to establish “national innovation centers for AI; increasing the number of innovative AI startups and total investment in the AI sector in Vietnam...[to] focus the public investment in forming mutually used, shared and open administrative databases.”

The OECD AI Policy Observatory report on Vietnam’s AI policies highlights the country’s investment in Ho Chi Minh as a Smart City beginning in 2017 as marking the implementation of OECD AI Principle 2.2, “Fostering a digital ecosystem for AI: Governments should foster accessible AI ecosystems with digital infrastructure and technologies, and mechanisms to share data and knowledge.”⁷¹⁵⁴ The report elaborates, “Ho Chi Minh (HCM) City is being transformed into a smart city and will develop blockchain infrastructure to minimize potential risks...to help the City deal with problems such as rapid population growth and inadequate healthcare, education, and transport services....; to ensure sustainable economic growth, taking the City towards a digital, knowledge-based economy and attracting investments.”⁷¹⁵⁵

Additionally, the OECD AI Policy Observatory has identified Vietnam’s partnership with Australia, which includes a significant policy exchange component, as an instance of its core principle 2.5 pertaining to “international cooperation for trustworthy AI.”⁷¹⁵⁶

UNESCO Recommendation on AI Ethics

Vietnam endorsed the UNESCO Recommendation on the Ethics of AI, together with other UNESCO member states.⁷¹⁵⁷ However, there is no evidence so far that Vietnam has developed policies or oversight mechanisms to support the implementation of the UNESCO Recommendation beyond data protection. However, as of October 2024, Vietnam is in the process of implementing UNESCO macro-tool, AI Readiness Assessment Methodology (RAM).⁷¹⁵⁸

Evaluation

In March 2021, the Prime Minister’s Office released its formal AI strategy for the next decade. The government of Vietnam pledged that the nation would

become an innovation leader in AI technology within the ASEAN nations, promising to apply AI towards the betterment of its citizens and to devise a system of laws and regulations that would prevent “abuse and infringement upon legitimate rights and interests of organizations and individuals,” as well as pledging to develop “legal documents on privacy protection, human rights [...] for AI-related activities.”⁷¹⁵⁹ Since then, Vietnam has continued to invest in programs within the country, including international partnerships aimed at improving its technological leadership and promoting the industry both domestically and abroad. However, there is little evidence that the country has made progress in establishing a framework that would protect human rights with respect to this rapidly advancing technology. Perhaps the most salient risk is that AI may be used to further authoritarian rule. As Freedom House reported recently in the designation of Vietnam as “Not Free,” “authorities have increasingly cracked down on citizens’ use of social media and the internet to voice dissent and share uncensored information.”⁷¹⁶⁰ The Asia Society Policy Institute notes, Vietnam’s commitment to applying AI to “‘proactively prevent crimes’ begs further discussion about the implications of surveillance technologies, algorithmic processes, and quality of datasets for predictive policing purposes.”⁷¹⁶¹ Freedom House reports that Vietnam has imprisoned human rights defenders and citizens for their internet use while restricting access to information.⁷¹⁶² In these circumstances, it remains to be seen which concrete steps Vietnam will take to implement the UNESCO Recommendation on AI Ethics beyond the Readiness Assessment.

- Q5. Has the country established a process for meaningful public participation in the development of a national AI Policy?
- Q6. Are materials about the country's AI policies and practices readily available to the public?
- Q7. Does the country have an independent (agency/mechanism) for AI oversight?
- Q8. Do the following goals appear in the national AI policy: "Fairness," "Accountability," "Transparency," ("Rule of Law,") ("Fundamental Rights")? [implementation? = legal force? = enforcement?]
- Q9. Has the country by law established a right to Algorithmic Transparency? [GDPR? / COE+?]
- Q10. Has the country signed the Council of Europe AI Treaty?
- Q11. Is the country implementing the UNESCO Recommendation on the Ethics of AI?
- Q12. Has the country's Data Protection Agency sponsored the 2018 GPA Resolution on AI and Ethics, 2020 GPA Resolution on AI and Accountability, 2022 GPA Resolution on Facial Recognition, and 2023 GPA Resolution on Generative Artificial Intelligence Systems?

