TABLE OF CONTENTS

EXECUTIVE SUMMARY	34
PURPOSE AND SCOPE	34
THE 2025 EDITION	34
ACKNOWLEDGEMENTS.....	36
A YEAR IN REVIEW	49
KEY DEVELOPMENTS.....	52
THE GLOBAL AI POLICY LANDSCAPE.....	53
COUNCIL OF EUROPE	53
<i>European Court of Human Rights</i>	54
EUROPEAN UNION	55
<i>European Commission</i>	55
<i>European Parliament</i>	56
<i>Two Councils</i>	57
<i>Court of Justice of the European Union</i>	57
<i>European Data Protection Board</i>	58
<i>European Data Protection Supervisor</i>	59
G7	60
<i>G7 Privacy Roundtable</i>	61
G20	62
GLOBAL PRIVACY ASSEMBLY	62
OECD.....	63
<i>Global Partnership on AI</i>	63
<i>OECD AI Policy Observatory</i>	64
<i>Collaboration with United Nations</i>	64
UNITED NATIONS	65
UNESCO.....	65
<i>UN High Commissioner for Human Rights</i>	67
<i>UN Special Rapporteur</i>	68
<i>UN and Lethal Autonomous Weapons</i>	69
THE VATICAN.....	72
TECHNICAL SOCIETIES	73
LEGAL SOCIETIES.....	74
CIVIL SOCIETY.....	75
<i>Global Efforts</i>	75
<i>Africa</i>	75
<i>Americas</i>	76
<i>Asia</i>	77
<i>Europe</i>	78
COUNTRY REPORTS.....	79
ARGENTINA.....	79
<i>National AI Strategy</i>	79
<i>Local Strategies</i>	80

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

<i>Public Participation</i>	81
<i>Data Protection</i>	81
<i>Algorithmic Transparency</i>	84
<i>Data Scraping</i>	86
<i>Use of AI in Public Administration</i>	87
<i>Facial Recognition</i>	88
<i>Environmental Impact of AI</i>	90
<i>Lethal Autonomous Weapons</i>	91
<i>Human Rights</i>	92
<i>OECD / G20 AI Principles</i>	93
<i>Council of Europe Convention on AI</i>	94
<i>UNESCO Recommendation on AI Ethics</i>	94
<i>Evaluation</i>	95
AUSTRALIA	95
<i>National AI Strategy</i>	96
<i>International Cooperation on Safe and Responsible AI</i>	99
<i>Public Participation</i>	100
<i>Data Protection</i>	102
<i>Algorithmic Transparency</i>	104
<i>Data Scraping</i>	106
<i>Use of AI in Public Administration</i>	107
<i>Use of AI in Education</i>	111
<i>Use of AI in the Military</i>	112
<i>Lethal Autonomous Weapons</i>	113
<i>Environmental Impacts of AI</i>	115
<i>Human Rights</i>	117
<i>OECD / G20 AI Principles</i>	118
<i>Council of Europe AI Treaty</i>	119

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

EXECUTIVE SUMMARY

Purpose and Scope

Artificial Intelligence and Democratic Values is the first global survey to assess progress toward trustworthy AI, based on detailed narrative reports, combined with a methodology that produces ratings and rankings for national AI policies and practices.

The **AIDV Index** has these objectives: (1) to document AI policies and practices, based on publicly available sources, (2) to establish a methodology for the evaluation of AI policies and practices, based on global norms, (3) to provide a basis for comparative evaluation, (4) to provide the basis for future evaluations, and (5) to ultimately encourage all countries to make real the promise of AI that is trustworthy, human-centric, and provides broad social benefit to all.

Artificial Intelligence and Democratic Values focuses on human rights, rule of law, and democratic governance metrics. Endorsement and implementation of the OECD/G20 AI Principles and the UNESCO Recommendation on the Ethics of Artificial Intelligence are among the primary metrics. Opportunities for the public to participate in the formation of national AI policy, adoption of the right to algorithmic transparency, and creation of independent agencies to address AI challenges are also among the metrics. Patents, publications, investment, and employment impacts are important metrics for the AI economy, but they are not considered here.

Artificial Intelligence and Democratic Values is published annually and will evolve as country practices change and new issues emerge.

The 2025 Edition

The 2025 edition of the report updates and expands the previous reports. To reflect some of the key discussions and developments in the AI policy landscape, our efforts to enhance usability, and our expansion as an organization, we have also made the following changes for *Artificial Intelligence and Democratic Values 2025*.

- We highlighted key actions taken in 2024 at the start of each country report.
- We changed the metric concerning signing the UNESCO Recommendation on the Ethics of AI to signing the Council of Europe international AI Treaty. We added a section on the Council of Europe AI Treaty to all country reports.
- We introduced a section on the Environmental Impact of AI to weigh policies on the resource demands of AI systems and efforts to mitigate environmental impacts more broadly.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- The scores for country reports previously published were reviewed and revised based on developments during the past year concerning AI policies and practices.
- The number of researchers participating in the project has grown significantly. Nearly 500 CAIDP Research Group members representing more than 90 countries contributed updates from 2024. This brings our total contributors well above 1000 researchers representing 120 countries.

Endorsements

As the development and use of AI continues to increase exponentially, governments and civil society have struggled to keep pace. However, in recent years there has been unprecedented growth in law and policy. This report is essential reading for anyone looking to grasp the key trends that link how nation states are responding to the rise of AI, and for anyone looking to understand the key developments in specific states. It is both thoroughly researched and the product of deep and broad expertise.

– *Edward Santow, Human Technology Institute, UTS (2025)*

The AIDV Index is an incredibly impressive and valuable compendium. The country reports themselves offer an extremely valuable collection of case studies.

– *Justin Longo, University of Regina (2025)*

The AI and Democratic Values 2024 report is a well-developed and highly technical work that provides essential insights into the intersection of artificial

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

intelligence and democratic governance. This report serves as a crucial tool for understanding how nations can effectively promote and safeguard democratic values in the age of AI. It is an invaluable resource for countries seeking to strengthen democratic principles while leveraging AI responsibly.

– *Armando Guio Español, Affiliate, Berkman Klein Center (2025)*

It is always encouraging to see the progress in AIDV and its contribution to the formation of AI policies around the world.

– *Wonki Min, KAIST (2025)*

The report seeks to shed light on the broad landscape of AI regulation and governance. Accordingly, it seeks to explicate both the challenges and opportunities surrounding the adoption of AI systems, making the AIDV a useful reference document that points towards more inclusive digital futures.

– *Bulelani Jili, Harvard University (2025)*

I endorse this report for its clear and diverse inclusion of countries in both the Global North and the Global South. The report gives an important insight into AI-related activities globally. This is important because AI does not operate in a vacuum, nor does it operate in silos: its impact is intertwined across the globe.

– *Kutoma Wakunuma, De Montfort University (2025)*

The CAIDP 2024 Report continues its tradition of excellence in providing essential insights into the global relationship among democratic values, ethics and the accelerated pace of AI innovation and development. It is an essential tool to understand the nature of AI and its relationship to the public good. At UNESCO, with our global standard on the ethics of AI, we are proud to partner with CAIDP to achieve a technological transition that is fair and sustainable.

– *Gabriela Ramos, UNESCO (2024)*

CAIDP (AIDV 2023) report sheds light on the current landscape of international regulations, national laws and policies emerging from the fascinating and complex field of AI. The report emphasizes the imperative to protect fundamental rights and uphold the rule of law and will serve as a useful roadmap for shaping AI governance and to foster and advance a crucial dialogue among diverse stakeholders in the international arena.”

– *Cristos Velasco, DHBW Cooperative State University (2024)*

CAIDP's flagship report provides insightful information how the AI principles are translated into practice across 75 countries.

– *Wonki Min, SUNY Korea (2023)*

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

It is a great exercise of comparative digital law in action, providing a comprehensive perspective on the evolution of AI policy also contributing to underline the constitutional relationship between AI & democracy. Digital Democracy and rule of law in the digital context will be the real challenges for the next decade.

– *Oreste Pollicino, Bocconi University (2023)*

A very worthwhile analysis.

– *Stuart Russell, University of Berkeley, California (2022)*

An impressive body of work.

– *Alessandro Acquisti, Carnegie Mellon University (2022)*

An excellent report, a very useful tool for the community and a reference to see nexus between AI and Democratic Values.

– *Leyla Keser, Istanbul Bilgi University (2022)*

A very insightful report on AI laws and policies that addresses significant international developments and provides a terrific comparison of AI laws and policies across 50 countries.

– *Lee J. Tiedrich, Duke University (2022)*

This report is unique in that it compares AI policies and practices around the world and should inspire progress toward trustworthy and human-centric AI. The report also documents the important role of digital rights and consumer groups in this endeavor.

– *Ursula Pahl, European Consumer Association (BEUC) (2022)*

It's rare to read a document that has the potential to influence national policies on artificial intelligence around the world. The country descriptions and evaluations are thoughtfully organized, well-written, and carefully documented. The country rankings enable readers to have a broad understanding of who the leaders are and why, while pointing out what still needs to be done. The AI and Democratic Values index gives me hope that AI policy efforts can improve human rights, social justice, and dignity.

– *Ben Shneiderman, author, Human-Centric AI (Oxford 2022)*

In this historical moment of global interest, negotiation, and competition on AI we are in right now, we urgently need a shared narrative serving the human interest and democracy. With its comprehensive overview of key global and local power actors and initiatives The Artificial Intelligence and Democratic Values Index is

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

an essential instrument for the facilitation of this shared global dialogue on AI now and in many years to come.

- Gry Hasselbalch, *DataEthics.eu*, *InTouchAI.eu* (2022)

This is a very ambitious and important exercise. The outcome is impressive—detailed and rigorous.

- Valsamis Mitsilegas, *Queen Mary University of London* (2022)

This comparative study sheds critical light on the adoption of Artificial Intelligence in democratic societies. AI and Democratic Values is an indispensable reference source for regulators, reporters, academics, and practitioners

- Dr. Pablo G. Molina, *Georgetown University* and founder, *International Applied Ethics and Technology Association* (*iaeta.org*) (2022)

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

A Year in Review

2024: Principles to Action

The *AI and Democratic Values Index* published annually by the Center for AI and Digital Policy provides a comprehensive review of AI policies and practices worldwide. In this fifth edition, we highlight the rapid evolution of AI governance frameworks. From the completion of a global AI treaty and a comprehensive regulation for AI, through resolutions and recommendations from the United Nations, and the development of regional frameworks and national laws and enforcement actions, the pace of AI governance, much like the technology itself, is accelerating.

This year, the first legally binding global treaty on artificial intelligence and human rights opened for signature. Expert reports followed by discussions and negotiations among member and non-member states at the Council of Europe over several years culminated in the Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law. Over forty countries from Europe, the Americas, Middle East-North Africa, and Asia have signed, signaling a global commitment to protecting human rights, democracy, and the rule of law.

Activities at the United Nations also demonstrate widespread support for managing emerging technologies and the digital world in line with human rights and, more specifically the Sustainable Development Goals (SDGs). The UN resolution supported by more than 120 countries in March 2024 demonstrated far-reaching support for ensuring that AI systems and applications are safe, secure, and trustworthy. The Global Digital Compact reiterated this commitment to ensuring that digital spaces conform to the same standards of international law and human rights protections we expect offline. The Pact for the Future lays out actions to ensure everyone enjoys these rights and to transform global governance to ensure all voices are heard.

Countries from the Global South led the world in implementing the UNESCO Recommendation on the Ethics of AI. Facilitated through partnerships with UNESCO, countries in Latin America, the Caribbean, Asia, and Africa have explicitly modeled AI policies and strategies on the Recommendation and completed the Readiness Assessment Methodology (RAM). The Latin American and Caribbean Regional Council developed through partnership with UNESCO and CAF provides opportunities to exchange best practices and develop a regional process for implementation. Brazil, Chile, the Dominican Republic, Mexico, and Uruguay from Latin America; Indonesia from Asia; Morocco and Saudi Arabia from MENA; and Gabon, Kenya, Mozambique, Senegal, and South Africa of Africa completed the RAM in 2024. More than thirty additional countries are in the process of completing the RAM.

Calls to transform global governance also translated into action in 2024. Brazil's presidency of the G20 led to an action plan to close the digital divide,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

reiterated calls for inclusive AI, and launched the Social 20 event to give civil society a place to be heard during the summit. The Digital Economy Working Group solidified goals for inclusive sustainable development in the Toolkit for AI Readiness and Capacity Assessment. The African Union's G20 membership and the South Africa presidency in 2025 can solidify this progress.

The Global Partnership on Artificial Intelligence (GPAI) joined forces with the OECD in July 2024. The integrated partnership creates another avenue for experts and policymakers from developing and emerging economies to contribute to discussions on AI policy and practice aligned with the OECD AI Principles.

The G7, too, translated principles and goals in the Hiroshima process to tools in 2024. The G7 Technology and Digital ministers launched the G7 Toolkit for AI in the Public, providing guidance to ensure AI in the public sector is safe, secure, and trustworthy. The section on AI, Science, Technology, and Innovation in the leaders' communiqué promised an action plan on AI in work. The communiqué identified partnerships as central to realizing an inclusive, human-centered, digital transformation. For example, collaboration with the OECD led to the launch of a monitoring tool for organizations developing advanced AI systems aligned to the Hiroshima Process International Code of Conduct.

At the regional level, the EU AI Act, a comprehensive regulation for the governance of AI, was formally adopted in March 2024 by the European Parliament, with a large majority of votes (523-46) in favor of the legislation. The risk-based framework notably includes a category of prohibited AI systems, such as subliminal manipulation, social scoring, scraping of facial images for facial recognition, biometric categorization, and real-time biometric identification. At the time of publication, nearly 200 national supervisory authorities have been selected to ensure the enforcement and implementation of the AI Act, with data protection agencies given a prominent role. The first provisions entered into force in August 2024.

Years of negotiations culminated in 2024 in the African Union's endorsement of the Continental AI Strategy. The strategy offers a test case for a "people-centered, development-oriented" approach to harnessing the transformative potential of AI developments and mitigating the negative impacts and risks. The strategy provides concrete action steps to ensure that AI development is African-centric by addressing systemic limitations in human and technological capacity. The Association of Southeast Asian Nations (ASEAN) demonstrated the adaptability of governance frameworks and benefits of public-private partnership by targeting the ASEAN Guide on AI Governance and Ethics to organizations across private and public sectors. The framework exemplifies meaningful, human-centric development by ensuring AI systems are developed to solve specific problems, within explicit governance and accountability structures,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

with human involvement and stakeholder community, and through operations management to identify and monitor risks and biases.

In the 2023 ***AI and Democratic Values Index***, we called attention to the use of autonomous weapons in regional conflicts, most prominently in Ukraine and Gaza. This year brought progress toward an international instrument on lethal autonomous weapons systems (LAWS). The UN Secretary-General report on LAWS in mid-2024 summarized various perspectives on and challenges in formulating one. However, the Secretary-General reiterated calls to develop the tool by 2026. At the REAIM 2024 summit in Korea, 63 countries agreed to concrete actions toward developing common normative frameworks for responsible AI in the military domain. A 2024 U.S. National Security Memorandum, for example, reiterated instructions to the U.S. military, the largest in the world, to use AI systems only in ways that align with democratic values and limited the use of AI systems in warfare.

In addition to updating and implementing national AI strategies, countries have also progressed on holding AI companies accountable. Brazil's judiciary banned and then fined X over its failure to handle accounts spreading misinformation about elections while the data protection authority prohibited Meta from using data originating in Brazil to train AI models. More than nine countries and the EU are investigating OpenAI over privacy and data protection violations and misinformation. Italy and Belgium are looking into DeepSeek. Meanwhile, Clearview paid new fines and was the subject of new investigations over databases of facial images collected and stored illegally.

We credit these milestones to the hard work and spirit of collaboration of the AI advisors, decisionmakers, heads of government, independent experts, civil society organizers, and individual advocates. Your work has built momentum that gives us confidence as we continue our mission to develop *a better society, more fair, more just—a world where technology promotes broad social inclusion based on fundamental rights, democratic institutions, and the rule of law*.

Of course, none of our work is possible without our extraordinary CAIDP team. Hundreds of Research Group members provided additions and updates to the report for 2024, guided by Team Leaders and Teaching Fellows. This year, we also benefitted from the editorial contributions of Policy Group members as well as reviews from our Global Academic Network. From the early project by a few people turned over in months, the current report reflects the efforts of more than 1000 contributors representing 120 countries over years of work.

We welcome your advice, suggestions, revisions, and insights about how you use the AIDV Index in your work. Please send editorial comments to editor@caidp.org and visit our website, www.caidp.org, for more information about our activities, recent AI policy developments, and how to get involved.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Key Developments

- Forty-one countries endorsed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law
- The UN Resolution on Safe, Secure, and Trustworthy AI, along with the Global Digital Compact reflected widespread consensus on the importance of protecting fundamental rights and freedoms in digital interactions
- The Global Partnership on AI created an integrated partnership with OECD to broaden efforts to implement the OECD AI Principles
- The EU completed the AI Act, the first comprehensive regulation on AI; the first provisions entered into force
- The African Union endorsed the Continental AI Strategy
- G20, G7, ASEAN, OECD, and the AI Seoul Summit created tools to facilitate compliance with guiding principles and codes of conduct for organizations designing, developing, deploying, and using AI technology
- Twelve countries completed and more than 30 initiated the Readiness Assessment Methodology (RAM), signaling progress on implementing the UNESCO Recommendation on the Ethics of AI
- The UN Secretary-General reiterated the call for prohibitions on fully autonomous weapons and regulations on other forms of autonomous weapons systems

CAIDP Recommendations for 2025

- Global support for the International AI Treaty
- Prohibitions on AI systems that undermine human rights and democratic values
- Human oversight of AI systems across the lifecycle
- Implementation and enforcement of AI governance frameworks, such as the EU AI Act and the Hiroshima AI Process
- Algorithmic transparency, including the accountability to contest adverse outcomes
- Liability rules for AI systems

THE GLOBAL AI POLICY LANDSCAPE¹

As a field of research, AI policy is rapidly maturing. In the last several years, national governments and international organizations have adopted policy frameworks that explicitly regulate “Artificial Intelligence.”² This has occurred at a rapid pace. While government funding for work on Artificial Intelligence goes back to the mid-1950s, it would be many years before governments examined the consequences of this research. That gap is now closing. Governments around the world confront important decisions about AI priorities, AI ambitions, and AI risks. Much of this report concerns the current policies and practices of national governments.

In addition to national governments, many intergovernmental organizations are pursuing AI policies and initiatives. This section provides an overview of these organizations, listed in a simple A to Z. We also note the important work of technical associations and civil society organizations. This section briefly summarizes these activities, as of early 2025.

Council of Europe

The Council of Europe (COE) is the continent’s leading human rights organization.³ The COE comprises 47 member states, 27 of which are members of the European Union. All COE member states have endorsed the European Convention of Human Rights, a treaty designed to protect human rights, democracy, and the rule of law. Article 8 of the Convention concerning the right to privacy has influenced the development of privacy law around the world.

The COE Convention 108 (1981) was the first binding international instrument protecting the individual against abuses that may accompany the collection and processing of personal data and regulating the transborder flow of personal data.⁴ In 2018, the Council of Europe amended Convention 108 and opened for signature and ratification the COE Modernized Convention 108+.⁵ Article 9(1)(c) specifically addresses AI decision-making. As the COE explains,

¹ [Editorial note: For the 2025 edition of the *AI and Democratic Values Index*, we have removed a lot of the background text that was typically included in the Global Policy Landscape section and focused on recent developments. These materials are still available in the 2024 edition of AIDV, which is available online at <https://www.caidp.org/reports/aidv-2023/>

⁵ Council of Europe, Data Protection, *Modernisation of Convention 108*, <https://www.coe.int/en/web/data-protection/convention108/modernised>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

the “modernised Convention extends the catalogue of information to be transmitted to data subjects when they exercise their right of access. Furthermore, data subjects are entitled to obtain knowledge of the reasoning underlying the data processing, the results of which are applied to her/him. This new right is particularly important in terms of profiling of individuals.”⁶ Forty-six states have signed the protocol amending the Privacy Convention and 33 have ratified.⁷

The development of the Framework Convention on AI emerged in response to growing concerns over the artificial intelligence. The Council of Europe initiated discussions on AI governance in 2019, leading to the drafting of a binding legal framework. In 2024, the Council of Europe adopted the Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law. The AI Treaty aims to ensure that the development and use of AI technologies align with fundamental human rights, democratic values, and the rule of law, addressing risks such as misinformation, algorithmic discrimination, and threats to public institution.

At the time of publication, over 40 countries, counting the individual member states of the European Union, had signed the treaty, including Canada, Japan, and the United States. Leading experts in international law and AI have also endorsed the AI Treaty. The Treaty is expected to enter into force in 2025.

European Court of Human Rights

The European Court of Human Rights has generated an abundance of case law interpreting Article 8 of the European Convention on Human Rights on the right to private and family life. This case law will establish governance norms for AI systems. The opinions of the Court on privacy and data protection are widely regarded by other courts. The Court has addressed privacy challenges in relation to telephone conversations, computers, mass surveillance, bulk interceptions of telecommunications and the internet.⁸ The Court have deemed these aspects of personal data protection of fundamental importance to a person’s enjoyment of their right to respect for private and family life.

In early 2025, the European Court of Human Rights sponsored a judicial seminar on Protecting Human Rights in a World of Artificial Intelligence,

Center for AI and Digital Policy

Algorithms and Big Data.⁹ A background paper prepared for the session outlined relevant European Court of Human Rights caselaw in three categories: Freedom of expression, right to a fair trial, and prohibition on discrimination.¹⁰ The paper further detailed specific areas of intersection between the case law of the Court of Human Rights and AI systems, such as facial recognition, the right to be forgotten, bias in the system, reasoned decision-making, and gender-based cyber violence.

European Union

The European Union (EU) was established by the Treaty of Masstricht in 1993. The European Union is a supranational political and economic union of 27 member states. Many institutions in the European Union now play a significant role in the development of AI policies and practices.

The EU AI Act, a comprehensive regulation for the governance of AI, was formally adopted in March 2024 by the European Parliament, with a large majority of 523-46 votes in favor of the legislation. The risk-based framework notably includes a category of prohibited AI systems, such as subliminal manipulation, social scoring, scraping of facial images for facial recognition, biometric categorization, and real-time biometric identification. At the time of publication, nearly 200 national supervisory authorities have been selected to ensure the enforcement and implementation of the AI Act, with data protection agencies given a prominent role.

European Commission

The European Commission plays an active role in developing the EU's overall strategy and in designing and implementing EU policies. The Commission is the initiator of EU legislation. AI was identified as a priority when the new Commission, under the Presidency of Ursula von der Leyen, was established in late 2019.¹¹ At that time, von der Leyen recommended new rules on Artificial Intelligence that respect human safety and rights.¹² Von der Leyen's proposal followed remarks at the G20 summit in 2019 by Chancellor Angela Merkel, who called on the European Commission to propose comprehensive regulation for artificial intelligence: "It will be the job of the next Commission to deliver

Center for AI and Digital Policy

something so that we have regulation similar to the General Data Protection Regulation that makes it clear that artificial intelligence serves humanity.”

European Parliament

The European Parliament is co-legislator, together with the Council of the European Union. The Parliament has convened hearings and adopted resolutions to outline the elements of EU legislation.¹³ One resolution urged the Commission to establish legal obligations for artificial intelligence and robotics, including software, algorithms, and data. A second would make those operating high-risk AI systems strictly liable for any resulting damage. A third resolution on intellectual property rights makes clear that AI should not have legal personality: only people may claim IP rights.

Two committees in the European Parliament have taken the reins for the EU AI Act. The Committee on the Internal Market and Consumer Protection (IMCO Committee) is responsible for the legislative oversight and scrutiny of EU rules on the single market, including the digital single market, customs, and consumer protection.¹⁴ The Committee on Civil Liberties, Justice, and Home Affairs (LIBE Committee) “is responsible for the majority of legislation and democratic oversight of policies that enable the European Union to offer its citizens an area of freedom, security and justice (Article 3 TEU). While doing so, we ensure, throughout the EU, the full respect of and compliance with the EU Charter of Fundamental Rights, in conjunction with the European Convention on Human Rights.”¹⁵

The influential LIBE Committee has also highlighted concerns about AI and fundamental rights and AI in criminal justice.¹⁶ In February 2020, the Committee held a hearing on Artificial Intelligence and Criminal Law and examined the benefits, risks, and ethical and rights implications of AI, predictive policing, and facial recognition. LIBE worked in association with the United Nations Interregional Crime and Justice Research Institute (UNICRI), the European Union Agency for Fundamental Rights (FRA), and the Council of

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Europe (COE). In November 2020, LIBE issued an opinion concerning AI and the application of international law.¹⁷

Two Councils

The European Council defines the EU's overall political direction and priorities.¹⁸ Its members are the heads of state or government of the 27 EU member states, the European Council President, and the President of the European Commission. The European Council is not one of the EU's legislating institutions, so does not negotiate or adopt EU laws. This is the prerogative of the Council of the European Union (Council), composed of representatives of member states' ministers.

Court of Justice of the European Union

Although the Court of Justice has yet to rule directly on the EU AI Act, the Court will play a significant role as AI policies evolve and AI law is adopted.¹⁹ The Court issued several judgements that implicate AI systems. In its *Ligue des Droits Humains* Judgment of June 2022, concerning the Passenger Name Records Directive, the Court of Justice reaffirmed the primacy of a human-centered approach to AI. The Court of Justice ruled that machine learning techniques may be incompatible with the protection of fundamental rights.²⁰ The Court observed that the opacity of artificial intelligence might make it impossible to understand the reason why a given program arrived at a positive match.²¹ As the Advocate General had earlier observed, algorithms “must function transparently and that the result of their application must be traceable.”²² The Court added in *Ligue des droits humains* that the use of pre-determined criteria also precludes the use of systems that modify “the assessment criteria on which the result of the application of that process is based as well as the weighting of those criteria.”²³ These holdings could

have far-reaching significance for the use of AI techniques by law enforcement agencies and the future interpretation of the EU AI Act.²⁴

The Court has also addressed the transparency of automated processing. In the SCHUFA case, the Court of Justice held that the generation of credit scores by credit reference agencies are within the scope of the prohibition on automated decision-making in Article 22(1) of the GDPR.²⁵ The practical consequence is that automated decision-making enabled by AI systems will be subject to the GDPR. In another case, the Court found that individuals subject to adverse decisions are entitled to receive meaningful information about the basis of the decision.²⁶ In the Court's words: "The explanation provided must enable the data subject to understand and challenge the automated decision."

Judgments of the Court concerning data transfers will also impact the development of AI systems. In the 2020 *Schrems II* judgment, the Court struck down the Privacy Shield framework that permitted the transfer of personal data from the European Union to the United States.²⁷ The *Schrems II* judgment will likely limit the collection and use of personal data for AI systems.

European Data Protection Board

The European Data Protection Board (EDPB) is an independent European body that contributes to the consistent application of data protection rules throughout the European Union and promotes cooperation among the EU's data protection authorities (DPAs).²⁸

The EDPB issued several reports in 2024 concerning Artificial Intelligence. A ChatGPT Taskforce expressed preliminary views on lawfulness, fairness, transparency, data accuracy, and the rights of data subjects.²⁹ A July 2024

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

statement from the EDPB addressed the role of DPAs in the AI Act framework.³⁰ The Statement described the relationship between the AI Act and the GDPR as “complementary and mutually reinforcing instruments” and recommended a “prominent role” for DPAs due to their experience and expertise in developing guidelines and carrying out enforcement actions on AI-related issues with respect to the processing of personal data. For these reasons and others, the EDPB recommended that DPAs be designated as Market Surveillance Authorities (MSA) under the EU AI Act.

In December 2024, the EDPB issued an opinion on AI Models.³¹ The report addressed four questions raised by the Irish DPA: (1) when and how an AI model can be considered anonymous; (2) how controllers can demonstrate the appropriateness of legitimate interest as a legal basis in the development and (3) deployment phases; and (4) what are the consequences of the unlawful processing of personal data in the development phase of an AI model on the subsequent processing or operation of the AI model. Among the key findings: “the determination of whether an AI model is anonymous should be assessed, based on specific criteria, on a case-by-case basis”³²; AI models are very likely to require such a thorough evaluation of the risks of Identification”³³; “When there is the finding of an infringement, SAs may impose corrective measures, such as ordering controllers, taking into account the circumstances of each case, to take actions in order to remediate the unlawfulness of the initial processing”;³⁴ and the lawfulness of the processing should be assessed case-by-case.³⁵

European Data Protection Supervisor

The European Data Protection Supervisor is the European Union’s independent data protection authority.³⁶ The EDPS responsibilities include the mission to “monitor and ensure the protection of personal data and privacy when EU institutions and bodies process the personal information of individuals.” This

Center for AI and Digital Policy

AI work of the EDPS builds on earlier initiatives, including Recommendations on the AI Act (2023) and the EDPS-EDPB Joint Opinion on the AI Act (2021).³⁷

The European Data Protection Supervisor undertook many projects related to AI in 2024. In June, the EDPS published Orientations on “generative Artificial Intelligence and personal data protection” to provide EU institutions, bodies, offices and agencies with practical advice and instructions on the processing of personal data when using generative AI systems, to facilitate their compliance with the requirements of the data protection legal framework.³⁸ The Guidelines emphasize the general principles of data protection that should help EU institutions comply with the data protection requirements. The European Data Protection Supervisor also supported the work of the Global Privacy Assembly and the G7 DPA Privacy Roundtable, discussed above.

G7

The Group of Seven (G7) is an inter-governmental political forum consisting of Canada, France, Germany, Italy, Japan, the United Kingdom, and the United States. The members represent the wealthiest liberal democracies. The group is officially organized around shared values of pluralism and representative government. The G7 is also the incubator for significant work on AI policy.

In 2024, Artificial Intelligence was a prominent feature in the G7 Leaders’ Communique. G7 leaders said they would “pursue an inclusive, human-centered, digital transformation that underpins economic growth and sustainable development, maximizes benefits, and manages risks, in line with our shared democratic values and respect for human rights.”³⁹ The G7 leaders expressed support for the Hiroshima AI process and the development of a reporting framework for monitoring the International Code of Conduct for Organizations Developing Advanced AI Systems.

G7 leaders called attention to labor issues and said they would launch an action plan on the use of AI in the world of work. “We ask our Labor Ministers to develop the action plan, envisaging concrete actions to fully leverage the potential

of AI to enable decent work and workers' rights and full access to adequate reskilling and upskilling, while addressing potential challenges and risks to our labor markets." The G7 leaders endorsed the UN General Assembly Resolution on Seizing the Opportunities of Safe, Secure and Trustworthy AI Systems for Sustainable Development and said they would work "towards closing digital divides, including the gender digital divide, and achieving digital inclusion."⁴⁰

The G7 leaders also recognized the impact of AI on the military domain and the need for a framework for responsible development and use. They stated, "We welcome those who have endorsed the Political Declaration on Responsible Military Use of AI and Autonomy (REAIM) and the REAIM Call to Action, and we encourage more States to do so to ensure that military use of AI is responsible, complies with applicable international law, particularly international humanitarian law, and enhances international security."⁴¹

Canada assumed the G7 Presidency in 2025.

G7 Privacy Roundtable

In recent years, privacy officials from G7 nations have gathered to host seminars and issue statements in conjunction with the Leaders' Summit. The G7 Privacy officials issued several statements related to AI at the 4th G7 Data Protection and Privacy Authorities Roundtable in Rome, Italy. First, the 2024 Communique emphasized "the challenges that artificial intelligence (AI) poses to privacy, data protection, and other fundamental rights and freedoms."⁴² In a second statement on AI and Children, the G7 Privacy officials warned about "potential violations of privacy and data protection linked to the use of AI systems which could have serious implications for children and young people."⁴³ The privacy officials identified several threats, including AI-based decision-making, manipulation and deception, and the use of children's data for training AI models. The officials recommended greater emphasis on privacy by design, privacy impact assessments, transparency, and digital literacy.

A third statement explored the role of Data Protection Agencies in fostering trustworthy AI.⁴⁴ The G7 Privacy officials welcomed the recognition of

DPA in many of the international instruments for AI, including the OECD AI Principles (2019) and the UNESCO Recommendation on AI Ethics (2019), as well as the Bletchley Declaration (2023) and the Seoul Declaration (2024). The privacy officials explained, “many AI technologies, including generative AI, are based on the processing of personal data, which can subject natural persons to unfair stereotyping, bias and discrimination even when not directly processing their respective personal data.” The G7 privacy officials emphasized, “Current privacy and data protection laws apply to the development and use of generative AI products, even as different jurisdictions continue to develop AI-specific laws and policies.” The statement concluded, “Many data protection overarching principles can be transposed into broader AI governance frameworks”; “DPAs supervise a core component of AI”; “DPAs can help address problems at their source”; and “DPAs have experience.”

G20

The G20 is an international forum made up of 19 countries, the African Union, and the European Union, representing the world’s major developed and emerging economies.⁴⁵ Together, the G20 members represent 85% of global GDP, 75% of international trade, and two-thirds of the world’s population. According to the OECD, because of its size and strategic importance, the G20 has a crucial role in setting the path for the future of global economic growth.

Global Privacy Assembly

The Global Privacy Assembly is the global network of privacy officials and experts. The Global Privacy Assembly meets annually to discuss emerging privacy issues and to adopt resolutions. In recent years, the focus of the GPA has moved toward AI.⁴⁶

In October 2023, the Assembly adopted a resolution on Generative AI Systems. The signatories stressed that they were particularly “concerned by the release—often with insufficient pre-deployment assessment—of generative AI systems to the wider public, which may present risks and potential harms to data

protection, privacy and other fundamental human rights if not properly developed and regulated.”⁴⁷

The GPA Working Group on Ethics and Data Protection in Artificial Intelligence presented a report at the October 2024 meeting in Jersey.⁴⁸ The Working Group set out a 2024–2025 workplan to (1) establish a clear definition of what constitutes a meaningful human review of automated decisions, (2) report on Generative AI-related work, (3) assess AI auditing capabilities, and (4) examine discrimination in insurance pricing and decisions.

OECD

The OECD is an international organization that “works to build better policies for better lives.”⁴⁹ The goal of the OECD is to “shape policies that foster prosperity, equality, opportunity and well-being for all.” The OECD has led the global effort to develop and establish the first government-endorsed framework for AI policy. This was a result of a concerted effort by the OECD and member states to develop a coordinated international strategy. The OECD AI Principles also build on earlier OECD initiatives such as the OECD Privacy Guidelines, a widely recognized framework for transborder data flows and the first global framework for data protection.⁵⁰ OECD policy frameworks are not treaties, do not have legal force, and are not directly applicable to OECD member states. However, there are many instances of countries adopting national laws based on OECD policies and a clear convergence of legal norms, particularly in the field of data protection.

Global Partnership on AI

The Global Partnership on Artificial Intelligence (GPAI) emerged from the OECD Recommendation on Artificial Intelligence.⁵¹ GPAI activities are intended to foster the responsible development of AI grounded in “human rights, inclusion, diversity, innovation, and economic growth.”⁵² The GPAI aims to “bridge the gap between theory and practice on AI by supporting cutting-edge research and

applied activities on AI-related priorities.” As of March 2025, GPAI’s members include Argentina, Australia, Belgium, Brazil, Canada, Czech Republic, Denmark, France, Germany, India, Ireland, Israel, Italy, Japan, Korea, Mexico, the Netherlands, New Zealand, Poland, Senegal, Serbia, Singapore, Slovenia, Spain, Sweden, Türkiye, the United Kingdom, the United States, and the European Union.⁵³

In 2024, GPAI formalized an integration partnership with OECD “for harnessing the potential of AI for Good and for All.”⁵⁴ According to a press statement, “The OECD and the Global Partnership on Artificial Intelligence (GPAI) are joining forces to advance an ambitious agenda for implementing human-centric, safe, secure and trustworthy Artificial Intelligence (AI) embodied in the principles of the OECD Recommendation on AI.”⁵⁵ The OECD further said, “The existing GPAI Expert Support Centres—in Paris, France, Montreal, Canada, and Tokyo, Japan—will continue to take an active role in shaping and advancing the new partnership’s work.”⁵⁶

OECD AI Policy Observatory

The OECD AI Policy Observatory launched in February 2020 provides extensive data and multi-disciplinary analysis on artificial intelligence across a wide range of policy areas.⁵⁷ According to the OECD, the AI Policy Observatory is based on multidisciplinary, evidence-based analysis and Global multi-stakeholder partnerships.

Collaboration with United Nations

In September 2024, the OECD and the United Nations announced a collaborative effort to strengthen global AI governance. This partnership focuses on conducting regular, science-based assessments of AI risks and opportunities.⁵⁸ The collaboration seeks combines the OECD’s technical expertise with the UN’s global reach to inform policy decisions and promote responsible AI development worldwide. OECD Deputy Secretary General Knudsen said, “The speed of AI technology development and the breadth of its impact requires diverse policy

ecosystems to work more cohesively. And in real time. I am delighted that the OECD and the UN will link their efforts to help governments improve the quality and timeliness of their policy response to AI's opportunities and its risks." UN Under-Secretary General Gill said, "We will work with all stakeholders, including leading scientists and academic centres from around the globe, to realise this goal."

United Nations

The Secretary-General of the United Nations has led a global campaign for AI governance over many years. Speaking in February 2025 at the AI Action Summit in Paris, Secretary-General António Guterres said, "We must all work together so that artificial intelligence can bridge the gap between developed and developing countries—not widen it. It must accelerate sustainable development—not entrench inequalities."⁵⁹ Guterres emphasized the need to ensure technology serves humanity, not the other way around. "The creation of an Independent International Scientific Panel on AI will be central to translating this vision into reality," said the Secretary-General. He also called attention to the growing impact of AI on the climate and sustainability. He concluded, "It is in all our interests for Governments and technology leaders to commit to global guardrails, share best practices and shape fair policy and business models."

The UN accomplished several milestones in 2024.

The Pact for the Future, adopted by World Leaders at the Summit for the Future in September 2024, outlined several goals for AI aligned with the Sustainable Development Goals, including enhancing international governance of AI for the benefit of humanity.⁶⁰ The Pact also warned of the "risks of existing and potential risks associated with the military applications of artificial intelligence."⁶¹

The Global Digital Compact, also adopted at the Summit for the Future, established the first universal agreement on the governance of AI. The Compact reiterated calls for building AI capacity in developing nations.

UNESCO

In 2020, UNESCO embarked on a project to develop a global standard for Artificial Intelligence. UNESCO Director General Audrey Azoulay stated, "Artificial intelligence can be a great opportunity to accelerate the achievement of

⁵⁹ United Nations, *Secretary-General, at Action Summit, Urges Working Together so Artificial Intelligence Expedites Sustainable Development, Not Creates World of "Haves and Have-Nots"* (Feb. 11, 2025), <https://press.un.org/en/2025/sgsm22548.doc.htm>

sustainable development goals. But any technological revolution leads to new imbalances that we must anticipate.”⁶²

The UNESCO Recommendation sets out about a dozen principles, five Action Goals, and eleven Policy Actions. Notable among the recommendations is the emphasis on Human Dignity, Inclusion, and Diversity. UNESCO also expresses support for Human Oversight, Privacy, Fairness, Transparency and Explainability, and Safety and Security, among other goals. Understandably, UNESCO is interested in the scientific, educational, and cultural dimensions of AI, the agency’s program focus.

The UNESCO Recommendation was adopted in 2021. This is the first global agreement on the Ethics of Artificial Intelligence.⁶³ UNESCO Director General Audrey Azoulay stated, “The world needs rules for artificial intelligence to benefit humanity. The recommendation on the ethics of AI is a major answer. It sets the first global normative framework while giving member states the responsibility to apply it at their level. UNESCO will support its 193 member states in its implementation and ask them to report regularly on their progress and practices.”

UNESCO explained, “The Recommendation aims to realize the advantages AI brings to society and reduce the risks it entails. It ensures that digital transformations promote human rights and contribute to the achievement of the Sustainable Development Goals, addressing issues around transparency, accountability and privacy, with action-oriented policy chapters on data governance, education, culture, labour, healthcare and the economy.” The key achievements of the UNESCO AI Recommendation include:

1. Protecting data. The UNESCO Recommendation calls for action beyond what tech firms and governments are doing to guarantee individuals more protection by ensuring transparency, agency and control over their personal data.
2. Banning social scoring and mass surveillance. The UNESCO Recommendation explicitly bans these uses of AI systems.
3. Monitoring and Evaluation. The UNESCO Recommendation establishes new tools that will assist in implementation, including Ethical Impact Assessments and a Readiness Assessment Methodology (RAM).
4. Protecting the environment. The UNESCO Recommendation emphasizes that AI actors should favor data-, energy-, and resource-efficient AI methods to help ensure that AI becomes a more prominent tool in the fight against climate change and on tackling environmental issues.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Recommendation aims to provide a basis to make AI systems work for the good of humanity, individuals, societies, and the environment and ecosystems, and to prevent harm. It also aims at stimulating the peaceful use of AI systems. The Recommendation provides a universal framework of values and principles of the ethics of AI. It sets out four values: respect, protection, and promotion of human rights and fundamental freedoms and human dignity; environment and ecosystem flourishing; ensuring diversity and inclusiveness; living in peaceful, just, and interconnected societies.

Further, the Recommendation outlines 10 principles—proportionality and do no harm, safety and security, fairness and non-discrimination, sustainability, right to privacy and data protection, human oversight and determination, transparency and explainability, responsibility and accountability, awareness and literacy—backed by more concrete policy actions on how they can be achieved. The Recommendation also introduces red lines to unacceptable AI practices. For example, it states that “AI systems should not be used for social scoring or mass surveillance purposes.”

The Recommendation focuses not only on values and principles but also on their practical realization via concrete eleven policy actions. UNESCO encourages Member States to introduce frameworks for ethical impact assessments, oversight mechanisms, etc. Member States should ensure that harms caused through AI systems are investigated and redressed by enacting strong enforcement mechanisms and remedial actions to make certain that human rights, fundamental freedoms, and the rule of law are respected.

UN High Commissioner for Human Rights

In the Roadmap for Digital Cooperation, the UN Secretary-General stated, “To address the challenges and opportunities of protecting and advancing human rights, human dignity and human agency in a digitally interdependent age, the Office of the United Nations High Commissioner for Human Rights will develop system-wide guidance on human rights due diligence and impact assessments in the use of new technologies, including through engagement with civil society, external experts and those most vulnerable and affected.”⁶⁴

In September 2021, the UN High Commissioner for Human Rights Michelle Bachelet called for a moratorium on the sale and use of AI that pose a serious risk to human rights until adequate safeguards are put in place.⁶⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

She also called for a ban on AI applications that do not comply with international human rights law. “Artificial intelligence can be a force for good, helping societies overcome some of the great challenges of our times. But AI technologies can have negative, even catastrophic, effects if they are used without sufficient regard to how they affect people’s human rights,” Bachelet said.

The High Commissioner’s statement accompanied the release of a new report on *The Right to Privacy in the Digital Age*. The UN Report details how AI systems rely on large datasets, with information about individuals collected, shared, merged, and analyzed in multiple and often opaque ways. The UN Report finds that data used to guide AI systems can be faulty, discriminatory, out of date, or irrelevant. Long-term storage of data also poses risks, as data could in the future be exploited in as yet unknown ways.⁶⁶

UN Special Rapporteur

An extensive 2018 report by a UN Special Rapporteur explored the implications of artificial intelligence technologies for human rights in the information environment, focusing in particular on rights to freedom of opinion and expression, privacy, and non-discrimination.⁶⁷ The Report of the Special Rapporteur on the Promotion and Protection of the Right to Freedom of Opinion and Expression defines key terms “essential to a human rights discussion about artificial intelligence”; identifies the human rights legal framework relevant to artificial intelligence; and presents preliminary guidelines to ensure that human rights are considered as AI systems evolve. The report emphasizes free expression concerns and notes several frameworks, including the International Covenant on Civil and Political Rights and the UN Guiding Principles on Business and Human Rights.

Among the Recommendations, the Special Rapporteur proposed “Companies should make all artificial intelligence code fully auditable and should pursue innovative means for enabling external and independent auditing of artificial intelligence systems, separately from regulatory requirements. The results of artificial intelligence audits should themselves be made public.” The report emphasizes the need for transparency in the administration of public services. “When an artificial intelligence application is being used by a public

sector agency, refusal on the part of the vendor to be transparent about the operation of the system would be incompatible with the public body's own accountability obligations," the report advises.

An article published in 2024 by the CAIDP founder urged the creation of a Special Rapporteur for AI and Human Rights.⁶⁸ Rotenberg wrote, "to effectively navigate the intricate landscape of AI and human rights, there is a pressing need for the creation of a UN Special Rapporteur on AI and Human Rights. This role would not only complement existing efforts but also provide the agility, authority, and competence required to address emerging challenges and safeguard human rights in the digital age."

UN and Lethal Autonomous Weapons

In 2024, the UN Secretary-General urged the Security Council to act decisively to establish international guardrails for artificial intelligence, warning that delays could heighten risks to global peace and security.⁶⁹ "Every moment of delay in establishing international guardrails increases the risk for us all," Mr. Guterres said. "No country should design, develop, deploy or use military applications of AI in armed conflict that violate international humanitarian and human rights laws." "Recent conflicts have become testing grounds for AI military applications," he said, citing AI use in autonomous surveillance, predictive policing, and even reported life-and-death decisions.

Particularly alarming, he underscored, is the potential integration of AI with nuclear weapons and the advent of quantum-AI systems that could destabilize global security. "The fate of humanity must never be left to the 'black box' of an algorithm," he stated, stressing the importance of human control over decisions involving the use of force.

The Secretary-General's remarks follow a long history of efforts to establish rules to limit the use of AI systems in warfare. In fact, one of the first AI applications to focus the attention of global policymakers was the use of AI for warfare.⁷⁰ In 2016, the United Nations established the Group of Governmental Experts (GGE) on Lethal Autonomous Weapons Systems (LAWS) following a review of the High Contracting Parties to the Convention on Certain Conventional

Weapons (CCW).⁷¹ In November 2019,⁷² the CCW High Contracting Parties endorsed 11 Guiding Principles for LAWS.⁷³ But concerns about the future of regulation of lethal autonomous weapons remain. At present, some countries believe that current international law “mostly suffices” while others believe new laws are needed.⁷⁴ Human Rights Watch provided an important overview of country positions on the future of banning fully autonomous weapons in August 2020.⁷⁵ Concerns over killer reports also arose at the 75th UN Assembly in October 2020. Pope Francis warned that lethal autonomous weapons systems would “irreversibly alter the nature of warfare, detaching it further from human agency.” He called on states to “break with the present climate of distrust” that is leading to “an erosion of multilateralism, which is all the more serious in light of the development of new forms of military technology.”⁷⁶ The Permanent Representative of the Holy See to the UN called for a ban on autonomous weapons in 2014.⁷⁷

Center for AI and Digital Policy

At the 2022 UN General Assembly, 70 countries endorsed a joint statement on autonomous weapons systems. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”⁷⁸

At the 78th UN General Assembly First Committee in 2023, 164 states voted in favor⁷⁹ of resolution L.56⁸⁰ on autonomous weapons systems. The Resolution emphasizes the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report presented in July 2024 summarized views from more than 40 Member and Observer States and 28 civil society organizations.⁸¹ The statements reflect a breadth of perspectives and concerns over defining LAWS and whether international law is sufficient for governing these weapons or a new instrument should be developed. Questions about the best approach remain but the Secretary-General noted the urgency “to take preventative action on this issue” and reiterated his call for “the conclusion by 2026, of a legally binding instrument to prohibit lethal autonomous weapons that function without human control or oversight and that cannot be used in compliance with international humanitarian law.”⁸² He concluded, “The autonomous targeting of humans by machines is a moral line that must not be crossed.”

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Vatican

Pope Francis has emerged as a leading figure in AI policy. In addition to his statements on autonomous weapons, in November 2020 the Pope warned that AI could exacerbate economic inequalities around the world if a common good is not pursued. “Artificial intelligence is at the heart of the epochal change we are experiencing. Robotics can make a better world possible if it is joined to the common good. Indeed, if technological progress increases inequalities, it is not true progress. Future advances should be oriented towards respecting the dignity of the person and of Creation.”⁸³

Earlier in 2020, the Pope endorsed the Rome Call for AI Ethics.⁸⁴ The goal of the Rome Call is to “support an ethical approach to Artificial Intelligence and promote a sense of responsibility among organizations, governments and institutions.” The Pope said, “The Call’s intention is to create a movement that will widen and involve other players: public institutions, NGOs, industries and groups to set a course for developing and using technologies derived from AI.” The Pope also said that the Rome Call for Ethics is the “first attempt to formulate a set of ethical criteria with common reference points and values, offering a contribution to the development of a common language to interpret what is human.”⁸⁵

The key principles of the Rome Call are 1) Transparency: AI systems must be explainable; 2) Inclusion: the needs of all human beings must be taken into consideration so that everyone can benefit and all individuals can be offered the best possible conditions to express themselves and develop; 3) Responsibility: those who design and deploy the use of AI must proceed with responsibility and transparency; 4) Impartiality: do not create or act according to bias, thus safeguarding fairness and human dignity; 5) Reliability: AI systems must be able to work reliably; 6) Security and privacy: AI systems must work securely and respect the privacy of users. These principles are described as “fundamental elements of good innovation.”

The Pope delivered several speeches on Artificial Intelligence in 2024. Speaking to the G7 leaders in June, the Pope described AI as an “exciting and fearsome” tool, “that can autonomously adapt to the task assigned to it and, if designed this way, can make choices independent of the person in order to achieve

Center for AI and Digital Policy

the intended goal.”⁸⁶ The Pope called attention to inherent bias in AI systems, particularly those that may be deployed for judicial decision-making, and explained that algorithms are neither objective nor neutral. The Pope also urged world leaders to reconsider the development and use of lethal autonomous weapons and ultimately ban their use. He said, “No machine should ever choose to take the life of a human being.”

Speaking to the World Forum in Davos in 2025, the Pope said that AI must promote and never violate human dignity.⁸⁷ The Pope said, AI raises “fundamental questions about ethical responsibility, human safety, and the broader implications of these developments for society.” The Pope warned against the risk that AI will be used to advance the “technocratic paradigm,” which perceives all the world’s problems as solvable through technological means alone. “Within this paradigm,” he explained, “human dignity and fraternity are frequently subordinated in the pursuit of efficiency, as though reality, goodness, and truth inherently emanate from technological and economic power.”

Technical Societies

Technical societies have also played a leading role in the articulation of AI principles. The IEEE led several initiatives, often in cooperation with government policymakers, to develop and promote Ethically Aligned Design (EAD).⁸⁸ The initial report, *A Vision for Prioritizing Human Well-being with Autonomous and Intelligent Systems*, was published in 2015. The IEEE published the second edition in 2017.⁸⁹ In 2019 the IEEE issued a Positions Statement on Artificial Intelligence, concluding that “AI systems hold great promise to benefit society, but also present serious social, legal and ethical challenges, with corresponding new requirements to address issues of systemic risk, diminishing trust, privacy challenges and issues of data transparency, ownership and agency.”⁹⁰

In November 2022, the IEEE Board approved the IEEE Standard for Operator Interfaces of Artificial Intelligence. The standard defines a set of operator

interfaces frequently used in AI applications and highlights various types of operators, such as those related to basic mathematics, neural network, and machine learning.⁹¹

ACM, an international society of computer scientists and professionals, has also contributed to the global AI policy landscape.⁹² In 2017 ACM released a Statement on Algorithmic Transparency and Accountability, identifying key principles to minimize bias and risks in algorithmic decision-making systems, including transparency, accountability, explainability, auditability, and validation.⁹³ In 2020, in response to growing concerns about the use of facial recognition technologies in public spaces, ACM released another statement addressing the unique issues of biometric data systems and the potential bias and inaccuracies that have significant consequences for violation of human rights.⁹⁴ A 2023 Statement addressed emerging challenges of generative AI and proposed several new principles, including Limits and guidance on Deployment and Use, Ownership, Personal Data Control, and Correctability.⁹⁵

Legal Societies

Legal societies are also playing a more prominent role in the AI policy landscape. The European Law Institute has published several reports and recommendations on AI law and policy.⁹⁶ In 2024, the International Bar Association endorsed the Council of Europe Framework Convention on Artificial Intelligence, Human Rights, Democracy and the Rule of Law.⁹⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Civil Society

Civil society organizations engage in AI policymaking through a variety of means. Whether researching AI-related justice issues like facial recognition in public spaces, submitting comments, or sitting in the rooms where policymakers make decisions on legislation, civil society organizations hold government leaders accountable for rights-violating AI uses and help develop more just policies. This section highlights some recent engagement by civil society organizations.

Global Efforts

International organizations such as the G20 provide channels for representatives from civil society. In 2024, for example, Brazil launched the G20 Social to “increase the participation of non-governmental actors in G20 activities and decision-making processes.”⁹⁸ The São Luís Declaration, a joint statement on inclusive AI by the civil, labor, think-tank, and women engagement groups, emerged from meetings leading up to the Social Summit held in connection with the Leaders’ Summit.⁹⁹

Other global meetings and venues such as the AI Safety Summit also include civil society organizations. The Sixth Athens Roundtable on AI and the Rule of Law in December 2024 brought together over 130 leading AI decision-makers in person and more than 800 participants online. The event emphasized the urgency of establishing robust, globally coordinated accountability mechanisms to safeguard the rule of law, democratic values, and global well-being. Key discussions centered on enforcing global standards for AI risk management, building an interoperable ecosystem for AI evaluations, and ensuring transparency and accessible information flows.

Africa

In Africa, civil society organizations have actively engaged with continental initiatives surrounding AI governance, exemplified by an open letter published in July 2024 addressing the African Union (AU).¹⁰⁰ The letter was coordinated by Pollicy and the Media Institute of Southern Africa (MISA) and

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

supported by a coalition comprising various organizations including Mozilla, Paradigm Initiative, African Internet Rights Alliance, and the Women of Uganda Network. The letter was issued in response to the endorsement of the Continental AI Strategy and the African Digital Compact by African ICT and Communications Ministers, applauding the AU for its visionary leadership and collective effort.

Signatories expressed significant concerns regarding the effectiveness of implementation at the national level, emphasizing that the transformative potential of these continental frameworks depends heavily on their translation into binding domestic policies. The coalition highlighted the importance of protecting African societies from potential negative impacts of AI, such as misinformation and AI-enabled propaganda, stressing the critical necessity of robust policies addressing data governance and fundamental rights. Recommendations included calling upon African Heads of State to actively participate in discussions during the AU Assembly, urging AU Chairperson Moussa Faki Mahamat to underscore the importance of the AU Data Policy Framework, and advocating for strengthened partnerships between civil society, communities, and AU bodies like AUDA-NEPAD. The letter strongly emphasized collaborative governance as essential, underlining civil society's willingness to partner with political leaders to ensure AI development truly benefits all Africans, reflecting a collective vision toward digital transformation rooted firmly in human rights and ethical standards.

Americas

Civil society organizations continue to advocate for individual rights in their struggle against facial recognition in public spaces. In Argentina, the Civil Rights Association (*Asociación por los Derechos Civiles*, ADC) organized against facial recognition in 2020–2023.¹⁰¹ A judge ruled the system implemented in Buenos Aires unconstitutional in 2022.¹⁰² The Coalition Rights on the Net (*Coalizão Direitos na Rede*) in cited several examples of arrests after mistaken identity in a 2024 open letter advocating for the Brazilian AI regulation to ban facial recognition technologies.¹⁰³ This action continues research informing the public on facial recognition in public spaces by Brazilian think tank Instituto

Igarapé¹⁰⁴ and a 2018 class action by the Brazilian Institute for Consumer Protection before the São Paulo Court of Justice in 2018.¹⁰⁵

In Mexico, the multi-stakeholder National Alliance on Artificial Intelligence (ANIA, *Alianza Nacional de Inteligencia Artificial*) revitalized the charge for a national AI strategy with the Proposal for a National AI Strategy for Mexico, 2024–2030.¹⁰⁶ ANIA brings together experts from academia, private enterprise, government, and NGOs to conduct roundtables, offer public webinars and workshops, research AI use cases, and collaborate with other regional leaders.

In the United States, a variety of civil society organizations, including the Center for AI and Digital Policy, engage in policymaking and public advocacy. The Algorithmic Justice League, led by Dr. Joy Buolamwini,¹⁰⁷ unites these areas with testimony to Congress and statements to legislators, organizing and capacity-building through public campaigns, and media such the documentary *Coded Bias*.¹⁰⁸ Buolamwini’s study, *Gender Shades*, co-authored with former Google AI Ethics co-lead Timnit Gebru,¹⁰⁹ prompted her advocacy and activism. Gebru’s organization, Distributed AI Research Institute, centers research that aims to “mitigate/disrupt/eliminate/slow down harms caused by AI technology, and cultivate spaces to accelerate imagination and creation of new technologies and tools to build a better future.”¹¹⁰ DAIR centers research on the real, present harms of AI technologies in society.

Asia

AI Safety Asia (AISA), co-founded in 2024 by Lyantoniette Chua, Senior Policy Advisor and Fellow at the Center for AI and Digital Policy is a global non-profit organization dedicated to the international governance of safe AI, beginning with initiatives in Southeast Asia. By promoting safe and governed AI in Asia, AISA aims to mitigate catastrophic risks, reduce adverse societal impacts, and unlock equitable socioeconomic development for 60% of the global population. Through programs such as the AISA Governance Academy and the Southeast Asia Policy Observatory, AISA seeks to enhance AI safety governance, upskill civil

servants, incubate junior researchers, and foster cross-disciplinary collaboration. AISA has conducted AI Safety Roundtables in Manila, Jakarta, Singapore, Kuala Lumpur, and Bangkok, convening stakeholders to discuss regional opportunities, challenges, and strategies for AI safety governance.

AISA joined with Asia Society France at the AI Action Summit in Paris, France, in February 2025, to convene a high-level dialogue in Paris on the sidelines of the AI Action Summit titled *From Oil to Water: Governing AI as a Global Public Good—A Europe-Asia Dialogue*.

Europe

Civil society organizations across Europe have issued an urgent collective response to the third draft of the EU Code of Practice for General Purpose AI (GPAI) models, warning that crucial protections for fundamental rights and child safety have been significantly weakened. The joint letter,¹¹¹ endorsed by influential groups including the Ada Lovelace Institute, ARTICLE 19, 5Rights Foundation, and The Future Society, criticized the relegation of fundamental rights concerns such as child sexual abuse material (CSAM) and non-consensual intimate image abuse (NCII) to voluntary measures listed in an appendix, rather than central obligations. According to these groups, this approach drastically shifts responsibility for assessing risks from GPAI model providers to downstream system developers, undermining the accountability envisioned by the EU AI Act. Furthermore, the coalition asserts that by reducing fundamental rights issues to mere "potential considerations," the code becomes incompatible with established international frameworks, such as the International Scientific Report on the Safety of Advanced AI, which explicitly acknowledges these harms. They also highlighted inadequacies in current industry safety frameworks cited by the drafters, pointing out that prominent frameworks from companies including Meta and Google notably fail to address critical risks related to human rights, discrimination, and child safety.

Civil society organizations urged EU policymakers to ensure the code aligns firmly with the original intent of the AI Act, maintaining mandatory protections rather than permitting companies to selectively recognize or ignore systemic risks. The signatories concluded that without these revisions, the code risks normalizing a regulatory landscape in which safeguarding fundamental rights and protecting vulnerable groups become discretionary rather than obligatory moral imperatives.

¹¹¹ *Civil Society's Urgent Warning: The EU's Code of Practice for General Purpose AI Final Draft Cannot Abandon Fundamental Rights, and Protections for Children*, Center for Democracy & Technology (Mar. 28, 2025), <https://cdt.org/insights/joint-civil-society-letter-urging-the-eu-institutions-to-protect-fundamental-rights-in-the-code-of-practice-for-general-purpose-ai-final-draft/>; [pdf] <https://cdt.org/wp-content/uploads/2025/03/Joint-Letter-CSO-CoP.pdf>

COUNTRY REPORTS

Argentina

In 2024, Argentina's data protection agency completed a public consultation on a guide to using AI responsibly and published a guide on transparency and personal data protection in AI. The legislature also proposed a bill to create a regulatory framework for AI and a federal AI observatory. Internationally, Argentina participated in negotiations for the Council of Europe international AI treaty. However, Argentina has not signed the treaty and refused to sign the UN Pact for the Future.

National AI Strategy

The Ministry of Science, Technology and Productive Innovation (MINCYT) published the National Strategy for Artificial Intelligence in 2019.¹¹² The plan includes two priority initiatives: Digital Agenda Argentina 2030¹¹³ and the National Strategy for Science, Technology, and Innovation, Argentina Innovates 2030.¹¹⁴

With the goal of positioning Argentina as a regional leader on AI, the ten-year strategy plan seeks to transform the country through AI, leveraging the technology in pursuit of developmental objectives built on the UN's sustainable Development Goals (SDGs). The Strategy aims to minimize the potential risks of AI development and implementation for Argentinean society by protecting personal data and individual privacy through guidelines for the design of AI systems consistent with ethical and legal principles. The strategy also proposes to analyze the impact in the production scheme, to measure effects on labor force, and to prevent automate systems from reproducing or reinforcing discriminatory or exclusionary stereotypes. The Strategy addresses the areas of:

- Talent and education
- Data
- Research & Development and Innovation
- Supercomputing infrastructure
- Actions to facilitate job transitions
- Facilitating public-private co-operation on data use
- Public services and manufacturing (as target sectors for AI development)

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The cross-cutting themes in the Strategy are:

- Ethics and regulation
- Communication and awareness building
- International co-operation

As the wide range of topics indicates, the Strategy requires a whole-of-government effort that brings together different government ministries under the leadership of the Digital Agenda Executive Roundtable (*Mesa Ejecutiva Agenda Digital*). This effort is supported by twenty different government agencies, as well as a Multi-sectoral Committee of Artificial Intelligence and a Scientific Committee of experts.

The 2019 National AI Strategy for Argentina set out ambitious goals that were built upon other national strategies developed under the former President Mauricio Marci, just before President Alberto Fernandez was elected in December 2019. The Executive Branch of the Fernandez administration published the Productive Development Plan Argentina 4.0 in April 2021.¹¹⁵ This plan, an initiative of the National Ministry of Productive Development, aims to promote the incorporation of technologies 4.0—including AI—in the national production chain. The Argentina 4.0 Plan does not refer to the National AI Strategy. In November 2021, the Secretariat for Strategic Affairs also adopted the Artificial Intelligence Program.¹¹⁶ This Program complements Decree 970/2020. The aim is to foster the responsible use of technology, such as artificial intelligence, “that contribute to consolidating Argentine technological sovereignty in the 4.0 revolution.”¹¹⁷

Local Strategies

The Autonomous City of Buenos Aires launched Future City: AI Strategy (*Ciudad Futuro: Plan Estratégico Inteligencia Artificial*) in August 2021. The Plan outlines the following three objectives:

- Use AI for the city’s development
- Use AI for the benefit of the citizens
- Use cross-cutting tools to ensure the city’s sustainability

Under this strategy, the Buenos Aires government has established Buenos Aires AI Lab (*BA Laboratorio IA*), which provides opportunities for training and

professional development to the youth and serves as a hub for facilitating R&D and application of AI.¹¹⁸ As with the National Plan, one of the key aspects of the Buenos Aires strategy is that it aims to foster mechanisms and tools for the development and use of AI technology that respects fundamental values and human rights.¹¹⁹

Public Participation

Since the initial development of Argentina's national AI strategy, the government has taken further steps to increase public participation in AI-related initiatives. In 2023, the Agency for Access to Public Information (AAIP) launched a program¹²⁰ focused on AI transparency and the protection of personal data. To further support these efforts, the AAIP has published the Guide to Transparency and the Protection of Personal Data in Responsible AI,¹²¹ outlining AI's potential risks and challenges and offering guidance on implementing responsible AI principles throughout the AI lifecycle. These efforts reflect Argentina's aim to ensure AI development aligns with societal values and effectively addresses public concerns.

Data Protection

Article 43 of Argentina's Constitution guarantees an individual's access to personal data in private and public registries, and exercise agency over how that data is used. Argentina's Personal Data Protection Law (PDPL) follows international standards regarding basic personal data rules and has even been deemed adequate by the European Commission.¹²² A new proposal has been put forward by the former administration to reform the PDPL and related legislation. However, the legislative draft has been under consideration by the National Congress since 2018, with no formal decision made in that regard as of this date. The purpose of this reform is not only for the country to keep its international

status as a jurisdiction that provides an adequate level of protection, particularly after the passing of the European General Data Protection Regulation, but also to keep its data protection regime up to date with the technological and legal developments that have taken place in recent years.

The AAPI is Argentina's data protection authority. Although it enjoys functional autonomy by law, the agency remains under the National Executive Branch from a structural perspective; an aspect that, along with the absence of proper mechanisms in place, has led civil society groups to question the impartiality and independence of the appointment process of its Executive Director.¹²³

The AAPI released a new draft bill on personal data protection for public consultation in late 2022.¹²⁴ Following an extended public consultation featuring 173 submissions, the AAPI took up 80 articles in its final proposal and modified 43 based on public comments. The reform package was presented to Argentina's government for review before introduction to the National Congress of Argentina in June 2023.¹²⁵

AAIP issued a resolution that established the Transparency and Protection of Data Program on the use of AI.¹²⁶ This program has the objective of enhancing regulatory frameworks and strengthening state powers necessary for the development and use of AI, based on the assumption that the state is responsible for guaranteeing the effective exercise of citizens' rights regarding transparency and the protection of personal data.

Additionally, it included the formation of the Observatory on AI, an initiative to foster governance and community engagement. A week after this Resolution was created, Argentina's President Chief of Staff issued Administrative Decision No. 750/2023 which created an Inter-Ministerial roundtable on AI.¹²⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

As a member of the Ibero-American Network for the Protection of Personal Data (RIPD), which comprises 16 data protection authorities of 12 countries, the AAPI endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence¹²⁸ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.¹²⁹ Both have been framed in accordance with the RIPD Standards for Personal Data Protection for Ibero-American States.¹³⁰ With the adoption of the Standards, a series of guiding principles and rights for the protection of personal data were recognized, that can be adopted and developed by the Ibero-American States in their national legislation in order to guarantee a proper treatment of personal data, and to have homogeneous rules in the region. The guiding principles of personal data protection are legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data and right to the limitation of treatment of personal data.

In May 2023, the RIPD data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data. Concerns regarding the risk of misinformation. “ChatGPT does not have knowledge and/or experience in a specific domain, so the precision and depth of the response may vary in each case, and/or generate responses with cultural, racial or gender biases, as well as false ones.”¹³¹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Argentina's AAIP has been a member of the Global Privacy Assembly (GPA) since 2018.¹³² AAIP co-sponsored the 2018 GPA Resolution on AI and Ethics,¹³³ 2020 Resolution on AI and Accountability,¹³⁴ 2022 Resolution on Facial Recognition Technology,¹³⁵ and the 2023 Resolution on Generative AI.¹³⁶

Argentina is also party to Convention 108 since June 2019. Argentina became the 23rd state to ratify 108+ on data protection in 2023.¹³⁷

Building on these initiatives, in July 2024 the Argentine Congress proposed the establishment of a Federal Observatory on AI¹³⁸ to guide ethical AI policy, enhance transparency, and ensure that AI systems respect constitutional rights. The Center for AI and Digital Policy (CAIDP)¹³⁹ praised Argentina's efforts, particularly the AAIP guidelines' focus on transparency and data protection, which is aligned with global standards such as the OECD AI Principles and UNESCO Recommendation on AI Ethics.

Algorithmic Transparency

Argentinian data protection law and AI regulation do not specifically include the right of citizens to receive notification when they interact with

Center for AI and Digital Policy

automated-decision systems or to object to a decision based solely on automatic data processing methods. However, some efforts have been made to promote algorithmic transparency. The Agency for Access to Public Information (AAIP)¹⁴⁰ published a preliminary draft of the Guide on Transparency and Personal Data Protection for Responsible AI,¹⁴¹ which outlines challenges and risks associated with AI while providing recommendations for implementing these principles throughout the AI lifecycle, in 2024. The guide promotes algorithmic transparency in the AI lifecycle and ensures data subjects are provided with relevant information regarding the AI system. Public consultation on this guide was opened after its publication.¹⁴²

The AAPI provided interpretation guidelines of the Personal Data Protection Act¹⁴³ through Resolution No. 4/2019¹⁴⁴ in which it recognizes that, under the right of access enshrined in the current data protection law, data subjects have the right to request from data controllers an explanation about the logic used by any system that reaches decisions solely based on automated processing of data and which can affect citizens or have pernicious legal effects on them.¹⁴⁵

The AAPI's proposed reform Act includes the right of citizens to get information about "the existence of automated decision systems, including those that create digital profiles," as well as "meaningful information" about the logic applied by those systems.¹⁴⁶ A formal right to object to a decision based solely on automatic processing methods is also included in the proposal.¹⁴⁷

Projects also provide guidance on algorithmic transparency such that “The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience.”¹⁴⁸

Data Scraping

The AAIP and 16 of its international counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy in 2024.¹⁴⁹ The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”¹⁵⁰ The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”¹⁵¹

Data scraping generally involves the automated extraction of data from the web. The statements responded to increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance

Center for AI and Digital Policy

purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

Use of AI in Public Administration

Argentina is among the Latin American and the Caribbean countries that have been utilizing AI in the public sector. Some of the implementations include Prometea,¹⁵² developed in 2017, which is a virtual assistant that anticipates case solutions (based on previous cases and solutions) and helps assemble judicial case files. Laura, an application developed by the Ministry of Finance of the Province of Cordoba, automates tasks in bureaucratic procedures.¹⁵³ One of the most controversial uses was the use of AI by the Government of the Province of Salta, which implemented a system to predict teenage pregnancy and school dropout using machine learning algorithms trained on personal, environmental, and health data collected in low-income districts of Salta City in 2016 and 2017.¹⁵⁴ The program came to an end following the 2019 national and state elections when the new administration terminated several programs, including the use of algorithms to predict pregnancy.¹⁵⁵

The Undersecretariat of Information Technologies enacted a resolution delineating a comprehensive framework of ethical principles and recommendations for the design, development, implementation, and use of AI projects in the public service.¹⁵⁶ The Ministry of Justice launched the National Comprehensive Program of Artificial Intelligence in Justice through Resolution 149/2024.¹⁵⁷ The National Program aims to apply AI in strategic areas that directly impact the lives of citizens, especially in justice and public administration, health, and education and training.¹⁵⁸ Resolution No. 710/2024 of the Ministry of Security

furthered the use of AI systems in the justice system with the creation of the Artificial Intelligence Unit Applied to Security (UIAAS)¹⁵⁹ to enhance crime prevention and investigation using AI tools like social media monitoring, facial recognition, and predictive algorithms.

As a member of the Latin American Centre for Development Administration (CLAD), Argentina approved the principles in the Ibero American Charter on Artificial Intelligence in Civil Service in late 2023.¹⁶⁰ The Charter aims to provide a roadmap and common framework for CLAD member states to adapt their AI policy strategies and laws for the challenges and opportunities involved in the implementation of AI in public administration. The guiding principles include human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection.

The Charter recommends that member states create policies and laws to adopt regulatory tools to assess the impact of AI systems on human rights and freedoms and to register algorithms to “anticipate risks, prevent undesirable effects and ensure its proper implementation.”¹⁶¹ The Charter also proposes a risk classification mechanism that would require guardrails for middle-risk uses and prohibitions against high-risk applications. Prohibited uses include facial recognition systems; systems aimed at behavior and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly); and social ranking systems based on certain personality traits, individual behaviors, socio-demographic features or economic status.¹⁶²

Facial Recognition

Several documented cases of facial recognition technology use have been reported in various cities and localities as well as at the provincial level in the country. Facial recognition systems being deployed include: for the identification

and capture of fugitives (in the Autonomous City of Buenos Aires);¹⁶³ for the identification of missing persons and of people with criminal backgrounds (town of Tigre, Buenos Aires province);¹⁶⁴ for the use of the police to surveil mass gatherings (Mendoza province);¹⁶⁵ or for the prevention and prosecution of crimes (Salta province).¹⁶⁶ The program in the City of Buenos Aires in particular was denounced by the UN Special Rapporteur for the Right of Privacy as a technology whose “proportionality” was questionable when compared to the “serious privacy implications” for people not related to any crime and for not carefully updating and checking for accuracy.¹⁶⁷ Human Rights Watch also denounced the system, noting the illegal exposure of minor’s personal information.¹⁶⁸ The City legislature approved a bill in 2020 to authorize the use of AI for the purpose of capturing fugitives.¹⁶⁹ But it has been alleged that this fact does not alter the unconstitutional character of the Buenos Aires program.¹⁷⁰ The increasing and unaccountable use of this technology led to the creation of a national campaign by the Association for Civil Rights (*Asociación por los Derechos Civiles*), a well-known Argentinian human rights organization. With the slogan: “Con mi Cara No” (“Not with my face”), the organization aims to raise awareness about the dangers facial

recognition technologies pose to citizens, particularly when their data is included within opaque and unaccountable systems.¹⁷¹ A trial judge declared the implementation of the Fugitive Facial Recognition System (SRFP, for its name in Spanish) by the Government of the City of Buenos Aires unconstitutional.¹⁷²

The Court of Appeals of the City of Buenos Aires confirmed the unconstitutionality of the use of the Fugitive Facial Recognition System implemented by the Buenos Aires City Government in 2023.¹⁷³ The use of SRFP is currently suspended. Meanwhile on the national level, the Artificial Intelligence Applied to Security Unit (UIAAS) plans to use facial recognition to predict future crimes.¹⁷⁴ AI may be used to cross-reference databases related to the commission of crimes (such as records of convictions, arrests, etc.) with others related to criminals and other persons of interest to generate predictions. UIAAS also expects to deploy facial recognition software to identify “wanted persons,” patrol social media, and analyze real-time security camera footage to detect suspicious activities.

Environmental Impact of AI

In Argentina, the role of AI in environmental management is becoming increasingly important as it has the potential to address critical challenges such as climate change, pollution, and biodiversity loss. AI is already being used in initiatives such as the United Nations Environment Programme's (UNEP)¹⁷⁵ World Environment Situation Room (WESR),¹⁷⁶ which uses AI for real-time analysis of environmental data. This includes monitoring CO2 levels, sea level rise and other key indicators to inform policy decisions and improve

environmental sustainability. AI also plays an important role in monitoring emissions, optimizing the use of renewable energy and supporting smarter environmental policies. However, there is growing concern about the environmental costs of AI, particularly in terms of data processing and e-waste. Argentina's growing focus on AI for sustainability must balance the technology's environmental impact with its benefits.

Lethal Autonomous Weapons

Argentina has been very critical about the development and use of lethal autonomous weapons systems, particularly those without significant human involvement. Argentina has set out a strong position in public statements as well as within international organizations, including during meetings regarding the Convention on Conventional Weapons. Within the framework of those meetings, Argentina stressed the need “to preserve meaningful human control at all phases of the development and use” of weapons systems.¹⁷⁷ On behalf of the Group of Latin American and Caribbean Countries, Argentina raised several concerns over fully autonomous weapons, including the risks of reprisal, retaliation, and terrorism.¹⁷⁸ And Argentina has called for a “preemptive prohibition of the development of lethal autonomous systems.”¹⁷⁹

At the 78th UN General Assembly First Committee in 2023, Argentina voted in favor of the resolution on autonomous weapons systems, along with 163 other states. The resolution stressed the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems and ways to address the related challenges and concerns they raise from humanitarian, legal, security, technological and ethical perspectives and on the role of humans in the use of force.

Argentina was one of the 70 countries that endorsed a 2022 joint statement on autonomous weapons systems at the UN General Assembly meeting. In this joint statement, States urged “the international community to further their understanding and address these risks and challenges by adopting appropriate

rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”¹⁸⁰

Argentina endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,¹⁸¹ which calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force. Argentina voted in favor of UN General Assembly Resolution 78/241¹⁸² on lethal autonomous weapons systems, which takes up several of the points expressed in Resolution L.56. Most recently, the country also supported a draft resolution that calls for open informal consultations that shall be open to the full participation of all member states and observer states, international and regional organizations, the International Committee of the Red Cross, and civil society, including the scientific community and industry.¹⁸³

Human Rights

According to the Freedom House 2024 report, Argentina is “free,” receiving overall a score of 85/100.¹⁸⁴ The Freedom House country report highlights concerns regarding democratic backsliding. Citizens continue to use social media to mobilize protests on political and social issues although new president Javier Milei has implemented restrictions on protests. The President has also dismantled several ministries, reducing their number from 20 to 8. Some controversial reforms have also been engaged regarding women, gender, and Indigenous affairs, raising concerns regarding the protection of vulnerable groups. On the other hand, in June 2024 the Argentine Chamber of Deputies proposed a bill to create an AI regulatory framework with INTI oversight, penalties for non-

compliance, and an advisory board for ethical and human rights impact assessment.¹⁸⁵

In the international arena, Argentina has shown a strong commitment to the protection of human rights, including international and regional initiatives that pertain to AI. However, in September 2024, during the 79th session of the United Nations General Assembly, Argentina refused to sign the UN Pact for the Future, which includes the Global Digital Compact, a comprehensive framework for global governance of digital technology and artificial intelligence.¹⁸⁶

OECD / G20 AI Principles

As part of the G20 and as a prospective member to the OECD, Argentina has endorsed the OECD/G20 AI Principles.¹⁸⁷ According to an OECD report, several policies of Argentina's national AI strategy align with the G20 AI principles. These include the comprehensive, human-centered and human rights-focus nature, which aligns with the Principles for Responsible Stewardship of Trustworthy AI (Section 1). Argentina's investment initiatives, the focus on conditions for AI development, educational plans and international engagements implement Section 2 of the G20 AI Principles (National Policies and International Co-operation for Trustworthy AI).¹⁸⁸

In October 2023, the OECD's *The State of the Implementation of the OECD AI Principles Four Years On* noted that Argentina's Ethics Principles for the Development of AI reflect the five value-based OECD AI Principles and the five recommendations to national governments.¹⁸⁹

Council of Europe Convention on AI

Argentina contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. The Treaty has been signed by 10 countries and the European Union since opening for signature in September 2024. However, Argentina has not initiated the procedures for signing.¹⁹⁰

UNESCO Recommendation on AI Ethics

Argentina is a UNESCO member and adopted the UNESCO Recommendation on the Ethics of AI during the 41st General Conference in November 2021.

In 2022, CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the UNESCO Recommendation in Latin America and the Caribbean.¹⁹¹ They pledged to create a Regional Council composed of national and local governments in the region which will support their implementation efforts.

The Regional Council, comprising national and local governments from Latin America and the Caribbean, including Argentina, was formally established, with its inaugural meeting convened in October 2023.¹⁹²

Argentina also signed the resulting 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.¹⁹³ The declaration reflects UNESCO's Recommendation on the Ethics of AI and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy, and data protection.

More recently, Argentina co-sponsored the adoption of the UNGA AI Resolution, a landmark resolution that emphasized the respect, protection, and promotion of human rights in the design, development, deployment, and use of AI. The resolution also urged all states, the private sector, civil society, research

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

organizations, and the media to develop and support regulatory and governance approaches and frameworks related to the safe, secure, and trustworthy use of AI. The resolution was designed to amplify the work already being done by the UN, including the International Telecommunication Union (ITU), the UN Educational, Scientific and Cultural Organization (UNESCO), and the Human Rights Council. Finally in August 2024, Argentina also signed the Declaration of Cartagena de Indias,¹⁹⁴ which establishes the commitment to promote governance frameworks and AI ecosystems for a safe, inclusive, ethical and responsible development of AI within the Latin American region.

Evaluation

Argentina's comprehensive, ambitious, and human-centered national strategy reflects the country's interest in matching socioeconomic development with strong human rights commitments in the design and development of AI. Despite the initial enthusiasm that surrounded the launching of the Plan, the new government seems to have abandoned this path. It remains to be seen how the Productive Development Plan Argentina 4.0 will be operationalized in practice. Despite significant progress in modernizing data protection law and bringing it up to international standards, the deployment of facial recognition systems has raised widespread concern that AI could be used for purposes that violate individual rights. This threat is especially concerning given recent reports of democratic backsliding. The non-signing of the Pact for the Future or the adoption of the Council of Europe's AI Treaty could represent a significant change of foreign policy to the detriment of human rights safeguards.

Argentina has the resources and the infrastructure to pursue regional leadership. Argentina has signed the UNESCO Recommendation on AI Ethics and, with the collaboration of the CAF, is on its path to its implementation. Argentina has also been calling for a prohibition and regulation of autonomous weapons.

Australia

In 2024, Australia modernized the national privacy act to account for threats to privacy from emerging technology and proposed guidelines for high-risk AI systems. The country also launched a Voluntary Safety Standard and AI Impact Navigator to assist companies developing and using AI systems. Australia

continued to participate in international discussions about human control and autonomous weapons at the UN and through REAIM.

National AI Strategy

The Australian government published a Roadmap for AI in 2019 to “help develop a national AI capability to boost the productivity of Australian industry, create jobs and economic growth, and improve the quality of life for current and future generations.”¹⁹⁵ Australia’s AI Technology Roadmap is intended to help guide future investment in AI and provide a pathway to ensure Australia captures the full potential of AI.¹⁹⁶ The Roadmap identifies three domains of AI development and application where AI could transform Australian industry based on existing strengths and comparative advantages, opportunities to solve Australian problems, and opportunities to export solutions to the rest of the world. These domains are Health, Aging, and Disability; Cities, Towns, and Infrastructure (including connected and automated vehicle technology); and National Resources and Environment (building on strengths related to mining and agriculture). The Roadmap also elaborates necessary foundations for realizing these goals in terms of data governance, ethics, trust research, skills, and infrastructure, while underscoring its complementarity with the OECD AI Principles.

Australia also published an AI Ethics Framework in 2019 to “help guide businesses and governments looking to design, develop, and implement AI in Australia.”¹⁹⁷ Key goals are to achieve better outcomes, reduce the risk of negative impact, and practice the highest standards of ethical business and good governance. The eight AI Ethics Principles are Human, social, and environmental wellbeing; Human-centered values; Fairness; Privacy protection and security; Reliability and safety; Transparency and explainability; Contestability and Accountability.¹⁹⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In 2020, the Australian Department of Industry, Science and Resources (DISR) launched a public consultation to inform the AI Action Plan,¹⁹⁹ which was published in 2021 as part of the Digital Economy Strategy.²⁰⁰ This plan aims to position Australia as a leader in developing and adopting “trusted, secure, and responsible AI,” enhancing business productivity, building a skilled workforce, and addressing national challenges.”²⁰¹

The Plan allocated \$53.8 million over four years to create the National AI Centre (NAIC) and four Capability Centres to support SMEs and promote ethical AI.²⁰² On July 1, 2024, DISR took over administration of the NAIC to strengthen government-industry engagement on AI.²⁰³

Australia's AI Strategy includes coordinated initiatives for responsible AI development and adoption. After a public consultation launched in 2023 on safe and responsible AI in Australia, including the need to regulate AI,²⁰⁴ the government's interim response in January 2024 concluded that the current regulatory framework likely did not sufficiently address known risks presented by AI systems.²⁰⁵

Following the AI Strategy and interim public consultation response, DISR established a temporary AI Expert Group to advise on measures for testing, transparency, and accountability in high-risk AI contexts and ensure system

Center for AI and Digital Policy

safety.²⁰⁶ Comprising 12 industry, academic, and legal experts, the group operated through September 2024, with plans for a permanent group expected.²⁰⁷

DISR launched the Voluntary AI Safety Standard in September 2024²⁰⁸ to establish consistent practices and help organizations manage AI risks, aligning with the broader objectives of the AI Action Plan. The standard provides guidance on the safe and responsible use of AI through ten voluntary guidelines emphasizing testing, transparency, and accountability. The AI Impact Navigator, a tool launched by the NAIC in October 2024, will assist users in implementing the Voluntary AI Safety Standard and in evaluating the impact of their AI systems.²⁰⁹

DISR also laid a path toward regulating the use of AI in high-risk settings with the release of a proposal paper outlining definitions, principles, and mandatory guardrails, including for the use of general-purpose AI systems.²¹⁰ These guardrails reference international AI regulations and include five of the most agreed-upon goals in the AI policy realm: fairness, accountability, transparency, rule of law, and fundamental rights. Public consultation on the proposal closed in October 2024 but how and if DISR implements feedback remains to be seen.²¹¹

The government has also acted to strengthen existing laws in areas that will help to address known harms with AI. This includes the implementation of privacy law reforms, including an in principle agreement to require non-government entities to conduct a privacy impact assessment to identify and manage, minimize or eliminate risks, which is already a requirement for government entities and an

amendment to the Online Safety Act 2021.²¹² A proposed amendment to existing communications legislation targeted misinformation and disinformation²¹³ but was withdrawn in committee over censorship concerns.²¹⁴

While the AI Strategy and bodies like the Australian Human Rights Commission recognize the need for regulation, Australia lacks a specific federal framework for AI. Nonetheless, the Senate formed the Select Committee on Adopting Artificial Intelligence in March 2024 to explore potential opportunities and challenges.²¹⁵ Findings were presented in late November 2024.²¹⁶

International Cooperation on Safe and Responsible AI

Australia and Singapore, building on their pre-existing trade agreement, signed the Singapore-Australia Digital Economy Agreement (SADEA) in 2020. The parties agreed to advance their cooperation on AI to “realise the benefits of AI and minimise any risks, and also shape the development of international frameworks, policies and standards.”²¹⁷

Australia participated in the first AI Safety Summit and endorsed the Bletchley Declaration in November 2023.²¹⁸ Australia thus committed to

participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that “for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.” The next AI Safety Summit was renamed the AI Action Summit and took place in February 2025 in France.

Public Participation

The Australian government has responded to recommendations and feedback from the public in national efforts on AI and digital policy, including the AI Ethics Framework²¹⁹ and Supporting Responsible AI discussion paper.²²⁰ More recently, the Australian Government opened a public consultation²²¹ as part of a review of the Online Safety Act 2021.²²² CAIDP’s comments²²³ highlighted “the online risks which accompany the advent of generative AI are extensive, and include threats to personal privacy, intellectual property, and life-altering outcomes based on AI-enabled decision-making” as it recommended additional safeguards to ensure the Act upholds fundamental rights and safety principles.

The Australian government published an interim response to the Safe and Responsible AI in Australia discussion paper in early 2024.²²⁴ The government committed to developing a regulatory environment that builds community trust and promotes AI adoption. Subsequently, DISR issued a formal request for

comment on Mandatory Guardrails for AI in High-risk Settings.²²⁵ The views were asked on the proposed guardrails, high-risk AI definition, and regulatory options for mandating the guardrails. CAIDP issued a Statement to the Australian Government on Mandatory Guardrails for AI²²⁶ with its recommendations.

The Therapeutic Goods Administration of the Department of Health and Aged Care²²⁷ and Department itself issued separate calls for public consultation in September 2024 as they reviewed their legislative frameworks to “clarify and strengthen legislation and regulation for AI in Australia’s health care settings.”²²⁸ In particular, they sought feedback on stakeholders, what about AI to regulate, and how to prevent AI harms and enable the benefits. The Joint Committee of Public Accounts and Audit adopted an inquiry into the use and governance of artificial intelligence systems by public sector entities in September 2024.²²⁹

The Australian Treasury opened a formal request for comment for a Review of AI and the Australian Consumer Law (ACL).²³⁰ The review will examine the ACL’s fitness to address consumer harms and support responsible use of AI. Inputs are sought to determine if provisions on product safety, prohibitions on businesses for deceptive conduct and unfair contract terms, prohibitions on false representations, etc., sufficiently safeguard and provide remedies against consumer harm. The review also seeks input on whether there are ambiguities around ACL’s application to AI and how it can be addressed.

Data Protection

In February 2023, the Australian Attorney-General's Department released its review of the Privacy Act 1988,²³¹ a significant step initiated in 2020.²³² The review was initiated after the 2019 Australian Competition and Consumer Commission (ACCC) recommended reforms to the Privacy Act that would “ensure consumers are adequately informed, empowered and protected, as to how their data is being used and collected.”²³³ The Privacy Act Review Report²³⁴ includes 116 recommendations based on 30 “key themes and proposals” from stakeholders. “The proposed reforms are aimed at strengthening the protection of personal information and the control individuals have over their information. Stronger privacy protections would support digital innovation and enhance Australia’s reputation as a trusted trading partner,” according to the Attorney-General's Department.

The Office of the Australian Information Commissioner welcomed the release of the report. “This is an important milestone as we move towards further reform of Australia’s privacy framework,” said Angelene Falk, the Australian Information Commissioner and Privacy Commissioner at the time of the report’s release. “As the privacy regulator we see the proposal to introduce a positive obligation that personal information handling is fair and reasonable, as a new keystone of the Australian privacy framework. This shifts the burden from individuals, who are currently required to safeguard their privacy by navigating complex privacy policies and consent requirements, and places more responsibility on the organisations who collect and use personal information to ensure that their practices are fair and reasonable in the first place.”

The Government released its Response to the Privacy Act 1988 Review, noting 10 proposals, agreeing in-principle to 68, and fully agreeing to 38 proposals, including that “further consideration should be given to enhanced risk assessment requirements in the context of facial recognition technology and other uses of biometric information and that this work should be coordinated with the

Center for AI and Digital Policy

Government's ongoing work on Digital ID and the National Strategy for Identity Resilience.²³⁵

These reforms build on Australia's efforts to enact regulation for accountability and data protection. The Privacy APP Code 2017 requires agencies subject to the Privacy Act (Australian Government Agencies – Governance) to conduct privacy impact assessments for all “high privacy risk projects.”²³⁶ Furthermore, section 33D of the Privacy Act grants the Commissioner authority to require an agency to provide impact assessments whenever an activity or function may have a “significant impact on the privacy of individuals.”²³⁷

The Privacy Act also builds on efforts to address privacy concerns raised by facial recognition and other biometric technology. The Federal Attorney-General referred positively to the 2022 Human Technology Institute (HIT) report outlining a Facial Recognition Model Law to address “threats to Australians’ privacy and other human rights” using a risk-based approach.²³⁸ The Federal Attorney-General noted that the Model Law is “a way of striking the right balance, endorsing, in principle, a risk assessment approach to regulating facial recognition and other biometric technologies.”²³⁹

The Government also oversaw public voice opportunities on privacy reform and doxxing. Doxxing is the “intentional online exposure of an individual’s identity, private information or personal details without their consent.”²⁴⁰ The Government received 97 written statements, 62 of which are publicly accessible,

on how to “most appropriately address doxxing through civil remedies”²⁴¹ that would “allow for redress and give individuals greater control and transparency over their personal information.”²⁴² The Parliament approved a bill to amend the Privacy Act 1988 to implement reforms that include “creating a statutory tort for serious invasions of privacy” and amending the Criminal Code Act 1995 to introduce two offenses for doxxing.²⁴³ The bill awaits Royal Assent to become law.²⁴⁴

Algorithmic Transparency

Australian law does not explicitly protect a right to algorithmic transparency. However, the transparency and explainability, contestability, and accountability principles in the AI Ethics Framework provide guidance for organizations²⁴⁵ and the 2024–2025 National Action Plan²⁴⁶ charges the Attorney-General’s Department and DISR to “create transparency in the use of automated decision making and artificial intelligence.” The Australian Government released the Transparency of Automated Decision Making (AU0024) to address public concerns about the transparency and integrity of government decisions made using automated systems and AI.²⁴⁷

These actions follow reports and advice from various agencies to establish algorithmic transparency as a right. In early 2019, the Australian Human Rights Commission called for an AI Policy Council to guide companies and regulators regarding artificial intelligence technology. “When companies use AI decision-making systems, they must build them in a way that allows a person to understand the basis of decisions that affect them. This is fundamental to ensuring

accountability and will be really important for all companies that use AI,” Human Rights Commissioner Ed Santow said.²⁴⁸ In a 2020 paper, Santow called on the Australian government to modernize privacy and human rights laws to account for the rise of artificial intelligence.²⁴⁹ “We need to apply the foundational principles of our democracy, such as accountability and the rule of law, more effectively to the use and development of AI,” he said.

The Office of the Australian Information Commissioner (OAIC) emphasized the need for greater transparency in its 2023 response to the Safe and Responsible AI in Australia discussion paper.²⁵⁰ The OAIC highlighted that “most Australians view transparency about the use of AI and the right to request information on how AI decisions are made as essential preconditions for its responsible deployment in decision-making.”²⁵¹

The Senate Economics References Committee's Interim Report on international digital platforms in 2023 included a chapter on algorithmic transparency.²⁵² Chapter 6 outlines risks such as misinformation, echo chambers, and biases in automated decision-making, stressing the need for algorithm disclosure, especially in content curation and targeted ads. The report called for regulation to ensure algorithms promote fairness, accuracy, privacy, and user safety.²⁵³

An interim report released by the Senate Select Committee on Adopting Artificial Intelligence in October 2024²⁵⁴ recommended that mandatory

transparency and disclosure requirements for AI-generated content should be developed before the 49th Parliament election.²⁵⁵

Data Scraping

The Office of the Australian Information Commissioner (OAIC) and 16 of its international data protection and privacy counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy.²⁵⁶ The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”²⁵⁷ The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”²⁵⁸

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

The OAIC’s press release places the joint initiative in the context of national efforts to hold industry accountable to privacy laws, noting “The joint initiative, with its focus on the implications of AI large language models, coincides with the OAIC recently publishing detailed guidance on privacy and developing

and training generative AI models.²⁵⁹ This guidance communicates the OAIC’s expectations of industry to ensure that in these new and developing areas industry operates within the boundaries of Australia’s privacy law.”²⁶⁰

Privacy Commissioner Carly Kind’s statement in August 2024 on the OAIC decision against investigating Clearview AI cited the initial joint statement to reiterate companies’ obligations to protect personal information.²⁶¹ The Clearview AI case demonstrates the significance of this guidance. In 2021, the Australian Information Commissioner declared that Clearview AI must “cease collecting images from individuals in Australia” and delete images it previously collected because the company had violated the Privacy Act and several Australian Privacy Principles in its use of facial recognition technology to collect images and biometric templates from people in Australia. Kind reiterated that “the determination against Clearview AI still stands” and promised guidance for companies seeking to develop and train AI models. The follow-up joint statement provides such guidance.

Use of AI in Public Administration

After a scandal involving an automated system issuing unlawful and inaccurate debt notices, the Australian government has worked to establish principles and procedures for the responsible use of AI systems in public administration. These efforts culminated in the Policy for the Responsible Use of AI in Government, which took effect on September 1, 2024.²⁶²

From 2016 through 2019, the Australian government agency Services Australia used an automated debt recovery system known as Robodebt to calculate overpayments and issue debt notices to welfare recipients. Robodebt was an automated data matching system that compared the records of Services Australia payment compliance program with averaged income data from the Australian Taxation Office. Robodebt was suspended in 2019 following investigations by the

Commonwealth Ombudsman,²⁶³ two Senate Committees,²⁶⁴ and several legal challenges,²⁶⁵ including class-action lawsuits against the government. In one such suit, Federal Court Justice Bernard Murphy condemned the Government in his ruling and approved a \$1.8 billion settlement, including repayments of debts paid, wiping of outstanding debts, and legal costs.²⁶⁶ In October 2022, the newly elected government effectively forgave the debts of 197,000 people that were still under review.²⁶⁷

A Royal Commission into the Robodebt scheme issued a report in July 2023.²⁶⁸ The Report detailed the human impact of system and its errors, including false or incorrectly calculated debt notices; negative consequences on the physical and mental health of debt notice recipients, often among the most vulnerable; and the lawfulness of the scheme.

In August 2023, the House of Representatives passed a formal motion apologizing for the scheme on behalf of the Parliament. In November 2023, the Australian government formally accepted or accepted in principle all 56

recommendations in the Royal Commission report.²⁶⁹ In the Government Response, the Prime Minister and Cabinet promised increased funding to implement the recommendations aligned to reforms aimed at “building trust in government, investing in a capable public sector, delivering strong institutions[,] and ensuring humans are put back at the centre of human services and service delivery.”²⁷⁰

In September 2023, the Digital Transformation Agency (DTA) and the Department of Industry, Science and Resources (DISR) established the Artificial Intelligence in Government Taskforce.²⁷¹ The Chief Executive Officer for the DTA, Chris Fechner, said that government has an important role to play in setting an example for the safe and ethical use of AI technologies. “We don’t want to be left behind but we do want to protect government systems and ensure we’re ultimately benefiting the wider Australian community.”²⁷²

The Taskforce comprised representatives from multiple Australian Public Service (APS) agencies and aimed to develop a safe, ethical, and responsible approach to AI application, policy, standards, and guidance across the government. The Taskforce identified four key principles for implementing AI safely and responsibly in the public sector: “1) AI should be deployed responsibly in low-risk situations, 2) Transparency and explainability: tell when AI is used and why its use was warranted, 3) Privacy protection and security: use only public information, and 4) Accountability and human centred decision-making: final word should be with a human.”²⁷³

In July 2023, the AI Taskforce released initial interim guidance on government use of publicly available generative artificial intelligence (AI) platforms. The Guidance was updated in November 2023.²⁷⁴ According to the Guidance, one of the golden rules that Australian Public Service staff should consider for the responsible use of generative AI tools is: “you should be able to

explain, justify and take ownership of your advice and decisions.”²⁷⁵ In addition, the Interim Guidance encouraged all APS staff to “read and understand Australia’s AI Ethics Principles,” and outlined steps to adhere to the Principles.²⁷⁶

In December 2023, the Australian government issued the Data and Digital Government Strategy. The data and vision for a world-class APS to 2030.²⁷⁷ The Data and Digital Government Strategy is accompanied by an Implementation Plan and a Roadmap timeline.

With the Strategy, the Australian government commits to “improving and maintaining trust in its use of data and digital technology through adopting a whole-of-government Data Ethics Framework [...] and adopting AI technologies in safe, ethical and responsible ways.”²⁷⁸

Building on the Strategy, the Data and Digital Ministers Meeting released a National Framework for using AI in government in 2024.²⁷⁹ This framework establishes a consistent and holistic approach to AI assurance across all aspects of government using 5 cornerstones.²⁸⁰ Shortly after release of the national framework, the Digital Transformation Agency’s Policy for the responsible use of AI in government took effect.²⁸¹ The policy outlines an adaptive whole-of-government framework that attempts to unite uses of AI in Public Administration and strengthen public trust in the Government’s use of AI.²⁸² Adherence is mandatory for non-corporate Commonwealth entities, excepting national defense matters and members of the national intelligence community, who are encouraged to adopt elements of the policy that do not compromise national security.²⁸³ The policy also requires government agencies to designate accountable official(s) to

assume responsibility for their respective agency's implementation of the Policy by November 30, 2024.²⁸⁴

Use of AI in Education

In May 2022, in a global investigative report on the education technology (EdTech) endorsed by for children's education during the pandemic, Human Rights Watch analyzed the technical and policy features of Minecraft: Education Edition used in Australia. Human Rights Watch found that the endorsements of this online learning platform put at risk or directly violated children's rights due their tracking abilities for advertising purposes.

According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up rights to do so.²⁸⁵

In February 2023, education ministers agreed to develop an evidence-based, best practice framework to guide schools in harnessing AI tools to support teaching and learning, and to establish a Taskforce to develop the framework.

The Taskforce issued the Australian Framework for Generative AI in Schools in November 2023.²⁸⁶ The Education Ministers will review the Framework at least once each 12 months, to accommodate the fast-moving pace of technological development. The framework relies on key principles such as Human and Social Wellbeing, including the use of AI tools "in ways that respect and worker rights, including individual autonomy and dignity"; Transparency, including explainability: "vendors ensure that end users broadly understand the methods used by generative AI tools and their potential biases"; Fairness; Accountability; Privacy, Security and Safety: safe and ethical use of generative AI tools; best practice implementation of generative AI tools in the classroom to lift

student outcomes; reducing workload burden and administration using generative AI tools; and establishing education-specific standards and governance to meet the needs of Australian schools.

On September 10, 2024, the House of Representatives Standing Committee on Employment, Education, and Training tabled its report, *Study Buddy or Influencer*,²⁸⁷ following its Inquiry into the Use of Generative Artificial Intelligence in the Australian Education System.²⁸⁸ The Committee's 25 recommendations explore how Australian schools can maximize the opportunities presented by generative artificial intelligence (GenAI) while successfully mitigating the risks of using the emerging technology and ensuring adequate safeguards and guardrails are in place to prevent misuse. The recommendations focus on integrating GenAI into Australia's national curriculum as a study buddy for all students.

Use of AI in the Military

Although Australia participates in forums on AI use in the military, the Defence Digital Strategy and Roadmap 2024, released on August 27, 2024, did not explicitly include a plan for integrating AI systems.²⁸⁹ The roadmap outlines a vision for a "secure, integrated, and scalable digital environment to compete and succeed in the digital age," but only briefly mentions the use of modern technologies such as AI and business process mining to inform and enhance defense operations.²⁹⁰

Moreover, Australian universities are collaborating with industry and government to train students in applied AI and other emerging technologies as part of Australia's Next Generation Graduates Program. The program seeks to create a skilled workforce that will enhance Australia's defense and aerospace sectors while leveraging engagement with Australia's First Nations peoples.²⁹¹

Lethal Autonomous Weapons

At the 78th UN General Assembly First Committee in 2023, Australia voted in favor²⁹² of resolution L.56²⁹³ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems” from humanitarian, legal, security, technological, and ethical perspectives and reflect on the role of humans in the use of force. The Resolution mandated the UN Secretary-General prepare a report reflecting the views of member and observer states on autonomous weapons systems.

In addition, Australia is a high contracting party to the convention on Certain Conventional Weapons (CCW).²⁹⁴ Australia has also endorsed the United Nations General Assembly Resolution 78/241 on lethal autonomous weapons systems (LAWS).²⁹⁵ Australia made a submission to the Secretary-General’s Report on Lethal Autonomous Weapons Systems in May 2024,²⁹⁶ indicating that the government “considers that the CCW is the most appropriate framework for multilateral discussions on LAWS” and reinforced its compromises to IHL and ethical standards. The submission also called attention to a joint proposal Australia co-sponsored to the Group of Governmental Experts on Emerging Technologies in the Area of Lethal Autonomous Weapons Systems (GGE).²⁹⁷ The Proposal introduces a two-tier approach that involves total bans on specific LAWS (e.g., those designed to target civilians or civilian objects) and the imposition of restrictions on other systems to ensure adherence to IHL.²⁹⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In October 2022, Australia was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.²⁹⁹ In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”³⁰⁰

In February 2023, Australia participated in the Responsible Artificial Intelligence in the Military Domain (REAIM) international summit, co-hosted by the Netherlands and the Republic of Korea.³⁰¹ At the end of the Summit, Government representatives, including Australia, agreed on a joint call for action on the responsible development, deployment, and use of artificial intelligence in the military domain.³⁰² In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” They also “affirm that data for AI systems should be collected, used, shared, archived and deleted, as applicable, in ways that are consistent with international law, as well as relevant national, regional and international legal frameworks and data standards. Adequate data protection and data quality governance mechanisms should be established and ensured from the early design phase onwards, including in obtaining and using AI training data.”

States also “stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders,

Center for AI and Digital Policy

including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain.”³⁰³ Australia has also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.³⁰⁴

At the 2023 REAIM Summit, the Netherlands also took the initiative to launch a Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission, which includes Australian commissioners and experts, has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field.³⁰⁵ The Global Commission will produce a strategic guidance report to identify short and long term recommendations for governments and the wider multi-stakeholder community.³⁰⁶

The second edition of the REAIM was held in Seoul, South Korea, on September 9–10, 2024.³⁰⁷ The Summit led to the adoption of the Blueprint for Action on the responsible use of AI in the military domain, endorsed by Australia.³⁰⁸ This commitment builds on the groundwork from the 2023 summit in The Hague, proposing broader guidance for the ethical and responsible application of AI in military contexts, emphasizing compliance with international law, human accountability, reliability, human involvement, and data governance.

Environmental Impacts of AI

Although AI technology is seen as a possible solution to clean energy and sustainability, Australia’s national science agency, the Commonwealth Science

Center for AI and Digital Policy

and Industrial Research Organization (CSIRO),³⁰⁹ has shifted focus to the potential environmental impacts of AI technology. This focus is expected to progress considering Australia's aim to "become a host for AI data [centers] in the Asia-Pacific region."³¹⁰ Australia's DISR commissioned a 2021 report to review the energy efficiency of data centers. The report found that "[g]rowth in edge computing (the use of data centres close to the point of use), which is required to support applications such as 5G, Artificial Intelligence and Virtual Reality, is likely to increase energy demand."³¹¹ Beyond data center energy impacts, the DISR proposal for mandatory guardrails included environmental impacts among those organizations should consider in assessing whether the use of an AI system is "high-risk."³¹²

Australia was one of 19 signatories to the Net Zero Government Initiative at the United Nations Framework Convention on Climate Change Conference of Parties (COP27).³¹³ The Net Zero in Government Operations Strategy, which outlines the Australian government's approach to achieve net zero government operations by 2030, set energy efficiency and environmental standards for new data centers.³¹⁴ As part of these efforts, the Digital Transformation Agency established a new Data Centre Panel to "help promote sustainable practices across the data centre market [...] to reach net zero."³¹⁵

Center for AI and Digital Policy

Human Rights

Human rights are respected and protected through various laws in Australia at the federal, state and territory levels, through the Australian Constitution, and the common law.³¹⁶ Australia has formally agreed to be bound as a party to seven core international human rights treaties,³¹⁷ including as an original signatory to the Universal Declaration of Human Rights.³¹⁸ Under the Human Rights (Parliamentary Scrutiny) Act 2011, all bills and legislations are scrutinized against these covenants and conventions for compatibility with human rights and freedoms.³¹⁹

Freedom House ranked Australia very highly (95/100) in 2024 and reported that, “Australia has a strong record of advancing and protecting political rights and civil liberties. Challenges to these freedoms include the threat of foreign political influence, harsh policies toward asylum seekers, discrimination against LGBT+ people, legal constraints on the press, and ongoing difficulties ensuring the equal rights of First Nations Australians.”³²⁰ Although Australia has maintained its “free” ranking, the score declined from 97 in 2021.³²¹

Australia also ranks highly in the Freedom House Freedom on the Net report, scoring 76/100 in 2024. Although Australia ranks highly in access to information, the report warns of proposed legislation that “sought to increase online surveillance and limit the security of encrypted communications.”³²²

Human rights and Artificial Intelligence came together in the Australian Human Rights Commission 2023 report to DISR on Safe and Responsible AI. The report outlined human rights risks of AI, called for government action to “ensure human rights-centred design in the deployment of new and emerging technologies (including AI),” and supported human rights impact assessments to increase public

trust.³²³ The Commission reiterated the need to center human rights in the development and deployment of AI systems in a 2024 report the Senate Select Committee on Adopting Artificial Intelligence.³²⁴ The report provided 6 recommendations to the Select Committee to “address risks that are not currently within the scope of the existing regulatory framework.”

OECD / G20 AI Principles

Australia has endorsed the OECD and the G20 AI Principles. Australia has been actively aligning its policies with the OECD AI Principles, including through the AI Ethics Principles, the creation of NAIC, and the Voluntary AI Safety Standard. The OECD notes the Australia Roadmap for AI, the AI Ethics Framework, and the Australia’s AI Standards Roadmap, “intended to identify priority areas for AI standards development and a pathway for Australian leadership on international standardization activities for AI.”³²⁵ The OECD also notes the work of Australia on trustworthy AI for health.

Australia joined the Global Partnership on AI as a founding member in June 2020.³²⁶ Minister Andrews stated, “Australia is committed to responsible and ethical use of AI. Membership of the GPAI will allow Australia to showcase our key achievements in AI and provide international partnership opportunities which will enhance our domestic capability.” Andrews further stated, “Membership of the GPAI will build on the work the Government started at last year’s National AI Summit, which brought together 100 AI experts to discuss the challenges and opportunities which AI will present for the Australian economy.”

Australia actively participated in the G20 meetings held in Brazil in 2024 and it also endorsed the Maceio Ministerial Declaration of the Digital Economy Working Group (DEWG).³²⁷ The declaration calls for international cooperation to

establish transparent and reliable AI guidelines to ensure equitable global benefits, human rights, and ethical standards. The declaration also highlights AI's potential in addressing challenges like climate change and health crises, urging investments in digital infrastructure and skills to maximize its positive impact.”³²⁸

Council of Europe AI Treaty

Australia is not a Council of Europe (COE) member, but became a voluntary party to the COE Convention on Cybercrime in November 2023.³²⁹ Australia participated in the negotiation and drafting process for the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy and the Rule of Law.³³⁰ The first-of-its-kind global framework, the treaty aims to ensure “respect of human rights, the rule of law and democratic legal standards in the use of artificial intelligence (AI) systems.”³³¹ The Framework Treaty opened for signature on September 5, 2024.³³² Australia has not yet endorsed the treaty as a signatory.³³³

UNESCO Recommendation on AI Ethics

Australia endorsed the UNESCO Recommendation on the Ethics of AI in 2021.³³⁴ The Australian AI Action Plan contains no explicit reference to the Recommendation because the Plan was published before.³³⁵ The country is only partially implementing the Recommendations according to the readiness assessment methodology (RAM) released by UNESCO in 2023.³³⁶ The recent

Center for AI and Digital Policy

responsible use of AI in government policy³³⁷ and the national data sharing framework signal further progress.³³⁸ A comprehensive assessment could help Australia evaluate the effectiveness of policy and further implement the UNESCO Recommendation.

Evaluation

Australia has set out an AI Roadmap and an AI Ethics Framework, in addition to endorsing the OECD/G20 AI Principles. The Government is implementing these values-based principles through practical initiatives such as the National Artificial Intelligence Center (NAIC) based on the country's AI Ethical Principles. The AI Ethical Principles are built upon OECD values.³³⁹ In addition, Australia has enacted the Next Generation AI Graduates Program that implements OECD AI Principle 2.4 on "AI skills, jobs and [labor] market transformations," as well as the Singapore-Australia Digital Economy Agreement (SADEA), which enacts the OECD AI Principle 2.5 on "international cooperation."³⁴⁰ Australia has encouraged public participation in the development of AI policy, joined the Global Partnership on AI, and has a strong record on human rights. Australia has independent agencies, including a national regulator for privacy and freedom of information³⁴¹ and a human rights commission that is engaged in AI oversight. Australia was also a cosponsor of the GPA resolution on Accountability in the development and use of AI. However, questions have been raised about the adequacy of the Ethics Framework.