Response Codes

Y – Yes

N – No

P –Partly

METHODOLOGY

Scope

We assessed the AI policies and practices of the top 40 countries by GDP. We looked at 40 additional countries we considered “high-impact” to make the AIDV Index representative of both the diversity and commonalities among countries worldwide in AI policies, issues encountered, and best practices. Our aim is to examine those countries likely to have the greatest policy impact in the AI field. We also considered influential intergovernmental organizations such as the European Union, Council of Europe, OECD, UNESCO, and G20. However, we did not attempt to evaluate these institutional AI policies.

Time Period

The research for the 2020 edition of the report was undertaken in late 2020 for publication in mid-December 2020. As the report has expanded, we have pushed publication later into year of release. For the 2021 edition of the report, published in mid-February 2022, we continued to gather information throughout 2021 and into early 2022. For the 2023 edition, information was gathered throughout 2022 and into early 2023. For AIDV 2025, we shifted the naming convention to reflect the year of publication. To the 2023 edition, we added information through 2023 and 2024, and activities in early 2025 that relate directly to metrics, such as endorsement of the Council of Europe AI Treaty.

Factors

We identified 12 factors to assess national AI policies and practices. The factors reflect well-known frameworks for AI policy (the OECD/G20 AI Principles, UNESCO Recommendation on the Ethics of AI, Council of Europe Framework Convention on AI), human rights (the Universal Declaration for Human Rights), and democratic decision-making (transparency, public participation, and access to policy documents). We also highlighted key themes for AI policy, including algorithmic transparency and accountability.

On certain factors, we deferred to well-established legal frameworks and well-known international organizations. For example, countries within the European Union are subject to the General Data Protection Regulation and the Data Protection Law Enforcement Directive, which provide certain rights to those who are subject to automated decision-making, including access to the underlying logic of an algorithm. The Council of Europe Modernized Convention 108 provides similar legal rights regarding AI. On general human rights assessments, we deferred to the reports of Freedom House, Human Rights Watch, and Amnesty

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

International. We also recognized those countries that endorsed the resolution on AI and Ethics, the resolution on AI and Accountability, the resolution on facial recognition, and resolution on Generative AI adopted by the Global Privacy Assembly, the global association of leading privacy experts and officials.

On the issue of implementation, we recognize that it is difficult to assess empirically progress toward AI policy goals, particularly when the underlying objective is not measured in quantitative terms, as would be the case for research investment, papers published, or patents obtained. Nonetheless, we believe this must be a key component of the evaluation. We turned first to the OECD, which has begun a process to track implementation of the OECD AI Principles. The OECD published substantial reports on the state of implement of the OECD AI Principles in 2020, 2021,⁷¹⁶³ and 2023.⁷¹⁶⁴ The OECD has also encouraged member states to provide overviews on national AI strategies to the OECD AI Group of Experts. Many of these strategies and other AI-related documents and policies are accessible on the OECD AI Policy Observatory.

We looked next at national developments, both favorable and controversial, concerning the implementation of AI policy. We consulted official sources but also reviewed independent sources such as news sources, agencies, and think tanks not directly aligned with national governments for these assessments.

Finally, because AI policy is in the early days, there is far more information about what governments intend to do than what they have done. We encourage governments to establish independent agencies with annual public reporting requirements to provide information about progress toward national goals and compliances with international policy frameworks. Such reports could provide the basis for future comparative evaluations.

The Metrics

Q1. Has the country endorsed the OECD/G20 AI Principles?

The OECD/G20 AI Principles are the first global framework for AI policy. Endorsement of these principles provides a baseline to determine a country's compliance with international AI policy norms. Countries that have endorsed the OECD/G20 AI Principles fall into four categories: (1) OECD Member Countries, (2) Non-member OECD Countries that endorsed the OECD AI Principles, (3) G20

⁷¹⁶³ OECD, *State of Implementation of the OECD AI Principles* (Jun. 18, 2021), <https://www.oecd.org/digital/state-of-implementation-of-the-oecd-ai-principles-1cd40c44-en.htm>;

⁷¹⁶⁴ OECD, *State of Implementation of the OECD AI Principles Four Years On* (Oct. 27, 2023), https://www.oecd.org/en/publications/the-state-of-implementation-of-the-oecd-ai-principles-four-years-on_835641c9-en.html

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Member countries that subsequently endorsed the G20 AI Principles, which follow closely the original OECD AI Principles,⁷¹⁶⁵ and (4) Members of the Global Partnership on Artificial Intelligence (GPAI),⁷¹⁶⁶ which requires a commitment to the OECD AI Principles.⁷¹⁶⁷

Determinations in this category are essentially binary: a country has either endorsed the OECD/G20 AI Principles or not.

Q2. Is the country implementing the OECD AI Principles?

Endorsement alone of the AI Principles is not sufficient to determine a country's AI practices. The OECD itself has begun a process to track implementation of the AI Principles, but the reporting to date is mostly anecdotal and inconclusive. We begin our analysis of implementation with the OECD reporting and then look to other sources, including government documents, news articles, and NGO reports to assess implementation.

Determinations in this category are more nuanced: some countries have called attention to their efforts to implement the OECD/G20 AI principles. Others have done so in practice without explicit references to the AI Principles. We have made reasonable efforts to identify national projects that implement the OECD/G20 AI Principles, based on reporting from the OECD, but information is often difficult to find. In some instances, we were able to acknowledge partial implementation (P). In 2020, we concluded that no country has fully implemented the OECD/G20 AI Principles and therefore no country received a Y determination. In 2021, we chose to recognize the leading role of four countries in the development and implementation of the OECD AI Principles – Canada, France, Korea, and Japan.

Q3. Has the country endorsed the Universal Declaration of Human Rights?

In the human rights field, the Universal Declaration of Human Rights is the most well-known and widely adopted legal framework for the protection of fundamental rights. Although the UDHR preceded the rise of Artificial Intelligence, we anticipated that many of the significant policy debates ahead will be grounded in principles set out in the Universal Declaration. For this reason, we propose endorsement of the UDHR as a second baseline to assess country AI policies and practices.

Determinations in this category are essentially binary: a country has either endorsed the UDHR or it has not. The one notable exception is Saudi Arabia,

⁷¹⁶⁵ The G20 AI Principles directly restate the value-based principles in Part I of the OECD AI Principles

⁷¹⁶⁶ GPAI, *Community* (2024), <https://gpai.ai/community/>

⁷¹⁶⁷ OECD, *Global Partnership on Artificial Intelligence (GPAI)* (2024), <https://www.oecd.org/en/about/programmes/global-partnership-on-artificial-intelligence.html>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

which did not endorse the UDHR but is a member of the United Nations and has recognized, according to human rights organizations, certain human rights obligations.

Q4. Is the country implementing the Universal Declaration for Human Rights?

Like the question regarding implementation of the OECD AI Principles, measuring implementation of the UDHR is not a simple task. Several well-established international organizations, such as Freedom House and Human Rights Watch, have developed formal metrics to evaluate compliance with human rights norms. We defer to these organizations for the evaluation of general human rights practices, while also noting that several of these factors may be useful in future evaluation of AI practices.

Determinations in this category typically fell into two categories: Y, a country widely recognized for its defense of human rights as generally understood by reference to the UDHR, and P, a country in partial compliance with human rights obligations. In 2021, we made this determination more precise. Countries that Freedom House designated as “Free” received Y. A country designated “Partly Free” was designated P and countries designated “Not Free” were designated N.

We continue to defer to the Freedom House ratings while noting concerns with their methodology. For example, Freedom House evaluates human rights conditions in Israel separately from those in the Gaza Strip and West Bank.

Q5. Has the country established a process for meaningful public participation in the development of a national AI Policy?

Almost every country in our report has set out a national AI strategy or action plan. We have attempted to fairly summarize and present these initiatives. But we are also interested in the development of these policies. Was there an opportunity for public participation? Was there a formal consultation process? Do the national AI policies reflect the views of those who may be impacted by the deployment of AI techniques? And is there an ongoing mechanism for public participation as national AI policies evolve?

Determinations in this category were based on our ability to identify opportunities for meaningful public participation. The distinction between a Y and P in this category reflected the quality of the opportunity for public participation and evidence that governments engaged that participation meaningfully.

Q6. Are materials about the country’s AI policies and practices readily available to the public?

Effective public participation requires public access to relevant documents. Has the national government taken steps to ensure that documents concerning AI policy are readily available, complete, and accurate? Are the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

materials available on the website of a public agency or are they maintained by a private company? Are there opportunities for future comment?