Although Australia has endorsed the UNESCO Recommendations on the Ethics of AI, the Government should take steps to conduct a comprehensive assessment to evaluate their effectiveness and further implement the UNESCO Recommendation on AI Ethics. The UNESCO readiness assessment methodology (RAM) released in 2023³⁴² credits Australia with partially implementing the Recommendations. The modernization of Australia's data protection law to better protect human rights continues to progress, most recently with the amendments to the Privacy Act passing through Parliament. In addition, Australia's national AI

strategy continues to develop, including the release of the Voluntary AI Safety Standard in August 2024, which aims to “ensure that the development and deployment of AI systems in Australia in legitimate but high-risk settings is safe and can be relied on, while ensuring the use of AI in low-risk settings can continue to flourish largely unimpeded.”³⁴³ Concerns exist regarding facial recognition and it remains to be seen whether the modernization of Australia’s data protection law will encompass this aspect as well.

Austria

In 2024, Austria developed the AI Implementation Plan to supplement and apply the national AI strategy. The country also progressed on implementing the EU AI Act. Internationally, Austria also endorsed the Council of Europe AI Treaty as part of the European Union.

National AI Strategy

The Austrian Government presented the national AI strategy, Artificial Intelligence Mission Austria 2030 (AIM AT 2030), in August 2021.³⁴⁴ The objectives are: A broad use of AI oriented to the common good; Positioning Austria as an innovation location for AI in key areas and fields of strength; Securing the competitiveness of Austria through the development and use of AI.

The Austrian strategy is guided by the two cornerstones of the European AI strategy: an ecosystem for trust and an ecosystem for excellence. Austria not only supports increased cooperation at the European level, as proposed in the European Commission’s White Paper on AI³⁴⁵ and the EU AI Act,³⁴⁶ but also intends to shape national AI ecosystems in line with the European AI strategy.³⁴⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Austrian strategy is based on a human-centered approach to AI to ensure that resources are used to support fundamental European values and respect and guarantee fundamental rights such as privacy and the principle of equality. Citizens' involvement is also identified as key.³⁴⁸ Regarding ethical principles,³⁴⁹ reference is made to the European High-Level Expert Group on AI's Ethics guidelines for trustworthy AI.³⁵⁰ Accordingly, AI systems must fulfil three basic principles to be considered trustworthy. They must:

- “be lawful by respecting all existing laws and regulations;
- respect ethical principles and values such as equality and fairness; and
- be robust, both in a technical sense and from a societal perspective.”³⁵¹

The Strategy also mentions the need to establish a clear legal framework that releases innovation in science and economy, reduces uncertainties and at the same time guarantees legal certainty. The Austrian Federal Government supports the creation of a Europe-wide legal framework for AI applications to avoid isolated national solutions.

The AI Implementation Plan introduced in 2024 supplements and updates the AIM AT 30 and “based on the fundamental European values and the upcoming European legal framework.” The implementation plan considers implementation of the EU AI Act along with the national AI strategy.³⁵²

The Federal Ministry Republic of Austria Climate Action, Environment, Energy, Mobility, Innovation and Technology oversees AI policy. Under the broad topic of innovation, the Ministry oversees topics such as digital policy, international/EU aspects, future mobility, research technology and innovation policy in Austria.³⁵³

The Austrian Council on Robotics and Artificial Intelligence (ACRAI) which was established in 2017 and consisted of experts on robotics, and artificial intelligence from industry, research and teaching used to advise the Federal

Ministry Republic of Austria Climate Action, Environment, Energy, Mobility, Innovation and Technology on top priorities, topical issues, challenges, risks, on the use of artificial intelligence as well as robotics and autonomous systems and had been commissioned to help the Ministry to develop its national AI strategy. ACRAI's mandate expired in July 2023 and the Council was subsequently disbanded and transferred to a new Council for Research, Science, Innovation and Technology Development.³⁵⁴

The Interministerial Working Group on the 2030 Agenda was set up under the joint leadership of the Federal Ministry for Climate Protection, Environment, Energy, Mobility, Innovation and Technology and the Federal Ministry of Science, Research and Economy to ensure the continuous exchange of information and the participatory and interministerial coordination processes. This mechanism acts as a participatory exchange mechanism and coordinates reporting on the implementation of the 2030 Agenda at federal level. With the preparation of Austria's first Voluntary National Review on the implementation of the Sustainable Development Goals, the country has taken an important step towards implementing these goals.³⁵⁵

Austria's 11-member AI Advisory Board established in early 2024 includes experts from academia, law, and ethics. This board advises the federal government on AI regulatory measures and ethical concerns and assists in incorporating EU AI Act guidelines into national policy frameworks.³⁵⁶

In Austria, Research and Technology Reports are compiled annually. The focus lies on current topics of national and international research and technology. Reports include information on current developments and trends, extensive data on research and development, and other priority topics. Currently, the Government of Austria does not offer any specific annual report about developments regarding AI or monitoring the implementation of the AI strategy.³⁵⁷

EU Digital Services Act

As an EU member state, Austria is bound by the EU Digital Services Act (DSA).³⁵⁸ The accompanying national implementing legislation, called the “DSA-Begleitgesetz” (DSA Accompanying Act) has been in force since February 2024.³⁵⁹

EU AI Act

As an EU member State, Austria is bound by the EU AI Act.³⁶⁰ Austria will designate national market surveillance, notifying authorities, and public authorities. The national public authorities are charged with protecting fundamental rights. Austria may also introduce legislation to further restrict some AI uses or protect rights, such as in relation to biometric identification.

Public Participation

Experts and other stakeholders were involved in the development of the national AI strategy through the Austrian Council on Robotics and AI.³⁶¹ The strategy also provides for broad participation of civil society organizations, intermediaries, and citizens in the implementation of the measures. The Austrian Regulatory Authority for Broadcasting and Telecommunications (RTR) created an AI Service Desk to serve as a “point of contact and information hub for the general public” on AI. The service desk also supports implementation of the EU AI Act.³⁶²

The Federal Government endeavors to formulate its target provisions in close coordination and comprehensive agreement with the fundamental values and objectives of the European Union. With this strategy, Austria is thus also

contributing to the promotion of Europe's industrial and technical performance regarding AI.

Data Protection

Austria is an EU Member State, so the General Data Protection Regulation (GDPR)³⁶³ applies. The Austrian Data Protection Act (DSG) supplements the GDPR.³⁶⁴

Following the EU AI Act's policy framework on AI systems, Austria has strengthened its data privacy measures. New policies require detailed impact assessments for systems handling sensitive data or biometric recognition. These updates further Austria's commitment to protecting data privacy and human rights.³⁶⁵

According to Article 35(4) GDPR, national supervisory authorities shall compose and publish the list of processing operations that requires performing a data protection impact assessment. According to the list established by the Austrian DPA, a data protection impact assessment is necessary in some cases involving AI use. These concern:

- assessment or classification related to a person's work, economic situation, health, preferences and interests, reliability or behavior, location or movements and that is based solely on automated processing and may have negative legal, physical, or financial consequences
- evaluating the behavior and other personal aspects in cases that may be used by third parties to make automated decisions that have legal effects on the persons evaluated or similarly significantly affect them
- using or applying new or novel technologies or organizational solutions in processing data that make it difficult to assess the impact on data subjects and the social consequences, in particular through the use of artificial intelligence and the processing of biometric data beyond the real-time reproduction of facial images

³⁶³ *Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the Protection of Natural Persons with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (Apr. 27, 2016), <https://eur-lex.europa.eu/EN/legal-content/summary/general-data-protection-regulation-gdpr.html>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- where the use of algorithms makes it possible to take decisions that significantly affect the data subject by going beyond the processing operations normally expected of a data subject³⁶⁶

Regarding the activities of law enforcement authorities, Austria also transposed the EU Data Protection Law Enforcement Directive (LED)³⁶⁷ with the DSG.³⁶⁸

Austria is a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals regarding the processing of personal data.³⁶⁹

The Austrian DPA is a member of the Global Privacy Assembly (GPA) since 2002. The DPA did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,³⁷⁰ the 2020 GPA Resolution on AI Accountability,³⁷¹ the 2022 GPA Resolution on Facial Recognition Technology,³⁷² or 2023 GPA Resolution on Generative AI Systems.³⁷³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Algorithmic Transparency

Austria is subject to the GDPR, as well as Convention 108+ since July 2022. Austrians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.³⁷⁴

Research shows that the Public Employment Service Austria (AMS) makes use of algorithmic profiling of job seekers and there have been concerns about notable discrimination and bias.³⁷⁵ Algorithm Watch also disclosed that the sorting algorithm used in Austria for employment gives lower scores to the disabled and women, and women with children are given even more negative weight.³⁷⁶

On this matter, the Austrian Federal Administrative Court rendered a decision before Austria ratified the Modernized Convention 108. The Court held at the time that the “Public Employment Service could lawfully process personal data belonging to jobseekers as this was necessary to guarantee a well-functioning labour market.”³⁷⁷

On the one hand, the Court stressed that “there are no indications that such data processing is not sufficiently clear [...] and is not otherwise regulated by means of adequate and specific measures to protect the fundamental rights and interests of the person concerned. It should be noted that the result of [any] assessment undoubtedly depends not only on the [personal] data used, but also on who or what carries out the assessment and how the individual factors (data) are weighted in each case. An assessment based on the same (personal) data may therefore not always lead to the same result. However, this does not change the fact that the result is based on the same (personal) data and thus the same information.”

On the other hand, the Court pointed out that “the case of an automated decision [...] is not given here, because [...] [t]he final decision on a jobseeker's chances of finding work and his or her further support remains with the counsellors, and not only were guidelines and instructions issued by the Public Employment Service to its employees, but training courses were also held.”³⁷⁸

³⁷⁸ Ibid

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The DPA ruled on a case concerning the calculation of marketing scores in 2020. The “scores consisted of alleged likelihoods (expressed in a percentage number) that the complainant would belong to certain demographic groups, such as “conservatives,” “traditionalists,” “hedonists,” or “digital individualists.”³⁷⁹ The complainant sent an access request on how the marketing scores had been calculated. The respondent refused access to the request because the requested information qualified as a trade secret.

The DPA first held that the marketing scores constitute personal data. The processing activities leading to the creation of the marketing scores constitute profiling. According to the DPA, the right to information under the GDPR is not limited to cases of automated decision making. The DPA further held that the respondent was not required to disclose the algorithm, source code, or compiler code used when creating the marking scores (as this would most likely qualify as a trade secret). However, the respondent “had to provide the following information in connection with the score calculation: parameters/input variables and how they came about (e.g., using statistical information); effect of the parameters/input variables on the score; explanation of why the data subject was assigned to a particular evaluation result; list of possible profile categories or similar equivalent information that enable the data subject to exercise his or her rights of rectification and erasure and to review the lawfulness of processing.”

Facial Recognition

Since December 2017, 25 “E-Gates,” where border controls are supported by facial recognition, have been installed at the Vienna International Airport in Austria. Manual border controls have also remained in place.³⁸⁰

After a one-year test phase, facial recognition for law enforcement has been in regular operation in Austria since August 2020. The police can only use digital image comparison if there is a suspicion of the commission of an intentional judicially punishable act in the case of unknown perpetrators. The Ministry of the Interior published information about the use of the software after parliamentary inquiries.³⁸¹ Accordingly, the Federal Criminal Police Office may use the system to investigate intentional acts authorized by the judiciary regardless of the level of

punishment for an offense. Whether Austrian law allows for such practice has been the object of controversy in the country.³⁸²

The Austrian supervisory authority (Datenschutzbehörde, “DSB”) issued a decision in 2023 against the facial recognition company Clearview AI, which maintains a database of over 30 billion facial images collected globally. The DSB found Clearview AI to have violated several GDPR provisions, citing a lack of lawfulness, fairness, and transparency in processing the complainant’s personal data, and of illegally scanning and extracting uniquely identifying facial features of the complainant. Clearview AI was ordered to delete the complainant’s personal data and designate a representative within the European Union.³⁸³

Predictive Policing

Efforts to base police work on computer-assisted forecasts have existed in Austria since 2004.³⁸⁴ Due to the increasing importance of big data and AI, an increase and expansion of predictive policing methods is to be expected in the next few years. Most of the predictive policing methods developed or applied in Austria do not affect the scope of protection of the right to respect for privacy or the fundamental right to data protection and are intended in particular to support the patrol service and burglary prevention.³⁸⁵ The situation was different with the project called INDECT, in which an Austrian university, the FH Technikum Wien, was also involved.³⁸⁶ In this project, personal data from social media was to be combined with retained data and video recordings to identify “abnormal behavior” at an early stage. The project was funded by the European Commission from 2009 to 2014.³⁸⁷ Neither the official project website, nor the official website of the FH Technikum Wien show further information on this project.³⁸⁸

Center for AI and Digital Policy

Automated Tax Fraud Detection

The Austrian Ministry of Finance operates the Predictive Analytics Competence Center (PACC). The expectation is that the use of AI will make a significant contribution to establishing a more efficient risk management structure with an increased efficiency in auditing, fraud prevention and tax collection.³⁸⁹

Approximately 6 million income tax disclosures and 1.4 million applications for COVID-19 assistance payments were reviewed by PACC in an automated manner. Based on machine learning, potential fraud scenarios are derived from a variety of historical data sources. This method is used, among other things, for the selection of tax audits, plausibility checks of tax returns, and the evaluation of start-ups and applications of all kinds. The Ministry of Finance claims that this will make it easier to detect tax evasion, including customs fraud.³⁹⁰

According to a Ministry of Finance's press release on the 2023 annual balance sheet, PACC's analysis identified 375,000 cases out of 34 million as potentially implausible, targeting them for further investigation into tax evasion and fraud.³⁹¹

User Tracking and Website Analytics

Many websites use tracking technologies to track users and show them personalized advertisement. The Austrian Data Protection Authority, after declaring the use of Google Analytics illegal,³⁹² held a similar decision on the "Facebook Login" and "Meta Pixel" tools provided by Meta.³⁹³ If these tools are used, data is inevitably transferred to the United States, where the data is at risk of intelligence surveillance. Such transfer would contravene the European Court of Justice's 2020 *Schrems II* decision. According to NOYB, "there is no information

if a penalty was issued or if the DSB is planning to also issue a penalty. The GDPR foresees penalties of up to €20 million or 4% of the global turnover in such cases, but data protection authorities seem unwilling to issue fines, despite controllers ignoring two CJEU rulings for more than two years.”³⁹⁴

Environmental Impact of AI

Austria’s 2024 AI Implementation Plan identifies Climate Neutrality and Sustainability as a Key Area from and through AI.³⁹⁵ The Environmental Impact Assessment Directive requires environmental impact assessments for 89 types of projects, including industrial plants, expected to have “substantial adverse impact on the environment.” However, the directive contains threshold values and criteria that could allow some AI systems or data centers to avoid assessment.³⁹⁶

Lethal Autonomous Weapons

Austria supports a legally binding instrument that would ban autonomous weapons and systems that are not meaningfully controlled by humans.³⁹⁷ At the virtual conference, Safeguarding Human Control over Autonomous Weapon Systems in 2021,³⁹⁸ the Austrian Federal Minister for European and International Affairs of Austria situated the country as the vanguard of many disarmaments, non-proliferation, and arms control issues. They also talked about the challenges of AI and questioned algorithms that make death or life decisions based on ethics, morality, and law and called for a legal norm in the form of a treaty to ensure human control.³⁹⁹

Austria was among the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding

and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”⁴⁰⁰

At the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea, nearly sixty states agreed to issue a joint call to action on the responsible development, deployment and use of AI in the military domain.⁴⁰¹ Austria has now endorsed the resulting Political Declaration issued in November 2023.⁴⁰²

The second REAIM summit took place in September 2024 in the Republic of Korea. Following the summit, a ‘Blueprint for Action’—a framework for the responsible use of AI systems in the military—was adopted by 61 countries, including Austria.⁴⁰³

At the 78th UN General Assembly First Committee in 2023, Austria tabled and voted in favor⁴⁰⁴ of resolution L.56⁴⁰⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

Following the resolution, Austria hosted the first Vienna Conference on Autonomous Weapons Systems Humanity at the Crossroads: Autonomous

Center for AI and Digital Policy

Weapons Systems and the Challenge of Regulation. More than 1000 participants from 140 countries participated in the conference to advance the debate on international regulation of autonomous weapons and discuss the challenges of a legally binding document.⁴⁰⁶

The UN Secretary-General released the report mandated by the earlier resolution. The report reiterated the need for a legally binding treaty by 2026. The treaty would seek to prohibit autonomous weapon systems that function without human oversight and are incompatible with international humanitarian law.⁴⁰⁷

Human Rights

According to the 2024 Freedom House report, Austria scores highly for political rights and civil liberties 2022 (93/100), and is designated as “Free.”⁴⁰⁸ Austria was the 70th country that joined the United Nations and is party to the most important international legal instruments for the protection and defence of human rights.⁴⁰⁹

With regards to AI policy, as part of the objectives contained in its AI Strategy, Austria states that it will deploy AI responsibly targeting the common good relying on fundamental human rights.⁴¹⁰ The strategy further provides that a human-rights compliant framework is being created in partnership with European partners in order to ensure that fundamental rights issues are tackled, likely a reference to the Council of Europe international treaty on AI.

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that “Considering that member States of the Council of Europe have committed themselves to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction and that this commitment stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing; Reaffirming that, as a result, member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which

are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”⁴¹¹

OECD AI Principles

Austria has endorsed the OECD and G20 AI Principles.⁴¹² Regarding implementation, the OECD notes that Austria is actively involved in relevant international organizations, the EU, and other processes and its AI strategy specifically addresses “human-centered values and fairness, robustness, security and safety, inclusive growth, sustainable development and well-being, investing in AI R&D and providing an enabling policy environment for AI.”⁴¹³

Austria is not a member of the Global Partnership on AI, a multi-stakeholder initiative that aims to foster international cooperation on AI research and applied activities and is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”⁴¹⁴

Council of Europe AI Treaty

Austria contributed as a Council of Europe and EU member state in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. Austria endorsed the international treaty as part of the European Union.⁴¹⁵

UNESCO Recommendation on AI Ethics

Austria endorsed the UNESCO Recommendation on AI, the first ever global agreement on the ethics of AI.⁴¹⁶

The Austrian Commission for UNESCO created an Advisory Board on the Ethics of Artificial Intelligence to implement the UNESCO Recommendation on the Ethics of Artificial Intelligence. The Advisory Board aims to exchange

information on developments related to AI and the UNESCO Recommendation, advise the National Contact Point at the Austrian Commission for UNESCO, and support measures to raise awareness and initiate a dialogue in society on the ethical implications of AI.⁴¹⁷

Austria's TU Wien Informatics program became the first to hold a UNESCO Chair on Digital Humanism in 2023. The UNESCO Chair was part of a collaboration among Austria Federal Ministry of Education, Science and Research, Austria Federal Ministry of Climate Action, Environment, Energy, Mobility, Innovation and Technology, Austria Federal Ministry of European and International Affairs, and the City of Vienna. Following UNESCO's AI ethics recommendations, the Chair seeks to lay scientific groundwork for meaningful regulations and foster an interdisciplinary approach to educating future IT professionals.

The Digital Humanism initiative⁴¹⁸ is a collaborative effort across science, politics, business, and civil society to ensure that technological advancements remain human-centered, aligning with values such as the rule of law, fundamental and human rights, a social market economy, and fact-based free discourse. The roots of this initiative in Vienna trace back to the foundational work⁴¹⁹ done by the Vienna Science and Technology Fund in 2019 and the Vienna Manifesto on Digital Humanism.⁴²⁰

Evaluation

The Austrian AI strategy released in late 2021 follows the larger goals of the EU strategy, emphasizing both excellence and the protection of fundamental rights. Austria has emphasized public participation in the development of the national AI strategy and receives expert advice from the Austrian Council on Robotics and Artificial Intelligence, which has stressed the importance of human-centric AI.

Austria ranks highly for traditional human rights protection and is active at the OECD, although it is not a member of the Global Partnership on AI. Austria ratified the Modernized Convention 108 of the Council of Europe, which includes an important provision on algorithmic transparency. This should avoid any doubts

Center for AI and Digital Policy

in the future regarding the scope of application of the right to algorithmic transparency. With the adoption of the EU AI Act, Austria shall establish a national supervisory mechanism which, it is to be hoped, will be an independent and will take the protection of human rights seriously. Concerns persist regarding the use of AI techniques for facial surveillance and predictive policing.

Azerbaijan

In 2024, Azerbaijan announced a draft strategy for AI development. Azerbaijan continued to use autonomous weapons and abstained from or opposed UN efforts to ban LAWS. The country's use of AI systems for military and surveillance purposes intensifies human rights concerns.

National AI Strategy

In recent years, Azerbaijan has taken an active interest in Artificial Intelligence and new technologies to reform the country's economy and extend internal security and policing.⁴²¹ The Ministry of Economy of the Republic of Azerbaijan announced in February 2022 that the country would establish an AI Strategy.⁴²² In March 2024, Acting Chairperson of the Innovation and Digital Development Agency of the Ministry of Digital Development and Transport Inara Valiyeva declared that a roadmap for the national AI strategy "is now at the approval stage."⁴²³

Minister of Digital Development and Transport Rashad Nabiyev announced the draft strategy for the development of artificial intelligence in October 2024. The minister's announcement focused on investment for startups and research to "establish a platform for the exchange of ideas and experience among all participants in the innovation ecosystem." The minister emphasized the plan to integrate sustainable development principles in the agenda, but did not mention ethical or human rights principles such as transparency or fairness.⁴²⁴

Center for AI and Digital Policy

and Machine Learning Platform, played a key role in preparing the roadmap for shaping Azerbaijan's National Strategy on Artificial Intelligence.⁴²⁵

In parallel, the Azerbaijan is also preparing a digital development strategy,⁴²⁶ including a data management strategy,⁴²⁷ with the support of the World Bank.

In 2016, Azerbaijan approved the Strategic Roadmap for Development of Telecommunications and Information Technologies in the Azerbaijan Republic (Roadmap).⁴²⁸ The Roadmap focuses on Information Communication Technology (ICT) sector and sets three main strategic targets:

- Improve governance structures and strengthen ICT;
- Increase productivity and operational efficiency of the business environment;
- Digitize government and social environment.⁴²⁹

In February 2021, Azerbaijan adopted its 2030 Vision: National Priorities on Socio-Economic Development,⁴³⁰ which highlighted the importance of technological transformation.

Both the Ministry of Economy and the Ministry of Digital Development and Transport have been active in areas related to AI adoption. The Ministry of Economy manages the Center for Analysis and Coordination of the Fourth Industrial Revolution established by Presidential Decree of January 6, 2021. The mandate of the center is to respond to global challenges and trends including artificial intelligence.⁴³¹ In October 2021, another Presidential Decree established

the Innovation and Digital Development Agency under the Ministry of Digital Development and Transport. This decision aimed to “improve governance in the field of digitalization, innovation, high technologies and communications in the Republic of Azerbaijan.”⁴³²

Public Participation

Azerbaijan has a law that promotes public participation in the formulation and implementation of government policies.⁴³³ Membership of the public council is open to everyone and elections are held to elect members of the public council.⁴³⁴ As a member of the Council of Europe (CoE), the country is committed to implement the Council of Europe (CoE) National Action Plan for the Promotion of Open Government 2020–2022, through the adoption and implementation of an expanded CoE Action Plan for Azerbaijan 2022–2025, which among several goals, is intended to enhance digitalization, improve civilian oversight, expand public participation, and prevent corruption.⁴³⁵

Azerbaijan is part of the Enlarged Partial Agreement of the North-South Centre of the Council of Europe (NSC) to encourage a bottom-up dialogue between civil society and other democratic governance actors around four goals: global development education, youth co-operation, women’s empowerment, and migration.

Data Protection

Data Protection is enshrined in the Constitution of the Republic of Azerbaijan. Article 32, paragraph VIII establishes the right to inviolability of private life, and states that the “scope of the personal information, as well as the conditions of their processing, collection, passing, use and protection is prescribed by law.”⁴³⁶

Center for AI and Digital Policy

The country's data protection laws also currently encompass three bodies of legislation:⁴³⁷ (1) the Law on State Secrets,⁴³⁸ (2) the 1998 Law on Data, Data Processing and Data Protection, and (3) the 2010 Law on Personal Data.⁴³⁹

The Personal Data Law provides for data subjects' right to be informed, right to access, right to rectification, right to erasure, right to object opt-out, and right not to be subject to automated decision-making (unless this is required by law). The Law regulates the collection, processing and protection of personal data, in the public and private sectors. The Law also covers cross-border transfer of personal data and the rights and obligations of public bodies and local authorities, individuals, and legal entities operating in this field.

The Ministry of Digital Development and Transport is the authority tasked with the implementation of this Law.⁴⁴⁰ A 2018 Decree of the President of the Republic of Azerbaijan authorized the ministry, formerly known as the Ministry of Transport, Communications, and High Technologies,⁴⁴¹ to exercise the authority to avoid infringements of the provision of the law, ensure information security, verify compliance in collection, processing and protection of personal data, and keep registry on information resources related to personal data. The State Security Service, Ministry of Internal Affairs, Ministry of Justice, and Special State Protection Service are also involved in the implementation of the data protection legal regime.⁴⁴²

Azerbaijan is party to Convention 108 or Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data.⁴⁴³ Convention 108 reaffirms the fundamental values of respect for privacy. Article 5 defines the need for personal data to be “obtained and processed fairly and lawfully.”

Convention 108 requires Azerbaijan to establish an independent data protection authority.

The Council of Europe (CoE) Action Plan for Azerbaijan 2022–2025 has a specific chapter on data protection and artificial intelligence. Azerbaijan is committed to:

- Move closer to signing and ratifying the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data (Convention 108+)
- Adopt legislation compliant with the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data (ETS No. 108)
- Establish a dedicated independent authority for personal data protection
- Disseminate and implement Council of Europe guidelines on the use of artificial intelligence
- Conduct an awareness-raising campaign on the importance of data protection for the benefit of the local population

The Chief of Special Communication and Information Security State Service of Azerbaijan, Tural Mammadov, said during the Cyber-Secure Economy: Reforms, Innovative Approaches and Solutions event in 2022 that a draft law on ensuring personal data protection has been prepared in Azerbaijan based on European standards, the GDPR in particular.⁴⁴⁴

Azerbaijan is not an accredited member of the Global Privacy Assembly and has not sponsored the 2018 GPA Resolution on AI and Ethics,⁴⁴⁵ the 2020 Resolution on AI and Accountability,⁴⁴⁶ the 2022 Resolution on Facial Recognition Technology, or the 2023 GPA Resolution on Generative AI Systems.⁴⁴⁷

Center for AI and Digital Policy

Algorithmic Transparency

Azerbaijan has neither signed nor ratified the protocol modernizing Convention 108, which provides for algorithmic transparency.⁴⁴⁸ National legislation does not provide for algorithmic transparency.

AI Readiness and Digitization

The Azerbaijan government has taken concrete steps to promote technology innovation. In June 2019, Presidential Decree 718 created a Centralized Government Cloud⁴⁴⁹ for the effective organization of the formation, storage, maintenance and integration of state information systems and reserves. The Decree also supports innovative solutions based on Artificial Intelligence and robotics and committed Azerbaijan to use “machine learning” (M2M), “artificial intelligence” (EU), “big data,” and “internet of things” (IoT) as bases for providing public services in the country.

In April 2021, the e-Gov Development Center of the State Agency for Public Service and Social Innovations organized the International Conference on Artificial Intelligence in Digital Governance. The first panel discussions were dedicated to the transformation of healthcare with AI, the second panel focused on AI and society and the last session addressed the future of artificial intelligence and how it will change human life.⁴⁵⁰

The Center for Analysis and Coordination of the Fourth Industrial Revolution (C4IR) held several events dedicated to AI and machine learning. The events focused on exchanging views and experience on the development of AI and machine learning with the involvement of government agencies, private companies, scientific and educational institutions, and civil society.⁴⁵¹

In October 2022, a mission of the Center for Analysis and Coordinator of the Fourth Industrial Revolution (C4IR) participated in a “Global Dialogue: The

Center for AI and Digital Policy

role of artificial intelligence in the new global development- innovation and inclusiveness,” presenting the measures taken by the government on the digital economy in the country.⁴⁵²

AI and the Judiciary

The Head of the Innovation and Digital Development Agency of Azerbaijan, Inara Valiyeva, announced the introduction of the Unified Court System based on AI for 2023. The Unified Court System is currently operating in test mode in coordination with the Supreme Court with about 50,000 documents used in the creation of the system.⁴⁵³ Azerbaijan plans to focus on improving the quality of decision-making and management by using Big Data and AI technologies.⁴⁵⁴ The project, conducted with the cooperation of the Council of Europe for the Efficiency of Justice (CEPEJ) and the World Bank, includes an automated random allocation of cases based on criteria regarding subject matter, weight of the case, and the court’s or judge’s caseload; a “fast-track procedure for uncontested small claims; an “e-Order” automated system”; and a unified judicial portal.⁴⁵⁵

Biometrics

The Law on Biometric Data adopted in 2008 determines the formation and requirements for biometric information resources, the organization and purpose of the biometric identification system, and the application of biometric technologies. The law also regulates the relations arising in this area. Azerbaijan began issuing biometric-based electronic identity cards in September 2018. The cards contain

information on place of residence and marital status as well as photos and fingerprints if the citizen is over age 15.⁴⁵⁶

AI Surveillance

A Freedom House 2022 report indicated that “state surveillance is pervasive, though the exact extent to which security agencies monitor ICT activity or track users remains unclear.”⁴⁵⁷ Usage of surveillance tools by the Azerbaijani Government was also reported by Amnesty International.⁴⁵⁸ The OCCRP (Organized Crime and Corruption Reporting Project) named Azerbaijan’s surveillance a Digital Autocracy.⁴⁵⁹ A report by Open Tech found that Azerbaijan is one of several countries where censorship, facial recognition, and access to encrypted communication have been prevalent as forms of information control.⁴⁶⁰

The Law on Operative-Search Activity authorizes agencies to conduct surveillance without a court order in cases where it is regarded as necessary to prevent serious crimes against individuals or especially dangerous crimes against the state. The vaguely written provision leaves the law open to abuse. It has long been believed that the State Security Service and the Ministry of Internal Affairs monitor the communications of individuals, especially foreigners, prominent political activists, and business figures.⁴⁶¹

In 2015, leaked documents showed that the Azerbaijani government was a client of the Italian surveillance company Hacking Team.⁴⁶² In the previous year,

Center for AI and Digital Policy

Citizen Lab reported that the government was using RCS (Remote Control System) spyware sold by Hacking Team. The RCS endpoint was active in Azerbaijan between June and November 2013. Azerbaijan hit international headlines in 2013 when the results of the October presidential elections were accidentally released before voting began.⁴⁶³ RCS allows anyone with access to activate a targeted device's camera and microphone and to steal videos, photos, documents, contact lists, and emails.⁴⁶⁴

In 2017, Amnesty International reported that Azerbaijani human rights activists, journalists, and political dissidents have been the targets of a sustained spear phishing campaign using emails and Facebook chat, apparently aimed at gaining access to their personal information and private communications.⁴⁶⁵ In the same year, malware targeted Azerbaijani dissidents.⁴⁶⁶

An April 2018 report by Qurium revealed that Azerbaijan had purchased specialized security equipment, in particular Deep Packet Inspection (DPI) technology, from the Israeli company Allot Communications for some \$3 million.⁴⁶⁷

In October 2018, Israeli newspaper Haaretz reported that Israel's Verint Systems had sold surveillance equipment and software to the Azerbaijani government. Local police later used the equipment to identify the sexual orientation of users on Facebook.⁴⁶⁸ Haaretz reported that a few years after Verint's systems began being used Azerbaijani police arrested and tortured 45 gay men and transgender women.⁴⁶⁹

In July 2021, an investigative initiative led by Forbidden Stories concluded that the Pegasus software produced by the Israeli cybersurveillance company NSO

Group was used in Azerbaijan to target more than 40 Azerbaijani journalists.⁴⁷⁰ Reporters with the Organized Crime and Corruption Reporting Project (OCCRP), which was among the groups working on the project, found some 250 potential targets in Azerbaijan, the majority of whom were “dissidents, activists, journalists, and opposition politicians.” The report added that “journalists came under particular pressure, with dozens of prominent names, including OCCRP’s Khadija Ismayilova, appearing on the list.”⁴⁷¹

The day full-scale war erupted between Azerbaijani and Armenian forces in Nagorno-Karabakh, the Ministry of Transport, Communications and High Technologies throttled mobile and fixed-line broadband internet across Azerbaijan and blocked a number of social media platforms and websites, including Facebook, WhatsApp, and Skype. The action lasted 46 days, Azerbaijan’s longest internet disruption to date.⁴⁷²

Facial Recognition

In December 2019, a report by Qurium indicated that the government may be using facial-recognition technology. Qurium identified an AzerTelecom server running the software.⁴⁷³

The Ministry of Transport, Communications and High Technologies (now Ministry of Digital Development and Transport) developed a Public-Private Partnership with SVORT and Sinam to establish AzInTelecom LLC.⁴⁷⁴ AzInTelecom is developing a new generation cloud digital signature called SIMA.⁴⁷⁵ SIMA’s initial purpose is to facilitate access to e-government services but will expand to the use of services through banks, mobile operators, internet providers, and household appliance stores. SIMA combines face recognition, public key, and cloud technologies and is based on biometric authentication.

Based on SIMA signatures, the Information Computing Centre is developing a payment system with face recognition technology.⁴⁷⁶ Users scan their identity card and verify their identity via face recognition through the front camera of the mobile devices.⁴⁷⁷ E-signatures are regulated by the Law of Azerbaijan on Electronic Signature and Electronic Document of March 9, 2004.⁴⁷⁸ No amendments were introduced concerning SIMA, biometric authentication, or facial recognition.

Smart Cities

As part of its plan to repopulate the Karabakh area following the war with Armenia, Azerbaijan plans to build Smart Cities/Villages in Zangilan. After the first pilot project of the Aghali village, three additional smart villages were planned for 2023.⁴⁷⁹

The President of Azerbaijan, Ilham Aliyev, announced in January 2021 that “settlements recently liberated from Armenian occupation will be re-established based on the concept of smart city/village.”⁴⁸⁰ The Concept of Smart Cities and Smart Villages was later approved by presidential order.⁴⁸¹ The Smart City/Village concept is to be implemented through working groups representing various ministries.⁴⁸² A publication of the Baku Research Institute provides insights about the Smart Cities concept as a means to promote sustainable

development of territories and attract population back.⁴⁸³ The World Bank published a framework and Smart Villages Readiness Index for Azerbaijan to support the country in ensuring that economic opportunities, access of service, and governance are applied in the process.⁴⁸⁴

Environmental Impact of AI

The Minister of Digital Development and Transport emphasized the country's attention the principles of sustainable development in its technology and innovation agenda in his announcement of the national strategy for AI development.⁴⁸⁵ However, no available policies demonstrate how officials plan to implement the principles.

Lethal Autonomous Weapons

During his swearing-in ceremony in February 2024, Azerbaijan's President, Ilham Aliyev stated, "Today, in the field of industrial development, in military industrial complex and, in general, in the military field, technological development and superiority are of great importance. Everyone saw this during the Second Karabakh War and the anti-terrorist operation. [...] Technological development, digitization, cybersecurity, application of artificial intelligence—all these should become part of our daily life. Government agencies, the private sector, and all other segments of society must be ready for this. [...] I do not see any dangers or threats to Azerbaijan but I know why—because they know that our response will be merciless, it will be crushing, and it will be given regardless of anything. Therefore, if we do not achieve technological development, if there are just a few thousand not tens of thousands of Azerbaijanis in this business, we may be overtaken. Therefore, I think that all institutions and, at the same time, society should know and see this as a duty."⁴⁸⁶

Azerbaijan is not a party to the Convention on Conventional Weapons (CCW),⁴⁸⁷ although the country participated as an observer on CCW meetings on

killer robots in November 2019.⁴⁸⁸ Azerbaijan is not among the countries that support a ban on lethal autonomous weapons.⁴⁸⁹ At the Plenary meeting on December 22, 2023, Azerbaijan abstained from voting on General Assembly Resolution 78/241, which asks UN Secretary-General António Guterres to seek the views of countries and other stakeholders on addressing the challenges of autonomous weapons systems from various perspectives and report back in the second half of 2024.⁴⁹⁰

Over the last decade, Azerbaijan has steadily built up its armed forces and purchased weapons from Russia, Israel, and Türkiye.⁴⁹¹ Azerbaijan also developed drone arsenal composed of Turkish and Israeli UAVs.⁴⁹²

In 2016, during the Four-Day War, also known as the Nagorno-Karabakh conflict in which the Azerbaijani Armed Forces faced the Armenian-backed Artsakh Defense Army, Azerbaijan used the Harop UAV to hit many targets, including artillery, air defense systems, and a busload of Armenian troops.⁴⁹³ As Forbes reported,⁴⁹⁴ the Harops were supplied by Israel. In 2017 a team from Aeronautics was in Azerbaijan to finalize a contract for Orbiter 1K kamikaze drones and were asked to attack enemy positions. Apparently when the Israeli drone operators refused, “senior representatives of the company took control and operated the craft themselves, ultimately missing their targets.” Israeli authorities imposed a two-year ban on Aeronautics for this stunt. But when the ban expired in 2019, the company promptly announced a \$13m deal to sell drones to

Azerbaijan. In the longer term, Azerbaijan plans to produce a licensed copy of the Orbiter known as Zarba themselves.

An Azerbaijani company announced in 2018 that it was working on three different sizes of kamikaze drones,⁴⁹⁵ including one with an 11-pound warhead able to cruise for three hours looking for targets, while another company announced manufacturing kamikaze-drone called Bat.⁴⁹⁶

Algorithm Watch reported that Azerbaijani forces used at least three different models of drones capable of identifying and destroying a target automatically⁴⁹⁷ and several autonomous weapons in the Second Nagorno-Karabakh conflict, known as the 2020 War.⁴⁹⁸

The 2020 War raised serious questions concerning the legality of UAVs and autonomous weapons. Ulrike Franke, autonomous weapons expert from the European Council on Foreign Relations, saw a watershed in warfare and commented: “The really important aspect of the conflict in Nagorno-Karabakh, in my view, was the use of these loitering munitions, so-called “kamikaze drones”—these pretty autonomous systems.”⁴⁹⁹ Human Rights Watch, in a statement to support the International Committee of the Red Cross initiative to ban Killer Robots, indicated: “the increased use of weapons systems with autonomy in today’s armed conflicts underscores the importance of creating a new international legal standard now, before it is too late.”⁵⁰⁰

The Republic of Nagorno-Karabakh was dissolved in 2024.⁵⁰¹ In 2023, with Russia distracted and bogged down by its war in Ukraine, Azerbaijan

launched a blockade of Nagorno Karabakh, eventually seizing the region and causing the majority of its Armenian population to flee.⁵⁰²

In the preliminary report on the draft of the UNESCO Recommendation on the Ethics of AI, Azerbaijan was referenced as a case of the use of AI technologies in armed conflicts. The report concluded that: “from the point of view of international humanitarian law, it is highly recommended to have certain regulations concerning the use of AI in military technology, so-called lethal autonomous weapons.”⁵⁰³

Human Rights

Azerbaijan is a Member State of the United Nations and of the Council of Europe. Azerbaijan endorsed the UN Universal Declaration of Human Rights⁵⁰⁴ and ratified the European Convention on Human Rights. Azerbaijan also has human rights obligations at the regional⁵⁰⁵ and universal levels.

The 2024 Freedom House report on Azerbaijan ranks the country as “Not Free” with a score of 7 out of 100, two points lower than in 2023.⁵⁰⁶ Among key aspects, the report cited the concentration of power in the authoritarian regime headed by President Ilham Aliyev since 2003 and his family. According to Freedom House, “Corruption is rampant, and the formal political opposition has been weakened by years of persecution. The authorities have carried out an extensive crackdown on civil liberties in recent years, leaving little room for independent expression or activism.” The fleeing of nearly all ethnic Armenians from the Nagorno-Karabakh region following Azerbaijani control in 2023 also contributed to the country’s “not free” status.

Azerbaijan scores 34/100 on internet freedom.⁵⁰⁷ Internet freedom continues to be restricted with blocked access to several social media sites and self-censorship through a media registry. “The government also launched a media

registry, required by the new media law adopted in 2022, and rejected the applications of several independent news outlets to join the registry. Prosecution of activists for their online criticism of the government continued during the coverage period. Additionally, activists faced online harassment, doxing, and blackmail.”⁵⁰⁸

The Council of Europe (CoE) Action Plan for Azerbaijan 2022–2025 includes strategic programming to align legislation, institutions, and practices further with CoE standards in human rights, the rule of law, and democracy.⁵⁰⁹ Among the objectives of the Action Plan are: the implementation of the UN 2030 Agenda for Sustainable Development,⁵¹⁰ and the identification of areas for cooperation in artificial intelligence.

Azerbaijan is also part of Partnership for Good Governance, through which the European Union and the Council of Europe cooperate to strengthen governance in the Eastern Partnership region⁵¹¹ and advance localized efforts to improve “stability, prosperity, and resilience.”⁵¹²

OECD / G20 AI Principles

Azerbaijan is not an OECD member and has not endorsed the OECD AI Principles. The OECD Development Centre has been supporting Azerbaijan in the promotion of enterprise digitalization. A 2022 study highlighted the significance of digitalization to allow Small Medium Enterprises access to strategic resources and integration into global markets.⁵¹³

Council of Europe AI Treaty

Rights, Democracy, and the Rule of Law.⁵¹⁴ However, Azerbaijan has not signed the treaty.⁵¹⁵

UNESCO Recommendation on AI Ethics

Azerbaijan is a UNESCO member since 1992 and is one of the 193 countries that endorsed the UNESCO Recommendation on the Ethics of AI.⁵¹⁶ It remains to be seen which steps Azerbaijan will take to implement the Recommendation.

Evaluation

Azerbaijan has set an ambitious goal of embracing new technologies to propel the economic growth of the country. The digitalization process in Azerbaijan has been accelerating and has stimulated several initiatives, including the development of a National AI Strategy. The country has not yet signed the protocol modernizing Convention 108 nor created an independent agency or mechanism for data (and AI) oversight to modernize its data protection law regime. Concerns exist that, with the use of AI, Azerbaijan is turning into a “digital autocracy.” The country has not endorsed any declaration against the use of LAWS and has been a laboratory for their use.

Bahrain

In 2024, Bahrain approved a law to punish the misuse of AI and introduced legal frameworks to protect individual privacy and reduce algorithmic biases through implementation of the Personal Data Protection Law. Limits on the freedom of expression and mobility remain, especially given the government’s use of AI systems for mass surveillance and tracking.

National AI Strategy

The Kingdom of Bahrain has declared AI as one of the focus areas of its digital strategy plans. Notwithstanding Bahrain’s relatively strong position as a leader in cloud technology and e-government in the Gulf Region, and a strong

Government AI readiness index,⁵¹⁷ the country is yet to formulate an AI policy framework.⁵¹⁸

However, Bahraini Prime Minister Prince Salman bin Hamad Al Khalifa approved the Sixth National Telecommunications Plan with the promulgation of an Edict on the Minister of Transportation and Telecommunications recommendation in November 2023.⁵¹⁹ The plan seeks to boost the telecommunication sector and includes the development of a national AI strategy and monitoring mechanism, “collaborative AI governance,” “conductive AI,” and AI “adoption across high-impact sectors.”⁵²⁰

Bahrain’s Shura Council unanimously approved a new standalone law to regulate AI in April 2024. The law identifies some offenses for misusing AI punishable by fines and imprisonment.⁵²¹

Under the leadership of HM King Hamad bin Isa Al Khalifa, King of Bahrain, the government initiated plans for the transition of Bahrain to a knowledge-based economy that keeps pace with the global trends in science and technology.⁵²² In the opening of the 5th legislative cycle of 2019, H.M. directed the government to undertake a national plan to increase the readiness for the digital economy “by adopting and employing artificial intelligence technology in the production and service sectors, through the establishment of the necessary systems and technical frameworks, as well as through encouraging quality investments, in order to guarantee the maximum benefit to our national economy.”⁵²³

Center for AI and Digital Policy

Elements of an AI roadmap are nested within the broader strategic digital and economic initiatives, including the Kingdom's Economic Vision 2030,⁵²⁴ which addresses AI policy and development in the country⁵²⁵. The Digital Transformation Journey of the Kingdom focuses on fostering an innovation ecosystem for the use of emerging technologies for the benefit of the Bahraini society. The Kingdom "encourages those involved in designing, developing, and deploying new technologies to ensure that they are consistent with the Kingdom's values and adhere to international norms and standards."⁵²⁶

The Digital Transformation Journey engages key government entities across multiple sectors such as the Bahrain Economic Development Board (EDB), which sets the goals and policies for Vision 2030, and the Information and eGovernment Authority (IGA), which implements digital transformation under the supervision of the ICT Government Committee (ICTGC).⁵²⁷ Tamkeen, the Bahrain Labor Fund, supports the private sector through strategies for enterprise growth and workforce development and by leveraging AI in the higher education sector. Other actors are the Bahrain Information Technology Society and AI Society, which act as a medium for civil society under license of government regulators.⁵²⁸

This vision for a modernized and digital economy in the public and private sector helped shape Bahrain's Digital Government Strategy 2022 to digitize and transform public services and increase digital usage in the country. The strategy is part of the Government of Bahrain's Government Action Plan 2019–2022, under the supervision of the Supreme Council for Information & Communication

Technology (SCICT) led by the Deputy Prime Minister. The digital initiatives are under the coordination of the National ICT Governance Committee (ICTGC).⁵²⁹

The Digital Government Strategy 2022 promotes principles of inclusion, increased digitization, design considerations, data analysis and transparency, and has five focus areas for including artificial intelligence:

- Strengthening digital infrastructure, reinforcement of the cloud based working environment, data, and artificial intelligence to fostering AI for the digital economy
- Accelerating the transformation and collaboration efforts of various public sector entities
- Ensuring the enforcement of policies, regulations and standards by safeguarding constituents' basic rights and protecting them against cyber risks
- Strengthening accountability, transparency and civic engagement through open data and e-Participation
- Encouraging innovation & nurturing entrepreneurship.

Bahrain launched the 2022–2026 Telecommunications, ICT, and Digital Economy Sector Strategy in February 2022 in line with the Economic Recovery Plan and the Digital Government Strategy 2022. Minister of Transportation and Telecommunications Kamal bin Ahmed Mohammed explained that the strategy aims “to increase the efficiency of government services through e-transformation, digitizing documents, moving to e-payments, and expanding the use of AI, while strengthening public private partnerships.”⁵³⁰ Performance indicators set for evaluation of the implementation by 2026, include the increase of start-ups by 20%, automation of 200 government services, increase in the sector by 35% and training 20,000 on cybersecurity. The government has aligned the ICT digital strategy to the UN Sustainable Development Goals, the Government Action Plan, and the Economic Vision 2030.⁵³¹

Bahrain is one of the first countries, along with the United Kingdom, to pilot test the World Economic Forum (WEF) AI procurement guidelines for the

public sector.⁵³² The guidelines aim to “enable governments to responsibly and sustainably deploy AI technology,”⁵³³ and “set government use and adoption of AI on a better path.”⁵³⁴ The guidelines have the potential to enhance explainability and accountability in the AI systems before acquiring and deploying these solutions, at the stage of writing proposal requests.⁵³⁵ Under the leadership of the Bahrain Economic Development Board (EDB), the adoption of the framework was in line with the country’s “reputation as the Middle East’s testbed thanks to its innovative regulatory framework, strong technology ecosystem and rapid shift to e-government.”⁵³⁶ To date there are no reports about the progress of the pilot in Bahrain.

Public Participation

Since 2016, Bahrain has been very active in promoting and developing public participation in relation to its digital services and technology. This has consistently involved a theme of strong encouragement of citizens and users to primarily engage with the government via digital means and social media. Bahrain’s eGov Strategy 2016 included a digitized National Suggestions and Complaints System, an open data platform, and continued encouragement of uptake of eGovernment services. In 2018, the strategy directly prioritized objectives including “Nurturing active participation and engagement with constituents.”⁵³⁷

Center for AI and Digital Policy

In the Digital Government Strategy 2022, the government developed the “Leave No One Behind” digital policy to focus on citizen needs, underpinned by the Digital First principle.⁵⁴¹ This principle prioritizes the design of public services digitally first to encourage citizens voicing their concerns and opinions via portals such as Tawasul. The design should require citizens and corporations to supply data only once to a government entity and the pooling of government data for greater public accessibility and civic engagement, which supports Bahrain’s Digital Identities initiative.

Data Protection

Bahrain has led the region in the enactment of legislation aligned to the highest global standards. The Kingdom was the second State in the Gulf Region, following Qatar, to address personal data protection as a right, with the enactment

of Law No. (30) of 2018 with Respect to Personal Data Protection Law (PDPL).⁵⁴² The Royal Decree No (78) of 2019 established the Personal Data Protection Authority (PDPA),⁵⁴³ and granted the Minister of Justice, Islamic Affairs and Waqf the chair of the Board of Directors of the PDPA.⁵⁴⁴ The PDPA has the responsibility to enforce the law and investigate potential violations.⁵⁴⁵

The PDPL, inspired by the EU GDPR, entered into effect in August 2019. The Law protects the rights of individuals regarding the collection, processing, and storage of their personal data (whether by automatic or manual means), and establishes obligations to data controllers or data processors in their relationship with data owners or subjects.⁵⁴⁶

The PDPL shares similarities with the GDPR⁵⁴⁷ in the rights to notification of data collection and processing, right to erasure, and right of rectification, but differs in some specifics related to the right to be informed (Article 18) and the right to object to processing of personal data (Articles 19, 20, and 21). Exceptions to the right not to be subject to decision-making based on solely automated means (Article 22), the absence of the right to data portability, and the shorter period of response to data subjects' requests (15 days vs one month in the GDPR) are important differences.

Unlike the GDPR, the PDPL mandates data managers to recognize the right of Bahraini data owners to object to personal data that causes harm or distress to the data owner or any persons. Prior written approval from the Personal Data Protection Authority is mandatory before processing certain personal data. Article 58 defines criminal and civil penalties for violations including prison, in specified cases, in contrast with GDPR where only monetary penalties are defined.

Following public consultations, the Minister of Justice issued ten decisions to guide implementation of the PDPL. These decisions specified technical requirements to protect personal data, rules and procedures for processing, the transfer of data outside of Bahrain, conditions for creating publicly accessible

Center for AI and Digital Policy

Accountability,⁵⁵⁴ the 2022 GPA Resolution on AI and Accountability,⁵⁵⁵ or the 2023 GPA Resolution on Generative AI Systems.⁵⁵⁶

Algorithmic Transparency

Bahrain has not enacted algorithmic transparency laws. The PDPL in Article 15, requires permission from the Authority before the automated processing of personal data of sensitive nature, biometric data, genetic data, linking data to two or more data controllers for different purposes. Article 22 includes the right to object to decisions based solely on automated processing for purposes of assessing performance at work, financial standing, credit scoring, reliability or conduct. Yet the PDPL does not include provisions to ensure transparency in the methods of processing.

According to Bahrain's National Digital Portal, the country introduced legal frameworks to protect individual privacy and reduce algorithmic biases in 2024. Although specific implementation details were not provided, Bahrain identified transparency, explainability, and non-discrimination as essential values for ethical AI systems to support more effective bias mitigation.⁵⁵⁷

Previously, Bahrain joined other member states of the Digital Cooperation Organization (DCO) to adopt the Riyadh AI Call for Action Declaration (RAICA) during the Global AI Summit of 2022.⁵⁵⁸ This Declaration is a commitment to

develop AI technology that benefits people, communities, and nations. Item 4 of the Call for Action addresses safeguards to prevent unfairness of algorithms against individuals due to their orientation, culture, gender, or race.

Digitization

Bahrain stands for digitization with its e-government and smart city plans. In November 2021, Bahrain launched an ambitious Economic Recovery Plan to propel growth post-COVID-19 through an investment of more than \$30 billion in national infrastructure and strategic priority sectors.⁵⁵⁹ Government entities with plans to use AI include the National Space Science Agency in agriculture,⁵⁶⁰ the Supreme Judicial Council in the courtroom,⁵⁶¹ the University of Bahrain in research labs, and advanced computing for applications in industry. The Kingdom has taken steps to build Smart cities, establish Smart traffic control, Smart cooling systems, and Smart banking.⁵⁶²

The Digital Government Strategy issued on September 2022, focuses on modern technologies and AI in the development of government services, leveraged by digital infrastructure and data.⁵⁶³

In cooperation with UNDP Bahrain, the country developed a comprehensive plan and roadmap of implementation of the sustainable Digital economy by 2025. A range of AI related initiatives and policies related to emerging technologies included:

- A cloud-first policy approach for the public sector during procurement processes

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- AI and Robotics use in banking, retail and financial services, supported by the government agencies such as Tamkeen
- The creation of the region's first national data repository, encompassing 73 government bodies for predictive analytics to improve public service and data access, including a partnership with AWS for a Big Data Hub

Internet of Things (IoT) initiatives are also being developed with agencies including the National Space Science Agency (NSSA); the Ministry of Transportation and Telecommunication; the Ministry of Works, Municipalities Affairs, and Urban Planning; and the Economic Development Board. The Government of Bahrain is partnering with Amazon Web Services to establish Big Data centers.⁵⁶⁴

Mass Surveillance

Amnesty International reported about an ongoing investigation on the use of Pegasus Spyware to infect the devices of three political activists in Bahrain in 2021.⁵⁶⁵ The misuse of the spyware provided by Israeli NSO Group to trace mobile phones targeted at least 50,000 devices of journalists and human rights activists. According to Citizen Lab, Bahraini authorities used cyber surveillance since 2013, including phone forensics technology sold by Israeli company Cellebrite to extract private data from the devices of arrested activists.⁵⁶⁶

The Carnegie Endowment for Peace report on AI surveillance, found that Bahrain is using facial recognition for smart policing, mainly from Chinese technology providers such as Dahua.⁵⁶⁷ Reports of use of surveillance cameras in public spaces also surfaced.

⁵⁶⁴ Kingdom of Bahrain, *Digital-First Policies: Bahrain's Digital Path* (Jul. 30, 2024), https://www.bahrain.bh/wps/portal/en/BNP/HomeNationalPortal/ContentDetailsPage/?ut/p/z0/1Y67bsJAEV_ZVO4RDPYxEAZgoQTiYSAxGMbtLZH9oTNRLEXIM_HUPGo6O69Oro6oGENWsyRC-PZibFt3-h42_14xWTwjgb90L8WQ7n8WjaxekkggUJfIK-hpKv2Rjj72TQD_ujCCM8v_Dvfq_fQGdOPP17WKdSbUkCNKk7eOVLUjuWInd_AaamrA0LK0sFN_bi0gRYUxspV95VnLW9IVNnpWK54e5tHpWftMm5YG-sqpzljKl5XKDaTVYdvXk5AeziS-M!/

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The OHCHR reiterated concerns about surveillance of individuals and groups cooperating with the United Nations.⁵⁶⁸ The Ministry of Interior has issued statements warning about legal procedures against activists and their followers who participate in cybercrime on social media.⁵⁶⁹

Bahrain's eGovernment authority released the "BeAwareBahrain" app to "ensure the safety of all its citizens and residents."⁵⁷⁰ The app alerted individuals in case of close contact with a confirmed case of COVID-19 and was able to confirm the location of people who had moved more than 15 meters from their phone. A 2020 report by Amnesty International on 11 countries using data tracking apps for COVID-19 concluded that the BeAwareBahrain app was among "the most alarming tools [...] carrying out live or near-live tracking of users' locations by frequently uploading GPS coordinates to a central server."⁵⁷¹ The surveillance activities included the real-time broadcast of users' locations to a government database, the publication of online sensitive information linked to their national ID, and the enforced use of a Bluetooth bracelet during quarantine.

Biometric Identification

Bahrain has integrated biometrics and digital IDs as part of the Digital First Policy. The use of a nationwide digital identity scheme to include Sijilat (the Commercial Registration Portal), the National Taxation System, and Sehati (the National Social Health Insurance Program), aims to facilitate users access to government services through one-time input into the system.⁵⁷² Users can visit a Government Service Center if they lack internet access.

Bahrain introduced biometric identification for automated border control in Bahrain International Airport (BIA) in 2019, as part of the Airport

Modernization Programme (AMP).⁵⁷³ In July 2022, Bahrain joined the Global Entry Partnership, the U.S. Customs and Border Protection (CBP) program for expedited entry into the U.S. for pre-approved, low-risk travelers. The program makes use of facial recognition and travelers can make use of biometric kiosks at airports to process them.⁵⁷⁴

Tamkeen (Labour Fund), Bahrain's government agency promoting private-sector business and individual development, launched digital onboarding using biometric identification to register customers. Tamkeen uses B2B payment integrated with BENEFIT Pay.⁵⁷⁵ BenefitPay is a financial network established in 1997 under license of the Central Bank of Bahrain.⁵⁷⁶ Benefit uses facial recognition for validation and authentication of users, recognizing all GCC IDs and passports of all nationalities. The service is available for FinTech, insurance, and investment companies to curtail cybercrime.⁵⁷⁷

Bahrain witnessed a significant uptake of digital identification and online civil registration services, with 743,000 transactions completed in 2023. The digitization of these services is crucial to the country's digital transformation.

With the growing trend towards digitization, only around 5% of transactions require physical contact, mainly for issues related to issuing residence permits and biometric updates. New initiatives include a national birth system, digital archiving of records, and a Central Population Registration System.⁵⁷⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Environmental Impact of AI

Bahrain revised its strategy roadmap in the wake of the COVID-19 pandemic to reprioritize its digital projects and ensure alignment with the UN Sustainable Development Goals.⁵⁷⁹

Additionally, the government is working toward a strong and sustainable digital economy by 2025. This is reflected in the Kingdom of Bahrain Economic Vision 2030, which seeks to ensure “a safe, secure, sustainable and attractive environment and world class infrastructure.”⁵⁸⁰

Bahrain has developed ethics to guide the responsible development and adoption of AI in the country, including a principle that “AI systems should be developed and used in a way that is sustainable and minimizes their environmental impact.”⁵⁸¹

AI is also a driver of sustainable development in Bahrain. The University of Bahrain and the Benefit Company signed a Memorandum of Understanding to use AI and advanced computing for research and innovation into sustainable energy, climate change, and sea-level prediction.

Lethal Autonomous Weapons

Bahrain is a High Contracting party to the Convention on Certain Conventional Weapons’ (CCW) Protocols III, IV, and V.⁵⁸² Bahrain is one of the 12 Arab state parties to the CCW that in 2020 called “for a new treaty to prohibit and restrict lethal autonomous weapons systems [...] and [stressed] the importance

of maintaining human control over the critical functions of weapons.”⁵⁸³ Such a treaty would also prohibit the use of weapons considered injurious or indiscriminate such as landmines and booby traps.

Bahrain, as part of the Non-Aligned Movement (NAM), expressed its position against lethal autonomous weapons systems during the UN General Assembly of 2015, due to its “moral, humanitarian, and legal challenges for the international community.”⁵⁸⁴ In a statement presented during the Group of Governmental Experts on Emerging Technologies in the Area of Lethal Autonomous Weapons Systems Meeting in Geneva in 2022, the NAM called for the negotiation of a “legally binding international instrument stipulating prohibitions and regulations on lethal autonomous weapons systems.”

Bahrain voted for the UN General Assembly Resolution 78/241 on lethal autonomous weapons systems, which directed the UN Secretary-General to prepare a report reflecting the views of member and observer states. Bahrain also supported the more recent UN General Assembly Resolution L.77. The resolution raised concerns about the impact of autonomous weapons on global security and regional and international stability and provides for open consultations to consider the Secretary-General’s report.⁵⁸⁵

Bahrain endorsed the Political Declaration resulting from the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea in November 2023.⁵⁸⁶ The Declaration followed a joint call to action on the responsible development, deployment, and use of AI in the military domain issued during the summit.⁵⁸⁷

Bahrain is not among the countries who supported the REAIM Blueprint for Action that resulted from the second REAIM Summit, which took place in Korea.⁵⁸⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Human Rights

Bahrain is a signatory of the Universal Declaration of Human Rights.⁵⁸⁹ The Prime Minister has expressed the importance of the UDHR in public statements.⁵⁹⁰ The country has completed four cycles of Universal Periodic Reviews, the most recent in November 2022.⁵⁹¹ The UPR of Bahrain noted the recommendations of various states for Bahrain to ratify international human rights covenants. The country made a voluntary pledge and commitment to implement projects of the national human rights plan (102 projects), for 2022–2026 and to submit voluntary reports every two years on the ongoing efforts to enhance the country’s human right system.⁵⁹²

Bahrain is one of the 16 State Parties to the Arab Charter on Human Rights⁵⁹³ and has ratified the International Covenant on Civil and Political Rights (ICCPR) and the International Covenant on Economic, Social, and Cultural Rights (ICESCR).⁵⁹⁴

Freedom House rated Bahrain as “Not Free” (12/100) in 2024.⁵⁹⁵ Restrictions to freedom of expression and beliefs and the use of spyware and surveillance technology to target activists and dissidents are areas of concern. Internet freedom in Bahrain remained restricted in 2024 with content critical of the government blocked and removed. Freedom House notes that despite the continued use of social media for activism, self-censorship prevailed due to fear of state surveillance.⁵⁹⁶

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Transparency International's 2023 Corruption Perception Index ranks Bahrain in 76 out of 180 countries with a score of 42/100, with 100 being very clean.⁵⁹⁷

Human Rights Watch reported on the ongoing imprisonment human rights defenders, some for more than a decade, and pro-democracy activists and abysmal conditions and denial of adequate healthcare in prisons. Limits on freedom of expression and the return of the death penalty, especially given unfair trials, remain concerns.⁵⁹⁸

OECD / G20 AI Principles

Bahrain is not a member of the OECD and has not endorsed the OECD AI Principles.⁵⁹⁹ Bahrain has not submitted reports to the OECD AI Policy Observatory in relation to ongoing policies, strategies, or activities associated with AI.⁶⁰⁰

Bahrain is a member of the MENA-OECD Initiative on Governance and Competitiveness created in 2021 to implement reforms to improve governance structures and cooperation.⁶⁰¹

Council of Europe AI Treaty

Bahrain has not endorsed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law, the first legally binding international AI treaty.⁶⁰²

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

Bahrain is a UNESCO member since 1972⁶⁰³ and is one of the member States which endorsed the Recommendation on the Ethics of AI.⁶⁰⁴ However, no reports exist about how Bahrain is implementing the UNESCO Recommendation.

Evaluation

Bahrain's Economic Vision 2030, Digital Government Strategy 2022, and Digital Economy Sector Strategy 2022–2026 frame the efforts of the Kingdom to provide a roadmap and KPIs for the governance of AI. The formulation of a National AI Strategy is a necessary next step in Bahrain's pathway to responsible and trustworthy innovation, if Bahrain takes the drafting of the Strategy as an opportunity to implement the UNESCO Recommendation on the Ethics of AI.

The participation of multiple governmental agencies advancing the digitalization and AI plans is a strength in the pathway to governing AI. Building on the experience of the public consultation for the Personal Data Protection Law (PDPL) in 2021, Bahrain has the potential to establish a formalized system for public consultation in AI policy to ensure the adoption of explainable, trustworthy, and fair AI.

While Bahrain has made strides in adopting the Gulf Cooperation Council's AI Ethics Initiative and reinforcing its commitment to AI privacy, security, and ethical standards, the limited public access to these documents makes it challenging to assess their effectiveness and transparency.

In terms of data protection and independent oversight, the alignment of the Bahrain's Personal Data Protection Law (PDPL) to GDPR, and the draft regulations for Data Protection Impact Assessments (DPIA) are positive steps, which can be enhanced by the adoption of algorithmic transparency and the creation of an independent data and AI supervisory authority.

Although it has signed the Universal Declaration of Human Rights and the Arab Charter on Human Rights, Bahrain stands as a “not free” country in relation to human rights protection. Concerns exist regarding the use of AI for mass surveillance purposes.

Bangladesh

In 2024, Bangladesh introduced a draft National AI Policy that identifies principles such as transparency and accountability, fairness, and sustainability as key to AI implementation in the country. Bangladesh also initiated the UNESCO Readiness Assessment Methodology (RAM).

National AI Strategy

Bangladesh published its National Strategy on Artificial Intelligence in March 2020.⁶⁰⁵ The goal is to make Bangladesh a “technologically advanced nation by the next decade.” The National AI Strategy is driven by the slogan “AI for Innovative Bangladesh.” The AI Strategy identified seven national priority sectors, which are:

5. public service delivery
6. manufacturing
7. agriculture
8. smart mobility and transportation
9. skill & education
10. finance & trade
11. health

To create a “sustainable AI Ecosystem,” the report proposes six strategic pillars, namely:

12. research and development
13. skilling and reskilling of AI workforce
14. data and digital infrastructure
15. ethics, data privacy, security & regulations
16. funding and accelerating AI startups
17. industrialization for AI technologies

Each pillar consists of a strategic brief, a roadmap, action plan, related stakeholders and lead ministries. Finally, a summary roadmap in the report includes steps for the development of AI over the next five years.

Under Strategy 4 of the AI national roadmap: “Ethics, Data Privacy, Security & Regulations,” the Bangladeshi government will create a new set of AI ethics guidelines to address issues such as fairness, safety, cybersecurity, and transparency. The ICT Division and Ministry of Law, Justice and Parliamentary Affairs intend to formulate Right to Explanation (RTE) Guideline for AI Algorithm.⁶⁰⁶

The national Parliament passed the Agency to Innovate (a2i) Bill 2023, creating the a2i as Bangladesh’s national innovation agency, a statutory body. It is a flagship program of the 2019 Smart Bangladesh's Vision 2041 and its 20-year

Perspective Plan,⁶⁰⁷ which aim to utilize technology for societal advancement by 2041. The Vision and Perspective Plan focus on four institutional pillars: governance, democratization, decentralization, and capacity building. As part of the three-prong strategy for Bangladesh's Innovation Economy, the Plan aims to leverage the fourth industrial revolution, including AI and smart machines, for competitiveness and a low-carbon economy. To this end, Bangladesh aims to develop a robust legal framework and governance structure for e-government and enacted laws in 2023 to lay the groundwork for AI regulation as part of this initiative.⁶⁰⁸

Minister of Law, Justice, and Parliamentary Affairs Mr. Anisul Huq announced the government's initiative to draft a law on AI in February 2024. The Minister emphasized plans to consult with international stakeholders before finalizing the act.⁶⁰⁹ Minister Huq led a discussion with the Ministry of Posts on the draft framework for the AI law, stressing the importance of addressing critical aspects related to human welfare and the ethical use of AI. He highlighted the commencement of discussions on AI's legal framework, with a focus on safeguarding human rights and promoting the beneficial application of AI across various sectors.⁶¹⁰

The Ministry of Posts, Telecommunications, and Information Technology released a draft National Artificial Intelligence Policy 2024 online.⁶¹¹ The policy lists 10 priority sectors for AI implementation: public services; governance and judiciary; telecommunication, data governance, surveillance; agriculture; environment; smart cities, transportation, mobility; finance, trade, and economy; manufacturing and industrial transformation; education, skill, and employment; health and wellbeing; science, technology, research and innovation. The draft also discusses key principles for AI development and implementation, including fairness, transparency and accountability, safety and security, sustainability,

Center for AI and Digital Policy

partnership and collaboration, and human-centered AI. It proposes to establish a National AI Center of Excellence for the coordination, monitoring, and facilitation of AI-related initiatives.

Public Participation

The National AI Strategy of Bangladesh identified engagement with media and civil societies for creating a “robust ethics, data privacy, security and regulations guideline” for emerging technologies.⁶¹² As part of its National Internet of Things (IoT) Strategy, the Bangladesh government proposed to establish “an Advisory Committee including representatives from Government, industry, academia, and community” to provide ongoing guidance in the emerging areas of IoT.⁶¹³

The Bangladeshi government sought civil society input on its draft of the Cyber Security Act in 2023, receiving around 900 recommendations in the two weeks of the comment period.⁶¹⁴

Data Protection

Although the Constitution of Bangladesh does not explicitly grant the fundamental right to privacy, Article 43 of the Constitution recognizes this right under certain restrictions and states that, “every citizen shall have the right, subject to any reasonable restrictions imposed by law in the interests of the security of the State, public order, public morality or public health – (a) to be secured in his home against entry, search and seizure; and b) to the privacy of his correspondence and other means of communication.”⁶¹⁵

Bangladesh proposed a draft Data Protection Act in 2022.⁶¹⁶ One critic noted that “The proposed Data Protection Act 2022 and the Bangladesh

Telecommunication Regulatory Commission Regulation for Digital, social media and OTT Platforms, 2021 attempt to protect citizen information against American tech companies, but both draft regulations grant Bangladesh authorities powers to control everything on the Bangladeshi internet.”⁶¹⁷ The purpose of this law is to provide security for personal data. The law does not provide a definition of personal data.⁶¹⁸ The proposed data protection law mandates storage of citizen data within Bangladesh. “The localization of the data within Bangladesh gives authorities broad powers to access people’s personal data without judicial oversight and accountability for any violation of people’s right to privacy,” ⁶¹⁹ wrote Amnesty International in feedback to the proposed bill.

In November 2023, the Cabinet of Bangladesh gave its approval in principle to the Draft Data Protection Act 2023. The Act shall now be enacted by the Parliament.⁶²⁰ The revised Act addressed stakeholders’ feedback on the transition period and data localization requirements. However, the definition of personal data was not addressed.⁶²¹ The Act provides for the establishment of a Board in charge of overseeing data protection in the country. The Board shall be constituted by the Government and consisting of a chairman and four members.

The Telecommunications Act (2000) is a law “for the purpose of development and efficient regulation of telecommunication systems and telecommunication services in Bangladesh.”⁶²² Under Section 67 (b) of the Act no person can “intercept any radio communication or telecommunication nor shall [utilize] or divulge the intercepted communication, unless the originator of the communication or the person to whom the originator intends to send it has consented to or approved the interception or divulgence.” Under Section 97 of the

Act, the government may ask the telecommunication operator to maintain records relating to the communications of a specific user under the broad definition of National Security and Public Interest.

The Information Communication Technology Act (2006) imposes responsibility on any individual or body corporate handling personal or sensitive data and requires them to maintain and implement reasonable security practices.⁶²³ Section 46 of the Information Communication Technology Act states that the state can intercept, monitor, or decrypt data in the interest of:

- state sovereignty, integrity, or security
- relations with foreign states
- public order
- preventing the commission of or incitement to commit any offense relating to the above
- investigation of any offense

The Digital Security Act came into force in October 2018 and pertains to “offences committed through digital devices.”⁶²⁴ Section 26 of the Act provides for “punishment for unauthorized collection, use etc. of identity information.” The Digital Security Act 2018 repealed 5 provisions of the Information Communication Technology Act 2006 including section 57, which was deemed to be in violation of rights protected under the Bangladesh Constitution.⁶²⁵

Under the Digital Security Act two entities were formed “to carry out the purposes of the Act”: the National Data Security Council (NDSC) and the Digital Security Agency (DSA). The NDSC under Section 13 of the Act “shall provide necessary direction and advice to the Agency” and the DSA shall have the power to “remove or block some data-information.” The DSA will have a Digital Forensic Lab and an Emergency Response Team to: (a) “ensure the emergency security of the critical information infrastructure; (b) take immediate necessary measures for remedy if there is any cyber or digital attack and if the cyber or digital security is affected; (c) take necessary initiatives to prevent probable and imminent cyber or digital attack; (d) take overall co-operational initiatives, including exchange of information with any similar type of foreign team or [organization], for carrying out the purposes of this Act, with the prior approval of the Government; (e) do such other acts as may be prescribed by rules.”

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In September 2023, Bangladesh's parliament passed the Cyber Security Act (CSA), replacing the Digital Security Act of 2018, to combat cybercrime and disinformation. The CSA outlines measures for detecting, preventing, and prosecuting crimes committed through digital or electronic means. Additionally, Section 5 of the Act establishes a National Cyber Security Agency, which will operate under the ICT Division to fulfill the Act's objectives, including supervising and coordinating with the National Computer Emergency Response Team, Computer Emergency Teams, or the Computer Incident Response Team.

The Cyber Security Act has largely been critiqued as a replication of the DSA. As Amnesty International reported, “The only changes the CSA makes are related to sentencing, which can be summarized as follows: lowering the maximum applicable prison sentence for eight [offenses], removing a sentence of imprisonment for two [offenses], increasing the maximum applicable fine for three [offenses] and removing the higher applicable penalty for all repeat [offenses]”⁶²⁶

Algorithmic Transparency

While there is no explicit right to algorithmic transparency in Bangladeshi law, the government acknowledged the lack of transparency of machine learning. The national AI strategy explicitly stated:⁶²⁷

- The EU General Data Protection Regulation (GDPR) can be a good solution to the challenge on rules about who will be responsible for an unwanted inversion.
- There should be a rule of “right to get an explanation” in every process.
- The impacts AI will bring to human physiology, dignity, and autonomy are a core challenge.
- A strong legal and ethical framework on how AI would be implemented in applications is a must.
- AI ethics should be righteous, fundamentally sound, assessable, reversible, and inclusive.

The draft National Artificial Intelligence Policy 2024 includes algorithmic transparency among the Key Principles for AI Implementation. Principle 3.2, Transparency and Accountability provides for “ensuring transparency and lines of accountability in the collection, storage, and usage of data in AI systems to ensure that the decision-making process is explainable and interpretable, allowing users and stakeholders to understand how AI arrives at decisions, and can challenge them.”⁶²⁸

Biometric Identification

Since 2008, the Election Commission of Bangladesh has issued a National Identity Card (NID) which is compulsory for every Bangladeshi citizen over the age of 18 for voting and for availing 22 types of services, including banking, taxpayer identity number (TIN), driving license, and passport. In 2016, the government started issuing a machine readable “smart NID card” with a chip that can store encrypted data such as biometric and identification data for enhancing security and reducing forgery.⁶²⁹

In June 2023, the Bangladesh Home Ministry gained the authority to issue NID cards, transferring this responsibility from the Election Commission. This change is part of the National Identity Registration Act, which aims to streamline the issuance process and enhance efficiency in managing citizen identification.⁶³⁰

Environmental Impact of AI

The draft National AI Policy 2024 includes Sustainability as a Key Principle and defines the goal to develop AI technologies that “minimize their carbon footprint and promote green AI practices.”⁶³¹ The Policy also identifies Environment, Energy, and Climate Change as a priority sector for AI integration. The goal is to apply AI systems for environmental monitoring, resource management, energy production and distribution, and localized strategies for disaster and environmental recovery.⁶³²

Lethal Autonomous Weapons

Bangladesh continues to engage actively in discussions surrounding lethal autonomous weapons systems (LAWS). The Group of Governmental Experts (GGE) on LAWS met twice in 2024, furthering discussions initiated by the UN

General Assembly resolution passed in December 2023, which called for a legally binding instrument to regulate these systems by 2026.⁶³³

Bangladesh expressed its support for multilateral talks on lethal autonomous weapons systems at the UN General Assembly in October 2016.⁶³⁴ The country participated for the first time in the Convention on Certain Conventional Weapons (CCW)⁶³⁵ meetings on lethal autonomous weapons systems in 2019 but did not make any statements.

In October 2023, at the 78th UN General Assembly, Bangladesh voted in favor of resolution L.56, emphasizing the international community's need to address concerns regarding autonomous weapons.⁶³⁶ Bangladesh advocates for a comprehensive assessment of these systems' compliance with international law, including humanitarian and human rights laws. Additionally, Bangladesh supports negotiating a legally binding instrument on autonomous weapons and aligns with the Non-Aligned Movement (NAM) in this endeavor. The NAM emphasizes the urgency of regulating emerging technologies related to autonomous weapons systems through a legally binding instrument under the Convention.

Human Rights

In 2024, Freedom House report ranked Bangladesh as “partly free” with a score of 40/100 for political and civil rights.⁶³⁷ The report states that, “the ruling Awami League (AL) has consolidated political power through sustained harassment of the opposition and those perceived to be allied with it, as well as of critical media and voices in civil society. Corruption is a serious problem, and anticorruption efforts have been weakened by politicized enforcement. Due

process guarantees are poorly upheld and security forces carry out a range of human right abuses with near impunity.”⁶³⁸

In January 2024, UN experts urged the Government of Bangladesh to implement significant human rights reforms to address repressive trends and restore political dialogue and participation during its fourth consecutive term. Expressing alarm over widespread attacks and intimidation of civil society, human rights defenders, journalists, and political activists during recent general elections, the experts highlighted reports of arrests, violence, and lack of independent investigations.⁶³⁹

The authorities of Bangladesh “imprisoned 433 people under the Digital Security Act, the majority of whom were held on allegations of publishing “false or offensive information” under Section 25.”⁶⁴⁰ Under this law, any kind of criticism of the ruling government would be considered an act of spreading false information. This represented a “21% year-on-year increase in the number of people detained under the Act. As of 11 July, the longest-serving prisoner detained under the Act had been held since 24 December 2018. Section 25 (publication of false or offensive information), Section 29 (publication of defamatory information) and Section 31 (offence and punishment for deteriorating law and order) of the Act were used systematically to target and harass dissenting voices, including those of journalists, activists and human rights defenders. The actions contravened Bangladesh’s commitments under the ICCPR as well as its domestic constitutional obligations.”⁶⁴¹ Bangladesh authorities also arrested a 15-year-old for “defaming” Prime Minister Sheikh Hasina Wazed in a Facebook post.⁶⁴²

The UN Office of the High Commissioner for Human Rights noted that security forces used excessive force against protesters, leading to allegations of extrajudicial killings and arbitrary arrests. The report calls for independent investigations into these incidents to ensure accountability.⁶⁴³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

OECD / G20 AI Principles

Bangladesh has not endorsed the OECD AI principles.

Council of Europe AI Treaty

Bangladesh has not endorsed the Council of Europe Framework Convention on AI and Human Rights, Democratic Values, and Rule of Law.⁶⁴⁴

UNESCO Recommendation on AI Ethics

Bangladesh has endorsed the UNESCO Recommendation on the Ethics of Artificial Intelligence.⁶⁴⁵

UNESCO is collaborating with Bangladesh's ICT Ministry and Aspire to Innovate (a2i) to conduct the Readiness Assessment Methodology (RAM). RAM is a tool to evaluate a country's preparedness for implementing AI, including perspectives of social equity, public participation, public trust, and environment and sustainability. The RAM is in progress.⁶⁴⁶

Evaluation

Bangladesh has set out a national strategy for AI that recognizes the importance of AI ethics and endorsed the UNESCO Recommendation on the Ethics of AI. The data protection law is still in draft form and there is support in the national AI strategy for a GDPR-style law and for an explicit right of algorithmic transparency in the draft National AI Policy 2024. In view of the country's low credentials regarding human rights protection, Bangladesh's extensive biometric identification program through the national ID system remains concerning.

Belgium

In 2024, Belgium established a Federal Data and AI Ethics Committee to promote ethical AI use in public administration while the Flemish Region launched a project, with UNESCO, to ready public administration for AI use. Belgium's data protection authority also issued guidance to ensure algorithmic transparency and accountability as the EU AI Act came into force and interacted with data protection regulations.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

National AI Strategy

In October 2022, the Council of Ministers of the Belgian Federal Government approved a National Convergence Plan for the development of artificial intelligence. The plan aims to foster AI development while emphasizing that “fundamental rights, such as privacy and non-discrimination, are protected and that new technologies should be developed within an appropriate ethical and legal framework.”⁶⁴⁷ The Plan aims to reduce the fragmentation of Belgian Regional AI strategies by establishing nine common objectives: (1) Promoting trustworthy AI; (2) Guaranteeing cybersecurity; (3) Strengthening the competitiveness and the attractiveness of Belgium through AI; (4) Developing a data-driven economy and a high-performance infrastructure; (5) Centralizing AI in healthcare; (6) Using AI for sustainable mobility; (7) Protecting the environment; (8) Providing better and life-long learning opportunities; (9) Offering citizens better service and protection.

The Convergence Plan also includes the establishment of a Governing Board to execute and coordinate it.⁶⁴⁸ The Convergence Plan explicitly refers to the need for transparency in AI design; preventing biased outcomes; assessing the societal impact of AI; ensuring system robustness and safety; and promoting diversity. It also advocates for AI that contributes to “the protection of fundamental rights, democracy, and the rule of law” and sees more representative and responsible data use as the key to prevent discrimination against women, minorities, the elderly, and other groups. In addition, the Convergence Plan envisions Belgium’s “active participation in the development of norms, standards, and recommendations in international fora” and argues for clear rules on “accuracy, transparency, accountability, explainability, and equality.”⁶⁴⁹

Belgium is a federal state. It has three regions as well as three communities, all of which have their own government, and many of which have also developed strategies and initiatives on digitalization or AI. “The Flemish Community, the French Community and the German-speaking Community are divided according to language and culture. They are responsible for language, culture, education, audiovisual media, and individual assistance such as specific parts of health policy and social welfare. The regions (the Flemish Region, the Brussels Capital Region and the Walloon Region) are divided based on territory.”⁶⁵⁰ They are responsible

for the economy, employment, housing, public works, energy transportation, environmental and spatial planning and have some things to say concerning international affairs. The Federal Government is responsible for foreign affairs, defense, justice, finance, social security, healthcare and internal affairs.⁶⁵¹

The Flemish Region released the *Vlaanderen Radicaal Digitaal*, in 2019, which was renewed as the *Vlaanderen Radicaal Digitaal II* in 2021. This regional digital strategy aims to foster digital public services, data processing, and automation in the public sector.⁶⁵² In 2019 as well, the Flemish government approved the Flemish policy plan on AI. It focuses specifically on algorithmic transparency, privacy, explainability, and human-centered, safe, sustainable, and trustworthy AI.⁶⁵³ The plan also envisions the allocation of 5 million euros to initiatives related to AI ethics and education.⁶⁵⁴ The Flemish Reform Programme (FRP) 2024,⁶⁵⁵ per the FRP, for 2024 operating year, a recurrent increase of €1.25 million is envisaged for strengthening AI research.

In 2022, the Flemish government adopted a new strategy for data governance, which also comprises initiatives for ethical data use, privacy, transparency, and AI analytics for the public sector.⁶⁵⁶ In September 2024, in continuation of the Flemish Government's commitment to AI, a project to make Flemish Public Administration AI-ready was launched.⁶⁵⁷

The Walloon government published the Digital Wallonia 2019–2024 strategy “based on values including a cross-disciplinary approach, transparency, coherence, openness and flexibility.”⁶⁵⁸ In 2019, the Walloon government also launched the regional strategy DigitalWallonia4.ai. The strategy aims to accelerate

Center for AI and Digital Policy

the development of the Walloon AI ecosystem and “sustainably include Wallonia in national and European AI initiatives in order to build a foundation of trust around transparent, ethical and responsible AI.”⁶⁵⁹

In 2022, the Brussels Capital Region started a pilot project with the FARI Institute, a non-profit initiative led by Vrije Universiteit Brussel and Université Libre de Bruxelles, to develop an AI strategy for the region.⁶⁶⁰ In January 2023, FARI published outcomes from the 2022 Conference on AI, Data and Robotics in Cities, including recommendations from the Observer Committee for the Brussels Capital Region. The recommendations included raising AI awareness and literacy; governing with various stakeholders, including citizens; determining AI-related responsibilities; collaborating on multi- and interdisciplinary levels; (responsibly) enabling data flows; reusing and readapting the existing AI guidelines, principles, and regulations.⁶⁶¹ The adoption of the 2022 Convergence Plan was also preceded by several initiatives at national and European level.

At the beginning of 2024, Belgium launched a call for candidates to set up a Data and AI Ethics Advisory Committee for the federal administration. Its members were officially appointed by ministerial decree on May 8, 2024.⁶⁶² The creation of this Committee has several objectives, including raising awareness among civil servants in relation to the use of data and AI and its ethical considerations; preserving human oversight; and respect for values such as human rights, democracy and the rule of law.

In 2019, the Information Report on the necessary cooperation between the Federal State and the federated entities regarding the impact, opportunities, possibilities and risks of the digital “smart society” was released by a working group created by the Belgian Senate that has been meeting since 2018.⁶⁶³ Their findings and recommendations are grouped in six chapters: governance, ethics and human rights, and legislation; economy, labor market and taxation; education and

training; attention economy: impact on people; privacy and cybersecurity; research and development. The report states that “The development and use of artificial intelligence shall be based on the following guiding principles: prudence, vigilance, loyalty, reliability, justification and transparency, accountability, limited autonomy, humanity, human integrity, and balancing of individual and collective interests.” “Fundamental rights, in particular human dignity and freedom, and privacy, must be the basis and starting point for all actions and legislation in the field of artificial intelligence.”⁶⁶⁴

The Belgian government, along with thirteen other EU Member States, published a position paper on innovative and trustworthy AI in October 2020, ahead of the EU AI Act. This paper sets out two visions for the EU’s development of AI: (1) promoting innovation, while managing risks through a clear framework and (2) establishing trustworthy AI as a competitive advantage. The countries call for a borderless single market for AI in the EU, arguing that “The main aim must be to create a common framework where trustworthy and human-centric AI goes hand in hand with innovation, economic growth, and competitiveness in order to protect our society, maintain our high-quality public service, and benefit our citizens and businesses. This can help the EU to protect and empower its citizens, stimulate innovation and progress in society, and ensure its values are protected.”⁶⁶⁵

Public Opinion

A 2019 opinion survey by AI4Belgium examined the public perception of AI, its perceived impact, and the role the government should play in AI implementation.⁶⁶⁶ According to the survey, 76% of the respondents hold a positive attitude towards technological developments, while only 6% hold a negative attitude. Most respondents were worried about the loss of privacy, security and integrity of their personal information (85%), less use of human common sense (85%), less human interaction (83%) and the loss of trust and control over robots and artificial intelligence (77%).

Center for AI and Digital Policy

When asked which activity to prioritize, the highest priority concerned “the management of ethical risks around AI. For example, discrimination, privacy, etc.” (74%). This was followed by “supporting employees and employers in the transition to AI in the workplace” (65%); “improving public service through AI” (58%); “supporting research and development (R & D) and innovation in the field of AI” (52%); “facilitating and supporting enterprise access to AI technologies” (48%); and “supporting start-ups engaged in AI” (45%). The majority of citizens suspect that AI will increase inequality between highly educated and low- or unskilled people (66%) and between persons with a privileged background and persons without one (60%).

Public Participation

As part of its Presidency of the Council of the European Union in the first half of 2024, Belgium launched a pioneering democratic initiative: a citizens’ panel on artificial intelligence (AI).⁶⁶⁷ This initiative underlines the country’s commitment to an inclusive and participatory approach towards the formulation of European policies in the field. The citizens’ panel, which is made up of 60 people selected at random from over 16,000 invitations sent out across Belgium, brings together all strata of the population in terms of age, gender, levels of education, and other demographic criteria. This diversity will ensure that the discussions and recommendations reflect a wide range of perspectives and experiences rooted in people’s lived experiences.

Belgian Minister of Foreign and European Affairs described the initiative as their determination “to put the Belgian people at the heart of the decision-making process.”⁶⁶⁸ Civil society must be heard on issues as important as artificial intelligence and contribute towards ambitious policies that meet their expectations.” The panel’s conclusions were compiled into a report, which featured 9 key messages aimed at contributing to Belgian and EU policy on AI. These messages reflected citizens’ aspirations for a responsible, ambitious, and beneficial approach to AI to ensure that AI serves the interests of all and leaves no one behind.⁶⁶⁹ On May 25, 2024, the report was presented and debated in Brussels,

in the presence of Belgian and European politicians, representatives of civil society and tech companies.⁶⁷⁰

EU Digital Services Act

As an EU member state, Belgium shall apply the EU Digital Services Act (DSA).⁶⁷¹ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

As required by DSA, Belgium designated competent authorities to implement provisions of the DSA. As numerous competences are involved in the implementation of the DSA, at federal and community level, four competent authorities have been designated in Belgium.⁶⁷² The DSA plays a critical role in monitoring social, economic, and technological developments, particularly in relation to data protection. Rapid growth of AI technologies significantly effects how data is collected, processed, and utilized and these competent authorities will play a pivotal role in addressing challenges related to data privacy, transparency, and accountability.

A Bill to implement the DSA was introduced to the Belgian Chamber of Representatives on January 31, 2024. The Bill aims to harmonize Belgian legislation with the new requirements for digital services under the DSA. Key provisions include the designation of the Belgian Institute for Postal Services and Telecommunications (BIPT) as the competent authority to supervise the provisions of the DSA at the federal level, the issuance of decrees designating the competent authorities for federated entities, and the establishment of a cooperation agreement between the federal state and the communities. The Bill introduces additional obligations for providers of very large online platforms and search engines. These obligations include the management, assessment, and limitation of systemic risks and the implementation of crisis response mechanisms. They apply to platforms and search engines with an average monthly number of users in the EU of 45 million or more. The Bill also proposes changes to other aspects of

Belgian law to align with the DSA and introduces sanctions for non-compliance with orders issued by the competent authorities.⁶⁷³

EU AI Act

As an EU member State, Belgium is bound by the EU AI Act.⁶⁷⁴ Member States had until November 2, 2024, to identify which authorities should be considered authorities protecting fundamental rights under Art. 77 of the EU AI Act. The European Commission shared an interpretative note to support compliance with Article 77 (2) AI Act with Member States.⁶⁷⁵ The EU and Council of Europe also launched a project to tackle AI-driven discrimination in public administrations, with the equity bodies of Belgium (via Unia), Finland, and Portugal involved. Running from 2024 to 2026, the project's objective is to ensure that these bodies can effectively oversee AI implementation, prevent discrimination, and provide redress or compensation to users who may be adversely affected by discriminatory AI outcomes.⁶⁷⁶

Data Protection

Since Belgium is an EU Member State, the General Data Protection Regulation (GDPR) is directly applicable in Belgium. Taking stock of the GDPR, the Belgium Privacy Commission was reformed in 2018.⁶⁷⁷ It is now called the Belgian Data Protection Authority (DPA) and aims to ensure compliance with the GDPR.⁶⁷⁸ The DPA has direct sanctioning powers as well as extended

enforcement capabilities. The Belgian DPA published guidance on the interplay between the GDPR and the AI Act on September 19, 2024.⁶⁷⁹

In March 2022, the DPA expressed concern over the Belgian draft legislation on amending the Act of December 3, 2017, establishing the Data Protection Authority. In particular, the DPA mentioned that the draft law jeopardizes its efficiency and independence.⁶⁸⁰ The draft legislation introduces parliamentary interference regarding the DPA internal organization and setting its priorities. The European Data Protection Board expressed similar concerns in its letter of April 2022 in support of the Belgian DPA.⁶⁸¹ The reform proposal of the DPA Act amending the law of December 3, 2017, was approved and entered into force on June 1, 2024.⁶⁸²

Belgium also established a Federal Data and AI Ethics Committee to promote ethical AI use in public administration, with objectives that include raising awareness among civil servants on data and AI ethics.⁶⁸³

Regarding the activities of law enforcement authorities, Belgium transposed⁶⁸⁴ the EU Data Protection Law Enforcement Directive (LED).⁶⁸⁵ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination,⁶⁸⁶ and “will in particular ensure that the personal data of victims,

witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”⁶⁸⁷

Following the transposition of the EU Law Enforcement Directive in Belgian law, the Supervisory Body for Police Information, “the oversight body which looks at how the police use information (COC) was reformed to function as an independent data protection body.”⁶⁸⁸ It is intended to oversee how the police use data.⁶⁸⁹

Both the DPA and the COC are members of the Global Privacy Assembly (GPA). The DPA co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence⁶⁹⁰ but did not endorse the 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence,⁶⁹¹ 2022 GPA Resolution on Facial Recognition Technology,⁶⁹² or 2023 GPA Resolution on Generative AI Systems.⁶⁹³

Belgium is also a member of the Council of Europe and ratified the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.⁶⁹⁴

In 2019, a national human rights institution, the Federal Institute for the Protection and Promotion of Human Rights, was established. Its main goal is to facilitate cooperation between the existing human rights oversight mechanisms

and fill the gaps in the existing landscape.⁶⁹⁵ More specifically, it “ensures that the use of new technologies and the digitalisation of society contribute to strengthening our rights rather than limiting them.”⁶⁹⁶

Algorithmic Transparency

Belgium is subject to the GDPR and Convention 108+. Belgians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁶⁹⁷ They also have the right to meaningful contestation.⁶⁹⁸

In 2019, the Federal Institute for the Protection and Promotion of Human Rights issued its first opinion on the use of algorithms and artificial intelligence by the administration and argued in favor of more transparency from public authorities.⁶⁹⁹

In April 2021, Members of the Chamber of Representatives proposed a change to a 1994 law to make the use of algorithms by public administrations more transparent. Key points of the law are to “publish algorithmic processes online, specifically when used for individual decisions,” to inform people of the algorithms used in making decisions on their cases, and to allow citizens to receive “comprehensible responses” to questions on algorithmic decisions.⁷⁰⁰ The amendment has not passed yet.⁷⁰¹

Center for AI and Digital Policy

In the meantime, in January 2023, Brussels, in collaboration with eight other cities across Europe and with the help of Eurocities' Digital Forum, adopted an algorithm register, the Algorithmic Transparency Standard. It will be used by the data officer for the Brussels Capital region. The aim is to provide more information for residents about the use of algorithm by municipalities and their impact. The register includes a range of information such as the type and purpose of an algorithm, the department using the algorithm, the geographical area and domain it relates to and a risk category. It also includes details on the data source and training data, any bias and mitigation, and human oversight. This initiative builds on similar algorithm registers launched in Amsterdam and Helsinki in September 2020.

According to André Sobczak, Secretary General, Eurocities, "The efforts undertaken by these cities aim to set a standard for the transparent and ethical use of algorithms while their use is still in its relative infancy across city administrations in Europe. In this way, they seek to offer both a safeguard for people whose data may be used by algorithms, and have created a validated model that other cities can use straight away, without having to invest further resources themselves."⁷⁰²

AI in Public Administration

In July 2023, the Council of Ministers proposed the establishment of an Advisory Committee on Ethics on Data and Artificial Intelligence for the federal administration.⁷⁰³ It will have the following objectives: a) empower civil servants in the use of data and AI, b) raise awareness among civil servants about the ethical aspects of data use, and c) show citizens that the Federal Administration is setting an example and dealing with digital technology in an ethical and innovative way.

In January 2024, Wallonia announced its aim to integrate AI into the public service sector.⁷⁰⁴ To this end, Wallonia launched a public call for the development of a Proof of Concept (PoC) with public entities.⁷⁰⁵ The Flemish region also initiated a project in 2024 to ensure the Flemish Public Administration AI-

ready.⁷⁰⁶ This project is funded by the European Commission's Directorate-General for Structural Reform Support. UNESCO's Ethics of AI Unit, Social and Human Sciences Sector, is tasked with implementing the project, which will leverage UNESCO's Readiness Assessment Methodology (RAM).

Facial Recognition

According to AlgorithmWatch, facial recognition has been used at the Brussels Airport, football matches, for school registration and for healthcare. A "smart" video surveillance system is also in use to locate criminals, solve theft cases and collect statistical information.⁷⁰⁷ AlgorithmWatch stressed that there is no legal framework governing this activity by the police.

Additionally, Belgium's involvement in the Prüm Convention facilitates the sharing of biometric data, including facial recognition images, across European borders. In March 2024, Belgium signed the Prüm II expansion, which includes provisions for cross-border facial recognition technology. This expansion underscores the need for Belgium to implement robust data protection measures and clear guidelines to ensure that cross-border use of Facial Recognition Technology (FRT) aligns with privacy standards.⁷⁰⁸

The COC has criticized the use of facial recognition at the Brussels airport, stating that there is "too little information about the implementation and risks of the technology as there was no clear policy or data protection impact assessment conducted to come to a conclusion or offer advice." In a 2022 report, the COC reiterated "the lack of legal basis for the use of facial recognition technology by the Brussels airport police" and noted that it took "corrective action" in order to halt the pilot project.⁷⁰⁹ The COC also reported that Belgian police had used the controversial facial recognition system Clearview AI without a legal basis and advised Belgian police to cease this activity."⁷¹⁰

In January 2022, the Belgian Minister of Internal Affairs expressed the objective of "creating an ethical advisory board on safety that will evaluate the ethical and efficient use of technology and methods for investigation and

intervention.”⁷¹¹ As of November 2024, there has been no official update on the formation or activities of the proposed ethical advisory board intended to oversee the use of advanced technologies, including facial recognition, within law enforcement.”

Regulatory Sandboxes

In Belgium, the Flemish and Walloon regions have both developed regulatory sandboxes aimed at creating self-contained, low-regulation environments where software developers can experiment with innovative solutions without taking on significant risks. In Flanders, the Sandbox Flanders project is coordinated through the Flemish government agency for digitalization, Digital Flanders. Sandbox Flanders is designed to develop innovative solutions for the public sector by “matching” start-ups with government agencies and departments. The project also aims to be a “permanent marketplace” for ideas without a profit motive.⁷¹² Many of the projects in question use AI systems to solve practical issues in particular “challenges,” such as predicting exam enrollments and automated policy impact assessments.⁷¹³ In the Walloon case, a private entity (LUDEBO) coordinates the sandbox ecosystem together with Digital Wallonia and the blockchain startup-collective Walchain, but the goal of this regulatory sandbox is only to foster blockchain technology development.⁷¹⁴

Starting in July 2023, regional authorities commenced sectorial AI testing under the Digital Europe Program.⁷¹⁵ The Testing and Experimentation Facilities (TEFs) are poised to aid in the implementation of the EU AI Act, particularly by supporting regulatory sandboxes in collaboration with national authorities. This initiative encompasses a facility spearheaded by Digitaal Vlaanderen, focused on smart cities and communities, with the objective of ensuring AI technologies align with European values prior to market introduction.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In 2024, the Brussels-Capital Region launched a mobility data and AI regulatory sandbox as part of the European AI Testing and Experimentation Facility for Smart and Sustainable Cities and Communities. Coordinated by Digitaal Vlaanderen, this initiative supports Belgian startups in developing AI solutions by providing access to real data and controlled testing environments. The sandbox specifically focuses on AI applications in the mobility sector, offering a structured environment for experimentation that ensures compliance with European standards. This project underscores Belgium's commitment to fostering AI innovation while aligning with EU regulatory standards for safe and ethical AI development.⁷¹⁶

Medical Data

The use of AI in healthcare is one of the cornerstones of Belgium's AI strategy. An entire chapter of its national convergence plan is devoted to "centralizing AI in healthcare"⁷¹⁷ and the plan states that "the creation of a healthcare data agency reflects the importance and the necessity of facilitating the re-use of healthcare for research and innovation." The national strategy also emphasizes the "perspective of the user" in that it aims to stimulate human-centric use of AI in healthcare, while acknowledging the necessity of clear accountability rules, attention to data bias and privacy, and giving patients agency over their own data.⁷¹⁸

In 2024, the Belgian EBCP (Evidence-Based Care Policies) mirror group released a policy brief focused on enhancing AI applications in healthcare, particularly in cancer care. The brief identifies critical areas for improvement, including data access, IT infrastructure, and legal and ethical frameworks, while emphasizing the importance of building public trust in AI applications. The brief also highlights Belgium's active role in EU initiatives, such as the European Health Data Space (EHDS) and the EU Cancer Imaging Infrastructure (EUCAIM), advocating for continued investments to align with European data-sharing and healthcare innovation standards.

Environmental Impact of AI

Belgium's Convergence Plan for developing AI includes protecting the environment among the main objectives.⁷¹⁹ However, there are no specific action steps to ensure that AI development is sustainable. The EU AI Act, for example, has been criticized for emphasizing AI *for* sustainability over AI that *is* sustainable.⁷²⁰

Lethal Autonomous Weapons Systems

In 2018, the Belgian Parliament passed a Resolution to prohibit use, by the Belgian Defense, of killer robots and armed drones.⁷²¹ In this resolution, the Parliament states that Belgium should:

- Participate in international working groups within the framework of the United Nations and the Convention on Certain Conventional Weapons (CCW) in particular to work towards an internationally recognized definition of killer robots and to determine which types of weapons will fall into this category in the future
- Advocate in international fora, together with like-minded countries, for a global ban on the use of killer robots and fully automated armed drones
- Ensure that the Belgian Defense never deploys killer robots in military operations
- Support the development and use of robotic technology for civilian purposes.

The culmination of Belgium's efforts, which began in 2018 to ban lethal autonomous weapons, was marked by the Belgian Defense Committee's approval of a bill to this effect.⁷²² Consequently, in January 2023, Belgium became one of the first countries in the world to implement an outright ban on lethal autonomous weapons.

Belgium has taken a relatively central role in putting Lethal Autonomous Weapons Systems (LAWS) on the international agenda. During its chairmanship of the Group of Governmental Experts (GGE) on Lethal Autonomous Weapons

Systems, Belgium aimed to “find consensus in relation to the clarification, consideration, and development of aspects of the normative and operational framework on emerging technologies in the area of LAWS.”⁷²³

Belgium was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”⁷²⁴

In February 2023, Belgium participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Belgium endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.⁷²⁵ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” Belgium also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁷²⁶

The second REAIM summit was hosted by the Republic of Korea in 2024.⁷²⁷ Belgium endorsed the outcome document, Blueprint for Action, which

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

translated the principles agreed upon at REAIM 2023 into action steps endorsees committed to ahead of the next summit.⁷²⁸

At the 78th UN General Assembly First Committee in 2023, Belgium voted in favor⁷²⁹ of resolution L.56⁷³⁰ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

Belgium endorsed the Chair’s Summary of the Vienna conference Humanity at the Crossroads: Autonomous Weapons Systems and the Challenge of Regulation, in April 2024, affirming its commitment to work urgently towards an international legal instrument to regulate autonomous weapons systems.⁷³¹

Human Rights

Belgium is a signatory to many international human rights treaties and conventions. In 2024, Belgium received a rating of “Free” with a score of 96/100 in the Freedom House report. Freedom House reported that “Belgium is a stable electoral democracy with a long record of peaceful transfers of power. Political rights and civil liberties are legally guaranteed and largely respected. Major concerns in recent years have included the threat of terrorism, corruption scandals, and rising right-wing nationalism and xenophobia.”⁷³²

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers clarified that Member States’ commitment to “ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction” required them to “ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible,

inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”⁷³³

OECD / G20 AI Principles

Belgium has endorsed the OECD/G20 AI Principles. In its 2021 survey, the OECD noted several examples of implementation of the AI Principles by Belgium, including the establishment of an AI Observatory, providing financial and non-financial support to retrain and attract top AI talent, development of an AI self-assessment tool, and the resolution to prohibit the use of lethal autonomous weapons by local armed forces.⁷³⁴

Belgium is a member of the Global Partnership for AI, a multi-stakeholder initiative that aims to foster international cooperation on AI research and applied activities and is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”⁷³⁵

Belgium’s 2022 national AI strategy covers all the OECD AI principles: inclusive growth, sustainable development and well-being; human-centered values and fairness, transparency and explainability; robustness, security and safety; and accountability.⁷³⁶ However, the strategy does not explicitly mention the OECD as the basis for its common objectives.⁷³⁷

UNESCO Recommendation on AI Ethics

Belgium is a signatory to the UNESCO Recommendation on the Ethics of Artificial Intelligence. The 2022 convergence strategy does not explicitly refer to the UNESCO Recommendation.⁷³⁸ However, the Flemish region is collaborating with UNESCO on project to ready the public administration for AI systems.⁷³⁹

<https://www.unesco.org/en/artificial-intelligence/recommendation-ethics/flemish-government>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

UNESCO's Ethics of AI Unit, Social and Human Sciences Sector, will leverage the Readiness Assessment Methodology (RAM) as part of the implementation.

Council of Europe AI Treaty

Belgium contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024.⁷⁴⁰ Belgium is party to the Convention through the European Commission signature on September 5, 2024.⁷⁴¹ However, Belgium has not taken individual action to endorse or ratify the treaty.

Evaluation

In 2022, Belgium adopted a national AI strategy with a strong focus on AI ethics that should ensure coherence among the regional AI strategies and align toward common objectives. Regional AI policy innovation has been strengthened to align with the UNESCO recommendations on AI ethics. Belgium also established a Federal Data and AI Ethics Committee within its Federal Public Service (FPS) to enhance AI oversight and educate civil servants on data ethics, human oversight, and fundamental rights.

However, some crucial points are still awaiting action, such as national action on the Council of Europe treaty and the establishment of an independent national supervisory agency under the EU AI Act.

Brazil

In 2024, Brazil presented a new AI Plan for 2024–2028 intended to strengthen alignment between national priorities and the AI strategy. The Superior Electoral Court approved a resolution prohibiting deep fakes and providing harsh sanctions for the use of fake content in elections. The problem of widespread use of real-time facial recognition in public security remains. Brazil led projects for digital inclusion and AI for sustainable development as the presidency of the G20.

National AI Strategy

Then-President Jair Bolsonaro declared before the United Nations General Assembly in September 2020 that Brazil is “open for the development of state-of-

the-art technology and innovation efforts, such as 4.0 Industry, artificial intelligence, nanotechnology, and 5G technology, with all partners who respect our sovereignty and cherish freedom and data protection.”⁷⁴²

The Brazilian government adopted a national AI strategy, *Estratégia Brasileira de Inteligência Artificial* (EBIA) in 2021,⁷⁴³ following on the Digital Transformation Strategy (E-Digital) released in 2018.⁷⁴⁴ Release of the EBIA followed restructuring of the Ministry of Science, Technology, Information, and Communications, which was divided into the Ministry of Science, Technology, and Information (MCTI) and the Ministry of Communication (MCom). AI is now the responsibility of a broad Directorate on Science and Digital Innovation under the Secretary of Entrepreneurship and Innovation of MCTI.⁷⁴⁵

The EBIA sets out six key objectives: develop ethical principles that guide responsible use of AI; remove barriers to innovation; improve collaboration between government, the private sector, and researchers; develop AI skills; promote investment in technologies; and advance Brazilian technological innovation and involvement at the international level.⁷⁴⁶

The Governance Committee of the Brazilian AI Strategy published the Working Plan for EBIA for 2022.⁷⁴⁷ The Governance Committee is composed of members from the public sector and government, companies and associations, NGOs and civil society, and centers for education and research. The Working Plan mentions which actions will be prioritized within the scope of the EBIA for 2022. It is structured around 9 axes: (1) Legislation, regulation, and ethical use; (2) AI

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

governance; (3) International aspects; (4) Qualifications for a digital future; (5) Workforce and training; (6) Research, development, innovation, and entrepreneurship; (7) Application in productive sectors; (8) Application in public power; (9) Public security.

The actions set forth in the Working Plan encompass: (1) Encouraging public agencies that will make use of AI for public security to submit data protection impact assessment prior to implementation; (2) Development of a framework with recommendations for an ethical AI, with mitigation of risks and biases; (3) Development of a dynamic repository of legislation and revision of regulatory model/sandboxes for active monitoring of the Bills in progress, with timely submission of multi-sectoral positioning; (4) Creation of an Artificial Intelligence observatory in Brazil, which can cooperate with other international observatories; (5) Preparation of an annual report with initiatives focused on international aspects; and (6) Expanding the offer of undergraduate and graduate courses related to Artificial Intelligence.

The Governance Committee of the Brazilian AI Strategy had two meetings in 2022. The first one, in February, focused on the revision of the Brazilian Strategy for Digital Transformation to be conducted by MCTI. MCTI published the new Brazilian Strategy for Digital Transformation in November 2022.⁷⁴⁸ The second meeting was in August and set to evaluate the activities already conducted by the Committee and to plan the next steps.

Regarding the governance of the Brazilian AI strategy, Belli, Curzi and Gaspar,⁷⁴⁹ analyzing the Committees' meetings from 2021, highlighted the lack of transparency regarding the institutions taking part in the Governance Committee meetings as well as the criteria used to choose them, as they were invited by the MCTI to participate in the Committee. They also identified that, throughout the meetings, there was a constant majority of private sector associations compared to academia and civil society, which might result in biased results for the implementation of the EBIA.

The federal government launched the proposal for the Brazilian Artificial Intelligence Plan 2024–2028 (PBIA) in July 2024. The new plan reassesses objectives and actions in the country's AI strategy and seeks to better align them with national interests and priorities.⁷⁵⁰ The plan outlines Brazil's vision for a

human-centered AI, promoting national autonomy, international cooperation, and alignment with the Sustainable Development Goals (SDGs). It emphasizes ethical standards, bias prevention, data sovereignty, and inclusivity in AI applications, aiming to position Brazil as a pioneer in socially responsible AI development.

The total budget for the plan is estimated at R\$23.03 billion. The plan considers both Immediate Impact Actions and Structuring Actions. The document details 31 Immediate Impact Actions focusing on specific problems in priority areas like health, agriculture, environment, social development, public service management, industry, commerce, services, and education. These actions aim at using existing technologies and databases to deliver quick, measurable, scalable, and impactful results. The document also includes 54 Structural Actions, long-term, foundational projects meant to establish the infrastructure, knowledge base, and regulatory environment needed for sustainable AI development. The Structural Actions are organized around five core pillars, each with distinct programs and funding allocations: (i) Infrastructure and AI Development, (ii) Diffusion, Training, and Workforce Development, (iii), Improvement of Public Services, (iv) AI for Business Innovation, (v) Support for AI Regulation and Governance.

Under the guidance of PBI, Brazil's AI Observatory (OBIA) was launched in September 2024⁷⁵¹ to monitor AI implementation nationwide, promoting transparency and fairness on key sectors like healthcare, thereby complementing Senate guidance on ethical AI policies.

AI Legislation

On September 29, 2021, the House of Representatives approved the draft Bill No. 21/2020 establishing the Legal Framework for Artificial Intelligence in Brazil (*Marco Legal da Inteligência Artificial*).⁷⁵² After approval in the House of Representatives, the draft Bill proceeded to the Federal Senate for joint analysis with two other legislative proposals: Bill No. 5051/2019 establishing the principles for the use of AI in Brazil and Bill No. 872/2021 providing for the ethical framework and guidelines that underline the development and use of AI in Brazil.

The aim of draft Bill No. 21/2020 is to create a legal framework for the development and use of AI by the government, companies, various entities and

individuals.⁷⁵³ AI agents, those who develop, deploy or use an AI system, will have a series of obligations, such as answering legally for decisions made by an artificial intelligence system and ensuring that the data used respects the Brazilian General Data Protection Law (LGPD).⁷⁵⁴ The processing of personal data of customers and users of companies in both the public and private sector is covered.