The determinations in this category often aligned with the determinations about public participation. We respect the practice of countries to publish reports and to seek public reports in the national language. We note, however, that the absence of an English translation may make independent evaluation of a country's AI policies and practices more difficult. We discuss the issue of Language in more detail below.

Q7. Does the country have an independent (agency/mechanism) for AI oversight?

All governments understandably seek to advance national AI priorities. And most governments have directed a science or industry ministry to lead national efforts. But the deployment of AI techniques also raises concerns about accountability, privacy and data protection, fairness, transparency, and equity. For these reasons, we look to determine whether countries have independent agencies, such as a data protection agency, a human rights commission, or an AI ethics commission, to protect fundamental rights.

Determinations in this category were based on the actual establishment of mechanisms to oversee or guide AI practices. Again, the difference between a Y and a P determination reflected the quality and breadth of the oversight mechanisms.

Q8. Do the following goals appear in the national AI policy: "Fairness," "Accountability," "Transparency," "Rule of Law," "Fundamental Rights"?

There are many themes in the AI policy realm. We identified these five goals as the most significant. They appear frequently in AI policy frameworks, and they are grounded in law. We recognize that countries that have endorsed the OECD/G20 AI Principles have, by implication, endorsed these goals. But this question asks whether countries have explicitly identified these goals in their national AI strategies.

Determinations in this category attempt to evaluate the extent to which a country has prioritized these AI policy goals. Full endorsement of all goals received a Y, partial endorsement a P.

Q9. Has the country by law established a right to Algorithmic Transparency?

One of the most significant AI policy issues today is Algorithmic Transparency. We take the position that individuals should have the right to access the logic, factors, and data that contributed to a decision concerning them and the ability to meaningfully contest adverse decisions. This right is currently established in two legal frameworks: The General Data Protection Regulation of the European Union (Article 22) and the Council of Europe Convention 108+, the modernized Privacy Convention (Article 9). Countries that are within the EU

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

and/or signatories to COE 108+ have therefore established this right. We have also considered whether countries, by national law, have established the right to algorithmic transparency.

For determinations in this category, we assigned a Y to those countries that are subject to the GDPR and/or the Council of Europe Convention or national legislation that explicitly grants these rights. In a subsequent review, we will investigate whether countries have *implemented* a right to algorithmic transparency. This will provide a more detailed assessment of this key metric.

Q10. Has the country endorsed the Council of Europe AI Treaty?

The Council of Europe Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law is the first legally binding international treaty on AI. We consider the AI Treaty, open for signature by all CoE member and non-member states a watershed moment in the development of AI policies. We substituted the CoE Treaty for the UNESCO Recommendation because 1) almost all countries have now endorsed the UNESCO Recommendation and 2) support for the AI Treaty will demonstrate a commitment to human rights, democracy, and the rule of law. For AIDV 2025, we wanted to highlight countries that made this commitment. We designated countries that signed as Y⁷¹⁶⁸ and EU member states that are party to the Convention through EU signature with P.⁷¹⁶⁹ In future editions, we will designate countries that have ratified the AI Treaty as Y and those that have signed as P.

[Note on Methodology: in AIDV 2020, we asked in Q11 whether countries supported the Social Contract for AI and in AIDV 2021, we asked in Q10 whether countries had endorsed the Universal Guidelines on AI. We described both as “aspirational goals for the Age of AI that go beyond the OECD/G20 AI Principles.” In AIDV 2022 and AIDV 2023, our assessment asked whether countries supported the UNESCO Recommendation on AI Ethics. We recognize this change disrupts our year-over-year comparisons but it reflects our efforts to adapt to the rapid evolution of AI policy.]

Q11: Is the country implementing the UNESCO Recommendation on the Ethics of AI?

Endorsement alone of the UNESCO Recommendation is not sufficient to determine a country’s AI practices. UNESCO itself has begun a process to track implementation of the Recommendation, but the reporting to date is limited to a

⁷¹⁶⁸ Council of Europe Treaty Office, *Chart of Signatures and Ratifications of Treaty 225* (Mar. 26, 2025), <https://www.coe.int/en/web/conventions/full-list?module=signatures-by-treaty&treatynum=225>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

few countries. We begin our analysis of implementation with UNESCO documents pertaining to planned partnerships and the 2022 UNESCO AI Needs Assessment Survey in Africa.⁷¹⁷⁰ However, we deepened the analysis by searching for statements made by countries pledging their commitment to implement the UNESCO Recommendation. We tracked preliminary announcements regarding implementation and monitoring mechanisms which shall be put into place. We then look to other sources, including regional organizations documents, news articles and NGO reports, to assess implementation.

Determinations in this category show that some countries have called attention to their efforts to implement the UNESCO Recommendation and help other countries to implement it. We also started to identify other countries that have done so in practice without explicit references to the Recommendation. We will proceed in the future with identifying national projects that implement the UNESCO Recommendation, based on future reporting from the UNESCO. Completion of the UNESCO Readiness Assessment Methodology (RAM) is one such project, indicating a country's commitment to develop and govern AI according to the Recommendation. Ethical Impact Assessments, including the tool developed by UNESCO, are another such project. In some instances, we were able to acknowledge partial implementation (P). We have also chosen to recognize the leading role of a few countries in the development and implementation of the UNESCO Recommendation (Y).

Q12: Has the country's Data Protection Agency endorsed the 2018 GPA Resolution on AI and Ethics, the 2020 GPA Resolution on AI and Accountability, the 2022 GPA Resolution on AI and Facial Recognition, and the 2023 GPA Resolution on Generative Artificial Intelligence Systems?

In the fall of 2018, the Global Privacy Assembly (then known as the International Conference of Data Protection and Privacy Commissioners), adopted a foundational Declaration on Ethics and Data Protection in Artificial Intelligence.⁷¹⁷¹ The 2018 Declaration emphasized fairness, vigilance, transparency and intelligibility, and measures to reduce unlawful bias and discrimination. In 2020, the GPA adopted a resolution on AI and

⁷¹⁷⁰ UNESCO, *UNESCO Launches the Findings of the Artificial Intelligence Needs Assessment Survey in Africa* (Sept. 28, 2022), https://www.unesco.org/en/articles/unesco-launches-findings-artificial-intelligence-needs-assessment-survey-africa?TSPD_101_R0=080713870fab2000b997f8502bad446dd247c280241aa27fd7822794303d84c6660f286b5a18426908ddf3745b1430007a6bae5f69251a9f6e076c992f212add23ade97d15b9e6e1e4b6982ed494862afe0aec119ec0669b25f164dab4a02b42

⁷¹⁷¹ ICDPPC, *Declaration on Ethics and Data Protection in Artificial Intelligence* (including list of authors and co-sponsors) (Oct. 23, 2018), http://globalprivacyassembly.org/wp-content/uploads/2018/10/20180922_ICDPPC-40th_AI-Declaration_ADOPTED.pdf

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Accountability.⁷¹⁷² That resolution sets out a dozen steps for AI accountability, including the preparation of human rights impact assessments. This Declaration was followed by three other key AI-related resolutions: the 2020 resolution on AI and Accountability, the 2022 resolution on AI and Facial Recognition, and the 2023 resolution on Generative Artificial Intelligence Systems.

We believe that support for these resolutions is an important indicator of a country's commitment to AI and data protection and effective implementation of AI policy goals. We checked to see which countries explicitly sponsored the resolutions. We will also consider other notable initiatives in future global surveys of AI policies and practices.

For determinations in this category, we assigned a Y to countries that sponsored the four resolutions, an N to countries that sponsored none of them (or are not represented at the GPA), and P to the countries that sponsored one, two, or three of the resolutions.

As an aside to the Global Privacy Assembly, we would recommend new mechanisms that would allow members to endorse resolutions concerning AI in subsequent years. We will update country ratings accordingly.

Hong Kong

Hong Kong constitutes a special case in our review of national AI policies and practices. Although Hong Kong, an Administrative Region of the People's Republic of China (HKSAR) is not a country, it ranks number 37 in the world for GDP, placing it within the top 40 countries we reviewed for the 2021 index. Hong Kong also has an active data protection agency that has contributed to the formulation of the AI policies endorsed by the Global Privacy Assembly. As Hong Kong is not a country it could not enter into international agreements, such as the OECD AI Principles. So, we treated commitments made by China to these policies as if they were made by Hong Kong. At the same time, we recognized variances in AI practices in the Region as well as the different ratings for compliance with the human rights norms, as determined by Freedom House.