Academics and NGOs have criticized the draft Bill 21/2020, warning that the bill “may help perpetuate recent cases of algorithmic discrimination through provisions that hinder accountability for AI-induced errors and restrict the scope of the rights established in the LGPD and in the Brazilian Constitution.”⁷⁵⁵ According to critics, the legislation favors a regime of subjective responsibility (requiring proof of a fault), which not only results in imposing the costs of developing AI applications on citizens —“in a patent inversion of the constitutional values”—but also fails to establish the necessary incentives for the adoption of appropriate safeguards against the risks of AI.⁷⁵⁶ The non-discrimination principle “merely mitigates the possibility of applying systems for illicit or abusive discriminatory purposes.” As for the principle of neutrality, its “pursuit” creates no binding obligation. The Brazilian AI Bill “gravely undermines the exercise of fundamental rights such as data protection, freedom of expression, and equality.”

In response to these criticisms, in March 2022, the Federal Senate appointed a temporary Commission of Jurists (*Comissão de Juristas*, “CJSUBIA”) chaired by Justice Ricardo Villas Bôas Cueva from the Superior Court of Justice (*Superior Tribunal de Justiça*, STJ) and with renowned academic Laura Schertel Ferreira Mendes as the Rapporteur. The Commission was charged with analyzing the three draft AI bills and consolidating them into a proposal for a new Brazilian AI Act.

The work of the Commission of Jurists was developed in three stages. The first stage was to establish public participation mechanisms to ensure the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

participation of society and obtain technical and multidisciplinary contributions. The second phase consisted in conducting ordinary working meetings and an international seminar with legal AI experts across the world, such as Alessandro Mantelero, Marc Rotenberg, Mireille Hildebrandt, and Maria Paz Canales, with the aim to gather further feedback.

The third phase was dedicated to the writing and consolidation of the inputs obtained for the elaboration of the proposal for a new Brazilian AI Act. In the third phase, 5 subgroups were created to develop the writing: 1) Concepts, fundamentals, and principles (headed by Clara Iglesias Keller); 2) Rights and Governance Rules (headed by Miriam Wimmer); 3) Risk categorization and algorithmic impact assessment (headed by Bruno Bioni); 4) Measures to support innovation (headed by Mariana Valente; and 5) Supervision and Oversight.⁷⁵⁷

The Commission of Jurists finalized its work⁷⁵⁸ and submitted a draft legal framework to the Federal Senate on December 6, 2022.⁷⁵⁹ The explanatory statement of the report stresses “Therefore, this substitute bill is based on the premise that there is no trade-off—a mutually exclusive choice—between protection of fundamental rights and freedoms, appreciation of work and dignity of the human person in the face of the economic order and the creation of new value chains. [...] Its normative objective is to conciliate an approach based on risks with a regulatory model based on rights [...] weight of regulation is dynamically calibrated according to the potential risks of the technology application context.”

The proposal has 45 articles, divided into 9 chapters: 1) Preliminary provisions, 2) Rights, 3) Risk Categorization, 4) Governance of AI Systems, V) Civil Liability, VI) Codes of Good Practice and Governance, VII) Reporting Serious Incidents, VIII) Supervision and Enforcement, IX) Final Provisions. It has two different regulatory approaches. Overall, it is risk-based approach, imposing different obligations depending on the level of risk of the AI system. However, it also brings a rights-based approach, since there are rights recognized for all individuals affected by AI systems, regardless of their risk levels.

The rights for all affected individuals include right to prior information before interacting with AI systems, right to explanation, right to challenge decisions or predictions made by AI, right to human participation in decisions in

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

AI systems, right to non-discrimination, and right to privacy and protection of personal data.

Chapter 3 describes the risk categorization of AI systems. Prior to being placed on market or used in service, the supplier of the AI system must complete a preliminary evaluation to classify its degree of risk, according to the criteria set forth in the law. For high-risk artificial intelligence systems, it will be mandatory to conduct an algorithmic impact assessment and publicized the conclusions, with the protection of industrial and trade secrets when necessary. Artificial Intelligence systems classified as excessive risk are prohibited to be used or implemented, and there is a non-exhaustive list of such in the law. The law also proposes a regulation to restrict the use of remote biometric identification systems in public security.

A controversial theme since draft Bill No. 21/2020 was Civil Liability for damages caused by AI systems. The proposal defines that in the case of high risk or excessive risk of the AI systems, the supplier or operator is objectively liable for the damage caused. Otherwise, the liability will be presumed and there will be a reversal of the burden of proof in favor of the victim.

To enforce the new legislation the competent authority would be a body or entity of the Federal Government, still to be defined.

In 2023, this text was presented in the form of a bill (Bill 2338/2023). To address this matter and others related to the topic of AI in the Senate, an Internal Temporary Committee on Artificial Intelligence (CTIA) was established.

In October, the Internal Temporary Committee concluded a cycle of 10 public hearings, marked by criticisms from technology sector companies and academics regarding the “negative” bias of the project, with concerns about inhibiting innovation. On the other hand, jurists advocated for a risk-based approach, rejecting the idea of preventing innovations. There were also disagreements regarding the authority responsible for overseeing AI applications.

After further amendments and a supplemental vote document⁷⁶⁰ to update a June 2024 report that recommended the approval of Bill 2338/2023,⁷⁶¹ the Senate approved Bill 2338 in December 2024.⁷⁶² The Bill had a significant focus on characterizing the risk profile of AI systems and applications as presenting “excessive risk”; “high risk”; or other. Developers, suppliers, or operators are

Center for AI and Digital Policy

responsible for conducting a preliminary assessment on an AI system to determine the risk level. Updates to Bill on the floor, however, make these assessments optional, though “considered a measure of good practice” for systems that are not general-purpose and not generative. The Bill also exempts social media from high-risk classification.

Some examples of AI applications classified as excessive risk include autonomous weapons and biometric identification systems for use in public safety or Justice.⁷⁶³ These applications will be prohibited in the proposed legislation. High-risk systems will be subject to rules that are more lenient than excessive risk, but stricter than common AI systems. The bill will consider control measures such as records of the operations performed and reliability tests. The parties responsible for these systems and applications should, for example, make an algorithmic impact assessment, and be responsible for introducing preventive, mitigating, and reversing measures of the identified negative effects of the AI system.

If the bill becomes law, the National Data Protection Authority (ANPD) will coordinate oversight under a supervisory agency, the National System of Regulation and Governance of Artificial Intelligence (SIA). In addition to the state agencies, the project also provides incentives for self-regulation in the form of voluntary association of companies and through stamps and certificates of good practice.

However, since the publication of this supplemental vote document dozens of additional suggested amendments have been introduced and in turn CTIA’s work has been extended further to consider these suggested changes.⁷⁶⁴

The State of Ceará adopted Law No. 17/611 in August 2021, establishing obligations and guidelines for the implementation and use of AI systems within the state.⁷⁶⁵ This law establishes that AI systems must be designed in a safe way, based on ethics and in accordance with this law and Brazilian laws more generally. The law defines an AI system as computer science technologies that enable computers to interact with humans, through technological mechanisms that enable the simulation of human reasoning.

State Law No. 17/611 set some obligations for AI systems and the companies that develop them:

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

1. establish secure mechanisms and algorithms, capable of protecting and ensuring the privacy and inviolability of users' data
2. respect for human dignity and equal treatment for all users, non-discrimination
3. enable users to have control over their personal data and how they are being used
4. ensure that the systems are always managed by humans and submitted to them, and maintain human autonomy and supervision
5. promote social well-being and not incite hatred and violence
6. respect freedom of expression, as long as it does not contradict the previous items.

In addition, State Law No. 17/611 states that companies headquartered in the State of Ceará, or that have their artificial intelligence systems in use and operation in the State of Ceará, must be responsible for how their systems operate, being liable for any damages in accordance with the law.

Public Participation

The Ministry of Science, Technology, Innovations, and Communications (MCTIC) organized an online public consultation between December 2019 and February 2020 to gather inputs for “a National Artificial Intelligence Strategy that allows to enhance the benefits of AI for the country, mitigating any negative impacts.”⁷⁶⁶ According to the terms of the public consultation, “the objective of the strategy is to solve concrete problems in the country, identifying priority areas in the development and use of AI-related technologies in which there is greater potential for obtaining benefits. It is envisaged that AI can bring gains in promoting competitiveness and increasing Brazilian productivity, in providing public services, in improving people's quality of life and in reducing social inequalities, among others.”⁷⁶⁷

The consultation addressed thematic areas related to AI and focused on the government's role regarding the impact of AI technologies on society. Relevant documents to artificial intelligence were made available on the consultation website. The consultation collected about 1,000 contributions in total, which were considered for the development of the strategy proposal.⁷⁶⁸

On the other hand, Academics and NGOs have stated that the debate on Bill No. 21/2020 lacked public participation. According to José Renato Laranjeira de Pereira and Thiago Guimarães Moraes, “The debate on the bill ignored the

claims of experts and civil society organisations to address the high risks of the technology regarding fundamental rights. In contrast, Members of Congress delivered favorable speeches on the positive impacts of AI in society, especially as a tool for efficiency and innovation.”⁷⁶⁹

As indicated above, the Federal Senate responded to these criticisms by establishing a Commission of Jurists to prepare a new consolidated proposal for a Brazilian AI Act, the preparation of which involved the establishment of public participation mechanisms. The Commission of Jurists initiated the organization of meetings, seminars, and public hearings divided into thematic axes, with the participation of experts and national and international representatives. 12 thematic panels were created and the Commission of Jurists received 102 statements from civil society entities, consolidated in the report submitted to the Federal Senate.⁷⁷⁰

Data Protection

Brazil’s President signed the new data protection law, *Lei Geral de Proteção de Dados Pessoais* (LGPD), in September 2020.⁷⁷¹ The LGPD is the first comprehensive data protection law in Brazil and mirrors the European Union’s GDPR.⁷⁷² The LGPD is relevant to the processing of personal data in relation to AI applications.⁷⁷³

The LGPD established the National Data Protection Authority (ANPD) to oversee data protection and privacy in the country. A new law in 2022 modified the LGPD to transform the ANPD into an independent agency, apart from the executive, with its own budget.⁷⁷⁴ The ANPD is guaranteed technical and decision-

making autonomy,⁷⁷⁵ and is given important attributions related to the LGPD interpretation, application and enforcement.⁷⁷⁶

Among other powers, the National Data Protection Authority (1) regulates the General Data Protection Law; (2) supervises compliance with personal data protection legislation, with a view to protecting the fundamental rights of freedom, privacy and the free development of the natural person's personality; (3) develops the guidelines of the National Data Protection Plan in order to protect the fundamental rights of freedom, privacy and the free development of the personality of the natural person; and (4) applies administrative sanctions.⁷⁷⁷

Seven principles underpin the protection of personal data in the LGPD: (1) respect for privacy; (2) informed self-determination; (3) freedom of expression, information, communication, and opinion; (4) the inviolability of intimacy, honor, and image; (5) economic and technological development and innovation; (6) free enterprise, free competition, and consumer protection; and (7) human rights, the free development of personality, dignity, and the exercise of citizenship by natural persons.

The Brazilian Congress enacted Constitutional Amendment (EC) 115, which establishes personal data protection as a fundamental right in February 2022.⁷⁷⁸ EC 115 also gives the Federal Government exclusive jurisdiction to legislate on personal data protection and processing.

The amendment establishes the competence of the highest court within Brazil's judiciary, the Federal Supreme Court (*Supremo Tribunal Federal*, STF), to adjudicate legal issues involving personal data. Previously, the STF had examined related cases based on other constitutional guarantees, such as the inviolability of intimacy and individuals' private life.

Brazil's alignment with international data protection trends is also reflected in EC 115. Personal data protection is recognized as a fundamental right by numerous other democratic states and international organizations, and, as an

example, is established in Article 8 of the Charter of Fundamental Rights of the European Union.

Entities that process personal data in compliance with the Brazilian legislation are set to benefit from greater legal certainty with the passing of EC 115. By giving Brazil's federal government exclusive jurisdiction over data protection legislation, EC 115 prevents alternative, and possibly incompatible, regulations on the subject from being enacted at state or municipal level.⁷⁷⁹

The ANPD published Resolution 19/2024 approving the regulation on international data transfers and the content of standard contractual clauses in August 2024.⁷⁸⁰ The regulation implements the international data transfer framework under the LGPD.⁷⁸¹ International data transfers from Brazil to a third country are permitted if: (i) the ANPD recognizes the third country as providing adequate protection for personal data; (ii) the data exporter and data importer enter into standard contractual clauses (SCCs), binding corporate rules, or special contractual clauses; or (iii) one of the specific cases listed in the LGPD applies. Publication of the regulation comes amid discussions of creating a “sovereign cloud” to ensure government data is stored within national borders as part of Brazil's Artificial Intelligence Plan.⁷⁸²

The National Council for the Rights of Children and Adolescents (CONANDA) published Resolution No. 245/2024 that addresses children and adolescents' rights in virtual environments. For the purposes of Resolution No. 245/2024, “virtual environments” means any information or communication technology, such as digital networks, content, services and applications available on the Internet; devices and connected environments; virtual and augmented reality; artificial intelligence; robotics; and automated systems, biometrics, algorithmic systems, and data analysis. Resolution No. 245/2024 establishes specific data protection requirements such as the prohibition of processing minors'

personal data for commercial purposes including targeted advertisement and profiling in connection with consumption, behavior, and market segmentation.⁷⁸³

AI Oversight

The ANPD adopted Resolution No. 10 in December 2023, which emphasized the need to strengthen data protection and oversight concerning AI applications.⁷⁸⁴

As a member of the Ibero-American Network for the Protection of Personal Data (RIPD, *Red Ibero-Americano de Protección de Datos*), the ANPD endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence⁷⁸⁵ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.⁷⁸⁶ Both have been framed in accordance with the RIPD Standards for Personal Data Protection for Ibero-American States.⁷⁸⁷ With the adoption of the Standards, a series of guiding principles and rights for the protection of personal data were recognized that can be adopted and developed by the Ibero-American States in their national legislation to guarantee proper treatment of personal data and to have homogeneous rules in the region. The guiding principles of personal data protection are legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data, and right to the limitation of treatment of personal data.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In May 2023, the RIPD data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data. Concerns centered on the risk of misinformation: “ChatGPT does not have knowledge and/or experience in a specific domain, so the precision and depth of the response may vary in each case, and/or generate responses with cultural, racial or gender biases, as well as false ones.”⁷⁸⁸

The ANPD is not a member of the Global Privacy Assembly (GPA). It has observer status since October 2021. The ANPD has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁷⁸⁹ the 2020 GPA Resolution on AI Accountability,⁷⁹⁰ the 2022 GPA Resolution on Facial Recognition Technology,⁷⁹¹ or the 2023 GPA Resolution on Generative AI Systems.⁷⁹²

In September 2020, the Federal Government published a decree establishing the rules governing the ANPD with the objective of giving effect to the LGPD and enabling sanctions in case of non-compliance.⁷⁹³

The ANPD’s regulatory agenda for 2023–2024 aimed to provide greater predictability, publicity, transparency, and efficiency to its regulatory process. In addition to ensuring the proper application of the LGPD, Article 20, which deals with the right of the data subject to request the review of automated decisions, the

Center for AI and Digital Policy

ANPD can better address the issue of AI by means of guidance documents (such as guides and technical studies). The ANPD states that it is essential that it studies and monitors the subject from the perspective of personal data protection, and particularly the application of the LGPD, since these guidelines will serve as a basis for the development of other rules that may be necessary for the discipline of AI systems.⁷⁹⁴

As part of Axis 5 of the National AI Strategy, Brazil established the National Center for Algorithmic Transparency and Reliable AI in 2024. This center is dedicated to conducting research on AI risks, enhancing transparency, and ensuring the integrity and reliability of AI systems. Additionally, the ANPD launched a series of Brazilian Guides for Responsible AI tailored to Brazil's national context, promoting ethical AI usage and building public trust in AI technologies.⁷⁹⁵

Should the House pass the Senate-approved AI Bill from December 2024, the ANPD would facilitate AI oversight through SIA.

Algorithmic Transparency

Article 20 of the LGPD establishes the right of any individual “to request the review of decisions taken solely on the basis of automated processing of personal data that affect his interests, including decisions designed to define his personal, professional, consumer and credit profile or aspects of his personality.”⁷⁹⁶

As a result, “the controller shall provide, whenever requested, clear and adequate information regarding the criteria and procedures used for the automated decision, observing the commercial and industrial secrets.”⁷⁹⁷ Where the information is not provided due to the observance of commercial and industrial secrecy, the national data protection authority “may perform audits to verify discriminatory aspects in automated processing of personal data.”⁷⁹⁸

⁷⁹⁷ Article 20.1 LGPD

⁷⁹⁸ Article 20.2 LGPD

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Some Brazilian researchers and judicial advocates, including Prof. Renato Leite Monteiro and entities like the Brazilian Institute of Consumer Protection (IDEC), assert that a comprehensive interpretation of the LGPD, in conjunction with the Constitution, consumer law, and other legal provisions, guarantees the existence of a right to explanation in Brazil. However, this position demands greater judicial consolidation.⁷⁹⁹

The national AI strategy heavily features algorithmic transparency as a goal for the development of AI capabilities and policies in Brazil. One of the critical strategic actions delineated in the EBIA is “Encouraging transparency and responsible disclosure actions regarding the use of AI systems, and promoting compliance by such systems with human rights, democratic values and diversity.”⁸⁰⁰ The EBIA also outlined algorithmic transparency as a critical theme to be pursued in AI research. The strategy outlined transparency as a critical element of AI governance both regarding explainability of decisions taken by autonomous systems and the transparency of methodologies used in the development of AI systems, including data sources and project procedures.⁸⁰¹

With regard to the transparency principle, the RIPD Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects provide, “The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience.”⁸⁰²

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Brazil approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.⁸⁰³ The Charter aims to provide a

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI in public administration and adapt their AI policy strategies and laws accordingly. The guiding principles are human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection.

In addition to common principles, the Charter recommends specific tools for monitoring AI impact as well as a risk classification mechanism that guardrails for high-risk use cases and prohibitions against uses that violate human rights. Prohibited uses include facial recognition systems; systems aimed at behavior and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly); and social ranking systems based on certain personality traits, individual behaviors, socio-demographic features, or economic status.⁸⁰⁴

The third axis of the proposal for the Brazilian Artificial Intelligence Plan 2024–2028 focuses on the use of AI to improve public services. The plan includes 19 suggested actions to foster the use of AI in the public sector to improve the delivery of public services and enhance impact on development and social inclusion. The plan outlines investments of R\$1.76 billion divided among an AI Nucleus for the Federal Government, a National Data Infrastructure, and a Program of AI Solutions for Public Services. Some of the areas targeted for proposed AI solutions to improve public services include procurement, management of human resources, management of educational resources, cybersecurity, management of assets, and prevention of extreme climate events.⁸⁰⁵

Algorithm-Based Advertising

The Brazilian Advertising Self-Regulation Council (CONAR), a nongovernmental organization that acts as a tribunal in the advertising industry to ensure advertising practices are lawful and ethical,⁸⁰⁶ decided a case involving algorithm-based advertising in December 2021.⁸⁰⁷ The ruling was issued with regard to a complaint filed by a consumer against a streaming platform, alleging that an ad did not reflect the actual content of the platform. In its defense, the

streaming platform clarified that its ads are created automatically through algorithms, which, having identified the consumer's interest in the film, would have then used the film to increase the consumer's engagement with the ad. CONAR did not consider that the streaming platform had committed any irregularities through this practice. However, it warned that advertisers should be cautious when using algorithm-based advertising, as those may hinder consumers from obtaining the solutions they seek.

In 2024, CONAR extended guidelines around algorithm-based advertising to encompass influencer marketing, requiring that all paid promotions be clearly labeled to avoid consumer confusion. These updates reflect Brazil's alignment with international trends prioritizing transparency and consumer protection.⁸⁰⁸

EdTech

The EdTech apps Descomplica and Stoodi used in Sao Paulo were part of a 2022 global study conducted by Human Rights Watch on education technology endorsed by 49 governments, including Brazil, during the pandemic. Based on technical and policy analysis of these EdTech products, Human Rights Watch found that Brazil's endorsement of these online learning platforms put at risk or directly violated children's rights.

Human Rights Watch found that both Descomplica and Stoodi have “the ability to collect their users’ advertising IDs. This allowed these apps to tag children and identify their devices for the sole purpose of advertising to them.” According to Human Rights Watch, in line with child data protection principles as well as corporations’ human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children’s data for advertising. The report noted steps companies should take to protect children’s rights, including working with governments to define clear retention and deletion rules for children’s data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards and ensure that children who want to learn are not compelled to give up their other rights to do so.⁸⁰⁹

In March 2024, Human Rights Watch submitted recommendations to the UN Committee on the Rights of the Child urging the ANPD to seek actionable steps against the EdTech companies to protect children and adolescents’ data privacy. Human Rights Watch also recommended that ANPD build on the current

“case law and Supreme court rulings protecting children’s right in educational settings” when addressing online education.⁸¹⁰

Medical Data

According to a 2020 OECD report for the G20 Digital Economy Task Force, Brazil is in the process of establishing regulation in the area of privacy and personal data protection in health systems consistent with existing legislation, including the LGPD. To this end, the country is developing a national electronic health records system, which aims to provide a robust database for current medical use, as well as for technology development and innovation.⁸¹¹

On March 24, 2022, the Brazilian Health Regulatory Agency (ANVISA)⁸¹² published a Resolution about the regularization of Software as a Medical Device (SaMD), which went into force in July 2022.⁸¹³ ANVISA clarified that the purpose of the device must be respected. There is currently no provision for specific regulation of SaMD that includes AI or ML technology; however, manufacturers of SaMD using this type of technology should submit, at the time of regularization, a description of the databases used for AI learning, training, and verification activities; information regarding the origin, the amount, and a description of the data used; and a report containing justification for the AI technique applied, the size of the databases used, and the training history. The absence of such information at the time of submission of the device regularization may lead to a negative outcome, for lack of sufficient explanation regarding the technology applied to the product, as required in the medical device regulation.⁸¹⁴

ANVISA’s 2024–2025 regulatory agenda does not explicitly mention AI or machine learning. However, reviewing the SaMD regulation is among its priorities.⁸¹⁵

Center for AI and Digital Policy

Use of AI in Courts

With a current backlog of 78 million lawsuits, the Brazilian judicial system operates with substantial challenges in case flow management. The lack of resources to meet this demand⁸¹⁶ has led to numerous initiatives involving Artificial Intelligence.

In this context, the President of the National Council of Justice (CNJ), a judicial agency responsible for the administrative and financial control of the judiciary and the supervision of judges,⁸¹⁷ published in August 2020 a Resolution on ethics, transparency and governance in the production and use of artificial Intelligence in the Judiciary.⁸¹⁸ The NCJ Resolution addresses AI-related requirements such as respect for human rights; preservation of equality, non-discrimination, plurality, and solidarity; transparency (from disclosure to explainability); data security; user control; and accountability.

The Attorney General of the Union (AGU) began using artificial intelligence tools in the production of legal documents in 2024. Federal lawyers and prosecutors may use generative AI tools through the institutional document management system known as Super Sapiens to make summaries of extensive texts, classify and sort documents, extract data from a process, or obtain suggestions for petition models.⁸¹⁹

The Public Prosecutor's Office of the State of Rio de Janeiro reportedly invested in data science and AI to expedite investigations and prevent crimes.⁸²⁰ The system has allowed information from different sources and bodies to be collected as well as real-time data to be collected from suspected criminals.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Likewise, Brazil's federal and state police are using AI applications such as military drones⁸²¹ and crime prediction software.⁸²²

Similar to the EU GDPR, the LGPD (Art. 4) excludes “the processing of data for the purposes of public security” from its scope and states that such processing “shall be governed by specific legislation, which shall provide proportional and strictly necessary measures in order to serve the public interest.” However, such specific legislation does not yet exist in Brazil.⁸²³

Computational Propaganda

According to Freedom House's Freedom on the Net report, Brazil is only “partly free” because of the prevalence of manipulated content online and the “notable proliferation of disinformation during the 2018 and 2022 election campaigns.”⁸²⁴ Several studies⁸²⁵ have pointed out the use of bots on online gatekeepers in the electoral context. Misinformation campaigns in Brazil have consisted in “pro-government and pro-party propaganda”; “attacking the opposition or mounting smear campaigns”; “suppressing participation through trolling and harassment”; and social media campaigns that “drive division and polarize citizens.”⁸²⁶

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Global Voice also reported that “in February 2022, the Federal Police delivered a partial report to the Supreme Court in which it further detailed the structure of these “digital militias” charged with coordinating attacks against rival politicians, democratic institutions, and the dissemination of “false news.” This report was part of a Supreme Court probe (dubbed “the digital militias probe”) opened in 2021.⁸²⁷

In 2024, the Brazilian Judiciary responded to these challenges—primarily through the Superior Electoral Court and the Federal Supreme Court—by implementing innovative measures to mitigate the harmful effects of disinformation and ensure the integrity of the electoral process.⁸²⁸ In February, the Superior Electoral Court approved a resolution⁸²⁹ that addressed several threats related to artificial intelligence. The resolution included prohibition of deep fakes; obligation to warning about the use of AI in electoral propaganda; restriction of the use of “robots” to mediate contact with the voter (the campaign cannot simulate dialogue with a candidate or anyone else); and accountability of “big techs” that do not immediately remove content that violates these guidelines from their platforms. The violation of this norm carries strict punishment for candidates. Article 9c highlights that a candidate can have their registration or mandate canceled for infringing on the norm and Article 9-E establishes the joint and severe liability of the providers, in a civil and administrative way, if they do not immediately remove certain content and/or accounts that violate these guidelines during the electoral period.

Facial Recognition

Facial recognition is implemented in both the public and private sectors in Brazil. According to Instituto Igarapé, a Brazilian think tank, there were at least 48 facial recognition applications throughout 16 Federal States between 2011 to

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

2019.⁸³⁰ The main use sectors are public security, border control, transportation, and education.⁸³¹

In August 2018, the Brazilian Institute for Consumer Protection (IDEC) brought a civil public class action⁸³² before the Court of Justice of Sao Paulo for breach of privacy and consumer legislation against the São Paulo Metro operator, regarding an AI crowd analytics system that claimed to predict the emotion, age, and gender of metro passengers without processing personal data.⁸³³ In May 2021, the São Paulo 37th Civil Court ordered the company to pay compensation for passengers' data collection without their consent and prohibited the company from continuing the implementation and use of cameras that recognized human presence or identified emotion, gender, and age groups.⁸³⁴

Another monitoring system with built-in facial recognition installed in the São Paulo subway network was challenged in Court. In early 2020, the operating company was requested to provide clarification on the risks and impact assessment expected from the implementation of the new technology, on how personal data will be processed, on technical databases and security systems issues, and on actions to mitigate the potential risk of a data breach.⁸³⁵ In March 2022, the 6th Public Treasury Court of São Paulo delivered a preliminary injunction ordering the operating company to suspend the deployment and use of the facial recognition system in the São Paulo metro stations.⁸³⁶ In April 2022, the preliminary injunction

Center for AI and Digital Policy

was confirmed in appeal by the São Paulo 5th Public Law Chamber.⁸³⁷ However, in October 2022, the same Chamber ruled that the operating company was entitled to deploy and use facial recognition technology on the grounds that the LGPD allows such use for public security purposes. Governor Rodrigo Garcia officially inaugurated the facial recognition system the following month. The aim is for 5,000 biometric cameras to be deployed in transit stations over the next 30 months.⁸³⁸

In July 2023, the government of São Paulo introduced the Muralha Paulista system, a security network that interconnects cameras and radars in different cities to the Metropolitan Region of São José do Rio Preto.⁸³⁹ The Muralha Paulista system has since been used by football clubs to identify perpetrators of violence or harassment at large sporting events, specifically to flag people with open warrants or judicial restrictions.⁸⁴⁰

In November 2023, Brazil's ANDP issued a technical note that sheds light on the legal waters of using facial recognition technology in sports stadiums. Amid controversies about striking a balance between enhancing public safety and safeguarding individual privacy, the note lays down concrete suggestions to ensure compliance with the General Data Protection Law. Key among these suggestions is the call for comprehensive Data Protection Impact Assessments that specifically address the processing of biometric data. The note outlines critical guidelines for avoiding legal pitfalls and details the consequences of failing to adhere to these standards, marking a step forward in the ongoing discussions around ethical deployment of AI technologies in public spaces.⁸⁴¹

The Brazilian police have also been using live facial recognition for Carnival and has plans to use the technology in events involving crowds to find

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

wanted criminals. In 2020, police forces rolled out facial recognition in six capitals across the country. When announcing the use of live facial recognition, the São Paulo police said they would create a “situation room,” where they would monitor the images from the cameras, which would then be compared with a database managed by a biometrics lab. According to the police, the aim is to reduce the likelihood of mistakes, such as wrongful arrests.⁸⁴²

In 2021, Brazil rolled out end-to-end biometric identification technologies by IDEMIA, a technology solution provider, for use in passenger identification at several airports, including domestic airports in São Paulo and Rio de Janeiro.⁸⁴³ Many have voiced concern at the government’s embrace of facial recognition technology, especially surrounding issues of racial bias, given that the LGPD does not address these technologies.⁸⁴⁴

In the first quarter of 2022, several campaigns started in Brazil opposing the widespread use of facial recognition technologies in public spaces.

One of them is called *Sai da minha cara* (Get off my face) and is led by civil society organizations, including the IDEC.⁸⁴⁵ A localized campaign with several states and cities, *Sai da minha cara* advocates for laws to ban facial recognition. Including bills to restrict the use of facial recognition by public authorities before the State Legislative Assembly of São Paulo⁸⁴⁶ and before the City Council in Porto Alegre, the capital of the state of Rio Grande do Sul.⁸⁴⁷ A

bill before the City Council in Curitiba, capital city of the state of Paraná, would restrict the use of facial recognition for mass surveillance by public authorities.⁸⁴⁸

Another campaign started in May 2022 under the name “Tire o Meu Rosto da Sua Mira” (Get My Face Out of Your Sight).⁸⁴⁹ Civil society organizations demand a total ban on the use of facial recognition technologies for public security purposes in Brazil. According to the campaign’s open letter, in Brazil, a country with the third largest incarcerated population in the world, the use of facial recognition technologies for public security purposes would lead to the worsening of racist practices.

A Federal Law proposal seeking to regulate the use of facial recognition technologies in Brazil both for the private and public sectors was submitted to the Brazilian House of Representatives in August 2022.⁸⁵⁰ The legislative process began that October and the proposed legislation was forwarded to the responsible commissions.

A new study published by the Center for Security and Citizenship Studies (CESeC) in March 2024 showed that 67.4 million Brazilians, close to a third of the population, are potentially under surveillance by facial recognition cameras. In updates in January 2025, the CESeC cited 337 facial recognition projects in the country and more than 81 million people surveilled.⁸⁵¹

The banning of the use of facial recognition systems for public security purposes was one of the key points that emerged during the public hearings promoted by the Commission of Jurists that elaborated the proposal for the regulation of artificial intelligence in Brazil.⁸⁵² Several Brazilian rights organizations called for a ban on facial recognition by law enforcement during discussions around the proposed AI regulation bill.⁸⁵³ For example, the Coalition Rights on the Net (*Coalizão Direitos na Rede*) cited several examples of arrests

after mistaken identity in their open letter advocating for the Brazilian AI regulation to ban facial recognition technologies.⁸⁵⁴

Environmental Impact of AI

Brazil's 2024 National AI Strategy (PBIa) recognized the environmental implications of AI technologies, focusing on integrating sustainability within AI development. The strategy includes the monitoring of AI's carbon footprint, advocating for energy-efficient AI systems, and promoting best practices to reduce environmental damage. The policy also encourages the creation of regulatory sandboxes for AI, which allow for controlled testing of AI technologies with an emphasis on minimizing their environmental impact, particularly in terms of energy consumption and e-waste. Brazil is also aligning its AI policies with global climate goals, supporting AI's potential to address challenges related to climate change and sustainable development.⁸⁵⁵ In addition, the Brazilian government announced a “new global initiative focused on information integrity, with particular attention to climate change.” This is in line with the G20 and the 30th UN Framework Convention on Climate Change (COP 30), expected to take place in Brazil in 2025 with support from UNESCO.⁸⁵⁶

Lethal Autonomous Weapons

During the 2018 discussions of the Group of Governmental Experts (GGE) on lethal autonomous weapons (LAWS), Brazil issued a joint statement with Austria and Chile that proposed to establish an open-ended GGE to negotiate a legally binding instrument to ensure meaningful human control over critical functions in LAWS.⁸⁵⁷

At the 77th UN General Assembly First Committee meeting in October 2022, Brazil's representative emphasized the need for a regulation that recognizes the centrality of human control in the development and use of autonomous

systems, in line with international humanitarian law.⁸⁵⁸ However, Brazil was not among the 70 countries that endorsed a joint statement on autonomous weapons systems at the October UN General Assembly meeting. In this joint statement, States urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”⁸⁵⁹

In February 2023, Brazil endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,⁸⁶⁰ which calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

Human Rights

Brazil is a signatory to many international human rights treaties and conventions and is considered as a free country in the world for the protection of human rights and transparency.⁸⁶¹ In 2024, Freedom House rated Brazil as “free” with a score of 72/100 for political rights and civil liberties. According to Freedom House, Brazil is “a democracy that holds competitive elections, and the political arena, though polarized, is characterized by vibrant public debate. However, independent journalists and civil society activists risk harassment and violent attack, and the government has struggled to address high rates of violent crime and disproportionate violence against and economic exclusion of minorities.”⁸⁶²

AI Safety Summit

Brazil participated in the first AI Safety Summit in 2023 and endorsed the Bletchley Declaration.⁸⁶³ Brazil thus committed to participate in international cooperation on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.” Brazilian representatives did not attend the 2024 in Seoul,⁸⁶⁴ in part because of the country’s commitments in the G20.⁸⁶⁵

OECD / G20 AI Principles

Brazil has endorsed the OECD AI Principles⁸⁶⁶ and the G20 AI Guidelines and referred to the OECD Principles as important guidance for the development of its national AI strategy. Brazil has also joined the Global Partnership on AI, a multi-stakeholder initiative that aims to foster international cooperation on AI research and applied activities. The GPAI is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”⁸⁶⁷

With the G20 Presidency in 2024, Brazil led progress on the realization of the G20 AI Guidelines. The G20 Digital Economy ministers, led by Brazil,

endorsed principles for digital inclusion, AI for inclusive sustainable development and inequality reduction, and combating disinformation.⁸⁶⁸

Council of Europe AI Treaty

Brazil did not participate in the negotiations for the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law and has not signed the treaty.⁸⁶⁹

UNESCO Recommendation on AI Ethics

Brazil has endorsed the UNESCO Recommendation on the Ethics of AI and recognizes its obligation to implement the framework. On May 11, 2022, UNESCO, in cooperation with the Regional Centre for Information Society Development Studies (CETIC.br), held an event to launch the Portuguese version of the UNESCO AI Recommendation, which aimed to “discuss and promote this subject in Brazilian society.”⁸⁷⁰ In 2019, Brazil hosted the UNESCO Latin American AI forum organized by CETIC.br involving different UNESCO members and officers. According to Marlova Noletto, director and UNESCO representative in Brazil, the country was actively engaged in the preparation of the UNESCO AI Recommendation and aligned with the contents thereof even before formal adoption.⁸⁷¹

The Brazilian Ambassador to UNESCO and president of UNESCO’s 41st General Conference, Santiago Mourão, emphasized that the UNESCO AI Recommendations fully align with the Brazilian government’s guidelines and actions on AI themes. He highlighted that the importance Brazil gives AI ethics is reflected in its engagement in intergovernmental negotiations, as well as in the inclusion of the theme in the Brazilian Strategy for AI.⁸⁷² CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the Recommendation on AI Ethics in Latin America and the Caribbean.⁸⁷³ They established a Regional Council comprising national and

local governments from Latin America and the Caribbean, including Brazil, and convened for the inaugural meeting in October 2023.⁸⁷⁴

Brazil also signed the resulting 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.⁸⁷⁵ The Santiago Declaration reflects UNESCO's Recommendation on the Ethics of AI and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.

Brazil was one of the first countries to complete the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.⁸⁷⁶ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.⁸⁷⁷

In 2024, initiatives in Brazil sought to highlight how marginalized groups such as the indigenous community are excluded from AI debates under UNESCO's Recommendation on the Ethics of AI.⁸⁷⁸

Evaluation

Brazil has developed a robust national strategy for AI and has established a comprehensive law for data protection that includes algorithmic transparency. The federal government's proposal for the Brazilian Artificial Intelligence Plan 2024-2028 (PBIA), which reassesses objectives and actions in the country's AI strategy and seeks to better align them with national interests and priorities, marks significant progress. ANPD has also progressed on data protection in the context of the proposed AI plan. However, AI legislation was slow to pass the Senate and awaits debate in the House. While there have been initiatives to tackle

Center for AI and Digital Policy

disinformation, facial recognition has not been adequately addressed, leaving human rights groups continuing to call for bans.

Brazil has emerged as an international leader in championing inclusive and more ethical AI. Brazil led on implementation of the UNESCO Recommendation through completion of the RAM and participation in regional discussions of best practices. Brazil's leadership in furthering digital inclusion in AI and beyond in the G20 is also noteworthy. Addressing national concerns in areas such as facial recognition could make Brazil a model for implementing international frameworks.

Canada

In 2024, Canada funded an AI Safety Institute and integrated into strategies for the Privacy Commissioner and public service. Canada also participated in negotiations for the Council of Europe AI treaty and signed the Convention in February 2025.

National AI Strategy

Canada's national AI Strategy has focused on the use of AI in government and public services. The Canadian government stated "Artificial intelligence (AI) technologies offer promise for improving how the Government of Canada serves Canadians. As we explore the use of AI in government programs and services, we are ensuring it is governed by clear values, ethics, and laws."⁸⁷⁹ Canada has set out Guiding Principles to ensure the "effective and ethical use of AI." The government has committed to "understand and measure" impacts, be transparent about use, "provide meaningful explanations" for AI decision-making, "be as open as we can be," and provide sufficient training."⁸⁸⁰

The Canadian government commenced the process for its first AI strategy for the federal public service in 2024.⁸⁸¹ The strategy focused on accelerating responsible AI adoption throughout the federal public service, leveraging AI

within the Government of Canada to enhance productivity, enhance capacity in science and research, and deliver improved digital services.⁸⁸²

The government of Canada and the government of Quebec announced a joint undertaking to “advance the responsible development of AI” in 2020.⁸⁸³ The establishment of the Centre of Expertise in Montréal for the Advancement of Artificial Intelligence (ICEMAI),⁸⁸⁴ “enables Quebec to highlight the important role of its AI ecosystem, specifically in the area of responsible development of AI, and to take its place internationally as an essential partner and subject-matter expert.”

Directive on Automated Decision-Making

The Government of Canada’s Treasury Board Secretariat (TBS) established a Directive on Automated Decision-Making to ensure that administrative decisions are “compatible with core administrative law principles such as transparency, accountability, legality, and procedural fairness.”⁸⁸⁵ Canada has developed a questionnaire for an Algorithmic Impact Assessment to “assess and mitigate the risks associated with deploying an automated decision system” and to comply with the Directive.⁸⁸⁶ The Directive took effect on April 1, 2019, with compliance required by no later than April 1, 2020.

The TBS completed the third review of the Directive on Automated Decision-Making in 2022. “The review takes stock of the current state of the directive and identifies risks and challenges to the government’s commitment to responsible artificial intelligence (AI) in the federal public service.”⁸⁸⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The TBS issued the Guide on the Scope of the Directive on Automated Decision-Making in 2024 to clarify the conditions for exception and applicability of the Directive to National Security Systems.⁸⁸⁸ The guide itemized five key elements for applicability: used by a department; developed after April 1, 2020; used in an administrative decision-making process; replaces or assists judgment; and used in a production environment. provides.

In a parallel effort to support the Directive, the TBS worked with Public Services and Procurement Canada (PSPC) to establish a Pre-qualified AI Vendor procurement program to streamline the procurement of AI solutions and services in the government. This new AI public procurement program was used to help government departments and agencies build awareness of the solutions offered by AI. It also provided small and medium AI companies with an opportunity to provide their services to the government.⁸⁸⁹ The Government of Canada posted a tender for companies to qualify for the AI source list in October 2024. The procurement aims to “establish a pre-qualified list of suppliers [...] who meet all the mandatory criteria to provide Canada with responsible and effective AI services, solutions and products.”⁸⁹⁰

Digital Charter Implementation Act

Bill C-27, the Digital Charter Implementation Act (DCIA), represented Canada’s first comprehensive AI legislation, introduced in June 2022.⁸⁹¹ The Bill, which comprised three separate pieces of legislation: the Consumer Privacy Protection Act (CPPA), Personal Information and Data Protection Tribunal Act (PIDPTA), and the Artificial Intelligence and Data Act (AIDA),⁸⁹² faced public criticism because of what was perceived as a insufficient protections and inadequate public consultation.

Amendments incorporating some of the public feedback in November 2023⁸⁹³ failed to earn public trust in AIDA as an effective, adaptable regulatory

framework for AI. The Canadian Civil Liberties Association, Privacy and Access Council of Canada, Amnesty International Canada, and several experts, academics, and other organizations sent a joint letter to the Minister of Innovation, Science and Industry in April 2024⁸⁹⁴ calling for the withdrawal of AIDA from parliamentary consideration and “consultation with Indigenous rights-holders, civil society, the private sector, and other stakeholders that should have taken place prior to AIDA’s introduction” before reintroducing it in revised form.

AIDA expired in a parliamentary committee, leaving the future of AI legislation in Canada uncertain.⁸⁹⁵ The Digital Charter Implementation Act also expired in Committee.⁸⁹⁶

Public Participation

In 2019, Canada established an Advisory Council on Artificial Intelligence to “inform the long-term vision for Canada on AI both domestically and internationally.”⁸⁹⁷ Composed of researchers, academics, and business leaders, the Council advises the Government of Canada on how to build on Canada’s AI strengths to support entrepreneurship, drive economic growth and job creation and build public trust in AI. The Council created two working groups to date, one on Commercialization and another one on Public Awareness. Public awareness is a key area for the Council that emphasized that policy design, including sectoral priorities, require the trust and support of the public to succeed.⁸⁹⁸

Canada’s AI Advisory Council created its public engagement and consultation processes using both consultation and deliberation. The national survey elicited an array of citizens’ input on AI use in different sectors. Online workshops aimed to find ways to address ethical concerns raised by citizens via

the survey. Among the goals of the deliberative process is to shape a new set of guidelines and recommendations for the development of AI.⁸⁹⁹

The government of Canada published a public consultation in 2023 to gather insights on the ongoing negotiations on the Council of Europe Convention on AI, Human Rights, Democracy and the Rule of Law. Officially, the role of Canada in the negotiations is to help shape “the treaty to reflect Canadian values and interests, while promoting Canadian objectives on AI in the context of potential risks to human rights, democracy and the rule of law.”⁹⁰⁰

The Minister of Innovation, Science and Industry launched a public consultation to help inform the design and implementation of a new AI Compute Access Fund and a Canadian AI Sovereign Compute Strategy proposed in Budget 2024. The consultation was aimed at researchers, innovators, civil societies, Indigenous groups, and businesses through various means including online.⁹⁰¹

Data Protection

The Office of the Privacy Commissioner (OPC) of Canada provides advice and information for individuals about protecting personal information.⁹⁰² The agency also enforces two federal privacy laws that set out the rules for how federal government institutions and certain businesses must handle personal information. The Privacy Act regulates the collection and use of personal data by the federal government.⁹⁰³ The Personal Information Protection and Electronic Documents Act (PIPEDA) applies to personal data collected by private companies.⁹⁰⁴

First in November 2020, and then in November 2022, after an extensive period of consultation, the Privacy Commissioner issued proposals on regulating

artificial intelligence.⁹⁰⁵ The recommendations “aim to allow for responsible AI innovation and socially beneficial uses while protecting human rights.” The Commissioner recommended amending PIPEDA to:

- allow personal information to be used for new purposes towards responsible AI innovation and for societal benefits
- authorize these uses within a rights-based framework that would entrench privacy as a human right and a necessary element for the exercise of other fundamental rights
- create a right to meaningful explanation for automated decisions and a right to contest those decisions to ensure they are made fairly and accurately
- strengthen accountability by requiring a demonstration of privacy compliance upon request by the regulator
- empower the OPC to issue binding orders and proportional financial penalties to incentivize compliance with the law
- require organizations to design AI systems from their conception in a way that protects privacy and human rights.

The Commissioner also highlighted a public consultation initiated by the OPC that received 86 comments from industry, academia, civil society, and the legal community, among others. Those inputs were incorporated in a separate report, which informs the recommendations for law reform.⁹⁰⁶

Federal, provincial and territorial privacy commissioners published the principles for responsible, trustworthy and privacy-protective generative AI technologies in December 2023. The objective is to help organizations that are developing, providing or using generative AI to be compliant with fundamental rights and privacy legislation.⁹⁰⁷

The Office of the Privacy Commissioner of Canada published the Strategic Plan considering its role in the development of AI in Canada. The OPC considered governing and developing AI among its three priorities for 2024–2027. The plan outlines how the OPC will maximize its impact in fully and effectively promoting and protecting the fundamental right to privacy, addressing and advocating for

Center for AI and Digital Policy

privacy in this time of technological change, and championing children’s privacy rights.⁹⁰⁸

The Privacy Commissioner of Canada is an accredited member of the Global Privacy Assembly (GPA) since 2002.⁹⁰⁹ The Privacy Commissioner has endorsed the 2018 GPA Resolution on AI and Ethics,⁹¹⁰ the 2020 GPA Resolution on Facial Recognition,⁹¹¹ the 2022 GPA Resolution on AI and Accountability,⁹¹² and the 2023 GPA Resolution on Generative AI Systems.⁹¹³

Algorithmic Transparency

The PIPEDA includes strong rights for individual access concerning automated decisions.⁹¹⁴ The PIPEDA Reform Report for AI builds on public consultations and proposes to “Provide individuals with a right to explanation and increased transparency when they interact with, or are subject to, automated processing.”⁹¹⁵ The Cofone Report on the reform also explains that “the right to explanation is connected to the principles of privacy, accountability, fairness, non-discrimination, safety, security, and transparency. The effort to guarantee these rights supports the need for a right to explanation.”

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In the last Open Algorithms Network meeting that was co-chaired by the Government of Canada, with participation from the Governments of Estonia, Norway, the United Kingdom, and Scotland as well as civil society respondents, the participants started considering issues of “equality, bias, and discrimination in their algorithmic commitments in Open Government Partnership (OGP) action plans and across government AI strategies.”⁹¹⁶ “Many of these commitments are grounded in the idea that opening data and design of algorithms is an avenue to reduce bias and discrimination, and that the process of collecting data or design is as important as the outcome.”⁹¹⁷ Algorithmic transparency⁹¹⁸ is an emerging commitment⁹¹⁹ area for OGP.

Data Scraping

The Office of the Privacy Commissioner alongside the data protection authorities of 16 countries, issued a statement in October 2024 calling for more protection of fundamental rights in mass data scraping and for AI model training.⁹²⁰ This was a follow up to the joint statement issued in August 2023, based on engagement with social media companies (SMCs) and other industry stakeholders. This follow-up joint statement lays out further expectations for organizations including deploying safeguarding measures; regular review and updating to keep pace with technological advancement; ensuring without limitation, that they have a lawful basis for data scraping; are transparent about the scraping they allow; and obtaining consent where required by law. Organizations that permit scraping of personal data for any purpose, including commercial and socially beneficial purposes, must be compliant with applicable data protection and privacy laws. Furthermore, SMCs and other organizations that use scraped datasets and/or use data from their own platforms to train AI, such as Large Language Models, must comply with data protection and privacy laws as well as any AI-specific laws where those exist.

Facial Recognition

Canada continues to ensure that facial recognition technologies do not threaten the rights of its citizens. Canada took decisive action against Clearview

AI in 2021, after discovering the organization had scraped billions of images of people from across the Internet, in clear violation of Canadians' privacy rights.⁹²¹

Following the Clearview action, the privacy commissioners of Canada, Ontario, and Québec issued a joint statement recommending the creation of a legal regulatory framework for the use of facial recognition technology by police. The recommendation identifies four requirements:⁹²²

1. Clear and explicit definitions for the appropriate and prohibited use of facial recognition technologies by law enforcement. This should include 'no-go' zones and the prohibition of mass surveillance.
2. Restricting the use of such technologies based on strict necessity and proportionality,
3. The use of strong independent oversight that are based on proactive engagement including program pre-authorization and advanced notice before initiating initiatives based on facial recognition technology
4. Privacy rights protection that limits the risk to individuals including limitations on the duration of information retention and measures to ensure that data is accurate

Following public consultation, the commissioners also indicated that federal and provincial agencies will be provided with specific advances based on specific implementation cases.

AI in Defense and Nuclear Policies

The Canadian Department of National Defence (DND) and Canadian Armed Forces (CAF) released their first-ever Artificial Intelligence Strategy in March 2024. The strategy focuses on five key areas: 1) Identifying and fielding capabilities required by DND and the CAF; 2) Creating a culture supportive of AI innovation; 3) Establishing principles, processes and practices to ensure that the use of AI is ethical, legal, inclusive, safe and trusted; 4) Managing talent and training to meet workforce needs; 5) Deepening strategic partnerships internally and externally with allies, industries and academia. The strategy "commits the Defence Team to becoming AI enabled by 2030."⁹²³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Canadian Nuclear Safety Commission (CNSC) joined the United Kingdom's Office for Nuclear Regulation (UK ONR) and the United States Nuclear Regulatory Commission (U.S. NRC) to establish high-level principles for the safe and effective integration of AI technologies in nuclear operations. The group jointly published the Trilateral Principles Paper on the Deployment of Artificial Intelligence in Nuclear Activities on September 5, 2024.⁹²⁴ Developed through a collaborative trilateral relationship formed in 2022, the paper addresses critical aspects such as safety and security engineering, human and organizational factors, AI system architecture, lifecycle management, and the documentation of safety measures. Highlighting the importance of data quality, the paper emphasizes that the performance of AI systems hinges on the quality of the data they process. The paper also identifies security challenges unique to AI, noting their potentially greater significance compared to conventional software issues. By providing this framework, the paper seeks to advance the responsible and secure use of AI within regulated nuclear activities.

Lethal Autonomous Weapons

Canadian academics urged Prime Minister Justin Trudeau to oppose Autonomous Weapon Systems in 2017 as part of the #BanKillerAI campaign.⁹²⁵

Trudeau included "Advance international efforts to ban the development and use of fully autonomous weapons systems," in the mandate he charged to Foreign Affairs Minister François Philippe Champagne in December 2019.⁹²⁶ However, this mandate has not been fulfilled. Canada CCW members who delivered a 2022 proposal on Principles and Good Practices on Emerging Technologies in the Area of Lethal Autonomous Weapons Systems.⁹²⁷

Canada agreed to the joint call to action on the responsible development, deployment, and use of artificial intelligence (AI) in the military domain as part

Center for AI and Digital Policy

of the REAIM Summit in 2023 in the Netherlands.⁹²⁸ Canada also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁹²⁹

The second REAIM summit was held in South Korea. At the summit, 61 countries, including Canada,⁹³⁰ signed a Blueprint for Action for the ethical and human-centric use of AI in the military.⁹³¹ The blueprint identifies the standards for AI in the military domain including the principles and framework for future governance, compliance with international law, holding humans responsible, ensuring reliability and trustworthiness of AI, maintaining an appropriate human involvement and improving the ability to explain AI.⁹³² At the 78th UN General Assembly First Committee in 2023, Canada voted in favor⁹³³ of resolution L56⁹³⁴ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

EdTech

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Canada, for children’s education during the pandemic. One of the case studies concerned “CBC Kids,” offered by the Canadian Broadcasting Corporation and recommended by Canada’s Quebec Education Ministry for pre-primary and primary school-aged children’s learning. Based on technical and policy analysis

of this EdTech product, Human Rights Watch found that the endorsement of this online learning platforms put at risk or directly violated children's rights, due to its tracking and profiling practices for advertising purposes. The report called on governments to develop, refine, and enforce modern child data protection laws and standards and ensure that children who want to learn are not compelled to give up their other rights to do so.⁹³⁵

The Canadian Teachers Federation released a policy brief in September 2024, calling for urgent action to regulate the use of AI in Canadian K–12 public education.⁹³⁶ The Teachers' Federation requested that the Federal Government and the Council of Ministers of Education, Canada (CMEC) develop and implement policies that safeguard the rights of educators and students as AI systems proliferate in public education across the country.

Human Rights

Canada consistently ranks “Free” and among the top ten nations in the world for the protection of human rights and transparency on the Freedom House Freedom in the World Report. Canada's score dropped one point to 97 in 2024.⁹³⁷ Freedom House reported that, “Canada has a strong history of respect for political rights and civil liberties, though in recent years citizens have been concerned about laws related to the administration of fair elections, government transparency, the treatment of inmates in prisons, and restrictions on public sector employees wearing religious symbols. While Black, Indigenous, and other marginalized Canadians still face discrimination and economic, social, and political challenges, the federal government has acknowledged these problems and made some moves to address them.”⁹³⁸

The Law Commission of Ontario and Ontario Human Rights Commission, representing Canada's most populous province, jointly created an AI impact assessment tool in November 2024 to provide organizations a method to assess AI systems for compliance with human rights obligations.⁹³⁹ The human rights AI impact assessment (HRIA) assists developers and administrators of AI systems to

identify, assess, minimize, or avoid discrimination and uphold human rights obligations throughout the lifecycle of an AI system by providing guidelines for when and how to conduct impact assessments. The HRIA is intended to: “Strengthen knowledge and understanding of human rights impacts; Provide practical guidance on specific human rights impacts, particularly in relation to non-discrimination and equality of treatment; and Identify practical mitigation strategies and remedies to address bias and discrimination from AI systems.”⁹⁴⁰

OECD / G20 AI Principles

Canada endorsed the OECD and the G20 AI Principles, including the principles updated in May 2024.⁹⁴¹

In 2020, Canada and France, and a dozen other countries announced the Global Partnership on Artificial Intelligence to “support the responsible and human-centric development and use of AI in a manner consistent with human rights, fundamental freedoms, and our shared democratic values.”⁹⁴² According to the statement, the “GPAI will be supported by a Secretariat, to be hosted by the OECD in Paris, as well as by two Centres of Expertise—one each in Montréal and Paris.”

Canada and the European Union announced in 2020 that they were collaborating to leverage AI to help the international community respond to COVID-19. The initiative included the GPAI’s group on AI and Pandemic Response and the annual EU-Canada Digital Dialogue.⁹⁴³

AI Safety Summit

Canada participated in the first AI Safety Summit and endorsed the Bletchley Declaration in 2023.⁹⁴⁴ Canada thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms,

and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

The formation of the International Network of AI Safety Institutes was announced at the AI Seoul Summit in May 2024. As a founding member of the Network, Canada will seek to actively coordinate efforts with international partners and collaborate on joint projects, including the development of guidance on AI safety.⁹⁴⁵

Canada launched the Canadian AI Safety Institute (CAISI) in November 2024. CAISI “is part of the Government of Canada’s plan to support the safe and responsible development and deployment of artificial intelligence (AI). CAISI aims “to advance the science of AI safety, in collaboration with international partners, in order to ensure that governments are well-positioned to understand and act on the risks of advanced AI systems. These include risks posed by synthetic content, including impersonation and fraud, as well as risks posed by the development or deployment of systems that may be dangerous or hinder human oversight.”⁹⁴⁶

UNESCO Recommendation on AI Ethics

Canada is a signatory of the UNESCO Recommendation on the Ethics of Artificial Intelligence.⁹⁴⁷ Canada’s principles for AI, directive on automated decision-making, and support of Impact Assessment tools reflect a commitment to the Recommendations in public deployment while guidelines for public procurement offer a means to extend those guidelines to the private sector.⁹⁴⁸

Council of Europe AI Treaty

Canada contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy, and the Rule of Law. The Committee of Ministers adopted the Framework during the 2024

ministerial meeting⁹⁴⁹ and it opened for signature in September 2024. Canada signed this first international AI Treaty on February 11, 2025.⁹⁵⁰

Evaluation

Canada is among the leaders in creating policies and guidelines for AI. In addition to endorsing the OECD/G20 AI Principles and establishing the GPAI with France, Canada has taken steps to establish model practices for the use of AI across government agencies. Canada has a solid record on human rights and is now working to update its national privacy law to address the challenges of AI. The failure of the Digital Charter Implementation Act including the AIDA and data protection updates raises the possibility that Canada will remain without a comprehensive AI policy.

Chile

In 2024, Chile released an update to the National AI Policy based on findings from the UNESCO Readiness Assessment Methodology and public consultation and roundtables. The country also introduced a series of bill to encourage the responsible and ethical development and use of AI, including a AI Bill, amendments to the data protection law, and recommendation on algorithmic transparency.

National AI Strategy

The Chilean government launched an updated National AI Policy that integrated recommendations from UNESCO's AI Readiness Assessment Report in May 2024.⁹⁵¹ This report followed Chile's milestone as the first country globally to apply and complete UNESCO's AI Readiness Assessment Methodology (RAM). The updated policy builds on the initial National AI Policy, published in October 2021.⁹⁵² The focus of the updated policy was to bring the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Ethics and Governance axis in alignment with recent governance developments rather than formulate a new policy.⁹⁵³

The original National AI Policy identifies a main objective, four transversal AI policy principles, and three interdependent axes. The axes address current opportunities and gaps in AI regulation by defining the scope of actions for relevant actors to achieve AI policy objectives by 2031.⁹⁵⁴ The National AI Policy is complemented by an AI Action Plan, which combines around 70 priority tasks in the areas of education, product development, talent management and others. The AI Action Plan also deals with accountability and establishes timelines for priority tasks implementation. However, the AI Policy does not provide for implementation deadlines, possible funding mechanisms or monitoring instruments, which could be beneficial for the implementation of the AI Action Plan.⁹⁵⁵

The main AI Policy objective for Chile is “to place the country at the forefront of AI research, development, and innovation, with an ecosystem that creates new capacities in various sectors.”⁹⁵⁶ Such an ecosystem should be designed according to transversal concepts of opportunity and responsibility, contribute to sustainable development, and improve the quality of life.⁹⁵⁷

To achieve this, the AI Policy provides for the following transversal principles:⁹⁵⁸

- AI with a focus on the well-being of people, respect for human rights and security with activities targeted at improving people’s quality of life by capitalizing on the benefits of AI while taking into account its risks and potential negative outcomes, in the light of human rights protection norms.

Both the algorithms and the data used for training automated systems should be trustworthy.

- AI for sustainable development with actions to promote AI use and development, and the inclusion of AI in Chile's sustainable development efforts.
- Inclusive AI with actions emphasizing integrity and data quality to address biases. Chile will ensure that AI does not discriminate based on gender, sexual orientation, and among vulnerable groups, including indigenous peoples, people with disabilities, etc.
- AI and globalization with initiatives developed in alignment with international efforts in the field of AI. These initiatives will be consistent with the principles and agreements Chile has already signed, such as the OECD AI Principles, and will be updated in accordance with any further international commitments the country makes.⁹⁵⁹

The National AI Policy also provides for an AI Action Plan and its implementation. The first axis, “Enabling Factors,” refers to the structural components of AI design and deployment, such as talent development, technology infrastructure, and data.⁹⁶⁰ The second axis, “Development and Adoption,” covers Chile’s targets regarding fundamental and applied research, technology transfer, innovation, entrepreneurship, public service improvement, and technology-based economic growth, as well as the participation of various actors in these processes, such as academia, government, private sector and civil society.⁹⁶¹ The third axis, Ethics, Regulatory Aspects, and Socioeconomic Impacts, tackles human-machine interaction and the socio-technical system, considering several important issues identified during the consultations: AI in consumer protection, intellectual property, cybersecurity, AI influence on the labor market and gender dimension, explainability and transparency of the algorithms, etc.⁹⁶² Thus, throughout its AI Policy, Chile stresses the importance of international standards for AI regulation and the protection of fundamental rights and the rule of law in AI use and deployment.

Chile is also actively working to build regional cooperation through the LATAM 4.0,⁹⁶³ which was launched in November of 2022. Its purpose is to regionalize AI development to exchange best practices among Latam countries, unify governance criteria, as well to promote regional integration. Moreover, institutionalizing Digital Rights Protection Treaties is one of the key regional strategies envisioned in the LATAM 4.0 regional coalition.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

After discussing a draft Bill modeled on EU AI Act in 2023,⁹⁶⁴ the Chilean Parliament officially introduced a bill to promote the ethical development of AI, safeguard fundamental rights, and ensure consumer protection in the Chamber of Deputies in May 2024.⁹⁶⁵

Public Participation

The Chilean Ministry of Science, Technology, Knowledge, and Innovation (MinCiencia) opened a public consultation on the National Artificial Intelligence Policy 2024 in January,⁹⁶⁶ which remained accessible for three months. The consultation seeks to gather citizen feedback on proposed revisions to the 2021 National Artificial Intelligence Policy with a focus on ensuring ethical AI usage in the public sector and fostering international collaboration, particularly within Latin America. This consultation formed part of the ongoing update of the Ethics and Governance axis of the policy.

The drafting of the initial National AI Policy was marked by an effort to ensure wide and inclusive participation across the industry, academia, civil society and the public at large. The core team was composed of 12 experts in the field.⁹⁶⁷ Virtual and in-person AI seminars, discussion groups and workshops were held across the country, including the regions, where inputs for the AI Policy were collected.⁹⁶⁸ After the first draft of the AI Policy was produced, a citizens'

consultation was held to collect their views. Overall, a total of more than 9,000 people participated in the process.⁹⁶⁹ The civil society expressed criticism regarding the lack of transparency regarding the output of regional and online workshops and difficulties accessing meeting minutes.⁹⁷⁰ The inclusivity of the process was also called into question as only 21% of respondents to the second stage consultation were female and a consultation questionnaire was available only in Spanish.⁹⁷¹

The updated policies were also informed by a series of roundtables. A report published by the Library of the National Congress on one such roundtable on Public Policies on Artificial Intelligence in 2023 noted that the discussions allowed “the exchange of information and opinions from [participants] with diverse professional experiences and areas of focus” to inform the design of public policies in the country.⁹⁷²

Data Protection

Article 19 of Chile's Constitution (*Constitución Política de la República de Chile*) of 1980 protects the right to private life.⁹⁷³ In 2018, the constitutional guarantee was extended to explicitly protect personal data.⁹⁷⁴

The Law on Protection of Private Life (*Ley sobre Protección de la Vida Privada*) (LPPL) of 1999 regulates the processing of personal data in public and private databases.⁹⁷⁵ In addition to LPPL, the processing of personal data in the financial and healthcare sectors is regulated by relevant sectoral laws.⁹⁷⁶ Legal actions regarding the violations of the constitutionally protected right to personal data can be brought before courts.⁹⁷⁷ Limited supervisory powers are shared

between two authorities. The Transparency Council (*Consejo para la Transparencia*) is an independent oversight agency which, as a part of its mandate, monitors compliance with the data protection law by the organs of the state administration. The Transparency Council does not have the power to impose fines.⁹⁷⁸

Since December 2021, a consumer protection agency SERNAC (*Servicio Nacional del Consumidor*) has had a competency to monitor data protection compliance in consumer matters. It cannot impose fines but may initiate and participate in judicial proceedings and collective voluntary proceedings.⁹⁷⁹

The Chilean government introduced draft bill No. 11144-07 Regulating the Processing and Protection of Personal Data and Creating the Personal Data Protection Agency in 2017. The bill takes the EU GDPR as a model and would establish an independent body to oversee data rights. The Joint Commission, National Congress, Senate, and Chamber of Deputies approved a later version of the Bill in August 2024.⁹⁸⁰ The bill is pending final review and approval by the Constitutional Court before it can be officially enacted by the President of the Republic.

Chile's Transparency Council endorsed the Ibero-American Network for the Protection of Personal Data (RIPD) standards and guidelines and committed to integrated the principles of legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality in national policies.⁹⁸¹ The 16 data protection authorities representing 12 countries initiated a coordinated action on ChatGPT, developed by OpenAI, in May 2023 on the basis that ChatGPT may entail risks for the rights and freedoms of users in the processing of their personal data because of the potential for “responses with cultural, racial or gender biases, as well as false ones.”⁹⁸²

The Transparency Council has been a member of the Global Privacy Assembly (GPA) since 2019.⁹⁸³ The Transparency Council has not endorsed any AI-related GPA Resolutions⁹⁸⁴ or the related ICDPPC Declaration on Ethics and Data Protection in Artificial Intelligence (2018).⁹⁸⁵

Algorithmic Transparency

There is currently no legally established right to algorithmic transparency in Chile, and the LPPL does not provide for individual rights related to automated decision-making (ADM).

Article 8 of the new PPPD Bill introduces a “right to object and not be subject to decisions based on the automated processing of their personal data, including profiling, which produces legal effects concerning them or significantly affects them” unless the decision is necessary for the conclusion or execution of a contract, based on data subject’s consent, or provided for by law.⁹⁸⁶ In all decisions made based on automated processing, the data controller must take necessary measures to ensure the rights and freedoms of data subjects, their right to information and transparency, to obtain explanation and human intervention, to express their point of view, and to request a review of the decision.⁹⁸⁷

With regard to the transparency principle, the RIPD Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects, endorsed by the Transparency Council, provide, “The information provided regarding the logic of the AI model must

include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience.”⁹⁸⁸

In October 2022, the Transparency Council initiated efforts to draft a General Instruction on Algorithmic Transparency.⁹⁸⁹ The analysis of algorithmic transparency in the public sector carried out by the public innovation lab GobLab UAI and the Transparency Council shows that although information about processing activities and algorithmic logic is sometimes available, it is frequently fragmented and dispersed across different sources.⁹⁹⁰ The researchers pointed to the considerable effort required to collect, systematize and present the information in a manner understandable to the recipient.⁹⁹¹

The survey of 74 companies selling IoT devices carried out by SERNAC in February 2022 showed a widespread lack of knowledge regarding the use of AI and algorithmic technologies within the private sector. Many companies were not aware if manufacturers had employed such technologies in the products they were selling or distributing.⁹⁹² This is aggravated by the lack of understanding about what data categories are collected by the IoT devices and the absence of privacy policies explaining processing to the consumers.

Use of AI in Public Administration

Chile’s government published a circular entitled Guidelines for the use of AI tools in the public sector in December 2023. The circular addresses key themes such as human-centric AI, transparency and explainability, privacy, and data use. The guidelines came into effect on January 1, 2024, and the circular was distributed to all public services.⁹⁹³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

As a member of the Latin American Centre for Development Administration (CLAD), Chile approved the principles in the Ibero American Charter on Artificial Intelligence in Civil Service in late 2023.⁹⁹⁴ The guiding principles include: human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection.

The Charter calls on member states to create policies and laws to require the assessment of the impact of AI systems on human rights and freedoms and the registration of algorithms to “anticipate risks, prevent undesirable effects and ensure its proper implementation.”⁹⁹⁵ The Charter also proposes a risk classification mechanism that would require guardrails for middle-risk uses and prohibitions against high-risk applications. Prohibited uses include facial recognition systems; systems aimed at behavior and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly); and social ranking systems based on certain personality traits, individual behaviors, socio-demographic features or economic status.⁹⁹⁶

Chile’s AI Bill introduced in May 2024 aligns with the Charter’s principles and outlines a comprehensive risk classification system for AI applications in public administration.⁹⁹⁷ This system mandates public agencies to conduct thorough assessments of the potential risks associated with the AI technologies they develop or procure.

Facial Recognition

In 2019, a group of 28 civil society organizations and nearly 70 experts have issued a public statement rejecting President Piñera's Mobile Surveillance

System deployed the same year.⁹⁹⁸ The system was created under Chile's Safe Street (*Calle Segura*) plan and used drones equipped with high-definition cameras and facial recognition technology to monitor public areas to fight crime and improve coordination of security agencies. Despite the criticism, the surveillance system which started with a fleet of 8 drones was expanded and new public procurements were ongoing at the time of the writing.⁹⁹⁹

A number of cases recorded in Chile demonstrated errors, false positives, and a general lack of effectiveness in publicly funded and invasive facial recognition systems. The facial recognition system deployed in one of Santiago's shopping malls and used to cross-reference images with the Investigative Police database of wanted suspects, for example, was reported to result in a 90% rate of false positives.¹⁰⁰⁰ The Transparency Council criticized the system for being disproportionate and intrusive from a privacy perspective.¹⁰⁰¹

Inadequate results and widespread errors were also reported when using IDEMIA's real-time image analysis and facial recognition software in the municipality of Las Condes¹⁰⁰² and the facial recognition system implemented by the Civil Registry.¹⁰⁰³ No regulatory initiatives banning mass deployment of facial recognition technology have yet been registered.

Regulation DAN-151 issued by the General Directorate of Civil Aeronautics (DGAC), however, establishes conditions for drone use with an explicit reference to the requirement of respect to people's rights to privacy and intimacy in the operation of drones.¹⁰⁰⁴

EdTech

As part of a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Chile, during the pandemic, Human Rights Watch found that Aprendo in Linea in Chile put at risk or directly violated children's rights. The EdTech product sent children's data to AdTech companies. According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report recommended that governments develop, refine, and enforce modern child data protection laws and standards and ensure that children who want to learn are not compelled to give up their other rights to do so.¹⁰⁰⁵

Key stakeholders, including policymakers, international organizations, private sector representatives, and academia, participated in discussions on the skills needed to meet the challenges and opportunities presented by artificial intelligence in education at a roundtable on Education and Skills in the Age of Artificial Intelligence hosted by the UNESCO Regional Office in Santiago in October 2023.¹⁰⁰⁶ Stakeholders highlighted the need for continuous training for teachers and school leaders regarding the ethical use of AI technologies. The discussion also emphasized the collaborative roles of various sectors in adapting education to current technological advancements. Valtencir Mendes, Head of Education at UNESCO Santiago, concluded by stressing the need to protect students' rights while adapting the educational system to technological advancements.

Chile was among the 16 countries from Latin America and the Caribbean that committed to the promotion of ethical AI education as part of their endorsement of the Cartagena de Indias Declaration in August 2024.¹⁰⁰⁷ The declaration stresses the need for collaboration to foster ethical and inclusive AI development and commits the countries to enhancing digital education and sharing best practices while ensuring AI governance frameworks uphold human rights and promote innovation.

AI and Neurotechnology

Chile became the first country in the world to provide constitutional protection for neuro-rights in 2021. Neuro-rights are recognized as a subset of human rights aimed at balancing the potentially adverse effects of neurotechnology.¹⁰⁰⁸ Article 19 of the Chilean Constitution was amended by introducing the provision that “Scientific and technological development will be at the service of people and will be carried out with respect for life and physical and psychological integrity. The law will regulate the requirements, conditions and restrictions for its use on people, especially safeguarding brain activity, as well as the information derived from it.”¹⁰⁰⁹ This guarantee is especially relevant in light of advances in the area of neuroscience and AI, such as brain-computer interfaces.¹⁰¹⁰

Chile introduced a on the protection of neuro-rights and mental integrity and the development of research and neurotechnologies in October 2020.¹⁰¹¹ The bill, which is currently in the second constitutional procedure of the legislative process,¹⁰¹² aims to regulate neurotechnologies while preserving rights and data regarding brain activity and mental integrity.

Environmental Impact of AI

Chile’s National AI Policy states that it will establish incentives for developers and deployers of AI systems to focus on energy efficiency and develop guidelines for environmentally responsible use in the public and private sectors.¹⁰¹³

Lethal Autonomous Weapons

During the 2018 discussions of the Group of Governmental Experts (GGE) on lethal autonomous weapons systems (LAWS),¹⁰¹⁴ Chile issued a joint statement with Austria and Brazil that proposed to establish an open-ended GGE to negotiate a legally binding instrument to ensure meaningful human control over critical functions in LAWS.¹⁰¹⁵ In 2020, Chile also joined eight other CCW parties and reiterated the call for the development of a “normative and operational framework” for ensuring human control of LAWS.¹⁰¹⁶

Chile was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly in October 2022. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.¹⁰¹⁷ In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”¹⁰¹⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

At the 78th UN General Assembly First Committee in 2023, Chile voted in favor¹⁰¹⁹ of resolution L.56¹⁰²⁰ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

Chile endorsed the Belén Communiqué in February 2023,¹⁰²¹ which calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

Chile also participated in the international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands in February 2023. At the end of the REAIM 2023, Chile, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.¹⁰²² In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” States also “stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain.”¹⁰²³

Center for AI and Digital Policy

Human Rights

Chile ranked as “Free” with a score of 94/100 in the Freedom in the World report,¹⁰²⁴ with 38/40 for political rights and 56/60 for civil liberties.

The government of Chile has continued to demonstrate progress on improving the protection of human rights related to AI by updating the Ethics and Governance axis of the 2021 version of its National AI Policy¹⁰²⁵ in line with input from various stakeholder groups gathered during a 2-month public consultation period.¹⁰²⁶ The new AI bill¹⁰²⁷ aimed at regulating AI development in a way that safeguards and promotes democratic principles, the rule of law, and citizens’ fundamental human rights will also ensure the ethical and responsible implementation of AI.

Despite Chile's ratification of several human rights instruments,¹⁰²⁸ some lingering issues remain with regard to human rights protection. Chile still has problems with incarceration conditions in detention facilities, and experiences cases of torture and brutality by law enforcement.¹⁰²⁹ There are also reported cases of arbitrary or unlawful murders, as well as issues with the protection of the rights of women, indigenous populations, LGBTQI+, migrants, and refugees.¹⁰³⁰ In October 2020, following a series of protests and clashes with law enforcement authorities, more than 70% of citizens voted in favor of forming a constituent

assembly to rewrite the constitution, which has remained unchanged since the dictatorship that officially ended in 1990.

AI Safety Summit

Chile participated in the first AI Safety Summit and endorsed the Bletchley Declaration in November 2023.¹⁰³¹ Chile thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

Chile did not participate in the AI Seoul Summit in May 2024.¹⁰³²

OECD / G20 AI Principles

As an OECD member, Chile endorsed the OECD AI Principles,¹⁰³³ directly referencing them on several occasions in its AI-related documents, including in its National AI Policy.¹⁰³⁴ The May 2024 update to the National AI Policy strongly emphasizes responsible AI development, ethical AI deployment, and the importance of international collaboration on AI governance.

The OECD has noted Chile's AI policy efforts across various dimensions,¹⁰³⁵ including its promotion of societal dialogues on AI, its creation of partnerships with the private sector for human capacity development, its willingness for international cooperation on AI governance.

Chile's AI policy vision also echoes several principles of the OECD AI Guidelines, including the principles of transparency and explainability, human-

centered AI, and building human capacity for AI.¹⁰³⁶ The Chilean Council for Transparency's recommendations on algorithmic transparency¹⁰³⁷ published in August 2024 align with OECD guidelines to promote accountability and the ethical use of algorithms in public services by introducing guidelines for proactive transparency, effective monitoring, and use of clear language in the delivery of information about automated and semi-automated decision-making systems.

Council of Europe AI Treaty

Chile has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law, the first legally binding international AI treaty.¹⁰³⁸

UNESCO Recommendation on AI Ethics

Chile is a UNESCO member and adopted the UNESCO Recommendation on the Ethics of AI during the 41st General Conference in November 2021.¹⁰³⁹

In 2022, CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the UNESCO Recommendation in Latin America and the Caribbean.¹⁰⁴⁰ They pledged to create a Regional Council composed of national and local governments in the region which will support their implementation efforts.

Chile's Ministry of Science, in partnership with UNESCO and CAF, convened the first Regional Forum on AI Ethics in November 2023. The aim of the event was to shape a collective strategy among Latin American and Caribbean

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

(LAC) countries aligned with the UNESCO Recommendation. Chile signed the resulting Santiago Declaration to Promote Ethical Artificial Intelligence.¹⁰⁴¹ It establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection. The Declaration also constitutes a milestone towards establishing a Regional Council on AI for the LAC region. Chile will preside over the working group created to this end.¹⁰⁴²

Chile was also one of the first countries to complete the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.¹⁰⁴³ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.¹⁰⁴⁴

Chile became the first country in the world to implement the RAM with the launch of an updated National AI Policy and action plan in May 2024.¹⁰⁴⁵ Chile also proposed a new bill aimed at regulating the ethical and responsible development of AI based on the recommendations from UNESCO's RAM.¹⁰⁴⁶

Evaluation

Chile has made considerable progress toward developing legislative and policy frameworks in data protection and AI and aligning them with international standards, particularly the UNESCO Recommendation on the Ethics of AI. Chile's continual efforts toward refining its National AI Policy in accordance with international AI governance standards and best practices—demonstrated, for

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

example, by the decision to promote more open dialogue with civil society and the public about AI's potential risks and opportunities—are to be commended.

Chile has made in improvement in finalizing updates to the Chile's data protection law, establishing a regulatory oversight agency with adequate enforcement powers, and implementing enforceable standards in algorithmic transparency. The new AI Bill¹⁰⁴⁷ currently under deliberation addresses the issue of regulatory oversight and includes provisions for the establishment of a National Commission on Artificial Intelligence,¹⁰⁴⁸ which will enforce and monitor compliance with the legislation. The recently updated data protection bill,¹⁰⁴⁹ complemented by the Chilean Council for Transparency's recommendations on algorithmic transparency,¹⁰⁵⁰ have also made significant progress toward algorithmic transparency protections similar to those established under GDPR.

Though it is encouraging to see that Chile is employing public consultations to gather multi-stakeholder input for their National AI Policy updates,¹⁰⁵¹ some of the timelines (such as 2 months) may prevent all affected stakeholders to be able to meaningfully share their perspectives on such complex issues. The proliferation of intrusive facial recognition technologies in public spaces could undermine Chile's ambitious AI agenda based on respect for human rights.

China

In 2024, China completed public consultation on measures for identifying synthetic AI-generated content and adopted the AI Safety Governance Framework. The country also adopted the G20 Ministerial Declaration promoting ethical AI for inclusive sustainable development in September.

National AI Strategy

Since 2013, the Chinese government has published several national-level policies, guidelines, and action plans, which reflect the intention to develop, deploy, and integrate AI in various sectors. In 2015, Prime Minister Li Keqiang launched the “Made in China” (MIC 2025) initiative aimed at turning the country into a production hub for high-tech products within the next few decades.¹⁰⁵² In the same year, the State Council released guidelines on China’s Internet + Action plan.¹⁰⁵³ It sought to integrate the internet into all elements of the economy and society. The document emphasized the importance of cultivating emerging AI industries and investing in research and development. The Central Committee of the Communist Party of China’s 13th 5-year plan is another notable example. The document mentioned AI as one of the six critical areas for developing the country’s emerging industries and as an essential factor in stimulating economic growth.¹⁰⁵⁴ The Robot Industry Development Plan,¹⁰⁵⁵ Special Action of Innovation and Development of Smart Hardware Industry,¹⁰⁵⁶ and Artificial Intelligence Innovation Action Plan for Higher Institutions¹⁰⁵⁷ illustrate detailed action plans and guidelines concerning specific sectors.

Most notable of all is the New Generation Artificial Intelligence Development Plan (AIDP) – an ambitious strategy to make China the world leader in AI by 2030 and the most transparent and influential indication of China's AI strategy’s driving forces. China’s State Council issued the AIDP in 2017. According to the Plan, AI should be used in a broad range of sectors, including

Center for AI and Digital Policy

defense and social welfare. The AIDP also indicates the need to develop standards and ethical norms for the use of AI. The actual innovation and transformation are expected to be driven by the private sector and local governments.¹⁰⁵⁸ The Chinese government has handpicked three major tech giants to focus on developing specific sectors of AI: Baidu, Alibaba, and Tencent.¹⁰⁵⁹ In return, these companies receive preferential contract bidding, more convenient access to finance, and sometimes market share protection.

Following the AIDP, the Ministry of Science and Technology published the New Generation Artificial Intelligence Development Code of Ethics (Code of Ethics).¹⁰⁶⁰ The New Generation AI Governance Professional Committee, consisting of experts from academics and the industry,¹⁰⁶¹ created the Code of Ethics and is responsible for its implementation. The Code of Ethics aims to “thoroughly implement the AIDP, refine the principles of AIDP, enhance society’s awareness and behavioural consciousness of AI ethics, actively guide responsible AI research, development, and application activities, as well as promote the healthy development of AI.” The Code of Ethics highlights six fundamental ethical requirements: (1) “improving human well-being,” (2) “promoting fairness and justice,” (3) “protecting privacy and security,” (4) “ensuring controllability, and trustworthiness,” (5) “strengthening responsibility,” and (6) “improving ethical literacy,” taking ethical issues like privacy, biases, discrimination, and fairness into consideration.¹⁰⁶² Thus, the Code of Ethics marks a step forward at the national level to develop ethical guidelines and principles for Artificial Intelligence.

On July 3rd, 2024, the Chinese government released official guidelines for a National Comprehensive Standardization System for the AI industry, marking

¹⁰⁵⁸ 3-year plan promoting the AIDP (2018–2020) emphasizes coordination between provinces and local governments.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

yet another such step forward. The guidelines were released—after a draft release and public consultation period—by China’s Cyberspace Administration, in partnership with several other technology-focused administrations, including the National Development & Reform Commission and the National Standardization Administration. The Standards are arranged into a complex set of primary standards and secondary standards. The primary standards are:

1. Basic Common Standards
2. Basic Support Standards
3. Key Technical Standards
4. Standards for Smart Products and Services
5. Enabling New Industrialization Standards
6. Industry Application Standards
7. Security/Governance Standards.

It is important to note that none of the Standards are substantive, leaving room for further developments. The entire Standardization System is therefore more of a strict framework or roadmap. This intricate series of standards represents China’s new approach to regulating Artificial Intelligence at the National Level.¹⁰⁶³

The National Development and Reform Commission issued guidelines for a National Data Standards System in 2024 to activate data’s potential, an adjacent but important area for AI strategy. These guidelines build on the National Artificial Intelligence Industry Comprehensive Standardization System by expanding upon different expectations of several of the previous categories. Among the processes set to be standardized by this set of guidelines are Data aggregation technical standards and 5G data transmission network standards. Given the recent release of these Data Standards, it remains to be seen how they will be implemented.¹⁰⁶⁴

Regarding local governments, there is a system of incentives for fulfilling national government policy aims. For this reason, local governments often become a testing ground for the central government’s policies. Chinese cities and provinces, as well as regional administrations, compete for the new AI incentives. Large metropolises, such as Tianjin and Shanghai, have already launched multi-

Center for AI and Digital Policy

billion-dollar AI city Venture Capital funds and converted entire districts and islands for new AI companies. Shenzhen and Shanghai have taken the lead to create policies and standards for the Artificial Intelligence industry in China at the provincial level. Coming into effect on November 1, 2022, the Regulations on the Promotion of Artificial Intelligence Industry in Shenzhen, in particular, marked the birth of the country's first regulation on the AI industry.¹⁰⁶⁵ Shanghai, in the meantime, published Regulations of Shanghai on Promoting the Development of Artificial Intelligence Industry, coming into effect on October 1, 2022.¹⁰⁶⁶ The two Regulations aim to promote the innovation and development of the AI industry in their provinces for the benefit of citizens, society, and the economy. Both Regulations establish mechanisms and Committees of AI Ethics to develop AI ethics policy and standards as well as provide guidance on AI ethics.

The establishment of the New Generational AI Governance Professional Committee at the national level and Committees of AI Ethics at the provincial level embodies the creation of a monitoring regime for the guidance and supervision of AI and AI ethics. The impact of the oversight of AI in policy implementation processes as well as the level of independence of these mechanisms remains unclear.

Management of Algorithmic Recommendations

China has started to adopt a comprehensive set of regulations on AI. The Provisions on the Management of Algorithmic Recommendations in Internet Information Services came into force in March 2022.¹⁰⁶⁷ The Provisions apply to any entity that uses algorithm recommendation technologies to provide Internet information services within Mainland China. The Provisions require companies to register algorithms to an online database to the extent that the algorithm has public opinion properties or social mobilization capabilities. Companies shall also complete an algorithm security self-assessment report. Users shall have the right to opt out of recommendation algorithms. The use of recommendation algorithms for illegal or harmful purposes is prohibited.

Deep Synthesis Regulations

In January 2023, the Cyberspace Administration of China (CAC) introduced new regulations regarding deepfake content. The regulations were formulated in order to “carry forward the core Socialist value vision, to safeguard national security and the societal public interest.” It prohibits the production of deepfakes without user consent and requires specific identification that the content had been generated using AI. Any content that was created using an AI system must be clearly labeled with a watermark i.e., text or image visually superimposed on the video indicating that the content had been edited. Deep synthesis services cannot use the technology to disseminate fake news. Content that goes against existing laws is prohibited, as is content that endangers national security and interests, damages the national image or disrupts the economy.¹⁰⁶⁸ The Cyberspace Administration of China published a draft on Measures for the Identification of Synthetic Content Generated by AI in September 2024. This instrument aims to standardize the labeling of AI-generated content by internet information service providers with requirements for production, display, and distribution. Service providers must embed explicit labels in files containing AI-generated content and include implicit labels with production details as per regulatory standards. If services include downloading, reproducing, or exporting generated synthetic content, service providers “shall ensure that the files contain explicit labels that satisfy these requirements.” Additionally, service providers are required to inform users of labeling specifications in service agreements. The draft was open for public comments, after which the final version will be published.¹⁰⁶⁹

Generative AI Measures

The Provisional Administrative Measures of Generative Artificial Intelligence Services (Generative AI Measures) were published by the Cyberspace Administration of China (CAC), together with six other authorities, on 13 July 2023 and took effect on 15 August 2023. The Generative AI Measures apply to “the use of generative AI technology to provide services for generating text, pictures, sounds, videos and other content within the territory of China”. They will

apply to domestic companies and to overseas generative AI service providers offering AI services in China to the public.”¹⁰⁷⁰

AI Ethics

The AIDP goes as far as to outline a specific desire for China to become a world leader in defining ethical norms and standards for AI.¹⁰⁷¹ There has been a recent wave of attempts to define ethical standards by both government bodies and private companies.

In 2017, China’s Artificial Intelligence Industry Alliance (AIIA), released a draft “joint pledge” on self-discipline in the AI industry—emphasizing AI ethics, safety, standardization, and international engagement.¹⁰⁷²

In 2019, the Beijing Academy of Artificial Intelligence (BAAI) released the Beijing AI Principles¹⁰⁷³ to be followed for the research and development, use, and governance of AI. The Beijing Principles are centered around doing good for humanity, using AI “properly,” and having the foresight to predict and adapt to future threats. But just like other principles presented, they are still very vague.

In line with these principles, Governance Principles for Developing Responsible Artificial Intelligence¹⁰⁷⁴ was prepared in 2019, by the National New Generation Artificial Intelligence Governance Expert Committee which was established by China’s Ministry of Science and Technology. This document outlines eight principles for the governance of AI: harmony and friendliness, fairness and justice, inclusivity, and sharing, respect for human rights and privacy, security, shared responsibility, open collaboration, and agility to deal with new and emerging risks. Above all else, AI development should begin by enhancing the common well-being of humanity, states the document.

Center for AI and Digital Policy

Another important document is a white paper on AI standards¹⁰⁷⁵ released in 2018 by the Standardization Administration of the People's Republic of China, the national-level body responsible for developing technical standards. Three key principles for setting the ethical requirements of AI technologies are (1) the ultimate goal of AI is to benefit human welfare; (2) transparency and the need to establish accountability as a requirement for both the development and the deployment of AI systems and solutions; (3) protection of intellectual property.

In April 2022, China published “Opinions on Strengthening the Management of Science and Technology Ethics,”¹⁰⁷⁶ which is the first national policy on tech ethics. The document proposes five principles to supervise and review technology ethics. It calls for the establishment of the China Science and Technology Ethics Society and ethical supervision in AI research.

It is apparent that these principles bear some similarities to the OECD AI Principles. Nevertheless, the principles established in China place a greater emphasis on social responsibility, community relations, national security, and economic growth, with relatively less focus on individual rights. However, establishing ethical AI principles can be viewed as a first step and a signal that China wishes to become engaged in a dialogue with international partners.

Public Participation

There is a growing concern in China about the misuse of personal data and the risk of data breaches. In a 2018 survey by the Internet Society of China, 54% of respondents stated that they considered the problem of personal data breaches as “severe.”¹⁰⁷⁷ The World Economic Forum suggests that 2018-2019 “could be viewed as the time when the Chinese public woke up to privacy.” According to the WEF, a controversy arose in 2019 when the Zao app, using AI and machine learning techniques, allowed users to swap faces with celebrities in movies or TV shows.¹⁰⁷⁸ “It went viral as a tool for creating deepfakes, but concerns soon arose as people noticed that Zao’s user agreement gave the app the global rights to use any image or video created on the platform for free.” The company later clarified

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

that the app would not store any user's facial information. Chinese consumers also challenged Alibaba when they learned that they had been enrolled in a credit scoring system by default and without consent. "Under pressure, Alibaba apologized."

At the 2022 World Artificial Intelligence Conference, the Shanghai Artificial Intelligence Laboratory Governance Research Center, Tsinghua University, and Fudan University jointly launched an open platform for artificial intelligence ethics – OpenEGLab.¹⁰⁷⁹ There are five major sections in the platform including rule sets, governance maps, risk displays, evaluation frameworks, and industry solutions. The rule set is dedicated to building a global governance knowledge base. Currently, about 1,500 marked rule documents have been included, including ethical principles, policy strategies, laws, regulations, and standards.

All recently adopted regulations, from those tackling Deepfake to those addressing facial recognition, have been opened for comments.

Data Protection

In recent years, China has introduced a number of major data protection laws, including the Personal Information Protection Law (PIPL) (effective from November 1, 2021) and the Data Security Law (DSL) (effective from September 1, 2021), together with a series of implementation regulations and administrative rules. The PIPL¹⁰⁸⁰ establishes a new comprehensive regulatory framework for personal information protection in China, requiring consents as its principal basis for data collection and handling, introducing provisions with extraterritorial effect, restricting cross border data transfers and imposing significant revenue-based fines for non-compliant conduct. The law is modeled after the EU GDPR¹⁰⁸¹ however the law places a greater emphasis on how private companies may collect and use data rather than the use of data by authorities. For instance, Article 26 on personal images and facial recognition allows the collection of unlimited amounts of personal data so long as it is done "for the purpose of safeguarding public

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

security.”¹⁰⁸² That is to say, the law does not limit the government’s ability to collect or store biometric data obtained through facial recognition. In contrast, the EU GDPR sees personal images as sensitive biometric data and requires Data Protection Impact Assessment (DPIA) for facial recognition technology. Finally, the law does not assign responsibilities when it comes to government entities that collect personal data, and who will be held responsible when it leaks. This becomes increasingly important with the rise of recent incidents of government leaks of the personal information of its citizens.¹⁰⁸³ Nevertheless, as the big data industry has been rapidly growing in China, the law provides more protection to users against unwanted data collection by private companies.

In March 2023, China’s Ministry of Science and Technology established the National Data Administration (NDA). The NDA will be “responsible for the coordination and advancement of building the data factor system; for overall planning of the integrated sharing and development and use of data resources; for overall planning and advancement of Digital China, digital economy; and digital society plans and construction”.¹⁰⁸⁴ The new regulator will have responsibilities that were previously performed by the Cyberspace Administration of China and by the National Development and Reform Commission.¹⁰⁸⁵

Algorithmic Transparency

Article 4 of the Interim Measures for Generative Artificial Intelligence Services refers to “effective measures to increase transparency in generative AI services and to increase the accuracy and reliability of generated content” based on the “service type.” The National Information Security Standardization Technical Committee (T260) then released the Basic Requirements for Security of Generative Artificial Intelligence Service¹⁰⁸⁶ with specific requirements for

providing users with information about the service and its functioning. Enforcement of those requirements is currently rolled out as an AI-content oversight campaign by Cyberspace Administration of China (CAC)¹⁰⁸⁷ and might be further aided via emerging AI standardization guidelines. The Ministry of Industry and Information Technology's target is that at least 60% of these prospective standards will be implemented in "general key technologies and application development projects," with over 1,000 Chinese companies championing early adoption.¹⁰⁸⁸

The Provisions on the Management of Algorithmic Recommendations in Internet Information Services¹⁰⁸⁹ highlight the principles of "openness" and "transparency" while establishing legal liabilities for violations of these principles. Article 4 Chapter I emphasizes that "the provision of algorithm recommendation services shall comply with laws and regulations, respect social morality and ethics, abide by business ethics and professional ethics, and follow the principles of fairness, openness and transparency, scientific reasonableness, and good faith." Companies shall be transparent regarding how their recommendation algorithms are trained and deployed, including which datasets the algorithm is trained on. Article 12 states, "Algorithmic recommendation service providers are encouraged to [...] optimize the transparency and understandability of search, ranking, selection, push notification, display, and other such norms, to avoid creating

harmful influence on users, and prevent or reduce controversies or disputes.” Chapter V establishes clear legal liability for non-compliance to and violation of the Provisions, including “the suspension of information updates and a fine of between 10,000 and 10,000 RMB, administration punishments or sanctions such as ordering the closure of websites, revoking relevant business permits, or revoking business licenses.”

Article 24 Chapter II, Section 1 of the PIPL provides, “Where personal information processors use personal information to make automatic decisions, the transparency of decision-making and the fairness and justice of the results shall be ensured, and shall not impose unreasonable differential treatment on individuals in terms of transaction price and other transaction conditions.

Where business marketing and information push are carried out through automatic decision-making, options not based on his/her personal characteristics shall be provided at the same time, or a convenient way for individuals to reject shall be provided.

Where automatic decision-making has a significant impact on individual’s rights and interests, he/she has the right to require the personal information processor to give an explanation, and to reject the decision made by the personal information processor only through automatic decision-making.”¹⁰⁹⁰

Social Governance

Social governance is another area in which AI is promoted as a strategic opportunity for China. The Chinese authorities focus on AI as a way of overcoming social problems and improving the welfare of citizens.¹⁰⁹¹ Specifically, in seeking to further the following goals on healthcare reform,¹⁰⁹² environmental protection¹⁰⁹³, the administration of justice,¹⁰⁹⁴ and the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

implementation of the Social Credit System or Social Score.¹⁰⁹⁵ Another concrete example of how China is using AI in social governance can be seen in the sphere of internal security and policing. China has been at the forefront of the development of smart cities equipped with surveillance technologies, such as facial recognition and cloud computing. A recent proposal for the southwestern Chinese city of Chongqing would put “AI in charge.”¹⁰⁹⁶ Today half of the world’s smart cities are located in China. This exemplifies the Chinese government’s intent to rely on AI technology for social governance and also to control the behavior of its citizens.¹⁰⁹⁷

Facial Recognition

As early as the 2008 Beijing Olympics, China began to deploy new technologies for mass surveillance.¹⁰⁹⁸ China put in place more than two million CCTV cameras in Shenzhen, making it the most-watched city in the world.¹⁰⁹⁹ In recent years, the techniques for mass surveillance have expanded rapidly, most notably in Shenzhen, also to oversee the Muslim minority group the Uyghurs, and in Hong Kong. Modern systems for mass surveillance rely on AI techniques for such activities as facial recognition, communications analysis, and location tracking. As one industry publication has reported, “In the world of surveillance, no country invests more in its AI-fueled startups and growth-stage businesses than China. And no technology epitomizes this investment more than facial recognition—a technology that courts more controversy than almost any other.”¹¹⁰⁰ Forbes continues, “But a thriving domestic tech base has done nothing to quell the concerns of citizens. China is held up as a Big Brother example of

what should be avoided by campaigners in the West, but that doesn't help people living in China.”

However, the Supreme People’s Court of the People’s Republic of China adopted and released the Provisions on Several Issues Concerning the Application of Law in the Trial of Civil Cases Relating to the Use of Facial Recognition Technology to Process Personal Information, which came into effect on August 1, 2021.¹¹⁰¹ The Provisions aim to “hear civil cases relating to the use of facial recognition technology in processing personal information, protect the lawful rights and interests of litigants, and promote the healthy development of the digital economy,” in accordance with “Provisions of the Civil Code of the People's Republic of China, the Cybersecurity Law of the People's Republic of China, the Law of the People's Republic of China on the Protection of Consumer Rights and Interests, the E-Commerce Law of the People's Republic of China, the Civil Procedure Law of the People's Republic of China, and other laws, and in conjunction with trial practice.”

In particular, the Supreme People’s Court highlights that the Provisions apply to civil cases arising from violations of the provisions of laws, administrative regulations, or the agreement of both parties to process facial information, which refers to biometrics information or facial information generated through facial recognition technologies.¹¹⁰² In this regard, the Provisions establish civil liabilities for the infringement of the rights and interests of natural persons in the process of biometrics data and information in the application of facial recognition technologies, which was republished and redistributed by local People’s Courts.¹¹⁰³ Before the enforcement of the Provisions regulating facial recognition technology, the China Academy for Information and Communications Technology (CAICT), a national think tank administrated by the Ministry of Industry and Information Technology, initiated the Trustworthy Facial Recognition Protection Plan in response to issues including “privacy leakage, technology abuse, biases and discrimination” in the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

development and application of facial recognition technologies while encouraging self-discipline of the industry.¹¹⁰⁴

There are many reports on China's use of facial recognition technology against ethnic minorities.¹¹⁰⁵ The discriminatory ways in which state organs, companies, and academics have researched, developed, and implemented facial recognition in China would seem not to comply with the OECD AI Principles or the Governance Principles for the New Generation Artificial Intelligence. The deployment of facial recognition has also provoked opposition within China.¹¹⁰⁶ This gap between stated ethical principles and on-the-ground applications of AI demonstrates the weakness of unenforceable ethics statements.¹¹⁰⁷

In September 2019, China's information-technology ministry announced that telecom carriers must scan the face of anyone applying for mobile and internet service.¹¹⁰⁸ There are over 850 million mobile Internet users in China. Meanwhile, the Hong Kong government invoked emergency powers in October 2019 to ban demonstrators from wearing face masks.¹¹⁰⁹

Protests in Hong Kong over the use of facial surveillance are widespread. Umbrellas once used to deflect pepper spray, are now deployed to shield protester activities from the digital eyes of cameras.¹¹¹⁰ It is notable that the battle over the use of facial surveillance in Hong Kong began with widespread public protests about a national security law that extended police authority over the semi-autonomous region.¹¹¹¹ According to the AP, "Young Hong Kong residents protesting a proposed extradition law that would allow suspects to be sent to China for the trial are seeking to safeguard their identities from potential retaliation by

Center for AI and Digital Policy

authorities employing mass data collection and sophisticated facial recognition technology.”¹¹¹²

China is also exporting the model of mass surveillance by facial recognition to other parts of the world. A detailed report, published in *The Atlantic* in September 2020, stated that “Xi Jinping is using artificial intelligence to enhance his government’s totalitarian control—and he’s exporting this technology to regimes around the globe.”¹¹¹³ According to *The Atlantic*, “Xi’s pronouncements on AI have a sinister edge. Artificial intelligence has applications in nearly every human domain, from the instant translation of spoken language to early viral outbreak detection. But Xi also wants to use AI’s awesome analytical powers to push China to the cutting edge of surveillance. He wants to build an all-seeing digital system of social control, patrolled by precog algorithms that identify potential dissenters in real-time.”

In September 2020, the United States State Department issued voluntary guidelines for American companies “to prevent their products or services (...) from being misused by government end-users to commit human rights abuses.”¹¹¹⁴ The report came amid growing concern that China is rapidly exporting its own surveillance capabilities to authoritarian regimes around the world, as part of its Belt and Road Initiative (BRI).¹¹¹⁵ But the Washington Post highlighted the ongoing role of US-made technology in the sweeping surveillance of China, and notably the Uighur Muslim minority.¹¹¹⁶ The Washington Post explained that “the aim is to monitor cars, phones, and faces—putting together patterns of behavior for ‘predictive policing’ that justifies snatching people off the street for imprisonment or so-called reeducation. This complex opened four years ago, and

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

it operates on the power of chips manufactured by U.S. supercomputer companies Intel and Nvidia.” The Post editorial followed a New York Times investigation which found extensive involvement by U.S. firms in the Chinese surveillance industry.¹¹¹⁷

Facial recognition technology will also be pushed forward with the development of humanoid robots to be deployed across all sectors of social life by 2025.¹¹¹⁸ The draft Shenzhen Accelerates High-level Application Action Plan for Promoting the High-quality Development of Artificial Intelligence (2023–2024) released in May 2023 mentions the deployment of “general-purpose embodied intelligent robots” and “large-scale application of humanoid robots”.¹¹¹⁹

In August 2023, the Cyberspace Administration of China also released a draft of regulation for facial recognition technology. Article 4 states that “facial recognition technology may only be used to handle facial information where there are specified purposes and sufficient need, and where strict protective measures are employed. Where other non-biometric identification schemes exist that can realize the same goals or achieve the same operational requirements, priority shall be given to the non-biometric identification schemes.” Regulations impose a necessity for full informed and individual consent and transparency in use of this technology in public spaces and compliance with data protection regulations.¹¹²⁰

AI and Public Health

In China, the ultimate ambition of AI is to liberate data for public health purposes. The AIDP outlines the ambition to use AI to “strengthen epidemic intelligence monitoring, prevention and control,” and to “achieve breakthroughs in big data analysis, Internet of Things, and other key technologies” for the

Center for AI and Digital Policy

purpose of strengthening intelligent health management.¹¹²¹ The State Council's 2016 official notice on the development and use of big data in the healthcare sector also explicitly states that health and medical big data sets are a national resource and that their development should be seen as a national priority to improve the nation's health.¹¹²² However, there is a rising concern that relaxed privacy rules and the transfer of personal data between government bodies will promote the collection and aggregation of health data without the need for individual consent.¹¹²³

Beijing Municipal Health Commission strictly prohibited the use of AI for automatically generating medical prescriptions and regulated various online healthcare activities with the draft set of 41 rules (open for public comment), with the goal that AI “shall not replace the doctors to provide diagnosis and treatment services.”¹¹²⁴

Use of AI in COVID-19 Response

In June 2020, the State Council released a White Paper, entitled “Fighting COVID-19: China in Action,” which provides that China has “fully utilized” artificial intelligence to not only research, analyze, and forecast COVID-19 trends and developments, but also to track infected persons, identify risk groups, and facilitate the resumption of normal business operations.”¹¹²⁵ During the pandemic, China has used AI for surveillance of infected individuals and medical imaging. China also sought to reduce human interaction by using computers and robots for various purposes and has proven to be very effective in reducing exposure, providing necessary services such as assistance for healthcare professionals, improving efficiency in hospitals, and precautionary measures for returning to normal business operations.¹¹²⁶

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Environmental Impact of AI

As of the end of 2024, there are no clear national policy actions addressing the environmental impact of AI. Note that the National Comprehensive Standardization System for the AI Industry, which was released in 2024, provides guidelines including a stated commitment to Sustainability Standards. Listed priorities include regulating the carbon emissions of private AI-focused enterprises, setting rules for assessing different AI systems' energy efficiencies, and a focus on balancing industrial development with environmental health.¹¹²⁷ On July 4th, 2024, China's Ministry of Foreign Affairs released an English Language version of the "Shanghai Declaration on Global AI Governance". In that declaration China again affirmed its commitment to protecting the health of the environment while pursuing its National AI Strategy.¹¹²⁸

Lethal Autonomous Weapons

The AIDP states that "the development of AI [is] a major strategy to enhance national competitiveness and protect national security" and that China will "[p]romote all kinds of AI technology to become quickly embedded in the field of national defense innovation."¹¹²⁹

At the 8th Beijing Xiangshan Forum (BXF),¹¹³⁰ China's major platform for international security and defense dialogue, Major General Ding Xiangrong, Deputy Director of the General Office of China's Central Military Commission, stated that China's military goals are to use AI to advance Chinese military.¹¹³¹ Zeng Yi, a senior executive at China's third-largest defense company, predicted that by 2025 lethal autonomous weapons, and military command decision-making would be commonplace. He also mentioned that the ever-increasing military use

of AI is “inevitable.” He emphasized that military AI would replace the human brain and exercise independent judgment. “AI may completely change the current command structure, which is dominated by humans” to one that is dominated by an “AI cluster.” These sentiments are shared by academics from the People’s Liberation Army (PLA) who believe that AI will be used to predict battlefield situations and outpace human decision-making.¹¹³²

In 2018, China’s Ministry of National Defense established two major research organizations focused on AI and unmanned systems: the Unmanned Systems Research Center (USRC) and the Artificial Intelligence Research Center (AIRC).¹¹³³ According to some experts, China is pursuing the most aggressive strategy for developing AI for military uses among the major military powers.¹¹³⁴ In the spring of 2017, a civilian Chinese university with ties to the military demonstrated an AI-enabled swarm of 1,000 uninhabited aerial vehicles at an airshow. A media report released after the fact showed a computer simulation of a similar swarm formation finding and destroying a missile launcher. Open-source publications indicate that China is also developing a suite of AI tools for cyber operations.

With regard to its official position on Lethal Autonomous Weapons, China maintains that both the common security and the dignity of mankind should be safeguarded. In the discussion of the 2022 Group of Governmental Experts on Lethal Autonomous Weapons Systems (LAWS),¹¹³⁵ China published the Working Paper of the People’s Republic of China on Lethal Autonomous Weapons Systems.¹¹³⁶ The Working Paper highlights the need for balancing both “national security” and “humanitarian concerns” in regulating the use of LAWS. The Working Paper also points out that “military applications of AI should be conducive to improving the humanitarian situation on the modern battlefields” and that countries should “ensure that relevant weapon systems and their means of

Center for AI and Digital Policy

warfare comply with international humanitarian law and other applicable international law.”¹¹³⁷

China attended the first summit on Responsible AI in the Military Domain—REAIM 2023 hosted by the Netherlands. The summit provided a platform for all stakeholders (governments, industry, civil society, academia, and think tanks) to forge a common understanding of the opportunities, dilemmas, and vulnerabilities associated with military AI.¹¹³⁸ China is one of the 57 endorsing countries that underlined the need to put the responsible use of AI higher on the political agenda and to further promote initiatives that make a contribution to this respect.

The second REAIM summit was hosted by the Republic of Korea in September 2024.¹¹³⁹ In this summit, China did not endorse the “Blueprint for AI Action” to govern responsible use of artificial intelligence in the military¹¹⁴⁰ that was supported by 61 countries. In contrast to the previous blueprint that was based on common understandings, the 2024 blueprint “lays out a roadmap for establishing norms of AI in the military domain.”¹¹⁴¹

At the 78th UN General Assembly First Committee in 2023, China was one of 8 states that abstained from voting on resolution L.56¹¹⁴² on autonomous weapons systems.¹¹⁴³ The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report was published in 2024 and analyzes ways to address the challenges and concerns autonomous weapon systems raise

from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force. In its submission, China stated that “all parties should seek to prevent a new arms race and should abide by the principle of equal, common and universal security” when dealing with LAWS. It further suggested the need for all parties to reach “an agreed understanding on key elements and technical characteristics” of LAWS to “formulate targeted measures and negotiate a legally binding international instrument.”¹¹⁴⁴

The Chinese Ambassador, Shen Jian, during the Debate on Conventional Weapons during the 78th Session of UNGA First Committee asserted that China “support(s), when conditions are ready, the negotiation of a legally binding instrument to prohibit fully autonomous weapons system, if all parties could reach consensus on issues such as definition and characterization of LAWS. Meanwhile, China encourages countries to combine the guiding principles with its domestic situation, adopt further measures, including industrial norms, ethical declarations, action guides, etc. to guide and regulate the development of technologies within the framework of existing laws and military management system.”¹¹⁴⁵

At the 79th UN General Assembly First Committee in 2024, China was one of the 165 countries in favor of a draft passed in the First Committee that encourages States “to pursue efforts at all levels to address related opportunities and challenges, including from humanitarian, legal, security, technological and ethical perspectives” and resolve divides on responsible AI in the military domain through cooperation in “providing assistance to and sharing knowledge with developing countries by exchanging good practices and lessons learned.”¹¹⁴⁶

At the First Session of the 2024 CCW Group of Governmental Experts on Emerging Technologies in the Area of Lethal Autonomous Weapon Systems, Ambassador Shen reiterated that China supports the negotiation of a legally binding instrument on LAWS “based on a common understanding of their characterization and definitions. [...] In the absence of clear characterization and definitions, we may exercise tiered management on autonomous weapon systems [...] China proposed five technical characteristics of “unacceptable LAWS,”¹¹⁴⁷

and is ready to engage in further discussions.” Then, Ambassador Shen asserted that “China believes that as a means and method of combat, LAWS are subject to the basic principles and stipulations of international humanitarian laws [...] Great uncertainties remain, nevertheless, as to whether current international humanitarian laws are adequate in responding to the challenge posed by LAWS.”¹¹⁴⁸ China further reiterated the relevance of agreed understanding on key elements and technical characteristics” and a “tiered and categorized management” of LAWS to avoid “blanket bans or restrictions” that could “undermine States’ legitimate defence capabilities” and “their right to the peaceful use of these technologies” in its submission to the UN General Assembly’s 2024 report on Lethal autonomous weapons systems.¹¹⁴⁹

Human Rights

China has endorsed the Universal Declaration of Human Rights. As a party to the UDHR, China shall recognize “the inherent dignity” of all human beings and secure their fundamental rights to “privacy.” Privacy rights are guaranteed to Chinese citizens under the Constitution. However, Article 40 of the Chinese constitution justifies the invasion of privacy “to meet the needs of State security.” Furthermore, the provisions of the Constitution are not directly enforceable since there is neither a constitutional court nor any possibility to assert constitutional rights.¹¹⁵⁰ Relatedly, problematic exemptions for the collection and use of data, when it is related to security, health, or the flexibly interpretable “significant public interests”¹¹⁵¹ contribute to weak data protection in China.

According to Freedom House, China is “Not Free” with a total score of 9/100.¹¹⁵² It even obtains a negative score of -2/40 for political rights. The 2024 Freedom House Report notes that “China’s authoritarian regime has become increasingly repressive in recent years. The ruling Chinese Communist Party (CCP) continues to tighten control over all aspects of life and governance,

including the state bureaucracy, the media, online speech, religious practice, universities, businesses, and civil society associations, and it has undermined an earlier series of modest rule-of-law reforms. The CCP leader and state president, Xi Jinping, has consolidated personal power to a degree not seen in China for decades. Following a multiyear crackdown on political dissent, independent nongovernmental organizations (NGOs), and human rights defenders, China's civil society has been largely decimated.”

Global AI Governance

In October of 2023, China suggested the establishment of a Global AI Governance Initiative.¹¹⁵³ In its announcement, the Ministry of Foreign Affairs called on countries to strengthen cooperation on the governance of AI. After stressing the “unpredictable risks and complicated challenges” posed by AI, the Ministry highlighted the need to “uphold a people-centered approach in developing AI,” to “respect other countries’ national sovereignty and strictly abide by their laws when providing them with AI products and services.” The Ministry stated, “We oppose using AI technologies for the purposes of manipulating public opinion, spreading disinformation, intervening in other countries’ internal affairs, social systems and social order, as well as jeopardizing the sovereignty of other states.” The Ministry indirectly called out US restrictions regarding export controls on AI chips and chipmaking tools,¹¹⁵⁴ “We oppose drawing ideological lines or forming exclusive groups to obstruct other countries from developing AI. We also oppose creating barriers and disrupting the global AI supply chain through technological monopolies and unilateral coercive measures. [...] We should increase the representation and voice of developing countries in global AI governance, and ensure equal rights, equal opportunities, and equal rules for all countries in AI development and governance”.

The Ministry also emphasized the need to put “ethics first”, establish and improve relevant laws, develop a testing and assessment system based on AI risk levels and implement agile governance. The National Cybersecurity Standardization Technical Committee 260 (or TC260) is a committee within the Chinese national standards body. In 2024, the TC260 adopted the AI Safety Governance Framework, a voluntary AI risk management framework that “outlines control measures to address different types of AI safety risks through technological and managerial strategies.” The document stresses that “comprehensive AI safety and security risk governance mechanisms and

Center for AI and Digital Policy

regulations” should “engage multi-stakeholder participation, including technology R&D institutions, service providers, users, government authorities, industry associations, and social organizations.”¹¹⁵⁵

AI Safety Summit

In November 2023, China participated in the first AI Safety Summit and endorsed the Bletchley Declaration.¹¹⁵⁶ Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.” The next AI Safety Summit was held in France from 10–11 February 2025 and was rebranded as the AI Action Summit.¹¹⁵⁷

OECD / G20 AI Principles

As a member of the G20, China has endorsed the G20 AI Principles. On September 13, 2024, China also adopted the G20 Ministerial Declaration reaffirming its commitment to ethical AI for inclusive sustainable development, aiming to drive growth, reduce inequality, and mitigate risks.¹¹⁵⁸

Council of Europe AI Treaty

China has neither signed the Council of Europe AI Treaty, nor participated it participated in its elaboration.¹¹⁵⁹

UNESCO Recommendation on AI Ethics

As Member of the UNESCO Ad Hoc Expert Group on AI Ethics, Zeng Yi, Director of the Sino-British Research Centre for AI Ethics and Governance, Institute of Automation, at the Chinese Academy of Sciences as well as Member of the National New Generation AI Governance Professional Committee, actively participated in the drafting and formulation of the UNESCO Recommendation on

Center for AI and Digital Policy

the Ethics of AI.¹¹⁶⁰ According to Zeng Yi, “the Recommendation is the most widely reached consensus worldwide at the governmental level, which will become a benchmark for reference to the development of AI ethics related international standards and international law.”¹¹⁶¹

The value of “harmonious coexistence,” as Zeng Yi pointed out in the formulation of the Recommendation, contributes to the harmonious development of human society coexisting with AI technologies as well as the empowerment of human development, society, and ecology by AI.¹¹⁶² It was however, partially accepted as “peaceful coexistence” to reflect diverse values and interests of different cultures, countries, and organizations.

The idea of “harmonious coexistence” is reflected in China’s New Generation Artificial Intelligence Governance Principles¹¹⁶³ (Governance Principles) and New Generation Artificial Intelligence Code of Ethics¹¹⁶⁴ (Code of Ethics) formulated by the National New Generation AI Governance Professional Committee, which shows similar visions with the Recommendation. Another shared vision concerns sustainable development. Zhang Yi’s proposal for the sustainable development of AI was accepted by the Recommendation in the policy section, which provided suggestions for achieving sustainability through deploying AI in the field of environment. At the national level, both the Governance Principles and the Code of Ethics issued by China consider sustainable development as the overall vision and objective for the New Generation Artificial Intelligence.¹¹⁶⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Since the publication of the UNESCO Recommendation on AI Ethics, Chinese mainstream news media, think tanks, research institutions, and organizations actively interpreted, reposted, and communicated the Recommendation to the wider public in China. As of the time of writing, China has not implemented nor is in the process of implementing the UNESCO's Readiness Assessment Methodology (RAM).¹¹⁶⁶

Evaluation

China is one of the first AI superpowers implementing the ambitious plan of leading the world in AI by 2030. The country has also already endorsed principles on AI ethics, enforced a new law on data protection, and adopted a comprehensive set of regulations on AI. However, concerns exist that the main objective of China's legislative frenzy is not to protect human rights but to make sure that it controls and monitors the digital world as much as it does with the physical world. The validation of the use of facial recognition for public security purposes in the data protection law, the various enforcement mechanisms and sanction regimes put in place to regulate AI are some cases in point. The use of AI technology against minorities and dissidents is also of concern. Nevertheless, China's participation in international efforts to create an ethical AI framework such as the UNESCO Recommendation on the Ethics of AI might show its willingness to establish some common understandings in foreign relations. It is as much a sign of its international status as an AI superpower.

Colombia

In 2024, Colombia's National Council of Economic and Social Policy released a draft National Policy on Artificial Intelligence while the Constitutional Court issued a landmark ruling that emphasized the need for human judgement in court cases.

National AI Strategy

"In an increasingly digital world, artificial intelligence is presented as a fundamental tool that can positively shape the future of our nation. However, we recognize that this power must be guided by solid ethical principles and a strategic vision that guarantees the well-being of all Colombians" said the Minister of Science, Technology, and Innovation, Yesenia Olaya, during the launch of the AI

¹¹⁶⁶ UNESCO, *Global AI Ethics and Governance Observatory*, <https://www.unesco.org/ethics-ai/en/global-hub>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Roadmap to ensure the ethical and sustainable adoption of AI in Colombia in February 2024.¹¹⁶⁷

The Roadmap identifies Ethics and Governance as a key theme. It suggests establishing and strengthening the legal and regulatory AI framework to tackle ethical challenges posed by AI. The Roadmap also identifies five strategic work environments: ethics and AI governance; AI education, research, and innovation; innovative and emerging AI industries; data and organizations AI; privacy, cybersecurity, and defense AI. The AI Roadmap not only promotes scientific integrity in the development of technological solutions but also seeks to establish effective governance structures that ensure its ethical application of artificial intelligence in solving social, economic, and environmental challenges at the national level.

The Roadmap serves as the basis¹¹⁶⁸ for the adoption of the National AI Policy by the National Council of Economic and Social Policy, a draft of which was issued on August 6, 2024.¹¹⁶⁹

The Ministry of Science, Technology, and Innovation is also in the process of constituting the first Committee of High-Level Experts on AI which will advise the government on AI policies.¹¹⁷⁰ More than 1,700 persons answered a call for applications launched by the Ministry.¹¹⁷¹

These policy initiatives are in line with the objectives and goals of the National Development Plan 2022–2026 “Colombia World Power of Life,” adopted in May 2023¹¹⁷² and the National Digital Strategy 2023–2026, issued in February 2024.¹¹⁷³

Center for AI and Digital Policy

Already in March 2022, Colombia issued its Ethical Framework for AI,¹¹⁷⁴ which, according to the President Iván Duque, provides “tools that strengthen the principle of democracy, free competition and equity.”¹¹⁷⁵ It is with these considerations along with ethics, social aspects, economic development and technological concepts that Colombia developed its AI policy.

The National Planning Department of Colombia, through the National Development Plan for 2018–2022 was the first to encourage the inclusion of emerging technologies of the Fourth Industrial Revolution, such as AI, the Internet of Things (IoT) and robotics in the digital transformation of national entities and strategies across all sectors.¹¹⁷⁶

Following this, the National Planning Department, the Ministry of Information and Communications Technologies (MinTIC), and the Office of the President launched the country’s National AI Strategy, titled the National Policy for Digital Transformation and AI.¹¹⁷⁷ The Strategy introduced social and economic conditions that facilitate the development of AI by creating a flexible framework of principles and guidelines rather than a rule-based structure. While the Strategy acknowledges its adoption of the OECD AI principles, it sets out 14 additional principles with a focus on four aspects namely inclusive growth, sustainable development, and well-being; building human capacity and preparing for labor market transition; fostering a digital ecosystem for AI; and providing an enabling policy environment for AI. The Strategy also endorses the adoption of an ethical framework for the development of responsible and inclusive AI, utilization of data for the development of AI, and establishment of a market that uses AI productively and competitively.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

To ensure the sustainable execution and continuity of AI public policy, various entities were created to coordinate the development and implementation of the National AI Strategy and other AI policies in the country. This includes the Presidential Advisory for Economic Affairs and Digital Transformation (DAPRE), the AI Expert Mission and the International Council for AI. DAPRE coordinates the work of government functionaries in implementing digital transformation through various systems including AI-based ones, while advising the government on the development of a digital ecosystem, along with the formulation and implementation of related policy.¹¹⁷⁸ The AI expert mission or task force serves as a bridge between regulators and experts. It includes experts from various professions who advise the government on policy formulation and assist them in developing a prospective roadmap for the implementation of AI policy, combining their technical and comprehensive vision.¹¹⁷⁹ The AI expert mission was launched with 10 experts. The International Council of AI was created to integrate international experts in the implementation and deployment of Colombia's national AI systems.¹¹⁸⁰ The Council consists of six government officials and nine international experts as permanent guests to collectively analyze and present policy proposals that will impact the development and deployment of AI. The Council will also review and guide the implementation of AI policy, while studying Colombia's position in international AI indices to determine points of improvement that can be integrated into a roadmap for the future of AI. "The Mission ended on July 19, 2022, leaving the country with 2 major projects implemented, the Policy Lab: AI Public Policy Lab: Future of Work and Gender and the Empowerment Platform: AprendeIA. In addition, a document on AI and Sustainability was developed."¹¹⁸¹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

There are various policy intelligence tools in place to monitor the implementation of AI policy. For instance, SisCONPES monitors the implementation of each action line of the National AI Strategy, by reporting to implementing authorities on progress made and obstacles that arise.¹¹⁸²

In February 2023, the Colombian Government presented the National Development Plan for 2022–2026, which included public policies related to digital transformation and democratization of ICT. However, it does not include direct references or developments on any national AI public policy.¹¹⁸³ The presidency released the National Development Plan for 2022–2026 in May 2023.¹¹⁸⁴

Ethical Framework for Artificial Intelligence

In Colombia, the aim of the Ethical Framework for AI is to address concerns arising from the implementation of emerging technologies such as AI.¹¹⁸⁵ The Ethical Framework for AI was developed around ethical principles that can serve as a criterion for evaluating the different uses and challenges that arise in this respect. The Ethical Framework for AI was developed as a tool that can be applied to different sectors taking into consideration the diversity of interests and opinions around the use of AI. The ten principles provided by the framework to guide the design, development, implementation and evaluation of AI systems include transparency, explainability, privacy, human oversight over AI decisions, security, responsibility, non-discrimination, inclusion, prevalence of the rights of children and adolescents, and social benefit.¹¹⁸⁶

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The framework also proposes an ethical algorithm register in which entities periodically report what their AI project is about, how they are implementing the AI ethics principles, and the ethical risks to the use of AI in their project. The register allows for the monitoring of progress in the implementation of AI principles and reinforces citizen participation by inviting their comments or questions on policies, good practices and projects related to AI.¹¹⁸⁷ The DAPRE and the Superintendency of Industry and Commerce (SIC) are responsible for monitoring AI projects. The Superintendency of Industry and Commerce monitors AI projects by carrying out the Data privacy regulatory Sandbox.¹¹⁸⁸ The ethical algorithm register of Colombia is based on the models of Amsterdam and Helsinki.¹¹⁸⁹

Regulatory Sandboxes and Beaches

Colombia has adopted a smart regulation approach to AI through regulatory sandboxes and beaches.¹¹⁹⁰ This controlled environment was set up to experiment and test AI systems in the local context, to identify technical and governance flaws while promoting innovation.¹¹⁹¹

At first, a Draft Model Concept for the Design of Regulatory Sandboxes and Beaches in AI was published in August 2020 with public comments received from various stakeholders.¹¹⁹² The purpose of this policy was to understand technology before trying to regulate it, by balancing precaution with

¹¹⁸⁷ Office of the President of the Republic of Colombia and The Development Bank of Latin America (CAF), *Ethical Framework for Artificial Intelligence in Colombia* [Spanish] (May 2021), <https://minciencias.gov.co/sites/default/files/marco-etico-ia-colombia-2021.pdf>

¹¹⁸⁹ Center for Technology and Society Studies (CETyS) of the University of San Andrés, *The Colombian Case: Adopting collaborative governance as a path for implementing ethical artificial intelligence* (2021), <https://repositorio.udesar.edu.ar/items/c2d4a6b9-0268-4d44-b348-6c84018b8c79>

¹¹⁹⁰ Regulatory sandboxes are a testbed for selected AI projects, where the regulatory framework is relaxed with some laws and regulations set aside while entities test their projects. Regulatory beaches are similar to regulatory sandboxes, but they are wider in scope. They allow a larger number of companies and sectors to participate in regulatory experimentation during extended amounts of time even longer than a year, with the goal of resolving industry problems.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

experimentation and learning. The document suggests a process of implementation that includes (1) defining a policy leadership to implement public policy; (2) defining emerging technologies and preliminary problems to be addressed; (3) completing a regulatory mapping of the impacted sector; (4) selecting a public entity to perform inspection and surveillance functions; (5) capacity building and training; (6) creating working groups; (7) designing a risk model and defining possible risks; (8) setting out a selection criteria for the risks; (9) designing the sandbox; (10) sharing the project for comment; (11) publishing and implementing; and (12) reporting on the findings and evidence.¹¹⁹³

A policy proposing a regulatory sandbox for Privacy and AI was open for public comments by the DAPRE and the Superintendency of Industry and Commerce until November 30 2021^{Superintendency}. The regulatory sandbox here is meant to be preventive, so AI systems related to e-commerce, advertising and marketing protect personal data from the stage of design to execution, using tools like privacy impact assessments and privacy by design. It proposes (1) criteria to ensure compliance with regulation on data processing in AI; (2) proper processing of personal data in all stages of an AI project; (3) creation of AI products that respects individual rights to personal data; (4) advice to companies on the protection of personal data in AI systems; (5) adoption of a preventive approach to protect human rights in AI projects; (6) suggestion of amendments or modifications to Colombian regulations on technological advances.¹¹⁹⁴

The Superintendency of Industry and Commerce released a final document governing privacy by design and by default in AI projects in April 2021 and the government approved the first proposals under the sandbox program in August 2021.¹¹⁹⁵ The Superintendency of Industry and Commerce's sandbox for Privacy and AI started operating during 2021, and on January 2022, selected a first project.¹¹⁹⁶

Research & Development

The MinTIC released an Information and Communication Technology (ICT) Plan for 2018–2022 titled *The Digital Future is for Everyone* in July 2019. Highlighting the need to develop human capital, the ICT Plan proposes an AI Center of Excellence & Appropriation to generate innovative proposals that benefit the national system and serve as references internationally.¹¹⁹⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The ICT plan also emphasizes the importance of removing obstacles to the use of technology for digital businesses. In this respect, in April 2019, the World Economic Centre for the Fourth Industrial Revolution was launched in Medellín, bringing together governments, the private sector, civil society organizations, academia, and tech experts from across the globe.¹¹⁹⁸ Together, these actors collaborate in designing, testing, and developing projects that prioritize policy and tech innovation on AI, the Internet of Things, blockchain, and robotics.¹¹⁹⁹

To boost innovative AI research, Colombia launched a start-up incubator and accelerator, C-Emprende.¹²⁰⁰ In addition to scaling enterprises and mobilizing resources, C-Emprende facilitates the exchange of knowledge between national and international academia, private sector actors, investors, and government representatives.

Colombia's Ministry of Science, Technology, and Innovation has partnered with Presight, a leading big data analytics firm in the Middle East, for joint research and development efforts in AI, data analytics, and emerging technologies across sectors like smart cities, energy transition, and climate action.¹²⁰¹

Public Participation

The Development Bank of Latin America (CAF) with the authorship of international expert, Armando Guío Español, has developed AI policy and implementation documents, including the ethical framework for AI, a model concept for the design of regulatory sandboxes and beaches in AI, a data governance model, a task force on the development and implementation of AI, and the outline of an international council for the implementation of AI policy.¹²⁰²

Draft AI policies and legislations of Colombia have been opened for public comment from academia, national, regional and international civil society actors, intergovernmental organizations and the private sector. These consultations have taken on various forms.¹²⁰³ Most recently, the Ministry of Science, Technology and Innovation (MinCiencias) conducted a public consultation on the Roadmap to

Center for AI and Digital Policy

ensure the ethical and sustainable adoption of AI in Colombia¹²⁰⁴ and plans on organizing subsequent consultations to flesh it out further.¹²⁰⁵

Additionally, the Ethical Framework for AI and its ethical algorithm register promote public participation in the implementation of AI ethics principles, as the registry is publicly accessible and includes an interactive channel where citizens can ask questions or post comments on the ethical implementation of AI.¹²⁰⁶ The presence of regulatory sandboxes and beaches also allows the participation of the private sector and academic institutions in the development of AI technology.

The Chamber of Representatives held a public hearing¹²⁰⁷ for a statutory bill that would “define and regulate artificial intelligence; align to human rights standards; establish limits of the development, use and deployment [of AI], partially modify [the data protection law]” in September 2024.¹²⁰⁸

Data Protection

Data Protection in Colombia is governed by Article 15 of the Constitution.¹²⁰⁹ Colombia also regulates financial credit, commercial and services information,¹²¹⁰ and personal data processing and databases.¹²¹¹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

For the implementation and monitoring of regulations regarding privacy, the Personal Data Authority (DPA) was established under the Division of Data Protection of the Superintendency of Industry and Commerce (SIC), according to Article 19 of Law 1581 of 2012. This authority functions as an oversight body, providing instructions and setting mandates, along with receiving complaints on the handling of data.

On automated decision-making, Law 1581 establishes that personal data processing must be for a legitimate purpose under the Constitution and other laws, it must be notified to the subject, and the purpose must be specific. As a result, if automated decision-making is the purpose of processing data, then it must be (1) legitimate as per the Constitution and other laws of Colombia, (2) specific in purpose, and (3) data subject should be informed of it.¹²¹²

Secondary decrees, decisions, and regulations provide a better understanding of data protection, particularly regarding the application of automated mechanisms to databases. Databases have been defined under Article 3 of Law 1581 as an organized set of personal data which is treated in the same as personal data. Decree 886 that regulates Article 25 of Law 1581 explains this further by stating that, when automation is applied to databases containing personal data, it should be registered in the public directory of databases called the National Register of Databases.¹²¹³ Drawing from the necessity to register information from databases and the protection of the right to *habeas data*,¹²¹⁴ the Constitutional Court concluded that the administrator of a database has specific obligations regarding the quality of data being transmitted and allows data subjects to authorize how their information in an automated system is handled.¹²¹⁵ Additionally, Article 26 of Decree 1377 establishes the principle of proven liability, according to which those responsible for handling personal data have an obligation to prove that they have taken sufficient and effective measures to abide by regulations, even when the data is processed by an automated method.¹²¹⁶

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In July 2020, through Resolution 38281, the Superintendency of Industry and Commerce concluded that Law 1581 is thematically and technologically neutral.¹²¹⁷ Thus, the provisions of Law 1581 apply to the processing of any data regardless of techniques or technologies used. The protection of personal data extends to all techniques and tools, including AI in its use for predictive dialing, robocalls and nuisance calls. Nelson Remolina, the Superintendent for the Protection of Personal Data, elaborated on this by stating that, while Colombian law allows for the creation, design, and use of technological innovations to process data, it must be done in a way that respects the legal system by complying with all the rules pertaining to the processing of personal data.¹²¹⁸

Colombian data protection law differs in scope from the GDPR, since it only applies to data processing carried out by data processors and data controllers within the country or to those who have a legal obligation under international law and treaties. Unlike the GDPR, the Colombian privacy law does not set out conditions under which data profiling is allowed. However, Colombian privacy law protects individual privacy through habeas data rights, guaranteed by Article 15 of the Colombian Constitution. Article 15 is intended to protect an individual's right to know, update, and rectify information gathered about them in online files or databases.¹²¹⁹

In January 2022, President Duque issued Decree 092, modifying the structure of the Superintendency of Industry and Commerce. The modifications include the creation of the Habeas Data Department, under the Deputy Superintendency for Personal Data Protection. The Decree tasks the Habeas Data Department with ensuring that all entities covered by the data protection regime comply with data protection law. The Habeas Data Department may also resolve any complaint or claim submitted by data subjects seeking to enforce their data rights. The Department may issue orders to enforce its statutory mandates.¹²²⁰

The Superintendency of Industry and Commerce, as a member of the Ibero-American Network for the Protection of Personal Data (RIPD), which comprises 16 data protection authorities from 12 countries, also endorsed the General

Recommendations for the Processing of Personal Data in Artificial Intelligence¹²²¹ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.¹²²² Both have been framed in accordance with the RIPD Standards for Personal Data Protection for Ibero-American States.¹²²³ The adoption of the Standards signals Colombia's recognition of guiding principles and rights for the protection of personal data that RIPD members can adopt and develop in their national legislation to guarantee a proper treatment of personal data facilitate homogeneous rules in the region. The guiding principles of personal data protection are: legitimacy, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data and right to the limitation of treatment of personal data.

The RIPD data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, in May 2023 over concerns regarding the risk of misinformation and harmful biases in responses.¹²²⁴

Colombia's Superintendency of Industry and Commerce also launched an independent investigation in May 2023 to assess whether the application ChatGPT complies with Colombian data protection law.¹²²⁵

The Superintendency of Industry and Commerce sponsored the 2020 GPA Resolution on Accountability in the Development and Use of Artificial

Intelligence¹²²⁶ and co-sponsored the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology.¹²²⁷ However, the organization did not co-sponsor the 2020 GPA Declaration on Ethics and Data Protection in AI¹²²⁸ or the 2023 GPA Resolution on Generative AI.¹²²⁹

Algorithmic Transparency

Colombian data protection law does not provide for algorithmic transparency. However, the 2022 Ethical Framework for AI¹²³⁰ provides for both transparency and explainability. The 2024 AI Roadmap also refers to algorithmic transparency.

A group of Colombian Senators introduced a Draft Bill 253 of 2022 to establish the guidelines for an AI policy in November 2022. If this piece of legislation were to pass, it would be the first one regarding this topic in Colombia and would enshrine algorithmic transparency in law.¹²³¹

The RIPD Specific Guidelines offers some clarity on the expectations for explainability as related to the transparency principle: “The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a

complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience.”¹²³²

The Colombian Constitutional Court made a landmark ruling emphasizing the need for human oversight in AI use within the judiciary. The ruling cited UNESCO's AI tools and guidelines, highlighting the importance of transparency, privacy, and human judgment in judicial processes.¹²³³ The court directed Colombia's Consejo de la Judicatura to develop comprehensive guidelines on AI use, aligning with best practices to ensure ethical application that respects human rights.

Data Infrastructure

Colombia facilitates data access for those designing and developing AI systems, achieved by removing unnecessary and unjustified barriers to access information. To facilitate such data access and to generate social and economic well-being, the Colombian government has developed data infrastructure policies with a shared dynamic and standardized resources across different actors. Thus, data infrastructure is used to strengthen institutional capacity to provide better quality services to citizens, to include citizens and the private sector in data governance, to drive innovation in governance, and to guide decision-making.

The first policy document on data infrastructure is the National Policy on Data Exploitation or CONPES No. 3920 of 2018, developed by the National Council on Economic and Social Policy, the National Planning Department, and the Office of the President.¹²³⁴ This policy uses data within a legal, ethical, and institutional framework to generate social and economic value; to increase the availability and interoperability of government data; to promote data culture in public entities, academia and the private sector; to promote data ethics and AI; and to provide test environments through data sandboxes, sandboxes on privacy and AI, and conceptual models for regulatory sandboxes and beaches in AI. To achieve this target, CONPES 3920 sets out 45 action steps with indicators, responsible parties, budgets and a timeline.

The second policy document is the National Data Infrastructure Plan (PNID) developed by MinTIC, the National Planning Department, and the Office

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

of the President, with the support of the World Economic Centre for the Fourth Industrial Revolution.¹²³⁵ The draft of the PNID was shared for public comment until 17 September 2021. The PNID presents an approach to data as infrastructure, defines the components of data infrastructure, and provides a roadmap with concrete actions to implement data infrastructure in the country. This roadmap identifies 6 elements including governance, data, data leveraging, infrastructure interoperability, data security and privacy, as well as technical and technological input for data management.

For the successful integration of the PNID into the data regulation ecosystem, the government intends to create between 2022 and 2025 PNID guidelines. The aim is to identify priority data and create guidelines to ensure data quality; to develop a data infrastructure governance model; to identify indicators for monitoring; and to draw up a collaborative participation strategy for different actors in the data ecosystem.

The third policy document is the Data Infrastructure Governance Model for the Development of Emerging Technologies that was created by the DAPRE, the National Planning Department, and the CAF.¹²³⁶ CONPES 3920 and the PNID both emphasized the need to develop an institutional framework to accompany the development of data infrastructure. The governance model responds to this need. The governance model outlines five objectives to guide its design, including institutional coordination, private sector participation, confidence building, technical modelling, and international impact. Under each of these objectives, responsible parties or entities and specific tasks have been provided.

The Ministry of Information and Communications Technologies introduced a bill aimed at developing a data infrastructure to enhance data availability, usage, and exchange, improve decision-making, and foster a data-driven culture.¹²³⁷ The bill applies to public administration entities and individuals

performing public functions, including the legislative, judicial, and control bodies. Key provisions include obligating public entities to implement recommendations from the National Data Committee, ensuring compliance with the Digital Government Policy for those using emerging technologies like AI, and guaranteeing interoperability among data infrastructure across public entities.

Data Scraping

Colombia's Superintendency of Industry and Commerce and international data protection and privacy counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy.¹²³⁸ The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”¹²³⁹ The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”¹²⁴⁰

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD),¹²⁴¹ Colombia approved the Ibero American Charter on Artificial Intelligence in Civil Service. The Charter aims to provide a roadmap and common framework for CLAD member states to adapt their AI policy strategies and laws for the challenges and opportunities involved in the implementation of AI in public administration. The guiding principles are human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection.

In addition to common principles, the Charter recommends specific tools for monitoring AI impact as well as a risk classification mechanism that guardrails for high-risk use cases and prohibitions against uses that violate human rights. Prohibited uses include facial recognition systems; systems aimed at behavior and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly); and social ranking systems based on certain personality traits, individual behaviors, socio-demographic features, or economic status.¹²⁴²

Use of AI in Courts

The Colombian government introduced the use of technology in the administration of justice through Article 95 of Law 270 in 1996, while mandating protection of confidentiality, privacy, and security of personal data.¹²⁴³ As a result, several government entities use AI in judicial aspects of their work. This includes the Constitutional Court, the Office of the Attorney General, and the Superintendency of Companies.

Concerning the Constitutional Court of Colombia, where thousands of case documents are received daily, their processing has been expedited using an AI system called Prometea. Applying machine learning abilities, this system investigates, analyses, identifies and suggests priority cases on health-related aspects within a few minutes.¹²⁴⁴ Additionally, it produces statistical reports,

automates documentation, systematizes and synthesizes case law across the country, and improves security by integrating blockchain technology. This system that includes human oversight, improved the efficiency of case processing by 937%.¹²⁴⁵

The Office of the Attorney General makes use of an AI system called Fiscal Watson, which consolidates criminal cases across different databases and regional offices to analyze similar evidentiary elements such as *modus operandi*, physical attributes, types of weapon and other aspects.¹²⁴⁶ By accelerating the processing of case information, Fiscal Watson has helped connect and solve similar cases across the country. The Attorney General has also suggested that Fiscal Watson can be used to identify irregularities in government contracts made during the COVID-19 pandemic, since all data and documentation is available online.¹²⁴⁷

The Superintendency of Companies, an administrative body, employs a robot assistant called Siarelis (System based on AI for the Resolution of Company Litigation) to exercise its discretionary judicial powers in corporate cases related for example to the piercing of the corporate veil or insolvency.¹²⁴⁸ Using Case Based Reasoning (CBR), Siarelis helps officials identify relevant case law for a specific case and also provides users with possible decisions that could be reached in their case. The outcome reached by the system is decided based on the judicial history and precedent relevant to a specific case.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Law 2213 of 2022¹²⁴⁹ and the General Procedure Code¹²⁵⁰ allow the use of different technologies in the different stages of Civil, Labor, Family, Administrative, Constitutional, Disciplinary and Criminal procedures in Colombia. The Law specifies that such technologies should only be used when they are suitable for the task. In this regard, Professor Gutierrez noted, “If ChatGPT and other LLMs currently available are evidently unreliable, since their outputs tend to include incorrect and false information, then judges would require significant time to check the validity of the AI-generated content, thereby undoing any significant “time savings”. As it happens with AI in other areas, under the narrative of supposed “efficiencies”, fundamental rights can be put at risk.”¹²⁵¹

In 2023, ChatGPT was used in Colombian Courts in two different cases. The answers provided by ChatGPT were determinant in both cases. In the first case, the judge asked questions with regard to key legal issues, specific to the Colombian legal system. In the second case, the questions touched upon issues of access to justice and due process pertaining to carrying out a hearing in the metaverse. There was no evidence that the answers received by ChatGPT were corroborated by other sources. Professor Florez also raised the risk of over-reliance on “the outputs of automated systems.”¹²⁵²

These cases led the Constitutional Court of Colombia to issue a “landmark”¹²⁵³ ruling indicating that AI tools like ChatGPT may be used to assist with judicial tasks but cannot replace human judgment in legal decisions.¹²⁵⁴ The Court emphasized that while AI can help manage workload and draft documents, excessive reliance on these systems could threaten due process and judicial independence. The ruling established key principles including transparency, privacy protection, and the requirement for human oversight.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In addition, the Court required the issue of guidelines for the use of AI in courts within four months after the ruling. To this end, the Superior Council of the Judiciary established a partnership with UNESCO to tackle four areas: development of judicial AI guidelines, capacity building, algorithmic impact assessment, and transfer of knowledge.¹²⁵⁵

Facial Recognition

In Colombia, facial recognition technology is used extensively by the State. The Ministry of Transport is integrating a network of cameras with facial recognition technology throughout Bogotá. The system, which is meant to prevent and reduce road accidents, has become operational in December 2021 and provides the location of cameras out of transparency.¹²⁵⁶ A facial recognition system to improve surveillance was also introduced by local authorities in September 2021 at a stadium in Barranquilla. This system combines cameras with access to unlimited databases to record and track individuals.¹²⁵⁷ The system will be used to identify and detain anyone with cases pending before the judicial system or any other relevant authority. The Atanasio Girardot stadium in Medellín also has 170 smart cameras installed for surveillance, since 2016.¹²⁵⁸ Expanding the reach of surveillance in the city, Medellín introduced 40 security robots with facial recognition capability and an integrated AI security system to patrol the city.¹²⁵⁹ The Border Control Agency located at El Dorado International Airport in Bogotá uses the Iris recognition system, with the system expected to reach other airports in the country within the next few years.

Fundación Karisma, a civil society organization dedicated to supporting the responsible use of tech, highlights the pitfalls of these systems. In a report titled “Discreet Cameras,” Fundación Karisma points out that surveillance technology and biometric identification systems in Colombia only take into consideration

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

technical and impact considerations while assessing systems. There is no analysis using necessity, proportionality or the possible effect of the technology on human rights.¹²⁶⁰ However, Colombia's co-sponsorship of the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology indicates a move towards official recognition of the importance of parameters such as reasonableness, necessity, proportionality, and the effect of the technology on human rights.¹²⁶¹ Although the government tries to ensure transparency by sharing the location of video surveillance systems that use facial recognition technology, the right to privacy and other fundamental rights of individuals are still ignored.¹²⁶²

Use of AI during COVID-19 Pandemic

Despite this situation during the emergency of the COVID-19 the government released a mobile app named CoronApp.¹²⁶³ At first, CoronApp's main objective was to allow people to stay updated on the progression of the pandemic in Colombia. In the days that followed, however, the narrative around the app changed. Its purpose became more ambitious. It soon became a digital tool to keep the population informed and "save as many lives as possible".¹²⁶⁴

Concerns were raised about the app's data privacy implications, as it collected personal information such as location data and potentially exposes users to security risks. The Colombian government stated that the app is voluntary, and that users' data will be kept confidential, but it is important for individuals to carefully review the app's privacy policy and consider the potential risks before downloading and using it.

In response to these concerns, the Colombian human rights organization Dejusticia has called for greater transparency and accountability in the use of

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

personal data collected through this app and another implemented in the future.¹²⁶⁵ Dejusticia had also called for the government to implement strict measures to protect the privacy of individuals and ensure that their data is only used for the purposes that the app was created.

Dejusticia has also urged the government to establish clear guidelines for the collection, use, and storage of personal data, and to provide users with the ability to opt out of the app(s) at any time. Additionally, they have called for the government to establish a system of oversight and accountability to ensure that data collected through the app(s) is not misused or mishandled.

CoronApp had the potential to be a useful tool in guaranteeing the health of the population, but it is important that the government takes steps to ensure that the personal data of users is protected and used responsibly. In April 2022, the Constitutional Court reviewed and determined that the plaintiffs' rights to privacy should be respected, even during a national state of emergency. Furthermore, the Court declared that authorities had a duty to "avoid the abusive and arbitrary use of personal data" and the National Data Authority was ordered to erase the plaintiffs' data.¹²⁶⁶

Environmental Impact of AI

The growing adoption of AI technologies in Colombia has prompted concerns about their environmental impact, leading to the inclusion of sustainability considerations in recent AI policy proposals. Colombia's particular vulnerability to climate phenomena, coupled with its 70% dependence on hydroelectric power, makes environmental sustainability a critical aspect of AI governance.¹²⁶⁷ In response, Colombia has proposed comprehensive frameworks addressing these challenges through both legislation and policy.

The national AI policy roadmap recognizes the need for robust measurement frameworks to understand and monitor AI's environmental impact, particularly regarding water resource usage, electrical energy capacity, and greenhouse gas emissions.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

A draft bill titled Law of Ethical and Sustainable Artificial Intelligence for Social Welfare issues in the Colombian Congress in July 2024¹²⁶⁸ would require AI developers to implement practices to reduce energy consumption, monitor CO2 emissions, and promote renewable energy adoption in AI infrastructure, with oversight from the Superintendency of Industry and Commerce in collaboration with the Ministry of Environment. This draft bill is in the early stages of discussions.

These policies reflect Colombia's approach to establish measurement and monitoring frameworks to ensure that development is sustainable before applying AI solutions.

Lethal Autonomous Weapons

During the 2015 meeting of the Group of Governmental Experts (GGE) on lethal autonomous weapons (LAWS), Colombia issued a statement calling for multilateral regulation to ensure human control over autonomous weapons at all times, so that no machine makes an autonomous decision.¹²⁶⁹ Colombia has called for a pre-emptive ban on all LAWS¹²⁷⁰ and for an international treaty that will ensure meaningful human control over any use of force.¹²⁷¹

Colombia was among the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 UN General Assembly meeting. In this joint statement, States urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”¹²⁷²

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In February 2023, Colombia endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,¹²⁷³ which calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

At the 78th UN General Assembly First Committee in 2023, Colombia voted in favor¹²⁷⁴ of resolution L.56¹²⁷⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

The Secretary-General issued the report in the 79th UN General Assembly and analyzed ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.¹²⁷⁶ Colombia contributed to statements from the Ibero-American states¹²⁷⁷ and as part of a group High Contracting Parties to the CCW. Both reports reiterated support for a legally binding instrument to prohibit the use of autonomous weapons outside human control and restrict other uses. The latter statement also proposed a draft protocol VI originally submitted to the GGE in July 2022 as a starting point for a legally binding instrument.¹²⁷⁸

Human Rights

Colombia is a signatory to many international human rights treaties and conventions. After concerns over illegal surveillance operations by the state

security forces in a 2021 Human Rights Watch report,¹²⁷⁹ Colombia has ranked as “free” in the Freedom in the World Report since 2023 with a score of 70/100.¹²⁸⁰ Lasting negotiations between the government armed groups led to government surveillance and concerns over corruption remain.¹²⁸¹ Colombia ranks as “partly free” on Internet Freedom with a score of 65/100, in part because of violence against digital journalists and cyberattacks on media and government entities.¹²⁸²

According to Article 93 of Colombia’s Constitution, rights and duties in the national system are interpreted according to international treaties and conventions that have been ratified by its Congress.¹²⁸³ Thus, Colombia has made powerful commitments backed by strong action that encourages legal certainty, with an entire implementation, regulatory and monitoring ecosystem for AI. This is strengthened by expert contributions and public participation at the national, regional and international level.

OECD / G20 AI Principles

Colombia has endorsed the OECD AI Principles. Colombia’s Ethical Framework for AI introduced as a guideline for trustworthy AI, provides standards for the ethical use and governance of AI and is aligned with the OECD AI principles.¹²⁸⁴ Additionally, Colombia has developed policy intelligence tools and a follow up plan to monitor the implementation of the OECD AI Principles, while identifying good practices to determine if OECD’s recommendations to Colombia have been implemented. However, Colombia has not joined the Global Partnership on AI (GPAI).¹²⁸⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Council of Europe AI Treaty

Colombia is not a member of the Council of Europe and has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.¹²⁸⁶

UNESCO Recommendations on AI Ethics

Colombia endorsed the UNESCO Recommendation on the Ethics of AI in November 2021. Even before the UNESCO recommendation was completed, the Presidency cited the example of OECD and UNESCO principles of OECD and UNESCO to acknowledge “the importance of ethical considerations for the design, development, and implementation of artificial intelligence in Colombia and more precisely the need to adopt an Ethical Framework as a non-binding guide for the implementation of artificial intelligence in the country.”¹²⁸⁷

CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the UNESCO Recommendation in Latin America and the Caribbean in 2022.¹²⁸⁸ As part of that collaboration, they helped establish a Regional Council composed of national and local governments, which convened its inaugural meeting in October 2023. This initial meeting focused on the collaborative exchange and formulation of proposals, encompassing both political and technical perspectives, aimed at guiding the ethical development of Artificial Intelligence in the region.¹²⁸⁹

Colombia signed the resulting 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.¹²⁹⁰ The Santiago Declaration reflects UNESCO’s Recommendation on the Ethics of AI and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.

Colombia is in the process of conducting a Readiness Assessment Methodology (RAM) exercise, which is a tool to support Member States to implement the UNESCO Recommendation on the Ethics of AI.¹²⁹¹

Evaluation

Colombia has anchored its AI policy in the Ethical Framework for Artificial Intelligence, which has influenced AI policies across Latin America. Colombia has recently drafted a National AI Policy that should guide it toward the adoption of a human-centric national AI strategy. Colombia is part of the Regional Council for the implementation of the UNESCO Recommendation on AI Ethics and has endorsed the Ibero-American Charter on AI in Civil Service.

The Constitution of Colombia established a right to data protection, and the country has a comprehensive data protection law and an active data protection agency. Draft bills for ethical and sustainable development and application of AI are being discussed in Congress. The Colombian data protection authority is the first in the region to have opened an investigation on OpenAI ChatGPT. However, Colombia's laws do not yet include algorithmic transparency. There are also growing concerns regarding the use of facial recognition systems and of AI in courts.

Costa Rica

In 2024, Costa Rica adopted a National AI Strategy following a public consultation. The country also continued to advocate in the UN General Assembly for a legally binding instrument on lethal autonomous weapons systems.

National AI Strategy

Costa Rica adopted its National Artificial Intelligence Strategy (*Estrategia Nacional de Inteligencia Artificial*, ENIA), developed by the Ministry of Science, Innovation, Technology, and Telecommunications (MICITT) in October 2024.¹²⁹² This initiative, drafted with UNESCO's support,¹²⁹³ aims to align national efforts

¹²⁹¹ UNESCO Global AI Ethics and Governance Observatory, *Global Hub* (Oct. 2024), <https://www.unesco.org/ethics-ai/en/global-hub>

¹²⁹² Ministry of Science, Technology and Telecommunications, *National Artificial Intelligence Strategy 2024–2027* [Spanish] (Oct. 24, 2024), <https://www.micitt.go.cr/sites/default/files/2024-10/Estrategia%20Nacional%20de%20Inteligencia%20Artificial%20de%20Costa%20Rica%20E SP.pdf>

¹²⁹³ Mariana Álvarez, *Costa Rica Will Be the First Country in Central America to have an Artificial intelligence Strategy*, UNESCO (Feb. 28, 2023),

toward a long-term vision for AI. ENIA's primary goals include fostering the ethical, safe, and responsible use, adoption, and development of AI technologies to maximize benefits for citizens while minimizing potential harm. The strategy outlines specific action areas to harness AI's advantages and to address associated ethical, social, and technical risks and challenges.¹²⁹⁴

Before the Strategy, two draft bills governing AI were proposed, both drafted with assistance from ChatGPT-4. The first, Draft Bill on Artificial Intelligence Regulation seeks to regulate the development, implementation, and use of AI in Costa Rica.¹²⁹⁵ The second, Draft Bill Regulation for the Responsible Promotion of Artificial Intelligence was proposed in September 2023.¹²⁹⁶ The Bill aims to promote the use, research, design, development, deployment, utilization, implementation, and application of artificial AI in Costa Rica, in accordance with the principles of ethics, responsibility, and human dignity. Both bills remain in the Science, Technology, and Education committee.

The country has also developed a general human-centered science, technology and innovation plan and a specific digital strategy that addresses issues related to AI technology. The National Plan on Science, Technology and Innovation 2022–2027 (*Plan Nacional de Ciencia, Tecnología e Innovación 2022–2027*, PNCTI) provides a general overview of the country's goals regarding the use of information and communication technologies for a sustainable, equitable and creative future. In this Plan, AI is one of several thematic areas. Regarding AI, the plan focuses on pursuing the following actions: i) the development of technical capabilities and competencies across STEM/STEAM curricula in schools and technical colleges, ii) the development of a program of study for technical certification in AI as offered by a collaboration between the Ministry of Public Education and technical colleges, iii) the development of understandable and accessible AI systems for all, and iv) the further support of the fAIr Latin America and Caribbean (LAC) initiative designed by the Inter-American Development Bank (IDB) to ensure the ethical and responsible adoption of AI.¹²⁹⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Costa Rica's science, innovation, technology and telecoms ministry presented an updated Digital Transformation Strategy 2023–2027 in August 2023. The Strategy focuses on two strategic axes: digital citizenship and good governance. The latter includes an action item on defining a National Strategy on Artificial Intelligence, which Costa Rica accomplished in 2024. The Digital Transformation Strategy frames the use of AI as a means to drive the country's economic competitiveness and productivity through innovation and value creation.

Another initiative specific to AI is Costa Rica's declared intention to build a National Laboratory for AI (*Laboratorio Nacional de Inteligencia Artificial*, LaNIA).¹²⁹⁸ MICITT, the National Center of High Technology (*Centro Nacional de Alta Tecnología*, CENAT), and the National Program (*Programa del Estado de la Nación*, PEN) signed a letter for cooperation in AI, science, and technology. The laboratory intends to search for cross-sector solutions to national problems with the support of AI and through international cooperation and interaction between the public and private sectors. This cooperation contributes to the goal to create an ecosystem, strengthen trust, and promote research and education in AI.

Public Participation

Citizen participation in Costa Rica has a vast and rich history that has given rise to a significant number of democratic innovations. The Constituent Assembly of 1949 was reintroduced into the constitutional text with instruments for citizen participation. With later reforms to the Constitution in 2002 and 2003, public participation was enhanced through the inclusion of the Referendum and the Popular Initiative. In 2003, Article 9 of the Constitution of Costa Rica was further amended, supplementing the various instruments of citizen participation that had already been incorporated into the Constitution. Costa Rica's democratic institutions provide a robust legal framework to support public participation.

The National Commission for Open Government is using its online platform to enable public consultations on relevant national policies. The MICITT

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

publishes all its public consultation opportunities on its website¹²⁹⁹ as well as on social media through its Facebook page.¹³⁰⁰

Costa Rica has made important progress in aligning its regulations and practices regarding public participation with OECD standards.¹³⁰¹ Costa Rica also takes part in the CoST initiative to implement the Infrastructure Transparency Index (ITI) for improving transparency and accountability across public infrastructures. These commitments consolidate the transformation of Costa Rica towards an open government.¹³⁰²

Public participation opportunities were offered on the National Plan on Science, Technology and Innovation 2022–2027,¹³⁰³ the creation of the High Level Commission of the Digital Government,¹³⁰⁴ and more recently the National Strategy for Cybersecurity.¹³⁰⁵

Costa Rica launched a public national consultation on its National Artificial Intelligence Strategy, inviting citizens to participate in shaping the country's approach to artificial intelligence on March 22, 2024.¹³⁰⁶ The consultation, which was open to April 11, 2024, sought input to promote the ethical, safe, and responsible adoption and development of AI in the nation. Participants were encouraged to review the National Artificial Intelligence Strategy document and submit feedback using a public consultation form via email.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Data Protection

Costa Rica has two comprehensive laws that protect personal data. While under the Ministry of Justice and Peace, the entity in charge of compliance with data protection law, the Agency for the Protection of Citizen's Data (*Agencia de Protección de Datos de los Habitantes*, Prodhav) is fully independent.¹³⁰⁷

Law No. 8968 protects the personal data handling of individuals. Law No. 7975, the Undisclosed Information Law, specifies that the unauthorized disclosure of confidential and/or personal information is a crime.¹³⁰⁸ These laws, together with their by-laws, were enacted to regulate activities of companies that administer databases containing personal information.¹³⁰⁹ The laws require data subjects' consent before the processing or use of their data. Consent must cover in particular the purpose for data collection and how the data will be processed. The identity of all recipients and parties with access to personal data must be disclosed. Transfer of personal data to third countries is also conditional upon data subjects' consent.

Additional laws include Costa Rica's Executive Decree No. 37554-JP for data breach and the General Telecommunications Law No. 8642 (Article 42) that protects the privacy of communications and personal information. The General Telecommunications Law is supplemented by administrative regulation N° 35205-MINAET that guarantees the secrecy of communications, the right to privacy, and the protection of personal data of subscribers and users.¹³¹⁰

After proposed amendments to align the data protection law with the GDPR stalled,¹³¹¹ the legislative assembly is discussing a new proposed law (Project 23097) that would repeal Law 8968 and replace it. The proposed new legislation would establish a set of principles and rights for personal data protection to ensure proper handling of residents' personal data and enhance the level of protection for individuals regarding data processing. These revisions would align Costa Rica with international standards on data privacy in a society increasingly shaped by information and communication technologies. The proposed law also aims to promote the development of mechanisms for international cooperation among control authorities in Ibero-American states, non-

Center for AI and Digital Policy

regional control authorities, and international entities specializing in data protection.¹³¹²

As a member of the Ibero-American Network for the Protection of Personal Data (RIPD) which comprises 16 data protection authorities from 12 countries, the Prodhab endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence¹³¹³ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.¹³¹⁴ Both have been framed in accordance with the RIPD Standards for Personal Data Protection for Ibero-American States.¹³¹⁵ By adopting the Standards, Costa Rica recognizes a series of guiding principles and rights for the protection of personal data that can be adopted and developed in national legislation to guarantee proper treatment of personal data, and to promote homogeneous rules in the region. The guiding principles of personal data protection are: legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data and right to the limitation of treatment of personal data.

The RIPD authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, in May 2023 on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data and because it may “generate responses with cultural, racial or gender biases, as well as false ones.”¹³¹⁶

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Despite being an accredited member of the Global Privacy Assembly (GPA) since 2012,¹³¹⁷ the Prodhab has not endorsed the 2018 GPA Resolution on AI and Ethics,¹³¹⁸ 2020 GPA Resolution on AI and Accountability,¹³¹⁹ 2022 GPA Resolution on AI and Accountability,¹³²⁰ or 2023 GPA Resolution on Generative AI Systems.¹³²¹

Algorithmic Transparency

The current data protection laws of Costa Rica are silent with regard to algorithmic transparency. However, Costa Rica's AI strategy emphasizes transparency in AI systems as necessary for building trust. The Strategy would require developers to ensure that AI processes are understandable and that automated decisions are explainable, especially in sensitive sectors like public administration. Regular audits and clear information on how AI algorithms work are recommended to avoid biases and maintain accountability, particularly for AI models impacting the public.¹³²²

The RIPD Specific Guidelines provide clarity on the definition and requirements of "transparency," noting: "The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience."¹³²³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Lisboa Declaration approved during the XXV International Congress for State Reform and Public Administration in November 2020, co-organized by the Latin American Center for Administration for Development (CLAD), proposed three AI-related actions for Costa Rica to accomplish in one to four years. First, the declaration promoted the assessment of algorithmic models by informing, documenting and publishing the results from pilot projects online. Second, the Declaration proposed further updates to the data protection law (No. 8968) to include algorithmic transparency. Finally, the Declaration urged the creation of a manual on the ethics of AI for the public administration to use as an instrument to measure and evaluate the impact of AI throughout Costa Rica.¹³²⁴

The proposed reform of Law 8968 does provide for algorithmic transparency.¹³²⁵ Transparency is also one of the key principles of the 2022 National Code of Digital Technologies.¹³²⁶

Use of AI in Public Administration

The ENIA highlights AI's potential to streamline public administration by automating tasks, improving public service delivery, and enhancing decision-making efficiency. For instance, AI is used to manage health services, such as the EDUS platform by Costa Rica's Social Security Fund, which leverages AI for chronic disease management and prevention. The document underlines the need for ethical standards and effective human oversight in these applications to align with national values and ensure responsible deployment.¹³²⁷

As a member of the Latin American Centre for Development Administration (CLAD), Costa Rica approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.¹³²⁸ The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI and

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

adapt their AI policy strategies and laws accordingly. The guiding principles are human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection.

In addition to common principles, the Charter recommends specific tools for monitoring AI impact as well as a risk classification mechanism that guardrails for high-risk use cases and prohibitions against uses that violate human rights. Prohibited uses include facial recognition systems; systems aimed at behavior and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly); and social ranking systems based on certain personality traits, individual behaviors, socio-demographic features, or economic status.¹³²⁹

Use of AI in Courts

While Costa Rica's judiciary has not yet fully integrated AI, the ENIA envisions a future where AI could assist with case management, evidence analysis, and even support decision-making. The strategy stresses that any use of AI in the legal system must be transparent, accountable, and subject to human oversight to uphold justice and prevent discrimination or errors in judgment.¹³³⁰

A new AI system called Prometea developed by the Innovation and AI Laboratory of the School of Law of the University of Buenos Aires and the Public Prosecutor's Office of the Autonomous City of Buenos Aires, has been implemented in the judicial system of the Inter-American Court of Human Rights in Costa Rica.¹³³¹ Regardless of whether judicial cases are simple (e.g. minor infractions, traffic accidents, and taxi license disputes) or complex (e.g. murder trials), controversy lies in the inevitable biases of the AI-enabled system and the lack of algorithmic transparency behind the decision-making process. Transparency of the AI system's algorithm, therefore, must be assured to protect due process and the rule of law.¹³³²

AI and Hiring

The use of data analytics and AI techniques for hiring, firing, and promoting employees in Costa Rica has also been very controversial due to AI

¹³²⁹ Ibid, p. 21

¹³³⁰ MICITT, *National AI Strategy (ENIA)*, (Oct. 27, 2024), p.78. <https://www.micitt.go.cr/el-sector-informa/micitt-presento-estrategia-nacional-de-inteligencia-artificial-enia>

¹³³² Ibid

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

systems' bias and lack of transparency. Companies recruiting in Costa Rica must adapt their recruiting processes to accommodate Costa Rican law, especially with regard to discrimination. However, controversy persists because Costa Rican law does not directly regulate the impact or effects of AI on recruitment.¹³³³

Costa Rica has piloted a skills and training platform that uses AI to “provide skill development suggestions to participants, based on their abilities, interests and experiences.”¹³³⁴

The ENIA addresses the role of AI in the hiring process, acknowledging its potential to make recruitment more efficient and objective. However, it also highlights the importance of preventing algorithmic biases that could affect vulnerable groups. Costa Rica's AI strategy encourages transparency in AI-driven hiring tools so applicants understand how decisions are made, and it supports providing opt-out capability to ensure ethical AI practices in employment.¹³³⁵

According to a September 2024 ManpowerGroup survey, Costa Rica ranks among the top countries with strong hiring intentions, with 36% of employers planning to increase their workforce. This positive outlook is partly driven by advancements in technology and the integration of AI in various sectors.¹³³⁶

Environmental Impact of AI

The recent collaboration between Costa Rica and the UNEP (United Nations Environmental Programme) Climate Technology Centre and Network (CTCN) at the 2024 Latin America and Caribbean (LAC) NDE Forum highlights Costa Rica's commitment to integrating artificial intelligence (AI) within its public administration to tackle climate challenges. This event, focused on AI for Climate Action, offered resources for AI capacity-building, including mapping the role of AI in climate action and learning about how AI technology can be applied to transform systems.¹³³⁷ The four-day event aimed to foster South-South and

North-South collaboration on climate technology. A representative from Costa Rica's Ministry of Environment and Energy stressed "the importance of technology to contribute to the identification and implementation of innovative solutions for climate action, both in terms of mitigation and adaptation." He also highlighted Costa Rica's human capital prepared to "make full use" of these initiatives.¹³³⁸

Lethal Autonomous Weapons

Costa Rica is one of the 126 member states signatory to the Convention on Certain Conventional Weapons (CCW) and participated in CCW meetings. During the UN General Assembly in October 2013, Costa Rica proposed that critical functions of weapons systems be subject to meaningful human control highlighting the risks and harms identified with the use of armed drones and robotic weapons. In 2016 Costa Rica called for a preemptive ban on lethal autonomous weapons systems.¹³³⁹

Costa Rica has continued to advocate for the ban on lethal autonomous weapons. In 2020 the Ministry of Foreign Affairs, together with the Foundation for Peace and Democracy (FUNPADEM), called for the prohibition of the use of Lethal Autonomous Weapons (LAWS).¹³⁴⁰ Still in 2020, while intervening as a member of the Group of Governmental Experts (GGE) on emerging technologies in the area of LAWS, Costa Rica advocated for the development of international legally binding agreements providing for prohibitions and regulations on autonomous weapons systems.¹³⁴¹

Costa Rica was among the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 UN General Assembly meeting. In this joint statement, States urged "the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International

Center for AI and Digital Policy

Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”¹³⁴²

In February 2023, the Costa Rican Ministry of Foreign Relations, together with the Foundation for Peace and Democracy, organized the Latin American and Caribbean Conference on the social and humanitarian impact of autonomous weapons. The Conference resulted in the endorsement by Costa Rica and more than 30 other Latin American and Caribbean states, of the Belén Communiqué.¹³⁴³ The Belén Communiqué calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

At the 78th UN General Assembly First Committee in 2023, Costa Rica voted in favor¹³⁴⁴ of resolution L.56¹³⁴⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. Costa Rica’s submission to the report reiterated its support for a legally binding instrument.¹³⁴⁶

Costa Rica voted in favor of Draft Resolution L.77 on lethal autonomous weapons systems at the 79th UN General Assembly First Committee in October 2024. The draft drew attention to the “negative consequences and impact of autonomous weapon systems on global security and regional and international stability” and marked the urgent necessity of human interventions to ensure accountability, responsibility, and compliance toward international law. L.77 also noted the Secretary-General’s proposal on enforcing legally binding prohibitions

Center for AI and Digital Policy

and regulations for autonomous weapons systems.¹³⁴⁷ Speaking at the assembly, Costa Rica reiterated the potential harms caused by lethal autonomous weapons and called for legally binding instruments to prevent the deployment of such weapons.¹³⁴⁸

Human Rights

In 2024, Freedom House ranked Costa Rica “Free” with an overall score of 91/100.¹³⁴⁹ Costa Rica also ranked as “Free” with a score of 85/100 for freedom on the internet; however, the report cited “worsening online intimidation, especially against critical journalists,” including online hate speech and threats of violence, as well as possible “politicalization in the allocation of state funding to media outlets” as threats to Costa Ricans’ online freedom.¹³⁵⁰ Human rights in Costa Rica predominantly stem from the UDHR, the country’s Constitution, and the Inter-American Human Rights System.

OECD / G20 AI Principles

Costa Rica endorsed the OECD AI Principles for designing safe, fair, trustworthy and robust AI systems¹³⁵¹ before becoming a member of OECD on May 25, 2021.¹³⁵² Costa Rica extended its commitment by endorsing the 2024 updates.¹³⁵³

Several policies proposed in Costa Rica’s national digital transformation strategy, in which AI is included, align with the OECD AI principles. These

include a focus on inclusive growth; human-centered values and fairness; transparency; robustness, security, and safety; and accountability.¹³⁵⁴

The fAIr LAC hub in the country is a promising initiative because it aims to help in defining an ethical and responsible AI framework.¹³⁵⁵

Council of Europe AI Treaty

Costa Rica contributed as a non-member¹³⁵⁶ to the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law.¹³⁵⁷ Despite this participation, Costa Rica has not signed this first legally binding international AI treaty.¹³⁵⁸

UNESCO Recommendation on AI Ethics

Costa Rica is one of the 193 countries that adopted the UNESCO Recommendation on the Ethics of AI during the 41st General Conference in November 2021. The instrument is the first of its kind that considers ethics as a basis for normative evaluation and guidance of AI technologies with reference to human dignity and wellbeing, and the prevention of harm.¹³⁵⁹

CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the Recommendation in Latin America and the Caribbean. They pledged to create a Regional Council composed of national and local governments in the region which will support their implementation efforts. Costa Rica is a member of the Regional Council,¹³⁶⁰

which was formally established, with its inaugural meeting convened in October 2023. This initial meeting focused on the collaborative exchange and formulation of proposals, encompassing both political and technical perspectives, aimed at guiding the ethical development of Artificial Intelligence within the region.¹³⁶¹

Costa Rica signed the resulting Santiago Declaration to Promote Ethical Artificial Intelligence.¹³⁶² It aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.¹³⁶³

Costa Rica also participated in the Second Ministerial and High Authorities Summit on the Ethics of Artificial Intelligence in Latin America and the Caribbean held in Montevideo, Uruguay, on October 3 and 4, 2024. The summit consolidated the work proposed in the first Ministerial Summit held in Santiago de Chile in October 2023, seeking to advance collaborative and sustainable AI-regulations efforts for Latin America and the Caribbean.¹³⁶⁴

The Ministry of Science, Technology and Telecommunications in Costa Rica developed the National AI Strategy released in 2024 through collaboration with UNESCO to align the strategy with the UNESCO Recommendation.¹³⁶⁵

Costa Rica is currently completing the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the

Recommendation.¹³⁶⁶ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.¹³⁶⁷

Evaluation

Costa Rica adopted a national AI strategy aligned with the UNESCO Recommendation through collaboration with UNESCO. Costa Rica has specifically endorsed worldwide initiatives focused on the ethical and responsible use of AI, including the OECD AI principles and the UNESCO Recommendation on the Ethics of AI, and has also participated in the IDB-led fAIr LAC hub. Costa Rica has an independent data protection agency charged with enforcing its comprehensive data protection law regime. The extensive use of AI both in public and private sectors calls, however, for protection of the right to algorithmic transparency.

Czechia

In 2024, Czechia adopted an updated National AI Strategy. The country also became party to the Council of Europe AI Treaty as an EU member state, though the country has not signed the treaty independently.

National AI Strategy

The Czech Ministry of Industry and Trade (MIT) announced¹³⁶⁸ the approval of an updated *National AI Strategy of the Czech Republic 2030*¹³⁶⁹ by government resolution on July 24, 2024. This updated strategy represents a fundamental shift from Czechia's original 2019 National Artificial Intelligence Strategy's (NAIS) general aspirational guidelines approach to a more structured and accountable framework. The change is significant because it moves from voluntary guidelines to specific requirements with designated oversight and enforcement mechanisms. This includes the new element of a mandatory implementation framework which includes regular reporting requirements, specific timelines for implementation, clear accountability measures, and concrete funding commitments.¹³⁷⁰

¹³⁷⁰ Ibid, pp. 47–48

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Other notable changes from the 2019 NAIS reflected in the updated NAIS 2030 include a restructuring of the strategy's seven key areas, which are now : 1) AI in Research, Development and Innovation, 2) Education and Expertise in AI, 3) AI Skills and Labor Market Impacts; 4) Ethical and Legal Aspects of AI, 5) Security Aspects of AI, 6) AI in Industry and Business, and 7) AI in Public Administration and Public Services.¹³⁷¹ Most importantly among the structural changes, International Cooperation is now integrated across all areas rather than being a standalone area, and Ethics and Legal Aspects of AI are now their own focused topic area, after previously being combined as two among five topics in the 2019 NAIS.¹³⁷²

The 2019 NAIS provides context for the updated version.¹³⁷³ The NAIS follows up on the commitment the Czech Republic undertook by signing, together with other EU Member States the 2018 EU Declaration of Cooperation on Artificial Intelligence.¹³⁷⁴ The NAIS is part of the Innovation Strategy of the Czech Republic 2019–2030¹³⁷⁵ and the Digital Czech Republic strategy.¹³⁷⁶ The NAIS sets out a framework of priority objectives and tools to support AI development in the academic, public and private sectors, mutual cooperation and international engagement.

The aim of the NAIS is to improve the national economic growth and competitiveness in AI by (1) promoting research and development activities; (2) financing research and development, investment support, and development of the AI ecosystem; (3) Creating public service infrastructures and providing access to data for AI development (4) Upgrading human capital and the educational system in order to meet the demands of AI (5) Measuring the impact of AI on labor systems and labor markets (6) addressing legal, societal and ethical aspects of AI, consumer protection and security issues, with reference to the work of the UN, OECD and Council of Europe in the field; (7) Engaging in international cooperation in the field of AI

To achieve these objectives, the Czech Government envisages policy actions across key areas like education, R&D support, financing, industry, social

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

impacts, regulation and international cooperation. For each key area, the Strategy identifies the responsible Ministry, the policy initiatives to develop, the cooperating entities, and key targets until 2021, 2027 and 2035.

The Deputy Prime Minister and Minister of Industry and Trade are directly responsible for the NAIS implementation and will coordinate it through the newly established AI Committee. The AI committee is a subcommittee of the Digital Czech Republic Steering Committee. The Committee primarily includes responsible ministries who are competent to coordinate each specific key area of the Strategy and will be in charge of the NAIS operational management. Working groups are affected to each of the NAIS seven key objectives. Once a year, the Steering Committee and the Czech Government will receive a progress report on the NAIS implementation.

The updated National AI Strategy of the Czech Republic 2030 specifically refers, multiple times, across multiple contexts, to: 1) Fairness (*spravedlnost*); 2) Accountability (*odpovědnost*); 3) Transparency (*transparentnost*); 4) Rule of Law (*právní stát*); 5) Legal Force (*právní síla*); and 6) Enforcement (*vymáhání*).¹³⁷⁷ By contrast, the 2019 NAIS included a section dedicated to the legal, societal and ethical aspects of AI, but did not specifically refer to Fairness, Accountability, Transparency, or Rule of Law. The 2019 NAIS, however, mentions “maintaining a high level of protection of fundamental and other rights, in line with the European approach of human-centric AI.”¹³⁷⁸

In introduction to the 2019 NAIS, the Czech Prime Minister stated, “We are going to focus on protecting every person and consumer, their rights and privacy, especially the weakest ones. We are going to prevent discrimination, manipulation and misuse of AI, we are going to set the rules for decision-making of algorithms about people in everyday life.”¹³⁷⁹ The NAIS also refers to “securing standards primarily in the areas of security, personal data protection and the protection of fundamental rights in research, development and use of AI.” The NAIS provides for the “continuous evaluation of legislative and other legal risks for the competitiveness of the Czech Republic, creation of ethical frameworks and for the national implementation of binding EU regulations and recommendations.”¹³⁸⁰ The updated NAIS continues this commitment.

¹³⁸⁰ Ibid, p. 34

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The National AI Strategy of the Czech Republic 2030 continues the path first established with the 209 NAIS to embody, and now put into more specific action, the Government's "commitment to becoming one of Europe's innovative leaders and a country of the technological future within twelve years."¹³⁸¹ This translates into a position cautioning the EU against overregulation in view of the adoption of an EU AI Act, following the release of the European Commission's White Paper on AI.¹³⁸² In November 2019, the Czech Republic prepared a position non-paper for the EU on the "Regulatory Framework for AI in the EU."¹³⁸³ In this non-paper, the Czech Republic recommended to refrain from initial overregulation of AI, to promote self-regulation and soft-law based on best practices, and to define horizontal red lines as a means of ensuring the protection of fundamental rights as well as legal certainty. The Czech Republic also emphasized that "securing the safety of citizens is the very precondition for the true implementation of fundamental human rights and freedoms."

The Czech Republic is also one of 14 EU Member States that urged the Commission in October 2020 to push for as little regulation as possible in the AI field to find a balance between setting up rules and ensuring fast AI development. In their non-paper, Czechia and other EU Member States set out two visions for the EU's development of AI: (1) promoting innovation, while managing risks through a clear framework and (2) establishing trustworthy AI as a competitive advantage.¹³⁸⁴

Public Participation

Public participation to formulate the 2024 National AI Strategy was formalized and inclusive. The public participation phase for preparing the update took place from June 28–August 20, 2023, and included 517 respondents from the general public, public administration representatives, private sector stakeholders,

Center for AI and Digital Policy

academic institutions, research organizations, and non-profit organizations.¹³⁸⁵ “To ensure broad-based support and relevance, the MPO consulted with public and private representatives. [...] We were inspired by the approaches of countries like Canada, the USA, the United Kingdom, and the Netherlands. We organized an online roundtable where experts from these countries presented their approaches to AI. The roundtable served as a platform for exchanging information and best practices,” said Petr Očko, Chief Director for Digitalization and Innovation at the MPO.¹³⁸⁶

This approach demonstrates more active commitment to public participation, including the use of Expert Working Groups, organized by the Aspen Institute in cooperation with prg.ai, under the auspices of the Ministry of Industry and Trade. However, it is unclear exactly how the general public was incorporated into the participation, which appears to possibly have focused mostly on experts, industry, and academics with some inclusion of NGOs and social partners. Despite the lack of clear insights into this process, it is notable that there appears to be a dedicated effort by key Czech AI leaders to embrace the need for, and execution of, robust public participation, perhaps in response to the lack of civil-society engagement, such as by human rights organizations, in the 2019 strategy.¹³⁸⁷

In February 2020, Czechia launched the AI Observatory and Forum, an expert platform on legal aspects of AI to create a favorable social and legal environment for research, development and use of responsible AI.¹³⁸⁸ The platform is tasked with identifying legislative obstacles for research, development and use of AI and offering recommendations on their removal, developing legal and ethical recommendations for practice, providing space for public debate and engaging Czechia in international discussions on AI regulation and data economy. Audits in the public and private sector will also detect the existence of legal barriers. The core of the expert platform and forum consists of a team of independent experts that continuously monitors trends in research and development of AI, its social impact, the development of legal and ethical rules in Czechia, in other countries and at international level. The platform cooperates

closely with the AI Committee in charge of coordinating the implementation of the NAIS. It is not clear how the general public is involved in the discussions or the work of the Platform. The latest news uploaded to the platform website are from 2020.

EU Digital Services Act

As an EU member state, Czechia shall apply the EU Digital Services Act (DSA).¹³⁸⁹ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation. The 2022 Strengthened Code of Practice on Disinformation¹³⁹⁰ requires signatories to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

The DSA sets out a co-regulatory framework where service providers can work under codes of conduct to address negative impacts regarding the viral spread of illegal content as well as manipulative and abusive activities, which are particularly harmful for vulnerable recipients of the service, such as children and minors.

EU AI Act

As an EU member State, Czechia is bound by the EU AI Act.¹³⁹¹ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of

the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office¹³⁹² established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

Data Protection

Since the Czech Republic is an EU Member State, the General Data Protection Regulation (GDPR)¹³⁹³ is directly applicable in Czechia and to Czechs. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”¹³⁹⁴ The GDPR has been applicable since May 25, 2018.

Regarding the activities of law enforcement authorities, the EU Data Protection Law Enforcement Directive (LED)¹³⁹⁵ protects citizens’ fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”¹³⁹⁶ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.¹³⁹⁷ The LED also requires for Member States, including the

Czech Republic, to enable data subjects to exercise their rights via national data protection authorities.¹³⁹⁸

The 2019 Personal Data Processing Act both supplements the GDPR and implements the LED in Czech law.¹³⁹⁹

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

The Czech Republic is also a member of the Council of Europe and has signed but has not yet ratified¹⁴⁰⁰ the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.¹⁴⁰¹

AI Oversight

The Office for Personal Data Protection (DPA) is the national supervisory authority in the Czech Republic. The DPA oversees enforcement of both the GDPR and the Personal Data Processing Act. Despite being a member of the Global Privacy Assembly (GPA) since 2002, the DPA has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence;¹⁴⁰² the 2020 GPA Resolution on AI Accountability;¹⁴⁰³ the 2022 GPA Resolution on

Facial Recognition Technology¹⁴⁰⁴ or the 2023 GPA Resolution on Generative AI.¹⁴⁰⁵

The Czech Republic also has several oversight bodies for human rights that could contribute to data protection. The Government Council for Human Rights is a permanent advisory body to the Government for the protection of human rights.¹⁴⁰⁶ The Council is in charge of monitoring compliance with the Constitution and other legislation governing the protection of human rights as well as the national implementation of international commitments of the Czech Republic in the field of human rights.

A Government Council for Gender Equality, a Government Council for National Minorities, a Government Board for Persons with Disabilities, and an Inter-ministerial Commission for Roma Community Affairs also protect human rights.¹⁴⁰⁷ The Czech Republic Ombudsman, the Public Defender of Rights is a non-accredited associate member of European Network of National Human Rights Institutions.¹⁴⁰⁸

Algorithmic Transparency

The Czech Republic has ratified Convention 108, which includes provisions for algorithmic transparency, but has not yet ratified the Protocol that amends it (Convention 108+) and expands algorithmic transparency requirements. However, the Czech Republic is subject to the GDPR as an EU member state. Czechs have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.¹⁴⁰⁹

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems¹⁴¹⁰ specifically emphasizes requirements on transparency, accountability and effective remedies.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

With regard to transparency, the Recommendation provides that “Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems.”¹⁴¹¹

Regarding contestability, the Recommendation clarifies that “Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”¹⁴¹²

Environmental Impact of AI

The Czech Republic NAIS primarily focuses on advancing AI for economic competitiveness, financial and research developments, legal aspects, innovation, and ethical frameworks. It does not specifically address policies aimed at mitigating the environmental impact of AI technologies.¹⁴¹³

Lethal Autonomous Weapons

According to the Czech Republic, “it is indispensable for the CCW High Contracting Parties to have sufficient guidance on how to ensure that any new weapon, means or methods of warfare are in compliance with the International Humanitarian Law, which is our main objective” and “welcome[s] the work on Lethal Autonomous Weapons Systems.”¹⁴¹⁴

The Czech Republic is one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”¹⁴¹⁵

Czechia participated in the REAIM 2023 international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Czechia endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.¹⁴¹⁶ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”¹⁴¹⁷ The Czech Republic also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.¹⁴¹⁸

The second REAIM summit took place in 2024 in the Republic of Korea.¹⁴¹⁹

At the 78th UN General Assembly First Committee in 2023, Czechia voted in favor¹⁴²⁰ of resolution L.56¹⁴²¹ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Human Rights

Czechia adopted the United Nations Declaration on Human Rights. As a member of the European Union and of the Council of Europe, Czechia is committed to upholding the EU Charter of Fundamental Rights and the European Convention on Human Rights. According to Freedom House, the Czech Republic is considered "Free" with a score of 94/100, up two points from the 2023 score.¹⁴²²

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that their commitment to the Convention for the Protection of Human Rights and Fundamental Freedoms required member state to “ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”¹⁴²³

OECD / G20 AI Principles

The Czech Republic has been a member of OECD since 1995 and has endorsed the OECD AI Principles.¹⁴²⁴ The original NAIS emphasizes the importance of cooperation with the OECD for the implementation of the Strategy measures. Exchange of information in expert groups on AI at the OECD and coordination of preparations for negotiations within the OECD are amongst those measures.¹⁴²⁵ The OECD AI Policy Observatory acknowledges that the NAIS addresses “inclusive growth, sustainable development and well-being; robustness, security and safety; accountability; fostering a digital ecosystem for AI; providing an enabling policy environment for AI; building human capacity and preparing for labour market transition, international co-operation for trustworthy AI.”¹⁴²⁶

The Czech Republic joined the Global Partnership on AI, a multi-stakeholder initiative which aims to foster international cooperation on AI

research and applied activities, in 2022.¹⁴²⁷ The GPAI is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”

Council of Europe AI Treaty

The Czech Republic contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024.¹⁴²⁸ The Czech Republic is party to the Convention as an EU member state but has not signed independently.¹⁴²⁹

UNESCO Recommendation on AI Ethics

A UNESCO member state since 1993,¹⁴³⁰ Czechia is among the 193 countries that endorsed the UNESCO Recommendation on AI, the first ever global agreement on the ethics of AI.¹⁴³¹ The Czech Republic supported the implementation of the UNESCO Recommendation by hosting the first ever Global Forum on the Ethics of AI under the Czech Presidency of the Council of the European Union and under the patronage of UNESCO in December 2022. The forum placed a spotlight on “ensuring inclusion in the AI world,” and took stock of the implementation of the recommendation.¹⁴³²

Czechia has not initiated the Readiness Assessment Methodology (RAM), a tool developed by UNESCO to assist in the implementation of the Recommendation.¹⁴³³

Evaluation

The Czech Republic's ambition to become a European leader in the digital field by 2030¹⁴³⁴ has shaped its position on AI policy. The release in 2024 of an updated National Artificial Intelligence Strategy 2030 builds on that ambition by shifting to a focus on implementation.¹⁴³⁵ The updated National AI Strategy of the Czech Republic 2030, effective as of July 2024, shifted transitioned from the broad aspirational approach in the 2019 NAIS to a structured, more enforceable framework.

Although the country adheres to a human centric approach to AI through its commitment to implementing the OECD AI Principles and the UNESCO Recommendation on the Ethics of AI, Czechia has consistently stood against perceived overregulation, notably through the EU AI Act, and strives with its national AI strategy to remove what it considers as legal impediments to AI development. The Czech Republic has not yet ratified the modernized Convention 108+ for the protection of individuals with regard to the processing of personal data. With the adoption of the EU AI Act, Czechia shall establish a national supervisory mechanism which, it is to be hoped, will be an independent one and will take the protection of human rights seriously.

Denmark

In 2024, Denmark's Agency for Digital Government was designated the national competent authority for the EU AI Act, collaborated with the data protection authority to launch a regulatory sandbox, and published guides for using generative AI. Denmark also became party to the Council of Europe AI Treaty through the European Commission's endorsement.

National AI Strategy

The Danish government unveiled their national AI strategy in March 2019.¹⁴³⁶ The Danish strategy on AI development outlines the issues that must be tackled, and defines specific policy efforts and key initiatives. The national AI strategy intends to establish Denmark as a leader in responsible AI development. There are four objectives to accomplish this goal:

¹⁴³⁴ Ministry of Industry and Trade of the Czech Republic, *National Artificial Intelligence Strategy of the Czech Republic*, p. 3 (2019), https://www.mpo.cz/assets/en/guidepost/for-the-media/press-releases/2019/5/NAIS_eng_web.pdf

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- Establish a consistent ethical and human-centered foundation for artificial intelligence;
- Prioritize and promote research in artificial intelligence;
- Encourage the growth of Danish firms through the development and use of artificial intelligence;
- Ascertain that the public sector utilizes AI to provide world-class services to citizens and society.

The strategy covers both the public and the private sector and presents key challenges, focus areas, policy initiatives as well as priority areas. It aims to create a framework that shall improve the level of trust in AI. Therefore, the strategy states six principles for AI, including self-determination, human dignity equality and justice, and addresses also responsibility and explainability.¹⁴³⁷ The national strategy establishes priority areas to lift the work of AI within Denmark. These priority areas are healthcare, energy and utilities, agriculture and transport.

In May 2024, the Danish Agency for Digital Government published three new AI Guides for companies, citizens and authorities for testing and working with Generative AI.¹⁴³⁸

Denmark has also issued several digital strategies to create the foundation for digital development. They refer briefly to AI. The current Joint Government Digital Strategy runs from 2022 until 2025 and “shall seize opportunities of digital development in Denmark”. It contains topics such as labor shortage, climate change, migration and digital inclusion and introduces 28 initiatives. The Joint Government Digital Strategy aims to allow a broad civil participation. The previous Joint Government Digital Strategy ran from 2016–2020. It established three objectives: To create digital solutions simple to use and of high quality, To provide favorable conditions for growth, and To always promote security and confidence.¹⁴³⁹

Denmark contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Framework Convention on Artificial Intelligence and human rights, democracy, and the rule of law was adopted in May 2024. It is a legally binding treaty aimed at ensuring the respect of human rights, the rule of law and democratic legal standards in the use of artificial intelligence (AI) systems. The

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

treaty is also open to non-European countries and sets out a legal framework that covers and addresses the risks that AI systems may pose, while promoting responsible innovation.¹⁴⁴⁰

Nordic-Baltic and Nordic Cooperation on AI

As for the regional landscape, the Danish Minister for digitalization signed the declaration on “AI in the Nordic-Baltic region” establishing a collaborative framework on “developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used” and “on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability.”¹⁴⁴¹

The ministerial declaration Digital North 2.0¹⁴⁴² builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017-2020. “In order to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration, a council of ministers for digitalisation (MR-DIGITAL) was established in 2017. The aim is to promote development in three areas: (1) Increase mobility and integration in the Nordic and Baltic region by building a common area for cross-border digital services; (2) Promote green economic growth and development in the Nordic-Baltic region through data-driven innovation and a fair data economy for efficient sharing and re-use of data; and (3) Promote Nordic-Baltic leadership in the EU/EEA and globally in a sustainable and inclusive digital transformation of our societies.”¹⁴⁴³

The Nordic and Baltic ministers for digitalization released another joint statement in November 2021, announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Danish inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them.¹⁴⁴⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In September 2022, the Nordic and Baltic ministers for digitalization issued a common statement on the importance of cooperation on digital security in the Nordic-Baltic region following the COVID-19 pandemic and the war in Ukraine. The ministers stressed that this “rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities.” The ministers declared that they “have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills. One important factor that helps ensure a strong level of digitalisation in the region is the trust citizens put in digital services from the public sector—be it at regional, national or local level. In order to keep up this high level of trust, we need to continue our efforts to make our digital public services human centric and accessible. [...] Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services.”¹⁴⁴⁵

As part of its action plan for Vision 2030 (2021–2024), the Nordic Council of Ministers identified innovation, digital integration, the safe use of artificial intelligence, data development and open data, education and digitalization as key objectives.¹⁴⁴⁶ The Nordic Council of Ministers also emphasizes the involvement of civil society in efforts relating to our vision for 2030 thanks to “a Nordic civil society network and public consultations.”¹⁴⁴⁷

Nordic Project 2024 will continue toward this vision to support collaboration among Nordic and Baltic countries in developing and using AI in a responsible way. The project aims to support Nordic businesses' development and application of responsible and ethical AI to achieve critical mass by pooling and coordinating resources through a collaboration platform, center, or hub.¹⁴⁴⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Public Participation

Denmark provides programs that enable non-governmental actors (e.g., the academic community, business, civil society, and regional and local governments) to express their perspectives or provide expert advice that informs policy-making processes. These policy initiatives enable stakeholders or experts to engage in public discussions to share information and foster collaboration. Public awareness campaigns and civic engagement activities include informing and consulting with members of the public.¹⁴⁴⁹

The Danish AI strategy for its part is based on proposals from a Digital Growth Panel¹⁴⁵⁰ and the Danish Government's Disruption Committee.¹⁴⁵¹

The Danish Ministry of Foreign Affairs launched the Tech for Democracy Initiative in 2021, which brings together government members, organizations, industries and civil society to ensure that technology works for humans and not the other way round. The initiative aims to establish a multistakeholder dialogue and offers numerous events on AI and human rights.¹⁴⁵²

The Danish Pioneer Centre for AI opened in 2021. It focuses on fundamental AI research and aims to make Denmark a leader in human-centered and ethically responsible AI. The Pioneer Center is a national initiative initiated by the Ministry of Higher Education and Science. It includes research foundations as well as Danish universities.¹⁴⁵³

In 2022, a Danish political party called Synthetic Party and led by an AI hoped to be able to stand for Denmark's general election. The party's mission was to raise awareness of the role of AI and its impact on society. Although the party was far from receiving enough signatures of support to be able to stand for the election, it drew attention to the interaction between AI and humans.¹⁴⁵⁴ In 2024, the Danish Data Protection Agency (Datatilsynet) introduced an AI-specific Impact Assessment Template for companies and authorities to assess the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

development and operation of AI solutions. The template emphasizes compliance with GDPR principles, including purpose limitation, data minimization, accuracy, security, transparency and the ability to explain AI decisions to data subjects.¹⁴⁵⁵

Furthermore, as part of the government's digitization strategy, the Danish Data Protection Authority collaborated with the Danish Agency for Digitalisation to establish a regulatory sandbox for AI, a controlled environment where companies and authorities can access relevant expertise and guidance in GDPR when developing or using AI solutions. A sandbox process provides: (1) Free access to relevant expertise and guidance; (2) Increased confidence in the finished project, product or service; (3) Better understanding of the regulatory requirements, expectations and the impact of the regulations on the business; (4) Strengthened perception of the company or authority as responsible and proactive in the approach to ethical and responsible use of AI; and (5) Opportunity to inform and contribute to future guidance efforts from the Danish Data Protection Authority and the Danish Agency for Digitalisation.¹⁴⁵⁶

EU Digital Services Act

As an EU member state, Denmark shall apply the EU Digital Services Act (DSA).¹⁴⁵⁷ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation by requiring online intermediaries and platforms to implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content. The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs and targeted advertising to minors based on profiling.

EU AI Act

As an EU member State, Denmark is bound by the EU AI Act.¹⁴⁵⁸ The EU AI Act is a risk-based market regulation which supports the objective of promoting

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI. The AI Act entered into force on August 1, 2024, with additional provisions entering into

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. Denmark designated the Agency for Digital Government the national competent authority charged with coordinating with supervisory authorities and the European AI Office.¹⁴⁵⁹ The Agency is part of the Ministry of Digital Affairs and is in charge of implementing digital and AI policies in the public sector for citizens and businesses. For example, the agency implemented the regulatory sandboxes and created AI guides for citizens, businesses, and authorities.¹⁴⁶⁰

Data Protection

Denmark, like other European countries, has enacted laws to supplement the EU General Data Protection Regulation (GDPR).¹⁴⁶¹ In Denmark, the GDPR and its Danish supplementary act, the Data Protection Act (DPA)¹⁴⁶² are the primary regulations governing the processing of personal data. The DPA provides for certain exceptions to the GDPR, most notably regarding the processing of personal data in the employment sector and the processing of national registration numbers.

In 2002, the Danish Act on Personal Data Processing came into force, implementing Directive 95/46 EC. However, despite the fact that the Danish data protection regulation is approximately two decades old, until the GDPR was

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

implemented in 2016, little attention was paid to data protection in Denmark. Prior to 2017–2018, the term 'data protection' was almost unknown to the broader Danish population and many businesses. Thus, GDPR compliance has been a hot topic in recent years. Since the GDPR's adoption, Danish businesses have invested in data protection compliance, mostly to mitigate economic and legal risks.

The Danish and other European supervisory authorities have released several recommendations and decisions interpreting the GDPR and relevant national legislation, allowing Danish businesses to conduct significantly more targeted and resource-efficient compliance operations. Denmark has lagged behind the majority of other EU Member States when it comes to data protection knowledge and compliance. So far, there have only been two cases in which fines have been imposed by Danish courts for GDPR breaches. The levels of fines (100.000 DKK and 50.000 DKK) were very low compared to fines in other countries (with fines up to millions). According to some privacy law professionals, there is a significant risk for Denmark to be considered a “safe haven” in relation to fines, which could cause companies that do not want to comply with the GDPR to locate in Denmark.¹⁴⁶³

Regarding the activities of law enforcement authorities, Denmark transposed the EU Data Protection Law Enforcement Directive (LED)¹⁴⁶⁴ through the Danish Law Enforcement Act.¹⁴⁶⁵ The LED “protects citizens’ fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”¹⁴⁶⁶ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results

¹⁴⁶³ Claas Thöle, *Four years of GDPR: The Danish approach to data protection, or absence thereof?* (Sept. 15, 2022), <https://inplp.com/latest-news/article/four-years-of-gdpr-the-danish-approach-to-data-protection-or-absence-thereof/>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

in discrimination.¹⁴⁶⁷ The LED also requires for Member States, including Denmark, to enable data subjects to exercise their rights via national data protection authorities.¹⁴⁶⁸

The EDPB has produced guidelines on the use of facial recognition technologies in the area of law enforcement,¹⁴⁶⁹ stressing that law enforcement must “satisfy the requirements of necessity and proportionality.” The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED).¹⁴⁷⁰

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

The Danish data protection agency, the Datatilsynet, is the national supervisory authority in Denmark. Despite being a member of the Global Privacy Assembly (GPA) since 2002, the Datatilsynet has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,¹⁴⁷¹ the 2020

Algorithmic Transparency

Although it has not yet ratified the Protocol amending the Convention 108 which provides for algorithmic transparency, Denmark is subject to the GDPR. Danes have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.¹⁴⁷⁵

The recently adopted EU AI Act sets transparency requirements for various risk categories of AI systems, each with specific forms and standards. For general-purpose AI systems (GPAI), these will be clarified by the ongoing, multi-stakeholder Code of Practice process (through April 2025), facilitated by the EU AI Office, which will shape GPAI rules coming into application in August 2025. For systems in other risk categories, ongoing standards work will provide a clearer basis in view of gradual AI Act compliance deadlines.¹⁴⁷⁶

The Digital Services Act (DSA), fully in force since February 2024, while not directly targeting algorithmic transparency, introduced a requirement for large online platforms to publish transparency reports on their content moderation practices. At least once a year, VLOPs and VLOSEs must issue detailed transparency reports.¹⁴⁷⁷ Among other details, such companies must describe the volumes, accuracy and error rate of their automated content moderation systems.

The recently adopted EU Platform Work Directive, pending transcription into national law by member states, also introduces transparency requirements, regarding the algorithmic management of workers.¹⁴⁷⁸ Among other rules, the

Directive aims to make the use of algorithms in human resources management more transparent, ensuring human oversight of automated systems, and guaranteeing workers' right to contest automated decisions.

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems¹⁴⁷⁹ specifically emphasizes requirements on transparency, accountability and effective remedies. The Recommendation provides that “Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs.”¹⁴⁸⁰ The Recommendation also clarifies that “Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”¹⁴⁸¹

In the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy and the Rule of Law, adopted by the EU in September 2024, Article 8 on Transparency and oversight instructs Parties to “adopt or maintain measures to ensure that adequate transparency and oversight requirements tailored to the specific contexts and risks are in place in respect of activities within the lifecycle of artificial intelligence systems, including with regard to the identification of content generated by artificial intelligence systems.”¹⁴⁸² The European Commission’s signature binds Denmark to the Convention.

Independent Council for Ethical Use of Data

According to Statistics Denmark, 83 percent of Danes have confidence in the way public authorities manage personal information.¹⁴⁸³ The government has set a goal of increasing this to 90% by 2024 in world-class digital services. To

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

accomplish this goal and fully exploit the potential of artificial intelligence, the government has set to instill confidence in the public sector's and private sector's work with data and new technologies. The government has established six ethical principles that will serve as the foundation for future development and application of artificial intelligence and has developed several initiatives promoting a strong emphasis on data ethics and establishing a responsible foundation for AI as part of the Danish National Strategy for AI. A critical component of these initiatives is to increase the accountability of both the public and private sectors' use of data and AI by ensuring transparency and compliance with data ethical guidelines. The Danish government established an Independent Data Ethics Council in 2019 with the mission of advising the public and private sectors on data-related ethical issues.

Danish Labeling Program for Digital Accountability

Another key initiative is the “D-seal.” The Danish government established an independent labelling scheme in collaboration with a consortium of the Confederation of Danish Industry, the Danish Chamber of Commerce, SMEdenmark, and the Danish Consumer Council. It is supported by the Danish Business Authority and financed by the Danish Industry Foundation. “All companies, regardless of their size, must meet the D-seal’s data ethics requirements if they develop software and if they use or develop algorithms and AI.”¹⁴⁸⁴ “The purpose of the D-seal is to promote data security, data protection and data ethics at Danish companies, so that customers and consumers can feel safe when using the companies’ products and services.”¹⁴⁸⁵ The idea is for the seal to create a market incentive for actors to be more data ethical. The D-seal was launched in September 2021.

The D-seal is based on 8 criteria: A management system for data accountability; Awareness and safe behavior; Technical IT security; Requirements for suppliers’ IT security and digital accountability; Transparency and control of data; Privacy & security by design & default; Reliable algorithms & AI; Data ethics.

In 2020, ahead of the negotiations regarding the draft EU AI Act, Denmark, together with 13 other EU Member States, issued a non-paper responding to the European Commission’s White Paper on AI.¹⁴⁸⁶ Through this

non paper, Denmark called for a “flexible” framework with voluntary self-labelling schemes. Denmark argued for a risk-based approach towards AI, highlighting that trustworthy and human-centric AI goes hand in hand with innovation, economic growth and competitiveness. The non-paper concludes with a call to the EU for a voluntary European labelling scheme that would make it visible for potential users, for example, citizens, businesses as well as public administrations, which applications are based on secure, responsible and ethical AI and data.¹⁴⁸⁷

Digitization of Public Administration

In October 2023, the Danish Data Protection Authority (*Datatilsynet*) published guidance on the development and use of AI by public authorities.¹⁴⁸⁸ The report contained the results of the mapping of the use of AI across the public sector longer term. The Danish Data Protection Authority stated that it will look at more guidance on how organizations can handle the risks that may be associated with the use of AI, such as bias and lack of transparency.

Environmental Impact of AI

The Danish National Strategy for Artificial Intelligence emphasizes responsible and ethical AI use across sectors, particularly targeting healthcare, public administration, and the green transition. This strategy is a part of Denmark’s broader commitment to sustainability. It includes measures such as promoting the use of renewable energy in AI-related infrastructures and supporting the development of efficient data processing methods to reduce carbon footprints.¹⁴⁸⁹

Lethal Autonomous Weapons

At a 2015 informal meeting of the Convention on Certain Convention Weapons Experts on Lethal Autonomous Weapons Systems, Denmark affirmed that weapons must remain under “meaningful human control.”¹⁴⁹⁰

Center for AI and Digital Policy

In 2020, during the General Debate of the First Committee of the 75th UN General Assembly, the Permanent Representative of Denmark declared, “Denmark supports the work of the GGE on Lethal Autonomous Weapons Systems (LAWS), in particular the 11 guiding principles. In our work on these principles we should in particular aim to develop an understanding of the type and degree of human machine interaction.”¹⁴⁹¹

Denmark was also one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”¹⁴⁹²

In February 2023, Denmark participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Denmark endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.¹⁴⁹³ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”¹⁴⁹⁴ Denmark also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.¹⁴⁹⁵

Center for AI and Digital Policy

At the 78th UN General Assembly First Committee in 2023, Denmark co-sponsored and voted in favor¹⁴⁹⁶ of resolution L.56¹⁴⁹⁷ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report was released in July 2024.

Human Rights

According to Freedom House, Denmark receives high scores for Political Rights and Civil Liberties for a combined score of 97/100 in 2024. The 2024 Freedom House report notes that “Denmark is a robust democracy with regular free and fair elections. Citizens enjoy full political rights, the government protects free expression and association, and the judiciary functions independently. However, Denmark has struggled to uphold fundamental freedoms for immigrants and other newcomers.”¹⁴⁹⁸ Denmark is a signatory to major human rights treaties, including the Universal Declaration of Human Rights. Denmark has also ratified several European human rights instruments, including the European Convention on Human Rights (ECHR).

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers reminded member states that their commitment “to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction” requires them to “ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”¹⁴⁹⁹

The Danish Parliament established the Danish Centre for Human Rights in 1987, which was renamed the Danish Institute for Human Rights in 2002. As

Center for AI and Digital Policy

Denmark's NHRI (National Human Rights Institute), the Institute has counterparts in other countries.¹⁵⁰⁰

OECD / G20 AI Principles

Denmark is a member of the OECD and has endorsed the OECD AI Principles.¹⁵⁰¹

In a 2021, report on the state of implementation of the OECD AI Principles, the OECD noted the progress that Denmark is making towards the implementation of the OECD AI principles.¹⁵⁰²

Denmark is also a member of the Global Partnership on AI, a multi-stakeholder initiative that aims to foster international cooperation on AI research and applied activities and is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”¹⁵⁰³

Council of Europe AI Treaty

Denmark participated in negotiations for the Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law as a Council of Europe member. Denmark became party to this first legally binding international AI treaty with the European Commission signature in September 2024 but has not taken action on the treaty as an independent nation.¹⁵⁰⁴

UNESCO Recommendation on AI Ethics

Denmark has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.¹⁵⁰⁵ It remains to be seen how this endorsement will translate in practice.

Evaluation

Denmark’s National AI strategy, released in 2019, sets out an ambitious agenda for the country. Denmark has emphasized responsible AI development, established an independent Data Ethics Council, endorsed the OECD AI

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Principles, and promoted opportunities for public participation in the development of AI policy. Denmark has also introduced certification seals to promote trustworthy AI. In a non-binding paper issued ahead of the EU Act negotiations, Denmark set out two visions for the EU's development of AI: (1) promoting innovation, while managing risks through a clear framework and (2) establishing trustworthy AI as a competitive advantage.¹⁵⁰⁶ The question that Denmark's position raises is whether Denmark considers AI ethics as a means for AI deployment or a condition. Denmark has established an independent national competent authority in accordance with the EU AI Act and even offered guides on safe and responsible use of generative AI for citizens, companies, and authorities.

As Denmark has endorsed the UNESCO Recommendation on the Ethics of AI and the country's action on the EU AI Act, Council of Europe AI Treaty, and Nordic-Baltic collaboration is a step toward implementation. The ratification of the modernized Convention 108 for the protection of individuals with regard to the processing of personal data would be a strong signal that Denmark prioritizes the fundamental rights of its citizens.

Dominican Republic

In 2024, the Dominican Republic progressed on implementing the National AI Strategy through technical projects and international alliances. The country also completed the UNESCO Readiness Assessment Methodology (RAM) and began implementing recommendations.

National AI Strategy

"We find ourselves at a transformative moment for the future of our nation. AI stands as the emblematic technology of our century, with an impact that will resonate in all facets of our society. A vast territory of new opportunities is opening before us, a horizon of transformation which calls us to immediate action." The President of the Dominican Republic introduced the National AI Strategy in October 2023 with these words.

One of the key pillars of the Strategy is Smart Governance. Smart Governance is resting on ethics and includes the digitization of public administration. Key objectives include the promotion of ethical and responsible AI in the Dominican Republic and the strengthening of the legislative and regulatory data protection framework.

The digitization of public administration will concern the adoption of AI systems in the fields of justice, health, education, security and transport. The

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Dominican Republic plans to implement generative AI applications, including chatbots, digital assistants, and predictive models, to address citizens' needs and combat corruption. Monitoring AI-based public services will involve establishing criteria centered on transparency and data quality.

One year later, the Government Office of Information and Communication Technologies (OGTIC), led by Director Bartolomé Pujals, presented the first results of the National AI Strategy. The report highlighted the country's advancement in regional partnerships and alliances such as signing the Cartagena Declaration at the Latin American and Caribbean Ministerial Summit on AI (Colombia), supporting a regional AI ecosystem focused on productivity and societal well-being. Domestically, the Dominican Republic also introduced TAINA, an AI system designed to modernize public services using text and voice technology, although there was no further information on its deployment. The Dominican Republic will host the III Summit on AI Ethics in 2025, reinforcing its role as a leader in ethical AI governance in the region.¹⁵⁰⁷

AI has also been addressed through other national and regional initiatives. The Dominican Republic's Ministry of Economy, Planning and Development (MEPyD) as described as “the pillars of the fourth industrial revolution, the internet of things, Big Data and big data analysis, cloud computing, artificial intelligence, among other aspects of the technology.”¹⁵⁰⁸ MEPyD Minister Juan Ariel Jiménez recognized that “large volumes of data, artificial intelligence and blockchain are transforming economic activities around the world. This technological trend has repercussions on production, social interaction, planning and, of course, on public management.”

The Dominican Republic has focused on the use of AI in the fields of public management and economic development. In 2021, President Luis Abinader issued Decree 71-21, establishing the Digital Transformation Cabinet¹⁵⁰⁹ to oversee the Dominican Republic's Digital Agenda 2030. The Cabinet “responds to the government's vision of making information and communication technologies a strategic tool for sustainable development [...] and inclusive for

Dominican society.”¹⁵¹⁰ Lisandro Macarrulla, Minister of the Presidency, stressed that the Agenda “will raise national productivity and competitiveness levels, placing us in a better position in global markets [... and] will improve the quality of life of citizens because they will be able to receive more and better services from the State and they will develop new skills that will allow them to access better jobs.”¹⁵¹¹ The Digital Agenda 2030 builds on previous digital strategies to address new technological challenges while incorporating a long-term vision that involves all social actors in its design and implementation. The Vice Minister of the Digital Agenda, José David Montilla, stated that working groups and thematic committees have been created that “include members of the cabinet, representatives of public and private institutions involved, specialists and volunteers, who will develop each of the pillars of the Agenda.

The Digital Agenda 2030 is divided into five main axes: 1) governance and regulatory framework; 2) connectivity and access 3) education and digital skills; 4) digital government; and 5) digital economy. Each of these axes responds to specific objectives through performance measurement indicators. “By 2030, the Dominican Republic expects to have reduced the digital divide and ensured access to, and use of, digital technologies in a secure and sustainable environment.”¹⁵¹² The Digital Agenda has been developed in line with the broader development strategy, more particularly with regard to addressing the digital divide through education.

The Dominican Republic has also been part of the Caribbean Artificial Intelligence Initiative led by the UNESCO Cluster Office for the Caribbean and the Broadcasting Commission of Jamaica (BCJ), with the support of UNESCO Information for all Program (IFAP) National Committee of Jamaica. The Initiative “aims to develop a sub-regional strategy on the ethical, inclusive and humane use of AI in the Caribbean Small Island Developing States”.¹⁵¹³ The Caribbean AI Policy Roadmap was released in June 2021,¹⁵¹⁴ following a period of stakeholder consultation.¹⁵¹⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

On February 18-19, 2021, a two-day “Artificial Intelligence Forum: Opportunities to Accelerate Human Progress for Sustainable Development in Caribbean Small Islands Developing States”¹⁵¹⁶ was organized to collect input from diverse stakeholders regarding AI policy topics. In April 2021, three additional workshops addressing the AI Policy Roadmap principles were held with stakeholders from the private sector, academia, civil society and youth.¹⁵¹⁷

The Caribbean AI Policy Roadmap acknowledges that “AI systems raise new types of ethical issues that include, but are not limited to, their impact on decision-making in employment and labour, social interaction, health care, education, media, freedom of expression, access to information, privacy, democracy, discrimination, and weaponization. Furthermore, new ethical challenges are created by the potential of AI algorithms to reproduce biases, for instance regarding gender, ethnicity, and age, and thus to exacerbate already existing forms of discrimination, identity prejudice and stereotyping. As Caribbean nations expand their adoption of AI tools and other exponential technologies, stakeholders (policymakers, citizens, private sector, academia, and NGOs) must proactively collaborate to create strategies for the humanistic development of guidelines, regulations and laws. Boundaries should be defined to regulate the AI decision-making, AI rights, inclusion of manual overrides and AI accountability protocols.”

The Policy Roadmap has been developed based on a series of “assumptions” about the Caribbean and Artificial Intelligence. These include: “Human creativity is inextricably linked to Caribbean identity, economic viability and sustainable development”; “AI is a product of human creativity”; “AI is in service of humanity”; “AI must be inclusive, fair, transparent, accountable”; “AI must be regulated”; “Human rights supersede AI rights”; “Bias is everywhere in AI”; “We Are Our Data”; “Data rights will be the civil rights movement of the 21st century.”¹⁵¹⁸

The Policy Roadmap is based on six principles: Resiliency, Governance, Transformation, Upskilling, Preservation and Sustainability.¹⁵¹⁹ With regard to governance, actions to be taken include:

- “Develop Responsible AI Governance, Oversight, Principles & Policies to Do No Harm and to enhance safety, security and accountability of AI.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- Promote AI as a tool for service to humanity.
- Establish common values and principles to ensure fairness, transparency and accountability in digital transformation and increased integration of AI algorithms.
- Develop policy and legislation to enable the establishment of national and regional AI Governance Committees / Oversight Boards as well as national and regional licensing regime to manage and monitor the development of standards that govern the industry including technical code of conduct for developers, procurement guidelines for buyers, design and use principles and ethically aligned design standards.
- Regulate AI industry to provide redress and punishment for individuals & companies that violate citizen rights and wellbeing including banning cyberbullying, hate crimes, discriminatory algorithms, disinformation and graphically violent images inclusive of penalties and fines.
- Develop an AI Appeal Court and Online Dispute Resolution System.
- Increase advocacy for AI ethics by targeting software developers at global forums and hosting a global software conference to network, lobby, share research and initiate collaborations with big tech.
- Develop AI software to test AI for biases and identify AI applications in most need of governance. Protect citizen privacy and instill trust.”¹⁵²⁰

The Dominican Republic is also a member of the Community of Latin American and Caribbean States (CELAC) and participated in its seventh Summit on January 24, 2023, in Buenos Aires. The Summit culminated in the signature of the Buenos Aires Declaration reinforcing the commitment to protect citizens’ rights and interests among signatories, including the Dominican Republic. This declaration fosters regional integration and collaboration on issues such as AI-based cyber threats and disinformation.¹⁵²¹

The Dominican Republic signed the Cartagena de Indias Declaration with 15 other nations, supporting ethical AI development and education in the region.¹⁵²² The Declaration called for cooperation to create inclusive, rights-focused AI frameworks in August 2024. The country also reaffirmed its commitment to AI governance by signing the Declaration of Montevideo in

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

October 2024.¹⁵²³ The Montevideo Declaration highlighted the use of UNESCO's Readiness Assessment and CAF's Guide to develop inclusive policies. The Dominican Republic also committed to addressing challenges in the regional AI Roadmap.

Public Participation

To engage with external stakeholders in development of digital service and policy design, the Dominican Republic used focus groups, public consultations and social media.¹⁵²⁴

Data Protection

The Dominican Constitution enshrines the right to the protection of personal data in public and private records under Section 44(2) and provides that data controllers and processors are to comply with data security, professional secrecy, data quality and data loyalty.¹⁵²⁵

The Dominican Republic issued Law No 172-13 on the Comprehensive Protection of Personal Data of consumers or users.¹⁵²⁶ Article 10 and Article 14 provide the right to access and right to rectification of personal data respectively. There is no mention of algorithmic transparency.

The Dominican Republic has no established general data protection authority. The General Law for the Protection of Consumer or User Rights No 358-05 declared that the National Institute for the Protection of Consumer Rights, "Pro Consumidor" monitors data protection compliance in relation to consumers. Pro Consumidor does not have enforcement powers, although they do have mediation and conciliation competences.¹⁵²⁷

The Dominican Republic has started to draft a new data protection law in line with international standards such as the Council of Europe's Convention

108+, and has received support from the Council of Europe to this end.¹⁵²⁸ Should the initiative come to fruition, it would be an opportunity for the Dominican Republic to provide data subjects with the right to algorithmic transparency which is one of the main innovation of the modernized Convention 108.

According to the 2023 National AI Strategy, the revision of Law No 172-13 shall include the establishment of safeguards for the protection of personal data and human rights in the context of AI implementation and should be ready in 2025.¹⁵²⁹

The Dominican Republic developed a Digital Government guide that includes a provision on the documentation and explainability of digital government initiatives, software, and services. However, specific guidelines for algorithmic transparency and explainability are not provided.¹⁵³⁰

Facial Recognition

The Dominican General Director of Immigration, Enrique García, reported in 2021 that facial recognition technology will be used to enforce security in airports and border entry to combat drug trafficking and international crime.¹⁵³¹ The Dominican Airport Association explained in September 2022 that there are intelligent security cameras in Dominican airports.¹⁵³²

The Director of the General Directorate of Passports (DGP) said in March 2022 that the country will transition from using mechanical passports to electronic passports. “The director of the DGP explained that the electronic passport would

have an integrated chip that facilitates facial recognition and will contain all the carrier information. However, Pichardo added that at the moment, this change does not have a scheduled date because advice is being sought to prevent errors that entail significant expenses, as has happened with other countries.”¹⁵³³

Environmental Impact of AI

The Dominican Republic’s Digital Economy Agenda includes an objective to use technology to promote “economic and social well-being as a way to promote sustainable development.”¹⁵³⁴ The country has also committed to using mitigating the environmental impact of AI by endorsing the Montevideo Declaration, a regional document centered on implementing the UNESCO Recommendation, that includes Environment and Sustainability as areas of focus for 2024–2025.¹⁵³⁵

Lethal Autonomous Weapons

The National AI Strategy makes clear that the goal of the Dominican Republic is to pursue the prohibition of the use of AI as a weapon of war.¹⁵³⁶

The Dominican Republic endorsed 2019 Declaration on Lethal Autonomous Weapons prepared by France and Germany and opened for endorsement during the Alliance for Multilateralism event on 26 September 2019. The Declaration posits 11 Principles on Lethal Autonomous Weapons Systems. These principles respond to challenges relating to the development of LAWS within the UN’s Convention of Certain Conventional Weapons (CCW).¹⁵³⁷ These principles affirm among others that “international humanitarian law applies to these systems; a human must always be responsible for the decision to use these systems; [and] States must examine the legality of these new weapons that they are developing or requiring at the design stage.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Dominican Republic is one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”¹⁵³⁸

The Dominican Republic endorsed the Belén Communiqué,¹⁵³⁹ which calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force in February 2023.

Also in February 2023, at the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea, nearly sixty states agreed to issue a joint call to action on the responsible development, deployment and use of AI in the military domain.¹⁵⁴⁰ The Dominican Republic endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.¹⁵⁴¹

At the 78th UN General Assembly First Committee in 2023, the Dominican Republic co-sponsored resolution L.56 on autonomous weapons systems¹⁵⁴² and voted in favor¹⁵⁴³ of it, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,”

and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

The UN General Assembly adopted Draft Resolution on Lethal Autonomous Weapons Systems, with the Dominican Republic voting in favor in November 2024.¹⁵⁴⁴

Human Rights

In 2024, Freedom House ranked the Dominican Republic as “partly free,” with a score of 68/100 for political rights and civil liberties.¹⁵⁴⁵ According to the Freedom House 2024 report, “The Dominican Republic holds regular elections that are relatively free, though recent years have been characterized by controversies around implementing a new electoral framework.” “Pervasive corruption undermines state institutions and the use of excessive force by police is a problem. Discrimination against Dominicans of Haitian descent and Haitian migrants, as well as against LGBT+ people, remain serious problems.”

Despite these issues, the Human Rights Council Working Group Universal Periodic Review in June 2024 highlighted the country’s progress in human rights, noting legislative advances in areas such as gender equality, child protection, and anti-discrimination measures. Key achievements include prohibiting child marriage, expanding educational access, and enhancing social protections for vulnerable groups. The report also discusses ongoing reforms to improve public security, reduce poverty, and protect marginalized communities, particularly through addressing the rights of women, children, and the LGBTQ+ community. Recommendations emphasize the need for further action on issues like statelessness, migration, and gender-based violence, urging the Dominican Republic to continue aligning its policies with international human rights standards.¹⁵⁴⁶

OECD / G20 AI Principles

The Dominican Republic has not endorsed the OECD AI principles.¹⁵⁴⁷ According to OECD AI Principle 2.5 regarding international cooperation for trustworthy AI, “Governments, including developing countries and with

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

in the region, the Dominican Republic signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.¹⁵⁵⁴ The Declaration aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These principles include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.¹⁵⁵⁵ The National AI Strategy states that the Dominican Republic will draft of a code of AI ethics in line with the UNESCO Recommendation.¹⁵⁵⁶

Following the second meeting of the Regional Council in 2024, the Dominican Republic signed the Montevideo Declaration,¹⁵⁵⁷ which emphasizes a commitment to human rights, freedoms, and democracy and outlines five key priorities for countries to pursue in the coming year: Governance and Regulation, Talent and Future Work, Protection of Vulnerable Groups, Environment, and Sustainability. Regional governments and the AI Working Group, with support from UNESCO and CAF, will lead the implementation, with semi-annual reviews to ensure transparency and stakeholder engagement.

The Dominican Republic completed the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation in 2024.¹⁵⁵⁸ Key recommendations focus on advancing the National Artificial Intelligence Strategy (ENIA) with strong institutional and public support. Priorities include updating regulatory frameworks for data protection, cybersecurity, and potential AI-specific regulations, along with strengthening public sector capacities, promoting diversity in AI, and reducing urban-rural technology access disparities.¹⁵⁵⁹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Evaluation

The Dominican Republic's endorsement of the UNESCO Recommendation on the Ethics of AI has strengthened efforts toward responsible AI governance. The adoption of the National AI Strategy provides a strong ethical foundation, but its success will depend on effective implementation, particularly in ensuring algorithmic transparency and revising data protection laws, which are pending.

While the country's stance on banning autonomous weapons is commendable, concerns about AI surveillance persist. The introduction of TAINA to modernize public services is promising, and the country's participation in the Cartagena and Montevideo Declarations highlights a commitment to ethical AI. However, the lack of progress on updating the data protection law poses a challenge to fully realizing these ambitions.

Egypt

In 2024, Egypt completed the first phase of the 2019 National Artificial Intelligence Strategy and initiated the second phase, which includes a focus on governance. Egypt also saw its efforts on the African Union Continental Artificial Intelligence Strategy come to fruition with the AU Executive Council endorsement in July 2024.