Exemplars

In developing the methodology, we also created a list of exemplar countries for several metrics. For example, on Question 5, concerning meaningful public participation, we were struck by the high level of public engagement in Switzerland. On Question 6, concerning the availability of a countries AI policies

⁷¹⁷² Global Privacy Assembly, *Adopted Resolution on Accountability in the Development and Use of Artificial Intelligence* (including list of main sponsors and co-sponsors) (Oct. 2020), <https://globalprivacyassembly.org/wp-content/uploads/2020/11/GPA-Resolution-on-Accountability-in-the-Development-and-Use-of-AI-EN.pdf>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

and practices, Germany's *Plattform Lernende Systeme* offers a map that shows, by region, AI developments across the country. And the multiple agencies in France, the CNIL and the Defender of Rights, provide a very good example of independent oversight for AI, highlighted by Question 7.

Scoring

We assigned a numeric value of 1.0 to each Y answer, 0.5 to each P answer, and 0.0 to each N answer. We then tallied the numbers, weighing each metric equally, and produced a total score. A top score would be 12, a bottom score is 0. We grouped countries by color gradation and then into tiers based on total scores.

Search Strategy

To locate relevant policy materials, we conducted extensive online searches. Key search terms, often used in combination with AI or Artificial Intelligence, included: Accountability, Algorithmic Transparency, Data Protection, Digital, Ethical, Ethics, Fairness, Governance, Law, Legislation, Policy, Privacy, Regulation, Strategy, and Technology.

Descriptive Summary

Each country report includes a descriptive summary labelled "Evaluation." The evaluation does not precisely track the metrics. It is intended to highlight the key findings in the country report and provide a general overview for the reader. For AIDV 2025, we included a brief introduction to highlight the most important developments in the country in 2024.

Language

Our research team has rapidly expanded and diversified, with language expertise in various languages such as English, French, German, Italian, Japanese, Korean, Mandarin, Russian, Spanish, Turkish, Uyghur, or Vietnamese. However, we preferred English publications, as they would be considered authoritative original sources or authoritative translations for the international community from the original sources. In instances where English was not available and the research team translated, we translated titles to English. In some instances, we translated text from non-English to English with a Machine Translation tool, such as DeepL Translate or Google Translate. . In those cases, we included the original alongside the translation as possible or left the original language.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Citation Format

We have continued the simplified citation format adopted for the *AI and Democratic Values Index 2022* in subsequent editions. Each citation includes the author and title of the publication. Where there are multiple authors, we provided the name of the institution if available. We include a date where there was a final publication date. Some citations to websites do not include dates. We included transparent, detailed URLs so the reader can quickly assess the source. In a paragraph where there may be multiple references to the same source, we cited to the source in the first instance, but not in subsequent instances unless there was an intervening reference to a different source.

Gender Balance and Diversity

In the development of the *AI and Democratic Values Index*, the selection of team members and reviewers, we strived to maintain gender balance. We have also tried to promote diversity and regional representation.

Bias

We did not explicitly examine the issue of bias in AI, although this is a widely discussed topic and the focus of extensive research, including the bias of data sets. Our view is that the most effective policy response to the problem of bias is the *explicit recognition of Fairness, Accuracy, and Transparency* in AI policy and the implementation of these principles in AI practices. Several questions in the *AI and Democratic Values Index* (Q1, Q2, Q7, Q9, Q10, Q11, Q12) make these factors key metrics for the evaluation of a nation's AI policies.

We also recognize the inherent bias in the construction of all surveys, including in the survey focus, framing of questions, and research methodology.⁷¹⁷³

Private Sector Practices

We did not attempt to review or evaluate the practices of private firms or organizations. The *AI and Democratic Values Index* attempts only to evaluate the policies and practices of national governments. We do believe that private firms must act in compliance with law and through democratic institutions, and that the evaluation of government policies must ultimately be the measure of private sector practices.⁷¹⁷⁴

⁷¹⁷³ Max Weber, *Objectivity of Social Science and Science Policy* (1904)

⁷¹⁷⁴ Further discussion of the methodology underlying the *AI Index* is presented in Marc Rotenberg, *Time to Assess National AI Policies*, Blog@CACM (Nov. 24, 2020), <https://cacm.acm.org/blogs/blog-cacm/248921-time-to-assess-national-ai-policies/fulltext>