National AI Strategy

The Egyptian Cabinet approved the formation of a National Council for Artificial Intelligence (NCAI) tasked with “outlining, implementing and governing the AI strategy in close coordination with the concerned experts and entities”¹⁵⁶⁰ in November 2019. The Technical Committee of the National Council for Artificial Intelligence, composed of representatives from all relevant government entities, as well as independent experts in the field of Artificial Intelligence (AI) released the National AI Strategy in 2021.¹⁵⁶¹ On this occasion, the President of the Arab Republic of Egypt, Abdel Fattah Al-Sisi, stated, “We strongly believe that as emerging technologies create opportunities, they also pose challenges that we should be prepared for. Thus, we aim, through the National AI Strategy, to open the door to dialogue with stakeholders and promote international cooperation to exchange views on the best practices for developing and using AI to build the common good. This is in addition to adopting and leading strong

Center for AI and Digital Policy

stances on AI ethics and the social and economic impact of using AI applications in African and Arab countries, under the umbrella of the African Union (AU) and the League of Arab States (LAS) to reach a common vision that reflects our needs and aspirations and conforms to our values and principles.”¹⁵⁶²

The National AI Strategy builds on the previous work of the Ministry of Communications and Information Technology and the Ministry of Higher Education and Scientific Research, along with input from independent experts and private sector companies.¹⁵⁶³

The two main objectives of the Egyptian National AI Strategy are to: “Exploit AI technologies to support the achievement of Egypt’s sustainable development goals, to the benefit of all Egyptians; Play a key role in facilitating regional cooperation within the African and Arab regions and establish Egypt as an active international player in AI.”¹⁵⁶⁴

The strategy consists of four pillars:

1. AI for government: the automation of government processes and the embedding of AI in decision-making cycles to increase efficiency and transparency
2. AI for development: the application of AI in different economic sectors, prioritizing agriculture/environment/water management; healthcare; Arabic natural language processing; economic planning and development; and manufacturing and smart infrastructure management
3. Capacity building: increasing general awareness of AI and providing professional training
4. International activities: fostering cooperation at both the regional and the international level.

In turn, these four pillars are supported by four categories of enablers:

1. Governance: including ethics, laws and regulations, tracking and monitoring
2. Data: including collection, management and monetization strategies
3. Ecosystem: including private sector, research and academia, and civil society
4. Infrastructure: including fair access to compute, storage, networking, and other assets.¹⁵⁶⁵

When it comes to “Governance” as an enabler, the National Strategy has shed light on the importance of adopting responsible/ethical AI policies, legislations and regulations “to mitigate potential misuse [of AI and] promote and enable the widespread adoption of AI solutions.”¹⁵⁶⁶

¹⁵⁶² Ibid, paragraph 10

¹⁵⁶³ Ibid

¹⁵⁶⁴ Ibid

¹⁵⁶⁵ Ibid

¹⁵⁶⁶ Ibid, paragraph 10.1.2

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Towards that end, the National Strategy put in place the following Key Performance Indicators (KPIs) to assess the status of ethical AI in Egypt:

- The establishment of a dedicated track within NCAI for AI Ethics
- Publish Guidelines for Responsible and Ethical development of AI
- A set of rules and regulations for responsible AI use
- Ethics in AI/technology courses being offered in universities as part of computing degrees.¹⁵⁶⁷

The most significant milestone is the adoption of the Egyptian Charter for Responsible AI in February 2023, which offers “actionable insights and policies for decision makers in government, academia, industry, and civil society.”¹⁵⁶⁸ Egypt’s efforts were also witnessed in establishing AI Faculties at Egyptian universities and teaching AI ethics in computer science faculties.¹⁵⁶⁹

The National Strategy is implemented in a phased approach. The first phase (2020–2022) focused on “training graduates and professionals to fulfil market needs and proving the value of AI in the different strategic sectors by starting pilot projects within government in partnership with local and foreign entities” as well as “building regional bridges to unify AI efforts on the African and Arab levels, as well as active participation in international organizations on topics such as AI Ethics, AI for SDGs, and the impact of AI on labor markets and education.”¹⁵⁷⁰

In the second phase (2023–2026), the emphasis will be placed on expanding AI into additional sectors. The government intends to establish a “paperless, collaborative, and smart” government.¹⁵⁷¹ Egypt signed a Memorandum of Understanding (MoU) with Thales, a French technology solutions company to integrate AI solutions to governmental services and to build AI capacity.¹⁵⁷²

In December 2023, the National Council for AI, chaired by Minister of Communications and Information Technology Amr Talaat, discussed plans regarding the second phase¹⁵⁷³ of the National AI Strategy. The second phase began in the second quarter of 2024 and encompasses several key economic

sectors. The second phase of the Strategy aims to develop initiatives across six key pillars: governance, ecosystem, information infrastructure, data, human resources, and technology. Priority initiatives include raising public awareness about AI, supervising the domestic data lifecycle and fostering AI expertise. Egypt's progress in this phase aligns with the OECD AI Principles, as highlighted in the OECD Artificial Intelligence Review of Egypt, published in May 2024.¹⁵⁷⁴

Egypt is actively working to bring the perspective of developing countries to international discussions, thereby helping to narrow the AI knowledge and development gap between developed and developing countries.¹⁵⁷⁵ In 2019, Egypt participated in the drafting of the UNESCO Recommendation on the Ethics of AI, serving as the Ad Hoc Expert Group's vice-chair.¹⁵⁷⁶

Egypt is also positioning itself as a regional leader in the AI and digital policy world. In 2019, Egypt hosted the third session of the African Union (AU) Specialized Technical Committee on Communication and Information Technologies. This meeting was crowned by the adoption of the Sharm El Sheikh Declaration, which recognized and reaffirmed the necessity for a coherent African Digital Transformation Strategy “to guide a common, coordinated response to reap the benefits of the Fourth Industrial Revolution.”¹⁵⁷⁷ Egypt hosted the first-ever DSC MENA 24 AI conference. This conference aimed to gain actionable insights into the international AI landscape through in-depth sessions on generative AI, natural language processing, computer vision, data engineering, cloud data, and AI applications in healthcare.¹⁵⁷⁸

Egypt also helped create the AU African Working Group on AI, a group tasked with drafting a continent-wide AI strategy.¹⁵⁷⁹ This strategy aspires to create a common stance on AI issues, areas of priority, and the role of AI in vital sectors as well as ensure “the governance of AI and the protection and availability of data and developing AI regulations.” The strategy also aims to position the African voice at the center of international fora and to “bridge the digital divide

between developed [States] and African countries.”¹⁵⁸⁰ Such active engagement culminated in Egypt being elected Chair of the African AI Working Group.¹⁵⁸¹ In February 2021, Egypt hosted the first meeting of the African AI Working Group, which led to the issuance of the Common Africa Position Paper on the Priority Areas of Africa towards AI, followed by the second meeting, which was also hosted by Egypt in December 2022.¹⁵⁸² Overall, the meetings of African Working Group on AI aimed to craft an African AI strategy in line with African Agenda 2063.¹⁵⁸³

Egypt also chairs the Arab League’s AI Working Group.¹⁵⁸⁴

Public Participation

The Ministry for Communications and Information Technology launched a website under the National Council for Artificial Intelligence¹⁵⁸⁵ that allows the public to easily access the National Strategy, I news, details about AI events, projects, and capacity-building programs, and information about AI partnerships with governments, international organizations, private sector companies, and academia. The AI Platform also includes a page where researchers can submit academic articles.

Regarding the drafting of the National AI Strategy, a stakeholder consultative process took place with academics, independent experts, and private sector companies. Nevertheless, neither the National Council for AI nor the Ministry for Communications and Information Technology has sought public feedback on any AI policy proposals.

Data Protection

The Egyptian Constitution protects citizens’ rights to privacy under Article 57.¹⁵⁸⁶ Egypt passed Law No. 151 on the Personal Data Protection Law (PDPL) in

July 2020.¹⁵⁸⁷ The Minister of Communications and Information Technology publicized draft a Executive Regulation of the PDPL in June 2022.¹⁵⁸⁸ However, the regulations have not been formalized as of 2024.¹⁵⁸⁹

The PDPL was drafted following the example of the European General Data Protection Regulation (GDPR). Article 2 of the PDPL provides for data subject rights such as the right to erasure, the right to be informed, the right to access, and the right to rectification and to object.¹⁵⁹⁰ The PDPL also enshrines principles applicable to the collection, storage and processing of personal data. These principles are (1) Data minimization; (2) Accuracy and security; (3) Lawfulness, and (4) Storage limitation. The PDPL foresees financial sanctions in the event of violations regarding the protection of personal data.

The PDPL provides for the creation of a data protection authority, namely, the Personal Data Protection Center (DPC). The Center is meant to be an independent authority that operates under the Ministry of Communications and Information Technology.¹⁵⁹¹ The DPC will set and apply decisions, regulations, and measures in relation to data protection and foresee an adequate mechanism for law enforcement. However, the DPC has not been established.¹⁵⁹²

Egypt does not have a data protection authority and is not a member of the Global Privacy Assembly (GPA). Egypt has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,¹⁵⁹³ the 2020

GPA Resolution on AI Accountability,¹⁵⁹⁴ the 2022 GPA Resolution on Facial Recognition Technology,¹⁵⁹⁵ or the 2023 GPA Resolution on Generative AI.¹⁵⁹⁶

At a conference on the challenges to the right to privacy given the rapid development of artificial intelligence organized by Egypt's Supreme Standing Committee for Human Rights, in collaboration with the Arab Organization for Human Rights (AOHR) in July 2022, the Minister of Social Solidarity Nevine El-Qabbaj stated that "artificial intelligence has breached all limits, even our mental privacy."¹⁵⁹⁷

Algorithmic Transparency

The PDPL does not refer to algorithmic transparency. However, the principles of "transparency and explainability" are enshrined in the Egyptian Charter for Responsible AI, in addition to the right of the user to know "when he or she is interacting with an AI system and not a human being."

The Charter provides that "Any end-user using an AI system has the fundamental right to know when he or she is interacting with an AI system and not a human being, for example in the case of automated call centers." The Charter also emphasizes that: "Developers of AI systems should always strive to provide transparent and explainable AI solutions. The degree of explainability required will vary according to the application domain and project requirements, but project sponsors must be clear on the potential tradeoff between the accuracy/quality and explainability of any given model. When in doubt, developers should opt for simpler models with higher degrees of explainability, without compromising the minimum desired quality and accuracy."¹⁵⁹⁸

Biometric Recognition

Egypt is increasingly adopting biometric technologies for security and surveillance. A deal was struck between the Arab Organization for Industrialization and Idemia, a leading biometric company, for the latter to produce biometric devices, including facial recognition systems, in Egypt.¹⁵⁹⁹ The Egyptian government agreed with Idemia in early 2020 to build a digital ID system for Egypt Post “backed by fingerprint biometrics and citizen IDs.”¹⁶⁰⁰ In 2021, Fingo, another organization specializing in biometrics, announced it had partnered with Egypt to develop a vein-based recognition system for the country’s national ID program.¹⁶⁰¹

On the sidelines of the recent COP27 hosted in Sharm El-Sheikh, the Egyptian government signed an MoU with the US-based company, Honeywell International Inc, to “run a pilot model in Sharm El-Sheikh by transforming the new building of the South Sinai Governorate General Assembly and Sharm El-Shaikh Hospital into sustainable smart buildings relying on modern technologies, especially artificial intelligence and data analytics.”¹⁶⁰² This agreement came as the second deal after Egypt contracted Honeywell in 2019 to provide city-wide public safety, security and surveillance system for the new administrative capital, which, according to a press release by the company, will “integrate advanced Internet of Things (IoT) software and [...] also connect video feeds from more than 6,000 IP cameras over a futureproof wireless network, and run sophisticated video analytics to monitor crowds and traffic congestion, detect incidents of theft, observe suspicious people or objects, and trigger automated alarms in emergency situations.”¹⁶⁰³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

These deals were concluded in a legal vacuum even though biometric systems could adversely impact several human rights, including the right to freedom of expression, the right to assembly, and the right to privacy.¹⁶⁰⁴

EdTech

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Egypt, for children's education during the pandemic. Based on technical and policy analysis of 163 EdTech products, Human Rights Watch found that governments' endorsements of the majority of these online learning platforms put at risk or directly violated children's rights.

This is the case for example of the EdTech product "Edmodo" used in Egypt, which according to Human Rights Watch, has the capability to collect Android Advertising IDs which enable advertisers to track children, over time and across different apps installed on their device, for advertising purposes. Edmodo also allows for shadow profiling by getting access to contacts' details and photos, if saved on the phone. According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights to do so.¹⁶⁰⁵

AI Credit Scoring

Egypt introduced AI Credit Scoring in the Egypt National AI Strategy.¹⁶⁰⁶ With AI Credit Scoring in finance and banking, Egypt aims to providing score cards to the finance sector and enabling access to financing and thus empowering un-bankable individuals and small businesses to contribute greatly to the economy.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Environmental Impact of AI

Egypt's 2021 National AI Strategy highlights the use of AI technology to mitigate the environmental cost of agriculture in the AI for Development (AI4D) pillar.¹⁶⁰⁷ However, the strategy does not address the environmental cost or resources required to develop and deploy AI systems. The Egyptian Charter for Responsible AI requires the environmental impact of Government AI projects to be weighed in “a thorough impact assessment to ensure maximum benefit from the technology, while respecting the guidelines of responsible and ethical AI development.”¹⁶⁰⁸

The African Union Continental Artificial Intelligence Strategy to which Egypt contributed identifies emissions and resource demands among the risks of using and developing AI systems.¹⁶⁰⁹ The Strategy identifies environmental protection as a priority area to apply AI technology but also calls for countries to center sustainability through innovations such as green data centers in developing technology.¹⁶¹⁰

Lethal Autonomous Weapons

While Egypt has signed the Convention on Conventional Weapons (CCW), it has not yet ratified the Convention.¹⁶¹¹ However, Egypt has been actively participating in CCW meetings on killer robots since 2014.¹⁶¹² Bassem Yehia Hassan Kassem Hassan, a representative of Egypt, speaking on behalf of the Arab Group, stated that the presence of weapons of mass destruction and their modernization are a grave threat to international security and development, and that international community must develop norms and rules to encourage responsible behavior and increase cooperation to reach concrete progress in

dealing with threats posed by lethal autonomous weapons and the use of artificial intelligence in armaments.¹⁶¹³

On numerous occasions, Egypt has warned that these weapon systems may have “possible ramifications on the value of human lives [and] the calculation of the cost of war,”¹⁶¹⁴ and thus, there must be “specific prohibitions on acquisition, research and development, testing, deployment, transfer, and use [of these systems].”¹⁶¹⁵ Egypt has called for a moratorium on lethal autonomous weapons systems until a ban is achieved, supporting “a legally binding instrument against the development and manufacture of such weapon systems [...] as well as the regulation of existing systems that fall within [the CCW] mandate.”¹⁶¹⁶

At the 78th UN General Assembly First Committee in 2023, Egypt voted in favor¹⁶¹⁷ of resolution L.56¹⁶¹⁸ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Egypt also voted in favor of Resolution L.77 on lethal autonomous weapons systems in 2024.¹⁶¹⁹ The resolution, supported by 161 states, raises concerns about the “negative consequences and impact of autonomous weapon systems on global security and regional and international stability” and stresses the “the importance of the role of humans in the use of force to ensure responsibility and accountability and for States to comply with international law.”

The Resolution noted “the repeated calls by the Secretary-General to urgently conclude negotiations of a legally binding instrument with prohibitions and regulations for autonomous weapons systems, in line with a two-tier approach.”¹⁶²⁰

Human Rights

Egypt has endorsed the Universal Declaration of Human Rights. However, the Freedom in the World report ranks Egypt as “Not Free” with a score of 18/100 for 2024.¹⁶²¹ The report cites the authoritarian rule of President Abdel Fattah al-Sisi and the lack of meaningful political opposition given the prosecution and imprisonment of dissenter and general restriction of civil liberties such as freedoms of the press, assembly, and expression. Criminalization of dissent, harassment, and surveillance for internet users as well as restrictions to access led to the “Not Free” ranking and 28/100 score on the Freedom on the Net report.¹⁶²²

In March 2021, 31 UN member states penned a joint declaration, supported by numerous NGOs, strongly condemning human rights abuses in Egypt. The declaration highlighted constraints on citizens’ freedom of expression, as well as their ability to voice political opposition and to peacefully assemble.¹⁶²³

Egypt is criticized by international human rights organizations and civil society for state surveillance on citizens’ communications and censorship on content online.¹⁶²⁴ Enactment of Law No. 175/2018 on Combating Information Technology Crimes (Anti-Cyber Crime Law) aimed to ensure online safety, security and fraud, however, it is evaluated as a regulation which can be used for surveillance due to vague definitions and language.¹⁶²⁵ Moreover, there is also

criticism on Egypt's collaboration procedures with private software and technology solution companies for the lack of transparency and accountability in projects such as Idemia and Thales.¹⁶²⁶

In late 2021, Egypt launched the National Human Rights Strategy.¹⁶²⁷ On this occasion, President Abdel-Fattah El-Sisi declared 2022 as the year of civil society.¹⁶²⁸ The Human Rights Strategy is based on three axes: a) Constitutional Guarantees for Enhancing Human Rights Respect and Protection, b) Egypt's International and Regional Human Rights Obligations, and 3) Sustainable Development Strategy: Egypt Vision 2030. While the Strategy tackled all human rights, particularly political rights, it did not address the positive/adverse impact of technology on these rights or the human rights implications of artificial intelligence. The Strategy referred only to the use of technology to enhance human rights under the "Right to Litigation and Strengthening Guarantees for a Fair Trial." The National Human Rights Strategy emphasizes that one of the target results of the Egyptian State is the expansion of "the automated litigation system [...] in courts and their support entities to enhance speedy justice."¹⁶²⁹ Accordingly, the State adopted various measures "most notably the automation of many judicial services, including automated litigation process in misdemeanor courts and launching remote litigation in civil and economic courts."¹⁶³⁰

In February 2023, Egypt released the Egyptian Charter on Responsible AI. The Charter builds on the OECD AI Principles and UNESCO Recommendation on the Ethics of AI. The Charter recognizes the significant risks AI might pose, such as bias, data drift, lack of transparency, lack of legal responsibility, and lack of fairness and equality. Therefore, it introduces guidelines and best practices for assessing AI systems trustworthiness with the aim to protect human rights and ensure the responsible, transparent, and fair use of the technology.¹⁶³¹

For instance, the Charter, as a reflection of the human-centeredness principle, stresses that "[t]he primary goal of using AI in Government is the well-being of citizens, including combating poverty, hunger, inequality, illiteracy, and corruption; achieving prosperity and inclusion." As for fairness, the Charter sets

out a number of rules, including that “AI systems, especially data-driven models, must be monitored regularly while in production to ensure no data drift occurs. In those cases, the quality of the data must be reviewed and if needed, the underlying models need to be changed to accommodate changes in data.” Regarding accountability, the Charter provides that the “[u]ltimate responsibility and accountability for the behavior and outcomes of an AI system must always lie with natural or legal persons. AI systems should not be given legal personality themselves.” The Charter also stresses that “[f]inal Human Determination is always in place [which] means that ultimately, humans are in charge of making decisions, and are able to modify, stop, or retire the AI system if deemed necessary.”¹⁶³²

OECD / G20 AI Principles

Although Egypt is not an OECD member, the country endorsed the AI Principles as a nonmember in 2021¹⁶³³ and continued to adhere to them after their update in 2024.¹⁶³⁴ As reported by the OECD in their 2021 white paper “State of implementation of the OECD principles,” Egypt has set up a governing body (the National Council for AI) to oversee the implementation of its AI strategy.¹⁶³⁵ This is a concrete first step toward fulfilling the OECD recommendation of ensuring “a policy environment that will open the way to deployment of trustworthy AI systems.”

Egypt has also taken steps toward fulfilling three of the four other OECD recommendations. The creation of both the AI Platform and the new Egyptian Center of Excellence,¹⁶³⁶ a government group that will work with private or academic partners to deliver AI projects on behalf of beneficiaries, help to “foster accessible AI ecosystems with digital infrastructure and technologies and mechanisms to share data and knowledge.” Empowering “people with the skills for AI and support workers for a fair transition” will be accomplished through enrollments in the newly created “Faculties of AI” at eight public and private Egyptian universities.¹⁶³⁷ Egypt’s cooperation “across borders and sectors to

progress on responsible stewardship of trustworthy AI” is evidenced by its participation in and leadership of international AI committees.

The final OECD recommendation is that governments “facilitate public and private investment in research & development to spur innovation in trustworthy AI.” The Egyptian government’s plans set a public goal of 7.7% of Egyptian Gross Domestic Product deriving from AI & robotics by 2030.¹⁶³⁸

The recently adopted Charter on Responsible AI purports to demonstrate how the country will interpret and implement the OECD AI Principles of “human-centeredness,” “transparency and explainability,” “fairness,” “accountability,” “security and safety.”¹⁶³⁹

Although Egypt is not a member of the Global Partnership on AI (GPAI), the Egyptian Ministry of Communications and Information Technology participated in GPAI events in 2021.¹⁶⁴⁰

Council of Europe AI Treaty

Egypt did not participate in the negotiations for the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law, which opened for signature by member and non-member countries in September 2024.¹⁶⁴¹ Egypt has not signed this first legally binding international AI treaty.¹⁶⁴²

UNESCO Recommendation on AI Ethics

Egypt endorsed the UNESCO Recommendation on AI Ethics¹⁶⁴³ and took an active part in its drafting.¹⁶⁴⁴ Egypt embedded most of the principles adopted in the UNESCO Recommendations on AI Ethics in its Charter for Responsible AI, albeit no concrete implementation has taken place so far. The Charter draws on the guidelines developed by UNESCO and other organizations by translating these recommendations into steps “to help ensure the responsible development,

deployment, management, and use of AI systems in the country.”¹⁶⁴⁵ Although the Charter recognizes the principle of “human-centered AI,” it does not acknowledge that “Respect, protection and promotion of human rights and fundamental freedoms” lie at the heart of Ethical AI.

Egypt is in the process of completing UNESCO’s Readiness Assessment Methodology (RAM),¹⁶⁴⁶ a tool designed to help countries determine their readiness “for sustainable and responsible AI adoption while reinforcing national policies and strategies in this vital field.”¹⁶⁴⁷

Evaluation

Egypt has been a leading voice in the African and Arab world to foster the regulation of AI. It has been chairing African and Arab working groups on the topic and actively participated in the drafting of the UNESCO Recommendation on the Ethics of AI. A key milestone was the adoption of the Egyptian Charter on Responsible AI. Egypt will soon start implementing the second phase of its National Strategy. Concerns exist regarding the lack of open and public participation in AI policy initiatives. The use of biometric technologies for security and surveillance is of particular concern in a country deemed “not free” according to Freedom House.

Estonia

In 2024, Estonia’s Ministry of Economy published an AI Action Plan focused on enhancing public-sector AI competencies and creating legal frameworks to address ethical AI use. Estonia also participated in negotiations for the Council of Europe Framework Convention on Artificial Intelligence and became party to the treaty through the European Commission’s signature.

National AI Strategy

The Estonian Cabinet adopted its first National AI Strategy in July 2019.¹⁶⁴⁸ The Government Chief Information Officer Office, based in the Ministry of Economic Affairs and Communications, was tasked with steering the AI

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Strategy. The first National AI Strategy built on a May 2019 report of Estonia's AI Taskforce.¹⁶⁴⁹ The actions detailed in the first AI Strategy were designed to advance the adoption of AI solutions in both the private and public sectors, to increase AI capacities and research and development, and to develop the legal environment to facilitate AI. The first AI Strategy committed to the establishment of a steering group, comprised of government representatives and other stakeholders, to monitor the implementation of the AI Strategy. In addition, the e-Estonia Council was tasked with considering the strategy's implementation annually. The first AI Strategy was conceived as a short-term strategy, intended to apply up until 2021. By adopting a short-term strategy, Estonia intends to gain insight and develop a long-term strategy in response to the experience gained. Estonia aims to monitor the development of the short-term action plan and keep the European Union informed of developments.

In spite of Estonia's national digital adviser initially proposing the adoption of a law granting legal personality to AI, Estonia's AI Taskforce concluded that no substantial legal changes were currently required to address the issues presented by AI.¹⁶⁵⁰ The Taskforce Report maintained, "Both now and in the foreseeable future, kratts are and will be human tools, meaning that they perform tasks determined by humans and express the intention of humans directly or indirectly." Accordingly, the AI Taskforce Report clarified that the "actions" of AI are attributable to the relevant state body or private party that uses the AI solution.¹⁶⁵¹ Minor changes recommended include the removal of obsolete laws and providing additional clarity to facilitate the use of AI. Estonia's Chief Information Officer stated that Estonia wants to "build on the EU framework, not to start creating and arguing" for a separate Estonian framework.¹⁶⁵² A draft EU AI Act is currently being negotiated.

Neither the first AI Strategy nor the AI Taskforce Report provided significant detail on questions related to the ethics of artificial intelligence.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Reference was, however, made to guidance provided by the European Commission for the development and implementation of trustworthy artificial intelligence.¹⁶⁵³ The Taskforce Report acknowledged that “trustworthy artificial intelligence must be guided by the principles of human rights, positive rights, and values, thus ensuring the ethics dimension and objective.”¹⁶⁵⁴ The Report recognized the relevance of the EU Charter of Fundamental Rights and referred to the following rights as central according to the Commission guidance on AI: the right to human dignity, the right to freedom, respect of the principles of democracy and the state, based on the rule of law, right to equality, non-discrimination, and acknowledgement of minorities, and civil rights.

To ensure that the development and use of AI is ethical, the Taskforce Report emphasized the importance of ensuring that AI is human-centric; that rights, ethics principles, and values are fundamental; and that AI may bring unintended consequences. The first AI Strategy referenced the EU guidelines that identify the importance of the following values: human agency, technical reliability, privacy and data management, transparency, non-discrimination, social and environmental well-being, and responsibility.

The Estonian Cabinet adopted its new Artificial Intelligence Strategy (2022-2023) as a continuation of Estonia’s first national AI strategy (2019–2021).¹⁶⁵⁵ This AI strategy was carried out in line with the objectives laid out by the European Commission in its Coordinated Plan on Artificial Intelligence. Estonia’s AI Task Force developed and implemented the country’s national AI strategy for 2024-2026 in January of 2024.

Nordic-Baltic Cooperation on AI

As for the international landscape, the Estonian minister responsible for digital development signed the 2018 declaration on “AI in the Nordic-Baltic region” establishing a collaborative framework on “developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used” and “on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

enabling interoperability, privacy, security, trust, good usability, and portability.”¹⁶⁵⁶

The ministerial declaration Digital North 2.0¹⁶⁵⁷ builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017–2020. The countries created a Council of Ministers for Digitalization (MR-DIGITAL) “to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration.”¹⁶⁵⁸

In November 2021, the Nordic and Baltic ministers for digitalization released another joint statement announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Estonian inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them.¹⁶⁵⁹

The Nordic and Baltic ministers for digitalization issued a common statement in 2022 on the importance of cooperation on digital security in the Nordic-Baltic region following the COVID-19 pandemic and the war in Ukraine. In their common statement, the ministers stressed that this “rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities.” The ministers declared that they “have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills. One important factor that helps ensure a strong level of digitalisation in the region is the trust citizens put in digital services from the public sector – be it at regional, national or local level. In order to keep up this high level of trust, we need to continue our efforts to make our digital public services human centric and accessible. [...] Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services.”¹⁶⁶⁰

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Secretary of the Nordic Council of Ministers published a report in May 2024 presenting the fundamental characteristics of the digitalization of their national public administrations from a legal perspective. The report discusses the impact of proposed EU regulations on AI, such as the AI Act, and their implications for national legislations within the Nordic-Baltic countries. It underscores the need for harmonized legal frameworks that support AI innovation while safeguarding fundamental rights and public trust.¹⁶⁶¹

Public Participation

In 2018, the Estonian government brought together an expert group to participate in a cross-sectional coordination project on AI.¹⁶⁶² The three tasks of this expert group were to develop the so-called Estonian artificial intelligence action plan; prepare draft legislation to ensure clarity in the Estonian judicial area and organize the necessary supervision; notify the public about the implementation of kratts and introduce possible options.

Participants in the group included representatives from state authorities, the private sector, universities, and sectoral experts. To prepare the report, interviews were conducted, including with company representatives involved in the development of AI and ICT representatives from universities. Working groups (in the fields of law, education, and the public sector) were also created.¹⁶⁶³ The e-estonia website states, “In these debates, technical and legal expertise goes a long way. But the discussion must also involve the public. Honest, meaningful debate requires that dreamy utopias be balanced with open discussions about AI’s controversial attributes and threats. Only this can create user-friendly legislation that’s equipped to reduce legal nightmares in the long-term.”¹⁶⁶⁴

Documents relating to the AI Strategy are accessible on the internet. The website Krattid provides links to the National Artificial Intelligence Strategy, the Report of Estonia’s AI Taskforce, the Vision Paper on #KrattAI: The Next Stage of Digital Public Services in #eEstonia, and the #KrattAI Roadmap for 2020.¹⁶⁶⁵

The Krattid website was updated with the new AI Strategy (2022–2023) and the new #KrattAI Roadmap for 2021–2022 in 2022. A separate website, the

Electronic Information System (EIS),¹⁶⁶⁶ enables anyone to follow ongoing legislative procedures, search for documents in the information system, take part in public consultations and comment on a document under inter-agency coordination. The EIS is a working environment for inter-agency coordination, submission of documents to the government and the parliament, and public consultation. In addition to national documents, draft European Union legislation and other documents related to the European Union decision-making process are available in the EIS.

The Ministry of Economic Affairs and Communications published the new national AI strategy (2022–2023) for public consultation for two weeks in 2021. Although the deadline was tight, the public had the opportunity to supplement and comment on the Action Plan.

Bürokratt¹⁶⁶⁷, an AI-powered virtual assistant designed by the Estonian government with civil society consultations, saw a significant expansion of its capabilities in January 2024. The government designed the assistant to simplify interactions with government services and promoted public awareness campaigns to increase its adoption among civil society.

EU Digital Services Act

As an EU member state, Estonia shall apply the EU Digital Services Act (DSA).¹⁶⁶⁸ The DSA regulates online intermediaries and platforms. The main objective of the DSA is to prevent illegal and harmful activities online and the spread of disinformation. The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Signatories to the DSA also commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data, as part of the 2022 DSA mitigation measure Strengthened Code of Practice on Disinformation.¹⁶⁶⁹

As part of its obligations under the DSA, Estonia was required to designate a Digital Services Coordinator (DSC) by February 17, 2024. The DSC is responsible for overseeing the implementation and enforcement of the DSA within the country. However, as of April 24, 2024, Estonia had not yet appointed its DSC.¹⁶⁷⁰ Consequently, the European Commission initiated infringement procedures by sending a formal notice to Estonia, urging the prompt designation and empowerment of the DSC to ensure compliance with the DSA. Currently appointed officer works under Consumer Protection and Technical Regulatory Authority (CPTRA).

EU AI Act

As an EU member State, Estonia is bound by the EU AI Act.¹⁶⁷¹ The EU AI Act is a risk-based market regulation that supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI. The EU AI Act entered into force on August 1, 2024.¹⁶⁷² In 2024, Estonia was actively aligning its national policies with the AI Act.

Data Protection

Since Estonia is an EU Member State, the General Data Protection Regulation (GDPR)¹⁶⁷³ is directly applicable in Estonia and to Estonians. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”¹⁶⁷⁴ The GDPR entered into force on 24 May 2016 and applies since 25

Center for AI and Digital Policy

May 2018. The Personal Data Protection Act (PDPA)¹⁶⁷⁵ and the new Personal Data Protection Implementation Act (Implementation Act) were adopted in December 2018 and February 2019 respectively to align Estonian law with the GDPR. They entered into force in January 2019 and March 2019 respectively.

Regarding the activities of law enforcement authorities, the PDPA also transposed the EU Data Protection Law Enforcement Directive (LED).¹⁶⁷⁶ “The directive protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”¹⁶⁷⁷ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.¹⁶⁷⁸

The European Data Protection Board (EDPB), of which Estonia is a member, stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights.”¹⁶⁷⁹

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Center for AI and Digital Policy

Estonia is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.¹⁶⁸⁰

The Data Protection Inspectorate¹⁶⁸¹ is the national supervisory authority in Estonia. Despite being a member of the Global Privacy Assembly (GPA) since 2006, the Inspectorate has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence;¹⁶⁸² the 2020 GPA Resolution on AI Accountability;¹⁶⁸³ the 2022 GPA Resolution on Facial Recognition Technology¹⁶⁸⁴ or the 2023 GPA Resolution on Generative AI.¹⁶⁸⁵

On April 5, 2024, the Estonian Data Protection Inspectorate (DPI) issued new data security recommendations in response to recent data breaches. The DPI emphasized the importance of:

- Implementing strong encryption for personal data, with pseudonymization for long-term storage of sensitive information.
- Enforcing robust password policies or adopting two-factor authentication.
- Utilizing effective monitoring systems to track system activities.
- Developing clear incident response plans.
- Raising employee awareness about data protection.
- Conducting regular tests and audits to identify potential vulnerabilities.
- Involving data protection specialists early in addressing security issues.
- Adopting recognized standards like the Estonian Information Security Standard or ISO 27001.

- Documenting all implemented measures and incident protocols.¹⁶⁸⁶

Algorithmic Transparency

Estonia is subject to the GDPR and Convention 108+. Estonians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.¹⁶⁸⁷

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems¹⁶⁸⁸ specifically emphasizes requirements on transparency, accountability and effective remedies. The Recommendation provides that “Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs.”¹⁶⁸⁹

The Recommendation also clarifies that “Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”¹⁶⁹⁰

The Ministry of Justice announced that it would draft legislation addressing high-risk algorithmic systems that will require the creators of AI (both public and private) to provide transparency regarding when AI communicates with an individual, processes an individual’s data, or makes a decision on the basis of the individual’s data.¹⁶⁹¹ A representative of the Ministry said that non-transparency of decisions is the biggest threat. When it comes to AI, based on current knowledge, even the person who wrote the algorithm’s code is unable to explain the reasons behind a decision, as the system is self-learning and self-evolving. “An assessment or a decision made by an algorithm may have a significant impact on fundamental rights no matter whether we are speaking of a

self-learning or a human-defined algorithm. It is a duty of a country based on the rule of law to have foresight and prevent serious interferences with fundamental rights by means of setting out a relevant legislative framework,” said Kai Härmand at the time Deputy Secretary General on Legal Policy at the Ministry of Justice.

Estonia's National AI Strategy for 2022–2023, which is currently being updated for the 2024–2026 period, underscores the importance of transparency in AI systems. The strategy outlines measures to ensure that AI applications, including algorithms used in public services, are transparent, accountable, and aligned with ethical standards.¹⁶⁹²

Digitization of Public Services

In 2018, the Estonian Undersecretary for Communications and State Information Systems emphasized the importance of facilitating AI in Estonia for investment and innovation, as well as for public administration.¹⁶⁹³ In light of its commitment to e-government, Estonia emphasizes the use of AI for government services. Indeed, *KrattAI* refers to “the vision of how digital public services should work in the age of artificial intelligence;” or more specifically, *KrattAI* is described as an “interoperable network of AI applications, which enable citizens to use public services with virtual assistants through voice-based interaction.”¹⁶⁹⁴

The Estonian government makes use of automated decision-making in many different contexts.¹⁶⁹⁵ For example, the Tax and Customs Board uses automated decision-making to facilitate tax refunds following the submission of an online income tax return. Other examples include the use of tachographs on lorries and automated speed checks on motorways to issue cautionary fines and the use of automated decision-making for the determination of a child’s school on

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

the basis of their registered residence.¹⁶⁹⁶ There has been international coverage of Estonia's ambitious plans for AI in the public sector – including on the issue of “Robot Judges.”¹⁶⁹⁷ The Estonian court system embraces digitalization and started an e-File system in 2005. The use of AI to tackle an immense backlog of cases has been considered, including the adoption of projects that can make “autonomous decisions within more common court procedures/tasks that would otherwise occupy judges and lawyers alike for hours.”¹⁶⁹⁸

The government has also launched the AI Govstack Testbed program (Bürokratt) and invites anyone with relevant experience to participate in an experimental framework to build the next generation AI-led country. Bürokratt exemplifies the Estonian vision of how digital public services should work in the age of AI. Bürokratt is an interoperable network of public and private sector AI solutions, which from the user's point of view, act as a single channel for public services and information.¹⁶⁹⁹ According to the International Research Centre on Artificial Intelligence (IRCAI), operating under UNESCO, “all the aspects regarding KrattAI are fully transparent – starting from business strategy and roadmap to the technology side: architecture, technical solutions – which is Open Source and available to all users.”¹⁷⁰⁰ Open source AI components are also used for the Krattid website.¹⁷⁰¹

The Estonian government provides a data tracker tool accessible through the state portal (eesti.ee) that enables anyone with an eID to keep track of which institutions have accessed their data and for what purposes.¹⁷⁰² As pointed out on the e-estonia website, transparency is “fundamental to foster trust in the effective functioning of the whole system.” Information is also provided regarding automated processing although Algorithm Watch states that it “is not always clear if data is used as a part of an automatic process or viewed by an official.”¹⁷⁰³ In spite of the ambition of this tool, the Estonian Human Rights Center argue that the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

data provided is variable depending on the service and at times not detailed enough. To assist transparency and understanding, the Estonian Human Rights Center suggests that visual depictions of data use should be provided.¹⁷⁰⁴ Similarly, Algorithm Watch states that the current tool does not provide a “clear understanding of what profiling is done by the state, which data is collected, how it is used, and for what purpose.”¹⁷⁰⁵

“It is a duty of a country based on the rule of law to have foresight and prevent serious interferences with fundamental rights by means of setting out a relevant legislative framework,” said Kai Härmand at the time Deputy Secretary General on Legal Policy at the Ministry of Justice.

Estonia plans to amend its Administrative Procedure Act with the view of automating certain administrative acts, e.g., evaluation and processing of license applications.¹⁷⁰⁶ The pending law “establishes the basis for conducting automatic administrative proceedings, as well as issuing automatic administrative acts or performing actions, which means actions without the intervention of an official or employee acting on behalf of an administrative body.” The key features of the draft law are the following:¹⁷⁰⁷

- automated decisions infringing individuals’ rights must be statutorily recognized, i.e., have a legal basis;
- automation must be advantageous to both, the state as well as an individual (e.g., by speeding up the decision-making);
- automation as such may not affect the ultimate outcome of the decision;
- the right to be heard, the right to communication between an individual and an authority and the right to have reasons given for automated decisions must be guaranteed, save for some limited exceptions;
- proactive services must be subject to the clear special provisions and an individual must have an opportunity to decline such services to ensure respect for her dignity.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The draft law passed the first reading in September 2022, and certain groups submitted their opinions on the draft in October 2022. There has been no further development since then.¹⁷⁰⁸

Environmental Impact

Estonia, a nation with a highly digitized public sector, recognizes the potential environmental consequences of its digital infrastructure. To address these concerns, the Estonian government adopted the Digital Agenda 2030 in 2021. This long-term strategy aims to establish a "green digital government" by prioritizing environmentally responsible solutions and minimizing the ecological impact of digital services. To achieve these objectives, the Estonian Ministry of Economic Affairs and Communications commissioned a report to analyze the environmental footprint of Estonia's digital society comprehensively.

When it comes to the use of AI, the UNESCO Recommendation emphasizes that AI actors should favor data, energy and resource efficient AI methods that will help ensure that AI becomes a more prominent tool. It is still unclear how Estonia will implement this recommendation. While Estonia benefits from its advanced digital infrastructure, the environmental impact of technologies like AI necessitates careful consideration. The energy demands of AI, particularly for training complex models, contribute to carbon emissions, a concern amplified by Estonia's reliance on oil shale for electricity generation. Estonia's Digital Agenda 2030 and its comprehensive analysis of its digital society's ecological footprint demonstrate a commitment to balancing technological advancement with environmental sustainability.

Lethal Autonomous Weapons

In a 2019 meeting of the Group of Governmental Experts on Lethal Autonomous Weapons Systems, Estonia expressed the view that “humans must retain ultimate control and responsibility in relation to the use of force in armed conflict” and “humans must exercise such control over a weapon system as may be necessary to ensure that the weapon system operates consistently with international law.”¹⁷⁰⁹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Estonia was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”¹⁷¹⁰

In February 2023, Estonia participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Estonia endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.¹⁷¹¹ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”¹⁷¹² Estonia also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.¹⁷¹³

At the 78th UN General Assembly First Committee in 2023, Estonia voted in favor¹⁷¹⁴ of resolution L.56¹⁷¹⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Human Rights

Estonia is a member of the European Union and the Council of Europe and is, accordingly, committed to the upholding of the Charter of Fundamental Rights and the European Convention on Human Rights. Estonia ratified the Universal Declaration on Human Rights and has acceded to international human rights treaties, such as the International Covenant on Civil and Political Rights. The Estonian Constitution also grants fundamental rights to citizens.

In Freedom House's 2024 Country Report, Estonia ranked "Free" with a score of 95/100, up one from 2023.¹⁷¹⁶ In Estonia, "democratic institutions are generally strong, and both political rights and civil liberties are widely respected." Freedom House noted, that "Estonia is well-known for its transparency and well-developed e-governance services."

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers reminded member states that their obligations to the Convention for the Protection of Human Rights and Fundamental Freedoms "stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing," meaning "member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimizing possible adverse effects."¹⁷¹⁷

In a 2018 report, the Commissioner for Human Rights of the Council of Europe urged the Estonian authorities to give careful consideration "to the ethical, legal and human rights implications of using robots and artificial intelligence in the care of older persons" given Estonia's strong focus on digitalization, new technologies, and AI.¹⁷¹⁸

OECD / G20 AI Principles

Estonia endorsed the OECD Principles on Artificial Intelligence, agreeing to "promote the use of AI that is innovative and trustworthy and that respects

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

human rights and democratic values”¹⁷¹⁹ in their original form in May 2019 and as updated in May 2024.

Council of Europe AI Treaty

Estonia contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy, and the Rule of Law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The European Union on behalf of all members on September 5, 2024; however, Estonia has not signed individually.

UNESCO Recommendation on AI Ethics

Estonia has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.¹⁷²⁰ No available records explicitly address implementation of the recommendation, though Estonia’s efforts to align with the EU AI Act and participation in negotiations of the Council of Europe Framework Convention on AI demonstrate the country’s attention to the Recommendations.

Evaluation

As a member of the European Union and the Council of Europe, Estonia is committed to the protection of human rights, ethics in AI, and algorithmic transparency. On 5 September 2024, the EU Commission signed the CoE AI Treaty on behalf of the EU. During the negotiations, Estonia demonstrated a pragmatic approach to incorporate more signatures as opposed to having an ambitious text gaining less international support.¹⁷²¹ Estonia has also endorsed the OECD AI Principles and the UNESCO Recommendation on the Ethics of AI. At regional level, Estonia has signed the Declaration of Collaboration on AI in the Nordic-Baltic Region which includes a commitment “to develop ethical and transparent guidelines, standards, norms and principles that can be employed as a steering mechanism to guide AI programmes.”¹⁷²²

By contrast, Estonia’s first AI Strategy did not consider the issues of ethics and human rights in significant depth. Nevertheless, Estonia opted for a short-term

Center for AI and Digital Policy

strategy in order to be able to adapt it to a rapidly evolving AI landscape. Based on Estonia's experience as a leading country in the world regarding the use of data¹⁷²³ and e-governance, its second national AI strategy, although still wary of "proactive over-regulation in a rapidly evolving area" and of "creating unnecessary obstacles", includes the bases for an ethical framework and provides for specific actions in this regard.

Reflective of this approach is Estonia's Prime Minister Kaja Kallas' statement: "We are already using artificial intelligence in our operations and services, but we see there is a huge potential to make our services more convenient for the people." "But at the same time, we are a rule-of-law country and every individual's privacy is a very important matter for us."¹⁷²⁴ This is a similar position that Estonia defended with regard to the draft EU AI Act. "We welcome the proposed AI Act because we have long supported the idea that European-wide harmonized regulation ensures a common market, and minimizing risks increases acceptance of AI technologies," said Mr. Velsberg, the Estonian Government Chief Data Officer. The question remains whether Estonia considers AI ethics a means for AI deployment or the respect of ethical principles as a condition for AI deployment. With the adoption of the EU AI Act, Estonia shall establish a national supervisory mechanism which, it is to be hoped, will be an independent one and will take the protection of human rights seriously.

Ethiopia

In 2024, Ethiopia's Council of Ministers approved a National AI Policy and Parliament adopted the Personal Data Protection Proclamation. As part of the African Union, Ethiopia also committed to the AU Continental AI Strategy.

National AI Strategy

Ethiopia has endowed the Artificial Intelligence Institute with the mission of developing a National AI Strategy. The Ethiopian Council of Ministers approved the National AI Policy in July 2024.¹⁷²⁵ The policy aims to leverage AI for economic growth, social development, and national security. It focuses on data management, human capital development, infrastructure development, and ethical considerations.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Ethiopia's National AI Strategy reflects a commitment to harnessing artificial intelligence for national development while aligning with international standards. Key areas of alignment include:

1. *Human-Centric Approach*: The strategy emphasizes the use of AI to benefit society, particularly in sectors such as agriculture, health, and education, which resonates with the OECD's call for AI that prioritizes human well-being.¹⁷²⁶
2. *Transparency and Explainability*: Ethiopia's strategy includes commitments to ensuring transparency in AI operations, aligning with the OECD's principle that AI systems should be transparent and provide explanations for their decisions.¹⁷²⁷
3. *Ethical AI Development*: The incorporation of ethical guidelines in Ethiopia's strategy aligns with UNESCO's recommendations for the ethical deployment of AI, ensuring respect for human rights and the promotion of social justice.¹⁷²⁸
4. *Inclusivity and Non-Discrimination*: The strategy aims to ensure equitable access to AI technologies, particularly for marginalized communities, reflecting UNESCO's emphasis on inclusivity in AI development.¹⁷²⁹
5. *Human Rights Protection*: Ethiopia recognizes the importance of aligning AI with human rights principles, echoing the Council of Europe's emphasis on protecting human rights in AI deployment.¹⁷³⁰
6. *Regulatory Frameworks*: The establishment of robust regulatory measures to govern AI use demonstrates Ethiopia's commitment to responsible governance, in line with the principles set forth by the Council of Europe.¹⁷³¹

In summary, Ethiopia's National AI Strategy aligns with the OECD AI Principles, UNESCO recommendations, and the Council of Europe Treaty on AI, showcasing a commitment to ethical, inclusive, and transparent AI development.

After three years of consultations with key stakeholders, Ethiopia's Council of Ministers has unanimously endorsed the country's national artificial intelligence (AI) strategy during its 37th regular meeting.¹⁷³²

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Ethiopian government is undertaking a series of initiatives to increase the adoption of technology for social and economic development, while also building a competitive domestic AI industry that upholds national security priorities. To provide strategic direction for this effort, the government has established a comprehensive national AI policy.

The new AI policy outlines the government's vision and goals for the sector. It specifies the technological framework to enable effective stakeholder collaboration, as well as guidelines for data management, governance, and human resource development.

Following thorough deliberations, the council of ministers has resolved to allocate the necessary resources and commence the implementation of the national AI policy. This marks a significant step forward in Ethiopia's ambition to leverage AI innovation to drive socioeconomic progress and strengthen its technological capabilities.

African Union

As a member of the African Union (AU), Ethiopia is committed to advancing the formulation and implementation of human-centered AI policies, in alignment with the goals of the AU digital transformation strategy¹⁷³³ and the Continental Data Policy Framework.¹⁷³⁴

The Continental AI Strategy was finalized in July 2024 during the 45th Ordinary Session of the African Union Executive Council in Accra, Ghana. The heads of African governments are expected to endorse the Strategy in February 2025 during the AU's annual summit in Addis Ababa, Ethiopia.

The Strategy calls for unified national approaches among AU Member States for inclusive and responsible AI development. It aligns with the AU Agenda 2063—a vision of a prosperous and integrated Africa—by centering AI development within empowerment, economic growth, and cultural progress. The Strategy was supported both technically and financially by UNESCO, ensuring that the African Union's approach to AI regulation and innovation aligned with the UNESCO Recommendation on the Ethics of Artificial Intelligence.¹⁷³⁵

Along with the development of the Continental AI Strategy, the African Union engaged with other international regulatory frameworks on AI in 2024. In April 2024, African Union senior officials met in Addis Ababa with the G7

Presidency to strengthen collaboration on AI.¹⁷³⁶ Among other discussions, the meeting highlighted the plans for the Italian G7 Presidency alongside the United Nations Development Programme (UNDP) to co-design an AI Hub for Sustainable Development with African leaders in 2024. The meeting co-chair stated, “The Italian G7 Presidency is committed to collaborating with UNDP, the African Union and African partners to steer global collective action and address critical infrastructure challenges in local AI ecosystems within African countries, specifically in the areas of data, compute and talent. The AI Hub aims to be a catalyzer for systemic change and accelerate the achievement of the Sustainable Development Goals. The benefits of an AI empowered Africa will have a positive impact not just within the African continent but across the world.”¹⁷³⁷

BRICS

At the 2023 BRICS Summit in South Africa, Ethiopia, together with Iran, Egypt, Saudi Arabia and the United Arab Emirates, was accepted by China, Russia, India, Brazil and South Africa as a new BRICS member. Russian President Putin who takes over the rotating chairmanship of BRICS in January 2024 said that the bloc seeks “strengthening multilateralism for equitable global development and security.”¹⁷³⁸ During the Summit, Chinese President Xi Jinping announced that BRICS countries would launch the AI Study Group of the BRICS Institute of Future Networks soon.¹⁷³⁹

The BRICS AI Study Group, established under the BRICS Institute of Future Networks, aims to foster collaboration and innovation in AI among member countries. Ethiopia can benefit from this platform by accessing advanced AI technologies, collaborating on AI research, attracting investments, and developing domestic AI capabilities.¹⁷⁴⁰

BRICS also elaborated on the Digital Economy Working Group proposed in a 2022 concept note¹⁷⁴¹ at the 2023 BRICS Summit, aiming to develop digital

education cooperative mechanisms. Deepening technological cooperation through this Working Group may also encourage future BRICS cooperation on AI.

In January 2024, China also called for the development of a “BRICS AI Development Cooperation Center” to be constructed in China. This announcement was followed by the release in February 2024, of the AI Governance International Evaluation Index, which evaluates BRICS’ AI development in contrast to G-7 countries.¹⁷⁴² As a member of BRICS, Ethiopia may benefit from this AI collaboration arising from the expansion of BRICS AI initiatives. However, geopolitical tensions between BRICS members China and Russia and the West may pose challenges in advancing a BRICS AI agenda on the global stage.

Data Protection

The 1995 Constitution of the Federal Democratic Republic of Ethiopia establishes a fundamental right to privacy.

Ethiopia made a significant stride in data protection with the enactment of the Personal Data Protection Proclamation No. 1321/2024 in July 2024.¹⁷⁴³ This comprehensive law, as outlined in the Federal Negarit Gazette, replaces Ethiopia’s fragmented regulatory framework and empowers individuals by granting them rights over their personal data, such as access, rectification, erasure, and objection to processing¹⁷⁴⁴. It also imposes stringent obligations on organizations handling personal data, including implementing robust security measures, obtaining informed consent, and ensuring transparency¹⁷⁴⁵.

As another form of protection, the Proclamation emphasizes data localization and regulates cross-border data transfers, emphasizing “sovereignty of data” to keep Ethiopian citizen data within national borders.¹⁷⁴⁶ Rules only allow personal data transfers outside of Ethiopia to countries with similar data protection standards.

By aligning with international standards, this law positions Ethiopia as a leader in data privacy and fosters a more secure digital environment. The Ethiopian Communications Authority—the regulatory authority for Communications Services in Ethiopia—will play a leading role in enforcing the law and addressing complaints from data subjects.

The right to privacy is further reinforced in several legal instruments, including the Criminal Code of the Federal Democratic Republic of Ethiopia (Proclamation No. 414/2004), the Civil Code of the Empire of Ethiopia (Proclamation No. 165/1960), the Freedom of the Mass Media and Access to Information Proclamation (No. 590/2008), and the recently enacted Media Proclamation No. 1238/2021. The Media Proclamation of 2021 repealed portions of the Mass Media & Access to Information Proclamation specifically related to mass media.¹⁷⁴⁷

Based on Section 8 of Ethiopia's Freedom of the Mass Media and Access to Information Proclamation No. 590/2008, personal data refers to any information that can be used to identify a living individual. This includes core identifiers like name, address, identification numbers, fingerprints, and blood type. It also encompasses details of life history, such as medical, educational, professional, and financial records, along with any criminal history. Additionally, the definition covers background and affiliations, including ethnic, national, or social origin, marital status, pregnancy status, age, color, sexual orientation, religion, beliefs, culture, and language. It includes information on physical and mental health conditions, including disabilities, as well as personal views and opinions on grant proposals or awards, provided they don't identify another individual, and how others perceive the individual.¹⁷⁴⁸

The Communication Services Proclamation No. 1148/2019 (Ar.50)¹⁷⁴⁹ establishes the responsibility of the Ethiopian Communication Authority to promote data privacy. The Ethiopian Communications Authority's Consumers Rights and Protection Directive No. 832/2021 explicitly defines personal data in section 2(12) as any information relating to an identified or identifiable natural person leading to identify such person, directly or indirectly in particular by reference to an identifier such as a name, an identification number, location data, telephone number, traffic and billing data, and other personal information in the context of Telecommunications Services.¹⁷⁵⁰

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Digital ID Proclamation 1284/2023¹⁷⁵¹ has been recently enacted with the view to adopt a comprehensive legal framework for the regulation of the national digital identification system. The Proclamation provides the rules for collecting, processing, transferring, disclosing, modifying, and overall management of personal data of registrants. “Personal Data” for the said Proclamation means the biometric and demographic data collected with the 'digital identification system [Article (2)(17)]. Interestingly, according to Article 17(1) of the Proclamation, the owner of the personal data is the registrant, and they shall give their data to the registrar upon their consent for processing, transferring, disclosing, and modifying.

Ethiopia has not signed the Council of Europe Convention 108¹⁷⁵² and its amending protocols or the African Union’s Convention on Cyber Security and Personal Data Protection, known as the Malabo Convention,¹⁷⁵³ which entered into force in June 2023.¹⁷⁵⁴

Digitization

Ethiopia's population reached 126.5 million by 2023, with more than 63% employed in agriculture¹⁷⁵⁵ and approximately 77% residing in rural areas¹⁷⁵⁶ with limited infrastructure and Internet access. At the beginning of 2024, there were only 24.83 million internet users, indicating a penetration rate of 19.4%.¹⁷⁵⁷ Despite the digital divide, the Government of Ethiopia launched the national digital

transformation strategy, Digital Ethiopia 2025,¹⁷⁵⁸ in June 2020. This strategy, built upon key economic sectors such as Agriculture, Manufacturing and Services, focuses on four foundational cross-sector areas: Infrastructure, Enabling Systems, Digital Interactions, and Digital Ecosystem. The overarching goals of this strategy include job creation, foreign exchange earnings, and inclusive prosperity, aiming to attain middle-income status by 2025. The World Bank approved \$200 million in concessional loans to support its implementation.¹⁷⁵⁹

The Ministry of Innovation and Technology (MinT) has significantly developed initiatives across various sectors since the Digital Ethiopia 2025 Strategy and Proclamation No. 1097/2019 in 2019 were adopted, including the Digital ID program.¹⁷⁶⁰

The National Bank has adopted the National Digital Payments Strategy¹⁷⁶¹ in the finance sector, while the government has embraced the Electronic Transaction Proclamation 1205/2020.¹⁷⁶² The International Telecommunication Union launched Digital Transformation Centers in Addis Ababa in 2022. The 17th Internet Governance Forum (IGF) took place in November and December 2022 in Addis Ababa.¹⁷⁶³

Biometric Identification

Ethiopia is currently implementing a Digital ID Program,¹⁷⁶⁴ Fayda, as part of the Digital Ethiopia 2025 Strategy. Given the ongoing civil war, there are fears

that the Digital ID Program could reinforce discrimination against ethnic minorities.¹⁷⁶⁵

In March 2022, the National Identification (ID) Program hosted its first “Digital Identification Proclamation Consultation” with over 200 key stakeholders invited, representing Federal ministries and government agencies, regional governments, civil society organizations, local human rights organizations, and international institutions.¹⁷⁶⁶ In 2023, the Digital ID Proclamation 1284/2023¹⁷⁶⁷ was issued and the Fayda program got underway.

Since then, the government has taken several initiatives to promote Fayda. The National Identity Program (NIP) entered a partnership with the country’s Federal Civil Service Commission to make the Fayda digital ID the main identification credential for all civil servants.¹⁷⁶⁸ NIP and the Ministry of Education have announced that biometric digital ID has been adopted as the official student ID across educational institutions,¹⁷⁶⁹ and UNICEF signed a MoU with NIP to support digital ID registration for children.¹⁷⁷⁰ At the end of 2023, Ethiopia called for an expression of interest in recruiting a public relations firm that will communicate the adoption of Fayda digital ID to the public to attain 90 million digital ID enrollments target within the revised deadline of 2028 from 2025.¹⁷⁷¹

Although government officials told parliament in November 2023 that digital ID registration is not mandatory, and that people can continue to use their analogue Kebele ID card, the same cannot be said in 2024. The digital ID became mandatory for all transactions with financial institutions¹⁷⁷² and access to public services.¹⁷⁷³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The program is being implemented with \$350 million funding from the World Bank's International Development Association (IDA), from which \$10 million has been disbursed as of August, 2024.¹⁷⁷⁴ The program's goal is for 90 million Ethiopians and legal residents to hold the Fayda digital ID by January 2029.¹⁷⁷⁵ However, the Ethiopia National ID Program (NIDP) hopes to issue 70 million IDs by the end of 2025.¹⁷⁷⁶ As of August 2024, Fayda has seen 8.2 million registrations.¹⁷⁷⁷ The recent passage of the Personal Data Protection Proclamation is an important step to safeguard data and digital privacy as this digital ID registration increases.

In 2024, digital ID registration became compulsory for any Ethiopian seeking access to government services.¹⁷⁷⁸ More recently, Ethiopia has worked to establish Fayda as a digital ID for domestic flights, marked by a Memorandum of Understanding signed by Ethiopian Airlines and the NIDP.¹⁷⁷⁹ Ethiopian Airlines is also working to integrate biometric passenger processing throughout the travel journey, from booking to boarding.

Ethiopia has also rolled out the Fayda program to the country's refugee population, currently gradually rolling it out to 77,000 refugees living in Addis Ababa.¹⁷⁸⁰ The program's goal is to extend digital ID access to the over 1 million refugees in Ethiopia, primarily individuals from South Sudan, Somalia, Eritrea, and Sudan. This digital ID expansion is supported in partnership with the National ID Program (NIDP) and UNHCR, the UN Refugee Agency.¹⁷⁸¹ Access to this ID card will help refugees engage in financial transactions, enroll in schools, and obtain SIM cards.

Environmental Impact of AI

Ethiopia's efforts and support to align national AI policies with the UNESCO Recommendation on the Ethics of AI demonstrates attention to the environmental impact of AI. Sustainability is one of ten core principles UNESCO

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

identified for a human-rights centered approach to AI ethics.¹⁷⁸² UNESCO also identifies Environment and Ecosystems as one of eleven key policy areas for implementation. The African Union Continental AI Strategy emphasizes sustainable development and seeks to develop AI to achieve this goal.

However, Ethiopia has not indicated specific policies or projects to curb the emissions and other environmental impacts of AI systems and infrastructure.

Lethal Autonomous Weapons

Ethiopia has not acceded to the Convention on Certain Conventional Weapons (CCW) neither to any of its Protocols.¹⁷⁸³

At the 78th UN General Assembly First Committee in 2023, Chile voted in favour¹⁷⁸⁴ of resolution L.56¹⁷⁸⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

“Ethiopia is a member of the African Group within the United Nations and is a member of the Non-Aligned Movement (NAM). Both the African Group and the NAM support the negotiation of a legally binding instrument on autonomous weapon systems.”¹⁷⁸⁶ Ethiopia was party to a working paper submitted on behalf of the NAM and other Parties to the CCW to the GGE on LAWS, which stated that “a strengthened and reinforced multilateral approach, with new legally-binding provisions for addressing the humanitarian and international security challenges posed by emerging technologies in the area of LAWS, is vital. There is an urgent need to pursue a legally-binding instrument on LAWS.”¹⁷⁸⁷

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Human Rights

Ethiopia is a party to a number of international and regional human rights instruments, including the Universal Declaration on Human Rights 1948, the International Covenant on Civil and Political Rights 1966,¹⁷⁸⁸ the Convention of the Rights of the Child 1989,¹⁷⁸⁹ and the African Charter on Rights and Welfare of the Child 1990.¹⁷⁹⁰ These human rights instruments ratified by Ethiopia form an 'integral part' of the laws of the country, according to Article 9 of its Constitution.

As of 2024, the human rights landscape in Ethiopia is marked by significant challenges, as reflected in the Freedom House report, which assigns Ethiopia a score of 24 out of 100 in its Freedom in the World index,¹⁷⁹¹ indicating a lack of political rights and civil liberties. The human rights landscape in Ethiopia is marked by significant challenges that reflect ongoing political, social, and ethnic tensions. This score underscores the urgent need for reform and accountability in the country, in particular around political repression, ethnic tensions and violence, media freedom, and restrictions on humanitarian aid.

OECD / G20 AI Principles

Ethiopia has not endorsed the OECD AI Principles. However, Ethiopia is a member of the African Union, which has recently joined the G20.

Council of Europe AI Treaty

Ethiopia has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.¹⁷⁹²

UNESCO Recommendation on AI Ethics

As a member of UNESCO, Ethiopia along with 192 other member states, adopted in 2021 the UNESCO Recommendation on the Ethics of AI, the first global standard on the ethics of AI.¹⁷⁹³

¹⁷⁸⁸ United Nations (1966) <https://www.ohchr.org/en/instruments-mechanisms/instruments/international-covenant-civil-and-political-rights>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Deputy General Director, Research and Development Cluster, from the Ethiopian Artificial Intelligence Institute participated in the June 2024 UNESCO-Eastern Africa Sub-Regional Forum on Artificial Intelligence (EARFAI). EARFAI focused on the potential for AI to benefit sustainable development and societal change in Eastern Africa, including discussions on the landscape of AI governance.¹⁷⁹⁴ A major theme of EARFAI involved discussions of implementation of UNESCO's Recommendation on the Ethics of AI within Eastern African states.

To assist with this implementation, UNESCO released the Readiness Assessment Methodology (RAM) in 2023, as a tool to guide Member States in identifying institutional and regulatory gaps that may inhibit development of an ethical AI ecosystem in line with the Recommendation.¹⁷⁹⁵ UNESCO has rolled out RAM in 22 African countries, including Ethiopia, where the RAM is in preparation.

Evaluation

Ethiopia is navigating a transformative journey in artificial intelligence with advancements and challenges across several key dimensions.

Ethiopia has initiated the development of a governance framework for AI, as outlined in its National AI Strategy. The strategy aims to establish regulatory measures that align with international standards. However, the framework is still in its nascent stages, lacking comprehensive regulations that ensure accountability and transparency in AI applications and missing an effective organized roadmap for implementation. These gaps present risks related to misuse and ethical concerns. For example, while the National AI Strategy and AU Continental Strategy include commitments to fairness, accountability, and transparency, implementation of these ethical guidelines remains inconsistent, with limited mechanisms to monitor AI systems for bias or discrimination.

Ethiopia has made progress in building local capacity for AI through partnerships with universities and technology hubs. Broader public awareness and involvement through this capacity-building can promote greater public participation in AI policy formulation, which the government has acknowledged as important.

Ethiopia is beginning to address issues of privacy, data protection, and individual rights in the digital landscape. However, existing legal frameworks are still evolving, and there is a pressing need to strengthen laws that safeguard

citizens' rights in the face of increasing surveillance and data collection. Fears remain that the Digital ID Program holds the potential to become a tool of mass surveillance in a country with a historically challenging human rights landscape.

Ethiopia's progress in AI is noteworthy. Nevertheless, significant challenges remain in governance, ethical implementation, capacity building, public engagement, and the protection of digital rights.

Finland

In 2024, Finland created a Working Task Force to implement the EU AI Act and submitted draft national legislation aligned with the Act for public consultation. The country also voted in the UN for the general and complete disarmament regarding LAWS and became party to the Council of Europe AI treaty through the European Commission's signature. However, Finland has not signed the treaty independently.

National AI Strategy

In 2017, Finland was among the first countries to develop a national AI strategy, establishing proposed target dates and allocating public funds in furtherance of the country's AI-related business objectives. The vision put forth by the national strategy is that "In another five years time, artificial intelligence will be an active part of every Finn's daily life. Finland will make use of artificial intelligence boldly in all areas of society – from health care to the manufacturing industry – ethically and openly. Finland will be a safe and democratic society that produces the world's best services in the age of artificial intelligence. Finland will be a good place for citizens to live and a rewarding place for companies to develop and grow. Artificial intelligence will reform work as well as create wellbeing through growth and productivity."

At that time, Finland explained that it implemented this AI strategy to: (1) enhance business competitiveness using AI, (2) ensure top-level expertise and attract top experts, (3) provide the world's best public services, and (4) make Finland a front runner in the age of AI.¹⁷⁹⁶

To that end, in May 2017, Finland's Minister of Economic Affairs launched Finland's AI Programme,¹⁷⁹⁷ an operational program tasked with "turning Finland into a leading country in the application of artificial intelligence."

¹⁷⁹⁶ OECD, *State of Implementation of the OECD AI Principles* (Jun. 18, 2021), https://www.oecd.org/content/dam/oecd/en/publications/reports/2021/06/state-of-implementation-of-the-oecd-ai-principles_38a4a286/1cd40c44-en.pdf

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Programme focused on three areas: an efficient public sector, a well-functioning society, and a competitive business and industry sector.¹⁷⁹⁸

The Minister of Economic Affairs appointed a steering committee, which included representatives from the public, private, and research sectors, and charged the steering committee with publishing a report containing its recommendations regarding the operationalization of Finland's AI Programme. Within the steering committee, the Minister of Economic Affairs established four subgroups "assigned to participate in the compilation and implementation of the Finnish AI Programme" and focused on four (4) key areas: (1) expertise and innovations; (2) data and platform economy; (3) transformation of work and society; and (4) ethics.

The steering committee published three reports. The first one, entitled "Finland's age of artificial intelligence: Turning Finland into a leading country in the application of artificial intelligence"¹⁷⁹⁹ was released in 2017. In this report, the steering committee examined "the significance of artificial intelligence to Finland's well-being, revised the programme objectives, and made some recommendations for actions, which, if implemented, should facilitate Finland's objective to "adopt and benefit from AI."¹⁸⁰⁰

In June 2018, the steering committee subgroup on transformation of work and society, published a second report entitled, "Work in the age of artificial intelligence: Four perspectives on the economy, employment, skills and ethics."¹⁸⁰¹ The subgroup separately examined (1) the impact of artificial intelligence on growth and employment; (2) labor market dynamics in a technological revolution; (3) learning and skills in a transition; and (4) good application of artificial intelligence technology and ethics. The report also offered three policy recommendations: (1) Increase the competitiveness of business and industry; (2) Provide high-quality public services and improve the efficiency of

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

the public sector; (3) Ensure a well-functioning society and wellbeing for its citizens.¹⁸⁰²

In this report, the subgroup defines the relationship between “good application of technology” and ethics in the following way. “In its most unassuming form, good application of technology means being aware of the potential negative impacts or problems associated with it and applying the technology accordingly. The most ambitious definition also includes a conscious attempt to use technology to promote certain societal goals regarded as valuable. We start our discussion with the more ambitious goal.” Accordingly, the subgroup identifies three key “values of a good artificial intelligence society”: transparency, responsibility, and extensive societal benefits.

According to the subgroup, “transparency refers to openness regarding 1) what data are collected and for what purpose (to underpin decision-making based on artificial intelligence), and 2) what the aim of the algorithms supporting and making decisions is.” Associated with transparency, is traceability, or “the possibility of tracing the purity and integrity of the data underpinning decision-making based on artificial intelligence and the grounds for making decisions.” The subgroup explains that “rather than the grounds of decisions made by individual algorithms, the requirement of traceability focuses on comprehensive understanding of the operation of the entire neural network system. The problem of traceability can partly be responded to by clarifying the rules of when a machine makes the actual decision and when only a prediction that supports final decision-making by a human. [...] However, the point of departure in all cases is that humans assume ultimate legal and moral responsibility for the decisions.”¹⁸⁰³

In December 2019, the steering committee published its third and final report, “Leading the way into the age of artificial intelligence.”¹⁸⁰⁴ The report detailed the steering committee’s policy recommendations for Finland’s AI Programme. The report also set forth the contours of Finland’s “vision” of a country that, by 2025, “is competitive and able to attract talent and has the most

¹⁸⁰² The report cautioned that “The conclusions of the report do not necessarily represent the group’s joint views,” but “do represent a majority opinion.”

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

relevantly educated population consisting of well-informed and independent citizens” in “the age of artificial intelligence.”¹⁸⁰⁵

In November 2020, Finland launched the Artificial Intelligence 4.0 Programme. “The purpose of the programme is to formulate the objectives and measures to promote digitalisation in Finland. Particular attention should be paid to SMEs, increases in digital investment and European cooperation. The programme will contribute to the recovery of companies and the economy from the coronavirus pandemic. According to the European Commission, digitalisation is one of the key means to generate new economic growth.”¹⁸⁰⁶

According to the European Commission’s Digital Economy and Society Index (DESI), Finland was the most digital country in the EU in 2022.¹⁸⁰⁷ The first interim report from launch to step one¹⁸⁰⁸ suggests that the digitalization agenda needs to be done “in cooperation between companies, research, and academia as well as training institutes and public organizations.” The vision of Finland was that by 2030 to be a “sustainable winner in the twin transition”—i.e. green and digital transition. This is in line with the EU’s coordinated plan on AI and its 2024 publication Communication on Boosting Startups and Innovation in Trustworthy Artificial Intelligence, which highlights a strategic plan for investment in trustworthy AI.¹⁸⁰⁹ The second interim (and final) report was launched in October 2022 and focuses on three key areas for development: (1) investments in research, development, and leading technologies; (2) increasing digital capabilities and promoting the uptake of technologies that speed up the digital and green transition in industry SME and (3) strengthen Finland’s position through European cooperation and transatlantic relations.¹⁸¹⁰

In addition, a Copyright Infrastructure Task Force was set up by the Ministry of Education and Culture (Term March 2024–October 2027) to “promote

the proper functioning of the copyright system in particular to form an open rights data framework (ORDF) for new technologies” (like AI).¹⁸¹¹ The work is in progress and by 2025, the task force will identify Use Case Groups and conduct the pilot. At the national level, a National Copyright Delegation was established for 2023–2027, focusing on three areas: (1) Practices related to AI, (2) Technologies, and (3) Legal issues.

At the EU level, work is underway to equip the creative industries with adequate tools to manage the challenges arising from Large Language Models and Generative AI.¹⁸¹²

The government also decided in September 2024 to have AI underpin its two research focus areas for 2025: (1) Economy and welfare in an era of strategic competition, and (2) Skills, labor supply, and migration in future Finland.¹⁸¹³

The new proposed budget for 2025 does not specifically mention AI and there have been funding cuts across ministries. However, the funding for security and infrastructure has increased.¹⁸¹⁴ The Prime Minister highlights that the government is in debt.¹⁸¹⁵ This budget takes into consideration the Recovery and Resilience Plan under the EU,¹⁸¹⁶ the invasion of Ukraine, and Finland’s subsequent decision to join¹⁸¹⁷ and support NATO.¹⁸¹⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Finland joined the “Political Declaration on Responsible Military Use of Artificial Intelligence and Autonomy”, led by the USA.¹⁸¹⁹ A policy paper titled, “The EU and military AI governance forging value-based coalitions in an age of strategic competition”, by the Finnish Institute of International Affairs, which is an autonomous institute, established and funded by the Parliament of Finland, highlights that “With 22 member states in common, the EU’s development of AI in military applications is nevertheless closely tied with NATO.” After joining NATO, Finland took 22 decisions costing €1.8 billion for military support to Ukraine.¹⁸²⁰ Finland states in its report to the Parliament on its achievement of the UN 2030 Agenda for Sustainable Development, “According to Article 5 of the North Atlantic Treaty, NATO deterrence and defense is of fundamental importance for Finland’s security.”¹⁸²¹

In October 2022, while informing the Finnish Parliament of the evolution of the negotiations surrounding the EU AI Act, the government stressed the importance of supporting innovation and achieving proportionality.¹⁸²² DESI was integrated into the State of the Digital Decade Result, in line with the Digital Decade Policy Programme 2030. As of 2024, Finland generally performs better than the EU average.¹⁸²³

Nordic-Baltic and Nordic Cooperation on AI

As for the regional landscape, the Finnish Minister in charge of digitalization signed the declaration on “AI in the Nordic-Baltic region” in 2018, establishing a collaborative framework on “developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used” and “on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards,

Center for AI and Digital Policy

enabling interoperability, privacy, security, trust, good usability, and portability. In 2024, a proposal for a shared vision for Nordic AI was discussed by high-level decision-makers from the private and public sectors with Nordic and Baltic ministers in Copenhagen, where the vision outlined was for large-scale AI adoption, with tangible benefits for both citizens and businesses.¹⁸²⁴

The ministerial declaration Digital North 2.0¹⁸²⁵ builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017-2020. “In order to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration, a council of ministers for digitalisation (MR-DIGITAL) was established in 2017. The aim is to promote development in three areas: (1) Increase mobility and integration in the Nordic and Baltic region by building a common area for cross-border digital services; (2) Promote green economic growth and development in the Nordic-Baltic region through data-driven innovation and a fair data economy for efficient sharing and re-use of data; and (3) Promote Nordic-Baltic leadership in the EU/EEA and globally in a sustainable and inclusive digital transformation of our societies.”¹⁸²⁶

In November 2021, the Nordic and Baltic ministers for digitalization released another joint statement announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Finnish inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them.¹⁸²⁷

The Nordic and Baltic ministers of digitalization issued a common statement on the importance of cooperation on digital security in the Nordic-Baltic region in September 2022, following the COVID-19 pandemic and the war in Ukraine. In their common statement, the ministers stressed that this “rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities.” The ministers declared that they “have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills. One important factor that helps ensure a strong level of digitalisation in the region is the trust citizens

put in digital services from the public sector – be it at regional, national or local level. In order to keep up this high level of trust, we need to continue our efforts to make our digital public services human centric and accessible. [...] Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services.”¹⁸²⁸

As part of its action plan for Vision 2030 (2021–2024), the Nordic Council of Ministers also identified innovation, digital integration, the safe use of artificial intelligence, data development and open data, education and digitalization as key objectives.¹⁸²⁹ A new initiative for research collaboration on ethical and responsible use of AI was documented in March 2024 as a discussion paper¹⁸³⁰. There are suggestions for a regional funding scheme and to identify instruments and thematic scoping relevant to Nordic research funders. Further, the suggested Nordic initiative not just understands the consequences and potential of AI in Nordic societies (Nordic value added, EU AI Act, data biases, cross-cutting strategic priorities) but uses thematic calls to “identify, amplify and fully capitalize on Nordic strengths and provide grounds for transfer of knowledge and lessons learned between sectors.

US-Nordic Leaders’ Summit

In July 2023, the Presidents of Finland and the United States and the Prime Ministers of Denmark, Iceland, Norway and Sweden participated in the third US-Nordic Leaders’ Summit. The leaders recognized the significance of emerging technologies such as AI and the need for appropriate guardrails and risk mitigation measures. The US and the Nordic countries committed to “step up” cooperation on technologies such as AI and to develop technologies and standards that align with and uphold human rights and fundamental freedoms.¹⁸³¹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Public Participation

Finland's longstanding and broad commitment to an open democracy has traditionally been given expression by extensive consultation with established groups.¹⁸³² The Finnish Constitution also states that “democracy entails the right of the individual to participate in and influence the development of society and his or her living conditions.” Provisions on consultation and participation are given further weight in various laws and guidelines including the Act on the Openness of Government Activities.

In 2024, the Finnish government requested an opinion on the draft of the government's proposal for legislation on the implementation of the artificial intelligence regulation.¹⁸³³ The draft seeks to advance the implementation of the EU's artificial intelligence regulation, regarding the supervision of certain artificial intelligence systems. The proposed law sets the competent market surveillance authorities and the authorities with the competence to receive and process notifications. Furthermore, the Finnish Transport and Communications Agency (Traficom) is appointed as a centralized contact point. The bill also proposed the amendment of the law on the market control of certain products (Law 1137/2016) to include within its scope.

Digital Services Act

As an EU member state, Finland shall apply the EU Digital Services Act (DSA).¹⁸³⁴ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

The Finnish Transport and Communications Agency, Traficom, is the DSA main supervisor. However, the Consumer Ombudsman and the Data Protection Ombudsman supervise specific other obligations.

¹⁸³⁴ *Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act)* (Oct. 21, 2022), <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A32022R2065>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Signatories also commit to reducing the risk of online harms under the 2022 Strengthened Code of Practice on Disinformation,¹⁸³⁵ which counts as a mitigation measure under the DSA. Actions include demonetizing the dissemination of disinformation, ensuring the transparency of political advertising, empowering users, enhancing the cooperation with fact-checkers, and providing researchers with better access to data.

EU AI Act

As an EU member State, Finland is bound by the EU AI Act,¹⁸³⁶ which entered into force on August 1, 2024.¹⁸³⁷ The EU AI Act is a risk-based market regulation that supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy, and ethical AI.

Finland has opted for an active role at EU level, choosing not to enact new national legislation while awaiting the AI Act's entry into force.¹⁸³⁸ Following the approval of the AI Act, Finland moved forward with the proposal of a bill to regulate the EU AI Act. Traficom serves as a centralized contact point for digital matters, while various sectoral authorities are designated for the oversight or market surveillance of their respective areas.

The Traficom indication is logical considering this agency's previous role as the “principal supervisor and coordinating authority referred to in the Digital Services Act, and it is responsible for other duties imposed by the regulations.”

This institutional choice may be contested or viewed as a departure from the European Data Protection Board's (EDPB) recommendation that “DPAs (acting as MSAs) should be designated as the single points of contact for the public and counterparts at Member State and Union levels,” given that “the single point of contact under the AI Act should be an MSA as provided for by Article 70(2) AI Act.”

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Nonetheless, the Office of the Data Protection Ombudsman still “has a strong role under the draft proposal. The Office of the Data Protection Ombudsman is appointed as the supervisory authority regarding prohibited AI systems and many high-risk AI systems, like biometrics, law enforcement, migration, education, and employment.” It is still unclear which body will be notifying authority to protect Fundamental Rights under the EU AI Act Article 77.

Data Protection

Since Finland is an EU Member State, the General Data Protection Regulation (GDPR)¹⁸³⁹ is directly applicable in Finland and to Finnish people. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”¹⁸⁴⁰ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. The Finnish Data Protection Act,¹⁸⁴¹ which entered into force on January 1, 2019, supplements the GDPR. Another key sectoral legislation in the field is the Act on the Protection of Privacy in Working Life.¹⁸⁴²

Regarding the activities of law enforcement authorities, Finland transposed the EU Data Protection Law Enforcement Directive (LED)¹⁸⁴³ through the Act on the Processing of Personal Data in Criminal Cases and in connection with Maintaining National Security, which entered into force on January 1, 2019, along with the Data Protection Act. The LED “protects citizens’ fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and

terrorism.”¹⁸⁴⁴ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.¹⁸⁴⁵

Finland is also a member of the Council of Europe and ratified the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.¹⁸⁴⁶

The Data Protection Ombudsman is the national supervisory authority which supervises compliance with data protection legislation and safeguards the rights and freedoms of individuals with regard to the processing of their personal data.¹⁸⁴⁷ The Ombudsman has made numerous important decisions,¹⁸⁴⁸ including with administrative fines amounting to several hundred thousand Euros.¹⁸⁴⁹ The institutional mission of the Data Protection Ombudsman is expected to be broadened in alignment with the draft proposal for the Finnish EU AI Act national regulation. The recent attributions encompass supervisory authority over prohibited AI systems, as well as numerous high-risk AI systems, addressing sensitive areas such as biometrics, law enforcement, migration, education, and employment.

Concerning this aspect, the Finnish Data Protection Ombudsman and current EDPB chair, Anu Talus, asserted the importance of the cooperation between authorities for the EU AI Act Enforcement, pointing out that “the debate on artificial intelligence in particular continued to be intense and is being even more so in 2024. It is important to ensure that cooperation between authorities in the enforcement of the EU’s AI Act is smooth at both national and European level¹⁸⁵⁰

Despite being a member of the Global Privacy Assembly (GPA) since 2002, the Data Protection Ombudsman has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,¹⁸⁵¹ 2020 GPA Resolution on AI Accountability,¹⁸⁵² 2022 GPA Resolution on Facial Recognition Technology,¹⁸⁵³ or 2023 GPA Resolution on Generative AI.¹⁸⁵⁴

Algorithmic Transparency

Finland is subject to the GDPR-like Finnish Law and Convention 108+. Finns have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.¹⁸⁵⁵ In 2023, OECD again recognized Finland and Helsinki for the Open AI Register of AI Systems use in the public sector as an example of OECD AI Principle 1.3 on transparency and explainability.¹⁸⁵⁶

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems¹⁸⁵⁷ specifically emphasizes requirements on transparency, accountability and effective remedies. The Recommendation provides that “Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate

between systems. The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs.”¹⁸⁵⁸

The Recommendation also clarifies that “Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”¹⁸⁵⁹

In December 2018, Juha Sipilä's Government (2015–2019) submitted to Parliament the Government report on information policy and artificial intelligence. The report combines two aspects while paying special attention to ethical issues and 200 people from different sectors of society were involved in working on the Report.¹⁸⁶⁰

In the report, information policy is studied not only from the viewpoint of information management, but also from the perspective of the conditions for the use of information, value basis, ethical principles and financial impacts. Information policies discussed in the report relate to data access rights, data ownership, copyrights, security and personal data protection. The report constitutes the knowledge basis and a policy, upon which a roadmap with prioritized actions can be built in the future.¹⁸⁶¹ The development and deployment of AI raises uncertainty about the application of the current legislation on these issues and increases the need for a reform of the legislative and regulatory framework.¹⁸⁶²

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Finland aligns with the European Union's Digital Services Act (DSA),¹⁸⁶³ which entered into force on 17 February 2024. It mandates algorithmic transparency from very large online platforms (VLOPs) and very large online search engines (VLOSEs) that have more than 45 million users per month, requiring them to disclose algorithmic structures and address systemic risks tied to algorithmic decisions. Finland, through the European Centre for Algorithmic Transparency (ECAT),¹⁸⁶⁴ has been actively participating in supporting and enforcing these standards, with particular emphasis on monitoring algorithmic impact across various sectors, from social media to public administration. The EU's DSA Implementing Regulation standardizes the format, content, and reporting periods for transparency reports, and providers will begin to collect data according to the Implementing Regulation as of July 1, 2025, with the first harmonized reports due at the beginning of 2026.¹⁸⁶⁵

Access to Data

The 2019 final report noted that “Data has become the world's most valuable resource, but when the existing operating models are applied, it primarily benefits a few giant corporations that collect the data from their service users.”¹⁸⁶⁶ With respect to the adoption of the GDPR by Finland (and other EU countries), the final report opined that although the law “strengthened the rights of individuals and harmonised the EU regulation related to processing of personal data” as currently formulated, “there is no joint concept or interoperable open ecosystem for the exchange of personal data based on consumer consent.”

The final report observes that “Finland is in a position to become a global trendsetter and a forerunner within the EU in the creation of fair, consumer-oriented principles” and that consumer-oriented principles require “a visionary approach and a joint EU-level roadmap, as well as technical proof of functional exchange of data.”

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Digitization of Public Services

In 2020, Finland launched a National Artificial Intelligence Programme — AuroraAI.¹⁸⁶⁷ The program prepares Finland for a human-centric and ethically sustainable society in the age of artificial intelligence through a decentralized open network and open data for smart public services and applications.¹⁸⁶⁸

In September 2020, the city of Helsinki launched an AI registry in beta version to detail how city government uses algorithms to deliver services. “Each algorithm cited in the registry lists datasets used to train a model, a description of how an algorithm is used, how humans utilize the prediction, and how algorithms were assessed for potential bias or risks. The registry also provides citizens a way to give feedback on algorithms their local government uses and the name, city department, and contact information for the person responsible for the responsible deployment of a particular algorithm.”¹⁸⁶⁹ The city of Helsinki describes its AI register as “a window into the artificial intelligence systems used by the City of Helsinki. Through the register, you can get acquainted with the quick overviews of the city’s artificial intelligence systems or examine their more detailed information based on your own interests. You can also give feedback and thus participate in building human-centred AI in Helsinki.”¹⁸⁷⁰

The city of Helsinki’s public register for algorithmic transparency has eight use cases on the website, a majority of which are chatbots: Summer Job Voucher chatbot, Parking chatbot, Urho—an outdoors sports and recreation chatbot, International House chatbot, Sotebot Helsinki chatbot for social service, an intelligent material management system for 1.8 million items of The City Library, Obotti—a chatbot for the Central Library, Talbotti—a chatbot for City of Helsinki’s financial management service and a rental apartment search chatbot.¹⁸⁷¹

In 2022, a new research project, Civic Agency in AI also started with the aim to help the public sector ensure that their AI tools are transparent, accountable,

and equitable. Its purpose is to develop best practices and recommendations regarding AI governance.¹⁸⁷²

In May 2023, a new general legislation on automatic decision-making in public administration entered into force, with an 18-month transition period.¹⁸⁷³ The legislation requires authorities to provide appropriate information about the use of an automated decision-making procedure. The legislation allows automated decision-making on administrative matters in so far as making a decision on the matter in question does not require individual consideration. Concerns exist with regard to its compatibility with Article 22(1) GDPR which provides for the right of the data subject not to be subject to a decision solely based on automated processing.

On the basis of this law, in October 2023, the Finnish Immigration Service adopted a decision to introduce automated decision making for students' first residence permits. One condition for the use of automated decision is that "the residence permit can be granted according to the application, and the matter does not require more extensive holistic deliberation."¹⁸⁷⁴

According to the e-government development index for 2024, Finland was one of the leading group of countries, ranking 9th with Helsinki a leading city.¹⁸⁷⁵ Straumurinn, developed with Estonia and Finland in 2018, is a government initiative to ensure data security, integrity, and interoperability between government agencies.¹⁸⁷⁶ Aviondata.fi is an open database platform of Finnish 2351 datasets and 71 APIs (for example Kela, the Social Insurance Institution of Finland uses this system),¹⁸⁷⁷ while Suomi.fi, established in 2023 contains

restricted public sector data¹⁸⁷⁸ for which you need to get access.¹⁸⁷⁹ In November 2024, Prime Minister Petteri Orpo hosted a roundtable with the business sector to stressed coordination between public sector and AI firms was needed and that AI offered opportunities for the public sector to improve its productivity and economic growth.¹⁸⁸⁰

AI and Children

Finland and UNICEF have been collaborating to create internationally applicable policy guidance for the use and development of AI for children. The Ministry for Foreign Affairs supports the project, where practices are developed for the planning of safe and inclusive AI solutions that take the rights of the child into account.¹⁸⁸¹

The Ministry of Education and Culture is developing statute and drafting a Recommendation on AI literacy, legal and ethical issues.¹⁸⁸² The purpose is to develop competencies through AI literacy and its safe use in learning use and equal opportunities for education and training actors.

Facial Recognition

According to news reports, Finland's National Bureau of Investigation has acknowledged using facial recognition technology in connection with certain law enforcement activities.¹⁸⁸³ After initially denying that it had used facial recognition technology in response to media questioning, the Finnish officials from the National Bureau of Investigation acknowledged that four members of its Child Exploitation Investigation Unit had conducted 120 searches of the Clearview AI system during the 2019 to 2020 time period.

The Deputy Data Protection Ombudsman issued a note to the National Bureau of Investigation regarding the controversial use of Clearview AI facial

recognition technology. In September 2021, the Deputy Data Protection Ombudsman warned the National Bureau of Investigation that its police officers had used a facial recognition technology system without first verifying that it complied with data security or data protection laws.¹⁸⁸⁴

A Digital Travel Credentials biometric pilot, funded by the European Union, for border checks was launched in August 2023 at the Helsinki-Vantaa airport.¹⁸⁸⁵ Finland also began work on a national digital identity wallet in April 2024, in line with the European Union's eIDAS regulation which introduces the European Digital Identity (EUDI) Wallet.¹⁸⁸⁶ Biometric data via facial recognition technologies are processed under the GDPR and the EU AI Act.¹⁸⁸⁷

Environmental Impact of AI

In November 2020, Finland launched its Artificial Intelligence 4.0 strategy, where the objective is to be a frontrunner in both green and digital transitions.¹⁸⁸⁸ According to an interim report¹⁸⁸⁹ issued in December 2021, Finland plans to be carbon neutral by 2035. Finland also plans to reinforce the EU's Green Deal,¹⁸⁹⁰ which considers AI data centers significant consumers of

energy¹⁸⁹¹ and the challenge to European energy grids with the war in Ukraine.¹⁸⁹² One of the four proposals in the Interim Report of the Artificial Intelligence 4.0 Programme published in December 2021 focuses on “Nature smartness and digital technology” to lead to the “triple victory of sustainable development”: economic, ecological and social benefits.¹⁸⁹³ In February 2024, the prime minister, Petteri Orpo reiterated that “Work, security and skills: these are also at the heart of the Government Programme.”¹⁸⁹⁴

Along with Austria and Sweden, Finland has been evaluated at the top end, in the EU and globally, regarding overall sustainability (environmental, social and economic) as defined in Agenda 2030 in the Sustainable Development Report, 2022.¹⁸⁹⁵ By 2024, Finland had the highest score of 86.35 out of 100 in the Sustainable Development Report out of 193 countries.¹⁸⁹⁶ The Government submitted a report in 2024 on the implementation of the United Nations’ 2030 Agenda for Sustainable Development to Parliament, which was the half way mark since the country adopted the 2030 Agenda in 2016.¹⁸⁹⁷

The areas highlighted for improvement were responsible production and consumption (of which AI is a new significant area). While Finland excelled in other SDG areas, achieving 86% of the 17 SDGs, the country lagged on imports, electronic waste, and nitrogen emissions.¹⁸⁹⁸ Still, according to the Climate

Change Act (2022), Finland will strive to become carbon neutral.¹⁸⁹⁹ The report on UN 2030 Agenda for Sustainable Development states, “The Foreign and Security Policy the UN Sustainable Development Goals (SDGs) is to be achieved by Agenda 2030 have been jeopardised by, among other things, the lack of multilateral cooperation in the field of sustainable development. problems of multilateralism, the repercussions of the war of aggression in Russia, and the interest rate pandemic the consequences of the currency pandemic.”¹⁹⁰⁰

Lethal Autonomous Weapons

In a 2020 report, Human Rights Watch noted that at the 2014 UN General Assembly, Finnish officials stated that the issue of lethal autonomous weapons systems is “a complex issue.” Finnish officials cautioned that the “development of weapons and means of warfare where humans are completely out of the loop would pose serious risks from the ethical and legal viewpoint,” stressing that “humans should always bear the ultimate responsibility when dealing with questions of life and death.” Finnish officials have not supported proposals to negotiate a new international treaty to ban or restrict killer robots. However, in June 2019, Finland’s new government released a coalition platform that seeks to ban weapons systems based on artificial intelligence.¹⁹⁰¹

Finland was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”¹⁹⁰²

Finland also submitted a working paper, together with Sweden, France, Germany, the Netherlands, Norway, and Spain, to the 2022 Chair of the Group of Governmental Experts on emerging technologies in the area of Lethal Autonomous Weapons Systems.¹⁹⁰³ This working paper presents a two-tier approach. Accordingly, States should commit to (1) outlaw fully autonomous lethal weapons systems operating completely outside human control and a responsible chain of command, and (2) regulate other lethal weapons systems featuring autonomy in order to ensure compliance with the rules and principles of international humanitarian law, by preserving human responsibility and accountability, ensuring appropriate human control and implementing risk mitigation measures.

In February 2023, Finland participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Finland endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.¹⁹⁰⁴ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” States also “stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain.”¹⁹⁰⁵

Finland also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.¹⁹⁰⁶

At the 78th UN General Assembly First Committee in 2023, Finland voted in favor¹⁹⁰⁷ of resolution L.56¹⁹⁰⁸ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons

Center for AI and Digital Policy

systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

A new act on the export of dual-use items entered into force on September 1, 2024 to harmonize Finnish regulations with the EU Export Control Regulation.¹⁹⁰⁹ The list applies to software and technology.¹⁹¹⁰ This Act can be extended to AI-based systems as per the EU AI Act, which states (Item 24), “Nonetheless, if an AI system developed, placed on the market, put into service, or used for military, defense, or national security purposes is used outside those temporarily or permanently for other purposes, for example, civilian or humanitarian purposes, law enforcement, or public security purposes, such a system would fall within the scope of this Regulation.”¹⁹¹¹ However, the regulation, also mentions (Item 24) “An AI system placed on the market for civilian or law enforcement purposes which is used with or without modification for military, defense or national security purposes should not fall within the scope of this Regulation, regardless of the type of entity carrying out those activities.”

The vote supports Finland’s position on Lethal Autonomous Weapons Systems, as per its submission on May 15, 2024,¹⁹¹² to the United Nations referring to its previous Note ODA-2024-00019/LAWS dated February 1, 2024. The document highlights that Finland’s objective is the conclusion of an international instrument that is legally or politically binding to address the challenges of LAWS. The proposal suggests prohibitions and regulations to (1) outlaws autonomous weapons systems that operate without any form of human involvement and outside a human-responsible chain of command (2) regulate the development and use of all other weapons systems having autonomous features or functions ensuring their compliance with the rules and principles of international law. These suggestions are intended to be application specific and technology agnostic. In October 2024, the draft UN legislation L.77 was formally adopted where Finland voted for the

adoption¹⁹¹³ of the high-level agenda for the general and complete disarmament of lethal autonomous weapons systems.¹⁹¹⁴

Human Rights

As one of the signatories to the Universal Declaration of Human Rights and several international human rights treaties and conventions,¹⁹¹⁵ Finland is committed to protecting human rights, civil liberties, and political rights. Under Finnish law, these rights are guaranteed and subject to the rule of law as interpreted by an independent judiciary.

Freedom House gives Finland a top score (100/100) in 2024 for political rights and civil liberties, observing that “Finland’s parliamentary system features free and fair elections and robust multiparty competition. . Corruption is not a significant problem, and freedoms of speech, religion, and association are respected. The judiciary is independent under the constitution and in practice.”¹⁹¹⁶

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers reminded member states that their commitment to “ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction” requires them to to “ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated.”¹⁹¹⁷

OECD / G20 AI Principles

Finland is a long-time member of the OECD and has adopted OECD AI Principles,¹⁹¹⁸ committing “to uphold international standards that aim to ensure AI systems are designed to be robust, safe, fair and trustworthy.”¹⁹¹⁹

The OECD recognizes Finland’s progress implementing principle 1.3 transparency and explainability (in Helsinki), and for promoting international research collaboration.¹⁹²⁰ It was also one of the early countries to have a National AI Strategy.

Council of Europe AI Treaty

Finland contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy, and the Rule of Law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The European Commission signed on behalf of the members of the European Union (including Finland) on September 5, 2024.¹⁹²¹ Finland has not signed independently.

UNESCO Recommendation on AI Ethics

Finland has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.¹⁹²² UNESCO is currently implementing its Readiness Assessment Methodology (RAM) in several countries, but Finland is not yet on the list of countries that have implemented or are in the process of implementing the Readiness Assessment Methodology (RAM).¹⁹²³

Finland has, nonetheless, has a historic of international cooperation with UNESCO. The Finnish National Commission for UNESCO “act as liaison

between UNESCO and national authorities. The Finnish National Commission is an advisory body and issues opinions to the Ministry of Education and Culture and the Government and takes initiatives with regard to: measures to be taken in Finland following decisions and recommendations adopted by UNESCO General Conferences and UNESCO executive bodies and by international conferences and meetings organized by UNESCO; other major matters and questions of principle relating to the activities of UNESCO; the representation of Finland at General Conferences and on UNESCO executive bodies and at international meetings and talks organized by UNESCO; other questions relating to UNESCO's fields of activity assigned to the Commission by the Ministry of Education and Culture; and communication of UNESCO's aims and activities in Finland.¹⁹²⁴

Evaluation

Finland was one of the most digital countries in the EU in 2023. In its national AI strategy, one of the first in the world, Finland adopted an approach based on its vision of “a good artificial intelligence society.” Risks posed by AI do not occupy center stage in the strategy, but Finland has tried to develop best practices and hands-on solutions for ensuring trustworthy AI by design. The capital, Helsinki, is the first city to have developed and adopted an AI register to foster trust in AI and ensure the best service to citizens.

Finland benefits from strong European and national data protection frameworks. The use of the Clearview facial recognition system by law enforcement authorities was controversial and was reprimanded by the Data Inspectorate. However, the introduction of a new law authorizing automated decisions in administration raises questions regarding its compatibility with data subjects' rights not to be subjected to automated decision making enshrined in the GDPR.

Finland has also worked closely with UNICEF to develop internationally applicable policy guidance for the use AI by children and has endorsed both the OECD AI Principles and the UNESCO Recommendation on the Ethics of AI. It remains to be seen which concrete steps Finland will adopt to turn its commitment to the UNESCO AI Ethics Recommendation into actions.

France

In 2024, France's data protection authority released recommendations for AI system development and while the government appointed a Minister of Artificial Intelligence to centralize AI leadership and policymaking. The new

¹⁹²⁴ Ministry of Education and Culture, *Finnish National Commission for UNESCO*, <https://okm.fi/en/national-commission-for-unesco>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

ministry could be important for implementing the EU AI Act, which entered into force. France became party to the Council of Europe AI treaty as an EU Member State.

National AI Strategy

France's national Strategy on Artificial Intelligence entitled "AI for Humanity" aims to make France a world leader in AI. "AI will raise a lot of issues in ethics, in politics, it will question our democracy and our collective preferences," stated French President Emmanuel Macron in 2018.¹⁹²⁵ He continued: "If you want to manage your own choice of society, your choice of civilization, you have to be able to be an acting part of this AI revolution."¹⁹²⁶

France's AI strategy sets out four objectives: (1) Reinforcing the AI ecosystem to attract the very best talents, (2) Developing an open data policy, especially in sectors where France already has the potential for excellence, such as healthcare, (3) Creating a regulatory and financial framework favoring the emergence of "AI champions," and (4) Promoting AI regulation and ethics, to ensure to high standard and acceptability for citizens. This includes supporting human sciences research on ethics of use, making all algorithms used by the State public, including admission to higher education, and encouraging AI's openness to diversity.

In November 2022, the French Government launched the second phase of the national AI strategy until 2025, with a focus on priority areas such as trusted AI and generative AI.¹⁹²⁷

The national AI strategy builds on the Villani¹⁹²⁸ report, *For a Meaningful Artificial Intelligence: Towards a French and European Strategy*,¹⁹²⁹ as well as the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

work of “France Strategy”¹⁹³⁰ and of the French national data protection authority (CNIL).¹⁹³¹

The National Coordinator for AI, tasked with the implementation of the national AI strategy, works with all administrations, centers and research laboratories dedicated to AI.¹⁹³²

National Pilot Committee for Digital Ethics

With regard to AI regulation and ethics (objective 4 of the National AI Strategy), in July 2019, the Prime Minister asked the French National Consultative Committee on Bioethics (CCNE) to launch a pilot initiative dedicated to Digital Ethics. The National Pilot Committee for Digital Ethics (NPCDE), created in December 2019, “shall submit initial contributions on the ethics of digital sciences, technologies, uses and innovations and determine relevant equilibria for the organization of public debate on digital ethics and artificial intelligence.” It is also tasked with maintaining ethical oversight and to raise awareness, inform and assist individuals, companies, administrations, institutions, etc., in their decision-making process.¹⁹³³ The committee has been seized by the Prime Minister to give opinions on the ethical issues concerning three specific topics of digital applications using in particular machine learning: 1) Conversational agents (chatbots); 2) Autonomous cars; and 3) Medical diagnosis and health AI.

However, civil society groups such as Access Now have objected to government studies that simply propose ethical guidelines rather than hard law. Access Now explains, “[t]here is solid and creative thinking in the advisory paper that informed the strategy around the ethical and regulatory challenges posed by AI, but at the moment the proposed solutions largely involve the creation of groups to study them rather than the proposal of new or modified norms.”¹⁹³⁴ “France’s

¹⁹³⁰ France Stratégie, the strategy department attached to the French Prime Minister, released a synthesis *France intelligence artificielle* report (Mar. 2017), <https://www.enseignementsup-recherche.gouv.fr/cid114739/rapport-strategie-france-i.a.-pour-le-developpement-des-technologies-d-intelligence-artificielle.html>

Center for AI and Digital Policy

AI strategy generally cleaves to the ‘ethics’ framework and makes scant reference to hard legal constraints on AI development.” AccessNow notes that the “Villani report is considerably more detailed about the ethical and legal challenges posed by AI.” While some civil society organizations oppose the need for the NPCDE, they continue to work towards their objectives and convened a conference with the European Research Consortium for Informatics and Mathematics (ERCIM) Ethics Working Group to discuss digital technology ethics and connected technologies in October 2022.¹⁹³⁵

In September 2023, the Prime Minister launched a new Committee on generative AI.¹⁹³⁶ Its aim is to make concrete recommendations in order to adapt French AI strategy. Among the members are Joëlle Barral from Google, Yann le Cun from Meta as well as Arthur Mensch and Cedric O, both involved with Mistral AI. Concerns about a possible conflict of interests and influence on the French position with regard to the draft EU AI Act have been raised.¹⁹³⁷

Public Participation

The Villani report, which has been a key source of inspiration for France’s national strategy, relied on the work of multiple stakeholders but not the public at large. However, the CNIL for its part did organize a public debate that led to its report on “the ethical matters raised by algorithms and artificial intelligence.” The CNIL report on the ethical issues raised by AI also followed extensive public outreach in 2017. More than 3,000 people took part in 45 debates and events, organized by 60 partners, including research centers, public institutions, trade unions, think tanks and companies.¹⁹³⁸

According to BEUC, the European consumer organization, more than 80% of those polled in France are familiar with Artificial Intelligence and over 50%

Center for AI and Digital Policy

respondents agreed that companies use AI to manipulate consumer decisions.¹⁹³⁹ BEUC also reported that there is little trust over authorities to exert effective control over organizations and companies using AI. More than 60% of respondents in France said users should be able to say “no” to automated decision-making.

EU Digital Services Act

As an EU member state, France shall apply the EU Digital Services Act (DSA).¹⁹⁴⁰ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation. The DSA also bans targeted advertising based on a person’s sexual orientation, religion, ethnicity, or political beliefs and targeted advertising to minors based on profiling.

EU AI Act

As an EU member State, France is bound by the EU AI Act.¹⁹⁴¹ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

The EU AI Act establishes a complex and layered governance structure involving multiple entities, such as notifying and notified bodies, conformity assessment bodies, an AI Board, an AI Office, national competent authorities, and market surveillance authorities. By and large, national market surveillance authorities are primarily responsible for the implementation and enforcement of the provisions of the regulation concerning high risks AI systems, with some coordination among national market surveillance authorities and monitoring by the European Commission. The Commission, including the European AI Office¹⁹⁴²

established in February 2024, has exclusive powers to supervise and enforce the obligations of providers of general-purpose AI models.

The AI Act came into force on August 1, 2024.¹⁹⁴³ France has until the end of 2025 to name the relevant authorities responsible for overseeing and enforcing the EU AI Act.

Data Protection

The right to the protection of personal data falls within the scope of application of the right to respect for private life,¹⁹⁴⁴ which is constitutionally protected.¹⁹⁴⁵

Since France is an EU Member State, the General Data Protection Regulation (GDPR)¹⁹⁴⁶ is directly applicable in France and to French people. The aim of the GDPR is to “strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”¹⁹⁴⁷ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018.

The EU Data Protection Law Enforcement Directive (LED)¹⁹⁴⁸ “protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”¹⁹⁴⁹ The LED provides for the prohibition of any decision

based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.¹⁹⁵⁰

The 1978 French Data Protection Act was amended in 2018 to adapt it to both the GDPR and the LED.¹⁹⁵¹

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

France is also a member of the Council of Europe and ratified the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.¹⁹⁵²

AI Oversight

The French data protection authority (CNIL) has published several papers on AI, including a 2018 report on the ethical issues raised by AI.¹⁹⁵³ This report set out two founding principles—fairness and vigilance—six recommendations, and six concerns. Following this report, a joint 2020 paper by the CNIL and the Defender of Rights detailed concerns around the transparency obligations of those responsible for AI systems.¹⁹⁵⁴

The CNIL’s work also contributed to the Declaration on Ethics and Data Protection in AI, which was later adopted by the Global Privacy Assembly in 2018.¹⁹⁵⁵ The CNIL is a member of the Global Privacy Assembly (GPA) since 2002. The CNIL did not endorse the 2020 GPA Resolution on AI

Accountability¹⁹⁵⁶ but co-sponsored the 2022 GPA Resolution on Facial Recognition Technology¹⁹⁵⁷ and the 2023 GPA Resolution on Generative AI.¹⁹⁵⁸

In January 2023, the CNIL created an AI Department (AID) to improve its understanding of the risks posed by AI systems, prepare for the entry into force of the EU AI Act, and develop further relationships within the AI ecosystem.¹⁹⁵⁹ The AID Director is Bertrand Pailhes, the former national coordinator for France's national AI strategy, helping to align AID's efforts with the national AI strategy's objectives and work towards creating a common EU framework for trustworthy and innovative AI.¹⁹⁶⁰

Generative AI was one of the key topics in the 2023 action plan. The CNIL's work on Generative AI was supported by the AID¹⁹⁶¹ and its Digital Innovation Laboratory (LINC), which released a study on generative AI to understand better its functioning and risks.¹⁹⁶² The CNIL issued its first recommendations on the development of AI systems in April 2024, following a public consultation. The recommendations seek to support AI ecosystem players in complying with the GDPR, focusing on the purpose of data processing, data retention, and data minimization.¹⁹⁶³ A second public consultation focusing on the legal basis of legitimate interest to develop AI systems, data subject rights, and

safe development of AI systems closed on October 1, 2024, with new recommendations expected to be published in early 2025.¹⁹⁶⁴

Algorithmic Transparency

Following the assassination in October 2020 of history professor Samuel Paty, the Secretary of State for the Digital Transition and Electronic Communications, Cédric O, wrote in a blog that “the opacity of the functioning of (social media) algorithms and their moderation is a societal and democratic aberration.” He added “it is also essential that full transparency be observed vis a vis the public authorities as regards the principles governing in detail the choices made by their moderation algorithms, whether it is about online hatred or dissemination of false information.”¹⁹⁶⁵

France is subject to the GDPR and Convention 108+ which both provide for a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.¹⁹⁶⁶

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems¹⁹⁶⁷ specifically emphasizes requirements on transparency, accountability and effective remedies. The Recommendation provides that “The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs.”¹⁹⁶⁸ The Recommendation also clarifies that “Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”¹⁹⁶⁹

Health Data Hub Controversy

In pursuit of its open data policy objective, France launched the Health Data Hub (HDH) in December 2019¹⁹⁷⁰ to facilitate data sharing and foster research. This data sharing is done by amalgamating 18 public databases of patient data to connect with environmental, patient compliance, and quality of life data, enabling consideration of all the data surrounding a patient.¹⁹⁷¹ The HDH's compiled health data is hosted by Microsoft.¹⁹⁷²

Following the European Court of Justice's *Schrems II* judgment in July 2020 which invalidated the Privacy Shield, France's highest administrative court (the *Conseil d'État*) considered a request for the suspension of the HDH. In October 2020, the Conseil d'Etat rejected the request. The Conseil d'Etat observed that "personal data hosted in the Netherlands under a contract with Microsoft cannot legally be transferred outside the European Union. While the risk cannot be completely excluded that the American intelligence services request access to this data, it does not justify, in the very short term, the suspension of the Platform, but requires special precautions to be taken, under the supervision of the CNIL."¹⁹⁷³

Following this decision, the CNIL announced it will advise public authorities on the implementation of appropriate guarantees and will ensure that use of the HDH's health crisis-related research projects is necessary.¹⁹⁷⁴

The press reported in October 2020 that the debates are far from over since the CNIL and the Conseil d'État do not have the same analysis of the situation. According to the CNIL, the end of the Privacy Shield requires an urgent change of host for the personal data. According to the Conseil d'Etat, the risks are hypothetical and not urgent.¹⁹⁷⁵ A CNIL's draft determination, could have

Center for AI and Digital Policy

essentially prevented the HDH's implementation.¹⁹⁷⁶ According to Mediapart, at the end of November 2020, the Minister of Health and Solidarity, Olivier Véran, responded to the President of the CNIL by saying he would put an end to Microsoft's hosting of the HDH within two years.¹⁹⁷⁷

In 2022, health data remains a major concern for the CNIL. Indeed, this data, known as sensitive data in EU law, has been widely collected and processed by many different data controllers and processors in the current health context to fulfill different purposes. Some of these purposes are access to the workplace for certain professions, implementing a sanitary pass, monitoring COVID-19 evolution, establishing vaccination campaigns, deepening research, and implementing health protocols for COVID-19 patients, among others. In this regard, in January 2023, the CNIL issued its Standard relating to the processing of personal data implemented for the purpose of managing health vigilance systems.¹⁹⁷⁸

GAIA-X

In April 2020, France and Germany launched Gaia-X, a platform joining up cloud-hosting services from dozens of French and German companies for business to move their data freely under Europe's data processing rules. "We are not China, we are not the United States—we are European countries with our own values and our own European interests that we want to defend" said French Economy Minister Bruno Le Maire.¹⁹⁷⁹ Gaia-X is meant to play a key role in the European data strategy as its success lies in the ability to harmonize rules on data sharing.¹⁹⁸⁰ According to the GAIA-X website: "The exchange of data across organisations is currently constrained by proprietary, non-transparent, non-

interoperable technologies that do not provide the necessary level of trust. Our concept of sovereignty translates into the autonomy and self-determination users need to operate their technology choices. Gaia-X enables and boosts the creation of Data Spaces through trusted platforms that comply with common rules, allowing users and providers to trust each other on an objective technological basis, to safely and freely share and exchange data across multiple actors.” As of February 2023, Gaia-X has over 350 members, and is built upon three pillars: the Gaia-X Association, national Hubs, and Community. Each pillar contains several working groups and committees to ensure Gaia-X’s objectives are met.

Gaia-X has been open to non-European firms, triggering worries that large American or Chinese companies could water down new rules or influence the initiative to benefit them rather than Europe’s own interests.¹⁹⁸¹

Use of AI in Public Administration

In December 2023, the CNIL selected four AI projects aimed at improving public services for incubation in its sandbox. One project led by the French employment agency (France Travail) is to equip job agents with AI conversational assistants to help them offer a personalized path adapted to the needs of job seekers.¹⁹⁸² Another project, the “Albert” project of the DINUM (interministerial directorate for digital affairs), is aimed at civil servants. It consists of assisting them in the search for information and helping them to formulate specific responses to users. The project is based on an open language model. It is considered as a potential “lever for the deployment of AI in administrations”.

Mass Surveillance

Facial recognition technology (FRT) processes sensitive personal data prohibited, at least in principle, by the GDPR and the French data protection law, subject to exceptions such as individual’s consent or for important public interests. In the latter case, FRT can be authorized by a Decree of the Conseil d’État informed by an opinion from the CNIL.

FRT has long been used in France on a voluntary basis with regard to passport control in airports, bank security, and has also been tested in several colleges. The deployment of a FRT-based ID program, Alicem,¹⁹⁸³ was scheduled

¹⁹⁸³ Charlotte Jee, *France plans to use facial recognition to let citizens access government services*, MIT Technology Review (Oct. 3, 2020), <https://www.technologyreview.com/2019/10/03/132776/france-plans-to-use-facial-recognition-to-let-citizens-access-government-services/>

for November 2019, despite a very critical opinion from the CNIL. Deployment was delayed after a group of NGOs appealed to the Conseil d'État requesting the annulment of the decree authorizing its creation. In early November 2019, the Conseil d'État dismissed the appeal.¹⁹⁸⁴ The same month, the CNIL published guidance on the use of facial recognition.¹⁹⁸⁵ The document, primarily directed at public authorities in France that want to experiment with facial recognition, presents the technical, legal and ethical elements that need to be considered. After recalling that facial recognition, experimental or not, must comply with the GDPR and the LED, the CNIL sets out three general requirements: (1) facial recognition can only be used if there is an established need to implement an authentication mechanism that ensures a high level of reliability, and there are no other less intrusive means that would be appropriate; (2) the experimental use of facial recognition must respect the rights of individuals (including consent and control, transparency and security); and (3) the use of facial recognition on an experimental basis must have a precise timeline and be based on a rigorous methodology setting out the objectives pursued and the criteria for success.

In December 2019, the Observatoire des Libertés Numériques¹⁹⁸⁶ and 80 organisations signed an open letter calling on the French Government and Parliament to ban any present and future use of facial recognition for security and surveillance purposes.¹⁹⁸⁷

In November 2023, investigative media Disclose revealed that in 2015, law enforcement secretly acquired surveillance video image analysis software from the Israeli company Briefcam. For eight years, the Ministry of the Interior concealed the use of this tool, which enables facial recognition. According to Disclose, the algorithmic video-surveillance option is unlawfully used by municipal police forces across the nation.¹⁹⁸⁸

Center for AI and Digital Policy

In 2020, the administrative tribunal of Marseille rendered a decision on facial recognition that ruled illegal a decision by the South-East Region of France (Provence-Alpes-Côte d'Azur) to test facial recognition at the entrance of two High schools.¹⁹⁸⁹ Following an analysis from the CNIL,¹⁹⁹⁰ the court ruled that there was no opportunity for free and informed consent and also that there were other, less intrusive means to manage entrance to high schools.¹⁹⁹¹ This was the first decision ever by a court applying the General Data Protection Regulation (GDPR) to Facial Recognition Technologies (FRTs).¹⁹⁹²

However, many other experiments are taking place, and companies are positioning themselves, with the Olympic Games in Paris in 2024 in their sights, and a market of seven billion euros at stake.¹⁹⁹³ In May 2023, the French Government enacted France's Olympic law legitimizing automated algorithmic image processing at the Olympic Games¹⁹⁹⁴ as an experiment until March 31, 2025.¹⁹⁹⁵ An automated surveillance system will be put in place in order to detect "suspect" behavior or objects. According to Human Rights Watch, "the surveillance provision of the proposed bill would constitute a serious threat to civic freedoms and democratic principles" Human Rights Watch also noted that the European Data Protection Board and the European Data Protection Supervisor stated, "biometric surveillance stifles people's reasonable expectation of anonymity in public spaces and reduces their will and ability to exercise their civic freedoms, for fear of being identified, profiled or even wrongly persecuted."¹⁹⁹⁶ The civil rights organization "La Quadrature du Net" also launched a campaign

against biometric surveillance.¹⁹⁹⁷ For its part, the CNIL has identified the use of augmented cameras in the framework of the Olympic games as a priority topic for investigation in 2024.¹⁹⁹⁸

French MPs unsuccessfully tried to challenge the law before the French Constitutional Council due to the use of algorithm-driven cameras in the Olympics. The French Constitutional Council noted that facial recognition will not be used and the AI-camera system was set for a legitimate purpose and only temporarily. As long as the necessary safeguards are put into place, there is no reason to invalidate the law at this stage.¹⁹⁹⁹

In May 2022, the EDPB has produced guidelines on the use of FRT in the area of law enforcement.²⁰⁰⁰ The EDPB Chair said: “While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms.” The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights.”²⁰⁰¹ A few months later, in October 2022, the CNIL imposed a €20 million fine on Clearview AI for unlawful use of facial recognition technology.²⁰⁰² In April 2023, the French DPA considered that the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

company had not complied with the order and consequently imposed an overdue penalty payment of EUR 5,200,000 on Clearview AI.²⁰⁰³

Environmental Impact of AI

France's AI Strategy includes raising international awareness about the environmental impact of AI, promoting research to make AI infrastructure "more environmentally friendly," and making ecological data open to the public among its key objectives.²⁰⁰⁴

Reports that France's delegation to the AI Action Summit in Paris in February 2025 would promote discussions around measuring AI's impact on the environment suggest progress on the first point. Anne Bouverot, Paris's envoy for AI noted that "We will definitely push for more transparency [...] and maybe a way to do that is to have a ranking or leaderboard."²⁰⁰⁵

Lethal Autonomous Weapons

President Macron declared in an interview that he is "dead against" the deployment of lethal autonomous weapons: "You always need responsibility and assertion of responsibility."²⁰⁰⁶ In the submission to the UN Secretary General 2024 report on member States' views on lethal autonomous weapons systems (LAWS), France emphasized support for a two-tier approach to address the challenges of LAWS. France advocates for the prohibition of fully autonomous lethal systems that are inherently indiscriminate and supports regulation of partially autonomous systems to ensure compliance with International Humanitarian Law (IHL) while maintaining human control and accountability.²⁰⁰⁷

In October 2022, France was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability,

and emphasized the importance of an international framework of rules and constraints.²⁰⁰⁸ In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”²⁰⁰⁹

At the 78th UN General Assembly First Committee in 2023, France voted in favor²⁰¹⁰ of resolution L.56²⁰¹¹ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

France also participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands in February 2023. At the end of the Summit, France, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.²⁰¹² States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

accountability.”²⁰¹³ France also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.²⁰¹⁴

France took part in the second REAIM Summit, which took place in Seoul, South Korea, on September 9–10, 2024. This summit concluded with the adoption of the Blueprint for Action, which emphasizes the necessity of maintaining human involvement in the development, deployment, and use of AI in the military domain, ensuring compliance with international law and preventing the proliferation of weapons of mass destruction.²⁰¹⁵

Human Rights

France is a signatory to many international human rights treaties and conventions. France typically ranks among the top nations in the world for the protection of human rights and transparency. Freedom House ranked France “Free” in 2024 with a score of 89/100, given the country’s “vibrant democratic processes and generally strong protections for civil liberties and political rights.” The report also notes that “successive governments have responded to terrorist attacks and the COVID-19 pandemic by curtailing constitutional protections and empowering law enforcement to impinge upon personal freedoms.”²⁰¹⁶

The French Ombudsman and the CNIL have “both, in their own area of expertise, voiced their concerns regarding the impact of algorithmic systems on fundamental rights.”²⁰¹⁷ Following a joint expert seminar in May 2020, they have called in June 2020 for a collective mobilization to prevent and address discriminatory biases of algorithms.²⁰¹⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In their report *Algorithms: Preventing Automated Discrimination*,²⁰¹⁹ the CNIL and the ombudsman stress that bias can be introduced at every stage of the development and deployment of AI systems, discuss how algorithms can lead to discriminatory outcomes and include recommendations on how to identify and minimize algorithmic biases. The Ombudsman called on the government and relevant actors to take appropriate measures to avoid algorithms that replicate and amplify discrimination.²⁰²⁰ In particular, the Ombudsman recommended to: i) support research to develop studies to measure, and methods to prevent bias; ii) reinforce information, transparency and explainability requirements with regard to algorithms; and iii) perform impact assessments to anticipate discriminatory effects of algorithms.

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers reminded member States of their commitment “to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction.” The Committee charged states to “ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”²⁰²¹

In April 2022, the French National Consultative Commission on Human Rights also adopted an opinion on the impact of artificial intelligence on fundamental rights. The consultative Commission recommends prohibiting certain uses of AI that are considered too prejudicial to fundamental rights, such as social scoring or remote biometric identification of people in public spaces and places accessible to the public.²⁰²²

AI Safety Summit

In November 2023, France participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁰²³ France thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

France hosted the third iteration of the AI Safety Summit, rebranded as the AI Action Summit, in February 2025.²⁰²⁴

OECD / G20 AI Principles

France endorsed the OECD and the G20 AI Principles.²⁰²⁵

In 2020, France and Canada, and a dozen other countries announced the Global Partnership on Artificial Intelligence (GPAI) to “support the responsible and human-centric development and use of AI in a manner consistent with human rights, fundamental freedoms, and our shared democratic values.”²⁰²⁶

The OECD praised France for its commitment to following OECD recommendations on public administration by publishing a guide for public administrations on the responsible use of algorithms in the public sector.

During a 2023 interview, President Emmanuel Macron stated, “The G7 and the Organisation for Economic Co-operation and Development (OECD), which includes 38 countries, would be a “good platform” to develop global regulation.”²⁰²⁷

Center for AI and Digital Policy

Council of Europe AI Treaty

France contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024.²⁰²⁸ The European Commission signed this first legally binding international AI treaty on behalf of EU Member States on September 5, 2024.²⁰²⁹ France did not sign independently.

UNESCO Recommendation on AI Ethics

France endorsed the 2021 UNESCO Recommendation on AI Ethics, the first ever global agreement on the ethics of AI.²⁰³⁰ France is not implementing or preparing the UNESCO Readiness Assessment Methodology (RAM), a tool to facilitate implementation of the AI ethics Recommendations by helping countries identify gaps in their AI governance and infrastructure.²⁰³¹

Evaluation

France is among the leaders in national AI policies. France has endorsed the OECD/G20 AI Principles and contributed to the creation of the Global Partnership on AI. French authorities in charge of human rights, data protection and ethics are actively involved in AI policy and have published practical guidance regarding facial recognition and algorithmic transparency. France anticipated the entry into force of the EU AI Act by creating a dedicated AI unit with its data protection authority.

However, when it comes to the use of AI by law enforcement authorities and for security purposes, strong resistance exists to fully enforce fundamental rights. France successfully advocated for a national security exemption in both the EU AI Act and the Council of Europe Framework Convention on AI, human rights, democracy and the rule of law. France also played a key role in imposing a separate and lighter regime for GPAI models under the EU AI Act.

Germany

In 2024, Germany introduced an AI-driven data strategy to enhance sustainable development through AI and became party to the Council of Europe AI Treaty through the EU signature. The federal government also presented bills to Parliament to permit the use of facial recognition by law enforcement and the use of biometric identification in migration.

National AI Strategy

The German government initially published its national AI strategy in November 2018.²⁰³² The three main goals are (1) “to make Germany and Europe a leading centre for AI and thus help safeguard Germany’s competitiveness in the future”, (2) to ensure “a responsible development and use of AI which serves the good of society,” and (3) to “integrate AI in society in ethical, legal, cultural and institutional terms in the context of a broad societal dialogue and active political measures.”

In December 2020, Germany updated its AI Strategy. The federal government responded to current developments—with an overview of AI principles and frameworks developed between 2018 and 2020 -, and high-priority topics such as the COVID-19 pandemic—with a discussion on how AI can help with “pandemic control,” or environmental and climate protection.²⁰³³

From 2018 to 2021, the Digitalrat or Digital Council advised the German federal Government on how to best implement the National AI Strategy. The Committee is comprised of AI experts in science and business. An exchange between politics and national as well as international experts is also at the forefront of their activities.²⁰³⁴ The 2021 coalition agreement of the German government describes AI as a crucial strategic technology for the future and addresses many key AI topics, although the German AI Association, a federation of AI companies and organizations, has noted that the agreement also has its flaws, notably with regards to data protection.²⁰³⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The guiding slogan for the German national strategy is “AI made in Germany.” One section of the AI Strategy states: “The Federal Government advocates using an “ethics by, in and for design” approach throughout all development stages and for the use of AI as the key element and hallmark of an ‘AI made in Europe’ strategy.” The Strategy continues, “The Federal Government is engaging in dialogue with national and international bodies, including the Data Ethics Commission or the EU Commission’s High-Level Expert Group on AI and will take into account the recommendations of these bodies as it develops standards on ethical aspects at German and European level.”

AI ethics is a core component of the AI Strategy.²⁰³⁶ The German government further emphasizes transparency for the development of AI to ensure the protection of civil rights and maintain trust in businesses and institutions. The AI Strategy suggests that “government agencies or private-sector auditing institutions” should “verify algorithmic decision-making in order to prevent improper use, discrimination and negative impacts on society.”

Germany has launched several projects to implement its National AI Strategy. According to the OECD, there are approximately 29 initiatives on AI across several topics and institutions.²⁰³⁷ They range from the ethical guidelines to initiatives that foster fruitful business environments. There are four that specifically focus on ethics.

First, the Ethical Guidelines for Automated and Connected Driving set out 20 ethical principles for autonomous and semi-autonomous vehicles.²⁰³⁸ This was among the first guidelines worldwide to establish ethical principles for connected vehicular traffic. The Ethical Guidelines led to an action plan and the “creation of ethical rules for self-driving cars” that was adopted by the Federal Government.²⁰³⁹

Second, the German AI Observatory forecasts and assesses AI technologies’ impact on society. The AI Observatory also develops regulatory frameworks that help deal with the rapidly changing labor market to ensure that social aspects of these changes are not neglected.²⁰⁴⁰

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Third, although not mentioning AI explicitly, the Ethical, Legal and Social Aspects of Modern Life Sciences Funding Priority, launched originally in 1997, funds research with the goal of establishing “findings regarding the opportunities and risks presented by modern life sciences” and developing a basis for discourse amongst involved stakeholders.²⁰⁴¹

Fourth, the Federal Ministry for Economic Cooperation and Development launched the Development Cooperation initiative FAIR Forward in 2019. The initiative aims to promote a more “open, inclusive and sustainable approach to AI on an international level” by “working together with five partner countries: Ghana, Rwanda, South Africa, Uganda and India.” The FAIR Forward goals are to: Strengthen Technical Know-How on AI, Remove Entry Barriers to AI, and Develop Policy Frameworks ready for AI. Several projects are underway in partner countries.²⁰⁴²

Further, the Federal Ministry for Economic Affairs and Energy launched a Regulatory Sandboxes initiative in 2018. This initiative, although not specifically dedicated to AI, focuses on “testing innovation and regulation which enable digital innovations to be tested under real-life conditions and experience to be gathered.”²⁰⁴³

In response to the European Commission’s White Paper on AI,²⁰⁴⁴ Germany called for tighter regulation of AI on the EU level in 2020. The German government stated it welcomes new regulations but wants more specific definitions and stricter requirements for data storage, more focus on information security and more elaborate definitions of when human supervision is needed.²⁰⁴⁵

Data Ethics Commission

In 2018, the German federal government established a Data Ethics Commission to “build on scientific and technical expertise in developing ethical guidelines for the protection of the individual, the preservation of social cohesion,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

and the safeguarding and promotion of prosperity in the information age.”²⁰⁴⁶ In 2020, the Commission recommended to the German parliament that sustainability, justice and solidarity, democracy, security, privacy, self-determination and human dignity should be the ethical and legal principles that guide the regulation of AI.²⁰⁴⁷ The Data Ethics Commission suggested a risk-based approach to the regulation of AI, which distinguishes five levels of criticality in a “criticality pyramid” and respective measures in its risk-adapted regulatory system for the use of algorithmic systems. The Commission also recommended the establishment of “*ex ante* approval mechanisms and continuous supervision by oversight bodies.”²⁰⁴⁸

The German consumer organization federation *Verbraucherzentrale Bundesverband* (vzbv) favored the creation of the Commission and strongly supported the recommendations, as did the main German industry body *Bundesverband der Deutschen Industrie* (BDI).²⁰⁴⁹ The vzbv further emphasized that the aim of Automated Decision Making (ADM) regulation must be to ensure compliance with existing laws. Toward that goal, “it must be possible for supervisory authorities to scrutinise and verify the legality of ADM systems and their compliance with existing laws so that they can impose penalties if the law is infringed.”²⁰⁵⁰ Vzbv also noted it is “important to ensure consumers’ self-determination when making decisions, to strengthen consumers’ confidence in ADM systems by creating transparency and to foster competition and innovation.”

Public Participation

Germany’s national AI strategy points out that the 2019 data strategy is based on “broad public consultation and a host of expert discussions,” though participation in developing and updating its AI strategy was primarily limited to “experts in expert forums.”²⁰⁵¹

²⁰⁴⁶ Bundesministerium der Justiz und für Verbraucherschutz, *Report of the Data Ethics Commission Strengthens Data Protection* (Oct. 23, 2019), https://www.bfdi.bund.de/SharedDocs/Pressemitteilungen/EN/2019/24_Datenethikkommission.html

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

One AI initiative, *Plattform Lernende Systeme* (Platform for Self-Learning Systems),²⁰⁵² focuses specifically on fostering dialogue between different stakeholders, like civil society, government, and business on the topic of self-learning systems. The Platform also aims to “shape self-learning systems to ensure positive, fair and responsible social coexistence” as well as strengthen skills for developing and using self-learning systems.²⁰⁵³ The IT Security, Privacy, Legal and Ethical Framework working group has published several papers on AI security and ethical issues.²⁰⁵⁴

To inform the public about AI policy, the German government created a website (KI-Strategie-Deutschland.de) to provide information on AI strategy implementation and new policy developments.²⁰⁵⁵ *Plattform Lernende Systeme* also offers a map that shows AI developments across Germany by region.²⁰⁵⁶

Germany’s federal parliament also set up a Study Commission comprised in equal parts of parliamentary representatives and experts called the “Study Commission on Artificial Intelligence, Social Responsibility, and Economic, Social and Ecological Potential.”²⁰⁵⁷ The Commission’s aim was to develop recommendations on AI and examine its impact on “our value systems, fundamental and human rights, and [its] benefits for society and the economy.” Some of their meetings were broadcasted on parliamentary television or could be attended in person. After two years of work, the Study Commission presented its final report to the federal parliament (Bundestag) on October 28, 2020. The Commission’s findings were debated in the Bundestag on November 5, 2020.²⁰⁵⁸

²⁰⁵² Literally “Platform for Self-Learning Systems”, but self-branded in English as Platform for AI.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

EU Digital Services Act

As an EU member state, Germany shall apply the EU Digital Services Act (DSA).²⁰⁵⁹ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation. The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Through the 2022 Strengthened Code of Practice on Disinformation,²⁰⁶⁰ which counts as a mitigation measure under the DSA, signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

EU AI Act

As an EU member State, Germany is bound by the EU AI Act.²⁰⁶¹ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI. The first provisions of the AI Act entered into force on August 1, 2024. EU countries have until the end of 2025 to designate institutions as oversight and supervisory authorities.²⁰⁶²

Data Protection

Since Germany is an EU Member State, the General Data Protection Regulation (GDPR)²⁰⁶³ is directly applicable in Germany and to Germans. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in

²⁰⁵⁹ Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act) (Oct. 21, 2022), <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A32022R2065>

the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”²⁰⁶⁴ The GDPR entered into force in May 2016 and has applied since May 2018.

The activities of law enforcement authorities have been addressed at the EU level by the EU Data Protection Law Enforcement Directive (LED).²⁰⁶⁵ The directive ensures that the “personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”²⁰⁶⁶ The LED prohibits any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.²⁰⁶⁷

The Federal Data Protection Act (*Bundesdatenschutzgesetz*, BDSG) was designed to bring the German privacy law on par with the GDPR and the LED. It is usually referred to as the “BDSG-new” since it replaced the former BDSG.²⁰⁶⁸ The German Federal Cabinet approved the Draft Law²⁰⁶⁹ to amend the BDSG in February 2024. After the legislative body’s (Bundesrat) opinion, the Draft Law will be discussed by the Federal Parliament (Bundestag).²⁰⁷⁰ The Draft Law institutionalizes a committee of Independent German Federal and State Data Protection Supervisory Authorities (Data Protection Conference—DSK), whose decisions will be legally non-binding. According to the Draft Law, companies and institutions that process personal data for scientific, historical, or statistical

purposes and act as joint controllers may be subject to the supervision of a single German supervisory authority, and it is possible to designate a supervisory authority that is competent for joint controllers who are subject to the supervision of different supervisory authorities. The Draft Law would allow data controllers to rely on an exception when the interest in the confidentiality of business and trade secrets outweighs the data subjects' right of access and would create a new legal basis for scoring in certain circumstances.

In addition to the BDSG-new, there are various sector-specific data protection regulations, such as those governing financial and energy industries. For example, the Telecommunications Telemedia Data Protection Act (TTDSG) set to be enforced in 2023, contains regulations about cookie management and Personal Information Management Systems.²⁰⁷¹ The name of the regulation was changed to Telecommunications Digital Services Data Protection Act (TDDDG) in 2024 as a part of the introduction of the Digital Services Act. The contents are essentially identical.²⁰⁷² Further, the German Civil Code Article 327q is intended to protect user privacy in cases where a consumer gives their personal data to access a service.²⁰⁷³

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Germany is also a member of the Council of Europe and ratified the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.²⁰⁷⁴ The German Federal Council introduced a draft law in July 2024 to protect personal rights from deepfakes under criminal law. The draft law addresses privacy concerns related to deepfake technologies and provides coverage for individuals whose rights to privacy are violated.²⁰⁷⁵

AI Oversight

The German Federal Commissioner for Data Protection and Freedom of Information (*Der Bundesbeauftragte für den Datenschutz und die Informationsfreiheit*) is the national data protection authority for Germany. It is however only in charge of federal government authorities and private telecoms and postal services.²⁰⁷⁶ The Federal Data Protection Commissioner serves as the joint representative of the German data protection authorities within the European Data Protection Board.²⁰⁷⁷

The Federal Data Protection Commissioner is a member of the Global Privacy Assembly since 2002. It co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in AI²⁰⁷⁸ and the 2023 GPA Resolution on Generative AI.²⁰⁷⁹ The Federal Data Protection Commissioner also sponsored the 2020 GPA Resolution on AI Accountability.²⁰⁸⁰ However, the Federal Data Protection Commissioner did not endorse the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology.²⁰⁸¹

Any other private entity and all other authorities in Germany are regulated by the relevant state DPA. Several State DPA are members of the Global Privacy Assembly but none of them has endorsed GPA's AI-related resolutions.²⁰⁸²

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Federal Data Protection Commissioner is also one of the members of the committee of Independent German Federal and State Data Protection Supervisory Authorities (Data Protection Conference—DSK). The DSK published a position paper in May 2024, ensuring that the member data protection authorities are prepared to be the designated national supervisory authority under the EU AI Act.²⁰⁸³ In the following days, the DSK published guidelines for implementing and using AI systems in compliance with the EU’s data protection regulations.²⁰⁸⁴ The guidelines aim to clarify uncertainties in the use of AI systems and provide pre-implementation and implementation guidance with compliance requirements.

The Federal Data Protection Commissioner is also a member of the G7-Roundtable of the data protection and privacy authorities. The Roundtable issued the Statement on Generative AI²⁰⁸⁵ in 2023, the Statement on the Role of Data Protection Authorities in Fostering Trustworthy AI,²⁰⁸⁶ and the Statement on AI and Children²⁰⁸⁷ in 2024. The Federal Data Protection Commissioner played a significant role in the statements.²⁰⁸⁸

The G7 Data Protection Authorities (DPAs) adopted a statement on AI governance in October 2024. They pointed out the critical role of DPAs in the realm of AI, emphasizing the need for protecting the right to privacy and data protection more than ever. The adopted statement “calls on policymakers and regulators for approaches that recognise the critical role of the DPAs in ensuring that AI technologies are developed and deployed responsibly and in identifying and addressing AI issues at their source.” The statement emphasized that “DPAs

Center for AI and Digital Policy

apply a human-centred lens to their mandate and have vast experience with data-driven processing and in operationalising many data protection overarching principles that can be transposed into broader AI governance frameworks, in particular fairness, accountability, transparency, and security.”²⁰⁸⁹

In Bavaria, there is one authority responsible for the private sector and one for the public sector: the Data Protection Authority of Bavaria for Private Sector (BayLDA) and the Bavarian Data Protection Commissioner, which is responsible for enforcing data rights against public authorities and government agencies.²⁰⁹⁰ In other states, one authority is responsible for all data protection supervision and enforcement in the state. One example of this is Hessen, where the Hessian Commissioner for Data Protection and Freedom of Information is responsible for the public authorities, government agencies as well as the private sector.²⁰⁹¹

In 2021, numerous German DPAs launched a collective investigation on the use by German companies of third-party providers outside the EU and their compliance with the 2020 European Court of Justice’s *Schrems II* decision regarding international data transfers. The Court has made clear that DPAs shall intervene to suspend or prohibit transfers which do not match the *Schrems II* criteria.²⁰⁹²

The Hamburg Commissioner for Data Protection and Freedom of Information published an advisory in June 2024 on Meta’s new privacy policy, planned AI model training protocol, and the utilization conditions of users’ personal data from social media applications. The Hamburg Commissioner provided helpful information on users’ options and what they can do, Meta’s new privacy policy’s aims and goals, and what happens next.²⁰⁹³ Furthermore, the BayLDA published guidelines regarding the application of the GDPR and other legal requirements to the processing of personal data by AI systems. The BayLDA

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

also expressed its opinion on the significant role and responsibility of data protection supervisory authorities in the field of AI supervision.²⁰⁹⁴

The German Institute for Human Rights, founded in 2001 by the German Bundestag (Parliament) as an independent national institution, works to ensure the observation and promotion of human rights by the German government in Germany and abroad.²⁰⁹⁵ The Institute published an interview on protecting human rights when applying AI in the context of elderly care in 2019²⁰⁹⁶ and has emphasized the importance of assessing and preventing the human rights risks of Artificial Intelligence in 2021,²⁰⁹⁷ though the Institute has not indicated that it sees a sustained oversight of AI-related human rights infringements as a priority.

The Federal Ministry of the Interior and Community is creating the Advisory Center for AI (BeKI) as a central point for contacting and coordinating for AI projects at the federal level. BeKI is still under development²⁰⁹⁸ and aims to ensure a coordinated approach, advise on the legal, ethical, and technical topics for responsible and transparent use of AI, and transform administrative processes sustainably.²⁰⁹⁹

The State Commissioner for Data Protection in Lower Saxony announced the establishment of the Office for AI under his authority in 2024. The new unit will support the use of AI technologies in relation to data protection laws, serve as a competence center for AI-related questions, and collaborate with other relevant authorities. The Commissioner Lehmke pointed out: “The establishment of the staff unit is an important step to proactively meet the challenges that AI brings with it, to ensure the protection of personal data in an increasingly digitalized world, and at the same time to accompany the opportunities of technical development.” The

unit also aims to devise safeguards for the implementation and evaluation of AI, evaluate the potential hazards of AI-based systems, provide assistance for research, promote awareness among various stakeholders, and conclusively ensure the implementation of AI in accordance with data protection regulations.²¹⁰⁰

Algorithmic Transparency

Germany is subject to the GDPR and Convention 108+. Germans have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.²¹⁰¹

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems²¹⁰² specifically emphasizes requirements on transparency, accountability, and effective remedies. The Recommendation provides that “The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs.”²¹⁰³ The Recommendation also clarifies that “Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”²¹⁰⁴

The Ministry of Education and Research started a funding priority for AI R&D projects on explainability and transparency in 2019. The Ministry stated that improving explainability and transparency are two of the Federal government’s central research goals.²¹⁰⁵ Funding is “aimed at collaborative projects between

science and industry in an interdisciplinary composition.”²¹⁰⁶ The German consumer organization vzbv emphasized in 2019 that the aim of automated decision-making regulation must be to ensure compliance with existing laws.²¹⁰⁷

In 2020, the German Data Ethics Commission for its part sees auditability, explainability, and redress possibilities as crucial for algorithm safety.²¹⁰⁸ However, even though Germany has had a significant impact on the drafting of the EU AI Act and its transparency regulations, AlgorithmWatch has noted that Germany (and specifically its Ministry of the Interior) has in recent years tried to water down transparency obligations for AI systems in the AI Act, most notably with regard to exemptions for AI use in “law enforcement, migration, asylum and border control,” including remote biometric identification systems.²¹⁰⁹

According to AlgorithmWatch,²¹¹⁰ the data protection agencies of the federal government and eight German federal states stated that greater transparency in the implementation of algorithms in the administration was indispensable for the protection of fundamental rights.²¹¹¹ The agencies demanded that if automated systems are used in the public sector, it is crucial that processes are intelligible and can be audited and controlled. In addition, public administration officials must be able to provide an explanation of the logic of the systems used and the consequences of their use. Self-learning systems must also be accompanied by technical tools to analyze and explain their methods. An audit trail should be created, and the software code should be made available to the administration and, if possible, to the public. According to the position paper, there need to be mechanisms for citizens to demand redress or reversal of decisions, and the processes must not be discriminating. In cases where there is a high risk for citizens, there needs to be a risk assessment done before deployment. Very sensitive systems should require authorization by a public agency that has yet to be created.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

One of the State DPAs, the Berlin Commissioner for Data Protection and Freedom of Information (BlnBDI), rendered a decision reasserting the importance of algorithmic transparency. In May 2023, the Berlin Data Protection Authority fined a Berlin-based bank € 300,000. The Bank used an online form to request various data about the applicant's income, occupation and personal details for a credit card application. Based on the information requested and additional data from external sources, the bank's algorithm rejected the customer's application without any justification. The algorithm is based on criteria and rules previously defined by the bank. Since the client had a good credit rating and a regular high income, he doubted the automated rejection and complained to the Berlin data protection commissioner. The lack of transparency regarding the automated decision led to the imposition of a fine by the State DPA.²¹¹²

Mannheim, in collaboration with eight other cities across Europe and with the help of Eurocities' Digital Forum, adopted an algorithm register, the Algorithmic Transparency Standard in January 2023.²¹¹³ The aim is to provide more information for residents about the use of algorithm by municipalities and their impact. The register includes a range of information such as the type and purpose of an algorithm, the department using the algorithm, the geographical area and domain it relates to and a risk category. It also includes details on the data source and training data, any bias and mitigation, and human oversight. This initiative builds on similar algorithm registers launched in Amsterdam and Helsinki in September 2020.

According to André Sobczak, Secretary General, Eurocities, "The efforts undertaken by these cities aim to set a standard for the transparent and ethical use of algorithms while their use is still in its relative infancy across city administrations in Europe. In this way, they seek to offer both a safeguard for people whose data may be used by algorithms and have created a validated model that other cities can use straight away, without having to invest further resources themselves."²¹¹⁴

The German Institution for Standardization (DIN) issued the DIN SPEC 92001-3 in 2023 as a guide for appropriate approaches and methods to enhance explainability throughout the life cycle of AI systems. The guide describes quality criteria, which promote explainable AI, for all types of AI systems and for all sectors. These criteria form the specific requirements for explainability and provide

proof of technical operation correctness, allowing organizations to embed transparency principles in their AI-based applications. The guide is the outcome of the CERTIFIED AI project, which was financed by the Ministry of Economic Affairs, Industry, Climate Protection and Energy of the State of North Rhine-Westphalia.²¹¹⁵

The Federal Office for Information Security (BSI) published a whitepaper on transparency of AI systems in 2024. In the whitepaper, the BSI highlighted the importance of transparency for AI system's trustworthiness and defined transparency in the context of AI systems for different stakeholders. The definition has been made in a technology-neutral and future-proof manner and covers the entire ecosystem related to AI, considering transparency beyond the actual system. The whitepaper also enumerates the transparency requirements of EU AI Act and examines the opportunities and risks of transparent AI systems.²¹¹⁶

The Federal Ministry for Digital and Transport (BMDV) and Federal Ministry of the Interior and Community (BMI) issued the AI guidelines in June 2024. The guidelines outline the framework for utilizing AI within the BMDV and BMI. It has been emphasized that the BMDV "use and design AI systems in such a way that results, modes of operation, decision-making principles and paths are presented as comprehensibly as possible for all those involved (explainable AI). This enables people to consciously acknowledge the results of AI, take responsibility for them and intervene if necessary. We make the use of AI recognizable." Furthermore, transparency regarding existing data, AI literacy, and broad participation opportunities in the AI environment are promoted.²¹¹⁷ The BMI elucidated the manner and rationale for the utilization of AI, as well as their guiding principles regarding its application.²¹¹⁸

Facial Recognition

German governments have launched several projects on facial recognition technology, but these have been met with considerable public resistance. In 2017, Hamburg police deployed facial recognition technology in the wake of the G20

protests, which led to a three-year legal battle involving the Hamburg DPA and several courts that ended with the police deleting its biometric database in 2020.²¹¹⁹ In 2018, the German Ministry of the Interior deployed facial recognition technology at a large train station in Berlin, sparking opposition from civil society.²¹²⁰ There was further outcry in 2020, when *Der Spiegel* reported that Germany planned to set up cameras capable of identifying people at 134 train stations and 14 airports.²¹²¹ In 2021, Germany's incoming coalition government said it would exclude biometric recognition in public spaces as well as automated state scoring systems by AI.²¹²² A January 2023 study showed that German citizens, when asked about facial recognition technology, generally "call for strong regulations to address associated risks," although citizens' trust in the government is correlated with their attitudes towards facial recognition technology.²¹²³

In late 2022 and early 2023, Germany has made clear it has some reservations on the AI Act, although its position seems to mesh well with the Act's general approach.²¹²⁴ Germany's position has been somewhat inconsistent: the German government favored a total ban on remote biometric identification technology in 2021 as per its coalition agreement²¹²⁵ while, in 2023, it only

supported a ban on *real-time* biometric recognition identification and would allow ex-post identification systems.²¹²⁶

The European Data Protection Board (EDPB) has produced guidelines on the use of facial recognition technologies in the area of law enforcement.²¹²⁷ The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights.²¹²⁸ After public consultation, the EDPB adopted guidelines for the use of facial recognition technologies in 2023. In version 2.0, practical examples and guidance were provided regarding facial recognition scenarios.²¹²⁹

In 2024, after a terrorist attack in Solingen, the Federal Government presented two draft bills, the so-called “security package,” to tighten security measures. The first draft bill, which aims to enhance internal security and the asylum system, empowers the Federal Office for Migration and Refugees to utilize biometric data to ascertain the identity of asylum seekers that do not carry IDs by comparing biometrics with publicly accessible data from the Internet.²¹³⁰ The second draft bill, which aims to improve the fight against terrorism, allows the use of biometric comparison for facial recognition to identify suspects easier.²¹³¹ The security package has been subjected to serious criticism.²¹³²

Predictive Policing

The German police has launched several projects using AI to assist in predictive policing both on the federal and state level. The Federal Crime Agency

has used risk scoring for “militant Salafists”²¹³³ while several state police forces have deployed PRECOBS, an anti-burglary system, with varying success. The police of Baden-Württemberg, for instance, started a pilot project with PRECOBS in 2015²¹³⁴ that was ended in 2019 “due to data quality issues.”²¹³⁵ North Rhine-Westphalia developed and tested the predictive policing tool SKALA from 2015 to 2018.²¹³⁶ In late 2022, Germany’s Constitutional Court started a legal review of surveillance software deployed by police in the state of Hesse since 2017. The software, dubbed ‘Hessendata’, is based on the US company Palantir’s Gotham program and its use has been met with public criticism.²¹³⁷ In the case, the court found that provisions in the laws of the states of Hesse and Hamburg, which enable the police to process data by matching data from various databases and to carry out automatic data analysis, were unconstitutional.²¹³⁸

In the EU AI Act negotiations, Germany called for a ban on systems that would replace human judges in crime and recidivism risk assessment as well, but it also pushed for exemptions for law enforcement in other areas.²¹³⁹

According to Germany’s “security package,” the Federal Criminal Police Office and the Federal Police will be able to compare biometric data with online sources and evaluate large volumes of data using AI. AI-based analysis can be used to establish connections between information held by law enforcement and the Internet, which is often used for predictive policing. The authority granted to law enforcement could be utilized in the event of a “particularly serious” crime suspicion.²¹⁴⁰ The widely criticized draft has not yet been enacted into law.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Environmental Impact of AI

The German Federal Government has acknowledged the importance of developing AI that is sustainable for the planet. In the 2020 update of Germany's Artificial Intelligence Strategy, the Federal Government says that it “will work to encourage that the technology is designed to be both energy and resource-efficient and is used as an instrument for environmental conservation. Direct and indirect environmental impacts will also be taken into account in all of this, so as to include rebound effects and shifting of environmental problems.”²¹⁴¹ There are currently no policies that explicitly refer to both AI and sustainability. However, in April 2024, the G7 Ministers of Climate, Energy, and the Environment committed to “promote and share emerging transformative capacity using artificial intelligence and machine learning to improve the complementary use of remote and in situ environmental data for climate, energy and environment decision making” in the Climate, Energy and Environment Ministers' Meeting Communiqué.²¹⁴²

The German Federal Ministry for Economic Cooperation (BMZ) and Development and the United Nations Development Programme (UNDP) announced a new platform designed to help ensure that responsible artificial intelligence is used for sustainable development in October 2024.²¹⁴³ The platform includes a list of five Sustainable Development Goals (SDG) as well as a way for participants to submit proposals for their initiatives. The initiatives should meet three criteria: (1) the initiative should be international, regional, or global, (2) the initiative should demonstrate its impact of its ability to achieve significant impact, and (3) at least one of the initiatives main goals should be to achieving one of the SDG in a developing country.²¹⁴⁴

Lethal Autonomous Weapons

The German government's 2018 coalition agreement stated that it “rejects autonomous weapon systems devoid of human control” and called for a global

ban.²¹⁴⁵ Also in 2018, in cooperation with the French government, the German government published a joint statement on Lethal Autonomous Weapons at the Meeting of the Group of Governmental Experts on Lethal Autonomous Weapons Systems (LAWS). They wrote, “At the heart of our proposal is the recommendation for a political declaration, which should affirm that State parties share the conviction that humans should continue to be able to make ultimate decisions with regard to the use of lethal force and should continue to exert sufficient control over lethal weapons systems they use.”²¹⁴⁶

In 2019, the then-Foreign Minister of Germany, Heiko Maas, reasserted the German position as being in favor of a total ban on Lethal Autonomous Weapons Systems,²¹⁴⁷ and the Foreign Ministry organized a virtual forum on LAWS in 2020 to move closer to a “collective normative framework.”²¹⁴⁸ Observers have argued, however, that the 2021 German coalition agreement is “ambivalent about legally binding action on autonomous weapons” and that it merely “rejects” these systems instead of pushing for regulation.²¹⁴⁹

The German government’s 2021 coalition agreement states, “We reject lethal autonomous weapon systems that are completely removed from human control. We actively promote their international outlawing. We want the peaceful use of space and cyberspace. For weapons technology developments in biotech, hypersonics, space, cyber and AI, we will take early arms control initiatives. We want to contribute to strengthening norms for responsible state behavior in cyberspace.”²¹⁵⁰

In October 2022, Germany was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General

Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.²¹⁵¹ In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”²¹⁵²

At the 78th UN General Assembly First Committee in 2023, Germany voted in favor²¹⁵³ of resolution L.56²¹⁵⁴ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

Germany’s submission reiterated support for “a legally binding instrument in the framework of the Group of Governmental Experts that prohibits the development, fielding or deployment of lethal autonomous weapons systems that cannot comply with international humanitarian law and are ipso facto prohibited.” Germany also supported “a set of regulations of weapons systems with autonomous functions, to ensure that human control is retained at all times [and] the creation of an additional protocol to the Convention on Certain Conventional Weapons that entails the prohibition of lethal autonomous weapons systems operating outside of human control and a responsible chain of command.”²¹⁵⁵

Germany also co-facilitated the Pact for the Future adopted by UN Member States in September 2024 that provides concrete measures to ensure a world that is safer, more peaceful, sustainable, and inclusive for the generations to

come.²¹⁵⁶ As per the provisions of the Pact, the Member States have taken the decision to “advance with urgency discussions on lethal autonomous weapons systems through the Group of Governmental Experts on Emerging Technologies in the Area of Lethal Autonomous Weapons Systems with the aim to develop an instrument, without prejudging its nature, and other possible measures to address emerging technologies in the area of lethal autonomous weapons systems, recognizing that international humanitarian law continues to apply fully to all weapons systems, including the potential development and use of lethal autonomous weapons systems.”²¹⁵⁷

Germany participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands in February 2023. At the end of the Summit, Germany, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.²¹⁵⁸ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”²¹⁵⁹ Germany also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.²¹⁶⁰

The second REAIM summit took place in Seoul on September 9–10, 2024. The REAIM Blueprint for Action was the outcome document for the summit. The blueprint encourages states, industry, civil society, and regional and international organizations to recognize and affirm the impact of AI applications on the military domain, especially on international peace and security. The blueprint exhorts stakeholders to implement ethical and human-centric AI applications while considering national and international laws. The importance of maintaining a global and regional dialogue and fostering active participation among stakeholders

has been emphasized. Germany is one of the supporting countries for this blueprint.²¹⁶¹

Human Rights

According to Freedom House, Germany is one of the top countries in the world for the protection of political rights and civil liberties, receiving a score of 93/100.²¹⁶² Freedom House reports that, “Germany is a representative democracy with a vibrant political culture and civil society. Political rights and civil liberties are largely assured both in law and practice.”

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers reminded member States of commitment to “ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction” and that “member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”²¹⁶³

AI Safety Summit

In November 2023, Germany participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²¹⁶⁴ Germany thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Germany participated in the AI Seoul Summit in May 2024, which built on the AI Safety Summit hosted by the UK at Bletchley Park.²¹⁶⁵ The next AI Safety Summit, called the AI Action Summit, took place in France in 2025.

OECD / G20 AI Principles

Germany is a member of the OECD and endorsed the OECD and the G20 AI Principles.²¹⁶⁶

In 2020, Germany joined 14 other countries to announce the Global Partnership on Artificial Intelligence to “support and accompany the responsible use of AI on the basis of human rights, fundamental freedoms, inclusion, diversity, innovation, economic growth and the common good, as well as to achieve the United Nations Sustainable Development Goals (SDGs).”²¹⁶⁷

In 2021, the OECD noted several examples of Germany’s implementation of the OECD AI Principles, including guidelines for trustworthy AI that are largely in line with the OECD AI Principles (Germany’s Data Ethics Commission ethics recommendations), the establishment of a dedicated body to coordinate and evaluate AI strategies, and the development of partnerships between public and private research organizations.²¹⁶⁸

Council of Europe AI Treaty

Germany also contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024.²¹⁶⁹ On September 2024, the EU signed this first legally binding international AI treaty on

behalf of its members, including Germany.²¹⁷⁰ Germany has not taken independent action.

UNESCO Recommendation on AI Ethics

Germany is a signatory to the UNESCO Recommendation on the Ethics of Artificial Intelligence. While its AI plan was published before the development of the UNESCO Recommendation, the German UNESCO Commission released a report in 2022 which showed that Germany “has taken important steps to regulate AI in a way that corresponds to human rights and the public good,” although more work is needed in some areas.²¹⁷¹

The German Bundestag held discussions over the UNESCO Recommendation on the Ethics of AI in 2022. However, no action has followed despite the discussions proposing action within 4 years of the release of the UNESCO Recommendation.²¹⁷²

UNESCO has provided Member States with the Readiness Assessment Methodology (RAM) to help countries assess how prepared they are to implement UNESCO’s Recommendation on AI Ethics. The RAM uses both quantitative and qualitative questions to assess a country’s readiness. Germany has not yet implemented the RAM.²¹⁷³

Evaluation

Germany’s national AI strategy emphasizes AI ethics, and Germany has called for regulating AI at EU level. However, while generally in favor of regulation and transparency, the German position on the risks of AI systems (particularly on biometric identification and predictive policing) is difficult to pin down, as different ministries, coalition members, and state governments may have different priorities and opinions.²¹⁷⁴ The same could be said about the regulation of GPAI models. With the adoption of the EU AI Act, Germany shall establish a national supervisory mechanism which, it is to be hoped, will be an independent

Center for AI and Digital Policy

one and will take the protection of human rights seriously. As Germany endorsed the UNESCO Recommendation on the Ethics of AI, it remains to be seen which concrete steps Germany will take to implement it in practice.

Ghana

In 2024, Ghana finalized a National Data Strategy through a collaboration between the Ministry of Communication and Digitalization and international organizations and launched the UNESCO Readiness Assessment Methodology (RAM). Ghana also endorsed the African Union Continental AI Strategy.

National AI Strategy

The Future Society (TFS) announced that “in October 2022, TFS delivered the Republic of Ghana National Artificial Intelligence Strategy 2023-2033 with our partners: Ghana’s Ministry of Communications and Digitalisation and Data Protection Commission, GIZ FAIR Forward and Smart Africa.” In January 2024, the Minister of Communications and Digitalisation, Ursula Owusu-Ekuful, stated that a draft strategy was ready and waiting for consideration and review by the Cabinet.²¹⁷⁵ The policy focuses on equipping Ghana's youth with AI skills through education and practical experiences, while fostering AI entrepreneurship and innovation through tax incentives and market incentives. It also emphasizes ethical AI practices, international collaboration, AI adoption in key sectors, and the establishment of a Natural Language Processing Centre of Excellence to promote local language integration.²¹⁷⁶ The Strategy is expected to ensure better conditions for the development and use of this innovative technology for the benefit of citizens.

The Ministry of Communications and Digitalization (MoCD), through the Data Protection Commission (DPC), launched the UNESCO Readiness Methodology (RAM) in October 2024 to help guide AI governance and development.²¹⁷⁷ The RAM helps countries identify gaps in AI governance and preparation for ethical AI in five dimensions: Legal and Regulatory, Social and Cultural, Economic, Scientific and Educational, and Technological and

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Infrastructural. Each of dimension is divided into sub-categories containing indicators for a cohesive assessment.²¹⁷⁸

As member of the African Union (AU), Ghana is working to align with the AU Digital Transformation Strategy²¹⁷⁹ as well as the Artificial Intelligence Continental Strategy for Africa. Ghana's Ministry of Communications and Digitalization participated in a consultative workshop organized by the AU High-Level Panel on Emerging Technologies (APET).²¹⁸⁰ The APET discussions aimed at gathering input about "myths, challenges, and benefits of Artificial Intelligence (AI) in Africa," urging African countries to invest in AI literacy, cooperate internationally for AI innovation, enhance data protection, invest in infrastructure, and review policy implementation frameworks governing AI.

The AU finalized the Artificial Intelligence Continental Strategy for Africa²¹⁸¹ at its 45th Ordinary Session in Accra, Ghana, in July 2024. The AU introduced the African Digital Compact (ADC)²¹⁸² in the same session as an initiative to leverage digital technologies and promote inclusivity in the drive for sustainable development and innovation across the continent. The ADC, aligned with Africa's Agenda 2063²¹⁸³ and the UN Global Digital Compact,²¹⁸⁴ calls for collaborative efforts from governments, businesses, and civil society to bridge digital divides and secure digital rights, fostering a resilient, digitally empowered Africa. With major AU policy developments taking place in Accra itself, Ghana could see a renewed push towards AU's Digital Transformation Strategy.²¹⁸⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Public Participation

In Ghana, stakeholder engagement for public policies is an established practice, led by the Ministry of Communication and Digitalization (MoCD). Annual budgets support the planning sessions to formulation of new policies.²¹⁸⁶ Stakeholder engagements took place for Ghana's Digital Economy Policy at the Accra Digital Centre in November 2022.²¹⁸⁷ Minister Ursula Owusu-Ekuful highlighted the significance of the ministerial consultation as a means to ensure inclusiveness and comprehensiveness of the policy, covering data governance, emerging tech and regulation, data classification, data sharing and open data.²¹⁸⁸

The National AI Strategy is the result of the collaborative efforts of Ghana's Ministry of Communications and Digitalisation, Ghana's Data Protection Commission, GIZ FAIR Forward,²¹⁸⁹ Smart Africa²¹⁹⁰ and The Future Society.²¹⁹¹ In total, the strategy is based on 40+ local stakeholder consultations, in-depth AI policy landscape mapping, and SWOT Analysis of Ghana's AI ecosystem, and 4 high-level public sector consultation workshops to iterate the mission and vision, recommendations and action plan, and a detailed booklet of AI use cases across key sectors.²¹⁹²

For example, in May 2022, The Future Society co-led a stakeholder consultation workshop in Ghana to support the development of Ghana's AI strategy.²¹⁹³ The workshop sessions addressed AI governance and frameworks, policies, implementation plans, SWOT, local AI ecosystems, AI ethical guidelines and recommendations for the establishment of program offices to drive implementation. The Future Society together with Ghana's Data Protection

Center for AI and Digital Policy

Commission, GIZ FAIR Forward, and Smart Africa held the third high-level public sector consultation workshop in August 2022 with representatives from private and public sector, academia, and civil society, to discuss the establishment of precautionary guardrails for AI across sectors.

As a member of the African Union, Ghana also took part in the planning for the Continental Artificial Intelligence Strategy.²¹⁹⁴ The document, in section 2.4.1, AI Governance and Regulation, cites the need for a multi-tiered governance approach to ensure transparency and accountability of the systems used and developed in Africa. Such an approach would include open public consultations comprising various sectors.

The MoCD, in partnership with Smart Africa, held a workshop aimed at finalizing Ghana's National Data Strategy in June 2024.²¹⁹⁵ Supported by the Data Protection Commission and the GIZ, the workshop brought together experts and government officials to align on strategic objectives for data governance, infrastructure, and capacity building. A collaborative approach was recognized as vital for empowering regulatory bodies, fostering partnerships across sectors, and ensuring effective data management and compliance to enhance AI integration and cybersecurity.

While stakeholder inputs have been gathered in the past for the National AI Strategy in Ghana, not all policies are publicly accessible through government sources. Increasing transparency by making these contributions available could strengthen public trust and engagement in AI policy development.

Data Protection

Ghana enacted the Data Protection Act in 2012.²¹⁹⁶ Section 41 of the Data Protection Act provides for the right of the data subject to object for decisions that significantly affect him to not be based solely on automated processing of personal data. The Data Protection Act establishes the Data Protection Commission,²¹⁹⁷ which is an independent statutory body in charge of enforcing the Data Protection Act and protecting data subjects' rights.

The Data Protection Commission and GIZ supported a workshop to finalize the National Data Strategy in June 2024, in partnership with the Ministry

of Communication and Digitization and Smart Africa.²¹⁹⁸ Key discussions among the experts and government officials centered on updating the legal framework to keep pace with technological advancements, enhancing technical infrastructure, improving data privacy and protection, and fostering inclusivity in data use, including the promotion of AI and cloud services.

Ghana is one of five African countries that ratified (in 2019) the African Union Convention on Cyber Security and Personal Data Protection (Malabo Convention).²¹⁹⁹ The Convention, drafted in 2011 and adopted in 2014 is an initial step to the establishment of a regulatory framework for data protection in the African region.²²⁰⁰ The agreement emphasized that each country is to develop its own legislative framework, observing the African Charter on Human and People's Rights, respecting privacy and freedoms while enhancing the promotion and development of ICT.²²⁰¹

Despite being a member of the Global Privacy Assembly since 2014, the Data Protection Commission has not endorsed the 2018 GPA resolution on AI and Ethics,²²⁰² the 2020 GPA Resolution on AI and Accountability,²²⁰³ the 2022

Resolution on Facial Recognition Technology,²²⁰⁴ or the 2023 GPA Resolution on Generative AI.²²⁰⁵

Algorithmic Transparency

The widespread use of social media and online tools in African countries makes regulating algorithmic transparency the most critical to protect against misuse.²²⁰⁶ The Data Protection Act of 2012 establishes the principle of “fair and transparent processing of a data subject’s personal data”²²⁰⁷ and provides that subjects need to be informed by the data processor when a decision has been made by automated means. Section 17 of the DPA sets out principles that data controllers must follow when processing personal data. Section 17 (f) provides for openness as a principle for processing personal data. This section could be interpreted as including algorithmic transparency, but it would need confirmation either by the Data Protection Commission or by court. The Malabo Convention does not explicitly provide for algorithmic transparency. Both data protection regimes could more explicitly include algorithmic transparency to ensure that individuals are informed about how algorithms influence decisions that affect them.

A study by International Telecommunications Society (ITS) on the use of artificial intelligence in the Fintech industry of Ghana and three other African countries found gender bias in financial services decisions. A lack of algorithmic transparency and explainability were areas of concern, contributing to the inability to make institutions accountable for biased decisions.²²⁰⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The launch of the UNESCO RAM in 2024 could promote discourse and action around algorithmic transparency in Ghana.²²⁰⁹

Facial Recognition

Practices of surveillance and use of facial recognition are of concern in the country. Ghana's National Service Scheme has implemented facial recognition in its registration process to prevent fraud and identity thefts in the receipt of payments to public employees. The deployment, which included testing, staff training sessions, and public awareness, has achieved its desired outcome according to government reports.²²¹⁰

A 2023 report reveals that the government has increased its possession of surveillance technologies. Ghana is implementing the Integrated National Security Communications Enhancement Network (ALPHA) project, a safe city project, which will incorporate the use of facial recognition CCTV cameras.²²¹¹ Concerns exist that the Ghanaian government will use this technology to identify and target citizens expressing dissenting viewpoints.²²¹²

Credit Scoring

In 2019, the use of citizen scoring mechanisms in Ghana by the National Identification Authority was subject of a study by Algorithm Watch. It resulted that six biometric databases owned by public authorities provide citizen scores, including credit reference scores issued by the Credit Reference Bureau.²²¹³

According to a report by the Bank of Ghana, it initiated discussions with credit bureaus to introduce credit scoring as a complement to the credit reports already offered by these bureaus in 2023. This initiative followed the introduction of the Ghana Card, which serves as a distinct identifier for individuals with credit information. The goal was to facilitate the implementation of the credit scoring

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

system by ensuring that financial institutions update existing credit information with new details from the Ghana Card.²²¹⁴

Ghana's Vice President, Dr. Mahamudu Bawumia, launched the initiative, known as myCreditScore in November 2024.²²¹⁵ Thus, the country is the second on the African continent to have such a system, the first being South Africa. Within the government, the initiative is viewed with favor and any discussions about possible harms are dismissed as criticism from the opposition.²²¹⁶ Additionally, several financial institutions have made significant progress in updating their existing credit information with the new Ghana Card data. This effort, combined with the integration of credit bureaus with the National Identification Authority (NIA) database, is anticipated to provide a strong foundation for the introduction of the credit scoring regime in the Ghanaian credit market.²²¹⁷

Biometrics

Ghanaian Police Service has adopted biometric devices as part of a digitization strategy with the objective to “dramatically improve policing in Ghana.”²²¹⁸ The police uses biometrics to check wanted individuals against the National Identification Authority’s (NIA) database. The process started in 2017 with the issuing of the new Ghana card, aimed to centralize the identity management systems.²²¹⁹ The NIA biometric database amounts to 17 million records, including Ghana ID card, car registration, and insurance information, allowing for identification in real time with biometric devices. The NIA National Identity System employs three biometric technologies for identification: unique

fingerprints represented as digitized templates, facial templates depicted as digitized color photos of the cardholder, and iris recognition.²²²⁰

A report by Privacy International identified practices of surveillance in Ghana during the phase of emergency response to the COVID pandemic.²²²¹ The PanaBIOS app endorsed by the African Union and deployed by the Ghanaian border enforcement, used algorithms to track and trace individuals that might pose a health threat.

The Ghanaian government announced in January 2024 that government employees who had not registered with the Ghana Card system would have their salaries frozen as of March. According to presidential correspondent Charles Takyi-Boadu, the initiative was based on the assumption that any citizen who did not register was deceased and freezing salaries would eliminate “ghost registrations” from the payroll.²²²²

In March, groups such as the People's National Convention (PNC), Great Consolidated Popular Party (GCPP), and Election Watch Ghana held demonstrations calling on the Electoral Commission of Ghana (EC) to be more transparent about biometric voter registration and the delivery of device kits to all political parties in the country after cases of the disappearance and destruction of several of these devices were reported.²²²³ In April, Deputy Minister for Foreign Affairs and Regional Integration Kwaku Ampratwum-Sarpong announced that a new model of digital passport would be introduced in the country, with an electronic chip that has a biometric identifier, which would be used to authenticate the holder’s identity.²²²⁴

Ghana launched the blockchain-based digital platform CitizenApp Data Interoperability System (CADIS) in October 2024 to facilitate access to digital government services. Identity verification is done through the Ghana Card and the citizen's phone number. Information such as biometric passport applications is

available for consultation on the app.²²²⁵ The mobile app was designed by the government to improve access to public services in Ghana, described as “Ghana’s Roadmap to Intelligent Governance.”²²²⁶ Notably, this shift resonates with earlier initiatives, such as Ghana’s adoption of biometrics for driver’s licenses and vehicle registration.²²²⁷

EdTech

Ghana was a subject of a study by Human Rights Watch about the use of government-endorsed Ed Tech tools for online learning during the COVID-19 pandemic across 49 countries.²²²⁸ The findings show that the government of Ghana endorsed platforms that have the capability to identify, tag, and track users, including children. Further, learning apps endorsed by Ghana tracked and collected data from children and teachers for advertising and revenue purpose, transmitting data to AdTech companies. For Ghana, the apps in this category were Edmodo and Ghana Electronic Library. Ghana was one of only nine countries that disclosed in their privacy policies that they collected and used children’s data for “behavioral advertising purposes.”

UNICEF launched the Learning Pioneers Programme in 2024, a two-year initiative in which six countries, including Ghana, are partnering with the Office of Innovation Learning Innovation Hub “to pilot and accelerate digital learning tools to address the learning crisis and shape the future of learning.” Under the slogan “Map, Match, and Make it Happen,” the countries will be mapping, testing, and developing scalable EdTech tools.²²²⁹

Environmental Impact of AI

Ghana responded to the global call to action to end poverty, protect the earth’s environment and climate, and ensure that people everywhere can enjoy

Center for AI and Digital Policy

peace and prosperity, captured in 17 UN Sustainable Development Goals.²²³⁰ According to the 2022 Voluntary National Review, Ghana is on track to achieve SDG 12 on responsible consumption and production and SDG 13 on climate action by the 2030 deadline.²²³¹ The report notes moderate progress has been made on goals including affordable and clean energy, and significant challenges lie in goals on sustainable cities and communities. Notably, the environmental impact of Artificial Intelligence, including energy consumption and its carbon footprint poses further challenges to achieve these goals. While academic research purports that Artificial Intelligence can help the Ghanaian Government plan for a renewable energy future,²²³² the research also acknowledges that AI poses risks to the environment.

The National AI Strategy reports that AI brings major opportunities to Africa to achieve sustainable growth and development, looking at specific case studies such as (a) AI in Smart Electricity Grid in Ghana, (b) AI applications for climate action (monitoring air quality, support renewable energy, manage recycling and water), and (c) AI for Agriculture. The Strategy notes these can be achieved through investment in applied AI research, which forms Pillar 7 of the National AI Strategy.²²³³

Lethal Autonomous Weapons

Ghana has not acceded to the Convention on Certain Conventional Weapons (CCW). However, the country has participated in several CCW meetings since 2014.²²³⁴ In a statement to the 2016 CCW informal meeting of experts on LAWS, Ghana called for the “promotion and preservation of human dignity for humanity as a whole [...] In our view, fully automated lethal systems must be proscribed before they are fully developed.”²²³⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Ghana is a member of two groups that support the negotiation of a legally binding instrument on autonomous weapons systems: The African Group within the United Nations and the Non-Aligned Movement. The African Group issued a statement in 2021 CCW calling on the “ethical, legal, moral and technical questions” in the use of autonomous weapons systems and urging concrete policy recommendations, including prohibitions and regulations.²²³⁶

At the 78th UN General Assembly First Committee in 2023, Ghana voted in favor²²³⁷ of resolution L.56²²³⁸ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

At the 79th Session of the same Committee in 2024, Ghana voted in favor of resolution L.77 on lethal autonomous weapon systems.²²³⁹ While the earlier resolution recognized potential risks of these systems, L.77 emphasizes the urgency of addressing the challenges posed by lethal autonomous weapons systems (LAWS), highlighting the need for a comprehensive approach to address diverse perspectives related to these systems. It includes specific calls for action, such as convening open informal consultations in 2025 and inviting participation from various stakeholders, including civil society and the scientific community.

Human Rights

Ghana is a signatory of the Universal Declaration of Human Rights (UDHR) and has enshrined the key provisions of the UDHR in its Constitution. The 1992 Constitution of Ghana²²⁴⁰ provides for the protection of fundamental human rights and freedoms. The UDHR provides for the right to privacy under Article 12. The right to privacy is guaranteed under Article 18 of the Constitution: “No person shall be subjected to interference with the privacy of his home, property, correspondence or communication except in accordance with law and as

may be necessary in a free and democratic society for public safety or economic well-being of the country, for the protection of health or morals, for the prevention of disorder or crime or for the protection of rights and freedoms of others.”

Ghana is a party to the African Charter on Human and Peoples’ Rights. In its 2019 Declaration of Principles on Freedom of Expression and Access to Information in Africa, the African Commission on Human and Peoples’ Rights (ACHPR), in charge of interpreting the Charter,²²⁴¹ called on states to ensure that the “development, use and application of AI, algorithms and other similar technologies by internet intermediaries are compatible with international human rights law and standards, and do not infringe on the rights to freedom of expression, access to information and other human rights.”²²⁴²

The ACHPR adopted Resolution 473 in February 2021, having recognized that emerging technologies such as AI have a bearing on the enjoyment of human rights under the African Charter.²²⁴³ The ACHPR called on state parties, Ghana included, to:

- Ensure that the development and use of AI and other emerging technologies is compatible with the rights and duties in the African Charter and other regional and international human rights instruments to uphold human dignity, privacy, equality, non-discrimination, inclusion, diversity, safety, fairness, transparency, accountability, and economic development.
- Ensure transparency in the use of AI and other emerging technologies and that decisions made in the use of AI technologies, robotics and other new and emerging technologies are easily understandable to those affected by such decisions.
- Work toward a comprehensive legal and ethical governance framework for AI and other new and emerging technologies to ensure compliance with the African Charter and other regional treaties.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In September 2022, the Special Rapporteur on Freedom of Expression and Access to Information in Africa, Ourveena Geereesha Topsy-Sonoo, recalled that, with Resolution 473, the Commission, “recognizing the need to better understand the legal, ethical, safety and security opportunities and challenges raised by AI, robotics and other new and emerging technologies in Africa, observed in its Resolution [...] that new and emerging technologies present both opportunities and perils for the promotion and protection of human and peoples' rights in Africa. The Commission further observed that whilst making government services and information digital enhances transparency and accessibility and artificial intelligence allows for a number of benefits in the society, it has to be accompanied by human rights considerations and a bridging of the digital divide.” The Special Rapporteur also declared that “State Parties are encouraged to develop domestic legal frameworks regulating AI and e-governance; ensure these technologies are developed and used transparently; and ensure that imported AI and e-governance systems align with the African Charter.”²²⁴⁴

According to the Freedom House’s 2024 Freedom in the World report,²²⁴⁵ Ghana is rated Free with a score of 80/100. Ghana is rated *Partly Free* with a score of 64/100 on the Freedom on the Net report. According to Freedom House, Ghanaian political rights and civil liberties are backed by a stable democracy, with competitive multi-party elections since 1992 and peaceful transfer of power between the two major political parties. Areas of weakness concern judicial independence and the rule of law. Corruption also poses challenges to the effective performance of the government. The Freedom House report also highlights political violence as a growing concern.

OECD / G20 AI Principles

Ghana is not a member of the OECD and has not official endorsed the OECD principles.²²⁴⁶ However, Ghana is a member of the African Union, which has recently joined the G20 and endorsed the G20 AI Principles.²²⁴⁷

Ghana is a member of the OECD Development Centre since 2015, collaborating with members and non-member countries in policy to improve living

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Evaluation

Ghana has made significant progress toward ethical AI governance by endorsing the Continental AI strategy, finalizing its National Data Strategy, and forming a new steering committee to oversee AI readiness. Ghana formulated a national AI strategy and contributed to the development of the Continental AI Strategy for Africa, which was finalized in 2024, and can serve as a guide for further elaborating the national strategy. The country has taken the first step to meaningfully implement the UNESCO Recommendation on the Ethics of AI with the initiation of RAM.

Efforts are underway to establish partnerships to further the digital strategy, though digitization is positioned more as a political tool than a direct means of enhancing efficiency and improving the lives of the country's population. While public addresses, such as those by Minister Ursula Owusu-Ekuful, emphasize the importance of public participation and transparent policymaking, these principles are primarily showcased at events involving international partners, with limited practical engagement of Ghanaian citizens.

Ghana benefits from an independent Data Protection Commission and developed its own data protection legal framework and ratified the Malabo Convention. Amid the rapid deployment of AI in the country, a step further would consist in modernizing the Data Protection Act to include the right to algorithmic transparency. The regulation of practices of biometrics identification, facial recognition, and individual scoring is essential to realize the benefits of AI for the Ghanaian society.

Hong Kong

In 2024, Hong Kong created the Digital Policy Office to oversee the Ethical Artificial Intelligence Framework and published a model data protection framework for AI. The Hong Kong Monetary Authority also issued Consumer Protection guidelines in the use of generative AI.

National AI Strategy

Hong Kong is making significant advances in AI development and policy implementation through the issuance of guidelines, policies, and AI technology applications in different sectors. Although this special administrative region²²⁵⁶ largely controlled by China does not have a national strategy for the regulation of AI, there exist several sectoral and overall guidelines, with efforts underway on

<https://moc.gov.gh/2024/10/01/readiness-assessment-measurement-ram-ethical-use-of-artificial-intelligence-launched/>

²²⁵⁶ Referred to as the Hong Kong Special Administrative Region (HKSAR).

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

more reforms, to guide organizations in adopting accountable and ethical AI models and processes.

A 2021 Guideline on Ethical Development and Use of AI issued by the Office of the Privacy Commissioner for Personal Data (PCPD) aims to guide organizations in their adherence to personal data and privacy requirements in the region.²²⁵⁷ The PCPD Ethical AI principles have been expanded to twelve principles from seven. Two of the twelve, namely (1) Transparency and Interpretability and (2) Reliability, Robustness, and Security are categorized as “Performance Principles.” The rest are categorized as “Generalized Principles” that include the following: (1) Fairness, (2) Diversity and Inclusion, (3) Human Oversight, (4) Lawfulness and Compliance, (5) Data Privacy, (6) Safety, (7) Accountability, (8) Beneficial AI, (9) Cooperation and Openness and (10) Sustainability and Just Transition.²²⁵⁸ The PCPD guideline also provides practical steps to help organizations in managing their AI systems, covered under four major areas namely:

- Establishing AI strategy and governance
- Conducting risk assessment and human oversight
- Executing development of AI models and managing overall AI systems
- Fostering communication and engagement with stakeholders.

The Hong Kong PCPD issued the Artificial Intelligence: Model Personal Data Protection Framework in 2024, one of the priorities previously outlined for the year.²²⁵⁹ Other priorities included promoting and protecting personal data privacy in the context of AI and reducing data scraping, doxxing, and data breaches.²²⁶⁰

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Some sectoral initiatives are also of relevance. In 2019, the Hong Kong Monetary Authority (HKMA) published a 12-principle guideline detailing adherence items for banks that engage in designing and implementing AI and big data analytics applications.²²⁶¹ The issuance of these principles aimed to ensure some form of safeguards for banks as they deal with the increased need for AI technology adoption in Hong Kong's vibrant financial sector. The HKMA has continued to refine its guidance on AI applications in banking.

New guidelines were issued in August 2024 on consumer protection in the use of AI in customer facing applications. It issued the guidelines to prevent any user harms from hallucination, incomplete results generated by GenAI in such applications. However, in its circular, the HKMA acknowledges that adoption of GenAI in the banking sector is still at 'an early stage, with most of the current applications focusing on improving banks' operational efficiency. Nonetheless, the ability of GenAI in content-creation means that GenAI could be more extensively adopted by the banking sector in customer-facing activities'.²²⁶² The guidelines build on the 2019 HKMA guidelines²²⁶³ on consumer protection and adds requirements. These include defining the scope, policies, using a human-in-the-loop approach, ensuring fairness, providing opt-out mechanisms, disclosing AI models' limitations, and abiding by Hong Kong's privacy regulations.

The HKMA is also taking steps to promote the use of AI for detecting suspicious activities by financial institutions. In September 2024, it released a circular on 'the Use of Artificial Intelligence for Monitoring of Suspicious Activities'²²⁶⁴ outlining several initiatives that the HKMA was undertaking to promote it. This includes an experience sharing forum, fintech sandbox²²⁶⁵, and guidance from the HKMA on innovating therein."

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Further, in financial services, on September 27, 2024, the HKMA released a research paper²²⁶⁶ on the use of AI in financial services, which highlighted that companies were currently using AI for improving internal efficiency constrained by lack of know-how and regulatory constraints. The paper also advocated for principles of fairness, governance and accountability, sustainability, reliability and transparency to be enshrined within GenAI models.”

Hong Kong’s technology development sector, specifically AI, is seeing increased integration with mainland China. In her 2021 policy address, the Chief Executive of Hong Kong, Carrie Lam stated that “the developments of Hong Kong and our country are closely related. Only by leveraging the Central Government’s policies in support of Hong Kong can we give full play to our unique strengths, which will, in turn, bring continuous impetus to our economy.”²²⁶⁷ This, coupled with the passage of the Hong Kong National Security Law in 2020 by China’s top legislature,²²⁶⁸ cast some doubts on the future of the One Country, Two Systems model for the governance of Hong Kong.²²⁶⁹

Also in September 2022, the Hong Kong Office of the Government Chief Information Officer developed the Ethical AI Framework for internal adoption within the Government regarding AI and big data analytics applications. The Ethical AI Framework will assist the government bureaus and departments in adopting AI and big data analytics and incorporating ethical elements in the planning, design, and implementation of IT projects or services, and it consists of ethical principles, practices, and assessment of AI.²²⁷⁰

In July 2024 the Hong Kong government officially²²⁷¹ merged the Government Chief Information Officer's Office and the Efficiency Office to create the Digital Policy Office (DPO) to manage digital policies, data governance, and enhance digital services. In a policy address²²⁷² for 2024, the HKSAR Chief

Center for AI and Digital Policy

Executive highlighted efforts for digital transformation of the Hong Kong public service through the DPO. This would include an AI based document processing application and an AI tool to address public queries.²²⁷³

Reforms in other sectors are also underway. For example, the Hong Kong Commerce and Economic Development Bureau began a 2-month consultation on amending the Copyright Ordinance (528) for effective copyright protection and innovation of AI models in 2024.²²⁷⁴

Public Participation

Hong Kong does not have a structured process for public participation in the development of AI policy, although some AI and digital technology projects have sought the engagement of citizens as part of their roll-out plans. For instance, in July 2024, the Hong Kong Commerce and Economic Development bureau began a two-month public consultation on required legal amendments to protect copyrights and ensure AI model development.²²⁷⁵

Data Protection and Algorithmic Transparency

Hong Kong passed the Personal Data (Privacy) Ordinance (PDPO) in 1995, which instilled a principles-based approach to data privacy and established the Office of the Privacy Commissioner for Personal Data (PCPD) as an independent data privacy regulator.

The PDPO saw amendments in 2012²²⁷⁶ and 2021²²⁷⁷ to address direct marketing and criminalize doxxing, respectively. Allowing the PCPD to conduct investigations without a warrant, press charges independently, force content to be taken down, and charge non-compliant internet platforms, there are concerns that

the doxxing amendment will be used to restrict dissenting opinions.²²⁷⁸ The PDPO applies to both private and public data usage. However, it allows for specific exemptions for criminal investigations, the performance of judicial functions, security and defense, and emergency situations.²²⁷⁹ In the context of the recent Hong Kong National Security Law and associated protests, the broader implications of these exemptions on human rights are less clear. For example, police can request content be taken down or have online platforms provide information about users.²²⁸⁰

The PCPD has been an active participant in international discussions on data protection, algorithmic transparency, and many other key issues in the use of AI, especially in the General Privacy Assembly.

The PCPD was a signatory to the 2018 Global Privacy Assembly (GPA) Declaration on Ethics and Data Protection in Artificial Intelligence. In November 2020, the PCPD sponsored the Resolution on Accountability in the Development and Use of Artificial Intelligence. The PCPD co-sponsored the 2023 GPA Resolution on Generative AI.²²⁸¹ The PCPD did not endorse the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology.²²⁸²

The AI Guidance presented by the PCPD makes several recommendations to increase transparency around the use of AI, including “putting in controls that allow human oversight and intervention of the operations of the relevant AI system.”²²⁸³ Similarly, the guidelines for banks using AI from the Hong Kong Monetary Authority push banks to hold leadership accountable for AI decision-

making, to ensure results from AI systems are explainable and auditable, and to provide transparency to consumers on the use of AI.²²⁸⁴ These recommendations align with established principles such as the OECD AI Principles, and similar recommendations in the proposed EU AI Act; however, this is just guidance to businesses, and non-binding.

The PCPD published the Artificial Intelligence: Model Personal Data Protection Framework in 2024. The Framework provides a set of practical and detailed recommendations for local enterprises through a risk-based approach, offering key principles such as human oversight, data privacy, fairness, transparency, interpretability, reliability, robustness, and security to guide the procurement, implementation, and use of AI systems.²²⁸⁵

Data Scraping

The PCPD and international data protection and privacy counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy in 2024.²²⁸⁶ The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”²²⁸⁷ The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”²²⁸⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

AI and Surveillance

Hong Kong has long-standing concerns about AI surveillance, especially as it relates to its relations with mainland China and the preservation of democracy in Hong Kong. Hong Kong Chief Executive Carrie Lam invoked the Emergency Regulations Ordinance in order to ban the use of face masks during anti-government protests in 2019.²²⁸⁹ This ordinance gives the chief executive the power to “make any regulations whatsoever which he may consider desirable in the public interest.”²²⁹⁰ In December 2020, Hong Kong’s Court of Final Appeal largely upheld the application of the Emergency Regulations Ordinance for the facemask ban.²²⁹¹ The use of face masks in the context of the 2019 protests was a deliberate effort by protestors to shield their identity from the government and the subsequent mask ban casts doubt over the future of the right to freely protest in Hong Kong.

Hong Kong has also been a strong proponent of the use of technology in public spaces, laying out its future plans through the Hong Kong Smart Cities Blueprint 2.0, published in December 2020.²²⁹² These plans include the use of the “StayHomeSafe” mobile app and companion tracking bracelet, whose use was required for all new entrants into Hong Kong.²²⁹³ Additionally, as an outcome of

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

the Smart City Blueprint, Hong Kong has pushed to adopt concrete policy standards for the use of autonomous vehicles (AVs).²²⁹⁴

The Legislative Council Panel on Transport released a proposal for legislation on this issue, with the goal of increased testing of AVs and a clear process for licensing new test cars.²²⁹⁵ The blueprint and associated initiatives also outline many plans such as the increased rollout of public wifi and contact tracing for COVID, as well as funding for robotic patrols of airport terminals and a new LawTech Fund.

Despite the clear potential upside, there is no mention of potential concerns, such as data privacy, algorithmic bias, or the potential violation of human rights in the documents rolling out these new initiatives. Furthermore, there was no significant public engagement, despite concerns about negative impacts.²²⁹⁶ The rollout of new technology in public places, the Hong Kong National Security Law, and the development and use of facial recognition technology by local companies²²⁹⁷ all threaten the increased use of AI for surveillance purposes in Hong Kong.

In July 2024, Hong Kong's security chief, Chris Tang, informed local media that the police aim to install 2,000 new surveillance cameras and plan to incorporate facial recognition technology, with the potential for AI-assisted suspect tracking. However, it remains unclear whether Hong Kong will implement continuous live facial recognition scanning of public spaces or if it will limit facial recognition to retrospective analysis of footage following a crime or upon legal authorization. Some experts have expressed concern that Hong Kong may be moving closer to mainland China's pervasive surveillance practices.²²⁹⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Environmental Impact of AI

The Hong Kong Special Administrative Region has considered the environmental impact of AI. The Twelve Ethical AI Principles include “Sustainability and Just Transition.” Any AI development should ensure that there are mitigation strategies in place to address potential impacts on society and the environment.²²⁹⁹ The framework specifically acknowledges that AI can have an impact on planet preservation and cites examples of using AI to optimize power usage and reduce carbon footprint.

Human Rights

As a special administrative region of China, Hong Kong has not ratified the United Nations Universal Declaration of Human Rights (UDHR).²³⁰⁰ But the above-mentioned AI ethical principles are explicitly derived from the UDHR.²³⁰¹ Also, the UN International Covenant on Economic, Social, and Cultural Rights (ICESCR) and UN International Covenant on Civil and Political Rights (ICCPR) apply to Hong Kong.²³⁰²

These human rights conventions are also complemented by other articles that protect the rights of citizens, including the Hong Kong Bill of Rights²³⁰³ and the Basic Law.²³⁰⁴ One of the key provisions in Article 30 of the Personal Data (Privacy) Ordinance protects citizens’ right to privacy and clearly identifies principles to be adhered to in the use of personal data.²³⁰⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Legislative Council of the Hong Kong Special Administrative Region adopted the Safeguarding National Security Bill in March of 2024.²³⁰⁶ This legislation raised concerns from the European Union about its potential impact on freedoms, political pluralism, and international relations. Therefore, the EU stated in a press release that it will continue to assess the implications of this legislation and urges Hong Kong and China to uphold commitments to autonomy under the one country, two systems framework.²³⁰⁷

The Freedom House 2024 Report ranks Hong Kong as “Partly Free” with a total score of 41/100 (down from 42/100 in the 2023 report).²³⁰⁸ Political rights and civil liberties are scored very low on the report because of the prevalence of pro-Beijing interests in the country’s political system and the limitations on freedom and autonomy because of political interventions from mainland China.

OECD / G20 AI Principles

Hong Kong is not a member of the OECD or the G20 and has not endorsed the OECD / G20 AI Principles.²³⁰⁹

Despite no official endorsement, Hong Kong’s National Strategy includes many of the OECD’s principles and implementation recommendations but has limitations, such as insufficient human capacity and incomplete alignment with human rights and democratic values, notably due to the use of facial recognition for surveillance purposes.

Council of Europe AI Treaty

Neither Hong Kong nor China have signed the Council of Europe AI treaty, which opened for signature to non-EU member countries and countries around the world in September 2024. Hong Kong and China also did not participate in the negotiations, which began in 2022, with input from 68 international representatives from civil society, academia, industry, and other international organizations was gathered.²³¹⁰

UNESCO Recommendation on AI Ethics

As a member of UNESCO, Hong Kong adopted the Recommendation on the Ethics of Artificial Intelligence in November 2021, the first global standard on the ethics of artificial intelligence. However, no measures so far have been put in place by the country to implement the Recommendation.²³¹¹

Hong Kong has not stated a plan or participated independently in UNESCO's Readiness Assessment Methodology (RAM) for artificial intelligence²³¹². Hong Kong's AI policies align with those of mainland China. However, China itself has not yet engaged in the RAM process and has not publicly indicated plans to do so.

Evaluation

Hong Kong has made significant progress in Artificial Intelligence policy over the past year. It has published frameworks and principles to enhance personal data privacy protection, to embed ethical considerations into the AI life cycle, and to ensure consumer protection. Establishing the Digital Policy Office marked a development that brought with it the creation of an ethical framework in AI, as well as the establishment as an institution to monitor its development., although it could be safe to link this special administrative region with some of China's AI efforts and achievements due to the administrative relationship between both.

Hong Kong has not been a signatory to the OECD AI Principles or the Universal Declaration for Human Rights; however, it has proposed and implemented similar principles and guidelines and endorsed the UNESCO Recommendation on the Ethics of AI as well as the OECD / G20 AI Principles. The leading role played by Hong Kong through the PCPD-sponsored resolution on greater accountability in the development and use of AI to the Global Privacy Assembly (GPA) shows that the region has the potential to play a prominent role in key global AI policy development and implementation.

Irrespective of its complicated relationship with mainland China, especially as it relates to surveillance and data protection issues, there is some effort by the government in regulating and promoting ethical AI use within the country. It is unclear, however, how much of this extends to new government initiatives, such as the Smart Cities Blueprint, or issues of national security. More effort is needed by the government in the adoption of a comprehensive national

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

AI strategy that promotes democratic values and human rights, as well as alignment with international commitments to AI principles.

Hungary

In 2024, Hungary established the Hungarian Artificial Intelligence Council to implement the EU AI Act, which entered into force in August. Hungary also faced referral to the European Union's Court of Justice over concerns that the National Defense of Sovereignty law violates citizens fundamental human rights.

National AI Strategy

Recognizing the potential benefits of the technology and simultaneously considering the possible related challenges, the Government of Hungary resolved to have a comprehensive Artificial Intelligence Strategy drawn up. In September 2020, the Hungarian Ministry of Innovation and Technology Government released the National AI strategy, outlining the strategic vision and actions for the development of AI in the period 2020–2030.

The document sets goals up to 2030 and outlines an action plan extending up to 2025. The AI Strategy is however considered as a living document due to rapid technological developments and experience gathered through the spread of applications. The Strategy shall be reviewed at least every two years.²³¹³

In the Strategy, the Hungarian government affirms its commitment to developing Hungarian artificial intelligence—as a special branch of its digitization efforts—to be high-tech and green, in the spirit of Hungary's general development objectives. The AI strategy aims to make the most of the opportunities offered by modern technologies for raising the living standard of citizens and protecting the environment.²³¹⁴ Hungary's AI strategy aims to support and boost all relevant sections of the AI value chain from data generation and management, through basic and applied research, to utilization of the technology and raising awareness of the possibilities inherent in practical AI applications.

Through a multi-layered set of goals, the strategy aims to:

- Strengthen the foundation pillars of the Hungarian AI ecosystem: data economy, research development and innovation (R&D&I), AI uptake, education and competence development, infrastructure deployment, and regulatory and ethical framework.

²³¹³ László Palkovics Minister for Innovation and Technology, *Hungary's Artificial Intelligence Strategy 2020–2030* (Sept. 8, 2020), <https://2015-2019.kormany.hu/en/ministry-for-innovation-and-technology/news/hungary-would-like-to-benefit-from-the-opportunities-afforded-by-artificial-intelligence>

²³¹⁴ Ibid

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- Focus on specific sectors and technology fields with the highest acceleration potential for Hungary: manufacturing, healthcare, agriculture, public administration, transportation, logistics and energy.
- Initiate transformative programs with long-term ambitious goals that offer direct benefits to citizens: autonomous systems and self-driving vehicles, health-awareness in a digital world, climate-driven agriculture, data-wallet and personalized services, AI-supported development of personal competencies, automated administration procedures in Hungarian, and energy networks focused on renewable sources of energy.

Given its breadth, the Strategy requires a whole-of-government effort that brings together different government ministries under the leadership of the Ministry of Innovation. This effort will be supported by AI Coalition team of different bureaucracies supporting the relevant ministries, as well as a Multi-sectoral Committee of Artificial Intelligence and a Scientific Committee of experts.

Hungary contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers formally adopted the Framework Convention in May 2024. It is open for signature and ratification by any country in the world.²³¹⁵

AI Ethical Guidelines

Hungary's national AI strategy aims to ensure a responsible, reliable, and human-centered use of AI thanks for the following actions:

- Creating an ethical framework: development of an AI code of conduct by the Ministry of Justice, the Ministry for Innovation and Technology, the AI Innovation Hub and the Central Statistical Office.
- Setting up an Artificial Intelligence Regulation and Ethics Knowledge Centre: the aim is to create and coordinate an extensive pool of experts to help resolve legal issues and matters of ethics relating to the regulation of AI and the implementation of the strategy.
- Establishing a regulatory framework for AI: the objective is to amend the current regulatory system to suit AI and to align it to EU regulations.
- Building data management regulation: the objective is to set up regulations for the use and exchange of public and private data and to define rules regarding data monetization.

²³¹⁵ Council of Europe, *Framework Convention on Artificial Intelligence and Human Rights, Democracy and the Rule of Law* (2024), <https://rm.coe.int/1680afae3c>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- As there is no one-size-fits-all solution, the Hungarian strategy calls for the development of sector-specific regulatory frameworks, ensuring that the regulatory needs for AI development are adapted to the relevant industry areas.

The responsible governing body for the AI Ethical Guidelines is the AI Coalition of Hungary²³¹⁶ (*MIK; Mesterséges Intelligencia Koalíció*). The AI Coalition is responsible for adapting the EU High Level Expert Group's AI ethical guidelines to the Hungarian context. The AI Coalition is a typical independent regulatory oversight and ethical advisory body. It is mainly composed of academics. The type of oversight provided is mostly technical guidance (e.g. toolkits, documentation, technical standards). One of its main activities is to gather opinions from stakeholders on ethical principles, regulation improvements etc.

Hungary held the presidency of the Council of the European Union in the latter half of 2024, having completed a trio with Spain and Belgium. To ensure continuity, presidencies collaborate in groups of three, known as trios, which jointly develop an 18-month program outlining shared priorities and goals.

Hungary, as president of the Council of the European Union, held the position of executive chair of the EU AI board until the end of 2024. The country was represented by Szolnok Szabolcs, the Deputy State Secretary responsible for technology at the Ministry of National Economy.²³¹⁷

Hungary Artificial Intelligence Council

The Hungarian Government's decision on the measures necessary to implement the Regulation of the European Parliament and of the Council on artificial intelligence enabling the full establishment of the Hungarian Artificial Intelligence Council (*Magyar Mesterséges Intelligencia Tanács*), was published in issue 98 of the *Magyar Közlöny* (Official Hungarian gazette) under decision 1301/2024, dated September 30, 2024. The decision tasks the Hungary AI Council with implementing the necessary measures to support the AI Act within Hungary.²³¹⁸ This new organization will operate under the oversight of the Minister for National Economy.²³¹⁹ Its primary responsibilities will include issuing guidelines, opinions, and statements to aid in the interpretation and application of

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

the AI Act, managing a regulatory sandbox and conducting market surveillance, which will facilitate the safe testing and deployment of AI technologies within Hungary. This sandbox environment will allow AI developments to be trialed in real-world conditions, ensuring compliance and monitoring AI innovations before broader release. The establishment of this council aligns with the requirements set forth by the European Parliament and Council Regulation 2024/1689/EU, aiming to promote a coordinated and transparent approach to AI governance.

The Hungarian Artificial Intelligence Council will be staffed by representatives from several key national institutions. These include the National Media and Infocommunications Authority (NMHH), Hungarian National Bank (MNB), Hungarian Competition Authority (GVH), National Authority for Data Protection and Freedom of Information (NAIH), Supervisory Authority for Regulated Activities (SZTFH), and the Digital Hungary Agency. By November 30, 2024, the Minister of National Economy is required to draft and present a legislative proposal detailing the resources and budgetary requirements needed to support the Hungarian Artificial Intelligence Council's functions.²³²⁰

Public Participation

The strategy has been developed in cooperation with the Hungarian Artificial Intelligence Coalition.²³²¹ The coalition was established in October 2018 to offer a community and forum for all stakeholders in the Hungarian AI ecosystem who wish to make an active contribution to the development of the Hungarian AI environment and skills.

Hungary's AI strategy also explicitly refers to public engagement activities. Hungary established an internet platform for its citizens to get trained, get exposure to the ongoing events in the AI sector, and engage with country-wide policy developments. The Hungarian government aims to get the best of artificial intelligence in terms of high-value economic return while countering possible adverse effects of the technology through increased public awareness and public participation. The National AI Strategy emphasizes that public engagement is a key aspect of the exercise of fundamental rights and a robust and inclusive business environment. For this reason, the Hungarian AI Strategy prioritizes the need to raise awareness of the use of artificial intelligence, its pragmatic and business applications as well as its projected impact on various sectors through an action plan entitled The AI Challenge. The Challenge aspires to train 100,000 people in the fundamentals of AI using domestically generated online course

²³²⁰ National Legal Repository, 301/2024. (IX. 30.) Korm. határozat a mesterséges intelligenciáról szóló európai parlamenti és tanácsi rendelet végrehajtásához szükséges intézkedésekről, (Sept. 30, 2024), <https://njt.hu/jogszabaly/2024-1301-30-22>

materials. The Action Plan also aims to raise 1 million people's awareness through interactive exhibitions, a website, and online professional content.²³²²

To give a sector-specific example, Hungary has launched a campaign to initiate debates among citizens concerning the use of AI-supported digital health applications with a discussion of their benefits and possible drawbacks.²³²³ In this regard, an extensive awareness-raising campaign has been launched regarding the importance of health data. The government is planning to receive citizens' questions and concerns through their data wallets. With the analysis of the results, the idea is to develop a marketplace in which qualified service providers would develop systems and supply related products as part of the implementation of the public's demand that is supervised by this initiative.

In November 2023, the Prime Minister's Cabinet Office invited feedback and input from the general public, stakeholders, and experts on the draft of the Law on the Digital State and Certain Rules for the Provision of Digital Services or "Digital Citizenship Law." The scheme will enable personal identification for the use of state and market services, electronic signature, and payment of public utility bills. A trial period will start in April 2024. The scheme will be optional. It has been developed in line with the EU's new Electronic Identification, Authentication and Trust Services (eIDAS) regulatory framework.²³²⁴

In September of 2024, an AI Summit was held in Budapest inviting participation from leaders of industry, government, and academia, highlighting Hungary's determination to use AI as a catalyst for transformative change across multiple sectors.²³²⁵

EU Digital Services Act

As an EU member state, Hungary shall apply the EU Digital Services Act (DSA).²³²⁶ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

EU AI Act

As an EU member State, Hungary is bound by the EU AI Act.²³²⁷ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI. The EU AI Act entered into force on August 1, 2024.

The Hungarian Government established the Hungarian Artificial Intelligence Council to implement the EU's AI Act. The council will issue guidelines, oversee a regulatory sandbox for AI testing, and ensure compliance with AI regulations.

Data Protection

Since Hungary is an EU Member State, the GDPR²³²⁸ is directly applicable in Hungary and to Hungarians. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market.”²³²⁹ The GDPR entered into force on May 24, 2016, and applies since May 25, 2018.

The activities of law enforcement authorities for their part are regulated at EU level by the EU Data Protection Law Enforcement Directive (LED).²³³⁰ The LED “protects citizens’ fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

against crime and terrorism.”²³³¹ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.²³³²

The Hungarian Act CXII of 2011 on the Right of Informational Self-Determination and on Freedom of Information (Data Protection Act) was amended on July 26, 2018, to supplement the GDPR and implement the LED Directive.

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Hungary is also a member of the Council of Europe. It has signed and ratified²³³³ the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.²³³⁴

The National Authority for Data Protection and Freedom of Information (NAIH)²³³⁵ is the national supervisory authority in charge of enforcing both the GDPR and the LED. The Authority is also entrusted with duties in connection with the Schengen Information System (SIS), the Customs Information System (CIS), Europol, Eurodac and the Visa Information System (VIS). The NAIH represents Hungary in the European Data Protection Board.

The NAIH is a member of the Global Privacy Assembly since 2002. The Authority endorsed the 2018 GPA Resolution on AI and Ethics,²³³⁶ but did not co-

sponsor the 2020 GPA Resolution on AI and Accountability,²³³⁷ the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology²³³⁸ or the 2023 GPA Resolution on Generative AI.²³³⁹

Algorithmic Transparency

Ambassador Harry Alex Ruzs, Permanent Representative of Hungary to the Council of Europe, deposited the instrument of ratification of Convention 108+ in the presence of Deputy Secretary General Bjørn Berge in August 2023.²³⁴⁰ Convention 108+ aims to modernize and improve the Convention 108, the only binding international instrument with global relevance in this field. In addition, Hungary is subject to the GDPR. Hungarians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.²³⁴¹

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems²³⁴² specifically emphasizes requirements on transparency, accountability and effective remedies. The Recommendation provides that “Transparency levels should be as high as possible and proportionate to the severity of adverse human rights impacts, including ethics labels or seals for algorithmic systems to enable users to navigate between systems. The use of algorithmic systems in decision-making processes

that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs.²³⁴³

The Recommendation also clarifies that “Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”²³⁴⁴

Transparency Information

The Hungarian Competition Authority launched an investigation against Microsoft's European services subsidiary, Microsoft Ireland Operations Limited, in July 2023 for possible unfair practices against Hungarian consumers in its so-called “new Bing service.” This came after Microsoft integrated an artificial intelligence-based chat feature similar to ChatGPT in its Bing search system that helps to answer questions in the search interface using machine learning to learn from the content, data, and information shared by users. The investigation focuses on whether Microsoft adequately informs users about features of its search engine, particularly concerning the AI-based chat feature. The concerns raised include contradictory policies and inadequate information about the service, such as its reliability, data management practices, and language accessibility.²³⁴⁵

In January 2024, the Hungarian Competition Authority launched a market analysis investigation of the effects of AI on consumer rights protection and competition. The market analysis will investigate the use of AI in data collection, advertising practices, and consumer interactions, raising concerns about transparency, consumer privacy and susceptibility to manipulation.²³⁴⁶

This case also prefigures the role that the Hungarian Market Surveillance Authority to be identified in line with the EU AI Act could play in ensuring respect for fundamental rights. It remains to be seen which modalities of cooperation with other authorities such as the Data Protection Authority will be put into place as well and the relevance of the local context such as the efficiency and independence of the participating authorities.

Emotion Recognition

The NAIH presented a case in the 2023 annual report where it imposed the highest fine to date of ca. EUR 670,000 (HUF 250 million). The case involved the

personal data processing of a bank (acting as a data controller) which automatically analyzed the recorded audio of customer service calls. The bank used the results of the analysis to determine which customers should be called back. The emotional state of the caller was analyzed using an AI-based speech signal processing software that automatically analyzed the call based on a list of keywords and the emotional state of the caller. The software then established a ranking of the calls serving as a recommendation as to which caller should be called back as a priority.

During the procedure before the Authority, it appeared that for years the bank had failed to provide to the data subjects proper notice and the right to object. The Authority emphasized that the only lawful legal basis for the processing activity of emotions-based voice analysis can only be the freely given, informed consent of the data subjects.

The NAIH also highlighted that although the bank had carried out a data protection impact assessment (DPIA) and identified that the processing is of high risk to the data subjects, capable of profiling and scoring, the DPIA had failed to present substantial solutions to address these risks.

The legitimate interest test performed by the bank had failed to consider proportionality, the interests of the data subjects, it merely established that the data processing is necessary to achieve the purposes it pursues.

The Authority, in addition to imposing a record fine,²³⁴⁷ obliged the bank to cease the analysis of emotions from voice analysis. The Authority highlighted that “artificial intelligence is generally difficult to understand and monitor due to the way it works, and even new technologies pose particular privacy risks. This is one of the reasons why the use of artificial intelligence in data management requires special attention, not only on paper but also in practice.”²³⁴⁸

Facial Recognition

A project called Szitakötő (dragonfly) was planned in 2016 to deploy 35,000 cameras with facial recognition capabilities in Budapest, and across the country.²³⁴⁹ From January 1, 2016, onwards, facial data of all residents of and visitors to Hungary, are being stored in a database that can be accessed by Hungarian law enforcement authorities. Hungary’s 35 000 CCTV cameras now operate as part of a single centralised searchable system, and its biometric

databases have been connected, allowing the police to identify any citizen from their face. The Hungarian Secret Services and police have already made use of the system, resulting in 6000 matches, 250 stop-and-searches and 4 arrests.²³⁵⁰

The NAIH investigated and fined a Hungarian municipality (Siófok) in March 2022 for installing AI facial-recognition software within a 39-camera CCTV network. NAIH found that this kind of data processing was unlawful and imposed a fine of HUF 500,000 (EUR 1,250) on the technical service provider partially owned by China. The investigation further revealed a lack of cooperation agreement between the municipality and the police regarding joint control of the CCTV network and the inadequate data security measures in place.²³⁵¹

Lethal Autonomous Weapons

In 2016, Hungary acknowledged that lethal autonomous weapons systems warrant “substantial consideration” and supported continuing diplomatic talks addressing concerns.

Hungary was one of the 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly in October 2022. The statement called for recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.²³⁵² In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”²³⁵³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

At the 78th UN General Assembly First Committee in 2023, Hungary co-sponsored and voted in favor²³⁵⁴ of resolution L.56²³⁵⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

At the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea, nearly 60 states agreed to issue a joint call to action on the responsible development, deployment and use of AI in the military domain in February 2023.²³⁵⁶ Hungary endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.²³⁵⁷

Human Rights

According to the Freedom House report published in February 2024, Hungary is a “partly free” country with an overall score of 65/100, showing no change compared to the previous year.²³⁵⁸ According to the report, “After taking power in the 2010 elections, Prime Minister Viktor Orbán’s Alliance of Young Democrats–Hungarian Civic Union (Fidesz) party pushed through constitutional and legal changes that have allowed it to consolidate control over the country’s independent institutions, including the judiciary. The Fidesz government has since passed antimigrant and anti-LGBT+ policies, as well as laws that hamper the operations of opposition groups, journalists, universities, and nongovernmental organizations (NGOs) that are critical of the ruling party or whose perspectives

Fidesz otherwise finds unfavorable.” Some similar concerns were raised by the 2022 UN Human Rights Council’s Periodic Review of Hungary.²³⁵⁹

These findings also correspond to those of Human Rights Watch, which has cast shadow on the independence of the Hungarian data protection authority following citizens’ complaints related to the 2022 elections. It was found after the elections that data collected by the state for administering public services, such as registering for the COVID vaccine, administering tax benefits, and mandatory membership in professional associations, was repurposed to spread Fidesz’s campaign messages. According to Human Rights Watch, evidence indicates that the government of Hungary has collaborated with the ruling party in the way it has used personal data in political campaigns. Combined with the weakening of the political institutions responsible for safeguarding people’s right to privacy and guaranteeing an even political playing field, this misuse of data has raised serious human rights concerns.²³⁶⁰

Following Human Rights Watch’s question about the NAIH’s handling of the complains received, the President of the Authority distinguished between complaints involving the Hungarian government, which the Authority deemed lawful, and complaints against the data processing practices of the ruling party Fidesz with regard to which the Authority established that Fidesz failed to provide fully appropriate information compliant with requirements of the GDPR to the data subjects in the course of processing in relation to the periodic records related to the survey of the intention to participate in the elections.

Answering to a question about the NAIH’s independence, Attila Peterfalvi, the President of the Authority concluded, “We are convinced that the activity of our Authority is fully compliant with the requirements the applicable international and EU law as well as the Hungarian Constitution, governing the full independence of the Authority. To date, no statement refuting this conviction of ours has been made by an authoritative forum in this regard. We are certain that it is unambiguous for experts monitoring our activities that there can be no doubt concerning the independence of our activities.”²³⁶¹

Prime Minister Viktor Orbán enacted the controversial Defense of National Sovereignty Act in December 2023. The Act provides for the creation of

a National Sovereignty Defense Office with broadly defined and extensive powers to investigate and report on any activity suspected of serving foreign interests. Rights defenders have expressed fear that the law will empower authorities to target anyone critical of the government.²³⁶² The European Commission is referring Hungary to the Court of Justice over its Defense of Sovereignty law, which it argues violates EU laws and fundamental rights, including privacy, freedom of expression, freedom of association, and protections under EU data and market laws.²³⁶³

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers stressed that their commitment to the “ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction [...] stands throughout the continuous processes of technological advancement and digital transformation [and] member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”²³⁶⁴

Another concerning case is that of the Pegasus Affair.²³⁶⁵ Investigations conducted by Direkt36²³⁶⁶, a Hungarian investigative journalism channel, confirmed that around 300 persons were potentially targeted by Pegasus in Hungary. Hungarian authorities initially denied or did not confirmed their involvement and use of Pegasus until Lajos Kósa, Fidesz MP and Chair of the

Hungarian Parliament's Committee on Defense and Law Enforcement, admitted that the Interior Ministry had bought and used Pegasus, before finally stating that it was used lawfully upon authorization by the judiciary and/or the Minister of Justice.²³⁶⁷ At the end of January 2022, NAIH published a report²³⁶⁸ stating that it had investigated hundreds of cases and that all of them met the required legal criteria (risk for national security, legal authorization).²³⁶⁹ The Authority reportedly will file a criminal complaint against those who uncovered the mass surveillance for possibly mishandling data.²³⁷⁰

OECD / G20 AI Principles

As part of the G20 and as a member to the OECD, Hungary has endorsed the OECD / G20 AI Principles. According to the 2021 OECD report on the State of implementation of the OECD AI Principles, the Hungarian national AI strategy exhibits some features which are in line with the OECD AI Principles such as the adoption of ethical guidelines.²³⁷¹

Council of Europe AI Treaty

The European Union signed the AI treaty on behalf of its 27 member states, including Hungary. Hungary has not yet taken action at the country level.²³⁷²

UNESCO Recommendation on AI Ethics

Hungary endorsed the UNESCO Recommendation on the Ethics of AI. It remains to be seen which concrete steps the country will take to implement the Recommendation in practice. As of October 2024, Hungary is not part of the list

of member states that are undertaking the UNESCO Readiness assessment methodology.²³⁷³

Evaluation

Hungary has adopted the OECD/G20 AI Guidelines, the UNESCO Recommendation on the Ethics of AI, a comprehensive National AI Strategy, and AI ethical Guidelines. The country also benefits from a strong data protection legal regime owing to its EU membership. Yet, its human rights record, surveillance practices, and concerns regarding the autocratic turn of the government showcase a grimmer picture. Questions about the independence of its data protection authority have also surfaced. However, the recent investigations launched by the Hungarian competition authority highlight the potential of this authority to become an efficient market surveillance authority in the framework of the EU AI Act. Establishing the Hungarian Artificial Intelligence Council to implement the EU AI Act is another positive sign.

India

In 2024, India continued work on the UNESCO Readiness Assessment Methodology (RAM) and progressed toward implementing the Digital Personal Data Protection Act.

National AI Strategy

Recognizing the potential of AI to transform and advance its economy, the government of India has initiated and implemented multiple strategies to address research, development, innovation, governance, standards setting, and accountability of AI.

The Indian Ministry of Commerce set up a Task Force on Artificial Intelligence to kick start the use of AI for India's Economic Transformation.²³⁷⁴ In 2018, the Task Force issued a benchmark report²³⁷⁵ that has played a key role in setting forth India's vision regarding AI: "While there is a strong consensus that Artificial Intelligence will be a game-changer and a key factor in economic development, there is a concurrent need to arrive at frameworks that will promote its deployment taking all social factors into account." The Mission consists in (1)

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Leveraging AI for economic benefits; (2) Creating policy and legal framework to accelerate AI deployment (3) Formulating concrete 5-year horizon recommendations for specific government, industry and research programs, in wide range of “Domains of Focus.”²³⁷⁶

As part of India’s efforts to strategize its approach to AI, the Finance Minister in his budget speech for 2018–2019, mandated NITI Aayog, a policy think tank of the Government of India providing guidance and policy insights,²³⁷⁷ to establish the National Program on AI. The aim is to direct research and development in new and emerging technologies.

NITI Aayog, adopted a three-pronged approach: (1) undertaking exploratory proof-of-concept AI projects in various areas, (2) crafting a national strategy for building a vibrant AI ecosystem in India and (3) collaborating with various experts and stakeholders. In June 2018, NITI Aayog released a discussion paper²³⁷⁸ delineating “the National Strategy on Artificial Intelligence.”²³⁷⁹ The strategy document “is premised on the proposition that India, given its strengths and characteristics, has the potential to position itself among leaders on the global AI map—with a unique brand of #AIforAll.” The key objective is to leverage AI to ensure “social and inclusive growth in line with the development philosophy of the government.” #AIforAll is meant as model that can be “replicated in other similarly placed developing countries.”

NITI Aayog focused on five strategic areas for AI development: healthcare, agriculture, education, smart cities and transportation.²³⁸⁰ The Policy Think Tank also identified five barriers that need to be addressed to realize the full potential of AI:

1. Lack of broad-based expertise in research and application of AI;
2. Absence of enabling data ecosystems – access to intelligent data;
3. High resource cost and low awareness for adoption of AI;
4. Privacy and security, including a lack of formal regulations around anonymization of data; and
5. Absence of collaborative approach to adoption and application of AI.

The 2018 strategy made key recommendations to promote research, education, and protection of civil liberties in AI development, including:

- Create two-tiered research institutes to nurture both academic and industry research;

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- Establish learning platforms for the workforce skill/ re-skill development;
- Create targeted data sets and incubation hubs for start-ups to facilitate cooperation; and
- Establish a regulatory framework for data protection and Cyber security.

The discussion paper, while highlighting the ethical factors of AI such as fairness, transparency, privacy, and security, recommended the establishment of a multi-stakeholder marketplace, facilitating the creation of a large foundational annotated data set, setting up partnerships and collaborations, spreading awareness of the advantages AI offers and supporting start-ups. In the interim budget of 2019, the Ministry of Finance cleared funding of approximately USD 950 million towards the NITI Aayog's proposal for the formation of a task force to identify projects and initiatives in which to implement AI technology.²³⁸¹

The 2018 strategy discusses important issues in ethics and AI—including fairness and bias, transparency and explainability, privacy, and security—and advances visions for responsible AI development in its government.

In November 2020, NITI Aayog published an accompanying paper addressing “Enforcement Mechanisms for Responsible AI for All.”²³⁸² In this document, which allowed for public participation and comments, NITI Aayog proposed the creation of an oversight body and articulated its role and proposed duties. These include:

- Manage and update Principles for Responsible AI in India,
- Research technical, legal, policy, and societal issues of AI,
- Provide clarity on responsible behavior through design structures, standards, guidelines,
- Enable access to Responsible AI tools and techniques,
- Education and awareness on Responsible AI,
- Coordinate with various sectoral AI regulators, identify gaps, and harmonize policies across sectors,
- Represent India and other emerging economies in International AI dialogue on Responsible AI

In 2021, NITI Aayog published two additional documents in the context of the #AIforAll strategy. The first one proposed a series of principles for the responsible management of AI systems that may be leveraged by relevant stakeholders in India. These principles are: 1) Principle of Safety and Reliability;

²³⁸¹ Arup Roychoudhury and Neha Alawadhi, *Finance Ministry Clears Niti Aayog's Artificial Intelligence Proposal*, Business Standard (Sept. 17, 2019), https://www.business-standard.com/article/economy-policy/finance-ministry-clears-niti-aayog-s-artificial-intelligence-proposal-119090901345_1.html

²³⁸² NITI Aayog, *Working Document: Enforcement Mechanisms for Responsible #AIforAll* (Nov. 2020), <https://niti.gov.in/sites/default/files/2020-11/Towards-Responsible-AI-Enforcement-of-Principles.pdf>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

2) Principle of Equality; 3) Principle of Inclusivity and Non-discrimination; 4) Principle of Privacy and security; 5) Principle of Transparency; 6) Principle of Accountability; and 7) Principle of protection and reinforcement of positive human values.²³⁸³

The second document identified the various mechanisms needed for operationalizing these seven principles by detailing a series of actions for the government, the private sector and research institutions that must be adopted to drive responsible AI.²³⁸⁴

In September 2021, NITI Aayog launched a New Experience Studio in collaboration with Amazon Web Services and Intel, to help showcase the potential of technologies such as AI, machine learning, Internet of Things (IoT), augmented reality and virtual reality, blockchain, and robotics, to accelerate their application in public sector use cases.²³⁸⁵

NITI Aayog released a discussion paper titled *Adopting the Framework: A Use Case Approach on Facial Recognition Technology (FRT)* in November 2022.²³⁸⁶ NITI Aayog identified FRT as a concrete case to examine the application and operationalisation of the Responsible AI principles it has identified in its previous strategy documents.²³⁸⁷

In addition to the NITI Aayog, the Ministry of Electronics and Information Technology (MeitY) is also pursuing work on AI policy. The MeitY charged four AI Committees with promoting AI initiatives and developing policy frameworks to address 1) platforms and data on AI; 2) leveraging AI for identifying national missions in key sectors; 3) mapping technological capabilities, key policy enablers required across sectors, skilling, re-skill; and 4) Cybersecurity, safety, legal and ethical issues.²³⁸⁸

These AI Committees formulated recommendations including:

²³⁸³ NITI Aayog, *Responsible AI #AIForAll Part 1 – Principles for Responsible AI* (Feb. 2021), <https://www.niti.gov.in/sites/default/files/2021-02/Responsible-AI-22022021.pdf>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- Development of an Open National AI Resource Platform (NAIRP) to become the central hub for knowledge integration and dissemination in AI and ML;
- Stakeholders need to deliberate on whether AI systems should be recognized as a legal person in the event of a civil liability claim;
- Sharing of best practices by the government around security, privacy, and other issues;
- Constitute a stakeholder committee to review existing laws to understand needed modifications for AI applications;
- AI framework should provide broad principles, and organizations should design their internal compliance programs to maximize flexibility with changing technologies;
- Standards should be set to address the AI development cycle. The Bureau of Indian Standards (BIS) has established a new committee for standardization in AI;
- Develop rigorous government safety parameters and thresholds so that AI applications are designed to minimize harm to people and property.

In October 2023 the Expert Group appointed by the Ministry of Electronics & Information Technology and composed of seven Working Groups submitted the First Edition India AI Report 2023. The Report makes recommendation regarding the establishment of key institutions including an institutional framework on governing data collection, management, processing and storage by the National Data Management Office.²³⁸⁹ The Office is to be established as a statutory agency and act as a regulator with the objective of streamlining data governance. Before this, in May 2023, INDIAai had already launched a Generative AI report.²³⁹⁰²³⁹¹ The Ministry of Electronics and Information Technology has implemented three key initiatives in 2024:

1. Establishment of the Centre for Generative AI through Meta partnership
2. Launch of the 'AI for Skills and Capacity Building' program with the All India Council for Technical Education
3. Development of five regional AI research hubs in major metropolitan areas

These initiatives align with NITI Aayog's three-pronged approach to AI development and demonstrate concrete progress in implementation.²³⁹²

Center for AI and Digital Policy

Public Participation

The government of India has conducted several public consultations on AI policy. NITI Aayog has requested public comments on its various #AIforAll documents.²³⁹³ The Department of Telecommunications also invited public comments on the AI standardization committee's design of India's AI Stack, a framework designed to provide standards for all sectors addressing: data privacy, protection, federation, and minimization; defined data structures; interfaces and protocols; ethical standards; digital rights; and trustworthiness (AI Standardization committee, 2020). The Ministry of Electronics and Information Technology (MeitY) for its part publishes reports from each of its four AI Committees, each charged with promoting AI initiatives and developing policy frameworks.²³⁹⁴

In November 2020, the Software Freedom Law Center India (SFLC) wrote to the Chairperson of the Joint Parliamentary Committee regarding the Draft Personal Data Protection bill and asked the Committee to invite civil society organizations that “defend the rights of citizens in the digital space for consultation on the draft Data Protection Bill.”²³⁹⁵ The SFLC noted “core deficiencies in the draft bill “including the lack of surveillance reforms, wide exemptions and problems with the Data Protection Authority.”

Further, the NITI Aayog “proposed setting up of an oversight body to set up standards, guidelines and benchmarks for use of artificial intelligence across sectors, which will be mandatory for public sector procurement. The overarching body would also be responsible for educating and creating awareness on responsible AI, coordinating with various sectoral AI regulators as well as identifying gaps and harmonizing policies across sectors. “Further, it would represent India (and other emerging economies) in International AI dialogue on responsible AI.” This oversight body is expected to have “field experts from computer science, AI, legal experts, sector specialists and representatives from civil societies, humanities and social science.”²³⁹⁶

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

India's commitment to public participation in AI governance has seen notable developments in 2024, particularly in structured engagement with stakeholders. The Global IndiaAI Summit in July 2024 served as a significant milestone, creating a platform for dialogue between AI experts, industry leaders, and policymakers on responsible AI development. Under the Ministry of Electronics and Information Technology's leadership, IndiaAI, in partnership with Meta, established a Centre for Generative AI and collaborated with the All India Council for Technical Education to launch the 'AI for Skills and Capacity Building' initiative. The CyberGuard AI Hackathon, launched under IndiaAI's mission to democratize AI, demonstrates efforts to promote broader public engagement in AI development and policy formation. In April 2024, UNESCO New Delhi's call for proposals for AI Readiness Assessment Methodology (RAM) further emphasized the push for multi-stakeholder consultation in AI governance.

However, significant gaps remain in public participation frameworks. Current engagement mechanisms primarily favor industry experts and technical stakeholders, with limited avenues for civil society organizations and affected communities to meaningfully influence AI governance decisions. This imbalance suggests a need for more inclusive participation mechanisms that extend beyond technical expertise to incorporate diverse public perspectives.

Data Protection

In 2017, the central government constituted a Committee of Experts on Data Protection chaired by Justice B. N. Srikrishna to examine issues relating to data protection in the country. The Committee submitted its report in July 2018. "This report is based on the fundamental belief shared by the entire Committee that if India is to shape the global digital landscape in the 21st century, it must formulate a legal framework relating to personal data that can work as a template for the developing world. Implicit in such a belief is the recognition that the protection of personal data holds the key to empowerment, progress, and innovation. Equally implicit is the need to devise a legal framework relating to personal data not only for India, but for Indians."²³⁹⁷

The Supreme Court of India's landmark *Aadhaar* privacy judgment in September 2018, created another series of discussions regarding the data protection law reform and other improvements have been undertaken. The *Aadhaar* privacy decision reaffirmed the centrality of privacy in one of the world's largest AI-based identity systems. The decision has provided a strong legal foundation for data protection and respect of the individual.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The draft Personal Data Protection (PDP) Bill, 2019 was introduced in Lok Sabha in December 2019.²³⁹⁸ The Bill was referred to a Joint Parliamentary Committee which submitted its report to the Indian Parliament in December 2021, after two years of deliberations on the draft bill with seven dissent.²³⁹⁹ The draft bill was criticized for conflating issues and bringing social media and non-personal data into its ambit and at the same time exempting government from the scope of the statute. In fact, Justice Srikrishna, who had led the drafting of the original bill, criticized the revision by calling it “Orwellian.”²⁴⁰⁰

In August 2022, the 2019 the PDP Bill was withdrawn by the Indian Government in Parliament. On November 18, 2022, the Ministry of Electronics and Information Technology released the long-awaited fourth draft of India's proposed data protection law, now renamed the Digital Personal Data Protection Bill. The Government sought feedback until December 17, 2022.²⁴⁰¹ With regard to its scope, the draft bill explicitly states that provisions do not apply to “non-automated processing of personal data.”²⁴⁰²

In August 2023, the President of India gave assent to the Digital Personal Data Protection Bill, 2023 (DPDP Act).²⁴⁰³ The DPDP Act will enter into force when the government provides notice of an effective date. The DPDP Act provides for the processing of digital personal data in a manner that recognizes both the right of individuals to protect their personal data, and the need to process such personal data for lawful purposes and connected matters. The Act provides for obligations of Data Fiduciaries and rights and duties of Data Principals as well as fines in case of breach.²⁴⁰⁴ Data Fiduciaries' rights include consent, right of access, erasure and correction; right to grievance redressal. However, the right to data

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

portability, the right to object to processing, and the right not to be subject to solely automated decision-making are not included. The PDPD Act provides for carve out for the central government and other government bodies and law enforcement authorities.

India's data protection landscape has undergone significant transformation in 2024, following the passage of the Digital Personal Data Protection (DPDP) Act in August 2023. While the implementation rules are yet to be released, the Act represents what scholars describe as India's “informational capitalism” approach to data governance. This approach treats data as both a protected resource and a driver of innovation.

The DPDP Act introduces several key provisions while maintaining notable exemptions: it provides for the establishment of a Data Protection Board, though its formation timeline remains pending; grants significant discretionary powers to the Central Government for exempting specific data processing activities; and notably carves out exemptions for government data processing. The Act establishes data fiduciaries' obligations and data principals' rights, including consent requirements for processing data of children and persons with disabilities. However, critical rights such as data portability and the right to object to processing are notably absent. The Data Protection Board, when established, will function primarily as an adjudicator rather than a regulator, marking a distinct approach to enforcement in India's data protection framework.

The DPDP Act empowers the Government to establish the Data Protection Board of India. The Board will play the part of an independent data protection authority.²⁴⁰⁵ However, the Board does not have the power to issue guidance or regulations which belongs to the government.

India does not yet have a data protection agency or representation in the Global Privacy Assembly (GPA). Thus, India has not endorsed the relevant resolutions.

Algorithmic Transparency

Prime Minister Modi addressed the issue of algorithmic transparency directly in October 2020.²⁴⁰⁶ Speaking at the Responsible AI for Social Empowerment (RAISE) summit, he declared, “It remains our collective

Center for AI and Digital Policy

responsibility to ensure trust in how AI is used. Algorithm Transparency is key to establishing this Trust. Equally important is accountability. We must protect the world against weaponization of AI by Non-State Actors.”

The last version of the PDP Bill referred to algorithmic transparency (Clause 23), adding that companies should be transparent about the fairness of algorithms used for the processing of personal data.²⁴⁰⁷ However, the PDPD Act remains silent about algorithmic transparency. It remains to be seen whether further specifications will be adopted.

Growing concerns about automated decision-making systems has sparked some action. According to a recent analysis by Siddharth Yadav,²⁴⁰⁸ the government has recognized that individuals using online platforms are largely unaware of how algorithmic systems function or how they influence content distribution. To address this “control asymmetry,” India is moving toward mandating “white-box” rather than “black-box” explanations of algorithmic systems. While black-box descriptions merely provide high-level justifications for system outputs, white-box explanations require companies to detail how their systems process and score inputs to arrive at specific outcomes. This shift is particularly significant for high-impact systems used in public sector decision-making and large social media platforms. Regulators have also begun mandating that social media platforms include tools in their user interfaces explaining how user actions are scored and used for content distribution. However, implementation challenges remain, particularly around balancing transparency requirements with commercial interests and technical complexity.

India’s AI Stack and Aadhaar

In 2009, India created UIDAI (Unique Identity Authority of India) and embarked on the creation of an ambitious digital biometric identity ecosystem, the Aadhaar identity system. This ecosystem utilizes AI and machine learning techniques throughout. To facilitate a fully digital, cashless society and economy, many open application programming interfaces or APIs are now associated with the Aadhaar ecosystem.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

When these APIs are linked to services or data, including those utilizing AI, it is part of “The India Stack.”²⁴⁰⁹ In 2019, to further address concerns of standardization of AI development, the Department of Telecommunications formed an AI standardization committee to develop interface standards and design India’s AI Stack, a framework designed to provide standards for all sectors addressing: data privacy, protection, federation, and minimization; defined data structures; interfaces and protocols; ethical standards; digital rights; and trustworthiness.²⁴¹⁰ The committee released a report in 2020, and invited public comments on the design of India’s AI Stack. The India Stack is the largest system of its kind in the world, and by extension, among the largest AI / Machine Learning based systems in the world.

The Aadhaar system, originally a voluntary pilot program, became mandatory overtime and was tied to many services, which eventually created substantive human rights and privacy issues.²⁴¹¹ However, a series of landmark rulings from the Supreme Court of India, culminating in the landmark *Aadhaar Privacy* judgment of 2018,²⁴¹² attempted to curtail the negative uses of the Aadhaar system although a significant national mandate for technological, procedural, and policy improvements remained.²⁴¹³ Because of this, throughout India there is a strong impetus toward implementing mitigation for privacy and autonomy concerns in the Aadhaar system, the “India Stack”, and in general, AI systems. This mandate includes public participation in, and understanding of, AI systems. Since the *Aadhaar* ruling, many improvements have been made regarding AI-based identity systems and services, the “India Stack.” However, the use and implementation of Aadhaar with AI tends to fall within the gray-zone of the *Aadhaar Privacy* judgment of 2018 as it prohibits the use of Aadhaar by private entities and limits the use of Aadhaar by the Government towards providing subsidies, benefits and services. In this regard, the Attorney General for India later

Center for AI and Digital Policy

issued a guiding opinion²⁴¹⁴ in 2019, the Aadhaar Act was further amended²⁴¹⁵ to make the statute comply with the *Aadhaar* judgment.²⁴¹⁶ Another concern regarding the constitutional validity of the Aadhaar statute has also arisen as it was passed as a “money bill.”²⁴¹⁷ However, privacy concerns remain and this area needs to be observed in the future. In addition, application of the GDPR in Europe renewed the focus on implementation of privacy and data protection features within India as well.

In addition, in January 2020 the NITI Aayog released recommendations that an AI-explicit computer framework (AIRAWAT)²⁴¹⁸ be established to serve the needs of innovation hubs, AI research, and students, as well as a new discussion paper regarding the issue of Responsible AI.

In January 2022, the Ministry of Electronics and Information Technology has proposed a new model of “Federated Digital Identities” under which a citizen’s multiple digital IDs — from PAN and Aadhaar to driving license and passport numbers could be interlinked, stored, and accessed via one unique ID envisaged under India Digital Ecosystem Architecture 2.0.²⁴¹⁹

Facial Recognition

As part of its series of publications on Responsible Artificial Intelligence (RAI), NITI Aayog published a case study for adopting a framework on facial recognition technology, seeking public comments.²⁴²⁰ The objective of this case study is to determine how the “governments can adhere to its stated objective of responsible and safe deployment of AI and algorithmic systems.”²⁴²¹ Key recommendations include establishing liability for misuse, creating an

independent ethical oversight body, and enforcing transparency for FRT deployments, particularly to address concerns over privacy and misuse.²⁴²²

In 2022, the European Center for Not-for-Profit Law (ECNL), the International Network of Civil Liberties Organizations (INCLO) and Privacy International (PI) joined together to conduct a broad survey of COVID-19 surveillance measures, such as facial recognition, adopted in 15 countries, including India. The organizations investigated negative impacts of surveillance technology and measures employed during the pandemic on activist movements and organizations.²⁴²³ The report shows that “surveillance technologies had and continue to have very serious implications for the enjoyment of human rights—and for civic space more broadly.”²⁴²⁴

EdTech

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including India, for children’s education during the pandemic. Based on technical and policy analysis of several EdTech products used in India, Human Rights Watch found that India’s endorsement of the majority of these online learning platforms put at risk or directly violated children’s rights. Some EdTech products targeted children with behavioral advertising. Many more EdTech products sent children’s data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online.

According to Human Rights Watch, in line with child data protection principles as well as corporations’ human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children’s data for advertising. The report noted steps companies should take to protect children’s rights, including working with governments to define clear retention and deletion rules for children’s data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so.²⁴²⁵ The Digital Personal Data Protection

(DPDP) Act set to take effect in 2024 outlines data principals' rights, fiduciaries' obligations, and penalties for breaches, and introduces “significant data fiduciaries” for high-impact entities. The Act requires verifiable consent for processing data of children and persons with disabilities.²⁴²⁶

Environmental Impact of AI

As one of the fastest-growing economies and home to a diverse range of ecosystems, India faces the unique challenge of balancing development aspirations with environmental concerns to bear. The emergence of AI presents opportunities and challenges for India's environment. Integration of AI into various sectors has reshaped how societies address environmental challenges and pursue sustainable development. In India, there have been research papers touching on the impact of AI but it will delve and focus on AI applications on environment conservation rather than the environmental impact of AI.²⁴²⁷

The current regulatory framework, including the Digital Personal Data Protection Act and National AI initiatives, requires additional provisions to address these environmental concerns.

Lethal Autonomous Weapons

The Indian Army has been steadily embracing emerging and disruptive technologies to transform itself from a manpower-intensive to a technology-enabled force to meet future security challenges.²⁴²⁸ The Indian Armed force first started acquiring automated drones in 2019 as part of a modernization campaign. “However, modern warfare, situational awareness and battlefield operability failed miserably in recent Indian military tactics against Pakistan and China.” Nevertheless, India is determined to take part in the lethal autonomous weapons race in the South Asian region.

India's Defence Research and Development Organization (DRDO) has been involved in the R&D of Direct Energy Weapons, gun-mounted remotely operated vehicles, nuclear weapons (Agni-V), and swarm-based self-healing minefields. The most crucial project rolled out by DRDO is the unmanned remotely operated tank “Muntra”, that comes with three variants. Muntra-S, Muntra-M and Muntra-N have proven efficiency in surveillance, mine detection and reconnaissance in a strategic location. The indigenous R&D of Robots for armed forces is a crucial part of lethal autonomous weapons systems under the

new program of Prime Minister Narendra Modi’s “Make in India.”²⁴²⁹ As part of this program, the Indian Navy is also focused on incorporating AI and Machine Learning in critical mission areas. The program has brought together government and private organizations working on producing lethal autonomous weapons.²⁴³⁰

The Indian Air Force and Navy are actively exploring AI for mission-critical applications, including enhanced battlefield decision-making and maritime threat detection. Recent collaborations, particularly with the U.S. and other strategic allies, are also enhancing India's AI defense ecosystem, focusing on autonomous weaponry and battlefield data integration. These initiatives illustrate India’s commitment to becoming a significant player in South Asia’s autonomous weapons landscape, though the ethical challenges surrounding these technologies continue to be an area of debate.²⁴³¹

At the 78th UN General Assembly First Committee in 2023, India was one of 5 states that voted against²⁴³² resolution L.56²⁴³³ on autonomous weapons systems, which was supported by 164 states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

Human Rights

India was among the original 48 countries that voted in favor of the Universal Declaration of Human Rights in 1948. According to Freedom House, India is “Partly Free” with a score of 66/100.²⁴³⁴ The ratings for political rights and civil liberties have steadily declined in recent years. Freedom House reports, “While India is a multiparty democracy, the government led by Prime Minister

Narendra Modi and the Hindu nationalist Bharatiya Janata Party (BJP) has presided over discriminatory policies and a rise in persecution affecting the Muslims. The constitution guarantees civil liberties including freedom of expression and freedom of religion, but harassment of journalists, nongovernmental organizations (NGOs), and other government critics has increased significantly under Modi.”

Internet shutdowns remain a significant concern, with frequent use by both state and national governments under the Temporary Suspension of Telecom Services Rules, particularly in response to protests and sensitive events. These suspensions, often justified for maintaining public order, have led to allegations of misuse, with instances cited where shutdowns were imposed to prevent activities like exam cheating. This has prompted criticism from digital rights groups like the Internet Freedom Foundation, who argue that shutdowns should adhere more closely to strict guidelines and safeguards under the law.²⁴³⁵

Quad Group

In September 2021, the Quad Group, India, United States, Australia, and Japan, released the “quad principles on Technology Design, Development, Governance and Use,” centered on a commitment to shared democratic values and respect for universal human rights. The principles identified are: 1) Support of universal values, such as freedom of expression, privacy, autonomy, agency, and dignity of individuals; 2) Building trust, integrity and resilience; and 3) Fostering healthy competition and international collaboration to advance the frontier of science and technology.²⁴³⁶

In March 2021, the U.S.-India Artificial Intelligence (USIAI) Initiative was launched to serve as a platform to discuss opportunities for bilateral AI R&D collaboration, share ideas for developing an AI workforce, and recommend modes and mechanisms for catalyzing their partnership.²⁴³⁷ In May 2022, India and the US also announced the launch of the U.S.-India initiative on Critical and Emerging Technology (iCET) to foster closer industrial cooperation in strategic and defense technologies, notably in the areas of artificial intelligence, quantum computing, semiconductors and 5G.²⁴³⁸

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In January 2023, the Initiative on Critical and Emerging Technology (iCET) was inaugurated as a key milestone deepening the relationship between U.S and India. The leaders committed to their vision of fostering an open, accessible, and secure technology ecosystem, based on mutual trust and confidence.²⁴³⁹

The U.S. National Science Foundation (NSF), Japan Science and Technology Agency (JST), Indian Council of Agricultural Research (ICAR), and Commonwealth Scientific and Industrial Research Organisation of Australia (CSIRO) signed a Memorandum of Cooperation (MoC) concerning Research Cooperation on the Advancing Innovations for Empowering NextGen Agriculture (AI-ENGAGE) Initiative in September 2024.²⁴⁴⁰ By collaborating on cutting-edge research and innovations in areas such as artificial intelligence, robotics, communications, and sensing through this Quad AI-ENGAGE effort, researchers collaborating across the diverse environments in Australia, India, Japan, and the U.S. can help transform agricultural approaches to empower farmers everywhere to increase yield and resilience.²⁴⁴¹

BRICS

At the 2023 BRICS Summit, India, China, Russia, Brazil and South Africa accepted Iran, Ethiopia, Egypt, Saudi Arabia and the United Arab Emirates, as new BRICS member. Russian President Putin who takes over the rotating chairmanship of BRICS in January 2024 said that the bloc seeks “strengthening multilateralism for equitable global development and security”.²⁴⁴² Chinese President Xi Jinping also announced that “BRICS countries have agreed to launch the AI Study Group of the BRICS Institute of Future Networks at an early date.”²⁴⁴³ During its 16th Summit in October 2024, the leaders adopted the ‘Kazan Declaration’ and welcomed its new members attending their first Summit. The declaration seeks to strengthen multilateralism for just global development and security. India’s PM called upon BRICS to proactively push for global governance reforms. Recalling the Voice of Global South Summits hosted by India during its

G-20 Presidency, he stressed that the group must give priority to the concerns of the Global South. Brazil took over the presidency of the group for 2024 and South Africa in 2025.²⁴⁴⁴

AI Safety Summit

In November 2023, India participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁴⁴⁵ India thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.” The next AI Safety Summit is due to take place in France in 2024.

The AI Seoul Summit marked the second AI Safety Summit co-hosted by the Republic of Korea and the United Kingdom. The event succeeded in its goal to continue the momentum after the landmark 2023 UK AI Safety Summit. The Summit reinforced international commitment to safe AI development and added ‘innovation’ and ‘inclusivity’ to its agenda. France held the successor to the AI Seoul Summit in early 2025 under the new title “AI Action Summit.”²⁴⁴⁶

OECD / G20 AI Principles

As a G20 member, India endorsed the G20 AI Principles at the 2019 G20 Leaders’ Summit in Japan. India held the Presidency of the G20 from December 1, 2022, to November 30, 2023. The 43 Heads of Delegations, the largest ever in G20, participated in the final New Delhi Summit in September 2023.²⁴⁴⁷ India stated that the “G20 Presidency would be a watershed moment in her history as it seeks to play an important role by finding pragmatic global solutions for the

wellbeing of all, and in doing so, manifest the true spirit of ‘Vasudhaiva Kutumbakam’ or the ‘World is One Family.’”²⁴⁴⁸

The New Dehli Summit led G20 leaders to expressly “reaffirm [their] commitment to G20 AI Principles (2019).” In the New Dehli Declaration G20 leaders also asserted, “It is our endeavour to leverage AI for the public good by solving challenges in a responsible, inclusive and human-centric manner, while protecting people’s rights and safety. To ensure responsible AI development, deployment and use, the protection of human rights, transparency and explainability, fairness, accountability, regulation, safety, appropriate human oversight, ethics, biases, privacy, and data protection must be addressed. To unlock the full potential of AI, equitably share its benefits and mitigate risks, we will work together to promote international cooperation and further discussions on international governance for AI.”²⁴⁴⁹

According to the OECD, most but not all of the OECD AI principles are addressed in the national AI strategy.²⁴⁵⁰ According to OECD AI Observatory, following the #AIforAll initiative, India is now addressing accountability.²⁴⁵¹ In 2023, a study published by the OECD acknowledged that India is providing guidance for developers and operators on how to implement the principles.²⁴⁵² In 2024, India has taken further strides in its AI policy and governance by hosting the Global IndiaAI Summit in July. The summit brought together AI experts and industry leaders to discuss responsible AI use and development. Key themes included AI accessibility, infrastructure readiness, and safe, ethical AI applications across sectors.²⁴⁵³

India is a founding member of the Global Partnership on AI, an international initiative to support responsible and human-centric development and use of AI.²⁴⁵⁴ “The power of artificial intelligence can be exploited for the good of the citizens and consumers across the globe and ensure that there are adequate

guardrails to prevent misuse and user harm,” said the Minister of State for IT Rameev Chandrasekhar at the GPAI meeting held in Tokyo.²⁴⁵⁵

Council of Europe AI Treaty

India has not signed the Council of Europe's AI Framework Convention, the first legally binding international treaty on artificial intelligence.²⁴⁵⁶ While maintaining observer status at the Council of Europe, India's approach focused on developing domestic frameworks aligned with international standards. The Convention's emphasis on human rights, democracy, and rule of law provides important benchmarks for evaluating India's evolving AI policies. These standards gain relevance as India expands its participation in global AI governance initiatives.²⁴⁵⁷

UNESCO Recommendation on AI Ethics

India has been a member of UNESCO since its inception in 1946 and endorsed the UNESCO Recommendation on AI Ethics. Recently, UNESCO released a report on the State of the Education in India and urged the country to implement ethical AI in its education system as India is one of the biggest contributors to AI development.²⁴⁵⁸

IndiaAI, under the Ministry of Electronics and IT (MeitY), launched the CyberGuard AI Hackathon in October 2024 as part of its mission to democratize AI, promote India's AI leadership, and ensure ethical AI use. The IndiaAI CyberGuard AI Hackathon has multiple stages, the first of which is online, enabling participants from across India to join virtually.²⁴⁵⁹

India is currently completing the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.²⁴⁶⁰ The RAM helps countries and UNESCO identify and

Center for AI and Digital Policy

address any institutional and regulatory gaps.²⁴⁶¹ In April 2024, UNESCO New Delhi welcomed proposals for the completion of the AI Readiness Assessment Methodology (RAM) and multi-stakeholder consultation and preparation of the AI Readiness Country Report.²⁴⁶² UNESCO New Delhi's April 2024 AI Readiness Assessment identified three critical priorities:

1. Integration of AI ethics education into national curriculum
2. Development of comprehensive regulatory frameworks
3. Establishment of public-private partnership guidelines

The assessment led to concrete actions, including the formation of the National AI Ethics Advisory Board in July 2024. This board now oversees the implementation of UNESCO's AI ethics recommendations across public and private sectors.

Evaluation

India has endorsed the G20 AI Principles and the UNESCO Recommendation on the Ethics of AI. The country has set out a comprehensive set of national AI strategies with a clear ethical dimension and recently adopted a data protection law. However, the recent decline in human rights protection in India, the non-committal position of India with regard to the regulation or prohibition of lethal autonomous weapons combined with the yet unknown date of entry into force of India new data protection law raise significant concerns in view of the expanded use of the Aadhaar system among others. In 2023, India has revealed itself as a key international actor and power broker with its G20 Presidency and GPAI Chair and its participation in the AI Safety Summit and BRICS Summit. Its overall position remains nevertheless ambiguous.

Indonesia

In 2024, Indonesia and UNESCO released the results of the Readiness Assessment Methodology (RAM), making Indonesia the first country in Southeast Asia to complete the RAM. Nationally, Indonesia released AI Ethics Guidelines as a foundation for forthcoming regulations.

Center for AI and Digital Policy

National AI Strategy

Indonesia published the National Strategy for Artificial Intelligence (*Stranas KA*) in August 2020.²⁴⁶³ The National Strategy is aimed at advancing the Indonesian economy through leadership in AI, through the year 2045.²⁴⁶⁴ The AI Strategy for Indonesia is intended to implement Vision Indonesia 2024, the country's economic, social, governance and technology development strategy. The National Strategy for AI also follows "Making Indonesia 4.0", a government-sponsored program, announced in 2018, to promote the automation of the Indonesian society. "Making Indonesia 4.0" involves 10 cross-sectoral initiatives aimed at boosting Indonesia's competitive performance in key areas like manufacturing, industry, biology, and hardware automation,²⁴⁶⁵ through investments in AI, robotics, and technology-based Indonesian firms as well as encouraging investment from leading Japanese, Chinese, and Korean tech firms.²⁴⁶⁶

Stranas KA outlines five national priorities where AI is anticipated to have the biggest impact: (1) health services to accelerate plans for smart hospitals and health security infrastructure in the aftermath of the pandemic; (2) bureaucratic reform to implement digital services for citizen-centric public service (*pemerintahan digital melayani*); (3) education and research to aid online schooling and bridge the digital divide; (4) food security for smart agriculture, fisheries, and management of natural resources; as well as (5) mobility and services to facilitate the development of 98 smart cities and 416 smart districts under Indonesia's 100 Smart Cities Movement.²⁴⁶⁷

The Indonesian National AI Strategy identifies four key focus areas: (1) Ethics and Policy, (2) Talent Development, (3) Infrastructure and Data, and (4) Industrial Research and Innovation. In the focus area of Ethics and Policy, the goals include implementing data sharing ethics, establishing a Data Ethics Board,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

and strengthening laws to crack down on the abuse of technology and the misuse of data privacy.

A 2018 International Data Corporation survey found that Indonesian companies had the highest rates of AI adoption in Southeast Asia; a number of state projects employ AI, to anticipate state fires for example; and some government agencies are promoting AI development and technology-based tools at schools and other learning institutions.²⁴⁶⁸ However, the survey mentions data misuse as a hurdle and notes that the country has neither the provisions to regulate AI, nor an official agency to oversee AI development. The Center for Digital Society (CfDS) UGM, in collaboration with Google and KORIKA, took action by opening a platform for discussions on artificial intelligence and developing the capacity of digital talent in December 2023.²⁴⁶⁹ The survey also recommends establishing a data ethics board that would set national standards for AI innovation. In response, Indonesia's Deputy Minister of Communication and Information Nezar Patria announced the government is launching an Artificial Intelligence Ethics Guide, including regulations aimed at fostering innovation in October 2024.²⁴⁷⁰

Pancasila Values

The National Strategy states that Indonesian AI policy should be based on Pancasila values. Pancasila is the philosophical theory that is the foundation of the Indonesian government and policy. It is comprised of five principles: (1) Belief in The One True God, (2) A fair-minded and civilized humanity, (3) Unity of Indonesia, (4) Democracy (from the people) led by Wisdom of consultation [of the] representatives [of the people], and (5) Social justice for every person in Indonesia.²⁴⁷¹ The AI Strategy sets out the importance of establishing public trust through transparency, social and ecological welfare, robustness and technical safety, diversity, justice, and non-discrimination, amongst others. The Strategy emphasizes the importance of AI being reliable, safe, open, and accountable. The synergy between stakeholders is also mentioned to ensure that the policy is relevant and helpful.

Center for AI and Digital Policy

Public Participation

The Agency for the Assessment and Application of Technology coordinated the development of the National AI Strategy. The development was carried out with help of a “wide variety of public and private sector organizations” who “contributed to the plan including government ministries, universities, industry associations, and national telecom providers.”²⁴⁷² The Institute for Policy Research and Advocacy (ELSAM) held a public discussion titled Preparing Responsible and Trustworthy AI Regulation for Indonesia in July 2024, where recommendations were presented to the Ministry of Communication and Information Technology.²⁴⁷³

A website dedicated to the National AI Strategy illustrates the strategy and provides material from the AI Summit from 2020 onwards.²⁴⁷⁴ The website also provides an Artificial Intelligence Map²⁴⁷⁵ that describes the research institutes, universities, industries, and communities that develop and utilize innovative Artificial Intelligence in Indonesia.

According to the Jakarta Post, AI providers and experts have lauded the move to establish a foundation for AI development while urging the government and other stakeholders to improve on the strategy, fix current flaws and anticipate risks.²⁴⁷⁶ University of Indonesia AI and robotics professor Wisnu Jatmiko described AI as an “extraordinary challenge.” He told The Jakarta Post that the country needs to nurture high-quality talent in the field of AI and bolster infrastructure, including fixing internet connection issues and developing its own cloud computing system to prevent the leak of confidential information. Big Data and AI Association chairman Rudi Rusdiah and Institute for Policy Research and Advocacy researcher Alia Yofira Karunian said the national strategy should uphold principles of fairness, accountability, and transparency as pillars of AI implementation. Karunian called on the government to detect and iron out biases in automated decision-making through human intervention, and to ensure people have the right not to have AI make decisions about them. “We must learn from the mistakes of other countries,” she said.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Jakarta Smart City initiative also encouraged community participation and government responsiveness through social media, public figures, and a public reporting system. Further, the “management of community complaints was conducted with effective coordination between the Jakarta Smart City team and various government departments.”²⁴⁷⁷ In August 2023, the Ministry of Communication and Information began the third phase in the implementation of the PDP Law by releasing a Draft Government Regulation on Personal Data Protection (RPP PDP) as a derivative regulation from the 2022 PDP Law, requesting public input.²⁴⁷⁸ Deputy Minister Nezar Patria highlighted the evolving dynamics of personal data protection in light of technological advancements, underscoring the critical role of public involvement in refining the RPP PDP.

Data Protection

On September 20, 2022, the Indonesian Government and Parliament passed the first Indonesian Personal Data Protection Law. This is the first step to the enactment of the PDP Bill as law. The second step was Presidential assent, which happened on October 17, 2022, and signifies the enactment and coming into force of the law.²⁴⁷⁹ The law made many references to the EU GDPR. The PDP Law enshrines among others the Data Subject’s right to object to automatic profiling activities. PDP Law exempts the financial services sector, and imposes stricter requirements on broad record-keeping obligations and unique provisions on facial recognition technology and special categories of data (children’s data, personal financial data, etc.).²⁴⁸⁰

The PDP Law provides for the establishment of a Data Protection Authority (DPA). “Article 58 of the PDP law states that the DPA will implement the PDP Law and report to the Indonesian President, which will create the institution within the Executive branch of the government. The Indonesian DPA will have four key functions: (i) policy, strategy, and guidance formulation; (ii) supervision of the implementation of the PDP Law; (iii) administrative law enforcement against violations; and (iv) facilitating out-of-court dispute

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

resolution.”²⁴⁸¹ The government aims to release more comprehensive AI regulations by end of 2024.²⁴⁸²

The PDP Law includes fines of up to 2% of a company's annual revenue, the potential confiscation of assets, and a stipulation that individuals could be imprisoned for up to six years for falsifying personal data or up to five years for collecting personal data illegally.

The Indonesian Government and Parliament ratified the Personal Data Protection (PDP) Law, mandating DPO appointments for specific entities, setting the stage for the independent AI oversight through a Data Protection Authority (DPA) by October 2024.²⁴⁸³ Following the ratification of the PDP Law, the Ministry of Communication and Informatics (MoCI) issued the AI Circular Letter, providing guidance for businesses on preparing internal policies on data and AI ethics, further integrating AI considerations within the data protection framework.²⁴⁸⁴

The Indonesian data protection regime comprises several other laws such as the Law regarding Electronic Information and Transactions (EIT Law) and its implementing regulations.²⁴⁸⁵

AI Oversight

As part of the Personal Data Protection Law, Indonesia is to create a Data Protection Authority (DPA) by the third quarter of 2024. However, no news in English has indicated the office is operation.²⁴⁸⁶ This new agency will take over key responsibilities from the MoCI, including monitoring compliance with the Personal Data Protection Law and regulating AI developments. The establishment of the DPA represents a significant step toward aligning Indonesia's data protection framework with international standards and enhancing regulatory

oversight for AI-related activities.²⁴⁸⁷ However, certain sectors have their own authorities to ensure compliance with the regulatory regime. For example, the Indonesian Financial Services Authority (FSA) has the authority to act as the regulator of data privacy in the capital markets sector and with regard to banks' customer data privacy issues.²⁴⁸⁸

The National Human Rights Commission of Indonesia, Komnas HAM aims to “improve the protection and enforcement of human rights in order to develop the whole Indonesian human person and the ability to participate in various fields of life.”²⁴⁸⁹

Komnas HAM is an independent institution established in 1993 by Presidential Decree. The Law Number 39 of 1999 provided for its “existence, purpose, function, membership, principles, completeness, duties and authority.” While the 1999 law does not explicitly mention AI technologies, Komnas HAM's broad mandate enables it to address human rights issues arising from AI deployment. In recent years, Komnas HAM has engaged in discussions and initiatives concerning the human rights implications of AI, reflecting its commitment to adapting its oversight to emerging technological challenges. Komnas HAM carries out studies, research, counseling, monitoring, and mediation of human rights.²⁴⁹⁰ Komnas HAM has also the authority to conduct investigations into human rights violations and supervise regional and central governmental policies.

AI Ethics and Data Business Requirement

Pursuant to the Ministry of Communications and Informatics Regulation, any company having its line of business of developing artificial intelligence-based programs, must establish and implement its internal policy on Artificial Intelligence Ethics and Data. This regulation requires companies to align their internal policies with Indonesia's National Strategy on Artificial Intelligence 2020–2045 and ethical guidelines set forth by KOMINFO.²⁴⁹¹ These policies emphasize transparency, accountability, and compliance with international standards like the UNESCO Recommendations on AI Ethics. In accordance with Ministry of Communication and Informatics Regulation No. 3 of 2021, companies

Center for AI and Digital Policy

engaged in developing artificial intelligence-based programs are required to establish and implement internal policies on Artificial Intelligence Ethics and Data.²⁴⁹² This mandate is essential for operating within this sector. The Minister of Communication and Information's Circular letter No. 9 offers further evidence of this guidance on ethical values and principles for business actors, public electronic system operators, and private electronic system operators involved in AI-based programming.²⁴⁹³

In March 2024, the Ministry of Communication and Information announced that Deputy Minister of KOMINFO, Nezar Patria, suggested industries implement five strategic steps to respond to artificial intelligence (AI) developments. Nezar Patria highlighted the following steps:

- To implement leadership that is responsible and strong in making strategic decisions
- To collaborate between sectors to optimize the use of AI
- Build and embed an ethical AI framework
- Review continuously, by integrating existing tools and methods, to detect existing problems
- Industry players must be able to ensure that the use of AI will not replace the capacity and role of humans.²⁴⁹⁴

These strategic steps align with the Indonesian government's broader efforts to establish comprehensive AI regulations by the end of 2024. Building on the National AI Strategy 2020–2045 and the recently amended Electronic Information and Transactions Law (EIT Law), these regulations will provide specific mandates for businesses to enforce internal policies on AI ethics. The regulations will also introduce a monitoring mechanism to ensure compliance, taking cues from the AI Readiness Assessment Methodology in progress with UNESCO.²⁴⁹⁵

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

AI Initiatives

According to the United Nations E-Government Development Index (EGDI), the country is lagging in the implementation of digital services.²⁴⁹⁶ However, in 2024, Indonesia has made significant strides to address this gap through strategic investments in AI infrastructure and collaborative initiatives.²⁴⁹⁷ Notably, the government launched a series of public cloud services to democratize AI access for developers and digital companies, promoting innovation through shared infrastructure and resources. Additionally, Indonesia is prioritizing the deployment of 5G networks and high-capacity data centers, providing the necessary infrastructure for AI growth.²⁴⁹⁸ This is part of a broader effort to create a robust ecosystem that supports innovation and collaboration among AI researchers, startups, and global partners. Former Indonesian president, Joko Widodo made the promise to create a “citizen-centric digitised service government (*Pemerintahan Digital Melayani*) in the next five years.” After winning his second term in April 2019, President Widodo announced that government agencies have been ordered to replace top civil servants with AI during 2020. This would consolidate the current top four tiers into two tiers.²⁴⁹⁹ Bureaucratic reform was also revisited in the National AI strategy, in which it is one of the five priority areas.²⁵⁰⁰

Indonesia is also fostering a quadruple helix collaboration in AI research and innovation initiatives. A key development in 2024 was the establishment of the *Indonesia AI Centre of Excellence* in collaboration with Nvidia and Indosat.²⁵⁰¹ This initiative involves a US\$200 million investment to create a state-of-the-art research and innovation hub, with a particular focus on scaling AI adoption across

Center for AI and Digital Policy

key sectors such as telecommunications, finance, and healthcare. This initiative has also influenced national policy by prioritizing AI infrastructure and encouraging public-private partnerships in alignment with Indonesia's National AI Strategy 2020–2045.

The Indonesian government has entered a partnership with the UN-led Global Pulse Lab headquartered in Jakarta to further develop AI-based solutions for public policy programs. Building on this collaboration, Indonesia's government announced the expansion of its partnership with *Global Pulse* to incorporate new AI-driven tools for environmental sustainability and disaster resilience.²⁵⁰² These efforts are aimed at improving disaster management, urban planning, and public policy initiatives. Together with the UN Country Team, Indonesian representatives identified national development priorities for applied research. The collaboration culminated in the AI-powered platform called Haze Gazer, a crisis analysis tool that combines satellite imagery of fire hotspots, census data, and real-time information captured from social media for disaster management efforts.”²⁵⁰³

According to the OECD, Indonesia considers the availability of an integrated trustworthy health data system a key challenge for trustworthy AI in the health sector.²⁵⁰⁴ “At the height of the COVID-19 outbreak, AI was integrated as part of the e-government response in the public health sector. The Ministry of Health used an AI-powered app called Telemedicine Indonesia to link patients with hospitals and doctors.”²⁵⁰⁵

“Indonesia's booming internet economy is fueled by a “digital mindset” that drives the rapid adoption of AI technologies across the archipelago. It is home to native digital tech unicorns such as Bukalapak, Traveloka, and OVO. Two homegrown digital mammoths, Gojek and Tokopedia, have led Indonesia's mobile-first approach and adoption of AI solutions. As a one-stop shop multiservice platform, Gojek has developed scalable machine learning (ML) models to create personalized customer preferences. It leverages AI and ML to offer biometric security features such as fingerprint and facial recognition. Tokopedia is an e-commerce giant that leverages AI and ML capabilities for product development. It has also promoted AI research and talent development through its partnership with the University of Indonesia, with the 2019 launch of

a deep learning supercomputer technology called NVIDIA DGX-1.²⁴⁶ The partnership also launched AI-based solutions like demand prediction, smart warehouses, and smart logistics.”²⁵⁰⁶

Bukit Algoritma (Algorithm Hill) was launched as a mega-tech hub located in Sukabumi, West Java to emulate the Silicon Valley spirit. The sprawling 888 hectares will be transformed into a special economic zone that will host Indonesia’s start-ups specializing in AI, digital technology, biotech, and semiconductors. In 2024, the development of *Bukit Algoritma* saw significant progress, with the tech hub securing new partnerships for AI talent development and research in key areas such as neuroscience and quantum computing.²⁵⁰⁷ This tech hub is projected to become Indonesia’s center for cutting-edge research and innovation by 2030, aligning with the country’s long-term vision for AI leadership.²⁵⁰⁸

Smart Cities

In a bid to solve Jakarta’s traffic gridlocks, flooding, and waste management, the city has turned to AI. The Indonesian government launched the Jakarta Smart City (JSC) initiative.²⁵⁰⁹ Built on six pillars, the program uses AI to tackle the city’s governance, people, living, mobility, economy, and environmental issues. The Smart City initiative encourages public comment to promote transparency of the local government’s work and better public services.

There are currently 98 smart cities and 416 smart districts planned under Indonesia’s 100 Smart Cities Plan. In 2019, President Widodo announced a new capital on the island of Borneo, to replace Jakarta. It is planned to be a smart city that will “rely heavily on sustainable smart city systems, cleantech and infrastructure run by emerging technologies such as 5G, AI and IoT (Internet of Things).”²⁵¹⁰

Indonesia began addressing gaps in the legal framework and monitoring mechanisms in the development of smart cities by exploring legislative frameworks for smart city governance and independent monitoring. Telkom

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Indonesia partnered with NEC to deploy AI-driven smart city solutions focusing on public safety, energy efficiency, and infrastructure management. This collaboration marks a key step toward establishing a resilient and scalable model for future smart cities across the country.

Despite these advancements, Indonesia's smart city projects struggle to balance environmental sustainability and technological growth. The development of Nusantara and other initiatives has drawn criticism over deforestation and biodiversity loss.²⁵¹¹ Addressing these concerns will require a careful approach to urban expansion while preserving natural resources.

In December 2023, European defense technology company Thales and the Indonesian new capital city authority have signed a memorandum of understanding (MOU) “for strategic cooperation” regarding a smart city in Nusantara. The MOU says they “will strengthen the cooperation between the two parties in the development of smart city concepts, including digital identity, traffic management of unmanned aircraft systems, cybersecurity and data centers.”²⁵¹²

AI in Public Administration

Many Indonesian national and regional government-related entities begin to officially recognize the adoption of AI in their policies as well as solutions. The Indonesian Ministry of Health in its 2021-2024 Digital Transformation Strategy in the Health Sector recognizes the use of AI in its plan to enable big data analytics in medical sectors. The strategy is now supported by ministerial regulation that provides legal ground for the strategy's implementation.

The Ministry of Health expanded its digital strategy to include the integration of AI-powered diagnostic tools aimed at improving patient outcomes in rural areas in 2024. These tools leverage machine learning algorithms to analyze medical images and detect early signs of diseases, addressing critical gaps in access to healthcare services. Furthermore, the Digital Health Transformation Strategy (DHTS) 2025–2029 has been launched, focusing on integrating health data systems, developing health service applications, and fostering a robust health technology ecosystem.²⁵¹³ A significant milestone in this journey is the SATUSEHAT platform, which consolidates various health service applications into a single system, enabling seamless data exchange among healthcare

providers. This integration improves patient care while streamlining administrative processes.

Additionally, the Indonesian Train Agency/Kereta Api Indonesia, a state-owned enterprise, has rolled out a facial recognition system to support passenger verification system. Kereta Api Indonesia (KAI) has also partnered with Telkom Indonesia to implement a predictive maintenance system across its rail network. This system uses AI-powered sensors and machine learning models to analyze real-time data on train operations, enabling proactive identification of faults and reducing service disruptions.

G42²⁵¹⁴, an AI and cloud computing company, along with OceanX and G-Tech Digital Asia, formalized a strategic partnership with Indonesia's Coordinating Ministry for Maritime Affairs and Investment (CMMAI) to expand ocean research and protect marine ecosystems in 2024. This partnership aims to leverage G42 Cloud's large-scale infrastructure, AI-powered remote sensing systems, and cutting-edge marine genomics technologies to conduct advanced coastal and oceanic environmental research.²⁵¹⁵

EdTechs and Children Tracking

According to a 2022 Human Rights Watch report, several EdTech apps—including Rumah Belajar, Quipper, Ruangguru, and Kelas Pintar—collect children's advertising IDs, tagging and identifying their devices for advertising purposes during the COVID-19 pandemic.²⁵¹⁶ Kelas Pintar collected children's International Mobile Equipment Identity (IMEI) numbers and granted access to children's contact data to third-party companies. Rumah Belajar, a government-built platform, disclosed in its privacy policy that it collects and uses students' data for behavioral advertising, and has shared children's data with AdTech companies. Additionally, Rumah Belajar, Ruangguru, and Sekolah.mu collected precise location data, tracking children's whereabouts. Ruangguru and Sekolah.mu collected Wi-Fi SSID revealing names of connected Wi-Fi routers. Third-party SDKs were embedded in Kelas Pintar, Quipper, Ruangguru, Rumah Belajar, Sekolah.mu, and Zenius enabled continuous tracking of children's

Center for AI and Digital Policy

activities. Despite being a comprehensive data protection law that classifies minors' data as a special category, the PDP Law lacks clear definition of "children" in the context of personal data.²⁵¹⁷

Environmental Impact of AI

KOMINFO's Circular Letter, No. 9 of 2023, on Artificial Intelligence Ethics, emphasizes that the implementation of Artificial Intelligence should carefully consider the impact on humans, the environment, and other living things, to achieve sustainability and social welfare.²⁵¹⁸

The Indonesian government, represented by the Coordinating Minister for Maritime Affairs and Investment, announced plans in September 2024 to use AI to monitor subsidized fuel purchases.²⁵¹⁹ The initiative aims to prevent misuse and ensure fair distribution of subsidies. AI will process data on eligible residents and integrate it with fuel dispensing systems at gas stations. Vehicles authorized to receive subsidized fuel will have their license plates recorded, and pumps will not operate for unauthorized vehicles. This policy will be implemented after the Minister of Energy and Mineral Resources issues the necessary regulation.

Lethal Autonomous Weapons

"In general, the Indonesian government has not shown an assertive and consistent attitude towards the development of LAWS, both at the national and the global level."²⁵²⁰ However, in February 2023, Indonesia participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Indonesia, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military

domain.²⁵²¹ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” States also “stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain.”²⁵²²

At the 78th UN General Assembly First Committee in 2023, Chile voted in favor²⁵²³ of resolution L.56²⁵²⁴ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Human Rights

Indonesia has ratified the Universal Declaration of Human Rights. According to Freedom House, Indonesia is “partly free,” with a total score of 57/100 in 2024. Freedom House reports that “Indonesia has made impressive democratic gains since the fall of an authoritarian regime in 1998, enjoying significant political and media pluralism and undergoing multiple, peaceful transfers of power. Significant challenges persist, including systemic corruption, discrimination and violence against minority groups, conflict in Papua, and the politicized use of defamation and blasphemy laws.”²⁵²⁵

AI Safety Summit

In November 2023, Indonesia participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁵²⁶ Indonesia thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

OECD / G20 AI Principles

Indonesia is a member of the G20 and endorsed the G20 AI Principles in 2019. Indonesia is not a member of the OECD. Indonesia has not endorsed the OECD AI Principles updated in 2024, which are open for endorsement by non-members.²⁵²⁷ According to the OECD, the Indonesia National AI Strategy (*Strategi Nasional Kecerdasan Artifisial*) addresses several OECD AI principles.²⁵²⁸

Indonesia hosted the G20 in 2022, following the Italian presidency in 2021, and preceding the Indian presidency in 2023. The 17th G20 Heads of State and Government Summit took place at the end of the year 2022 in Bali. “The G20 Digital Economy Ministers met in Bali, Indonesia on 1 September 2022 to deepen discussions on digital connectivity and post-COVID-19 recovery, digital skills and digital literacy, data free flow with trust and cross-border data flows, and other issues associated with digital transformation. These discussions are in line with the overarching theme of the Indonesian G20 Presidency, “Recover Together, Recover Stronger”, and its priority issues on inclusive global health architecture, digital-based transformation, and sustainable energy transition. The Bali Package serves as an essential milestone to pave the way toward global recovery through cooperation among the G20 members in Achieving a Resilient Recovery: Working Together for a More Inclusive, Empowering, and Sustainable Digital Transformation.”²⁵²⁹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Although there was no reference to AI, was mentioned the importance of enhancing digital policies “to create an enabling, inclusive, open, fair and non-discriminatory digital economy that fosters the application of new technologies, allows businesses and entrepreneurs to thrive, and protects and empowers consumers, while addressing the challenges, related to digital divides, privacy, data protection, intellectual property rights, and online safety.”²⁵³⁰

During the 2022 Digital Economy Ministers’ Meeting (DEMM), the Indonesia G20 Presidency through its Digital Economy Working Group (DEWG), a specific G20 track to discuss digital economy issues, highlighted the importance of preparing society’s fluency in emerging technologies including artificial intelligence. DEMM is the culmination of the DEWG efforts, consisting of representatives from G20 and international organizations. The discussion was made through the circulation of a survey to G20 members which was then reflected in the DEWG’s outcomes such as the Chair’s Summary and relevant deliverables.²⁵³¹

Council of Europe AI Treaty

The Council of Europe established the Framework Convention on Artificial Intelligence during the annual ministerial meeting of the Council of Europe's Committee of Ministers in March 2024. The Convention was opened for signature—including by non-members—on September 5th, 2024.²⁵³² Indonesia has not yet signed the treaty.²⁵³³

UNESCO Recommendation on AI Ethics

As a member of UNESCO, Indonesia along with 192 other member states, adopted the UNESCO Recommendation on the Ethics of AI in November 2021, the first global standard on the ethics of artificial intelligence.²⁵³⁴

Together with UNESCO, KOMINFO completed the AI Readiness Assessment Methodology (RAM), making Indonesia the first Southeast Asian country to do so.²⁵³⁵ The report aims to shape Indonesia's AI policy and regulatory framework and is under review by a diverse group of multi-sectoral stakeholders.

The exercise attracted more than 500 participants from Aceh to Bali, putting in place an inclusive dialogue among government, academia, civil society, and the private sector. The country's landscape was evaluated on five key dimensions: legal or regulatory, socio-cultural, economic, scientific and educational, and technical or infrastructural.

The highlights of this report have revealed some important findings, including labor displacement, perceived regional disparities in the effect of AI, low awareness of associated risks with AI, and the call for increased research funding. The report highlights key policy recommendations that can mitigate these challenges. The recommendations include the creation of a National AI Agency for coherent governance, comprehensive regulations in line with global standards, and capacity building initiatives to ensure access to AI resources equitably, especially beyond urban centers.

Evaluation

Indonesia has endorsed the G20 AI Principles and the UNESCO Recommendation on the Ethics of AI, developed a national AI strategy, and became the first Southeast Asian country to complete the AI Readiness Assessment. These developments provide a foundation for formulating inclusive and ethical AI policy and regulatory.

KOMINFO's Circular Letter, No. 9 of 2023, was pivotal in emphasizing the ethics of AI and its impact on humans, the environment, and living beings. The government plans to introduce more comprehensive AI regulations, including the creation of a supervisory authority and efforts to promote AI ethics within the private sector—both key steps toward ensuring trustworthy AI.

In parallel, Indonesia is exploring legislative frameworks for smart city governance and independent oversight. The partnership between Telkom Indonesia and NEC aims to deploy AI-driven smart city solutions focusing on

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

public safety, energy efficiency, and infrastructure management—setting the stage for sustainable and scalable smart cities nationwide.

Iran

In 2024, Iran inaugurated a National AI organization as a step toward implementing the AI Roadmap focused on development. The country also used facial recognition and other surveillance technology to intensify enforcement of the Hijab Law and implemented technology and laws to restrict access to information.

National AI Strategy

“Digital Iran,”²⁵³⁶ a national road map for the advancement of technology from 2020 through 2025, outlines Iran’s digital transformation agenda.²⁵³⁷

The Digital Iran framework has three layers: Enabler, Application, and Impact.²⁵³⁸ The enabler layer consists of six pillars, regulation, security, infrastructure, identity, literacy, and open data. The application layer includes digital society, digital government, and digital business and the impact layer covers the social, economic, and environmental dimensions. The vision of the framework is to build “a healthy cooperative society coupled with the smart economy, sustainable development and effective governance with transparency as a result of utilizing digital technologies.” The framework is implemented through 13 strategies, 30 policies and 42 confirmed projects.

The Information & Communications Technology (ICT) Minister of Iran inaugurated the AI Innovation and Development Center in February 2020.²⁵³⁹ The mission of the center is to build partnerships with industries, businesses, universities and research institutes and international centers to define and implement joint research and application projects in AI and provide infrastructure

and data needed for researchers, start-up businesses and various industrial, agricultural and e-government sectors.²⁵⁴⁰

The center issued the Draft Iran's National AI Development Roadmap. This road map was compiled using the approach of the Supreme Council of Science, Research, and Technology, which involves comparative studies, environmental analysis, surveying of experts, and vision development.²⁵⁴¹ This publication is divided into two sections: AI use cases and AI enablers. In the application cases section, the objective is to employ AI in high-priority areas like healthcare, transportation, agriculture, education, industry, and the environment. In the second section, the most essential topics investigated include AI enablers, the training of expert human resources, infrastructures, standards, data, and AI ethics.²⁵⁴²

Former president Ebrahim Raisi finalized and approved Iran's National AI Document, an executive order with a strategic plan to establish a National AI Organization, in December 2023. The document mandated the creation of National Steering Committee and the National Artificial Intelligence (AI) Center.²⁵⁴³ The Council, consisting primarily of ministers and heads of institutions, will oversee the allocation of the nation's resources and infrastructure for artificial intelligence.²⁵⁴⁴ The National AI Center set out to develop AI processing and service providers and implement large-scale projects aligned with national needs. Developments have focused on research, job training, and infrastructure²⁵⁴⁵ relevant to AI, cybersecurity, and the broader digital economy.²⁵⁴⁶ In July 2024, Iran's caretaker President

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Mohammad Mokhber inaugurated the National AI Organization, intended to coordinate national AI efforts and facilitate collaboration with private sectors.²⁵⁴⁷

The formulation of national programs and policies has emphasized investments in infrastructure and human-resource development aligned with the Supreme Leader's guidelines.²⁵⁴⁸ The government has been mandated to draft a National AI Development Plan within six months to enhance policy coordination and resource prioritization.²⁵⁴⁹ Despite these strides, challenges like inadequate infrastructure and the need for large-scale investment remain critical issues. Overall, AI policy has emerged as a central axis for Iran's scientific and industrial development without attention to the social impact of AI use.

The Ministry of ICT,²⁵⁵⁰ responsible for implementation of modern technologies in the IT sector, supports AI developments by hosting international technology²⁵⁵¹ conferences, cultivation, and creation of new industries with the use of digital technologies, and investment in academic research.²⁵⁵²

Public Participation

Despite the autocratic nature of the Iranian regime, the government purports to support public inclusion in AI policy frameworks. However, evidence of this participation outside government institutions is difficult to access from abroad.

Data Protection

There are currently no comprehensive data protection laws in place in Iran.²⁵⁵³ In February 2018, the ICT Minister unveiled the first drafts of five newly proposed bills for internet and cyberspace regulation in Iran. The legislation

Center for AI and Digital Policy

addresses e-government, electronic identification, and the responsibilities of service providers, electronic financial transactions, and data protection, respectively.²⁵⁵⁴ A draft bill on data protection and privacy was presented to the cabinet in July 2018.

The Draft was under expert revision to align with the GDPR. However, the government failed to progress on the bill.²⁵⁵⁵ The bill has been taken up by subsequent governments but has not been passed. The draft law provides for the establishment of the Supervisory Board of Personal Data, which would be tasked with receiving and processing stakeholder complaints to protect personal data. In the absence of an overarching data privacy law, the legal framework for privacy derives from a combination of other laws and regulations dealing with data protection alongside additional issues. Such legislation includes the Law on Publication and Access²⁵⁵⁶ to Data 2009, the Electronic Commerce Law 2004,²⁵⁵⁷ and the Cybercrime Law 2009.²⁵⁵⁸

The Iranian Communications Regulatory Authority has access to a web application known as SIAM, which allows for the remote manipulation of cellular connections. This application is part of Iran's data restriction, which may help explain why it was implemented. SIAM is a computerized system that operates in the background of Iranian cellular networks, giving its operators a wide range of options for remotely executing commands to modify, interrupt, and monitor customers' phone use. These tools may reveal the data links in a crawl, decrypt phone calls, trace the movements of people or large groups, and generate complete metadata summaries of who spoke to whom and when.²⁵⁵⁹

Algorithmic Transparency

The government of Iran has not adopted any legislation that mandates algorithmic transparency.

Freedom of Internet and Digital Rights

Since 2022, Iran's internet freedom has increasingly been restricted as authorities impose widespread disruptions to internet and mobile services in response to large-scale anti-government protests connected to the Woman, Life, Freedom movement. These measures include blocking access to platforms like Instagram and WhatsApp, which were previously available to Iranians,²⁵⁶⁰ and instructing internet service providers to raise prices by 30 to 40% between 2023 and 2024²⁵⁶¹, significantly raising access costs for citizens.²⁵⁶² VPN controls have also intensified, with the government blocking Google Play and the Apple App Store to limit VPN installations and restricting access to sites offering these tools.²⁵⁶³ In February 2024, the Supreme Council of Cyberspace (SCC), Iran's primary internet regulatory body, officially prohibited VPN use without a license²⁵⁶⁴ after criminalizing the sale and distribution of these tools in 2023, pushing users toward domestic circumvention methods to access filtered content.²⁵⁶⁵

Following the rollout of the NIN, authorities plan to implement a 'layered internet' system, granting selected groups, such as academics and officials, access to international websites, while restricting the general population to domestic platforms within the NIN.²⁵⁶⁶ This government-controlled network is designed to

Center for AI and Digital Policy

isolate Iranians from global information and confine them to the tightly monitored NIN.

The Telecommunication Company of Iran (TCI), which is run by the ICT Ministry, controls internet traffic flowing in and out of the country.²⁵⁶⁷ While the Islamic Revolutionary Guard Corps (IRGC), a security force, previously held a majority stake in the Telecommunication Company of Iran (TCI), the IRGC withdrew from the telecommunications sector in October 2018, selling its shares in TCI and the Mobile Telecommunication Company of Iran (MCI). However, TCI's dominance over Iran's internet infrastructure still facilitates extensive monitoring of online activities.²⁵⁶⁸

Iran's parliament has been drafting the "Protection Bill," which would impose additional limitations on Iranians' internet access. The measure requires overseas technology businesses to have a legal representation in Iran to comply with Iranian law and cooperate with Iranian authorities.²⁵⁶⁹ The Iranian government has long monitored individuals, prosecuted them for online expressions, and banned online areas. In addition, the measure intends to prohibit the creation and distribution of censorship "circumvention technologies" (VPNs) that are routinely used in Iran to access a wide variety of blocked websites.²⁵⁷⁰ In the meantime, Iranian authorities are deliberating over the concept of a national internet, which appears to entail denying users access to international search engines, news websites, and email servers in favor of providing them with alternatives developed and controlled by the Islamic Republic of Iran.²⁵⁷¹

In response to Iran's severe internet censorship, the U.S. Congress introduced the bipartisan Internet Reach and Access Now Act (IRAN Act) in

August 2024²⁵⁷². Supported by members across party lines, this legislation mandates the Secretary of State implement a strategy promoting internet freedom in Iran. The IRAN Act emphasizes three primary goals: ensuring that sanctions enforcement does not hinder access to circumvention tools, enhancing virtual private networks (VPNs) availability for human rights activists, and developing methods to help Iranian civil society circumvent government-imposed internet shutdowns. The Act aligns with ongoing U.S. efforts to support Iranians' digital rights and facilitate open communication, aiming to counteract the Iranian regime's attempts to isolate its population from the global internet.²⁵⁷³

Digital ID (National Smart Card)

Iran implemented digital IDs as part of the e-government program.²⁵⁷⁴ Iran's Executive Council of Information Technology built a digital platform as part of its ongoing e-government initiatives. In addition to two pilots with the Ministry of Agriculture and the Ministry of Culture and Islamic Guidance, the council also announced the addition of the Ministry of Cooperatives Labor and Social Welfare, the Ministry of Economic Affairs and Finance, the Iranian Health Insurance Organization, the Ministry of Welfare and Social Security, and the Central Insurance of Iran for the next phase of the digital government.²⁵⁷⁵ The platform plays a central role in accessing public services, including e-government and e-health, effectively making digital identification mandatory for all citizens engaging with government services.²⁵⁷⁶

Iran's Law Enforcement Forces signed an agreement with an Iranian digital ID and biometric firm, to acquire a digital ID detection authentication platform.²⁵⁷⁷ The digital ID platform obtains 5 to 15-second selfie videos and then runs it through an ID liveness detection algorithm to verify user identity against a user's original image registered with Iran's Civil Registration Organization. شرکت بیو آیدی

digital ID platform, which saw expanded integration into Iran's government services in 2023–2024. This system is expected to connect with national security and internet access programs, such as the NIN, embedding surveillance into daily life.

Facial Recognition

Iran is actively integrating facial recognition and biometrics into its law enforcement system for border protection.²⁵⁷⁸ Iran's banking sector is adopting biometric methods and requires customers to provide their smart identity for many banking transactions. Iranian officials have also announced plans that would require citizens to verify their identity using the smart identity card to access the internet.²⁵⁷⁹

The Noor Plan, introduced in April 2024 by Iran's Law Enforcement Command, intensifies the crackdown on women violating mandatory hijab laws through increased surveillance and enforcement measures, including facial recognition.²⁵⁸⁰ Parliament approved the Hijab and Chastity Bill, often referred to as Hijab Law in September 2023, and the Guardian Council approved the law in September 2024.²⁵⁸¹ A March 2025 UN report noted intensified surveillance and restrictions on digital space despite reports in late 2024 that the government had paused implantation of “a new, stricter law on women's mandatory headscarf.”²⁵⁸² The legislation consolidates and intensifies mandates hijab enforcement, introducing higher fines, extended prison terms, and restrictions on employment and education for violations.²⁵⁸³ The Hijab Law also expands the use of facial recognition technology to identify women appearing unveiled in public or online.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Security forces now use AI-based systems to monitor and enforce these regulations, aligning with government efforts to control public morality and suppress dissent. Facial recognition technology has become central to Iran's surveillance network, particularly in addressing gender-based transgressions, with support from China's AI technology integrated into Iran's domestic surveillance infrastructure.²⁵⁸⁴

The Hijab Law raises significant concerns about privacy and discrimination. Article 24 authorizes intelligence services and the IRGC to track individuals in cyberspace who advocate against the hijab requirement.²⁵⁸⁵ Article 28 mandates police to enhance detection systems, using AI to identify individuals engaged in prohibited activities. Surveillance responsibilities extend beyond government agencies: Article 64 requires service providers, including banks, transportation companies, retailers, professionals, and residential complex managers to upgrade surveillance cameras to capture high-quality images and store footage for at least twenty days.²⁵⁸⁶

EdTech and Children Tracking

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Iran, for children's education during the pandemic. Based on technical and policy analysis of the Shad App, owned and provided by Iran, Human Rights Watch found that the government endorsement of this online learning platform put at risk and directly violated children's rights. The app provided access to education for 50% teachers and 25% students. The enrollment was lower in less developed regions of Iran.²⁵⁸⁷

It results from the report that "Teachers in Iran told Human Rights Watch that the government compelled those in public schools to use Shad, an app built by Iran's Education Ministry for online learning during Covid-19. One teacher said: "The principal called and said that if I do not install the Shad app, I would be recorded as absent. The authorities do not accept teaching in Telegram and WhatsApp. Students have also been told that if you are not in this app, your score will not be approved and will not be sent to the [school]." In October 2021, the Iranian government reported more than 18 million active users of Shad." Technical

analysis of Shad's code by Human Rights Watch found that the app can collect children's precise location data, the time of their current location, the child's last known location, their Wi-Fi SSID, IP address, the child's contacts, and any saved photos of their contacts.

EdTech products in Iran and other countries sent children's data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online. According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so.²⁵⁸⁸

Environmental Impact of AI

Iranian government officials consider using artificial intelligence to assess weather conditions, control air and water pollution, and manage waste and water as part of conservation efforts.²⁵⁸⁹ However, Iran's official sources do not discuss the negative effects of artificial intelligence on the environment. Moreover, Masoud Pezeshkian skipped the COP 29 Summit in Azerbaijan in November in 2024 as the UN climate goals negatively impact Iran's economy.²⁵⁹⁰

Lethal Autonomous Weapons

The Iranian military is very interested in the development of AI & Autonomous Weapon systems in the pursuit of force-multiplying asymmetric warfare capabilities. At the Human Rights Council in May 2013, Iran expressed interest in opening multilateral talks on lethal autonomous weapons systems. However, Iran has not commented on the concerns raised by removing human control from the use of force or supported proposals to negotiate a new international ban treaty. Iran is not a party to the Convention on Conventional

Weapons (CCW) but attended CCW meetings on killer robots in 2016 and 2018–2019.²⁵⁹¹

The Chief Commander of Iran's Islamic Revolution Guards Corps (IRGC) stated in July 2022 that the country achieved the AI required to direct drones and ballistic missiles while under sanction.²⁵⁹² “AI technology enables an autonomous aircraft to fly more than 2,000 kilometers from any point and hit a moving target or a specific location,”²⁵⁹³ he added. Shortly after this interview, another IRGC commander verified the use of AI to beat the enemy and stated that the success was due to the collaboration of universities and military departments.²⁵⁹⁴

At the 78th UN General Assembly First Committee in 2023, Iran was one of eight states that abstained from voting²⁵⁹⁵ on resolution L.56.²⁵⁹⁶ on autonomous weapons systems. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

Iran did not respond to the Note Verbale by the United Nations to all member states and observer states in February 2024. The Note intended to find a common definition of “lethal autonomous weapons” term and called to discuss the concepts of human control, meaningful human control, appropriate human judgment, and human involvement.²⁵⁹⁷

In view of the expiration of UN sanctions against Iran, the United States committed in October 2023 to take further action. Secretary of State Blinken stated, “While the United States has already sanctioned all possible entities and individuals contained within Security Council Resolution 2231, today we are announcing additional designations on individuals and entities related to Iran’s

missile, conventional arms, and UAV activities, including such activities involving Russia, the People's Republic of China, Venezuela, and elsewhere. In coordination with the Departments of Commerce, Justice, and the Treasury, we are additionally issuing new public guidance to private industry regarding Iranian missile procurement.²⁵⁹⁸ The US argued that there is “horrific impact of Iran’s provision of missiles and unmanned aerial vehicles (UAVs) to designated terrorist organizations and militant proxies that directly threaten the security of Israel and our Gulf partners.” The US provided evidence of components and debris from lethal Iranian-made drones that were recovered from Ukraine and other locations.²⁵⁹⁹

Human Rights

Iran is a signatory to the UDHR in 1948.²⁶⁰⁰ in 2024, the Freedom House Index indicated Iran as a “Not Free” country, with a rating of 11/100,²⁶⁰¹ a slight drop from 2023 (12/100) and 2021(16/100).²⁶⁰² Among the key developments explaining Iran’s decreased score, Freedom House highlighted the violent crackdown to the protests in more than 100 cities beginning in September 2022 “following the death of Mahsa Amini, a 22-year-old Kurdish woman who had been arrested and beaten by the so-called morality police in Tehran for allegedly not wearing her hijab properly.” Nearly 500 people had been confirmed dead by year’s end, and an estimated 14,000 people were arrested, including those who voiced support for the movement.²⁶⁰³

The protests and crackdown marked escalation of already limited political and civil rights. Freedom House reports that the Guardian Council strictly filters candidates in elections according to their loyalty to the regime while the supreme

leader and unelected institutions under his rule play a crucial role in political life in the country.²⁶⁰⁴

According to a 2023 Human Rights Watch report on Iran, internet freedom remains highly restricted and State-aligned cyber operations spread disinformation and manipulated the online space. Iran and its judicial system have shown little inclination to curb or confront serious human rights violations perpetrated by Iranian security agencies. The country's security and intelligence apparatus, in partnership with Iran's judiciary, harshly crack down on any form of dissent, including through excessive and lethal force against protesters.²⁶⁰⁵

The Iranian authorities' suppression of recent protests in Iran is the latest in a cycle of attacks perpetrated by the Iranian authorities against the people who are voicing their concerns. The cycle of attacks started in Iran between December 2017 and January 2018 and continued thereafter.²⁶⁰⁶ According to Press TV, in an open letter that was signed by 227 of Iran's 290 members of Parliament, the MPs ask for demonstrators to be taught a "good lesson" as a means of discouraging such individuals who challenge the authority of the Iranian government.²⁶⁰⁷

OECD / G20 Principles

Iran has neither endorsed the OECD AI Principles,²⁶⁰⁸ nor defined ethical norms and standards for AI.

Council of Europe AI Treaty

Iran has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.²⁶⁰⁹

UNESCO Recommendation on AI Ethics

Iran is one of signatories to the UNESCO Recommendation on AI Ethics, which aims to deliver the advantages of technology while reducing associated human rights risks.²⁶¹⁰ Iran has not implemented the UNESCO Readiness Assessment Methodology (RAM) or taken clear action to implement the Recommendations.²⁶¹¹

Evaluation

Iran has launched the “Digital Iran” framework to oversee and implement modern technologies, recently drafted an AI roadmap, and endorsed the UNESCO Recommendation on AI Ethics. While the institutional structure enables coordinated development, the governance structure notably lacks transparency mechanisms, ethical guidelines, or public oversight provisions. The absence of a comprehensive data protection law and independent oversight mechanism as the country seeks to expand national biometric identification and systems for facial recognition is concerning. Iran is also engaged in the race for developing lethal autonomous weapons while not partaking in any international efforts to regulate, let alone prohibit, their use.

Ireland

In 2024, Ireland launched a refreshed National AI Strategy and established an AI Advisory Council to oversee the national AI strategy and provide advice to the government. Ireland also consulted the public on the national approach to implementing the EU AI Act and became party to the EU AI Act through the European Commission signature.

National AI Strategy

Ireland’s national enterprise strategy, the Economic Recovery Plan and Enterprise 2025 Renewed, set out Ireland’s ambition to be at the frontier of disruptive technologies, including AI. In 2019, Ireland published the Future Jobs Ireland Plan, which included a commitment to develop Ireland’s national AI strategy and create a Top Team on Standards for AI to focus on increasing Ireland’s AI development and assisting AI enterprises.²⁶¹² Ireland’s Department

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

of Enterprise, Trade, and Employment (DETE) published the national AI strategy AI—Here for Good in 2021 that set out a long-term AI roadmap.²⁶¹³

In 2024 Ireland announced that Ireland's National AI Strategy is undergoing updates. The update to Ireland's National AI Strategy reflects the substantial advancements in AI technology and regulation since the original strategy was released in 2021. Strategic actions in this refresh include ensuring Ireland's leadership in effectively implementing the EU AI Act, commissioning a study on the potential impacts of AI on key sectors of the Irish economy, amongst others.²⁶¹⁴

The aim of AI—Here for Good is to make Ireland “an international leader in using AI to the benefit of our population, through a people-centered, ethical approach to AI development, adoption and use.”²⁶¹⁵ Its objectives are grouped into eight strands: AI and Society; A Governance Ecosystem that Promotes Trustworthy AI; Driving Adoption of AI in Irish Enterprise; AI Serving the Public; A Strong AI Innovation Ecosystem; AI Education, Skills and Talent; Supportive and Secure Infrastructure for AI; and Implementation of the Strategy.

In August 2023, Ireland published a development report against the 2021 National AI Strategy, providing details on implementation of tasks under each of these strands as either “complete” or “in progress.” The report offers an overview of upcoming planned actions for continued implementation.²⁶¹⁶ Among them, Ireland continues to monitor the progress of the EU sandbox pilot and will consider the implications and requirements of regulatory sandboxes for AI in Ireland.²⁶¹⁷

Ireland's national AI policy states that “ensuring explainability, accountability, and fairness” and addressing discrimination are some of the main challenges to be addressed through AI regulation. Ireland's Strategic Approach to AI emphasizes the importance of AI that is “accountable and acceptable to society.” Under its objective to create an agile AI governance and regulatory framework, Ireland recognizes the risk of unfair discrimination and unequal treatment arising from biased training data, design, and use, along with challenges

of “explainability, accountability, and fairness.” The Top Team on Standards for AI is responsible for developing certification schemes and codes of conduct for AI to determine or demonstrate fairness, estimate bias in training data, develop auditing mechanisms, and support GDPR rights. This team, alongside similar Ireland government efforts, is working towards creating a common EU framework for trustworthy and innovative AI to create a coherent and borderless single AI market.²⁶¹⁸

In July 2023, the National Standards Authority of Ireland, as part of the National Strategy, issued its Artificial Intelligence (AI) Standards & Assurance Roadmap. The Roadmap is based on the work of the Top Team on Standards for AI and input from experts from across the Irish AI community, including academia; business, information technology industry, SMEs, and legal experts. It is expected that this Roadmap will support the standardization of the development and use of AI in the country.²⁶¹⁹

Ireland's Department of Enterprise, Trade, and Employment (DETE) is currently spearheading Ireland's national AI policy, which lists strategic actions to be conducted by various Irish agencies, including the Department of Environment, Climate and Communications, the Department of Justice, the National Standards Authority of Ireland, and the Department of Children, Equality, Disability, Integration, and Youth. It has also established the Top Team on Standards for AI to develop certification schemes and codes of conduct to address AI at different stages of development.

Strand 8 of AI—Here for Good’s, “Implementation of the Strategy,” lists several entities that compose Ireland’s “whole of Government strategy” for AI. The Enterprise Digital Advisory Board (EDAF) was established in May 2022 to represent government departments, businesses, and AI experts, oversee the implementation of business elements of the National AI Strategy, and advise the Irish Government on driving enterprise adoption of AI. The membership of the EDAF was renewed in 2023 after a public call for expressions of interest.²⁶²⁰ The AI Ambassador, a member of the Enterprise Digital Advisory Board, and the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

GovTech Delivery Board, which is responsible for AI adoption in the public sector, are other entities that Ireland plans to incorporate into its governance of AI.

Following Ireland's 2021 Strategy release, *Harnessing Digital—The Digital Ireland Framework*, a new national digital strategy, was unveiled in February 2022 by the Department of the Taoiseach to drive and support the digital transition across the Irish economy and society.²⁶²¹ This high-level framework outlines a roadmap to support Ireland's aspiration to be a digital leader at the center of European and global digital developments, with a strong emphasis on inclusion, security, and safety, anchored by strong governance and a well-resourced regulatory environment.

This framework's objectives are grouped into four strands: Digital Transformation of Business; Digital Infrastructure; Skills; Digitalization of Public Services. The Irish government has identified several digital risks which these objectives aim to mitigate. For instance, this Strategy offers pragmatic and effective mitigation solutions to risks around non-digital adopting organizations and those that might be digitally "left behind" as Ireland's society becomes more technologically literate.

In the 2023 implementation report of this Strategy, Ireland announced the creation of the Competition and Consumer Protection Commission (CCPC) as the competent authority for registration and compliance of data intermediation services. It also announced the establishment of the Central Statistics Office (CSO) as the competent body for assisting public sector bodies which opt to share "protected data."²⁶²²

The creation of both agencies is also part of the government's attempts to comply with the 2024 Digital Services Bill adopted in line with the EU Digital Services Act that came into force in February 2024.²⁶²³ These developments are expected to align Ireland's data privacy regulations with international standards and show its commitment to "enforcing digital regulation seriously", although it is not clear at the moment how these two agencies will work together, and with the pre-existing Irish Data Protection Commission (DPC).²⁶²⁴

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Public Participation

To receive engagement and input in the development of its National AI Strategy, Ireland held a public consultation process from October 16 to November 7, 2019, which was open to all stakeholders and interested parties. This consultation aimed to “better understand the views of the public on the opportunities, enablers and challenges for AI in Ireland and to gather views on key areas and issues that should be addressed by the strategy.”²⁶²⁵

Strand 1 of AI—Here for Good, AI and Society, asserts that Ireland “must also prioritize measures to raise awareness about AI.” To that end, Ireland plans to appoint an “AI ambassador to promote awareness among the public and businesses of the potential that AI offers.” This AI ambassador is expected to engage with the public, lead a “national conversation around the role of AI” with an emphasis on “an ethical and compliant approach,” and champion AI as a positive force for Ireland. Ireland published a call for Expression of Interest for the AI Ambassador position on October 26, 2021, and applications were due November 12, 2021.²⁶²⁶ In May 2022, Dr. Patricia Scanlon was appointed to serve as Ireland’s first AI Ambassador. During the drafting phase of the new digital strategy, *Harnessing Digital—The Digital Ireland Framework*, no public consultation announcement occurred, removing the public’s ability to offer feedback.

Ireland planned to convene a Youth Assembly on AI to discuss young people’s views of AI’s “benefits, risks and impacts on different groups in society.” University College Cork (UCC) currently hosts *The Elements of AI*, a massive open online course (MOOC) made available to all EU member states. Ireland plans to use *Elements of AI*, which is freely available, “to deliver AI education to at least 1% of the population. As part of the Ireland’s AI—Here for Good, young Irish people were asked for their thoughts on AI and its potential applications. The inaugural National Youth Assembly on Artificial Intelligence was held at Trinity College Dublin on October 12, 2022, with 43 young people aged 13 to 23.²⁶²⁷ In June 2024, Ireland’s Department of Enterprise, Trade and Employment requested

Center for AI and Digital Policy

public opinion on the national approach to the EU AI Act’s implementation thereby providing an opportunity for public participation.²⁶²⁸

Public Trust in AI

Strands 1 and 2 of AI—Here for Good are aimed at “building public trust in AI.” Strand 1 seeks to build public trust in AI through public awareness programs and research and grants to develop AI applications for societal good and sustainability, including health and climate change. Strand 2 addresses the need for a “robust governance framework to safeguard against [AI] risks and underpin public trust in AI.” It establishes three pillars that Ireland will use to ensure a strong AI governance framework: 1) “an agile and appropriate framework,” 2) “active promotion of ethics guidance and frameworks,” and 3) “a robust system of standards and certification.”

Ireland has played an active part in EU discussions of the AI Act and the EU’s prior work related to AI, and Ireland’s AI strategy states that it will continue to do so. Ireland’s National AI Strategy endorses the EU AI Act as a “‘smart mix’ of voluntary and mandatory measures [that] will help to protect our people, facilitate innovation in AI and respect our democratic values,” Strand 2 emphasized the AI Act’s voluntary and self-regulatory oversight of non-high-risk AI and its integration of impact assessments, codes of practice, and ethical guidelines.

EU Digital Services Act

As an EU member state, Ireland shall apply the EU Digital Services Act (DSA).²⁶²⁹ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation. The DSA also bans targeted advertising based on a person’s sexual orientation, religion, ethnicity, or political beliefs and targeted advertising to minors based on profiling.

EU AI Act

As an EU member State, Ireland is bound by the EU AI Act.²⁶³⁰ The EU AI Act is a risk-based market regulation which supports the objective of promoting a

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

The AI Act entered into force on 1 August 2024, and will be fully applicable 2 years later, with some exceptions: prohibitions will take effect after six months, which means in February 2025. The governance rules and the obligations for GPAI models will become applicable in August 2025, and the rules for AI systems embedded into regulated products will apply in August 2027.

Data Protection

Since Ireland is an EU Member State, the General Data Protection Regulation (GDPR)²⁶³¹ is directly applicable in Ireland and to Irish people. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market.”²⁶³² The GDPR entered into force on 24 May 2016 and applies since 25 May 2018.

Regarding the activities of law enforcement authorities, the EU Data Protection Law Enforcement Directive (LED).²⁶³³ protects citizens’ fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”²⁶³⁴ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.²⁶³⁵ The LED also requires for Member States, including Italy,

2018/1139 and (EU) 2019/2144 and Directives 2014/90/EU, (EU) 2016/797 and (EU) 2020/1828 (Artificial Intelligence Act), (Jul.12,2024), <http://data.europa.eu/eli/reg/2024/1689/oj>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

to enable data subjects to exercise their rights via national data protection authorities.²⁶³⁶

The 2018 Irish Data Protection Act both supplements the GDPR and implements the LED in Irish law. In addition, the Irish Data Protection Commission in July 2024, issued a guidance for organizations employing AI systems, highlighting risks of personal data processing by AI, including Large Language Models (LLMs), in compliance with GDPR.

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Ireland is also a member of the Council of Europe. It signed but has not yet ratified²⁶³⁷ the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.²⁶³⁸

The Irish DPA is a member of the Global Privacy Assembly (GPA) since 2002. Although the DPA endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,²⁶³⁹ it did not co-sponsor the 2020 GPA Resolution on AI Accountability,²⁶⁴⁰ the 2022 GPA Resolution on Facial Recognition Technology²⁶⁴¹ or the 2023 GPA Resolution on Generative AI.²⁶⁴² In January 2024, the Minister of State for Trade Promotion, Digital Transformation

and Company Regulation established the AI Advisory Council as an independent AI oversight body, providing expert advice to the government, supporting national AI strategy development by building public trust and promoting the development of trustworthy, person-centered AI.²⁶⁴³

AI Oversight

Established under the Data Protection Act of 2018, the Data Protection Commission (DPC) is Ireland's national independent supervisory authority responsible for upholding the data protection rights of individuals in the EU. The DPC is charged with monitoring the application of the GDPR, including its transparency and automated decision-making provisions, and other Irish and EU regulatory frameworks and directives. The DPC has faced criticism from members of the European Parliament for failing to enforce the GDPR by choosing to bring a legal proceeding in the *Schrems II* case instead of deciding on its own, issuing only one GDPR sanction out of thousands of complaints, and failing to reach a draft decision on any case referred to Ireland in 2018.

On March 25, 2021, the European Parliament passed a resolution expressing its concern with the slow pace of the Irish DPA and calling for faster investigations to show EU citizens that “data protection is an enforceable right.”²⁶⁴⁴ On May 20, 2021, the European Parliament voted in favor of a resolution calling for the European Commission to open an infringement procedure against the DPC.²⁶⁴⁵ In December 2022, the EDPB overturned a previous draft decision by the DPC that took the view that Meta's bypass of the GDPR was legal and the EDPB requested changes in the decision on WhatsApp, as well as further investigations into the core violations of WhatsApp. In January 2022, the DPC adapted its limited decision, but refused to investigate other matters, as ordered by the EDPB. According to noyb, “the DPC threatens to bring a lawsuit against its European partners.”²⁶⁴⁶ In January 2022 as well, the European Commission defended the Irish Data Protection Commissioner by stating that “there is no proof that the DPC didn’t follow the Irish data protection rules or that

the cooperation mechanism wasn't employed correctly.”²⁶⁴⁷ Complex cases, especially those involving disputed issues such as WhatsApp, may take a long time. As a result, the European Commission refused to comment on or initiate infringement proceedings against a DPA for its views on a particular subject.

The failure of the DPC to exercise enforcement powers triggered concerns about the Commission's ability to safeguard fundamental rights about AI.

In September 2023, after an *ex officio* investigation started in 2021, the DPC concluded that TikTok failed to secure compliance regarding user policies for children as required by the GDPR.²⁶⁴⁸

The DPC launched its 2023 Annual Report²⁶⁴⁹ in May 2024 highlighting 19 final decisions that resulted in administrative fines totalling €1.55 billion.

In March 2023, the DPC announced its participation in the European Data Protection Board's 2024 Coordinated Enforcement Framework (CEF), in accordance with Article 15 of the GDPR. In a fact-finding exercise, the DPC will send questionnaires to 30 data controllers in the public and private sectors to gather insights into how organizations apply the Right of Access Guidelines on data subject rights²⁶⁵⁰ for an EU-wide report.²⁶⁵¹

In September 2024, the DPC announced a Cross-Border statutory inquiry into Google Ireland Limited (Google) under Section 110 of the Data Protection Act 2018, about whether Google has complied with any obligations that it may have had to undertake an assessment, pursuant to Article 35 of GDPR's Data Protection Impact Assessment, prior to engaging in the processing of the personal data of EU/EEA data subjects associated with the development Pathways Language Model 2 (PaLM 2), its foundational AI model.²⁶⁵²

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In September 2024, the DPC fined Meta €91 million following an inquiry launched in April 2019 after Meta Platforms Ireland Limited (MPIL) notified the DPC that it had inadvertently stored passwords of social media users in ‘plaintext’ on its internal systems, without cryptographic protection or encryption.²⁶⁵³

The DPC announced its final decision to levy administrative fines totaling €310 million on LinkedIn in October 2024 after an inquiry that examined LinkedIn’s processing of personal data for the purposes of behavioral analysis and targeted advertising of users who have created LinkedIn profiles (members). With concerns related to the lawfulness, fairness and transparency of this processing, the decision includes a reprimand and an order for LinkedIn to bring its processing into compliance.²⁶⁵⁴

Algorithmic Transparency

Although it has not yet ratified the Protocol amending the Convention 108 which provides for algorithmic transparency, Ireland is subject to the GDPR. Irish people have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.²⁶⁵⁵

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems²⁶⁵⁶ specifically emphasizes requirements on transparency, accountability and effective remedies. The Recommendation provides that “The use of algorithmic systems in decision-making processes that carry high risks to human rights should be subject to particularly high standards as regards the explainability of processes and outputs.”²⁶⁵⁷ The Recommendation also clarifies that “Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”²⁶⁵⁸

Although Ireland has not created its own AI ethical guidelines, its National AI Strategy incorporates the seven requirements of the EU High-Level Expert

Group (EU HLEG) on AI's Ethics Guidelines for Trustworthy AI. UCC's Insight Centre currently hosts an online version of EU HLEG's Assessment List for Trustworthy AI, as an accessible checklist for adhering to the seven requirements of the Ethics Guidelines for Trustworthy AI. The Top Team on Standards for AI is tasked with developing codes of conduct that address explainability and transparency.

Transparency is an important part of Ireland's national AI strategy. Ireland views transparency as an essential component of accountability and trust in AI. Strand 1 of AI—Here for Good states that “AI must be developed and used with trust, transparency and accountability” and that Ireland is committed to ensuring that AI systems are “trustworthy, fair and inclusive.”

Transparency remains an important part of Ireland's Harnessing Digital - The Digital Ireland Framework by continuing the implementation of Ireland's Data Sharing and Governance Act, which is designed to protect citizen's privacy by establishing a prescriptive framework in legislation for governance, oversight, and transparency of data processing within the Public Service. In July 2024, the Data Protection Commission issued guidance, centered on the right to be informed (transparency) of Articles 13 and 14 of the GDPR²⁶⁵⁹, for organizations employing AI systems, highlighting risks of personal data processing by AI, including Large Language Models (LLMs), in compliance with GDPR.²⁶⁶⁰

Public Services Card Facial Recognition Controversy

In March 2013, the Department of Employment Affairs and Social Protection (DEASP), Ireland's national social security office, implemented facial image matching software to minimize fraud and errors of the Public Services Card's (PSC) social security applicant identity verification. The Irish Council for Civil Liberties (ICCL), an independent non-profit in Ireland, has criticized the PSC for collecting and storing more data than necessary, increasing the risk of a security breach through its collection of sensitive biometric data, forcing economically vulnerable people to exchange their private data for access to services to which they are legally entitled, and contradicting Ireland's position on privacy at the EU.²⁶⁶¹ DEASP has not published their facial image matching software's accuracy and while continuing to use the software despite being under investigation by the Irish Data Protection Commissioner since October 2017. Human Rights Watch has documented reports of eligible applicants being denied

social security support due to documentation requirements or objections to the PSC for privacy reasons.²⁶⁶²

In June 2023, the ICCL released a copy of a Data Protection Impact Assessment (DPIA) conducted in 2021 on the upgrade of facial matching software for the PSC.²⁶⁶³ The document was obtained through a Freedom of Information Request. The assessment revealed significant issues with the use of FRT by the DEASP, including lack of valid legal foundation under the GDPR for the creation and use of a biometric database; lack of transparency about what data was collected and how it was used; and lack of adequate guardrails for the retention of sensitive personal data.²⁶⁶⁴ It appears that this DPIA report is not publicly available on the DEASP website.

A proposal to equip the Garda with police facial recognition technology (FRT) to enhance their surveillance powers was made by the Minister of Justice in May of 2022.²⁶⁶⁵ In conjunction with AI and other surveillance capabilities, this FRT system aims to enable the fast identification of criminals from CCTV footage.

An ICCL press release in June 2023²⁶⁶⁶ found that a Data Protection Impact Assessment (DPIA) of a facial matching software upgrade for the Public Services Card (PSC) in 2021 failed to identify any legal basis under Article 9 GDPR for the creation of a biometric photo and template database of 3.2 million cardholders. This DPIA reveals for the first time that the Department of Social Protection has known that its biometric processing of personal data arising from the PSC project is illegal and reported that cardholders were not directly informed about the biometric processing during face-to-face interviews for the same. Olga Cronin, Surveillance and Human Rights Policy Officer, ICCL, says: “The Department has been building a national biometric database without a relevant legal basis and without transparency. It continues to collect people’s biometric information in exchange for services they are legally entitled to. This must stop. This processing

Center for AI and Digital Policy

is unnecessary, disproportionate, and presents a risk to people’s fundamental rights.”

Police FRT is used as a method of widespread monitoring to track and identify individuals without the need for reasonable suspicion. FRT’s widespread use runs the risk of damaging effects by altering how people interact in public and online settings. While public safety and national security concerns take precedence over individual privacy, the intrusions caused by police FRT surveillance are excessive and unjustified.

In January 2024, the International Justice Clinic (IJC) submitted comments²⁶⁶⁷ on Ireland’s General Scheme of the Garda Síochána (Recording Devices) (Amendment) Bill 2023 to the Joint Committee on Justice at the Houses of the Oireachtas (Irish Parliament). “The Bill grants the Garda Síochána (Irish police) the power to use facial recognition technology on any past images or video that they have legally accessed for (1) crime investigation and prevention and (2) national security, so long as it is not used on live feeds. This facial recognition technology is a powerful tool that automatically extracts unique identifiers from individuals’ faces recorded by data and matches them with identifiers on a watch list.”

According to the IJC, “post” or retrospective use of facial recognition technology equally causes a formidable impact on fundamental human rights as “live” identification. When facial recognition technology is used on data recorded in a publicly accessible place, “it causes people to experience fear that they might be identified in the future [...] especially in the case of the indefinite retention and use of images or video for facial identification.” Post use still has the potential to limit people’s ability to freely participate in a public protest or move in a publicly accessible place.

In February 2024, the Joint Oireachtas Committee on Justice published its pre- legislative scrutiny report on the Draft General Scheme of the Garda Síochána (Recording Devices) (Amendment) Bill 2023²⁶⁶⁸, following concerns raised by the Data Protection Commission, Irish Council for Civil Liberties, Digital Rights Ireland, the Law Society of Ireland, amongst others. The report highlights deficiencies in the general scheme of the bill, emphasizes the rationale for introducing FRT should be published; and calls on An Garda Síochána and the

Department of Justice to urgently clarify how FRT is intended to be used and what imagery and reference databases are intended to be used.²⁶⁶⁹

Over-policing is already an issue in communities with marginalized groups, and this technology has the potential to exacerbate the problem through racial and minority ethnic profiling and the disruption of people's lives. The Garda's use of technologies such as CCTV, ANPR, drones, and body worn cameras are already being scrutinized.²⁶⁷⁰ Furthermore, the continued use of facial recognition by DEASP for determining access to social services and the Irish DPC's weak GDPR enforcement record remain areas of concern.

Environmental Impact of AI

Ireland is actively addressing the environmental impact of artificial intelligence (AI) through a combination of national strategies, regulatory frameworks, and industry initiatives. The National AI Strategy, *AI—Here for Good*, specifically emphasizes AI for Societal Good and Sustainability, including applications for environmental and climate action. The National Strategy highlights that AI offers promising tools for climate action, enabling energy monitoring, real-time environmental tracking, and crisis prevention. Ireland's Climate Action Plan 2019 highlights AI's role in managing energy use and balancing the grid. However, sustainable development is essential, given AI's own energy demands. Ireland encourages data centers to adopt circular economy principles, aligning with EU Ecodesign Regulation standards to minimize environmental impact.²⁶⁷¹ The 2023 Progress Report of the *Harnessing Digital: The Digital Ireland Framework*²⁶⁷² reiterates Ireland's commitment to advance the digitalization of enterprise and public services, while simultaneously reaching Ireland's climate objectives.

Lethal Autonomous Weapons

Ireland is a High Contracting Party to the Convention on Certain Conventional Weapons (CCW) and has been an active participant in CCW discussions related to lethal autonomous weapons systems (LAWS). According to Human Rights Watch, Ireland has expressed interest in multilateral talks on LAWS in the UN since at least 2013 and has participated in every CCW meeting on LAWS between 2014 and 2019.²⁶⁷³ In 2019, Ireland joined the other High Contracting Parties to the CCW to adopt 11 guiding principles for addressing challenges to international humanitarian law posed by LAWS.²⁶⁷⁴ Ireland also joined eight other CCW parties in finding that the 11 guiding principles were a “useful and valuable starting point” and calling for the development of a “normative and operational framework” for ensuring human control of LAWS.²⁶⁷⁵ Ireland has not called for a prohibition on or new international treaty for the regulation of LAWS.

Ireland is one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”²⁶⁷⁶

In February 2023, at the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea, nearly sixty states agreed to issue a joint call to action on the responsible development, deployment and use of AI in the military domain.²⁶⁷⁷ Ireland endorsed the resulting

Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.²⁶⁷⁸

At the 78th UN General Assembly First Committee in 2023, Ireland voted in favor²⁶⁷⁹ of resolution L.56²⁶⁸⁰ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report²⁶⁸¹ analyzed ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

In May 2024, Ireland contributed a national submission²⁶⁸² to the UN Secretary-General, as per UNGA Resolution 78/241 on Lethal Autonomous Weapons Systems (LAWS).²⁶⁸³ This submission highlights a series of risks requiring urgent and comprehensive multilateral action as well as the country’s views on how the multiple challenges posed by autonomous weapons systems must be addressed.

In October 2024, the Draft Resolution L.77 on Lethal Autonomous Weapons Systems²⁶⁸⁴ was adopted at the First Committee of the United Nations General Assembly and Ireland is amongst the countries who endorsed it. On behalf of Ireland, Mr. Jason Robinson, Deputy Permanent Representative to the

Conference of Disarmament, made a statement²⁶⁸⁵ expressing concern over the widespread use of explosive weapons and stressed that “any use of military force must comply with international humanitarian law, particularly the principles of distinction and proportionality.

Human Rights

According to Freedom House, Ireland is “free,” with high scores for political rights and civil liberties (97/100). Regarding transparency and openness, Freedom House reports: “The public has broad access to official information under the 2014 Freedom of Information Act, though partial exemptions remain for the police and some other agencies. A Transparency Code requires open records on the groups and individuals that advise public officials on policy. The government has been criticized for failing to consult meaningfully with civil society groups and relevant stakeholders in policy formulation, particularly regarding the Roma, Travelers, and people living with disabilities.”²⁶⁸⁶

Ireland has endorsed the Universal Declaration of Human Rights and ratified seven of the nine core international human rights instruments,²⁶⁸⁷ along with the European Convention on Human Rights.²⁶⁸⁸ Strand 1 of Ireland’s national AI strategy commits to “making human rights and ethical principles a key focus” of its national AI strategy, although it largely focuses on AI R&D that can improve access and inclusion, e.g., AI tools that help people with impaired hearing through real-time live captioning.

In a 2020 Recommendation on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers reminded Member States that their pledge to “ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction” required that “member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms which are universal, indivisible,

Center for AI and Digital Policy

inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”²⁶⁸⁹

The European Commission’s Vice-President for Values and Transparency, Věra Jourová signed the Council of Europe Framework Convention on Artificial Intelligence, as an effective framework at the international level that aims to address risks posed by AI to human rights, democracy, and the rule of law. The Convention provides a common approach to ensure that activities within the lifecycle of AI systems are compatible with human rights, democracy and the rule of law, while enabling innovation and trust. The Convention covers AI systems potentially interfering with human rights, democracy and the rule of law, by following a risk- based and differentiated approach.²⁶⁹⁰

AI Safety Summit

In November 2023, Ireland participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁶⁹¹ Ireland thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

The second AI Safety Summit took place in Seoul on 21-22 May 2024 and was co-hosted by the UK and South Korea.²⁶⁹² The U.S. secretary of commerce Gina Raimondo launched the first Strategic Vision on AI Safety²⁶⁹³, to “accelerate

Center for AI and Digital Policy

the advancement of the science of AI safety” at a global level by promoting “complementarity and interoperability” between institutes and fostering a “common international understanding” of AI safety approaches.²⁶⁹⁴ The initial members of the network include the United States, United Kingdom, European Union, Japan, Singapore, South Korea, Canada, France, Kenya, and Australia.

G20 / OECD Principles

Ireland is a member of the OECD and endorsed the OECD AI Principles in May 2019. According to its National AI Strategy, Ireland’s AI policies are “underpinned by [Ireland’s] engagement” with AI policy processes at the EU, UN, and OECD. In February 2024, the Department of Public Expenditure, NDP Delivery and Reform released Interim Guidelines for Use of AI outlining key considerations and risk mitigations for the use of AI in the Public Service.²⁶⁹⁵

Ireland joined Global Partnership on Artificial Intelligence (AI) as a full member as part of its national AI strategy to establish an “agile and appropriate” AI governance and regulatory environment.²⁶⁹⁶

Council of Europe AI Treaty

Ireland contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. The Council of Europe Committee of Ministers formally adopted the Framework Convention on 17 May 2024 and opened it for signature at the Conference of Ministers of Justice in Vilnius (Lithuania) on 5 September 2024. The European Union, on behalf of its 27 member states became one of the first signatories.²⁶⁹⁷ Ireland has not taken individual action on the treaty, however.²⁶⁹⁸

UNESCO Recommendation on AI Ethics

Ireland endorsed the UNESCO Recommendation on AI, the first ever global agreement on the ethics of AI.²⁶⁹⁹ In its National AI Strategy, issued a few months before the UNESCO Recommendation, Ireland already explicitly acknowledges the UNESCO Recommendation which is a positive sign that it will take the necessary measures to implement it. However, in Ireland's Progress Report on implementation of the National AI Strategy: AI—Here for Good²⁷⁰⁰, confirms the endorsement but provides no details on the implementation of the UNESCO recommendations on the Ethics of AI." Ireland has not begun the UNESCO Readiness Assessment Methodology (RAM).²⁷⁰¹

Evaluation

Ireland has endorsed the OECD AI Principles and the UNESCO Recommendation on AI Ethics. Ireland has also established a national AI strategy to address trust and transparency issues and improve its AI competitiveness. In 2024, Ireland also updated its national strategy to account for new developments in AI technology and included key strategic actions to ensure proportionate regulation and trust- building measures in new AI innovations.²⁷⁰² However, recent issues concerning the positions adopted by its data protection authority, in contradiction with those of other national data protection authorities in the EU or the European Data Protection Board and its absence of ratification of Convention 108+, are reasons for concern. The recent facial recognition amendment that allows police to use FRT for offenses such as rioting and violent disorder adds to the list of concerns.

Ireland's Data Protection Commission has issued guidelines centered on the right to be informed under the GDPR and demanded comprehensive safeguards in the deployment of FRT. Moreover, the DPA has been holding technology companies accountable for their compliance with the GDPR. Ireland is introducing additional measures to align with the AI Act, including establishing an AI Advisory Council and designating nine national public authorities to provide independent oversight.

Israel

In 2024, Israel launched a major reform of the Privacy Protection Law, which requires the appointment of Data Protection Officers and grants new powers and tools for enforcement to the privacy protection authority. Israel also signed the Council of Europe AI Treaty.

National AI Strategy

On 18 December 2023, Israel launched its National AI Program²⁷⁰³, with a three-fold emphasis on 1) developing a cohesive, holistic, long-term, government strategy for sustained growth in AI; 2) fostering an enabling pro-innovation environment to promote AI adoption within the private and public sectors; and 3) enhancing the facilities and resources available for research and development activities. It explicitly refers to a risk-based approach to AI regulation that “should be contextualized, weighing potential risks and benefits within specific use cases, compatible with the OECD Trustworthy AI Principles.

The 2024 AI Program focuses on responsible AI innovation, which is human-centric, non-discriminatory, reliable, safe, accountable, and transparent. Sector-specific regulation is encouraged along with a risk-based approach and multi-stakeholder consultation. In terms of governance, Israel’s national policy on artificial intelligence regulations and ethics proposes to establish an AI policy coordination center, in collaboration with the Office of Legal Counsel and Legislative Affairs (Economic Law Department), at the Ministry of Justice.²⁷⁰⁴ The center will serve as an expert-based inter-agency body and is expected to hold various responsibilities aimed at effectively managing and overseeing Israel’s AI landscape.

Initially, it will provide guidance to sectoral regulators concerning the necessity and development of AI regulations. Subsequently, it will foster inter-agency coordination to ensure alignment with global policies and minimize overlaps. The center will lead coordinated and horizontal efforts to implement governmental AI policies and regularly update the national policy on artificial intelligence regulations and ethics as necessary. The Center will offer advice to the government on AI regulation and oversee the implementation of the national policy on artificial intelligence regulations and ethics. The Center will also represent Israel in international forums pertaining to AI regulation and standards. The center will disseminate information and tools on responsible AI innovation to regulators and the private sector. Lastly, the Center will establish consultation

²⁷⁰³ Ministry of Innovation, Science and Technology, Israel AI National Program 2024 (Dec. 18, 2023), <https://www.gov.il/BlobFolder/news/most-news20231218/he/Israel%20National%20AI%20Program%202024.pdf>

²⁷⁰⁴ Israeli Ministry of Science and Technology and the Office of Legal Counsel and Legislative Affairs at the Ministry of Justice, *Israel’s Policy on Artificial Intelligence Regulation and Ethics* (Dec. 17, 2023), p. 9 s. 4(3), https://www.gov.il/en/departments/policies/ai_2023

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

forums to facilitate ongoing discussions and knowledge-sharing among various stakeholders, including industry, academia, civil society organizations²⁷⁰⁵, and the government.

The composition of the center should reflect a diverse array of civil servants possessing expertise in areas such as government policy, regulation, international relations, technology, and law. The center's operations would be supervised by a steering committee led by a senior official from the Ministry of Innovation, Science and Technology. This committee would also comprise other senior officials from the Ministry of Justice, Ministry of Finance, Regulatory Authority, Privacy Protection Authority, Israel National Digital Agency, and Israel Innovation Authority.

The Center is tasked with broad responsibilities but does not have decision-making authority. Operating as a centralized governmental hub for AI regulation, it lacks significant enforcement powers. Existing regulators will maintain their authority to enforce adopted AI principles. However, aside from the Protection of Privacy Authority, other relevant regulators may lack the capacity to develop and enforce segment-specific AI guidance. Consequently, the regulatory framework heavily depends on a non-regulatory entity to equip regulatory bodies with essential knowledge, tools, and resources.²⁷⁰⁶

Public Participation

The initial release of the draft regulatory and ethics policy in October 2022 was followed by a phase of consultation with an explicit request for public comment.

The policy draft also called for the establishment, within the Ministry of Innovation, Science and Technology, of a forum for public participation to discuss the development of AI regulations and oversight.²⁷⁰⁷ Following this call for public participation, the Israeli Democracy Institute provided comments, covered by the media,²⁷⁰⁸ on the government's plan to regulate AI.²⁷⁰⁹ The Israeli Democracy

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Institute argued that the suggested AI soft regulation, self-regulation, and ethical principles are insufficient. Instead, the government should design enforceable laws that clearly define “red lines” to avoid Israel becoming the backyard of AI-related experiments. The Israeli regulation should align with international efforts, especially those of the European Union. The Israeli Democracy Institute also advocated for an approach that includes human right protection and risk-based frameworks and is embedded in a combination of horizontal and sector-specific regulations.

In September 2024, nine months after the launch of Israel's National AI Program, the country launched its second phase with a NIS 500 million Investment in Research and Development Infrastructure.²⁷¹⁰ The initiative, implemented by the National Artificial Intelligence Program, is an offshoot of the discussions and recommendations of the National Digital Bureau and the Telam Forum. Representatives from the Israel Innovation Authority, the Council for Higher Education, the Ministry of Defense’s Directorate of Defense Research and Development, the Ministry of Innovation, Science and Technology, and the Ministry of Finance have expressed their voices on how this second phase is critical to maintaining Israel's position as a leading power in AI and serves as a catalyst for creating significant value for Israel’s economy and the future of AI in the country.

The second phase²⁷¹¹ includes focus areas such as AI Integration in the Public Sector and Local Authorities, Preserving Israel’s Leadership in AI Research, Expanding Human Capital in the Industry, Access to Data and Information, and Encouraging Transformative High-Tech Ventures. Moreover, in September 2024, the Ministry of Innovation, Science, and Technology issued a public call to form a national expert forum on artificial intelligence. The forum, which was created by Government Resolution 173, will include experts from academia, industry, and leading civil society organizations.²⁷¹²

which the right for privacy is a constitutional right;²⁷¹³ (2) the 1981 Privacy Protection Law (PPL)²⁷¹⁴ and subsequent regulations,²⁷¹⁵ such as Israel's 2017 Data Security Regulation;²⁷¹⁶ and (3) the guidelines of the Israeli Privacy Protection Authority.²⁷¹⁷ Chapter 1 of the PPL covers privacy generally, while Chapter 2 concerns data in storage and sets out various registration, purpose-limitation, transparency and security requirements, as well as individual rights of access and rectification.²⁷¹⁸ Other Chapters address procedural and enforcement matters as well as the disclosure or sharing of information by public bodies and liabilities for the publication of privacy-infringing material in newspapers.

In 2011, The European Commission determined that Israel satisfied the “adequacy requirement” according to the European Directive 95/46. In 2024, the European Commission decided to extend its adequacy decision as it concluded that “Israel continues to provide an adequate level of protection for personal data transferred from the EU.”²⁷¹⁹ The Israeli Ministry of Justice proposed updates of the PPL, due to the major gap between GDPR and the current Israeli Law. In 2021, the Israeli Ministry of Justice announced approval of updates to the Privacy Protection Law. The amendments include significant new administrative enforcement powers for the Privacy Protection Authority, including the authority to impose financial sanctions, updating technological and social definitions, and reducing the bureaucratic burden on organizations' obligation to register databases.²⁷²⁰

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In January 2022, the Israeli government introduced a substantial amendment to the PPL, Bill No. 14, aimed to align the PPL with the EU GDPR at least in part.²⁷²¹ On 05 August 2024, the Israeli Parliament approved the Amendment No. 13 to the Privacy Protection Law, 5741-1981 (previously known as Amendment no. 14), which is the most comprehensive amendment to the law since 1996. The amendment will come into effect in August 2025. The amendment introduces for the first time the mandatory appointment of Data Protection Officers, significantly expands the PPA's powers, establishes various tools for effective enforcement of the PPL, and allows courts to award statutory damages without proof of damage up to an amount of NIS 10,000.²⁷²²

Israel's Privacy Protection Authority (PPA) is the primary regulator for matters relating to privacy and data security.²⁷²³ The PPA sits within the Israeli Ministry of Justice and is headed by the Registrar of Databases. The PPA regulates and enforces data protection across all sectors, private and public, according to the provisions of the Privacy Protection Law.

In July 2022,²⁷²⁴ the PPA presented their interpretation of section 11 of the PPL which enshrines the right information. The PPA's interpretation covers AI-based decision-making systems. In August 2022,²⁷²⁵ the PPA covered telemedicine (or 'telehealth') services, including AI-based diagnostic services. In August 2022, the PPA issued a detailed report²⁷²⁶ about DeepFake technologies and privacy. According to the PPA, "unauthorized distribution of an image or video forged using the Deepfake technology—which displays degrading or demeaning content relating to a person's private life and could be perceived in public as authentic - constitutes a violation of the Privacy Protection Act."

The PPA has been a member of the Global Privacy Assembly (GPA) since 2009. The PPA has not endorsed the 2018 GPA Declaration on Ethics and Data

Protection in Artificial Intelligence,²⁷²⁷ the 2020 GPA Resolution on AI Accountability,²⁷²⁸ the 2022 GPA Resolution on Facial Recognition Technology²⁷²⁹ or the GPA 2023 Resolution on Artificial Intelligence and Employment.²⁷³⁰ However, it co-sponsored the 2023 GPA Resolution on Generative AI.²⁷³¹

Algorithmic Transparency

In its 2022 interpretation of section 11 of the PPL on the right to information, the PPA clarified that this provision applies to AI-based systems.

The topic of algorithmic transparency had already been raised by the Knesset's Research and Information Center's June 2018 research document that was prepared for the first discussion on the government's readiness for artificial intelligence that month.²⁷³² Since then, algorithmic transparency has regularly been mentioned in policy documents and debates, leading to Decision 212. Algorithmic transparency is also mentioned in the draft policy and regulatory policy.

In November 2022, the press reported that the Israeli Police operates an AI-based profiling system that aims to identify drug smugglers at the airport border. The AI-based system draws data from police and government databases, and outputs names of citizens arriving at the airport. Citizens whose names were outputted by the system, are bodily searched even though there is no prior intelligence information or any other suspicion that they smuggled drugs. According to the journal, the Israeli police refuse to provide details on how the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

system is operated and how the algorithm works. As a result, it was argued that courts cannot properly monitor the AI-based system and its decisions, and these searches continue without prior suspicion but only as a result of the opaque algorithm.²⁷³³ In April 2024, UN experts deplored the purported use of artificial intelligence and related military directives by Israel in occupied Gaza leading to an unprecedented toll on the civilian population, housing, vital services, and infrastructure.²⁷³⁴ As a signatory of the Council of Europe Convention, Israel has the obligation to ensure effective oversight mechanisms in the use of artificial intelligence, as stipulated in Article 26 of the document ensuring activities associated with the artificial intelligence systems are fully consistent with human rights, democracy and the rule of law.²⁷³⁵

Medical Data

In 2018, Israel's Prime Minister announced the establishment of a \$300 million initiative to make Israel's large pool of de-identified clinical data available to researchers, entrepreneurs, and medical institutions to develop new treatments and personalized medicine among other goals. "With all records in a common format, AI systems – using machine learning algorithms – will be able to parse the data, seeking correlations in conditions and treatments to discern which treatments are likely to be most effective" said the Director of the Israel Ministry of Health.²⁷³⁶

The initiative currently includes the "Mosaic" (*Psifas*) project, a personalized medicine health project, for creating a national information infrastructure for health research in the field of genetics and medical information. Another project is Timna:²⁷³⁷ a national platform for conducting big data research in health data, intended to serve the research community in the health system, academia and Israeli industry.

In April 2023, the Medical Technologies, Information and Research Division and the Digital Health Division at the Ministry of Health, published

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

guiding principles for the development of machine learning based technologies.²⁷³⁸ These ten guiding principles are intended to facilitate the development and utilization of safe, efficient, and high-quality medical devices incorporating artificial intelligence and machine learning. The principles place particular emphasis on addressing challenges unique to machine learning, including bias prevention, overfitting prevention, transparency, data reliability, privacy, and information security. On 12 July 2024, the Medical Information Mobilization Law, 5784-2024 passed the Health Committee, and the second and third reading in the Knesset will follow. The proposed legislation will give people more control and will allow them to mobilize medical data to health organizations of their choice in a clear and easy way to ensure therapeutic continuity, better diagnosis, and personalized treatment.²⁷³⁹

COVID-19 Tracking Controversy

Beginning with emergency measures taken in March 2020, the Israeli police used mobile-phone location data and AI techniques to attempt to determine whether those in quarantine were indeed staying in quarantine. A month after the tracking was authorized, the parliamentary committee in charge of overseeing the practice halted the mobile phone tracking. The Committee argued that the harm done to privacy outweighed the benefits of the tracking.²⁷⁴⁰

Israel then turned to Shin Bet, the Israeli Security Agency, to monitor the general population and track potential Covid patients and their contacts.²⁷⁴¹ This action was criticized by human rights activists²⁷⁴², as well as medical associations²⁷⁴³.

On 26 April 2020, Israel's Supreme Court banned the intelligence agency from tracing the phone location of those who may be infected with Covid-19, until

new laws are passed.²⁷⁴⁴ “The state's choice to use its preventative security service for monitoring those who wish it no harm, without their consent, raises great difficulties and a suitable alternative [...] must be found,” the court said.²⁷⁴⁵ The Association for Civil Rights in Israel, one of the groups which brought the court challenge, welcomed the decision, saying: “Israel must not be the sole democracy which operates its secret security service to monitor its citizens, even in the fight against the coronavirus.”²⁷⁴⁶ In July, Israel’s parliament voted to allow the country’s Internal Security agency to track the contact relations of Israeli cell phone users for the rest of the year amid a resurgence in new cases.²⁷⁴⁷ Human rights organizations renewed their objections.²⁷⁴⁸

In August 2020 it was revealed that only four percent of those sent for isolation by the intelligence system were actually sick²⁷⁴⁹. In a September 2020 opinion, the PPA also objected to the use of the Israeli Internal Security Service location tracking tool.²⁷⁵⁰ The PPA said that the measure cannot be justified, and that use would adversely impact the public’s trust in public authorities. The PPA also questioned the effectiveness of the location tracking tool. In January 2021, the government received an automatic extension to the expired law to continue tracking - due to the elections at that time. In March 2021, the Supreme Court clarified that the Knesset is not in charge of supervising the tracking tool or limiting its use. In the same month, elections were also held. The same month, a week after the elections to the 24th Knesset and before its inauguration, the

Foreign Affairs and Security Committee refused to continue using the tracking tool.²⁷⁵¹

Social Ranking

Following a proposal to use scoring technologies for Israelis who may be infected with COVID-19, in April 2020, the PPA also published a review on the use of technologies for the social ranking of citizens to achieve social and governmental goals, and the impact of this on the right to privacy.²⁷⁵² The April 2020 review indicated that social ranking systems have increased in an era of Big Data and are present, in Israel, in forms such as the credit data rating system or a potential future AI-based system aimed to rate an individual's likelihood of contracting COVID-19. Specifically, the review outlined that such a system, which would process location, medical, and personal data, would constitute a serious violation of the privacy of citizens and should be avoided as far as possible and, where it cannot be avoided, it must be compliant with data protection law. These findings further translate into Israel's global rank AI capacities ranking seventh among 62 nations in The Global Artificial Intelligence Index in 2023, as reported by Statista. This places it between South Korea and Germany, which ranked sixth and eighth, respectively. Between 2021 and 2023, Israel dropped two positions in the index ranking. This reflected a deterioration in the country's relative global position in AI capacities.²⁷⁵³

Facial Recognition

Facial recognition in Israel is implemented in border control and Israel has a biometric database of face photos and fingerprints of citizens and residents, as well as foreigners accessing Israel. A biometric database was enacted in law in 2009.²⁷⁵⁴ The law provides the basis for the Israeli national ID-Card. The database includes biometric face-photos, and voluntarily supplied fingerprints. According to the biometric database law, the information can be used for severe crime enforcement, and for state security tasks. In May 2020, the Israeli State Comptroller reported that the data of about 4.5 million Israeli drivers' licenses, including facial pictures, are not sufficiently protected from misuse or outside hacking. Various public reports have documented Israel's use of facial recognition

Center for AI and Digital Policy

in Gaza, including the Israeli security forces' extensive gathering of Palestinian biometric data without consent and using facial recognition to build a large database for mass surveillance. The facial recognition program, which is run by Israel's military intelligence unit, including the cyber-intelligence division Unit 8200, relies on technology from Corsight, a private Israeli company that also uses Google Photos to allow Israel to pick faces out of crowds and grainy drone footage.²⁷⁵⁵

Still, Israel's military has invested tens of millions of dollars to upgrade West Bank checkpoints with AnyVision facial recognition technology to verify Palestinian workers' identities and ease their entry into Israel. The new system, which began rolling out late 2018, drew criticism about the role the controversial technology plays in Israel's military control over Palestinians.²⁷⁵⁶

Microsoft, which was part of a group that had invested \$74 million in AnyVision, hired a team of lawyers to audit the Israeli firm and determine whether AnyVision's technology applications complied with Microsoft's ethical principles against using facial recognition for mass surveillance. In March 2020, Microsoft said it was pulling investments from AnyVision although the outcomes of the audit did not substantiate claims that the startup's technology was used unethically.²⁷⁵⁷

In 2021, the Washington Post released further information on the program.²⁷⁵⁸ The initiative involves a smartphone technology called Blue Wolf that captures photos of Palestinians' faces and matches them to an image database. The phone app flashes in different colors to alert soldiers if a person is to be detained, arrested or left alone. To create the database, in 2020 soldiers photographed Palestinians, including children and the elderly. The total number of people photographed is unclear. The Israeli military has also installed face-scanning cameras in the divided city of Hebron to assist soldiers at checkpoints to identify Palestinians before they present their ID cards. A wider network of closed-circuit television cameras provides real-time monitoring of the population and can sometimes see into private homes.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

A new security tool was also under development: body cameras with facial recognition technology to enable police to scan crowds and detect suspects in real time, even if their faces are obscured.²⁷⁵⁹ In April 2022, the then minister of justice Gideon Sa'ar opposed the police initiative to operate facial recognition cameras in public spaces.²⁷⁶⁰ In February 2023, the issues of using a biometric photo system were removed from the draft law, which regards the police and the “Special Photographic Systems.”²⁷⁶¹

Environmental Impact of AI

Israel's National AI Program provides a clear direction for promoting sustainability. The section under responsible innovation highlights the government's strategy for promoting growth, sustainable development, and Israeli leadership in innovation. It further promotes the public sector use of AI to unlock the potential of AI technologies, highlighting societal benefits such as bridging equality divides, improving health, education, mobility and employment, and enhancing environmental sustainability.²⁷⁶² In addition, Israel participated and adopted the UN General Assembly Resolution on ‘Seizing the opportunities of safe, secure, and trustworthy artificial intelligence systems for sustainable development,’ which, among others, promotes the access to and design, development, deployment, and use of safe, secure and trustworthy artificial intelligence systems to achieve sustainable development in its three dimensions – economic, social and environmental.²⁷⁶³ In November 2024, the Knesset's Technology Committee discussed the impact of AI on Israel's electricity usage, with experts raising concerns over Israel's capability to cope with an increasing electricity demand arising from the AI revolution, which is expected to add approximately 500 megawatts in the next years, equivalent to the consumption of

half a million people. The committee called the government to develop a policy, and a report from the Energy Ministry is expected within six months.²⁷⁶⁴

AI and Warfare

Israel is a High Contracting Party to the UN's Convention on Certain Conventional Weapons (CCW) protocol and as such has presented objections to the distinctions accorded to lethal autonomous weapons systems (LAWS), and the accompanying calls for prohibition. Israel's representatives to the UN maintain that humans must always be accountable for error and human rights abuses, regardless of the weapons technology.²⁷⁶⁵ Israel is known to be at the forefront of developing lethal autonomous weapons, including both the Iron Dome defense system²⁷⁶⁶ and the Harop suicide drone.²⁷⁶⁷ The Israeli mission to the GGE on LAWS of the Convention on Certain Conventional Weapons clarified Israel's position in August 2019.²⁷⁶⁸ In August 2020, Israel expressed further views on the Eleven Guiding Principles Adopted by the Group of Government Experts concerning lethal autonomous weapons systems. Israel's view is that "the law of armed conflict, or international humanitarian law (IHL), applies to the potential development and use of emerging technologies in the area of LAWS; that human judgment will always be an integral part of any process regarding emerging technologies in the area of LAWS, and will be applied during their life-cycle; and that humans will always be responsible for the use of LAWS." Moreover, in Israel's view, "besides the potential risks that may be associated with LAWS, there are also operational advantages to the use of LAWS as well as clear advantages from the humanitarian perspective."²⁷⁶⁹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

At the 78th UN General Assembly First Committee in 2023, Israel abstained from voting on resolution L.56 on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. Despite abstaining from voting, Israel contributed to the Secretary-General Report.²⁷⁷⁰

According to New York Times, Israel used an AI-equipped, remotely operated gun to kill an Iranian nuclear scientist.²⁷⁷¹ The Israeli system used AI to correct for more than a second and a half of input delay, allowing the system’s operator to fire the gun at a moving target while stationed more than 1,000 miles away.

In a statement released by the Israel Defense Forces on November 2, 2023, the unit revealed its deployment of an AI target-creation platform called Habsora (the Gospel, in English) in the Gaza-Israel conflict.²⁷⁷² The system leverages AI to generate targets at a fast pace using an algorithm that extracts intelligence data from a wide range of sources, and proposes target recommendations to researchers, which are presumably approved by human authorities.

On December 10, 2023, the Association for Civil Rights in Israel, sent a legal correspondence²⁷⁷³ to the Chief Military Prosecutor requesting an assessment of the system and its utilization of AI in determining attack targets, while evaluating its compliance with both Israeli and international legal obligations. The association also sought clarification on potential biases that could result in erroneous targeting, posing risks to innocent civilians. In addition to the legal correspondence, the association filed a freedom of information request²⁷⁷⁴ regarding the use of the system.²⁷⁷⁵ The freedom of information request is a right

Center for AI and Digital Policy

emanating from the Freedom of Information Law of 1998, which grants Israeli citizens, residents, and registered corporations, the legal right to access government agency records, except those exempted by law.

The request aimed to unveil all pertinent information about the Habsora system that could be shared with the public. The association sought documents outlining the ethical rules governing the system's usage, as well as information regarding the associated operational procedures. Questions regarding the predictive capabilities of the algorithm and the level of accuracy achieved by the system were also raised. Further inquiries involved obtaining information on the system's transparency to operators, protocols for handling system failures, the extent of human oversight available to operators, and the traceability of system operations. The association further requested details on how the system's activity could be explained to affected parties and sought information about any external audits conducted on the system and the decisions made based on these audits. According to news reports by the Guardian, Israel's bombing campaign in Gaza has used an AI-powered database system called Lavender to identify up to 37,000 potential targets based on their apparent links to Hamas.²⁷⁷⁶

In September 2024, the UN published the Report of the Special Committee to Investigate Israeli Practices Affecting the Human Rights of the Palestinian People and Other Arabs of the Occupied Territories, under which it expressly raised concerns about the reliance on the artificial intelligence-assisted targeting that accelerates decision-making to such an extent that soldiers authorize strikes in a matter of seconds, resulting in an indiscriminate loss of life, which violates international humanitarian law.²⁷⁷⁷

Along with the United States, United Kingdom, Australia and China, Israel was among the nations which attended the Paris AI Action Summit in February 2025 yet abstained from endorsing the Paris Declaration on Maintaining Human Control in AI-Enabled Weapons.²⁷⁷⁸

Human Rights

Israel is a signatory to many international human rights treaties and conventions and ranks “Free,” receiving a combined score of 74/100 from Freedom House. The ranking reflects the nation's institutions adhering to a respect

²⁷⁷⁶ The Guardian, *The Machine Did it Coldly* (Apr. 3, 2024),

for political rights and civil liberties. This score represents a decline of three digits compared to the country's 2023 score.²⁷⁷⁹ Freedom House explained the decline in part with the proposed amendments in January 2023 to “reduce the judiciary’s ability to block government actions and legislation”²⁷⁸⁰ and the increased number of “Palestinians held in Israeli prisons—including those held without charge in administrative detention [...] after Hamas’s attack and during the ensuing Israeli military operations in Gaza and the West Bank.”²⁷⁸¹

Freedom House ranks the Gaza Strip and West Bank separately from Israel. The 2024 Freedom in the World report classifies Gaza as “Not Free” with a score of 8/100²⁷⁸² and the West Bank as “Not Free” with a score of 22/100.²⁷⁸³

AI Safety Summit

In November 2023, Israel participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁷⁸⁴ Israel thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.” Israel did not participate at the AI Seoul Summit, which was held in May 2024.²⁷⁸⁵ Israel did participate in the Paris AI Action Summit in February 2025; however, as noted, along with the United States, United Kingdom, Australia and China, was among the nations that

abstained from endorsing The Paris Declaration on Maintaining Human Control in AI-Enabled Weapons.²⁷⁸⁶

OECD / G20 AI Principles

Israel has endorsed the OECD AI Principles. Israeli Government Decision 212²⁷⁸⁷ from August 2021 instructs lawmakers to consider, among other things, the OECD principles as part of the promotion of the national policy in the field of AI. The draft AI regulatory and ethical policy reiterates it.

In November 2021, Israel joined the Global Partnership on Artificial Intelligence in recognition of its advanced artificial intelligence technologies and its adherence to the values of equality and democracy promoted by the OECD.²⁷⁸⁸ Israel's National AI Program references a risk-based approach to AI regulation compatible with the OECD Trustworthy Principles, weighing potential risks and benefits within specific use cases. All Global Partnership on Artificial Intelligence (GPAI) Members reached a consensus in July 2024 on the future of GPAI and signed the New Delhi Ministerial Declaration. The Declaration formalized a new integrated partnership with the OECD and the commitment to strengthen synergies between GPAI and OECD for the advancement of human-centric, safe, secure and trustworthy AI is emphasized.²⁷⁸⁹

Council of Europe Convention on AI

Israel also contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. On 17 May 2024, The Council of Europe adopted the Framework Convention, which is open for signature by the member States and the non-member States since 05 September 2024. Israel signed the Framework Convention on the same day.²⁷⁹⁰ Under the

signed Convention, activities throughout the AI lifecycle must comply with fundamental principles, including human dignity, equality, respect for privacy, transparency, accountability, and reliability.²⁷⁹¹

UNESCO Recommendation on AI Ethics

Israel is not a member of UNESCO and did not endorse the UNESCO Recommendations on the Ethics of AI. Israel also has not taken any affirmative action to implement the UNESCO Readiness Assessment Methodology (RAM).²⁷⁹²

Evaluation

Israel benefits from a well-established legal regime for data protection but has thus far adopted a different approach to its AI policy, privileging soft regulation and self-regulation. While Israel has long been a leader in AI research and development, the government is still slowly developing its AI policy. The use of an AI-based tracking system for sensitive medical conditions by the internal security agency is of concern. Also troubling is the use of facial recognition technology without clear legal basis. Israel's reluctance to endorse limits on lethal autonomous weapons is particularly problematic in view of the Gaza-Israel conflict. Of critical concern has been the deployment of an AI platform, the Lavender system, in targeting military strikes. Red lines and safeguards with respect to the use of AI in warfare are urgently needed.

Italy

In 2024, Italy released an updated National AI Strategy to guide AI legislation and progressed on implementing the EU AI Act. As the presidency of the G7, Italy oversaw the launch of the G7 Toolkit for AI in the Public Sector. The country also became party to the Council of Europe AI Treaty through the EU signature.

National AI Strategy

In July 2020, the Italian Ministry of Economic Development (MISE) published the Proposals for a National Strategy for Artificial Intelligence drafted by the MISE AI Expert Group.²⁷⁹³ The final Proposals are the result of a public

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

consultation organized in 2019 on an initial set of proposals²⁷⁹⁴, and a background paper providing initial guiding principles and policy recommendations.²⁷⁹⁵ The final Proposals provide 82 recommendations for developing an Italian strategy.

In the introduction to these recommendations, the group of experts in charge of the drafting of the Proposals explains that: “[i]n a global context dominated by the increasing, and often blind rivalry between the United States and China, the European Union has gradually carved for itself a role of defender of the responsible use of technology based on an approach which considers AI as a means and not an end in itself. Working together toward the formulation of public policies is also necessary in the context of the multilevel governance of the EU. Since 2018, the European Commission has played a key role in defining the “European Coordinated Plan on Artificial Intelligence.” Ensued, for each EU Member State, the obligation to define a national AI strategy and send it to Brussels. The Italian Government (the Ministry of Economic Development) has followed an approach similar to that of the Commission, by appointing in January 2019 a group of 30 experts, which here presents the results of its work in the shape of proposals for a national AI strategy.”²⁷⁹⁶

According to the group of experts, Italy has to contribute to defining a European AI strategy and to developing a national strategy that takes into account Italian specificities. Italy should thus take AI as an opportunity to inaugurate a new “RenAIssance.” “Just as the Renaissance in the middle of the Fourteenth Century signals a new way of understanding the world, with a focus on human beings and their needs, impulses and sufferings, Renaissance in the digital era could be inspired by the need to define a new relationship between human beings and machines, whereby technology increases human capabilities and becomes a key instrument in drafting a new social contract, oriented towards sustainable development. In this sense, Italy should position itself as the defender of AI for good, so not as an end in itself, but as desirable to the extent that it can contribute to the well-being of human beings and to sustainable development in economic, social, and environmental context. The possibility of a new RenAIssance underlines all the Proposals. This approach is far from idealist: to consider the issue of the development of AI from the perspective of the future of work,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

interpersonal relationships as well as social and environmental governance constitutes a Copernican revolution compared to the traditional approach oriented towards industrial competitiveness which nonetheless plays a central role in the sustainability of our economy.”²⁷⁹⁷

The Group of experts calls for a human-centric approach to AI based on three pillars driving the development of technologies and policies:

- AI for human beings. The first pillar concerns the individual and the relationship with “the machine.” AI technologies must be at the service of people, guaranteeing human supervision, preventing social and territorial imbalances deriving from unaware and inappropriate uses. It is about defining and implementing initiatives related to safety, public administration, health and medicine, education, new skills, policies for work and digital humanities, media and the cultural and creative industry.
- AI for a reliable, productive and sustainable digital ecosystem. The second pillar includes industrial policies for the manufacturing sector (Industry 4.0). AI must be designed and implemented in a reliable and transparent way, so that it can be adopted in any productive area. This concerns the promotion of robotics and autonomous systems, software, data processing, internet of things, finance, pharmaceuticals, and biotech.
- AI for sustainable development. The third pillar focuses on sustainability. AI technologies must generate opportunities of growth and well-being for all individuals, in line with the principles contained in Article 3 of Italian Constitution and the United Nations Sustainable Development Goals. This pillar includes actions related to environmental protection and sustainable infrastructures such as smart cities, transport, agriculture, and space.

In November 2021, the Italian government issued a national AI strategy entitled: the Strategic Programme on Artificial Intelligence 2022–2024.²⁷⁹⁸ The Strategic Programme was jointly developed by the MISE, the Ministry of Education, University and Research and the Ministry of Technological Innovation and Digital Transition.

The Strategic Programme recognizes that the Italian AI ecosystem has vast potential, yet not fully exploited. The current Italian context and international position call for a national AI strategy characterised by the need to build on the positive elements of its ecosystem while focusing on reforms and investments on specific areas of weakness. To that end, the Strategic Programme identifies 5 guiding principles: “Italy’s AI is a European AI; Italy will be a global research and

innovation hub for AI; Italy's AI will be human centred, trustworthy and sustainable; Italian companies will become leaders of AI based research, development and innovation; Italy's public administrations will govern with AI and will govern AI".²⁷⁹⁹

On the basis of these guiding principles, the Strategic Programme defines "6 objectives: the goals of the Italian strategy"²⁸⁰⁰ among which: "Develop and adopt human-centred and trustworthy AI; Increase AI-based innovation and the development of AI technology; Develop AI-driven policies and services in the public sector."²⁸⁰¹

The Strategic Programme also defines "11 priority sectors where Italy intends to focus investments"²⁸⁰² as well as 3 areas of intervention: how the country aims to achieve the stated objectives."²⁸⁰³ These are: "Talent and Skills, Research; Applications" with a view to mobilize AI "for more competitive enterprises" and "for a more modern public administration."²⁸⁰⁴ In these 3 areas of interventions, the Strategic Programme indicates 24 policy initiatives deemed "fundamental for Italy to retain technological competitiveness at the international level, connect the excellent results of research with the needs of industry and address the key challenges of Italian society going forward."²⁸⁰⁵

The Italian government approved a draft AI law outlining a national strategy addressing the societal, regulatory, privacy, and economic impacts of AI in April 2-24.²⁸⁰⁶ As of November 2024, the draft is under parliamentary review and has not yet been adopted.²⁸⁰⁷ The law aims to promote the opportunities of AI to enhance citizens' quality of life while ensuring risk management based on a human-centric approach. It follows a dual approach: promoting transparent and

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

responsible AI use within an anthropocentric framework while supervising potential economic, social, and fundamental rights impacts.²⁸⁰⁸

The draft builds on general principles rooted in fundamental rights, such as explainability, fairness, accuracy, non-discrimination, and data protection. It aims to complement, not overlap with, the EU AI Act, making it the first national legislation designed to align with this broader regulatory framework. A sector-specific approach is applied, with tailored rules for health, work, justice, and public administration. The draft law also establishes a dual national oversight authority for AI. Lastly, the draft addresses sustainability, stipulating that AI must support democratic processes, boost productivity, and contribute to social welfare.

In July 2024, the Agenzia per l'Italia Digitale (AgiD) and the Department for Digital Transformation of the Council of Ministers issued a national AI policy entitled Italian Strategy for Artificial Intelligence for 2024–2026.²⁸⁰⁹ The policy was drafted by a committee of fourteen experts to assist the government in shaping national legislation and policy. According to the AgiD, the strategy “reflects the government's commitment to creating an environment in which AI can develop in a safe, ethical and inclusive manner, maximizing benefits and minimizing potential adverse effects.”²⁸¹⁰

This Strategy helps contextualize the draft AI law and supports the government's vision. The updated AI strategy accounts for recent shifts in the technological landscape since 2021, including the rise of generative AI systems and foundational models. The Strategy delves into four strategic macro-areas: (i) research, (ii) public administration, (iii) enterprises, and (iv) education.

The strategic macro-areas rely on the development of two key enabling factors: fostering the access to national knowledge assets including datasets and models and reinforcing the network infrastructures for AI. To ensure successful implementation, the Strategy includes a monitoring and implementation framework with coordination and oversight mechanisms, performance metrics, and a commitment to continuous improvement.

Digital Italy 2026

As part of the Next Generation EU, the European Union's landmark instrument for recovery from the coronavirus pandemic, Italy's Department for Digital Transformation has introduced a digital strategy which aims to meet the

digital objectives and initiatives identified in its National Recovery and Resilience Plan (PNRR).²⁸¹¹ Digital Italy 2026 identifies several priority investment areas among which Data and interoperability; Digital services and digital citizenship; Digitization of public administrations; and Basic digital competency. Digital Italy 2026 is complemented by an Operational Plan that details its lines of action and provides key targets for 2025.²⁸¹²

Digital Italy 2026 is devised according to three-year goals that assign deadlines for each investment area and reform axis. These largely aim to adhere to the European Commission's 2030 Digital Compass.²⁸¹³ By 2026, Italy will aim to have:

- 70% of the population using digital ID
- 75% of the population achieving basic digital competency
- 75% of public services operating on the cloud
- 80% of essential public services available online
- 100% of families having broadband access.

Public Participation

The Proposals for a National Strategy for Artificial Intelligence drafted by the MISE AI Expert Group in July 2020 followed a 2019 consultation on an initial set of proposals.²⁸¹⁴ The Expert Group was comprised of ten representatives of enterprises operating in the field of AI, ten representatives of research centers / think tanks or academia, and ten representatives of the labor market, professions, consumers and civil society.²⁸¹⁵

A 2020 survey of Italian consumers by BEUC, the European Consumer organization, found substantial public concern about the deployment of AI.²⁸¹⁶ More than half of the respondents disagreed or strongly disagreed that current regulation is adequate to efficiently regulate AI. Over 70% of respondents in Italy

“strongly agreed that users should be able to say ‘no’ to automated decision-making.” More than half “(strongly) agreed that companies use AI to manipulate consumer decisions.”

The Italian Strategy for Artificial Intelligence for 2024-2026 stems from the event "Artificial Intelligence for Italy" held in Rome on March 12, 2024, opened to representatives of public administrations, companies in the ICT and innovation sector, as well as to academia and research.²⁸¹⁷

EU Digital Services Act

As an EU member state, Italy shall apply the EU Digital Services Act (DSA).²⁸¹⁸ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation. The DSA bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs and targeted advertising to minors based on profiling.

Signatories also commit to the 2022 Strengthened Code of Practice on Disinformation,²⁸¹⁹ which counts as a mitigation measure under the DSA. The Code of Practice requires companies to act in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

EU AI Act

The EU AI Act entered into force on August 1, 2024. As an EU member State, Italy is bound by the EU AI Act.²⁸²⁰ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to

AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

Data Protection

Since Italy is an EU Member State, the General Data Protection Regulation (GDPR)²⁸²¹ is directly applicable in Italy and to Italians. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market.”²⁸²² The GDPR entered into force in May 2016 and applies since May 2018.

Italy’s adaptation to the GDPR is implemented through the Italian Data Protection Code, with recent updates through Italian Decree Law No. 139 of October 8, 2021. This decree amends the Personal Data Protection Code to align more closely with GDPR principles, specifically authorizing public administrations and publicly controlled companies to process personal data for tasks in the public interest or within public powers. After parliamentary approval, the decree became law on December 7, 2021, as published in the Official Gazette.²⁸²³

Italy transposed the EU Data Protection Law Enforcement Directive (LED)²⁸²⁴ in 2018,²⁸²⁵ thereby protecting “citizens’ fundamental right to data protection whenever personal data is used by criminal law enforcement authorities

²⁸²¹ Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, <https://eur-lex.europa.eu/EN/legal-content/summary/general-data-protection-regulation-gdpr.html>

²⁸²⁴ Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA, <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A02016L0680-20160504>

²⁸²⁵ *Attuazione della direttiva UE 2016/680 del Parlamento Europeo e del Consiglio, del 27.4.2016, relativa alla protezione delle persone fisiche con riguardo al trattamento dei dati personali da parte delle autorità competenti ai fini di prevenzione, indagine, accertamento e perseguimento di reati o esecuzione di sanzioni penali, nonché alla libera circolazione di tali dati e che abroga la decisione quadro 2008/977/GAI del Consiglio*, *Gazzetta Ufficiale della Repubblica Italiana*, (May 24, 2018).

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

for law enforcement purposes.”²⁸²⁶ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.²⁸²⁷

Italy is also a member of the Council of Europe and ratified the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.²⁸²⁸

AI Oversight

The Italian Data Protection Authority (DPA) “is an independent administrative authority established by the so-called privacy law (Law No. 675 of 31 December 1996) and regulated subsequently by the Personal Data Protection Code (Legislative Decree No. 196 of 30 June 2003) as amended by Legislative Decree No. 101 of 10 August 2018, which also established that the Italian DPA is the supervisory authority responsible for monitoring application of the General Data Protection Regulation (pursuant to Article 51 of Regulation No. 2016/679).”²⁸²⁹ The DPA has direct sanctioning powers as well as extended enforcement capabilities.

In January 2021, an Italian court determined that an algorithm that evaluates employee performance violates labor law.²⁸³⁰ The case concerned the ranking algorithm of the food delivery service Deliveroo. The judge ruled that the algorithm unfairly assessed absent workers noting that it failed to take account of permissible reasons for absence. The court ordered the company to pay a fine and legal costs and to post the judgment.²⁸³¹

In October 2021, the DPA banned remote surveillance of customer care employees for lack of respect of essential safeguards enshrined in the GDPR.²⁸³²

²⁸³¹ Tribunale Orinario di Bologna, *Nella causa iscritta al n. r.g. 2949/2019 contro Deliveroo Italia SRI* (Dec. 31, 2020), <http://www.bollettinoadapt.it/wp-content/uploads/2021/01/Ordinanza-Bologna.pdf>

²⁸³² European Data Protection Board, *Italian SA bans remote surveillance of customer care employees* (Oct. 28, 2021), https://edpb.europa.eu/news/national-news/2021/italian-sa-bans-remote-surveillance-customer-care-employees_en

The case originated from a complaint by an employee of a public transports operator, which concerned the processing of personal data relating to the company's call centre operators by way of the inbound calls management system. "The investigations by the Italian SA showed that the employees had not been informed adequately about the processing, and that the system in question allowed recording and replaying phone calls as well as storing, for an unspecified period, additional information on the individual operators' activities such as call duration, called numbers, date and time of each call. Since the software allowed the remote surveillance of workers, its deployment was to be made conditional on the enhanced safeguards set out in this respect by national law pursuant to Article 88 GDPR – namely, either an ad-hoc agreement with trade unions or an authorisation by the competent inspectorate for labour."²⁸³³ The DPA fined the company EUR 30,000 taking also account of the cooperation provided in the course of the fact-finding activities; the company had immediately discontinued the processing following the on-site inspection.

The Italian DPA issued a letter to the Italian Parliament in March 2024 emphasizing the importance of a single, independent AI authority for oversight.²⁸³⁴ The European Data Protection Board and the European Data Protection Supervisor have previously recommended that data protection authorities would be the most logical choice for this role, given the close relationship between AI and data protection.

The proposed legislation on AI currently under review by parliamentary committees includes the establishment of a dedicated national oversight authority for AI, as required by the EU AI Act, to ensure effective regulation and oversight.²⁸³⁵ Currently, Italy's DPA ensures compliance with ethical AI standards and safeguards individual rights. However, the draft AI bill may alter this evaluation, as it designates both AgiD and the National Cybersecurity Agency as the national authorities for AI, in line with Article 70 of the EU AI Act, to ensure the proper implementation of national and European regulations. The final decision on which authority will be appointed rests with Parliament. Additionally, Member States have until August 2, 2025, to designate an oversight authority, as mandated by the EU AI Act.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Italy has actively participated in the Global Privacy Assembly (GPA) negotiations, adopting the following resolutions: the Declaration on Ethics and Data Protection in Artificial Intelligence (2018),²⁸³⁶ the Resolution on AI Accountability (2020),²⁸³⁷ the Resolution on Generative AI (2023), and the Resolution on Artificial Intelligence and Employment (2023).²⁸³⁸ However, Italy did not endorse the Resolution on Facial Recognition Technology (2020).²⁸³⁹ This reflects ongoing efforts to ensure that ethical guidelines and accountability mechanisms are established across various AI domains.

Algorithmic Transparency

Italy is subject to the GDPR and Convention 108+. Italians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.²⁸⁴⁰ The Council of Europe Committee of Ministers stresses that these include transparency levels proportionate to the risk of the systems or decisions and meaningful contestation.²⁸⁴¹

As for the public sector, in its 2018 White Paper on Artificial Intelligence at the service of citizens,²⁸⁴² the Agency for Digital Italy stressed the necessity for the functioning of AI systems to abide by criteria of transparency and openness. “Transparency is a fundamental prerequisite to avoid discrimination and solve the

problem of informational asymmetry, thus guaranteeing for citizens the right to understand public decisions.”²⁸⁴³

In May 2021, the Italian Court of Cassation released its judgment in *Garante per la Protezione dei Dati Personali v. Associazione Mevaluate Onlu*.²⁸⁴⁴ The case concerned the Italian DPA’s 2016 order to Mevaluate Italia s.r.l. to suspend the implementation of its online Artificial Intelligence system capable of analyzing documents voluntarily uploaded by users to provide reputational ratings. The Court of Cassation quashed the previous ruling of the Court of Rome, which had opined in favour of the lawfulness of the system as data subjects had provided their consent. The Court of Cassation found that the lack of transparency regarding Mevaluate’s algorithms invalidates such consent, thus violating Article 8 of the EU Charter of Fundamental Rights, the GDPR and a series of articles of Legislative Decree No. 196 of 2003. It was further found that consent can only be valid if the data subject is appropriately informed about the purposes of processing and freely and specifically expresses their consent to the same. Consent cannot be considered as informed, if the logic involved in the algorithm remains unknown to the data subjects, as it was the case in Mevaluate reputational ranking system.

In July 2021, the DPA issued a 2.6 million Euros penalty to the on-demand delivery company Foodinho.²⁸⁴⁵ The DPA identified some irregularities concerning the algorithm used by the company to rate drivers’ performance. The DPA found that the controller had not adequately informed employees regarding the way the system worked and did not guarantee the accuracy and correctness of the results of the algorithms used to evaluate drivers. No information was provided regarding “significant information about the logic used as well as the importance and the consequences of such treatment of personal data by the riders.”²⁸⁴⁶ One of the issues of concern was the risk of discrimination arising from the algorithmic system and of relevance has been the decision of the Court of Cassation, a discussed above.

In February 2023, the DPA imposed a provisional limitation on the processing of Italian users’ data by the US-based company that has developed and

Center for AI and Digital Policy

operates an App called Replika. The App features an AI-powered chatbot that generates a virtual friend using text and video interfaces. The App “carries factual risks to children.” For example, they receive replies that are absolutely inappropriate to their age.²⁸⁴⁷ The App does not provide any age verification mechanism. According to the DPA, the App is in breach of the GDPR. The service provider’s “privacy policy is not to be regarded as compliant with the transparency principles and obligations set out in the Regulation as it fails to disclose whatever information on the key elements of the processing at issue, in particular on the use of children’s personal data, which is in breach of Article 13 of the Regulation.”²⁸⁴⁸ The personal data of children are processed unlawfully “since performance of a contract cannot be invoked as a legal basis, even implicitly, given that children are incapable to enter into a valid contract under Italian law.”²⁸⁴⁹

Investigations on OpenAI

In March 2023, the Italian Data Protection Authority temporarily banned ChatGPT in Italy due to concerns over privacy violations and the lack of an age-verification system, marking the first instance of a data protection authority blocking the chatbot. The DPA cited a data breach and required OpenAI to provide additional information, with potential fines looming. Access to OpenAI’s platforms, including ChatGPT, was restored in April 2023, with the company guaranteeing more transparency and more rights for European users and non-users. However, based on the outcome of its fact-finding activity, the Italian DPA concluded that the available evidence pointed to the existence of breaches of the provisions contained in the EU GDPR. OpenAI had 30 days to submit its counterclaims concerning the alleged breaches. The Italian DPA stated that it will also take account of the work in progress within the EDPB ad-hoc task force in its final determination on the case.²⁸⁵⁰

In March 2024, the Italian DPA initiated an investigation into OpenAI’s new AI model, Sora, due to concerns over the processing of personal data in the EU, particularly in Italy. The inquiry demands that OpenAI provide detailed

information within 20 days about Sora's training process, the data it processes and collects, the handling of sensitive personal data, and the sources of this data. Additionally, Italy's DPA seeks to understand if and how Sora will be offered in the EU, including the methods for informing users and non-users about data processing procedures and the legal bases for the processing.²⁸⁵¹

Facial Recognition

According to Privacy International, the municipality of Como, Italy, purchased a facial recognition system “with little transparency and despite the lack of a clear legal framework.”²⁸⁵² Privacy International reported that Como “embraced a narrative of technological innovation pushed by Huawei” within the broader concept of smart city and innovation tech, but after the intervention of the Italian Data Protection Authority (DPA), the municipality was obliged to suspend the system. The DPA determined that there was no legal basis to collect facial images. Subsequent reporting by Wired indicated that the municipality had changed vendors and that the system installed most recently failed to work as proposed.²⁸⁵³

The Italian National Police intended to use a facial recognition system, called SARI Real-Time which would allow for real-time identification of migrants on boats upon their landing on Italian ports. The SARI Real-Time system, originally purchased to be employed during protests and public events, was discontinued following a decision by the DPA, who ruled in April 2021 that the system could open the doors to unjustified mass surveillance and that there was no legal basis to deploy it.²⁸⁵⁴ The DPA “in line with the stance taken by the

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Council of Europe” considered “that the use of facial recognition for the purposes of preventing and suppressing crime is highly problematic.”²⁸⁵⁵

In December 2021, the Italian parliament introduced a moratorium on video surveillance systems that use facial recognition technologies. This law introduces a temporary ban for private entities as well as public authorities to use these systems in public places or places accessible to the public.²⁸⁵⁶ The moratorium, originally set to last until December 31, 2023, has been updated to reflect evolving legislative developments surrounding facial recognition technologies.

According to EDRI, this is an important development, yet the moratorium contains major exceptions: “it only covers video surveillance systems with facial recognition, it doesn’t take into account systems such as those developed by Clearview AI.” The “moratorium allows the police to use such systems subject to a case-by-case approval by the DPA and it exempts judicial authorities and public prosecutors from any control.”²⁸⁵⁷ EDRI also remarked that “[u]ntil now, the Italian DPA had stopped the use of real-time facial recognition systems and remote biometric identification systems by the police and municipalities because Italy lacked a legal basis for the processing of biometric data by law enforcement authorities. Now this moratorium provides a legal basis and risks normalising the use of these technologies during police activities in the field of public security and for investigation and crime prosecution activities.”²⁸⁵⁸

In March 2022, the DPA issued a 20 million euro fine on Clearview AI,²⁸⁵⁹ a private firm that offers an identity matching service for law enforcement, reportedly powered by a database of around 10 billion faces made up by selfies scraped off the internet. The DPA fined Clearview AI “after finding it applied what amounted to biometric monitoring techniques also to individuals in the Italian territory.”²⁸⁶⁰ Italy issued the fine citing unlawful processing “without an

appropriate legal basis” and “infringements of several fundamental principles including transparency—as it failed to adequately inform users—, purpose limitation—as it processed users’ data for purposes other than those for which they had been made available online—, and storage limitation—as it did not set out any data storage period. Thus, Clearview AI is violating data subjects’ freedoms including the protection of privacy and non-discrimination.”²⁸⁶¹ The DPA also “ordered the company to erase the data relating to individuals in Italy; it banned any further collection and processing of the data through the company’s facial recognition system. Clearview AI was finally ordered by the Italian SA to designate a representative in the EU to be addressed in addition to or instead of the US-based controller in order to facilitate exercise of data subject rights.”²⁸⁶²

AlgorithmWatch reported in 2020 that Italy was exploring the use of facial recognition in football stadiums.²⁸⁶³ In December 2022, Serie A CEO Luigi De Siervo announced that Italian league officials are working on a system of facial recognition technology to be used inside the stadiums to identify fans responsible for racist chants. According to De Servio: “We’re still awaiting authorisation from privacy authorities but we should be able to get that with the help of the government.”²⁸⁶⁴

In March 2024, the DPA issued a warning to Worldcoin, a private firm with a project based on iris scanning to verify the identity of users and linking this treatment to the market of financial instruments, in this specific case the cryptocurrency called “WLD.” The DPA considers that the processing of biometric data based on the consent of the project members doesn’t provide for sufficient information about the risks associated with the processing of such high-risk data. In addition, the promise to receive free WLD tokens from Worldcoin once the user gives its consent to the processing of biometric data via iris scanning negatively affects the ability to give free consent. Therefore, the DPA deems that it cannot be considered a valid legal basis to collect biometric data according to the requirements under the GDPR.²⁸⁶⁵

In June 2024, the DPA issued a 120 thousand euro fine on a dealership for violating the personal data of employees through the use of facial recognition

systems to control work presence, following up on a complaint issued in 2021.²⁸⁶⁶ With reference to the processing of biometric data, the DPA reiterated that the use of such data is not allowed because there is no national legal provision that currently provides for the use of biometric data for the recording of attendance. In addition, in an employment relationship, consent cannot be considered as a valid legal basis due to the unbalanced nature of this relationship. Finally, the DPA pointed out that this processing violated also the principle of data minimization, necessity, and proportionality.

AI Literacy

The development and implementation of AI technologies firmly depend on skills and competences. The Government has already shown its intention to strengthen the provision of AI competencies at all education levels. At the primary and secondary education level, the government has launched the National Plan for the Digital School (PNSD) to update school curricula and promote new skills in digital education and AI-related courses.²⁸⁶⁷ At higher education levels, the government is encouraging the integration of courses with AI-related themes in bachelors, masters and doctoral programs. The planned budget also aims to support projects among PhDs, researchers, and professors. Literacy campaigns will also be fostered via broadcasting and multimedia. Special attention will be devoted to informing about fake news and issues of cyber security.

In September 2022, to support the evolution and implementation of the PNSD in view of recent technological changes and the development of digital learning following the COVID-19 pandemic,²⁸⁶⁸ the Ministry of Education established a scientific and technical Committee. The Committee of experts oversees strategic paths to meet the growing demand for digital skills.²⁸⁶⁹

In line with UNESCO principle of awareness and literacy, and its policy area for education²⁸⁷⁰ through the Italian Strategy for Artificial Intelligence for 2024–2026, Italy aims to promote high-quality AI education at all levels. The first goal is to encourage the widespread development of AI courses at the university

level, accounting for the ethical aspects of AI. The second goal is to train highly skilled researchers at the PhD level, strengthening the national PhD in AI. To avoid a knowledge gap that could undermine social and economic cohesion, the third goal is to develop general AI and digital literacy skills for all Italian citizens by introducing AI at the school level. This Strategy also includes specific upskilling and reskilling programs for businesses and the public administration.²⁸⁷¹

EdTech and Children Tracking

In November 2020, the Council of Europe Consultative Committee of the Convention 108 issued Guidelines on Children’s Data Protection in an Education Setting, also applicable to remote e-learning solutions and services.²⁸⁷² The Committee recalls that “[t]he UN Convention Committee on the Rights of the Child set out in 2001, that “Education must be provided in a way that respects the inherent dignity of the child and enables the child to express his or her views freely.””²⁸⁷³

In May 2022, the WeSchool app, with an estimated 1,000,000 users in Italy, was analyzed as part of a global investigative report conducted by Human Rights Watch on the education technology (EdTech) endorsed by 49 governments, including Italy, for children’s education during the pandemic. Human Rights Watch found that Italy’s endorsement of this online learning platform put at risk or directly violated children’s rights.

EdTech products, such as WeSchool, sent children’s data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online. According to Human Rights Watch, in line with child data protection principles as well as corporations’ human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children’s data for advertising. The report noted that companies should work with governments to define clear retention and deletion rules for children’s data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern

child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights in order to do so.²⁸⁷⁴

The National AI Strategy launched in 2024, in alignment with UNESCO Recommendations on AI Literacy, highlights the necessity of providing high-quality education that addresses the challenges posed by artificial intelligence. The strategy emphasizes interdisciplinary collaboration in higher education, addressing significant ethical concerns, and promoting educational pathways accessible to both schools and the general public. It underscores the urgent need for reskilling and upskilling initiatives to prepare various sectors for the impending AI transformation.²⁸⁷⁵

In this regard, the Education Minister announced that AI-assisted software will be trialed in 15 classrooms across four regions, serving as virtual assistants to enhance the learning experience for students and support teachers in customizing education to meet individual needs. This pilot program not only aims to improve digital literacy but also seeks to promote a more informed and responsible citizenry.²⁸⁷⁶

Use of AI in Public Administration

In 2018, the Agency for Digital Italy issued a White Paper on Artificial Intelligence at the service of citizens.²⁸⁷⁷ The objective is to give an important impulse to innovation in the public sector. The White Paper defines a plan to facilitate the adoption of AI technologies in the Italian Public Administration and improve the quality of public services. Artificial intelligence technologies can be implemented in healthcare, education, security, urban management. The White Paper includes a set of recommendations defining the challenges for developing and implementing AI technologies in the public sector. The White paper defines nine challenges:

- The ethical challenge: the anthropocentric vision on artificial intelligence technologies leads to looking at AI technologies as at the service of humans. In this case, it is important to ensure that these technologies meet universal

²⁸⁷⁴ Human Rights Watch, *How Dare They Peep into My Private Life* (May 25, 2022), <https://www.hrw.org/report/2022/05/25/how-dare-they-peep-my-private-life/childrens-rights-violations-governments>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

needs. The characteristics of AI technologies leads to raising questions concerning the quality of data, transparency, and accountability, as well as the protection of rights and freedoms. This step is critical in the public sector to ensure transparency and the respect of individuals' rights and freedoms.

- The technological challenge: AI technologies cannot still replicate the functioning of the human mind. There is interest in improving and implementing these technologies to make the work of the Public Administration more effective.
- The skills challenge: citizens increasingly deal with digital technologies. Therefore, it is critical they understand how the Public Administration implements and uses artificial intelligence technologies to make decisions or provide public services. Civil servants need to constantly improve their skills to ensure they can effectively be aware of the opportunities and challenges of the implementation of AI technologies in the public sector.
- The data challenge: data quality is one of the primary issues when implementing artificial intelligence technologies. Open data of public bodies can provide important information that would be very useful to generate applications of artificial intelligence at the service of the citizens. Therefore, it is critical to ensure equal and non-discriminatory access to public data.
- The legal challenge: in the field of AI technologies, it is necessary to reconcile the principle of transparency of administrative acts and procedures with the protection of privacy and personal data. A second issue of transparency concerns intellectual property rights over algorithms. Moreover, when the public administration implements a decision-making process, it is necessary to deal with accountability.
- The implementation challenge: training public employees, particularly officials and managers, on the functioning, benefits, as well as ethical and technical implications of the use of AI technologies is critical to ensure the development of the public sector.
- The inequalities challenge: AI solutions can reduce social inequalities in the field of education and training, health and disability, knowledge, and human rights. However, AI technologies can also increase inequalities like in the case of biased outputs. Therefore, the Public Administration should focus on implementing these technologies ensuring inclusiveness, accessibility, transparency, and non-discrimination.
- The measurement challenge: The implementation of new technologies impacts on citizens and institutions. The Public Administration does not always have the instruments to measure these effects. However, the introduction of AI technologies in the public sector can provide more information while requiring an impact assessment.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

- The human being challenge: citizens and institutions should be aware of the effects of automated systems. Artificial intelligence systems are not only a matter of technology but also social innovation.

The Minister of Technological Innovation and Digitization and Fondazione Leonardo have signed a Memorandum of Understanding to shape the framework and boundaries for AI adoption in Public Administration.²⁸⁷⁸

In 2024, the Agenzia per l'Italia Digitale - Agency for Digital Italy (AgID) introduced the Three-Year Plan for Information Technology in Public Administration 2024-2026, strengthening the guiding principles for digital transformation and, for the first time, offering detailed guidelines for AI adoption. Developed in collaboration with universities, private sector, and public associations, the plan emphasizes interoperability, accessibility, and the use of open-source software to prevent technological lock-in and reduce costs. The plan sets a target for at least 125 public administrations to adopt open-source software by 2025, promoting efficiency and fostering a community for technological solution-sharing.²⁸⁷⁹

Moreover, the Italian Presidency's Department for Digital Transformation, under the G7's Digital & Technology Working Group, has coordinated the release of the G7 Toolkit for Artificial Intelligence in the Public Sector which was developed in partnership with the OECD and UNESCO. This toolkit aims to align AI policies across G7 member countries, promoting ethical standards of transparency, accountability, and social impact in public sector AI applications. It provides practical insights and shares best practices for the use of AI by public administrations, while integrating ethical considerations and showcasing G7 trends as a reference for the responsible and secure application of AI in the development of public policies.²⁸⁸⁰

Environmental Impact of AI

The concept of sustainability in AI policy is articulated by several international frameworks that Italy has endorsed. According to the OECD AI principles and UNESCO Recommendation, sustainable AI is understood as AI that can be leveraged for social good and can substantially contribute to achieving the Sustainable Development Goals (SDGs) by the United Nations Agenda 2030, as

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

defined by its member states in 2015.²⁸⁸¹ According to the UNESCO Recommendation, “the advent of AI technologies can either benefit sustainability objectives or hinder their realization, depending on how they are applied across countries with varying levels of development.”²⁸⁸² As a signatory to these frameworks, Italy is expected to align its national AI policies with sustainability principles.

As an EU member state, Italy is bound by the EU AI Act.²⁸⁸³ In article 1, environmental protection is mentioned as one of the purposes of the EU AI Act. Moreover, Article 40 requires the European Commission to request that standardization bodies develop guidelines for improving the resource efficiency of high-risk AI systems. Under article 95, the AI Office and the Member States shall facilitate the drawing up of codes of conduct concerning the voluntary application for “assessing and minimizing the impact of AI systems on environmental sustainability, including as regards energy-efficient programming and techniques for the efficient design, training and use of AI.”

In addition, as part of the National AI Strategy for 2024–2026, Italy presents sustainability as one of the goals to achieve in its general vision as AI can be “an ally in enhancing the quality of life for individuals and the sustainable management of resources, optimizing the use of energy and raw materials”.²⁸⁸⁴ As part of the strategic macro-area on research, Italy promotes applied AI research “focusing on contexts of greatest economic and social value for Italy and the greatest impact on citizen welfare”.²⁸⁸⁵ However, the Strategy does not provide for actionable measures dedicated to sustainability.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Nonetheless, Italy has extended its commitment to sustainable AI beyond national borders through a collaborative initiative with the United Nations Development Programme (UNDP).²⁸⁸⁶ Under the leadership of Prime Minister Giorgia Meloni, Italy announced the establishment of an AI Hub for Sustainable Development set to launch in 2025. This hub, part of the broader Mattei Plan, is designed to foster AI-driven growth and innovation in nine African nations by promoting AI applications in critical sectors such as agriculture, health, energy, and education.²⁸⁸⁷ The project aims to bridge the digital divide, emphasizing inclusive digital ecosystems and sustainable local innovations in line with UNDP's goals for developing countries.

This initiative also highlights Italy's dedication to ethical and responsible AI deployment that supports sustainable economic growth and social equity, particularly in underrepresented regions. Furthermore, the AI Hub rests on three key pillars: data pipelines, green computing infrastructure, and talent development, to ensure that AI benefits are equitably distributed and align with the broader objectives of the SDGs. This international partnership reflects Italy's ambition to lead globally in responsible AI practices.²⁸⁸⁸

Lethal Autonomous Weapons

Italy has been an active participant in the Convention on Certain Conventional Weapons (CCW) meetings on killer robots since 2014. Italy has been supporting a two-track approach in favor of a legally binding solution with a combination of prohibitions and regulations. According to Italy, a two-track approach would maintain an element of human control while not interfering with the advancement of technology.²⁸⁸⁹

In a 2019 statement at the UN General Assembly, Italy emphasized that “any existing or future weapon system must be subject to human control, particularly in relation to the ultimate decision to use lethal force.”²⁸⁹⁰

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

In October 2022, Italy was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability and emphasized the importance of an international framework of rules and constraints.²⁸⁹¹ In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”²⁸⁹²

At the 78th UN General Assembly First Committee in 2023, Italy voted in favor²⁸⁹³ of resolution L.56²⁸⁹⁴ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report which counted with Italy’s contribution analyzed ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.²⁸⁹⁵

The General Assembly decided to open informal consultations²⁸⁹⁶ for two days in 2025, after the meeting of the Group of Governmental Experts, with the full participation of Member States and observer States, international and regional organizations, the International Committee of the Red Cross, and civil society,

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

including the scientific community and industry, with the objective to brief on the work being done by the Group of Experts and discuss the report.

In February 2023, Italy participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Government representatives, including Italy, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.²⁸⁹⁷ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” Italy also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.²⁸⁹⁸

In September 2024, South Korea hosted the second summit on the Responsible Artificial Intelligence in the Military Domain (REAIM). Sixty-one countries including Italy endorsed a Blueprint for Action to govern responsible use of artificial intelligence (AI) in the military field.²⁸⁹⁹ Contrary to the 2023 Hague REAIM summit, the AI blueprint was more action-oriented, in keeping with advanced discussions and developments in the military such as AI-enabled drones used by Ukraine. The Blueprint for Action was officially endorsed as the outcome document of the REAIM Summit 2024. This declarative document lays out a roadmap for establishing norms of AI in the military domain. It suggests principles and framework for future governance, “emphasizing that being responsible entails complying with international law, holding humans responsible and accountable, ensuring reliability and trustworthiness of AI, maintaining an appropriate human involvement, and improving AI explainability.”²⁹⁰⁰

Human Rights

Italy is a signatory to the major international human rights instruments and generally ranks highly for the defense of human rights. In 2024, Freedom House gives Italy a “free” (90/100) rating for political rights and civil liberties.²⁹⁰¹

²⁸⁹⁷ Government of Netherlands, *Call to action on responsible use of AI in the military domain* (Feb. 16, 2023) Press Release, <https://www.government.nl/latest/news/2023/02/16/reaim-2023-call-to-action>

Freedom House notes that “Civil liberties are generally respected, but concerns about the rights of migrants and LGBT+ people persist. Regional inequalities are persistent and substantial. Endemic problems of corruption and organized crime pose an enduring challenge to the rule of law and economic growth.”

The Rome Call for Ethics in AI

In February 2020, the Italian Government, together with the Pontificia Accademia per la Vita, Microsoft, IBM and FAO signed The Rome Call for Ethics in AI. This initiative is aimed at increasing awareness of the role of ethics in AI and proposes a more human-centric approach to AI.²⁹⁰² The Call sets out a program of “Algorithm Ethics” according to the “fundamental principles of good innovation,” including Transparency, Responsibility, Impartiality, Reliability, Security, and Privacy. The Call is based on three principles:

- Ethics: All human beings are born free and equal in dignity and rights.
- Education: Transforming the world through the innovation of AI means undertaking to build a future for and with younger generations.
- Rights: The development of AI in the service of humankind and the planet must be reflected in regulations and principles that protect people – particularly the weak and the underprivileged – and natural environments.

The RenAIssance foundation was set up to guard and promote the Rome Call for AI Ethics in April 2021.²⁹⁰³

In January 2023, representatives of the Chief Rabbinate of Israel’s Commission for Interreligious Relations, the Pontifical Academy for Life and Abu Dhabi Forum for Peace, commended a joint declaration on AI Ethics: An Abrahamic Commitment to the Rome Call.²⁹⁰⁴ The joint declaration is meant as a companion to the Rome Call.

Archbishop Vincenzo Paglia, President of the Pontifical Academy for Life and the RenAIssance Foundation, welcomed the participants to the event in which the joint declaration was issued with the following words: “We have gathered with our Jewish and Muslim brothers in an event of great importance to call upon the world to think and act in the name of brotherhood and peace – even in the field of technology. The signing of the Rome Call by Jewish and Muslim religious leaders and the joint call for algorethics to guide the design of artificial intelligence refer

precisely to the increasingly urgent need to build paths of peace, mutual respect, dialogue, and community.”²⁹⁰⁵

In April 2024, Cisco, the multinational digital communications technology company,²⁹⁰⁶ and the Archbishop of Canterbury Justin Welby²⁹⁰⁷ endorsed the Rome call for ethics.

AI Safety Summit

In November 2023, Italy participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁹⁰⁸ Italy thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development, and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

The AI Safety Summit, co-hosted by the United Kingdom and South Korea in May 2024, brought together leaders from 11 countries, including Italy, to discuss and strengthen the global commitment to AI safety, innovation, and inclusivity. During this event, the participating countries issued the Seoul Declaration for Safe, Innovative, and Inclusive AI, emphasizing the importance of international cooperation in AI safety, interoperability between governance frameworks, and support for AI safety research. This declaration expanded upon the goals set in the 2023 Bletchley Declaration, advocating for inclusive AI practices to bridge digital divides and safeguard democratic values, while supporting the UN Sustainable Development Goals.²⁹⁰⁹

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Italy's active involvement in the summit reflects its ongoing commitment to ethical and safe AI governance standards within a multilateral framework. Building on the efforts at Bletchley Park and Seoul, the forthcoming AI Action Summit, set to take place in France in February 2025, will once again gather governments, academia, and the broader AI community to explore ways to maximize the global benefits of this generation-defining technology.²⁹¹⁰

OECD / G20 AI Principles

Italy endorsed the OECD and the G20 AI Principles.

In 2021, Italy hosted the G20 summit. Recognizing the “benefits stemming from the responsible use and development of trustworthy human-centered Artificial Intelligence (AI),” the G20 Leaders declared in Rome that they would encourage competition and innovation, “as well as diversity and inclusion.”²⁹¹¹ Artificial intelligence figured prominently in the G20 Declaration of the Digital Ministers who met in Trieste, Italy. They stated, “We reaffirm our willingness to implement trustworthy Artificial Intelligence (AI) and to commit to a human-centered approach, as decided in 2019 under the Japanese G20 Presidency, guided by the G20 AI Principles, drawn from the OECD Recommendations on AI.”²⁹¹²

Italy is also a founding member of the Global Partnership for AI, a multi-stakeholder initiative which aims to foster international cooperation on AI research and applied activities and is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”²⁹¹³

Under its G7 presidency in 2024, Italy has been working with the Brazilian G20 Presidency to advance dialogues and actions, with AI identified as a common priority for sustainable development. The G7 Italian Presidency underscored its global leadership in AI and technology policy, focusing on fostering international cooperation and ensuring AI development adheres to democratic values. Under the scope ‘Digital Development-Growing Together’, the Italian G7 Presidency and the G7 countries acknowledged the need to work in partnership with

developing countries to strengthen local AI digital ecosystems.²⁹¹⁴ The Italian Presidency's priorities were also to focus on the impact of AI on jobs and inequality.²⁹¹⁵ In addition, the Italian Presidency's Department for Digital Transformation, under the G7's Digital & Technology Working Group, has coordinated the release of the G7 Toolkit for Artificial Intelligence in the Public Sector which was developed in partnership with the OECD and UNESCO.²⁹¹⁶

UNESCO Recommendation on AI Ethics

Italy is a UNESCO member since 1948. Italy endorsed the 2021 UNESCO Recommendation on AI Ethics,²⁹¹⁷ the first ever global agreement on the ethics of AI. Italy's national AI strategy and international partnerships and plans align to the UNESCO Recommendation.

As of November 2024, Italy has neither competed nor announced preparation for the UNESCO Readiness Assessment Methodology (RAM), which forms one of the core pillars of the implementation of UNESCO Recommendation on the Ethics of Artificial Intelligence.²⁹¹⁸

Council of Europe AI Treaty

Italy contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. The Committee on AI approved the Draft Framework Convention during its 10th Plenary session in March 2024. In May 2024, The Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law was adopted in Strasbourg²⁹¹⁹. On September 5, 2024, the European Commission signed the Council of Europe

Framework Convention on behalf of the European Union and its State Members including Italy.²⁹²⁰ Italy has not yet ratified the Convention.

Evaluation

Italy has endorsed the OECD/G20 AI Principles and is a founding member of the Global Partnership on AI. The Rome Call for AI Ethics, undertaken by Pope Francis with the support of the Italian government and private companies, sets out a powerful vision for AI that is human-centric and that diminishes social inequality. Italy has underscored these key priorities in the framework of its Presidency of the G7. Italy has also signed the UNESCO Recommendation on the Ethics of AI although it has yet to take steps to implement it.

Italy is subject to the GDPR and has ratified the modernized Council of Europe Convention 108, providing a high level of protection for personal data and the specific right of algorithmic transparency. The Italian Data Protection Authority has played a leading role in fundamental rights protection against possible encroachments stemming from the design, deployment, or use of AI systems, most recently through investigations concerning OpenAI.

Anticipating the EU AI Act entry into force, the Italian government has developed an AI draft law, the first instance of a domestic legislation to be read in conjunction with the EU AI Act. It has yet to be approved by the Italian Parliament. Alongside the draft law, the new National AI Strategy for 2024-2026 provides for policy objectives in four strategic macro-areas: research, public administration, enterprises, and education. The Strategy is in line with the UNESCO Recommendation on training and AI literacy and could advance Italy towards implementation through the strategic measures on education.

Jamaica

In 2024, Jamaica's National AI Task Force submitted research-based recommendations for a national AI policy and the Information Commissioner issued AI-targeted Data Protection Regulations.

National AI Strategy

The Jamaican National AI Task Force formed in 2023²⁹²¹ submitted a report to the Cabinet in September 2024 with research-based recommendations for a

²⁹²⁰ Delegation of the European Union to the Council of Europe, Press Release, *The European Commission signs historic Council of Europe Framework Convention on Artificial Intelligence and Human Rights* (Sept. 10, 2024), <https://www.eedas.europa.eu/delegations/council-europe/european-commission-signs-historic-council-europe-framework-convention-artificial-intelligence-and-en?s=51>

²⁹²¹ Jamaica Information Service, *Government to Set Up AI Task Force* (Jul. 15, 2023), <https://jis.gov.jm/government-to-set-up-ai-task-force/>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

national AI policy.²⁹²² The Task Force comprises members from private sector entities, civil society, academia, and other experts. The Task Force report establishes an evidence-based foundational AI framework; explores AI's role and transformation potential across key sectors such as Education, Business, and Government; addresses ethical challenges posed by AI; and develops strategies for risk mitigation, international positioning, and social impact assessment. The report will also serve as a guide for the Government to develop downstream AI policies related to economic growth and opportunities.

Even before the Task Force report suggested tools, the Jamaican government reaffirmed its commitment to addressing the challenges posed by AI and deepfakes to the democratic Process. Senator Dr. Dana Morris, Minister for Skills and Digital Transformation, reiterated the government's dedication to preserving democracy and transparency. She stated, "Central to the Administration is our commitment to preserving democracy and the democratic process. The government understands the critical importance of maintaining trust and transparency in our electoral system."²⁹²³

There are also several significant policy initiatives worth mentioning. Jamaica's 2009 National Development Plan, Vision 2030, which aims among others to advance the achievement of the UN Sustainable Development Goals, does not address digital policy directly. However, the Vision 2030 the Jamaica Secretariat acknowledges in reflections on the "perspectives on the future of national development planning post-COVID-19" imagines a role for digital technologies such as AI will have in the future: "[t]he advancement of technology enablement geared to support adaptation and agility and access to public goods and services for sustainable and inclusive growth. This includes digitalization and equity in access to technology products and services. It also includes the infusion of cultural values and norms that support the application of technology and innovation towards improved productivity, competitiveness, and growth."²⁹²⁴

Jamaica's Broadcasting Commission (BCJ) has been a leader in fostering a human-centered approach to AI in Jamaica and Small Island Developing States (SIDS). The BCJ is an "independent statutory agency which falls within the ambit of the Minister with responsibility for Information." Among others, the BCJ is

mandated to “provide advice to policy makers in the formulation of policies for the [media] industry” and “conduct research on all areas relating to the electronic media in Jamaica.”²⁹²⁵

At the 2019 Regional Forum on Artificial Intelligence in Latin America and the Caribbean, Cordel Green, the Executive Director of the Broadcasting Commission, stated, “As we seek to understand the new environment and the broad impacts of AI on society, UNESCO’S ROAM principles (Rights, Openness, Accessibility to all, Multi stakeholder participation) are critical. We should resist technological determinism. AI must be designed to promote human well-being, enhance human performance and mitigate harm, [...] we must avoid the worst outcomes of the first industrial revolution which left millions of people behind. We can make AI the rising tide which lifts all ships.” He also mentioned that “the role of the state is to ensure the regulation, support and planning of the sector by developing policies that address the needs of all citizens and do not undermine fundamental rights.”²⁹²⁶

It is to address these issues, and because “Small Island Developing States must protect their own interests,” that “the BCJ has spearheaded the Caribbean AI Initiative, which is a collaborative project with the UNESCO Cluster Office for the Caribbean,”²⁹²⁷ supported by UNESCO’s Information For All Programme (IFAP).²⁹²⁸ The Initiative “aims to develop a sub-regional strategy on the ethical, inclusive and humane use of AI in the Caribbean Small Island Developing States.”²⁹²⁹ The Caribbean AI Policy Roadmap was released in June 2021,²⁹³⁰ following a period of stakeholder consultation.²⁹³¹

The Caribbean AI Policy Roadmap acknowledges that “AI systems raise new types of ethical issues that include, but are not limited to, their impact on

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

decision-making in employment and labour, social interaction, health care, education, media, freedom of expression, access to information, privacy, democracy, discrimination, and weaponization. Furthermore, new ethical challenges are created by the potential of AI algorithms to reproduce biases, for instance regarding gender, ethnicity, and age, and thus to exacerbate already existing forms of discrimination, identity prejudice and stereotyping. As Caribbean nations expand their adoption of AI tools and other exponential technologies, stakeholders (policymakers, citizens, private sector, academia, and NGOs) must proactively collaborate to create strategies for the humanistic development of guidelines, regulations and laws. Boundaries should be defined to regulate the AI decision-making, AI rights, inclusion of manual overrides and AI accountability protocols.”

The Policy Roadmap has been developed based on a series of “assumptions” about the Caribbean and Artificial Intelligence. These include: “Human creativity is inextricably linked to Caribbean identity, economic viability and sustainable development”; “AI is a product of human creativity”; “AI is in service of humanity”; “AI must be inclusive, fair, transparent, accountable”; “AI must be regulated”; “Human rights supersede AI rights”; “Bias is everywhere in AI”; “We Are Our Data”; “Data rights will be the civil rights movement of the 21st century.”²⁹³²

The Policy Roadmap is based on six principles: Resiliency, Governance, Transformation, Upskilling, Preservation and Sustainability.²⁹³³ With regard to governance, actions to be taken include: “Develop Responsible AI Governance, Oversight, Principles & Policies to Do No Harm and to enhance safety, security and accountability of AI. Promote AI as a tool for service to humanity. Establish common values and principles to ensure fairness, transparency and accountability in digital transformation and increased integration of AI algorithms. Develop policy and legislation to enable the establishment of national and regional AI Governance Committees/Oversight Boards as well as national and regional licensing regime to manage and monitor the development of standards that govern the industry including technical code of conduct for developers, procurement guidelines for buyers, design and use principles and ethically aligned design standards. Regulate AI industry to provide redress and punishment for individuals & companies that violate citizen rights and wellbeing including banning cyberbullying, hate crimes, discriminatory algorithms, disinformation and graphically violent images inclusive of penalties and fines. Develop an AI Appeal Court and Online Dispute Resolution System. Increase advocacy for AI ethics by targeting software developers at global forums and hosting a global software conference to network, lobby, share research and initiate collaborations with big

tech. Develop AI software to test AI for biases and identify AI applications in most need of governance. Protect citizen privacy and instill trust.”²⁹³⁴

Public Participation

The Caribbean AI Policy Roadmap was the object of a series of stakeholder consultations through the organization of forums and a poll. On February 18-19, 2021, a two-day Artificial Intelligence Forum: Opportunities to Accelerate Human Progress for Sustainable Development in Caribbean Small Islands Developing States²⁹³⁵ was organized to collect input from diverse stakeholders regarding AI policy topics. Three additional workshops addressing the AI Policy Roadmap principles were held with stakeholders from the private sector, academia, civil society and youth²⁹³⁶ and events outreach continued with a focus in Jamaica.²⁹³⁷

The Jamaican Government is emphasizing bipartisan discussions as a form of public participation as it works to establish a broad consensus on the responsible use of AI, particularly in political contexts.²⁹³⁸

Data Protection

In recognition of the Universal Declaration of Human Rights, the Jamaican Parliament amended the Constitution in 2011 to provide for a new Charter of Fundamental Rights and Freedoms that includes right to privacy, including of communication.²⁹³⁹

Jamaica has prioritized developing laws similar to the European Union's General Data Protection Regulation (GDPR).²⁹⁴⁰ The Government of Jamaica passed the Data Protection Act (DPA) in June 2020.²⁹⁴¹ The DPA applies to both

public and private sector organizations. Data controllers had until December 1, 2023 to implement the necessary measures to ensure DPA compliance. This concerns, among others, fairness and lawfulness, purpose limitation, data minimization, accuracy, storage limitation, respect for data subjects' rights. These rights include the right to personal data access; consent to processing; prevent processing, and rights in relation to automated decision-making.²⁹⁴²

The DPA established the Office of the Information Commissioner (OIC) to enforce data privacy rights outlined in the legislation. The OIC is also responsible for advising the Minister of Science, Energy and Technology on matters related to data protection; disseminating information to the public; and drafting relevant guidelines. The first Information Commissioner was appointed in December 2021.

The Minister of Science, Energy and Technology expressed support for the Information Commissioner's progress in May 2022, noting, "the Office has already been making strides in the data privacy and protection arena. The OIC has been leveraging various public awareness strategies to facilitate preliminary consultations regarding the issues and concerns of different interest groups."²⁹⁴³ The OIC has launched and fully operationalized their web portal complete with service descriptions, a resource center, and portals for data controllers and other users.²⁹⁴⁴

The Office of the Information Commissioner proclaimed rules and regulations based on the Data Protection Act for AI-driven businesses in March 2024.²⁹⁴⁵ The Data Protection Regulations 2024 outline data protection procedures, including specific identification and authorization requirements for individuals acting on behalf of data subjects, methods for submitting requests to data controllers, guidelines for data protection officers, and protocols for reporting security breaches and ensuring compliance with data protection standards. These regulations also empower individuals with rights to access, correct, and control their personal data, while requiring organizations to handle data responsibly and transparently.

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Jamaica's OIC is not a member of the Global Privacy Assembly.²⁹⁴⁶ The OIC has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence²⁹⁴⁷, the 2020 GPA Resolution on Accountability in the Development and Use of Artificial Intelligence,²⁹⁴⁸ the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology²⁹⁴⁹ or the 2023 GPA Resolution on Generative AI.²⁹⁵⁰

Algorithmic Transparency

The right to algorithmic transparency is provided by the DPA. One peculiarity is that access to this right is submitted to a “prescribed fee” which might have a deterrent effect even more so for underprivileged individuals.²⁹⁵¹

The Data Protection Regulations 2024²⁹⁵² emphasize the critical importance of algorithmic transparency by granting individuals the right to understand the logic behind automated decisions and to object to processing that significantly affects them. This aligns with global ethical principles by ensuring fairness, accountability, and protection against discrimination. Additionally, the regulations mandate robust safeguards against misuse of personal data, requiring data controllers to provide clear, intelligible explanations of data processing purposes and impacts.

National Identification Systems

In a 2019 landmark decision, “Jamaica’s Chief Justice Brian Sykes observed that the government’s harsh decision to impose criminal sanctions to enforce compulsory registration by all citizens in a new digital ID system was a remarkable choice “in a democracy where the exercise of executive power rests upon the consent of the governed.”

Jamaica adopted the National Identification Act (NIRA) in December 2018 to establish a National Identification System (NIDS) that “facilitates the enrolment of all citizens of Jamaica and all individuals who are ordinarily resident in Jamaica” for “the verification of identity information and the authentication of a National Identity Number and National Identity Card.”²⁹⁵³

The NIRA was approved despite the strong objection of civil society and the parliamentary opposition because of the compulsory formal registration of all citizens including specific biometric information.] The Act required the capture and storage with a central registering authority of vein patterns, and if needed, footprints, toe prints, palm prints and the blood type of citizens and residents, along with iris scans and fingerprints.

In *Julian J. Robinson v. The Attorney General of Jamaica*, the Supreme Court of Judicature of Jamaica ruled that the NIRA was unconstitutional and nullified it, on the grounds of violating the right to privacy and equality enshrined in the Jamaican Charter of Fundamental Rights. More particularly, “[t]he Court, while giving an extensive interpretation of the right to privacy held the mandatory nature of the Act and the criminal sanctions to be in violation of informational privacy and liberty of the individuals. The disproportionate measures used to enforce the Act, the lack of necessary and a legitimate purpose, and absence of safeguards against misuse of the data collected under the Act were the primary grounds on which the Court declared the Act to be unconstitutional.”²⁹⁵⁴

A new Act, the National Identification and Registration Act of 2020, which allows for the voluntary submission of biometric information for participation in the NIDS, was passed in October 2021.²⁹⁵⁵ While this new Act has not been tested in court, it has attracted criticism from civil society organizations.²⁹⁵⁶

Facial Recognition

The Passport, Immigration and Citizenship Agency (PICA) introduced facial recognition components to passport production with the objective to protect the identity of the citizen and reduce passport fraud in 2016.²⁹⁵⁷ The implementation of facial recognition programs started through immigration kiosks at major airports in Kingston and Montego Bay.²⁹⁵⁸ Reportedly, in 2017, PICA “has moved a step closer to protecting the identity of Jamaicans by implementing, for the first time in Jamaica, a facial recognition system akin to the Automated Fingerprint Identification System (AFIS) currently in use by the police.”²⁹⁵⁹

In recent years, law enforcement authorities in Jamaica have expressed interest in integrating police surveillance technologies into regular law enforcement practices.²⁹⁶⁰ This is the case for example of the Jamaican Constabulary Force, Jamaica’s primary domestic law enforcement agency. The agency has announced its procurement of various technologies, including predictive policing, networked camera systems, and DNA databases.²⁹⁶¹ A notable development occurred in July 2020, when media reports indicated that the Constabulary Force secretly deployed facial recognition technology to support routine law enforcement investigations.²⁹⁶² At issue was the use of facial recognition in the CCTV surveillance system known as JamaicaEye, a traffic monitoring technology.²⁹⁶³ Jamaica’s Security Minister Horace Chang announced in June 2022 that Jamaica invested in more cameras to JamaicaEye as part of efforts to incorporate technology in everyday policing. Chang noted plans to install 300 additional CCTV cameras across the corporate area, adding to the more-than 850 CCTV cameras already installed across main townships.²⁹⁶⁴

Jamaica’s largest life insurance company and pension fund manager has implemented “facial recognition technology that will replace the notarized

certificate that [pensioners] had to submit annually as ‘proof of life’ for their pension payments to continue uninterrupted.”²⁹⁶⁵ According to the Financial Gleaner, “[p]ensioners will be required to upload a Government-issued picture ID, along with a short live video of their face, once a year, which will be verified or validated by the facial recognition technology.”²⁹⁶⁶

Environmental Impact of AI

The Vision 2030 Jamaica National Development Plan integrates sustainability as a guiding principle, emphasizing environmental protection, sustainable consumption and production, and resilience against climate change.²⁹⁶⁷ The plan outlines cross-sectoral strategies to manage the environmental impacts of economic activities, transportation, and land use, while promoting policies that align with global development frameworks like the Sustainable Development Goals (SDGs).

Jamaica has also emphasized sustainability in the context of Small Island Developing States (SIDS) by urging governments to create policies for Artificial Intelligence (AI) that prioritize human well-being and equitable development.²⁹⁶⁸

Lethal Autonomous Weapons

Jamaica has consistently supported the negotiation of a legally binding instrument on autonomous weapons systems in international bodies, including as a member of the Non-Aligned Movement (NAM),²⁹⁶⁹ and through endorsement of the Belén Communiqué by Latin American and Caribbean states.²⁹⁷⁰ Jamaica has attended some of the Convention on Certain Conventional Weapons (CCW)

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

Group of Governmental Experts meetings on Lethal Autonomous Weapons Systems (GGE on LAWS) since 2014.²⁹⁷¹

At the 78th UN General Assembly First Committee in 2023, Jamaica voted in favor²⁹⁷² of resolution L.56²⁹⁷³ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

At the 79th UN General Assembly First Committee in October 2024, Jamaica voted in favor of Draft Resolution L.77 on lethal autonomous weapons systems along with 160 states in October 2024.²⁹⁷⁴ Draft Resolution L.77 emphasizes “the importance of the role of humans in the use of force to ensure responsibility and accountability and for States to comply with international law” while voicing concerns about the “negative consequences and impact of autonomous weapon systems on global security and regional and international stability.”²⁹⁷⁵

Human Rights

Since declaring independence from British colonial rule, Jamaica has been organized under a democratic political system featuring competitive elections, a vibrant civil society, and respect for the rule of law. Freedom House rates Jamaica “free” in the Freedom in the World 2024 report with a score of 80/100.²⁹⁷⁶ However, Freedom House also notes that “corruption remains a serious problem, and long-standing relationships between officials and organized crime figures are thought to persist. Violent crime remains a concern, as does harassment and violence against LGBT+ people.”²⁹⁷⁷

Center for AI and Digital Policy

Jamaica has endorsed the Universal Declaration of Human Rights and ratified the International Covenant on Economic, Social and Cultural Rights and the International Covenant on Civil and Political Rights.

The National AI Task Force’s emphasis on the integration of human rights, such as privacy, into its AI policies, reinforcing Jamaica’s commitment to ensuring AI development aligns with democratic principles and international human rights standards.²⁹⁷⁸

OECD / G20 AI Principles

Jamaica has not endorsed the OECD AI Principles. However, according to the OECD, Jamaica’s DPA “better aligns” the country with the OECD AI Principles as it includes the principles of “transparency, explainability and fairness” in data collection and processing.²⁹⁷⁹

Jamaica is a “member state of the Inter-American Development Bank (IDB), which has adopted the OECD AI Principles as part of its fAIr LAC initiative.”²⁹⁸⁰ The OECD acknowledges the work of the Inter-American Development Bank and its “fAIr LAC initiative to promote the responsible and ethical use of AI and improve public services, e.g., education, health, and social protection, in Latin American and Caribbean (LAC) countries,”²⁹⁸¹ including in Jamaica.

Council of Europe AI Treaty

Jamaica has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.²⁹⁸² Countries from all over the world are eligible to sign the treaty and commit to complying with its provisions.²⁹⁸³

UNESCO Recommendation on AI Ethics

Jamaica has endorsed the UNESCO Recommendation on the Ethics of AI²⁹⁸⁴. Jamaica's Broadcasting Commission played a leading role in the elaboration of the Caribbean AI Policy Roadmap, which was based on a first draft of the UNESCO Recommendation.

Jamaica signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence at a summit of Latin American and Caribbean leaders organized with support from UNESCO and the Latin American Development Bank (CAF) with the express purpose of implementing the Recommendation.²⁹⁸⁵ The Santiago Declaration aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.²⁹⁸⁶

Jamaica is preparing to implement the UNESCO Readiness Assessment Methodology (RAM).²⁹⁸⁷ The Readiness Assessment Methodology (RAM) is a key tool to support UNESCO Member States in their implementation of the UNESCO Recommendation on the Ethics of AI. The RAM helps to highlight any institutional and regulatory gaps and enables UNESCO to tailor support for governments to fill those gaps to ensure an ethical AI ecosystem in line with the Recommendation.²⁹⁸⁸

Evaluation

Jamaica has played a pioneering role in regional AI policy and has demonstrated a capacity and ability for leadership in the Caribbean SIDS, in large part through the efforts of the Broadcasting Commission. As an active member of the UNESCO Caribbean Cluster, Jamaica participated in developing the Caribbean AI Policy Roadmap, which draws inspiration from a first draft of the UNESCO Recommendation on the Ethics of AI and reflects regional concerns of

Caribbean SIDS regarding the environment, history of colonialism, and maintenance of distinctive Caribbean cultures.

Jamaica has also demonstrated the oversight capacity of its judicial system with its Supreme Court striking down a law that would have implemented state surveillance through a mandatory AI-powered national identification system. Jamaica is now building on these efforts and is in the process of drafting a national AI strategy. Concerns persist, however, given the growing use of facial recognition technology.

Japan

In 2024, Japan introduced voluntary AI Guidelines for Business, version 1.0, which encourage continual risk assessment as part of a process of effective oversight. Internationally, Japan partnered with UNESCO on the Global AI Ethics and presented a framework for global regulation of Generative AI at the OECD.

National AI Strategy

Under the direction of former Prime Minister Shinzo Abe, Japan has emerged as a global leader in both AI policy and data governance. Abe declared in 2019 that “Artificial Intelligence (AI) must be used solely for humans and humans must be held responsible for its outcome. We will take the lead in establishing human-centered ethical principles for AI.”²⁹⁸⁹

Earlier, in 2016, Prime Minister Abe called for the Japanese government to establish an “Artificial Intelligence Technology Strategy Council.”²⁹⁹⁰ The Council set out an Artificial Intelligence Technology Strategy and Industrialization Roadmap.²⁹⁹¹ The Roadmap focuses on public-private collaboration along the AI “full pipeline from research and development to social implementation.”

Japan’s AI strategy emphasizes a risk-based, agile, and multi-stakeholder process, rather than a one-size-fits-all obligation or prohibition.²⁹⁹² Priority areas include productivity; health, medical care, and long-term care; mobility; and

Center for AI and Digital Policy

information security. The roadmap includes three phases: (1) the development and application of AI within various domains, (2) the public use of data and AI across those domains, and (3) the creation of ecosystems that integrate domains together. In August 2018, an action plan specified the objectives and timetable for accomplishment for each initiative under the Strategy.

The government established separate opportunities for the examination of ethical aspects of AI technology, intellectual property rights, personal information protection, and promotion of open data as cross-sectional items.²⁹⁹³

Japan updated the AI Strategy in 2019,²⁹⁹⁴ 2021²⁹⁹⁵ and again in 2022.²⁹⁹⁶ The 2022 Strategy defines the purpose “to contribute to the resolution of global issues through the realization of Society 5.0 and to present a comprehensive policy package related to AI for overcoming Japan’s own social issues and improving industrial competitiveness.”²⁹⁹⁷ The “Society 5.0” refers to “a human-centered society that balances economic advancement with the resolution of social problems by a system that highly integrates cyberspace and physical space.”²⁹⁹⁸

“Based on the “Human-Centered AI Social Principles,” it is important to enable diverse human resources to contribute based on a wide range of knowledge, perspectives, ideas, etc., regardless of their diverse backgrounds such as gender, age, political beliefs, and religion.”²⁹⁹⁹

The 2022 strategic objectives are: (0) dealing with imminent crises by establishing systems and technological infrastructures to maximize the protection of people's lives and property against pandemics and large-scale disasters; (1) developing and attracting “human resources for the AI era”³⁰⁰⁰ in a sustainable manner; (2) “Japan should become a top runner in the application of AI in real-world industries and achieve enhanced industrial competitiveness” while contributing to “the promotion of sustainable industries and the achievement of the UN Sustainable Development Goals (SDGs) through innovation”³⁰⁰¹ “In

addition, it is important to further improve the quality of services, improve the working environment, and ultimately reduce the financial burden by applying AI in the public sector”³⁰⁰² (3) realizing a “sustainable society with diversity”³⁰⁰³ not only for Japan but also on a global scale to contribute in the achievement of SDGs; (4) “Japan should take the leadership to build an international network in the AI field for research, education and social infrastructure and accelerate AI research and development, human resources development, and achievement of SDGs”³⁰⁰⁴

Social Principles of Human-Centric AI

Japan’s 2019 Social Principles of Human-Centric AI³⁰⁰⁵ were developed by the Council for Social Principles of Human-Centric AI. The Social Principles specify the form of society that Japan should aim for, discuss impacts on society, present a set of AI social principles, and identify issues to consider in AI R&D and social implementation. They call for all relevant stakeholders to cooperate and interact closely.

Three fundamental values underpin the Social Principles of Human-Centric AI: (1) Dignity—A society in which human dignity is respected; (2) Diversity and Inclusion—A society in which people with diverse backgrounds can pursue their own well-being; and (3) Sustainability—A sustainable society.

The social principles themselves are meant to be implemented across the Japanese society, including national and local governments, as well as in multilateral frameworks. They include seven principles for AI:

1. Human-Centric—The utilization of AI must not infringe upon the fundamental human rights guaranteed by the Constitution and international standards and AI should be developed, utilized, and implemented in society to expand the abilities of people and allow diverse people to pursue their own well-being;
2. Education/Literacy—All stakeholders must have an accurate understanding of AI, knowledge, and ethics permitting appropriate use of AI in society;
3. Privacy Protection—AI should not infringe on a person's individual freedom, dignity or equality; AI using personal data should have mechanisms to ensure accuracy and legitimacy, and to allow individuals to be substantially involved in managing the privacy of their personal data, personal data must be protected appropriately according to its degree of importance and sensitivity;
4. Ensuring Security—A risk management approach is necessary;
5. Fair Competition;

³⁰⁰⁵ Cabinet Secretariat, Government of Japan, *Social Principles of Human-Centric AI* (Feb. 15, 2019), <https://www.cas.go.jp/jp/seisaku/jinkouchinou/pdf/humancentricai.pdf>

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

6. Fairness, Accountability, and Transparency—It is necessary to ensure fairness and transparency in decision-making, appropriate accountability for the results, and trust in the technology so that people who use AI are not subject to undue discrimination related to personal background, or unfair treatment in terms of human dignity; and
7. Innovation.

On January 28, 2022, Japan's Ministry of Economy, Trade and Industry (METI) updated the "Governance Guidelines for implementation of AI Principles" after additionally inviting experts from consumer protection and standardization, aiming to operationalize the AI principles that are required for the facilitation of deployment of AI.³⁰⁰⁶

The Ministry of Economy, Trade and Industry (METI) and the Ministry of Internal Affairs and Communications (MIC) integrated and updated the existing guidelines; AI R&D Guidelines, AI Utilization Guidelines, and Governance Guidelines for Implementation of AI Principles and compiled AI Guidelines for Business V 1.0 in 2024. The Guidelines set out ten principles to be considered (1) human centricity (2) transparency (3) fairness (4) accountability (5) security (6) privacy (7) education and literacy (8) fair competition (9) innovation and (10) safety.³⁰⁰⁷

AI R&D Guidelines

The original AI R&D Guidelines were directed at developers.³⁰⁰⁸ They include 9 principles related to (1) collaboration; (2) transparency; (3) controllability; (4) safety; (5) security; (6) privacy; (7) ethics (respect human dignity and individual autonomy); (8) user assistance; and (9) accountability.

The Japanese AI R&D Guidelines influenced global AI policies. The Japanese government proposed an international discussion on AI policy at the G-7 ICT Ministers' meeting in 2016 in Kagawa-Takamatsu and presented the Guidelines to the G-7 Leaders meeting in Turin, Italy in 2017.³⁰⁰⁹ The Japanese AI R&D Guidelines also contributed significantly to the development of the OECD AI Principles, the first global framework for AI Policy. The OECD AI Principles were adopted by 42 countries in May 2019, and then by G-20 Nations

at the Leaders' Summit hosted in Osaka, in June 2019. OECD Secretary-General thanked Prime Minister Abe and said that the OECD AI Principles, endorsed by the G-20 nations, are “affirming that the AI we want is centered on people, respects ethical and democratic values, is transparent, safe, and accountable.”

AI Governance in Japan

From a regulatory standpoint, Japan has no regulations that generally constrain the use of AI. According to a 2021 report published by the Ministry of Economy, Trade, and Industry (METI) which comprehensively describes Japan's AI regulatory policy, such “legally-binding horizontal requirements for AI systems are deemed unnecessary at the moment.”³⁰¹⁰ The introduction of general-purpose AI systems and the risks to national security, human rights and democratic process impacted the regulatory approach. The 2023 and 2024 Whitepapers published by Liberal Democratic Party AI Project Team consider introduction of narrow legislation for advanced AI systems with serious risks.³⁰¹¹

In the case of sector-specific regulations, none prohibit the use of AI, but rather promote the adoption of AI while requiring businesses to take appropriate measures and disclose information about risks.³⁰¹² For example, the Digital Platform Transparency Act imposes requirements on large online malls, app stores, and digital advertising businesses to ensure transparency and fairness in transactions with business users, including the disclosure of key factors determining their search rankings.³⁰¹³ The Financial Instruments and Exchange Act³⁰¹⁴ requires businesses engaging in algorithmic high-speed trading to register with the government and requires them to establish a risk management system and maintain transaction records.³⁰¹⁵

Public Participation

Japan organized a conference with public participation in advance of the 2016 G-7 ICT Ministers' meeting.³⁰¹⁶ The conclusions of the conference informed the 2016 Takamatsu Declaration.³⁰¹⁷ The G7 ICT Ministers agreed to promote ICT technology R&D for Artificial Intelligence; meet high standards of privacy and data protection; promote accessibility and digital literacy for everyone; and respect cultural and linguistic diversity.

In October 2016, Japan³⁰¹⁸ also launched a new public conference on the theme "Toward AI Network Society" with the participation of experts from industry, academia, and citizens to examine the social, economic, ethical, and legal implications of AI.³⁰¹⁹ The AI Network Society conference formulated the AI R&D Guidelines.³⁰²⁰ In 2019, another meeting of the Toward AI Network Society conference produced the AI Utilization Guidelines, "a commentary on the principles expected to be taken into consideration in the utilization of AI."³⁰²¹

The 2022 AI Governance Guidelines were elaborated following public consultation. In 2021, the Ministry of Economy, Trade, and Industry issued a call for Public Comments on the AI Governance Guidelines for Implementation of AI Principles Ver. 1.1³⁰²² The Governance Guidelines reflect the advice of companies, academics, legal experts, and auditors.

Data Protection

The 2003 Act on the Protection of Personal Information (APPI) initially governed data processing in the private sector only.³⁰²³ As of April 2022, the APPI shall apply to the private sector, national administrative agencies, local

governments, national and public hospitals, national and public universities, and national research and development corporations.³⁰²⁴ This amendment accompanies the launch of a new Digital Agency in September 2021. The aim is “to accelerate the digitization of local and central government after the COVID 19 pandemic further exposed the necessity of reformation”. The Agency “commits to “Human-friendly digitalization: No one left behind”, underpinned by the vision of “Government as a service” and “Government as a startup”.”³⁰²⁵

The 2020 amendments to the APPI bring the law closer to the EU’s General Data Protection Regulation (GDPR).³⁰²⁶ The amendments upgrade individuals’ rights, introduce the concept of pseudonymization, reinforce data breach reporting, and increase penalties for offenders. In January 2019, the European Commission adopted an adequacy decision on Japan’s APPI, allowing personal data to flow freely between the two economies.³⁰²⁷

Prime Minister Abe put forward the concept of Data Free Flow with Trust (DFFT) in a speech at the World Economic Forum in January 2019.³⁰²⁸ Abe said, “We must, on one hand, be able to put our personal data and data embodying intellectual property, national security intelligence, and so on, under careful protection, while on the other hand, we must enable the free flow of medical, industrial, traffic and other most useful, non-personal, anonymous data to see no borders, repeat, no borders.” Abe underscored the importance of privacy protection, explaining that the DFFT regime should be built on “non-personal data.” Abe further emphasized that the appropriate framework for the protection and governance of data according to their sensitivity would allow higher freedom of data flow across borders. The G20 Leaders adopted the concept of Data Free

Center for AI and Digital Policy

Flow with Trust at the 2019 Summit,³⁰²⁹ and reaffirmed the goal at the 2020 Summit in Riyadh.³⁰³⁰

Regulatory cooperation for DFFT was also discussed at the Digital Ministers' G7 Digital Track during the G7 Germany 2022 and was a key topic during the G7 Digital Ministers' meeting in Takasaki in April 2023 as well.³⁰³¹

The G7 2022 Action Plan for Promoting DFFT emphasized the importance of regulatory cooperation. Key topics for discussion include regulatory approaches related to privacy-enhancing technologies and interoperability of data protection frameworks, as well as regulatory cooperation between data protection and privacy authorities on enforcing data protection and related laws and regulations.³⁰³²

The third G7 Data Protection and Privacy Authorities Roundtable took place in Japan in June 2023. Issues such as “the promotion of DFFT, cross-border enforcement cooperation and advanced technologies and privacy protection with the aim of fostering cooperation amongst each other” were addressed.³⁰³³

The Personal Information Protection Commission (PPC), established in 2016, supervises the implementation of the APPI. PPC members exercise their official authority independently. The PPC also supervises the implementation of the My Number Act, which regulates the use of numeric identifiers for social security and taxation.³⁰³⁴

The PPC is a member of the Global Privacy Assembly since 2017.³⁰³⁵ The PPC endorsed the 2018 GPA Declaration on Ethics and Data Protection in

Algorithmic Transparency

Japanese law does not contain a general right of algorithmic transparency. However, there are specific provisions for certain sectors. For example, for financial services, the Comprehensive Guidelines for Supervision over Major Banks require that the concerned individual be provided with specific explanations of the reasons for the rejection of a request to conclude a loan agreement.³⁰⁴⁰

In July 2022, the Tokyo District Court ruled in favor of Hanryumura, a Korean-style BBQ restaurant chain operator in an antitrust case brought against Kakaku.com, operator of Tabelog, Japan's largest restaurant review platform. Japanese legal experts have said an antitrust case related to a local restaurant website could change how large internet platforms such as Google, Facebook, and Amazon operate in the country, forcing them to reveal the inner workings of their secret algorithms. "There hasn't been a case in competition law anywhere else in the world where a court has requested a digital platform to disclose its algorithm," said Kentaro Hirayama, a lawyer specializing in antitrust issues and formerly with Japan Fair Trade Commission, the country's antitrust regulator. The internet company has appealed against the decision.³⁰⁴¹

Facial Recognition

Japan has deployed facial recognition in several sectors, including transportation, banking (ATMs), police, and immigration. Japan used facial recognition technology originally intended for security purposes, along with thermal scans to prevent the spread of the novel coronavirus when it hosted the Tokyo Olympics and Paralympics in 2021.³⁰⁴² Go Iwashita, the Director of the Security Bureau for Tokyo Organizing Committee for the Olympic and Paralympic Games, said “Throughout the game, four million facial recognition operations had been performed and we received no reports of failure.”³⁰⁴³

Osaka Metro Co. has developed automated ticket gates with facial recognition with a view to equipping all metro stations in Osaka by 2024, ahead of the 2025 World Expo.³⁰⁴⁴ Likewise, the Japanese Ministry of Economy, Trade and Industry is testing facial recognition ticketing on driverless buses in several cities across the country.³⁰⁴⁵

In September 2020, Japan Times reported that Japanese Police Forces have been using facial recognition technology across the nation since March 2020 to locate criminal suspects. Critics warned that the system could transform the country into a surveillance society unless it operates under strict regulations, a senior National Police Agency (NPA) official said “we are using the system only for criminal investigations and within the scope of the law. We discard facial images that are found to be unrelated to cases.”³⁰⁴⁶ The NPA manages and utilizes facial images under rules set by the National Public Safety Commission, a Japanese Cabinet Office commission that guarantees the neutrality of the police system by insulating the force from political pressure and ensuring the maintenance of democratic methods in police administration. The NPA also manages fingerprints and DNA under the Public Safety Commission. The agency’s database currently holds 10 million facial images of criminal suspects.

Japan does not have specific legislation for facial recognition in the government sector. As of September 2020, the Japanese APPI covers the use of

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

facial biometric data gathered from security cameras.³⁰⁴⁷ Law enforcement is however exempt from this type of privacy regulation. APPI also allows the use of anonymized facial recognition data beyond the intended purposes if such data is sufficiently protected from being restored to its original form. The Personal Information Protection Commission formed a committee of experts in January 2022 to review and prepare a guideline for the appropriate use of camera images for crime prevention and safety in public spaces.³⁰⁴⁸ The draft guidelines were released for public comment in January 2023. The PPC supports the use of facial recognition cameras in public places for crime prevention or security purposes but recommends that operators increase transparency so as not to cause undue anxiety to those being filmed.³⁰⁴⁹

Biometric Identification

In 2021, the Digital Agency has been endowed with the task to accelerate the digitization of public services, industries and lifestyle through the My Number System and My Number Card. My Number System relates primarily to the Social Security and Tax Number System which provides one unique number to all registered residents in Japan. The system serves to centralize all personal information dispersed across various administrations with the aim to improve the efficiency of public services. The My Number Card can be used as an official identification card as well as a multi-purpose card for a wide range of public services or for various private on-line transactions.

Before the COVID-19, the former Director-General of the Administrative Management Bureau at the Ministry of Internal Affairs and Communications, Susumu Kamimura, explained that among the reasons why AI usage progressed slowly in the Japanese Public sector are the “black-box effect” and the “privacy issue”. As for the black box effect, “this is more likely the reason AI has not been deployed in the public sector, where transparency and accountability are often more important than efficiency and low-cost.”³⁰⁵⁰ “The privacy issue is another factor. Japanese people are extremely sensitive to a lack of privacy, and that is the main reason Japan does not have a true national ID system, and its partial substitute – My Number – has not been fully implemented. An AI-powered precise identification of personal features will not be readily tolerated.”³⁰⁵¹

A survey on attitudes toward the My Number Card by Kioicho Strategy Institute showed that, “Among respondents, 59.4% said they have a My Number Card, which roughly corresponds to the 55.7% of Japanese as a whole. [...] By contrast, 18.4% of respondents said that they had no intention of obtaining a card.” “As a means of promoting the My Number Card scheme, the government is conducting a campaign to give card holders up to ¥20,000 worth of My Number Points that can be used for shopping and other purposes.”³⁰⁵²

In February 2023, the Tokyo Medical Practitioners Association filed a lawsuit against the government with the Tokyo District Court to prevent the replacement of patients’ insurance cards with My Number from April 2023. “The suit claims that in order for the government to require medical institutions to accept My Number cards, the Health Insurance Act should be amended.”³⁰⁵³

Environmental Impact of AI

Japan announced plans in October 2020 to achieve net zero carbon emissions by 2050 and has since accelerated efforts to eliminate emissions.³⁰⁵⁴ The Green Growth Strategy hinges on decarbonizing the production of electricity through renewable energy and hydrogen power and shifting sectors such as transportation to electricity. Through the Strategy, Japan plans to leverage various methods to decrease energy demand and carbon emissions, including taxation as well as innovation.³⁰⁵⁵

Rather than viewing regulation and carbon taxes as hindrances to innovation, Japan’s Director of the Environmental Policy Division in the Ministry of Economy, Trade and Industry Kawahara Kei sees opportunity: “While increasing Japan’s industrial competitiveness, we will make our contribution to the world by spreading Japanese technology overseas.”³⁰⁵⁶

Lethal Autonomous Weapons

Since 2014, Japan has participated in international talks on lethal autonomous weapons systems. Japan often states that it has “no plans” to acquire such weapons and highlights the need to retain meaningful human control over the

Center for AI and Digital Policy

use of force. However, Japan does not support the negotiation for a new treaty to address mounting concerns over fully autonomous weapons and has yet to join the group of 29 countries calling for a prohibition on such weapons.³⁰⁵⁷

In December 2021, Japan and other countries blocked any advancement in U.N. talks toward legally binding measures to ban and regulate the development and use of lethal autonomous weapon systems. The Sixth Review Conference of the Convention on Certain Conventional Weapons ended in December 2021 in Geneva without progress, failing to reflect eight years of work and leaving countries and nongovernmental organizations that have called for legally binding rules expressing disappointment.³⁰⁵⁸

At the 77th UN General Assembly First Committee meeting in October 2022, Japan issued a statement, noting that the country “recognizes the meaningful results achieved by the Group of Governmental Experts (GGE) in the discussion on emerging technologies in the area of lethal autonomous weapons systems (LAWS) in the past years, as one of the key topics under the CCW. Despite the sensitivity and complexity of this issue, intensive deliberations at the GGE meetings have significantly contributed to fostering bases for common understanding. Japan believes it is beneficial for the High Contracting Parties to continue the discussion on LAWS step-by-step within the CCW framework. Japan also welcomes many proposals submitted to the GGE this year to advance such discussion. Japan will continue to actively contribute to international rule-making.”³⁰⁵⁹

Japan was also among the 70 countries that delivered a joint statement on autonomous weapons systems at the 77th UN General Assembly. In this joint statement, States urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”³⁰⁶⁰ In a

2024 statement to UN, Japan supported the view that “the obligations of IHL apply to all weapon systems, including LAWS, that weapon systems must not be used if they are incapable of being used in compliance with IHL [...] Japan recognizes that, in the use of weapon systems, human responsibility cannot be transferred to machines, and we must ensure that they are operated under a responsible chain of human command and control in a manner consistent with the obligations of states under IHL, and that responsibility is clearly attributed.”³⁰⁶¹

Representatives from Japan³⁰⁶² agreed a joint call to action on the responsible development, deployment and use of artificial intelligence in the military domain following the February 2023 Summit on Responsible Artificial Intelligence in the Military Domain (REAIM) in The Hague.³⁰⁶³ Japan also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.³⁰⁶⁴ Japan is also involved in the Global Commission on Responsible AI in the Military Domain launched at the 2023 REAIM Summit.³⁰⁶⁵

The Republic of Korea hosted the second REAIM summit in 2024. Japan endorsed the outcome document, the Blueprint for Action,³⁰⁶⁶ which outlines principles for AI governance and emphasizes international law compliance, accountability, and human oversight.³⁰⁶⁷

Human Rights

Japan's Global Freedom Score in 2024 was 96/100. Based on the latest Freedom House Country Report, political rights and civil liberties are generally well respected. Outstanding challenges include ethnic and gender-based discrimination and claims of improperly close relations between the government and the business sector.³⁰⁶⁸

AI Safety Summit

In November 2023, Japan participated in the first AI Safety Summit and endorsed the Bletchley Declaration.³⁰⁶⁹ Japan thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.” Japan launched its AI Safety Institute in 2024.³⁰⁷⁰

OECD / G20 AI Principles

Japan endorsed the OECD and the G20 AI Principles and is a member of the Global Partnership on AI (GPAI). Japan was a catalyst for the adoption of the OECD AI Principles at the G20 Ministerial meeting in Tsukuba and the G20 Leaders' Summit in Osaka, Japan, in 2019.³⁰⁷¹ In 2024, the GPAI Tokyo Expert Support Center was established as the third Center after Montreal and Paris.³⁰⁷²

Council of Europe AI Treaty

Japan contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. Japan signed the Convention in February 2025.³⁰⁷³

UNESCO Recommendation on AI Ethics

Japan, along with 192 other States, endorsed the UNESCO Recommendation on the Ethics of AI in November 2021.

METI has been holding meetings of the Expert Group on how AI principles should be implemented. While compiling its report on the AI Governance in Japan, the Expert Group acknowledged the UNESCO Recommendation as part of the “high-level guidance from AI principles to implementation” while describing “the governance structure in the era of Society 5.0.”³⁰⁷⁴ The Japanese Government also supported the launch of a platform in the Southern Africa sub-region for the implementation of the Recommendation.³⁰⁷⁵

G7 Hiroshima Process

In 2023, the G7, led by Prime Minister Kishida, released the G7 Leaders’ Statement on the Hiroshima AI Process.³⁰⁷⁶ The G7 leaders emphasized: “We also recognize the need to manage risks and to protect individuals, society, and our shared principles including the rule of law and democratic values, keeping humankind at the center.”

The G7 leaders confirmed the need for generative AI governance. Thanks to Japanese diplomacy, by the end of 2023, the G7 leaders reached an agreement on the world’s first international framework, known as the G7 Hiroshima AI Process Comprehensive Policy Framework. It includes both a set of Guiding Principles applicable to all AI actors throughout the entire AI lifecycle and a Code of Conduct that lists in more detail the actions that AI developers must abide by.³⁰⁷⁷ The Hiroshima process was supported by a report prepared by the OECD geared towards ensuring a common understanding on generative AI.³⁰⁷⁸ In 2024, Japan launched the Hiroshima AI Process Friends Group to expand the number of

countries and organizations committed to the Framework.³⁰⁷⁹ In 2025, as part of the G7 Hiroshima AI Process, the G7 launched HAIP, a voluntary Reporting Framework, among organizations developing advanced AI systems to encourage transparency and accountability.³⁰⁸⁰

Evaluation

Japan is a pioneer in the field of AI policy. Japan hosted the G20 Leaders' meeting in Osaka in 2019 at which time the G20 nations endorsed the OECD AI Principles. The former Prime Minister Shinzo Abe promoted the concept of Data Free Flow with Trust (DFFT), a core concept for human-centric AI, that carries forward in the policy recommendations of the OECD, the G20, the G7 and the European Commission. During Japanese Presidency of G7 in 2023 the first international framework on generative AI was adopted. Japan also endorsed the UNESCO Recommendation on the Ethics of AI and is taking steps towards its implementation. However, concerns about the unregulated use of facial recognition remain.

Kazakhstan

In 2024, Kazakhstan adopted a Concept for AI Development for 2024–2029 and established a Committee of Artificial Intelligence and Innovation Development.

National AI Strategy

In recent years, Kazakhstan has taken an active interest in AI and new technologies to reform the country's economy and extend internal security and policing.³⁰⁸¹ Kazakhstan has also expressed interest in Russia's AI development.³⁰⁸² The government set out an AI and other smart technologies Agenda in 2017 and adopted the Concept for Artificial Intelligence Development for 2024–2029 in 2024.³⁰⁸³

Artificial Intelligence and Democratic Values 2025

Center for AI and Digital Policy

The Agenda included the cultivation and creation of new industries with the use of digital technologies along with productivity growth through the widespread introduction of automation, robotics, and AI, and the exchange of big data.³⁰⁸⁴ One of Kazakhstan's primary purposes in embracing AI is to spark foreign investment to diversify the economy and reduce the country's economic dependence on natural resources. Developing AI is also a means for to strengthen social governance and welfare. Kazakhstan's 2017 AI Agenda mentions the growing threat of terrorism and the prevention of religious extremism propaganda on the Internet and social networks.³⁰⁸⁵

The state program Digital Kazakhstan describes the implementation of this Agenda through the realization of several projects AI sector such as developing international technoparks for startups, telecommunications and digital infrastructure, model factors based on Industry 4.0 technologies, and smart cities.³⁰⁸⁶

The country has established several IT and research centers to be the flagships for the development of AI in Kazakhstan: Nazarbayev University, Astana International Financial Centre, and Astana International Technology Park of IT Startups.

Despite these aspirations, Kazakhstan scored only 51.41 out of 100 in the Government AI Readiness Index, with the lowest score in the technology sector.³⁰⁸⁷ A dearth of qualified IT specialists³⁰⁸⁸ and low R&D spending (0.13% of GDP in 2021)³⁰⁸⁹ have been significant barriers to a dynamic and innovative technology sector. According to Kazakhstan Prime Minister Askar Mamin, Kazakhstan "simply does not have such financial means to develop its own AI

technologies.”³⁰⁹⁰ The country is trying to address this problem with the help of foreign investors³⁰⁹¹ and international partners.³⁰⁹²

The government made several steps to advance its AI policy and implementation in 2024. The Committee of Artificial Intelligence and Innovation Development under the Ministry of Digital Development, Innovation and Aerospace Industry began its work leading and coordinating state policy in the fields of artificial intelligence, technology, innovation, and digital assets.³⁰⁹³ The government also launched the AI People course, a nationwide initiative to increase AI literacy and skills among the general population,³⁰⁹⁴ in line with the UNESCO recommendation on AI literacy.³⁰⁹⁵ These measures support the realization of the Concept for Artificial Intelligence Development for 2024–2029, which focuses on six pillars: data, infrastructure, human capital, scientific research, regulatory

environment, and acceleration programs.³⁰⁹⁶ The Concept envisions embedding AI across economic sectors and public administration, contributing to GDP growth, and creating high-value AI products and startups.

Public Participation

Kazakhstan has yet to develop a systematic process for public consultation in matters of policy. A law on public access to government information was adopted in 2015, but it is “poorly implemented in practice.”³⁰⁹⁷

On transparency, Freedom House states, “The government and legislature offer little transparency on their decision-making processes, budgetary matters, and other operations. The media and civil society do not have a meaningful opportunity to provide independent commentary and input on pending laws and policies.”³⁰⁹⁸

A 2020 OECD report analyzed the legal and policy framework of more than 200 public councils that gathered civil society in Kazakhstan.³⁰⁹⁹ Recommendations included the implementation of clearer guidelines for public consultation, training, and ensuring a feedback loop of the input from the Councils.

A 2022 Presidential Decree establishing an action plan for legal policy included an action to increase public participation in the process of testing candidates for judges (Action N82) and improvement of legal education and legal propaganda (Action N99).³¹⁰⁰

Presidential and governmental decrees, as well as other legal documents, are published on the Ministry of Justice official webpage, readily available to the public. The e-gov page connects to more than 700 government services.

As part of the Digital Kazakhstan National program, the Ministry of Digital Development, Innovations and Aerospace Industry oversees 740 e-

government integrated services. Services are available to citizens via the egov.kz portal, mgov mobile app, and front offices of Government for Citizens.³¹⁰¹

Data Protection

Law No. 94-V on Personal Data and its Protection (Personal Data Law)³¹⁰² of May 21 2013 sets the general regulations for the localization, collection, and processing of personal data.

The country experienced a wave of major data breaches from the databases of the CEC and the Prosecutor General's Office in 2019.³¹⁰³ Soon after, the personal information of 11 million people was published online and could be accessed by anyone through a published database.³¹⁰⁴ These incidents led to the amendment of the existing data protection law, which was revised to mostly align with the GDPR.³¹⁰⁵

The Amendment Law on the Regulation of Digital Technologies was enacted in 2020.³¹⁰⁶ The Amendments entered into force in two phases, first in July 2020, and then in January 2021.³¹⁰⁷ Court practice regarding non-compliance with personal data protection measures began in 2021–2022.³¹⁰⁸

The amendments established the Ministry of Digital Development, Innovation and Aerospace Industry of Kazakhstan as the competent authority to

enforce the data protection law, created rules for the collection and processing of personal data, and introduced the concept of “personal data safety protection service.” The amendments also clarify informed consent with the requirement that the content and amount of personal data collected strictly correspond to those previously declared and to the legal purposes of their processing. While the GDPR requires “the appropriate data protection training to personnel having permanent or regular access to personal data,” Kazakhstan’s amendments do not require data protection training. Training is important because human error is one of the major causes of data breaches across the world.

Kazakhstan’s Ministry of Digital Development, Innovation and Aerospace Industry is not a member of the Global Privacy Assembly (GPA). Thus, no national authority has sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,³¹⁰⁹ 2020 GPA Resolution on AI Accountability,³¹¹⁰ 2022 GPA Resolution on Facial Recognition Technology,³¹¹¹ or the 2023 GPA Resolution on Generative AI.³¹¹²

Algorithmic Transparency

Although Kazakhstan’s Personal Data Law has been inspired by the GDPR, it does not include the concept of the “right to not be subject to automated decision-making.”³¹¹³ Kazakhstan would have the possibility to ratify the Council of Europe’s Modernized Convention for the Protection of individuals with regard to the processing of personal data (Convention 108+), which provides for the right to algorithmic transparency, but has not done so.³¹¹⁴

AI Regulation

Kazakhstan began regulating artificial intelligence in 2021. The President of Kazakhstan issued Decree No. 674 on the approval of the Concept of Legal Policy of the Republic of Kazakhstan until 2030.³¹¹⁵ The Decree addresses AI accountability, noting, “The need for the legal regulation of artificial intelligence and robotics is determined primarily by the solution of the issue of distribution of responsibility for the harm caused by their actions, as well as the solution of the problem of determining the ownership of intellectual property rights to works created with the participation of artificial intelligence.”³¹¹⁶
